Surrogate Legend

DCBP = DCB Decachlorobiphenyl

TCX = Tetrachloro-m-xylene

Surrogate Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-80878-1

Method: 8081A - Organochlorine Pesticides (GC)

Matrix: Water — **Prep Type: Total/NA**

		Percent Surrogate Recovery (Acceptance Limits)	
Lab Sample ID	Client Sample ID	TCX1 (49-132)	DCB1 (10-142)

320-80878 Chain of Custody

Preservation Used 1= Ice, 2= HCl; 3= H2SO4, 4=HNO3, 5=NaOH, 6= Other _____

Possible Hazard Identification
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☐Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☐Disposal by Lab ☐Archive for _____ Months

Special Instructions/QC Requirements & Comments.
Hold samples for addional analys's

Custody Seals Intact: ☐ Yes ☐ No	Custody Seal No.		Cooler Temp (°C): Obs'd _____ Corr'd. _____ Therm ID No. _____

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	Seal present with no number.
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-80878-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Revision
The report being provided is a revision of the original report sent on 11/17/2021. The report (revision 1) is being revised due to: Report samples to MDL or EDL for 8290A per client request. Total TEQ also added.

Receipt
The samples were received on 10/27/2021 12:54 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.3º C.

Dioxin
Method 8290A: Automatic End Resolution Check failed to print. Resolution Check was run the next morning and the instrument had maintained 10,000 resolution. All samples were run within the 12 hour window.
AOC1/AOC8-S4-0.5 (320-80878-3), AOC1/AOC8-S4-0.5DUP (320-80878-4), AOC1/AOC8-S10-0.5 (320-80878-13), (CCV 320-542971/2), (CCV 320-542971/8) and (CPS 320-542971/1)

Method 8290A: The following samples exhibited elevated noise or matrix interferences for 2,3,7,8-TCDF causing elevation of the detection limit (EDL): AOC1/AOC8-S4-0.5 (320-80878-3) and AOC1/AOC8-S4-0.5DUP (320-80878-4) . The reporting limit (RL) for the affected analytes has been raised to be equal to the EDL, and a "G" qualifier applied.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-80878-2

Laboratory: Eurofins TestAmerica, Sacramento

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	2897	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
TEQ		Solid	Total Dioxin/Furan TEQ
TEQ		Water	Total Dioxin/Furan TEQ

Method Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-80878-2

Method	Method Description	Protocol	Laboratory
8290A	Dioxins and Furans (HRGC/HRMS)	SW846	TAL SAC
TEQ	Total TEQ Calculation	Lab SOP	TAL SAC
8290	Separatory Funnel (Liquid-Liquid) Extraction of Dioxins and Furans	SW846	TAL SAC
8290	Soxhlet Extraction of Dioxins and Furans	SW846	TAL SAC

Preservation Used 1= Ice, 2= HCl; 3= H2SO4, 4=HNO3, 5=NaOH, 6= Other

Possible Hazard Identification
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☐Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☐Disposal by Lab ☐Archive for ____ Months

Special Instructions/QC Requirements & Comments.
Hold samples for addional analys's

☐Custody Seals Intact: ☐ Yes ☐ No | Custody Seal No. | Cooler Temp (°C): Obs'd ____ Corr'd. ____ Therm ID No. ____

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job ID: 320-80878-3

Qualifiers

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Revision
The report being provided is a revision of the original report sent on 11/19/2021. The report (revision 1) is being revised due to: Report samples to MDL per client request.

Receipt
The samples were received on 10/27/2021 12:54 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.3º C.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-542843 and analytical batch 320-543764 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Hi Criselda,

I need to run lead for the following samples:

- AOC1-S3-2
- AOC1/AOC8-S4-2
- AOC1-S6-2
- AOC1-S11-2

Thank you,

Nathan Diem
Project Geologist

Subject: Preliminary Data-Eurofins TestAmerica report files from 320-80878-1 Cole School PEA

Hello,

This is a Preliminary Data- still waiting on few more PCB results

Attached please find the report files for job 320-80878-1; Cole School PEA

Please feel free to contact me or your PM Justinn Gonzales if you have any questions.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job ID: 320-80878-5

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 10/27/2021 12:54 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.3º C.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-549145 and analytical batch 320-549638 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.5
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-80943-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
P	The %RPD between the primary and confirmation column/detector is >40%. The higher value has been reported
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
L	A negative instrument reading had an absolute value greater than the reporting limit

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 320-80943-1

No additional comments.

Revision
The report being provided is a revision of the original report sent on 12/3/2021. The report (revision 1) is being revised due to: Report samples to MDL per client request.

Receipt
The samples were received on 10/28/2021 12:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.4º C and 2.5º C.

GC/MS Semi VOA
Method 8270C: The following samples were diluted due to the nature of the sample matrix: AOC3/AOC10-S8A-0.5 (320-80943-23), AOC3/AOC10-S8A-2 (320-80943-24), AOC3/AOC10-S8B-0.5 (320-80943-25), AOC3/AOC10-S8B-2 (320-80943-26), AOC3/AOC10-S9C-0.5 (320-80943-27), AOC3/AOC10-S9C-0.5DUP (320-80943-28) and AOC3/AOC10-S9C-2 (320-80943-29). Elevated reporting limits (RLs) are provided.

Method 8270C: The following samples were diluted due to the nature of the sample matrix: AOC3/AOC10-S8A-0.5 (320-80943-23), AOC3/AOC10-S8A-2 (320-80943-24), AOC3/AOC10-S8B-0.5 (320-80943-25), AOC3/AOC10-S8B-2 (320-80943-26), AOC3/AOC10-S9C-0.5 (320-80943-27), AOC3/AOC10-S9C-0.5DUP (320-80943-28) and AOC3/AOC10-S9C-2 (320-80943-29). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8270C: The following samples were diluted due to the nature of the sample matrix: (320-80943-A-29-E MS) and (320-80943-A-29-F MSD). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8270C SIM: The following samples were diluted due to the nature of the sample matrix: (320-80943-A-29-B MS) and (320-80943-A-29-C MSD). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270C SIM: The following samples were diluted due to the nature of the sample matrix: AOC3/AOC10-S8A-0.5 (320-80943-23), AOC3/AOC10-S8B-0.5 (320-80943-25), AOC3/AOC10-S9C-0.5 (320-80943-27), AOC3/AOC10-S9C-0.5DUP (320-80943-28) and AOC3/AOC10-S9C-2 (320-80943-29). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081A: Surrogate recovery for the following samples were outside control limits: AOC3/AOC10-S8B-0.5 (320-80943-25), AOC3/AOC10-S8B-2 (320-80943-26) and AOC3-S6C-2 (320-80943-37). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3/AOC10-S8B-0.5 (320-80943-25), AOC3/AOC10-S9C-0.5 (320-80943-27), AOC3/AOC10-S9C-0.5DUP (320-80943-28), AOC3-S8D-0.5 (320-80943-30), AOC3-S7C-0.5 (320-80943-34) and AOC3-S7D-0.5 (320-80943-38). Elevated reporting limits (RLs) are provided.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3/AOC10-S9C-2 (320-80943-29), AOC3/AOC8-S8C-0.5 (320-80943-32) and AOC3-S6C-0.5 (320-80943-36). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S3B-0.5 (320-80943-1), AOC3-S3B-2 (320-80943-2), AOC3/AOC8-S5B-2 (320-80943-14) and AOC3-S6B-0.5 (320-80943-15). Elevated reporting limits (RLs) are provided.

Job ID: 320-80943-1 (Continued)

Laboratory: Eurofins TestAmerica, Sacramento (Continued)

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S2A-0.5 (320-80943-3), AOC3-S3A-0.5 (320-80943-5), AOC3-S4A-2 (320-80943-8), AOC3-S5A-0.5 (320-80943-9), AOC3-S4B-0.5 (320-80943-11), AOC3/AOC8-S5B-0.5 (320-80943-13) and AOC3-S6A-0.5 (320-80943-17). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8081A: Surrogate recovery for the following samples were outside control limits: AOC3-S3B-0.5 (320-80943-1), AOC3-S2A-2 (320-80943-4), AOC3-S3A-2 (320-80943-6), AOC3-S4B-2 (320-80943-12), (320-80943-A-16-B MS) and (320-80943-A-16-C MSD). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8081A: Surrogate recovery for the following sample was outside control limits: AOC3-S5C-2 (320-80943-41). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8081A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-539858 and analytical batch 320-542188 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S7A-0.5 (320-80943-19), AOC3-S7B-0.5 (320-80943-21), AOC3/AOC10-S8A-0.5 (320-80943-23) and AOC3-S5C-0.5 (320-80943-40). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S6A-2 (320-80943-18) and AOC3-S7B-2 (320-80943-22). Elevated reporting limits (RLs) are provided.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: (320-80943-A-19-C MS) and (320-80943-A-19-D MSD). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S4C-0.5 (320-80943-42), AOC3-S3C-0.5 (320-80943-44), AOC3/AOC8-S1E-0.5 (320-80943-50), AOC3-S2E-0.5 (320-80943-52), AOC3-S3E-0.5 (320-80943-54), AOC3-S3D-0.5 (320-80943-56), AOC3-S4D-0.5 (320-80943-58) and AOC3-S4E-0.5 (320-80943-60). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: (320-80943-A-42-C MS) and (320-80943-A-42-D MSD). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S3C-2 (320-80943-45), AOC3-S1D-0.5 (320-80943-46) and AOC3/AOC8-S2D-0.5 (320-80943-48). Elevated reporting limits (RLs) are provided.

Method 8081A: The %RPD between the primary and confirmation column exceeded 40% for 4,4'-DDE for the following sample: AOC3-S5A-0.5 (320-80943-9). The results from primary column have been reported and qualified in accordance with the laboratory's SOP.

Method 8081A: The %RPD between the primary and confirmation column exceeded 40% for Endrin ketone, trans-Chlordane, 4,4'-DDD, 4,4'-DDE and Methoxychlorfor the following samples: (320-80943-A-42-C MS) and (320-80943-A-42-D MSD). The results from the primary column have been reported and qualified in accordance with the laboratory's SOP. 320-80943-42[MS] for Endrin ketone, trans-Chlordane, 4,4'-DDD, 4,4'-DDE and Methoxychlor. 320-80943-42[MSD] for Endrin ketone, 4,4'-DDD and Methoxychlor.

Method 8082: Surrogate recovery for the following samples were outside control limits: AOC3-S7B-0.5 (320-80943-21), AOC3/AOC10-S8A-0.5 (320-80943-23), (320-80943-A-21-D MS), AOC3/AOC10-S9C-0.5DUP (320-80943-28), AOC3-S5C-0.5 (320-80943-40), (320-80943-A-40-D MS), AOC3-S3B-0.5 (320-80943-1) and AOC3-S4C-0.5 (320-80943-42). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8082: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 320-539860 and

Job ID: 320-80943-1 (Continued)

Laboratory: Eurofins TestAmerica, Sacramento (Continued)

analytical batch 320-541881 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected.

Method 8082: The continuing calibration verification (CCV) associated with batch 320-541881 recovered above the upper control limit for DCB Decachlorobiphenyl. The samples associated with this CCV were non-detects for all PCB mixtures; therefore, the data have been reported. The associated samples are impacted: AOC3/AOC10-S8B-0.5 (320-80943-25), AOC3/AOC10-S9C-0.5 (320-80943-27), AOC3/AOC10-S9C-0.5DUP (320-80943-28), AOC3-S8D-0.5 (320-80943-30), AOC3/AOC8-S8C-0.5 (320-80943-32), AOC3-S7C-0.5 (320-80943-34), AOC3-S6C-0.5 (320-80943-36), AOC3-S7D-0.5 (320-80943-38), AOC3-S5C-0.5 (320-80943-40), (CCVRT 320-541881/3), (LCS 320-539860/2-A), (MB 320-539860/1-A), (320-80943-A-40-D MS) and (320-80943-A-40-E MSD).

Method 8082: The continuing calibration verification (CCV) associated with batch 320-543551 recovered above the upper control limit for PCB-1254. The samples associated with this CCV were non-detect for all PCB mixtures; therefore, the data have been reported. The associated samples are impacted: AOC3-S4C-0.5 (320-80943-42), AOC3-S3C-0.5 (320-80943-44), AOC3-S1D-0.5 (320-80943-46), AOC3/AOC8-S2D-0.5 (320-80943-48), AOC3/AOC8-S1E-0.5 (320-80943-50), AOC3-S2E-0.5 (320-80943-52), AOC3-S3E-0.5 (320-80943-54), AOC3-S3D-0.5 (320-80943-56), AOC3-S4D-0.5 (320-80943-58), AOC3-S4E-0.5 (320-80943-60), (CCV 320-543551/4), (LCS 320-540587/2-A) and (MB 320-540587/1-A).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010B: The matrix spike (MS) recoveries for preparation batch 320-538889 and analytical batch 320-539464 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The absolute response for Arsenic and Molybdenum was greater than the method reporting limit (RL) in the following sample: AOC3-S1D-0.5 (320-80943-46). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The absolute response for Selenium was greater than the method reporting limit (RL) in the following sample: AOC3/AOC10-S8A-2 (320-80943-24). The instrument raw data has been manually reviewed and the result can be reported as ND.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-192816 and analytical batch 570-193608 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: Due to the high concentration of Lead, the matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 570-192816 and analytical batch 570-193608 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 3550B: Due to the matrix, the following sample(s) could not be concentrated to the final method required volume of 1mL,it was concentrated to final volume of 10mL. The reporting limits (RLs) are elevated proportionately. Samples are associated with method 8270C solids in preparation batch 320-539206 and 320-539206.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Arsenic	6.8		1.9	1.2	mg/Kg	1		6010B	Total/NA

This Detection Summary does not include radiochemical test results.

Detection Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-80943-1

Client Sample ID: AOC3/AOC8-S1E-2 — Lab Sample ID: 320-80943-51

No Detections.

Client Sample ID: AOC3-S2E-0.5 — Lab Sample ID: 320-80943-52

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Lead	100	B	1.0	0.26	mg/Kg	1		6010B	Total/NA
Arsenic	10		2.0	1.3	mg/Kg	1		6010B	Total/NA

Client Sample ID: AOC3-S2E-2 — Lab Sample ID: 320-80943-53

No Detections.

Client Sample ID: AOC3-S3E-0.5 — Lab Sample ID: 320-80943-54

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Heptachlor	2.6	J	16	1.4	ug/Kg	10		8081A	Total/NA
Lead	65	B	0.95	0.25	mg/Kg	1		6010B	Total/NA
Arsenic	16		1.9	1.2	mg/Kg	1		6010B	Total/NA

Client Sample ID: AOC3-S3E-2 — Lab Sample ID: 320-80943-55

No Detections.

Client Sample ID: AOC3-S3D-0.5 — Lab Sample ID: 320-80943-56

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.
☐Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐Return to Client ☐Disposal by Lab ☐Archive for _____ Months

Special Instructions/QC Requirements & Comments.
Hold samples for additional analysis

Custody Seals Intact: ☐ Yes ☐ No	Custody Seal No.	Cooler Temp (°C): Obs'd._____ Corr'd:_____ Therm ID No.:_____

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-80943-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
*5-	Isotope dilution analyte is outside acceptance limits, low biased.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 320-80943-2

Comments
No additional comments.

Revision
The report being provided is a revision of the original report sent on 11/18/2021. The report (revision 1) is being revised due to: Report samples to MDL or EDL for 8290A per client request. Total TEQ also added.

Receipt
The samples were received on 10/28/2021 12:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.4º C and 2.5º C.

Dioxin
Method 8290A: The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit: AOC3/AOC8-S2D-0.5 (320-80943-48). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample.

Method 8290A: The bracketing continuing calibration verification (CCV) associated with batch 320-541728 has analytes with percent difference values that are between the method criteria of 30% to 35% deviation from the initial calibration curve. Per method guidelines, an average relative response factor (RRF) is calculated from the bracketing CCV and is used to quantitate the Isotope Dilution Analyte (IDA) recovery in the associated samples.

Method 8290A: The Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit: AOC3/AOC8-S2D-0.5 (320-80943-48). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-80943-2

Laboratory: Eurofins TestAmerica, Sacramento

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	2897	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
TEQ		Solid	Total Dioxin/Furan TEQ

Method Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-80943-2

Method	Method Description	Protocol	Laboratory
8290A	Dioxins and Furans (HRGC/HRMS)	SW846	TAL SAC
TEQ	Total TEQ Calculation	Lab SOP	TAL SAC
8290	Soxhlet Extraction of Dioxins and Furans	SW846	TAL SAC

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job ID: 320-80943-3

Qualifiers

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
320-80943-3

Comments
No additional comments.

Revision
The report being provided is a revision of the original report sent on 11/18/2021. The report (revision 1) is being revised due to: Report samples to MDL per client request.

Receipt
The samples were received on 10/28/2021 12:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.4º C and 2.5º C.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-543191 and analytical batch 320-543762 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

EXTERNAL EMAIL*

Hi Justinn,

I need to run additional lead and arsenic for the following samples:

Lead:

AOC3-S3B-2
AOC3-S5A-2
AOC3-S4B-2
AOC3-S6B-2

AOC3-S6A-2
AOC3-S7A-2
AOC3-S7B-2
AOC3/AOC10-S8A-2
AOC3-S8D-2
AOC3/AOC8-S8C-2
AOC3-S7C-2
AOC3-S6C-2
AOC3-S5C-2
AOC3-S3C-2
AOC3/AOC8-S2D-2
AOC3-S3D-2
AOC3-S4D-2

Arsenic:

AOC3/AOC8-S5B-2
AOC3-S4C-2
AOC3-S3C-2
AOC3-S3E-2

Thanks

Nathan Diem
Project Geologist
Ninyo & Moore

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
P	The %RPD between the primary and confirmation column/detector is >40%. The higher value has been reported
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

No additional comments.

Revision
The report being provided is a revision of the original report sent on 12/1/2021. The report (revision 1) is being revised due to: Report samples to MDL per client request.

Receipt
The samples were received on 10/29/2021 2:21 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.8º C, 1.0º C and 1.8º C.

GC Semi VOA
Method 8082: Surrogate recovery for the following samples were outside control limits: AOC3-S5E-0.5 (320-81042-5), AOC3/AOC8-S6E-0.5 (320-81042-7), AOC3-S7E-0.5 (320-81042-15), (320-81042-A-15-D MS), (320-81042-A-15-E MSD), AOC3-S2H-0.5 (320-81042-35), AOC3-S2F-0.5 (320-81042-37), AOC3-S2F-0.5 DUP (320-81042-39), AOC3-S1F-0.5 (320-81042-40), AOC3-S1G-0.5 (320-81042-42), AOC3-S1H-0.5 (320-81042-44), AOC3-S5H-0.5 (320-81042-46), AOC3-S4H-0.5 (320-81042-48), AOC3-S3H-0.5 (320-81042-50), AOC3-S4I-0.5 (320-81042-52) and AOC3-S5I-0.5 (320-81042-54). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8082: The following samples were diluted due to the nature of the sample matrix: AOC3-S6G-0.5 (320-81042-18), AOC3-S5F-0.5 (320-81042-20), AOC3-S4F-0.5 (320-81042-22), AOC3-S3F-0.5 (320-81042-24), AOC3/AOC8-S3G-0.5 (320-81042-26), AOC3-S4G-0.5 (320-81042-28) and AOC3-S5G-0.5 (320-81042-30). Elevated reporting limits (RLs) are provided.

Method 8082: The continuing calibration verification (CCV) associated with batch 320-544372 recovered above the upper control limit for PCB-1221 and PCB-1254. The samples associated with this CCV were non-detect for all PCB mixtures; therefore, the data have been reported. The associated samples are impacted: AOC3-S6G-0.5 (320-81042-18), AOC3-S5F-0.5 (320-81042-20), AOC3-S4F-0.5 (320-81042-22), AOC3-S3F-0.5 (320-81042-24), AOC3/AOC8-S3G-0.5 (320-81042-26), AOC3-S4G-0.5 (320-81042-28), AOC3-S5G-0.5 (320-81042-30), AOC3-S2G-0.5 (320-81042-33), AOC3-S2H-0.5 (320-81042-35), AOC3-S2F-0.5 (320-81042-37), AOC3-S2F-0.5 DUP (320-81042-39), AOC3-S1F-0.5 (320-81042-40), AOC3-S1G-0.5 (320-81042-42), AOC3-S1H-0.5 (320-81042-44), AOC3-S5H-0.5 (320-81042-46), AOC3-S4H-0.5 (320-81042-48), AOC3-S3H-0.5 (320-81042-50), (CCV 320-544372/4), (LCS 320-541215/2-A), (LCS 320-541228/2-A), (MB 320-541215/1-A) and (MB 320-541228/1-A).

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S6D-0.5 (320-81042-1), AOC3-S5D--0.5 (320-81042-3), AOC3-S5E-0.5 (320-81042-5), AOC3/AOC8-S6E-0.5 (320-81042-7), AOC3-S8E-0.5 (320-81042-9), AOC3-S9E-0.5 (320-81042-12), AOC3-S9E-0.5 DUP (320-81042-13), AOC3-S7E-0.5 (320-81042-15), AOC3-S6F-0.5 (320-81042-16), AOC3-S6G-0.5 (320-81042-18), AOC3-S6G-2 (320-81042-19), AOC3-S5F-0.5 (320-81042-20), AOC3-S4F-0.5 (320-81042-22), AOC3-S4F-2 (320-81042-23), AOC3-S3F-0.5 (320-81042-24), AOC3/AOC8-S3G-0.5 (320-81042-26), AOC3-S4G-0.5 (320-81042-28), AOC3-S5G-0.5 (320-81042-30), AOC3-S2G-0.5 (320-81042-33), AOC3-S2H-0.5 (320-81042-35), AOC3-S2H-2 (320-81042-36), (320-81042-A-36-B MS), (320-81042-A-36-C MSD), AOC3-S2F-0.5 (320-81042-37), AOC3-S2F-0.5 DUP (320-81042-39), AOC3-S1F-0.5 (320-81042-40), AOC3-S1G-0.5 (320-81042-42), AOC3-S1H-0.5 (320-81042-44), AOC3-S5H-0.5 (320-81042-46), AOC3-S4H-0.5 (320-81042-48), AOC3-S3H-0.5 (320-81042-50), AOC3-S4I-0.5 (320-81042-52) and AOC3-S5I-0.5 (320-81042-54). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S6D-2 (320-81042-2), AOC3-S5D-2 (320-81042-4), AOC3-S5E-2 (320-81042-6), AOC3-S8E-2 (320-81042-10), AOC3-S6F-2 (320-81042-17), AOC3-S5F-2 (320-81042-21), AOC3-S3F-2 (320-81042-25), AOC3/AOC8-S3G-2 (320-81042-27), AOC3-S4G-2 (320-81042-29), AOC3-S5G-2 (320-81042-31), AOC3-S5G-2 DUP (320-81042-32), AOC3-S2G-2 (320-81042-34), AOC3-S4I-2 (320-81042-53) and AOC3-S5I-2 (320-81042-55). Elevated reporting limits (RLs) are provided.

Method 8081A: Surrogate recovery for the following samples were outside control limits: AOC3-S5E-2 (320-81042-6), AOC3/AOC8-S6E-2 (320-81042-8), AOC3-S8E-2 (320-81042-10), AOC3-S7E-2 (320-81042-11), AOC3-S9E-2 (320-81042-14), AOC3-S6F-2 (320-81042-17), AOC3/AOC8-S3G-2 (320-81042-27), AOC3-S2F-2 (320-81042-38), AOC3-S1F-2 (320-81042-41), AOC3-S1G-2 (320-81042-43),

Job ID: 320-81042-1 (Continued)

Laboratory: Eurofins TestAmerica, Sacramento (Continued)

AOC3-S1H-2 (320-81042-45) and AOC3-S5I-2 (320-81042-55). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: (320-81042-A-16-C MS), (320-81042-A-16-D MSD), (320-81042-A-18-C MS), (320-81042-A-18-D MSD), (320-81042-A-36-B MS), (320-81042-A-36-C MSD), (320-81042-A-54-C MS) and (320-81042-A-54-D MSD). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8081A: The %RPD between the primary and confirmation column exceeded 40% for Endrin ketone for the following samples: (320-81042-A-16-D MSD) and (320-81042-A-54-D MSD). The results from primary column have been reported and qualified in accordance with the laboratory's SOP.

Method 8081A: The %RPD between the primary and confirmation column exceeded 40% for Endosulfan I, Endosulfan II, Endrin ketone, Dieldrin, cis-Chlordane, Aldrin, Endrin and 4,4'-DDT for the following samples: (320-81042-A-18-C MS), (320-81042-A-18-D MSD) and (320-81042-A-36-B MS). The results from primary column have been reported and qualified in accordance with the laboratory's SOP. 320-81042-18[MS] for Endosulfan I, Endosulfan II and Endrin ketone Dieldrin. 320-81042-18[MSD] for Endosulfan I, Endosulfan II, Endrin ketone, Dieldrin, cis-Chlordane, Aldrin, Endrin, and 4,4'-DDT. 320-81042-36[MS] for Endosulfan I.

Method 8081A: The method blank for preparation batch 320-541292 and analytical batch 320-546025 contained Heptachlor above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-539068 and analytical batch 320-539464 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-539068 and analytical batch 320-539835 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B: The serial dilution performed for the following samples associated with batch 320-539464 was above the control limits of 10% for the following analytes: Barium (13%). The associated sample is: (320-81042-A-1-A SD ^5).

Method 6010B: The serial dilution performed for the following samples associated with batch 320-539835 was above the control limits of 10% for the following analytes: Zinc (11%). The associated sample is: (320-81042-A-1-A SD ^5)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with method 8081A aqueous in preparation batch 320-539998.

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with method 8082 aqueous in preparation batch 320-539996.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

320-81042 Chain of Custody

Preservation Used 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.
☐Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐Return to Client ☐Disposal by Lab ☐Archive for _____ Months

Special Instructions/QC Requirements & Comments:
Hold samples for additional analysis

Custody Seals Intact: ☐ Yes ☐ No | Custody Seal No. | Cooler Temp (°C): Obs'd._____ Corr'd._____ Therm ID No._____

COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-81042-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Revision
The report being provided is a revision of the original report sent on 11/23/2021. The report (revision 1) is being revised due to: Report smaples to MDL or EDL for 8290A per client request. Total TEQ also added.

Receipt
The samples were received on 10/29/2021 2:21 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.8º C, 1.0º C and 1.8º C.

Dioxin
Method 8290A: The scheduled automatic ending resolution check did not print due to loss of communication to the SIOS data acquisition computer. Upon arrival to the laboratory, the analyst rebooted the SIOS and performed a manual ending resolution check. Although this ending resolution check was performed past the 12 hour analytical clock, all associated samples were analyzed within the 12 hour analytical clock and the resolution check indicates the instrument maintained greater than 10,000 resolution. No further corrective action was taken. AOC3/AOC8-S6E-0.5 (320-81042-7), (CCV 320-544985/17) and (CCV 320-544985/2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-81042-2

Laboratory: Eurofins TestAmerica, Sacramento

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	2897	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
TEQ		Solid	Total Dioxin/Furan TEQ
TEQ		Water	Total Dioxin/Furan TEQ

Method Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-81042-2

Method	Method Description	Protocol	Laboratory
8290A	Dioxins and Furans (HRGC/HRMS)	SW846	TAL SAC
TEQ	Total TEQ Calculation	Lab SOP	TAL SAC
8290	Separatory Funnel (Liquid-Liquid) Extraction of Dioxins and Furans	SW846	TAL SAC
8290	Soxhlet Extraction of Dioxins and Furans	SW846	TAL SAC

Protocol References:

Lab SOP = Laboratory Standard Operating Procedure

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job ID: 320-81042-3

Qualifiers

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 320-81042-3

Laboratory: Eurofins TestAmerica, Sacramento

Narrative

Job Narrative
320-81042-3

Comments
No additional comments.

Revision
The report being provided is a revision of the original report sent on 11/23/2021. The report (revision 1) is being revised due to: Report samples to MDL per client request.

Receipt
The samples were received on 10/29/2021 2:21 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.8º C, 1.0º C and 1.8º C.

Metals
Method 6010B: The matrix spike duplicate (MSD) recoveries for preparation batch 320-543917 and analytical batch 320-544802 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job ID: 320-81044-1

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
P	The %RPD between the primary and confirmation column/detector is >40%. The higher value has been reported
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 320-81044-1

Laboratory: Eurofins TestAmerica, Sacramento

No additional comments.

Revision
The report being provided is a revision of the original report sent on 11/26/2021. The report (revision 1) is being revised due to: Report samples to MDL per client request.

Receipt
The samples were received on 10/29/2021 2:21 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.8º C, 1.0º C and 1.8º C.

GC Semi VOA
Method 8082: Surrogate recovery for the following samples were outside control limits: AOC3-S6I-0.5-DUP (320-81044-6), AOC3-S8F-0.5 (320-81044-8), AOC3-S7I-0.5 (320-81044-29), (320-81044-A-29-D MS) and (320-81044-A-29-E MSD). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8082: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-541557 and analytical batch 320-543860 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8082: The following sample was diluted due to the nature of the sample matrix: AOC3-S2I-0.5 (320-81044-3). Elevated reporting limits (RLs) are provided.

Method 8081A: Surrogate recovery for the following samples were outside control limits: AOC3-S1I-2 (320-81044-2), AOC3-S2I-2 (320-81044-4), AOC3-S6I-2 (320-81044-7), AOC3-S8F-2 (320-81044-9), AOC3-S9G-2 (320-81044-11), AOC3-S7G-2 (320-81044-17), AOC3/AOC8-S6H-2 (320-81044-19), AOC3-S7H-2 (320-81044-21), AOC3-S8H-2 (320-81044-23), AOC3/AOC8-S9I-2 (320-81044-26), AOC3-S8H-2 (320-81044-28), AOC3-S7I-2 (320-81044-30) and (320-81044-A-17-B MS). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S7F-2 (320-81044-13) and AOC3-S8G-2 (320-81044-15). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S1I-0.5 (320-81044-1), AOC3-S2I-0.5 (320-81044-3), AOC3-S6I-0.5 (320-81044-5), AOC3-S6I-0.5-DUP (320-81044-6), AOC3-S8F-0.5 (320-81044-8), AOC3-S7F-0.5 (320-81044-12), AOC3-S8G-0.5 (320-81044-14), AOC3-S7G-0.5 (320-81044-16), AOC3/AOC8-S6H-0.5 (320-81044-18) and AOC3-S8H-0.5 (320-81044-22). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3-S9G-0.5 (320-81044-10) and AOC3-S7H-0.5 (320-81044-20). Elevated reporting limits (RLs) are provided.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: AOC3/AOC8-S9I-0.5 (320-81044-24), AOC3/AOC8-S9I-0.5 DUP (320-81044-25), AOC3-S8H-0.5 (320-81044-27) and AOC3-S7I-0.5 (320-81044-29). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8081A: The following samples were diluted due to the nature of the sample matrix: (320-81044-A-27-C MS) and (320-81044-A-27-D MSD). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Job ID: 320-81044-1 (Continued)

Laboratory: Eurofins TestAmerica, Sacramento (Continued)

Method 8081A: The %RPD between the primary and confirmation column exceeded 40% for trans-Chlordane, beta-BHC, Endosulfan I and 4,4'-DDT for the following sample (320-81044-A-27-C MS) and (320-81044-A-27-D MSD) . The primary results have been reported and qualified in accordance with the laboratory's SOP. 320-81044-27[MS] for trans-Chlordane, beta-BHC and Endosulfan I. 320-81044-27[MSD] for Endosulfan I and 4,4'-DDT.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 320-539936 and analytical batch 320-540856 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with method 8081A aqueous in preparation batch 320-540231.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.6
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-81044-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 320-81044-2

Laboratory: Eurofins TestAmerica, Sacramento

Narrative

Comments
No additional comments.

Revision
The report being provided is a revision of the original report sent on 11/23/2021. The report (revision 1) is being revised due to: Report samples to MDL or EDL for 8290A per client request. Total TEQ also added.

Receipt
The samples were received on 10/29/2021 2:21 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.8º C, 1.0º C and 1.8º C.

Dioxin
Method 8290A: The scheduled automatic ending resolution check did not print due to loss of communication to the SIOS data acquisition computer. Upon arrival to the laboratory, the analyst rebooted the SIOS and performed a manual ending resolution check. Although this ending resolution check was performed past the 12 hour analytical clock, all associated samples were analyzed within the 12 hour analytical clock and the resolution check indicates the instrument maintained greater than 10,000 resolution. No further corrective action was taken. AOC3/AOC8-S9I-0.5 (320-81044-24), AOC3/AOC8-S9I-0.5 DUP (320-81044-25), (CCV 320-544985/17) and (CCV 320-544985/2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-81044-2

Laboratory: Eurofins TestAmerica, Sacramento

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	2897	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
TEQ		Solid	Total Dioxin/Furan TEQ
TEQ		Water	Total Dioxin/Furan TEQ

Method Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-81044-2

Method	Method Description	Protocol	Laboratory
8290A	Dioxins and Furans (HRGC/HRMS)	SW846	TAL SAC
TEQ	Total TEQ Calculation	Lab SOP	TAL SAC
8290	Separatory Funnel (Liquid-Liquid) Extraction of Dioxins and Furans	SW846	TAL SAC
8290	Soxhlet Extraction of Dioxins and Furans	SW846	TAL SAC

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Revision
The report being provided is a revision of the original report sent on 11/22/2021. The report (revision 1) is being revised due to: Report samples to MDL per client request.

Receipt
The samples were received on 10/29/2021 2:21 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.8º C, 1.0º C and 1.8º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subject: Preliminary Eurofins TestAmerica report files from 320-81044-1 Cole School PEA

Hello,

Attached please find the report files for job 320-81044-1; Cole School PEA

Please feel free to contact me if you have any questions.

Thank you.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*3	ISTD response or retention time outside acceptable limits.
B	Compound was found in the blank and sample.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
P	The %RPD between the primary and confirmation column/detector is >40%. The higher value has been reported
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 320-81134-1

Laboratory: Eurofins TestAmerica, Sacramento

Revision
The report being provided is a revision of the original report sent on 11/24/2021. The report (revision 2) is being revised due to: Correct sample ID for sample 12.

Report revision history
Revision 1 - 12/15/2021 - Reason - Report samples to MDL per client request.

Receipt
The samples were received on 11/2/2021 12:48 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.0º C.

Receipt Exceptions
Only 2 1 liter ambers received for the following methods: 8081, 8082, 8015 D/M and 8270C SIM. Not enough sample volume for all methods. PM confirmed with client on methods to analyze.

GC/MS VOA
Method 8260B/CA_LUFTMS: The ending CCV for batch 540739 (CCV 320-540739/32) was outside acceptance limits with a low bias. Two consecutive CCVs (CCV 320-540739/34, CCV 320-540739/35) were analyzed the next morning, outside the 12 hour tune window to demonstrate that the instrument was still in calibration. AOC4-S1-5 (320-81134-8), AOC4-S1-10 (320-81134-9), AOC4-S1-15 (320-81134-10), (CCV 320-540739/32), (CCV 320-540739/34) and (CCV 320-540739/35).

Method 8260B: Internal standard (ISTD) response for Dioxane-d8 for the following samples in analytical batch 320-541535 was outside acceptance criteria: (LCSD 320-541535/5). This ISTD does not correspond to any of the requested target compounds reported from this analytical batch; therefore, the data have been reported.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with analytical batch 320-541535.

Method 8260B: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-539553 and analytical batch 320-541763.

Method 8260B: Internal standard (ISTD) response for the following sample was outside control limits: AOC4-S1-15 (320-81134-10). The sample(s) was re-extracted and/or re-analyzed and ISTD response was outside control limits.

Method 8260B: Internal standard (ISTD) response for the following sample was outside control limits: AOC4-S1-15 (320-81134-10). The sample(s) was re-analyzed and ISTD response was outside control limits. The original analysis has been reported.

Method 8260B/CA_LUFTMS: The ending CCV for batch 541762 (CCV 320-541762/30) was outside acceptance limits with a low bias. Two consecutive CCVs (CCV 320-541762/34, CCV 320-541762/35) were analyzed the next morning, outside the 12 hour tune window to demonstrate that the instrument was still in calibration. AOC4-S1-5 (320-81134-8), AOC4-S1-10 (320-81134-9), AOC4-S1-15 (320-81134-10), AOC4-S1-5 DUP (320-81134-11), AOC9-SG3-5 (320-81134-12) and (CCV 320-541762/30).

Method 8260B: The laboratory control sample (LCS) for analytical batch 320-542727 recovered outside control limits for the following analytes: N-Propylbenzene, tert-Butylbenzene and Vinyl chloride. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260B: The laboratory control sample duplicate (LCSD) for analytical batch 320-542727 recovered outside control limits for the following analytes: N-Propylbenzene, tert-Butylbenzene and sec-Butylbenzene. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Job ID: 320-81134-1 (Continued)

Laboratory: Eurofins TestAmerica, Sacramento (Continued)

Method 8260B/CA_LUFTMS: The ending CCV for batch 542094 (CCV 320-542094/32) was outside acceptance limits with a low bias. Two consecutive CCVs (CCV 320-542094/34, CCV 320-542094/35) were analyzed the next morning, outside the 12 hour tune window to demonstrate that the instrument was still in calibration. AOC4-S1-5 DUP (320-81134-11), AOC9-SG3-5 (320-81134-12), AOC9-SG3-10 (320-81134-13), AOC9-SG4-5 (320-81134-14), AOC9-SG4-10 (320-81134-15), AOC9-S2-5 (320-81134-18), AOC9-S2-10 (320-81134-19), (CCV 320-542094/32), (CCV 320-542094/34) and (CCV 320-542094/35).

Method 8260B: Reanalysis of the following sample(s) was performed outside of the analytical holding time. The sample had low internal standard recoveries in original analysis, it was then reanalyzed within holding time but no reportable data was generated due to vial leakage. The sample was then re-prepped and reanalyzed out of the analytical holding time: AOC4-S1-10 (320-81134-9).

Method 8260B/CA_LUFTMS: Reanalysis of the following sample was performed outside of the analytical holding time. The sample did not generate a reportable result in original and second analysis within hold due to vial leakage. They were then re-prepped and reanalyzed out of the analytical holding time and the out of hold result has been reported: AOC4-S1-5 (320-81134-8).

Method 8260B: Reanalysis of the following sample was performed outside of the analytical holding time. The samples did not generate a reportable result in original and second analysis within hold due to vial leakage. They were then re-prepped and reanalyzed out of the analytical holding time and the out of hold results has been reported: AOC4-S1-5 (320-81134-8).

Method 8260B: The method blank for analytical batches 320-542727, 320-542091, 320-540740, and 320-541763 contained Naphthalene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8015B: Surrogate recovery for the following sample was outside control limits: AOC6-S9B-4 (320-81134-20). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8015B: The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: AOC4-S1-5 (320-81134-8), AOC4-S1-5 DUP (320-81134-11), AOC9-S2-10 (320-81134-19) and AOC6-S9B-4 (320-81134-20).

Method 8015B: The following samples contained a hydrocarbon pattern in the diesel range; however, the elution pattern was later than the typical diesel fuel pattern used by the laboratory for quantitative purposes: AOC4-S1-10 (320-81134-9), AOC9-SG3-5 (320-81134-12), AOC9-SG3-10 (320-81134-13), AOC9-SG4-10 (320-81134-15) and AOC9-S2-5 (320-81134-18).

Method 8082: Surrogate recovery for the following sample was outside control limits: AOC6-S9B-4 (320-81134-20). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with method 8082 aqueous in preparation batch 320-540241.

Method 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with method 8015B_DRO/8015B_DRO_DOD5 aqueous inpreparation batch 320-540321.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-81134-1

Laboratory: Eurofins TestAmerica, Sacramento

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	2897	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
8015B	3510C	Water	Motor Oil Range Organics [C28-C40]
8015B	3550B	Solid	Motor Oil Range Organics [C24-C36]

Laboratory: Eurofins Calscience LLC

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
California	State	2944	09-30-22

Preservation Used: 1= Ice, 2= HCl, 3= H_2SO_4; 4=HNO_3, 5=NaOH, 6= Other _____

Possible Hazard Identification
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☐Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☐Disposal by Lab ☐Archive for _____ Months

Special Instructions/QC Requirements & Comments.

Hold samples for additional analysis

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-81134-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Revision
The report being provided is a revision of the original report sent on 11/23/2021. The report (revision 1) is being revised due to: Report samples to MDL or EDL for 8290A per client request. Total TEQ also added.

Receipt
The samples were received on 11/2/2021 12:48 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.0º C.

Dioxin
Method 8290A: The following sample exhibited elevated noise or matrix interferences for one or more analytes causing elevation of the detection limit (EDL): (LCS 320-539562/2-A) . The reporting limit (RL) for the affected analytes has been raised to be equal to the EDL, and a "G" qualifier applied.

Method 8290A: The bracketing continuing calibration verification (CCV) associated with batch 320-544400 has analytes with percent difference values that are between the method criteria of 20% to 25% deviation from the initial calibration curve. Per method guidelines, an average relative response factor (RRF) is calculated from the bracketing CCV and is used to quantitate any positive results in the associated samples for the affected analytes.

Method 8290A: The scheduled automatic ending resolution check did not print due to loss of communication to the SIOS data acquisition computer. Upon arrival to the laboratory, the analyst rebooted the SIOS and performed a manual ending resolution check. Although this ending resolution check was performed past the 12 hour analytical clock, all associated samples were analyzed within the 12 hour analytical clock and the resolution check indicates the instrument maintained greater than 10,000 resolution. No further corrective action was taken. AOC1-S9A-0.5 (320-81134-1), AOC6-S9B-4 (320-81134-20), (CCV 320-544985/17) and (CCV 320-544985/2).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-81134-2

Laboratory: Eurofins TestAmerica, Sacramento

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
California	State	2897	01-31-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
TEQ		Solid	Total Dioxin/Furan TEQ

Method Summary

Client: Ninyo & Moore
Project/Site: Cole School PEA

Job ID: 320-81134-2

Method	Method Description	Protocol	Laboratory
8290A	Dioxins and Furans (HRGC/HRMS)	SW846	TAL SAC
TEQ	Total TEQ Calculation	Lab SOP	TAL SAC
8290	Soxhlet Extraction of Dioxins and Furans	SW846	TAL SAC

Protocol References:

If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
Unconfirmed	☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months

APPENDIX C

Data Validation Tables

QUALITY ASSUANCE/QUALITY CONTROL – DATA VALIDATION

Ninyo & Moore has prepared this data validation memorandum to summarize the findings of a Level II data validation for analytical results of soil, groundwater, and soil vapor samples collected during the Preliminary Environmental Assessment conducted at the Central Administration Center at Cole Campus located at 1011 Union Street, Oakland, California.

The analytical data obtained from the soil and soil vapor sampling activities were assessed for quality assurance/quality control (QA/QC) to ensure the data met the requirements for its intended use. QA/QC procedures were implemented during the sampling to assure the project's data quality objectives were achieved, so that the sample, analysis and reporting activities provide data that are accurate, precise, representative and legally defensible.

This project's QA/QC tasks included maintaining appropriate field documentation, sample collection following standard environmental sampling and handling methodology, collecting equipment blanks, field duplicates, and analyzing trip blanks.

Ninyo & Moore reviewed TestAmerica Laboratories Inc. (TestAmerica) and Torrent Laboratory Inc. (Torrent) laboratory analytical reports in accordance with the U.S. EPA guidance documents, National Functional Guidelines for Superfund Organic and Inorganic Methods Data Review (U.S. EPA, 2017a and U.S. EPA, 2017b). A summary of the review is provided in Table C-1. All samples were submitted in accordance with the U.S. EPA analytical procedures without significant analytical testing issues.

Two samples analyzed for VOCs were analyzed one day outside of holding time. The project samples were all non-detect and have been qualified with a "UJ" flag. For a few analyses, sample dilution was required that resulted in elevated reporting limits.

TestAmerica and Torrent prepared and/or analyzed method blank (MB) samples, laboratory control samples/laboratory control sample duplicates (LCS/LCSD), matrix spikes/matrix spike duplicates (MS/MSD) and duplicate samples in accordance with their internal QC procedures. No significant issues were identified by the laboratories on their internal QC samples.

One batch LCS/LCSD exceeded acceptance limits. Project samples that were non-detect were not qualified. Field duplicates were reported as a relative percent difference (RPD) between duplicate and original samples in tables C-3 through C-7.

Concentrations were detected in 20 MBs during this PEA. Of these detections, 17 batches did not have concentrations detected in field samples or the concentrations in the field samples were greater than 10 times the concentration detected in the MB, so they were not qualified. Concentrations that were detected in the MB at a concentration less than 10 times the concentration detected in the field sample, concentrations were qualified with a "J" flag. If the concentrations that were detected in the MB at a concentration less than 10 times the concentration detected in the field sample, and both concentrations were detected between the reporting limit (RL) and method detection limit (MDL), concentrations were qualified with a "U" flag.

Concentrations were not detected in the trip blank (TB) sample or equipment blank samples (EB). TB and EB results are presented in table C-2.

In accordance with the QA/QC review, some analytical results are qualified as estimated concentrations as noted in this section and Table C-1. These estimated analytical results are denoted with a "J" flag on Table 1 through Table 7. No data were rejected during this data validation.

AOC1-S1-0.5 DUP, AOC1-S2-0.5	P = The %RPD between the primary and confirmation column/detector is >40%. The higher value has been reported	None	PCB-1254, dioxin/furans	Surrogate and MS/MSD within project control limits. No qualifiers.
AOC4-S1-5, AOC4-S1-10	H = Sample was prepped or analyzed beyond the specified holding time	U	VOCs, TPHg	Samples were analyzed 1 day past hold time. Field samples were nondetect and qualified
AOC4-S1-5, AOC4-S1-10, AOC4-S1-15, AOC4-S1-5 DUP, AOC9-SG3-5, AOC9-SG3-10, AOC9-SG4-5, AOC9-SG4-10, AOC9-S2-5, AOC9-S2-10, AOC1-S9A-0.5, AOC1-S9A-0.5 DUP, AOC1-S9A-2, AOC6-S9B-4	B = Compound was found in the blank and sample.	U, None	metals, dioxin/furans	If concentrations detected in the project sample are less than 10x of those concentrations detected in the MB, project samples are qualified. Detections qualified with a U if they are detected between the RL and the MDL
AOC4-S1-15	*3 = ISTD response or retention time outside acceptable limits.	None	VOCs	The sample(s) was re-analyzed and ISTD response was outside control limits. The original analysis has been reported.no concentrations detected above the RLs in the field samples. No qualifier.
AOC9-SG3-10	* = LCS or LCSD is outside acceptance limits.	None	VOCs	LCS exceeds the upper range of the percent recovery limits, no concentrations detected above the RLs in the field samples. No qualifier.
AOC1-S9A-0.5, AOC1-S1-0.5 DUP, AOC1-S9A-2, AOC6-S9B-4	q = The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.	J	dioxin/furans	Results are estimated. Detections are qualified.
Batch 541574	Compounds were found in the method blank and sample.	None	metals	Concentrations detected in the project samples are greater than 10x the concentrations detected in the MB. No qualifiers.
Batch 542727	LCS or LCSD is outside acceptance limits.	None	VOCs	LCS/LCSD recoveries were above the upper range. Project samples were nondetect. No qualifiers.
Torrent: 2111530A				
AOC5-S7-0.5, AOC5-S7-2.0, AOC5-S7-5.0 Dup	E = Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument	J	dioxin/furans	Values reported with an E qualifier should be considered as estimated.
Torrent: 2111198				
AOC5-S7-0.5, AOC5-S7-2.0, AOC5-S7-5.0 Dup	E = Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument	J	dioxin/furans	Values reported with an E qualifier should be considered as estimated.

Table C1. Summary of Data Review

Sample or Batch Identification	Laboratory Data Flag / Comments	J Flag	Analyte(s)	Notes

Notes:

VOCs- volatile organic compounds, analyzed by EPA Method 8260B

OCPs - organochlorine pesticides, analyzed by EPA Method 8270C SIM

PCBs - polychlorinated biphenyls, analyzed by EPA Method 8082

TPHd and TPHmo - TPH as diesel and as motor oil, analyzed by EPA Method 8015B

TPHg - total petroleum hydrocarbons as gasoline, analyzed by EPA Method 8260B

Metals analyzed by Environmental Protection Agency (EPA) Method 6010B; mercury analyzed by EPA Method 7471A

Data validation conducted using the EPA August 2016 National Functional Guidelines for Superfund Organic and Inorganic Methods Data Review

RL - reporting limit

MDL - method detection limit

%RPD - percent relative difference

MB - method blank

EB - equipment blank

TB - trip blank

RPD - relative percent difference

MS/MSD - matrix spike/matrix spike duplicate

LCS/LCSD - laboratory control spike, laboratory control spike duplicate

CCB - continuing calibration blank

CCV - continuing calibration verification

BS - blank spike

J = concentration is considered estimated

UJ - concentration not detected, estimated detection limit

Table C-2. Equipment Blank and Trip Blank Detections

Sample ID	Date Collected	Arsenic	Lead	Other Metals	OCPS	PCBS	PAHs	TPHd and TPHmo	VOCs	SVOCs	Dioxins/ Furans
		(mg/L)			µg/L						pg/L

Notes:

-- - not analyzed

µg/L – milligrams per liter

mg/L micrograms per liter

pg/L picograms per liter

ND - not detected above the labratory reporting limit

ND<X – analyte not detected at or above laboratory reporting limit X

Arsenic, lead and other metals analyzed by Environmental Protection Agency (EPA) Method 6010B

Dioxions/Furans analyzed by EPA Method 8290A.

OCPs - organochlorine pesticides analyzed using EPA Method 8081A

PCBs - polychlorinated biphenyls, analyzed by EPA Method 8082

PAHs - polyaromatic hydrocarbons, analyzed by Environmental Protection Agency (EPA) Method 8270C SIM

TPHd - total petroleum hydrocarbons as diesel analyzed by EPA Method 8015B.

TPHmo- total petroleum hydrocarbons as motor oil analyzed by EPA Method 8015B.

VOCs- volatile organic compounds, analyzed by EPA Method 8260B

ND<X – analyte not detected at or above laboratory reporting limit X

Bold - indicates the RPD exceeds the project limit of 100%

Table C-6. RPD Calculations for Duplicate TPHs, VOCs, and PAHs Soil Samples

Sample ID	Depth (feet bgs)	Date Collected	TPHd	TPHmo	VOCs	PAHs
			(mg/Kg)			
AOC4-S1-5	5.0	11/01/21	1.3	ND<5	ND	ND
AOC4-S1-5 DUP	5.0	11/01/21	1.5	5.8	ND	ND
Relative Percent Difference			14%	NA	NA	NA

Notes:

TPH - total petroleum hydrocarbons

TPHd - TPH as diesel, analyzed by Environmental Protection Agency (EPA) Method 8015B

TPHmo - TPH as motor oil, analyzed by EPA Method 8015B

VOCs- volatile organic compounds, analyzed by EPA Method 8260B

PAH - polycyclic aromatic hydrocarbons analyzed using United States Environmental Protection Agency (US EPA) Method 8270C selective ion measurement (SIM)

bgs – below ground surface

mg/Kg – milligrams per kilogram

ND - Not detected

ND<X – analyte not detected at or above laboratory reporting limit X

-- - not analyzed

NA - not applicable

Bold - indicates the RPD exceeds the project limit of 100%

Table C-7. RPD Calculations for Duplicate Fixed Gases and VOCs in Soil Vapor Samples

Sample ID	Date Collected	Depth (feet bgs)	VOCs													Fixed Gases			
			Acetone	2-Butanone (Methyl Ethyl Ketone)	Carbon Disulfide	Chloroform	Cyclohexane	cis-1,2-Dichloroethene	Ethanol	Hexane	m,p-Xylene	2,2,4-Trimethylpentane	2-Propanol	Toluene	All Other VOCs	Helium	Methane	Carbon Dioxide	Oxygen
			(µg/m^3)													%			
SG1-5	11/15/21	5.0	ND<25	ND<12	ND<13	15	ND<3.6	ND<4.1	ND<20	ND<3.7	ND<4.5	ND<4.8	ND<10	ND<3.9	ND	ND<0.10	ND<0.00021	2.3	18
SG1-5 DUP	11/15/21	5.0	ND<24	ND<12	73	14	ND<3.6	ND<4.1	ND<20	ND<3.6	ND<4.5	ND<4.8	23	ND<3.9	ND	ND<0.10	ND<0.00021	2.3	18
Relative Percent Difference			NA	NA	**>100%**	7%	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	0%	0%

Notes:

Fixed gases analyzed by American Society for Testing Materials (ASTM) Method D 1946-90

VOCs - Volatile organic compounds, analyzed by Environmental Protection Agency EPA TO-15

% - percent

µg/m³ - micrograms per meters cubed

bgs - below ground surface

ND - not detected

ND<X – analyte not detected at or above laboratory reporting limit X

NA - not applicable

Bold - indicates the RPD exceeds the project limit of 100%

Confidence Coefficient	95%
Number of Bootstrap Operations	2000

Arsenic (mg/kg)

General Statistics

Total Number of Observations	124	Number of Distinct Observations	61
Number of Detects	105	Number of Non-Detects	19
Number of Distinct Detects	59	Number of Distinct Non-Detects	5
Minimum Detect	1.9	Minimum Non-Detect	1.9
Maximum Detect	45	Maximum Non-Detect	2.6
Variance Detects	27.13	Percent Non-Detects	15.32%
Mean Detects	6.197	SD Detects	5.208
Median Detects	4.4	CV Detects	0.841
Skewness Detects	4.37	Kurtosis Detects	29.14
Mean of Logged Detects	1.622	SD of Logged Detects	0.595

Normal GOF Test on Detects Only

Shapiro Wilk Test Statistic	0.663	**Normal GOF Test on Detected Observations Only**
5% Shapiro Wilk P Value	0	Detected Data Not Normal at 5% Significance Level
Lilliefors Test Statistic	0.205	**Lilliefors GOF Test**
5% Lilliefors Critical Value	0.0867	Detected Data Not Normal at 5% Significance Level

Detected Data Not Normal at 5% Significance Level

Kaplan-Meier (KM) Statistics using Normal Critical Values and other Nonparametric UCLs

KM Mean	5.552	KM Standard Error of Mean	0.452
KM SD	5.005	95% KM (BCA) UCL	6.385
95% KM (t) UCL	6.301	95% KM (Percentile Bootstrap) UCL	6.333
95% KM (z) UCL	6.295	95% KM Bootstrap t UCL	6.568
90% KM Chebyshev UCL	6.907	95% KM Chebyshev UCL	7.521
97.5% KM Chebyshev UCL	8.373	99% KM Chebyshev UCL	10.05

Gamma GOF Tests on Detected Observations Only

A-D Test Statistic	2.425	**Anderson-Darling GOF Test**
5% A-D Critical Value	0.761	Detected Data Not Gamma Distributed at 5% Significance Level
K-S Test Statistic	0.146	**Kolmogorov-Smirnov GOF**
5% K-S Critical Value	0.089	Detected Data Not Gamma Distributed at 5% Significance Level

Detected Data Not Gamma Distributed at 5% Significance Level

Gamma Statistics on Detected Data Only

k hat (MLE)	2.632	k star (bias corrected MLE)	2.563
Theta hat (MLE)	2.354	Theta star (bias corrected MLE)	2.418
nu hat (MLE)	552.7	nu star (bias corrected)	538.2
Mean (detects)	6.197		

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)			
For such situations, GROS method may yield incorrect values of UCLs and BTVs			
This is especially true when the sample size is small.			
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates			
Minimum	0.01	Mean	5.271
Maximum	45	Median	3.9
SD	5.265	CV	0.999
k hat (MLE)	0.721	k star (bias corrected MLE)	0.709
Theta hat (MLE)	7.312	Theta star (bias corrected MLE)	7.437
nu hat (MLE)	178.8	nu star (bias corrected)	175.8
Adjusted Level of Significance (β)	0.0481

DL/2 is not a recommended method, provided for comparisons and historical reasons			
Nonparametric Distribution Free UCL Statistics			
Data do not follow a Discernible Distribution at 5% Significance Level			
Suggested UCL to Use			
95% KM (Chebyshev) UCL	7.521		
Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.			
Recommendations are based upon data size, data distribution, and skewness.			
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).			
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)			
For such situations, GROS method may yield incorrect values of UCLs and BTVs			
This is especially true when the sample size is small.			
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates			
Minimum	0.01	Mean	120.7
Maximum	990	Median	60

Re: **Cole Administration Building**
1011 Union Street
Oakland, CA 94607

EXECUTIVE SUMMARY

The Cole Administration Building, located at 1011 Union Street Oakland, CA 94607 is a 2.57-acre lot that was previously paved over and served as an elementary school. The Cole Administration Building project reduces the stormwater impact and has been designed in accordance with the State Water Resource Control Board and local NPDES Provision C.3 Technical Guidelines regarding post-construction stormwater management.

Stormwater runoff is directed into five bioretention planters which will serve both as stormwater detention and treatment prior to discharge to the City of Oakland's storm drain system. Bioretention sizing calculations may be found in Attachment A and B. The location of drainage features including bioretention basins may be found in Attachment C.

The project complies with regional SFRWQCB and has completed the Department of State Architect's (DSA) plan check process. As DSA is the authority of the project the district need not enter into a maintenance agreement with the City of Oakland.

Worksheet for Calculating the Water Quality Design Volume (80 percent capture method)

Instructions: After completing Section 1, make a copy of this Excel file for each Drainage Management Area within the project. Enter information specific to the project and DMA in the cells shaded in yellow. Cells shaded in light blue contain formulas and values that will be automatically calculated.

1.0 Project Information

1-1	Project Name:		
1-2	City application ID:		
1-3	Site Address or APN:		
1-4	Tract or Parcel Map No:		
1-5	Site Mean Annual Precip. (MAP)[1]	**19.0**	**Inches**

The calculations presented here are based on the 80% capture method of sizing **volume-based treatment measures** provided in the Clean Water Program Alameda County C.3 Technical Guidance, v. 4.0. The steps presented below are explained in Chapter 5, Section 5.1 of the guidance manual, applicable portions of which are included in this file, in the tab called "Guidance from Chapter 5".

Refer to the Mean Annual Precipitation Map in Appendix D of the C.3 Technical Guidance to determine the MAP, in inches, for the site. Click here for map

1-6 Applicable Rain Gauge[2]: **Oakland Airport**

Enter "Oakland Airport" if the site MAP is 16.4 inches or greater. Enter "San Jose" if the site MAP is less than 16.4 inches.

MAP adjustment factor is automatically calculated as: **1.04**

(The "Site Mean Annual Precipitation (MAP)" is divided by the MAP for the applicable rain gauge, showin in Table 5.2, below.)

2.0 Calculate Percentage of Impervious Surface for Drainage Management Area (DMA)

2-1 Name of DMA: **DMA 1**

For items 2-2 and 2-3, enter the areas in square feet for each type of surface within the DMA.

	Type of Surface	Area of surface type within DMA (Sq. Ft)	Adjust Pervious Surface	Effective Impervious Area
2-2	Impervious surface	**583**	**1.0**	**583**
2-3	Pervious service	**1,431**	**0.1**	**143**
	Total DMA Area (square feet) =	**2,014**		

2-4 ***Total Effective Impervious Area (EIA)*** **726** **Square feet**

Note:
DMA 1 exceeds 2:1 pervious to impervious ratio and therefore is self-treating. No Bioretention needed.

3.0 Calculate Unit Basin Storage Volume in Inches

Table 5-2: Unit Basin Storage Volumes (in inches) for 80 Percent Capture Using 48-Hour Drawdowns

		Unit Basin Storage Volume (in) for Applicable Runoff Coefficients
Applicable Rain Gauge	**Mean Annual Precipitation (in)**	**Coefficient of 1.00**
Oakland Airport	18.35	0.67
San Jose	14.4	0.56

3-1 ***Unit basin storage volume from Table 5.2:*** **0.67** **Inches**

(The coefficient for this method is 1.00, due to the conversion of any landscaping to effective impervious area)

3-2 ***Adjusted unit basin storage volume:*** **0.69** **Inches**

(The unit basin storage volume is adjusted by applying the MAP adjustment factor.)

3-3 ***Required Capture Volume (in cubic feet):*** **42** **Cubic feet**

(The adjusted unit basin sizing volume [inches] is multiplied by the size of the DMA and converted to feet)

3-4 ***To size an infiltration trench, enter the surface area available:*** **Square feet**

3-5 ***Required depth of infiltration trench, given the surface area available (in 3-4):*** **Feet**

(Assumes 35% void space in rectangular trench with vertical sides.)
(Note: Infiltration trench depths are typically between 3 and 8 feet.)

Worksheet for Calculating the Water Quality Design Volume (80 percent capture method)

Instructions: After completing Section 1, make a copy of this Excel file for each Drainage Management Area within the project. Enter information specific to the project and DMA in the cells shaded in yellow. Cells shaded in light blue contain formulas and values that will be automatically calculated.

Drainage Management Area 3

Description	Porosity	Depth(ft)	Area(sf)	Volume Provided(cf)	Volume Required(cf)
Ponding		0.5	860	430	
Planter Media	0.25	1.5	860	323	
Rock	0.35	1	860	301	
				1054	1048

Drainage Management Area 4

Description	Porosity	Depth(ft)	Area(sf)	Volume Provided(cf)	Volume Required(cf)
Ponding		1	510	510	
Planter Media	0.25	1.5	510	191	
Rock	0.35	1	510	179	
				880	878

Drainage Management Area 5

Description	Porosity	Depth(ft)	Area(sf)	Volume Provided(cf)	Volume Required(cf)
Ponding		1	1070	1070	
Planter Media	0.25	1.5	1070	401	
Rock	0.35	1	1070	375	
				1846	1833

Total Bioretention Area =	3274
Total Required Capture Volume =	5160
Total Provided Capture Volume=	5218

Notes:

1. Required capture volume per Alameda County C.3 Technical Guidance V4.0 worksheet for Calculation the Water Quality Design Volume.

PEDESTRIAN CONCRETE
4.0" (3000 PSI) CONCRETE W / #3 @ 18" O.C. EA WAY OVER 4.0" CLASS II AB OVER 8" NATIVE MATERIAL SCARIFIED AND COMPACTED TO 90% RELATIVE COMPACTION AT 2% ABOVE OPTIMUM PER THE PROJECT'S GEOTECHNICAL REPORT. INSTALL CONCRETE JOINTS PER DETAIL 3/C-107. STANDARD GREY COLOR CONCRETE, MEDIUM BROOM FINISH.

DECORATIVE CONCRETE BANDING
4.0" (3000 PSI) CONCRETE W / #3 @ 18" O.C. EA WAY OVER 4.0" CLASS II AB OVER 8" NATIVE MATERIAL SCARIFIED AND COMPACTED TO 90% RELATIVE COMPACTION AT 2% ABOVE OPTIMUM PER THE PROJECT'S GEOTECHNICAL REPORT. INSTALL CONCRETE JOINTS PER DETAIL 3/C-107. COLORED AND STONE TEXTURED STAMPED CONCRETE.

HEAVY DUTY CONCRETE PAVEMENT (T1 = 8.0)
8" (4000 PSI) CONCRETE W / #4 @ 18" O.C. OVER 6.0" CLASS II AB OVER 8" NATIVE MATERIAL SCARIFIED AND COMPACTED TO 95% RELATIVE COMPACTION AT 2% ABOVE OPTIMUM PER THE PROJECT'S GEOTECHNICAL REPORT. INSTALL CONCRETE JOINTS PER DETAIL 3/C-107.

ASPHALT PAVEMENT (T1 = 6.0)
3.5" AC OVER 6.0" CLASS II AB OVER 12" NATIVE MATERIAL SCARIFIED AND COMPACTED TO 95% RELATIVE COMPACTION AT 2% ABOVE OPTIMUM PER THE PROJECT'S GEOTECHNICAL REPORT. SEE DETAIL 8/C-110 FOR BASKETBALL COURT PAVING SECTION. 5

DEEP LIFT PAVEMENT
MINIMUM 10" AC DEPTH

TRENCH REPAIR
MINIMUM 8" AC DEEP LIFT

CRUSHED ROCK
PER DETAIL 9 ON SHEET C-107

BIORETENTION
PER DETAIL 10 ON SHEET C-107

NOTE:

BUILDING CORNER POINTS ARE APPROXIMATE AND PROVIDED FOR BUILDING PAD PREPARATION ONLY. CONTRACTOR SHALL REFERENCE STRUCTRUAL ENGINEER'S FOUNDATION PLAN FOR ACTUAL BUILDING DIMENSIONS.

GENERAL PAVING AND DIMENSIONING NOTES:

ALL MATERIAL AND CONSTRUCTION PROCEDURES WITHIN THE SCOPE OF THIE PROJECT SHALL CONFORM TO ALL APPLICABLE CITY OF OAKLAND STANDARD SPECIFICATIONS (LATEST EDITION).

1. CONTRACTOR SHALL IMMEDIATELY NOTIFY ENGINEER OF ANY QUESTION THAT MAY ARISE CONCERNING THE INTENT, PLACEMENT, OR LIMITS OF DIMENSIONS NECESSARY FOR CONSTRUCTION OF THIS PROJECT.
2. ALL CURB RADII ARE 2.5', UNLESS OTHERWISE NOTED.
3. ALL COORDINATE POINTS ARE AT FACE OF CURB OR RADIUS POINT. BUILDING CONTROL POINTS ARE AT THE OUTER MOST EDGE OF THE BUILDING ENVELOPE.
4. THE CONTRACTOR SHALL SAWCUT EXISTING PAVEMENT, CURBS, AND SIDEWALKS AT NEW PAVEMENT, CURB AND SIDEWALK JUNCTURES. NO JAGGED OR IRREGULAR CUTS WILL BE ALLOWED OR ACCEPTED.
5. ALL PAINT SHALL BE 4" WIDE WHITE REFLECTIVE PAINT: WHITE ON TOP OF 6" WIDE BLACK STRIPE ON CONCRETE UNLESS OTHERWISE NOTED ON THE DRAWINGS.
6. ALL PAVEMENT MARKINGS SHALL RECEIVE TWO COATS OF PAINT.
7. ALL SIGNS SHALL CONFORM TO MUTCD, LATEST EDITION.
8. ALL CONCRETE SIDEWALK SHALL BE 5' IN WIDTH UNLESS OTHERWISE SPECIFIED.
9. ALL CURBS ARE 6" HIGH UNLESS OTHERWISE NOTED.
10. BUILDINGS ARE SHOWN FOR REFERENCE ONLY, REFER TO ARCHITECTURAL PLANS.

PARKING SUMMARY NOTES:

	REQUIRED	PROVIDED
MIN. NUMBER OF AUTO SPACES (PER OAKLAND MUNICIPAL CODE):	= 1 PER 600 SF GROUND FLOOR + 1 PER 1,000 SF OTHER FLOOR =(25,542/600)+(27,250/1000) = 84 1 OFF-STREET LOADING BERTH	94 TOTAL (84 STAFF + 30 VISITOR) 1 BERTH
ACCESSIBLE SPACES:	3 STAFF (INCLUDING 1 VAN) 2 VISITOR (INCLUDING 1 VAN)	3 STAFF (INCLUDING 1 VAN) 2 VISITOR (INCLUDING 1 VAN)
NUMBER OF EV READY SPACES (PER OAKLAND MUNICIPAL CODE): INSTALLED	7 STAFF SPACES EV READY 7 STAFF SPACES EV CONDUIT INSTALLED 3 VISITOR SPACES EV READY 3 VISITOR SPACES EV CONDUIT INSTALLED	7 STAFF SPACES EV READY 7 STAFF SPACES EV CONDUIT 3 VISITOR SPACES EV READY 3 VISITOR SPACES EV CONDUIT

INTRODUCTION

This report assesses potential noise and vibration impacts resulting from the construction and operation of the Oakland Unified School District (OUSD) Central Administrative Center at Cole Campus Project proposed at 1011 Union Street in Oakland, California. The project proposes to demolish the existing Cole Middle School and cafeteria buildings in order to build a two-story, 56,176 square foot administrative office/education building. The new building would include 13 to 14 classrooms, multiple office rooms and meeting rooms, and space for IT Department work including a separate server room.

This report evaluates the project's potential to result in significant impacts with respect to applicable California Environmental Quality Act (CEQA) guidelines. The report is divided into three sections: 1) the Setting Section provides a brief description of the fundamentals of environmental noise, summarizes applicable regulatory criteria, and discusses the results of the ambient noise monitoring survey completed to document existing noise conditions; 2) the General Plan Consistency – Noise and Land use Compatibility section discusses noise and land use compatibility utilizing policies in the City's General Plan; and, 3) the Impacts and Mitigation Measures Section describes the significance criteria used to evaluate project impacts and provides a discussion of each project impact with respect to the significance criteria.

SETTING

Fundamentals of Environmental Noise

Noise may be defined as unwanted sound. Noise is usually objectionable because it is disturbing or annoying. The objectionable nature of sound could be caused by its pitch or its loudness. Pitch is the height or depth of a tone or sound, depending on the relative rapidity (frequency) of the vibrations by which it is produced. Higher pitched signals sound louder to humans than sounds with a lower pitch. Loudness is intensity of sound waves combined with the reception characteristics of the ear. Intensity may be compared with the height of an ocean wave in that it is a measure of the amplitude of the sound wave.

In addition to the concepts of pitch and loudness, there are several noise measurement scales which are used to describe noise in a particular location. A decibel (dB) is a unit of measurement which indicates the relative amplitude of a sound. The zero on the decibel scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Sound levels in decibels are calculated on a logarithmic basis. An increase of 10 decibels represents a ten-fold increase in acoustic energy, while 20 decibels is 100 times more intense, 30 decibels is 1,000 times more intense, etc. There is a relationship between the subjective noisiness or loudness of a sound and its intensity. Each 10 decibel increase in sound level is perceived as approximately a doubling of loudness over a fairly wide range of intensities. Technical terms are defined in Table 1.

There are several methods of characterizing sound. The most common in California is the A-weighted sound level (dBA). This scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Representative outdoor and indoor noise levels in units of dBA are shown in Table 2. Because sound levels can vary markedly over a short period of time, a

method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events. This energy-equivalent sound/noise descriptor is called Leq. The most common averaging period is hourly, but Leq can describe any series of noise events of arbitrary duration.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends upon the distance the receptor is from the noise source. Close to the noise source, the models are accurate to within about plus or minus 1 to 2 dBA.

Since the sensitivity to noise increases during the evening and at night -- because excessive noise interferes with the ability to sleep -- 24-hour descriptors have been developed that incorporate artificial noise penalties added to quiet-time noise events. The Community Noise Equivalent Level (CNEL) is a measure of the cumulative noise exposure in a community, with a 5 dB penalty added to evening (7:00 pm - 10:00 pm) and a 10 dB addition to nocturnal (10:00 pm - 7:00 am) noise levels. The Day/Night Average Sound Level (DNL or Ldn) is essentially the same as CNEL, with the exception that the evening time period is dropped and all occurrences during this three-hour period are grouped into the daytime period.

Effects of Noise

Sleep and Speech Interference

The thresholds for speech interference indoors are about 45 dBA if the noise is steady and above 55 dBA if the noise is fluctuating. Outdoors the thresholds are about 15 dBA higher. Steady noises of sufficient intensity (above 35 dBA) and fluctuating noise levels above about 45 dBA have been shown to affect sleep. Interior residential standards for multi-family dwellings are set by the State of California at 45 dBA DNL. Typically, the highest steady traffic noise level during the daytime is about equal to the DNL and nighttime levels are 10 dBA lower. The standard is designed for sleep and speech protection and most jurisdictions apply the same criterion for all residential uses. Typical structural attenuation is 12-17 dBA with open windows. With closed windows in good condition, the noise attenuation factor is around 20 dBA for an older structure and 25 dBA for a newer dwelling. Sleep and speech interference is therefore possible when exterior noise levels are about 57-62 dBA DNL with open windows and 65-70 dBA DNL if the windows are closed. Levels of 55-60 dBA are common along collector streets and secondary arterials, while 65-70 dBA is a typical value for a primary/major arterial. Levels of 75-80 dBA are normal noise levels at the first row of development outside a freeway right-of-way. In order to achieve an acceptable interior noise environment, bedrooms facing secondary roadways need to be able to have their windows closed, those facing major roadways and freeways typically need special glass windows.

Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that the causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The DNL as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. When measuring the percentage of the population highly annoyed, the threshold for ground vehicle noise is about 50 dBA DNL. At a DNL of about 60 dBA, approximately 12 percent of the population is highly annoyed. When the DNL increases to 70 dBA, the percentage of the population highly annoyed increases to about 25-30 percent of the population. There is, therefore, an increase of about 2 percent per dBA between a DNL of 60-70 dBA. Between a DNL of 70-80 dBA, each decibel increase increases by about 3 percent the percentage of the population highly annoyed. People appear to respond more adversely to aircraft noise. When the DNL is 60 dBA, approximately 30-35 percent of the population is believed to be highly annoyed. Each decibel increase to 70 dBA adds about 3 percentage points to the number of people highly annoyed. Above 70 dBA, each decibel increase results in about a 4 percent increase in the percentage of the population highly annoyed.

TABLE 1 Definition of Acoustical Terms Used in this Report

Term	Definition
Decibel, dB	A unit describing, the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20 micro Pascals.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micro Pascals (or 20 micro Newtons per square meter), where 1 Pascal is the pressure resulting from a force of 1 Newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e. g., 20 micro Pascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hz	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and Ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, L_{eq}	The average A-weighted noise level during the measurement period.
L_{max}, L_{min}	The maximum and minimum A-weighted noise level during the measurement period.
L_{01}, L_{10}, L_{50}, L_{90}	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, L_{dn} or DNL	The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to levels measured in the night between 10:00 pm and 7:00 am.
Community Noise Equivalent Level, CNEL	The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 pm to 10:00 pm and after addition of 10 decibels to sound levels measured in the night between 10:00 pm and 7:00 am.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

TABLE 2 Typical Noise Levels in the Environment

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	110 dBA	Rock band
Jet fly-over at 1,000 feet		
	100 dBA	
Gas lawn mower at 3 feet		
	90 dBA	
Diesel truck at 50 feet at 50 mph		Food blender at 3 feet
	80 dBA	Garbage disposal at 3 feet
Noisy urban area, daytime		
Gas lawn mower, 100 feet	70 dBA	Vacuum cleaner at 10 feet
Commercial area		Normal speech at 3 feet
Heavy traffic at 300 feet	60 dBA	
		Large business office
Quiet urban daytime	50 dBA	Dishwasher in next room
Quiet urban nighttime	40 dBA	Theater, large conference room
Quiet suburban nighttime		
	30 dBA	Library
Quiet rural nighttime		Bedroom at night, concert hall (background)
	20 dBA	
		Broadcast/recording studio
	10 dBA	
	0 dBA

Fundamentals of Groundborne Vibration

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One method is the Peak Particle Velocity (PPV). The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. In this report, a PPV descriptor with units of mm/sec or in/sec is used to evaluate construction generated vibration for building damage and human complaints. Table 3 displays the reactions of people and the effects on buildings that continuous or frequent intermittent vibration levels produce. The guidelines in Table 3 represent syntheses of vibration criteria for human response and potential damage to buildings resulting from construction vibration.

Construction activities can cause vibration that varies in intensity depending on several factors. The use of pile driving and vibratory compaction equipment typically generates the highest construction related groundborne vibration levels. Because of the impulsive nature of such activities, the use of the PPV descriptor has been routinely used to measure and assess groundborne vibration and almost exclusively to assess the potential of vibration to cause damage and the degree of annoyance for humans.

The two primary concerns with construction-induced vibration, the potential to damage a structure and the potential to interfere with the enjoyment of life, are evaluated against different vibration limits. Human perception to vibration varies with the individual and is a function of physical setting and the type of vibration. Persons exposed to elevated ambient vibration levels, such as people in an urban environment, may tolerate a higher vibration level.

Structural damage can be classified as cosmetic only, such as paint flaking or minimal extension of cracks in building surfaces; minor, including limited surface cracking; or major, that may threaten the structural integrity of the building. Safe vibration limits that can be applied to assess the potential for damaging a structure vary by researcher. The damage criteria presented in Table 3 include several categories for ancient, fragile, and historic structures, the types of structures most at risk to damage. Most buildings are included within the categories ranging from “Historic and some old buildings” to “Modern industrial/commercial buildings”. Construction-induced vibration that can be detrimental to the building is very rare and has only been observed in instances where the structure is at a high state of disrepair and the construction activity occurs immediately adjacent to the structure.

The annoyance levels shown in Table 3 should be interpreted with care since vibration may be found to be annoying at lower levels than those shown, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage.

TABLE 3 Reaction of People and Damage to Buildings from Continuous or Frequent Intermittent Vibration Levels

Velocity Level, PPV (in/sec)	Human Reaction	Effect on Buildings
0.01	Barely perceptible	No effect
0.04	Distinctly perceptible	Vibration unlikely to cause damage of any type to any structure
0.08	Distinctly perceptible to strongly perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
0.1	Strongly perceptible	Threshold at which there is a risk of damage to fragile buildings with no risk of damage to most buildings
0.25	Strongly perceptible to severe	Threshold at which there is a risk of damage to historic and some old buildings.
0.3	Strongly perceptible to severe	Threshold at which there is a risk of damage to older residential structures
0.5	Severe - Vibrations considered unpleasant	Threshold at which there is a risk of damage to new residential and modern commercial/industrial structures

Regulatory Background – Noise

Noise-related regulations, plans, and policies established by the State of California and the City of Oakland are applicable in this assessment of the proposed project. These planning documents are implemented during the environmental review process to limit noise exposure at existing and proposed noise-sensitive land uses.

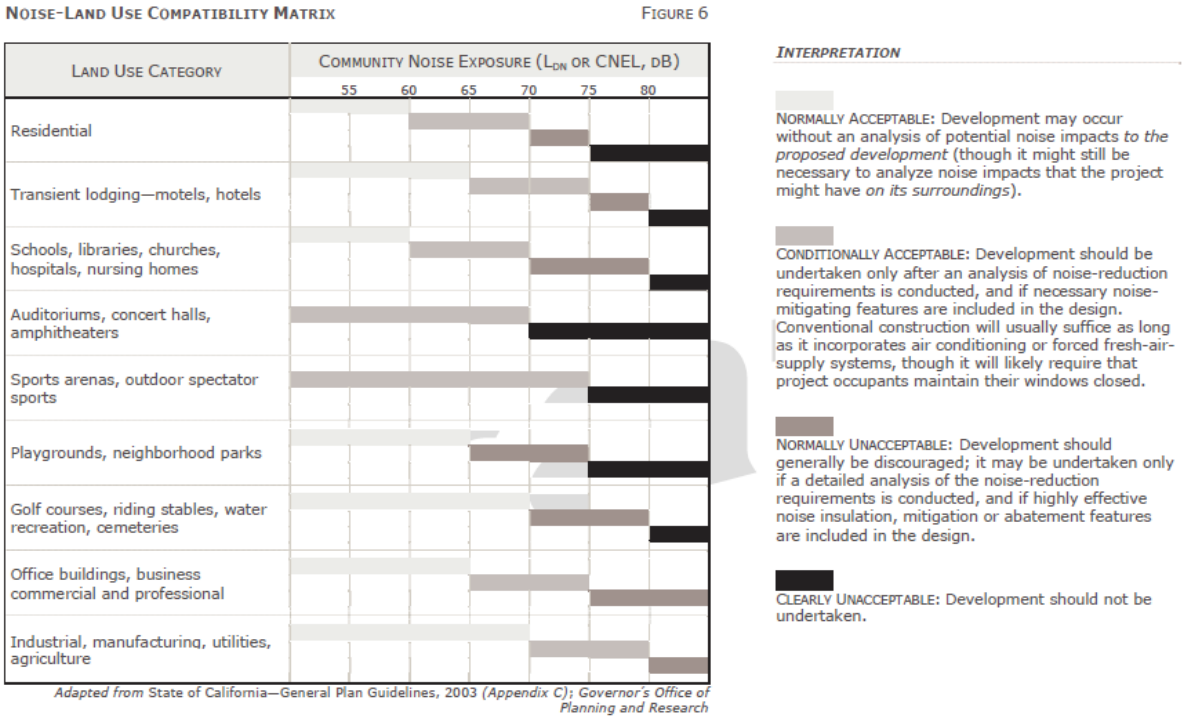
State of California

State CEQA Guidelines. The California Environmental Quality Act (CEQA) contains guidelines to evaluate the significance of effects of environmental noise attributable to a proposed project. Under CEQA, noise impacts would be considered significant if the project would result in:

(a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;

(b) Generation of excessive groundborne vibration or groundborne noise levels;

(c) For a project located within the vicinity of a private airstrip or an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, if the project would expose people residing or working in the project area to excessive noise levels.



Checklist items (a) and (b) are applicable to the proposed project. The project is not located within the vicinity of a private airstrip or a public airport and would not expose people residing or working in the project area to excessive aircraft noise levels; therefore, item (c) is not carried further in this analysis.

2019 California Green Building Standards Code (Cal Green Code). The State of California established exterior sound transmission control standards for new non-residential buildings as set forth in the 2019 California Green Building Standards Code (Section 5.507.4.1 and 5.507.4.2). Section 5.507 states that either the prescriptive (Section 5.507.4.1) or the performance method (Section 5.507.4.2) shall be used to determine environmental control at indoor areas. The prescriptive method is very conservative and not practical in most cases; however, the performance method can be quantitatively verified using exterior-to-interior calculations. For the purposes of this report, the performance method is utilized to determine consistency with the Cal Green Code. Both of the sections that pertain to this project are as follows:

> **5.507.4.1 Exterior noise transmission, prescriptive method.** Wall and roof-ceiling assemblies making up the building envelope that are exposed to the noise source shall meet a composite STC rating of at least 50 or a composite OITC rating of no less than 40, with exterior windows of a minimum STC of 40 or OITC of 30 when the building falls within the 65 dBA L_{dn} noise contour of a freeway or expressway, railroad, industrial source or fixed-guideway noise source, as determined by the local general plan noise element.
>
> **5.507.4.2 Performance method.** For buildings located within the 65 dBA L_{dn} noise contour of a freeway or expressway, railroad, industrial source or fixed-guideway noise source, wall and roof-ceiling assemblies making up the building envelope and exposed to the noise source shall be constructed to provide an interior noise environment attributable to exterior sources that does not exceed an hourly equivalent noise level ($L_{eq\ (1\text{-}hr)}$) of 50 dBA in occupied areas during any hour of operation.

The performance method, which establishes the acceptable interior noise level, is the method typically used when applying these standards.

City of Oakland General Plan Noise Element. The Noise-Land Use Compatibility Matrix (Figure 6 of the Noise Element) categorizes noise levels at office buildings of up to 65 dBA L_{dn}/CNEL as "acceptable", from 65 to 75 dBA L_{dn}/CNEL as "conditionally acceptable", and from 75 to 85 dBA L_{dn}/CNEL as "normally unacceptable".

City of Oakland Planning Code. The noise performance standards of the Oakland Planning Code set out to control operational and construction noise levels. These policies were further clarified in the City of Oakland CEQA Thresholds of Significance Guidelines, dated October 17, 2016. The following policies are applicable to the project.

Section 17.120.050 G, Temporary Construction and Demolition Noise: Table Oakland-1, below, specifies the maximum noise level allowable at receiving uses during short and long term construction or demolition projects. The City allows for an exemption if an acoustical analysis is performed that identifies recommend measures to reduce potential impacts.[1]

[1] The acoustical analysis must identify, at a minimum, (a) the types of construction equipment expected to be used and the noise levels typically associated with the construction equipment and (b) the surrounding land uses including any sensitive land uses (e.g., schools and childcare facilities, health care and nursing homes, public open space). If sensitive land uses are present, the acoustical analysis must recommend measures to reduce potential impacts.

TABLE Oakland-1 City of Oakland Construction Noise Standards at Receiving Property Line, dBA[1]		
Receiving Land Use	**Maximum Allowable Noise Level (dBA)**	
	Weekdays 7 a.m.-7 p.m.	**Weekends 9 a.m.-8 p.m.**
Less than 10 days		
Residential	80	65
Commercial, Industrial	85	70
More than 10 Days		
Residential	65	55
Commercial, Industrial	70	60
Notes: 1) If the ambient noise level exceeds these standards, the standard shall be adjusted to equal the ambient noise level.		

Section 8.18.020, Persistent Noises a Nuisance: The persistent maintenance or emission of any noise or sound produced by human, animal or mechanical means, between the hours of nine p.m. and seven a.m., which, by reason of its raucous or nerve-racking nature, shall disturb the peace or comfort, or be injurious to the health of any person shall constitute a nuisance.

Failure to comply with the following provisions shall constitute a nuisance.

A. All construction equipment powered by internal combustion engines shall be properly muffled and maintained.

B. Unnecessary idling of internal combustion engines is prohibited.

C. All stationary noise-generating construction equipment such as tree grinders and air compressors are to be located as far as is practical from existing residences.

D. Quiet construction equipment, particularly air compressors, are to be selected whenever possible.

E. Use of pile drivers and jack hammers shall be prohibited on Sundays and holidays, except for emergencies and as approved in advance by the Building Official.

Section 17.120.050 A-F, Operational Noise: Table Oakland-2, below, specifies the maximum noise level allowable at receiving uses during new project operations.

TABLE Oakland-2 City of Oakland Operational Noise Standards at Receiving Property Line, dBA[1]			
Receiving Land Use	**Cumulative No. of Minutes in 1-Hr Period[2]**	**Maximum Allowable Noise Level (dBA)**	
		Daytime 7 a.m.-10 p.m.	**Nighttime 10 p.m.-7 a.m.**
Residential and Civic[3]	20 (L_{33})	60	45
	10 ($L_{16.7}$)	65	50
	5 ($L_{8.3}$)	70	55
	1 ($L_{1.7}$)	75	60
	0 (L_{max})	80	65
		Anytime	
Commercial	20 (L_{33})	65	
	10 ($L_{16.7}$)	70	
	5 ($L_{8.3}$)	75	
	1 ($L_{1.7}$)	80	
	0 (L_{max})	85	
Manufacturing, Mining, and Quarrying	20 (L_{33})	70	
	10 ($L_{16.7}$)	75	
	5 ($L_{8.3}$)	80	
	1 ($L_{1.7}$)	85	
	0 (L_{max})	90	

Notes: 1) These standards are reduced 5 dBA for simple tone noise, noise consisting primarily of speech or music, or recurring impact noise. If the ambient noise level exceeds these standards, the standard shall be adjusted to equal the ambient noise level.

2) L_x represents the noise level that is exceeded X percent of a given period. L_{max} is the maximum instantaneous noise level.

3) Legal residences, schools and childcare facilities, health care or nursing home, public open space, or similarly sensitive land uses.

Existing Noise Environment

The project site is located west of Union Street, north of 10th Street, east of Poplar Street, and south of Wade Johnson Park. The project site consists of approximately 2.8 acres of land currently occupied by the former Cole Middle School and cafeteria buildings. The surrounding area is predominately residential with multifamily residences to the west and south, an Oakland Housing Authority office to the south, and single-family residences to the east and northeast. The California Cereal Products industrial site to the north serves as the primary source of noise in the site vicinity.

A noise monitoring survey was performed between Wednesday, July 15, 2020 and Friday, July 17, 2020 to quantify and characterize ambient noise levels at the site and in the project vicinity. The monitoring survey included one long-term measurement (LT-1) and one short-term measurement (ST-1). The noise environment results primarily from operations at the California

Cereal Products industrial site located approximately 150 feet north of the nearest project property line. Other secondary sources of noise such as traffic along local roadways and distant highways are insubstantial and dominated by noise from operations at the industrial site. Figure 1 shows the location of noise measurements relative to the project site.

Long-term measurement LT-1 was made at the southwest corner of the site near the intersection of Poplar Street and 10th Street. This location was chosen in order to characterize noise resulting from local traffic and industrial sources in the general site vicinity including at residences to the west. Hourly average noise levels at this location ranged from 54 to 65 dBA L_{eq} during the day and from 50 to 56 dBA L_{eq} at night. The day-night average noise level on Thursday, July 16, 2020 was 62 dBA L_{dn}. The daily trend in noise levels at LT-1 is shown in Figures 2 through 4.

Short-term noise measurement ST-1 was made over a 10-minute period on Wednesday, July 15, 2020 between 8:30 a.m. and 8:40 a.m. ST-1 quantified noise levels near the northwestern corner of the site, across from Wade Johnson Park and approximately 275 feet southwest of the California Cereal Products industrial site. As with the rest of the site vicinity, noise at this location was dominated by industrial activities. Table 4 summarizes the results of measurement ST-1.

TABLE 4 Summary of Short-Term Noise Measurement Data (dBA)

Noise Measurement Location (Date, Time)	L_{max}	$L_{(1)}$	$L_{(10)}$	$L_{(50)}$	$L_{(90)}$	$L_{eq(10\text{-}min)}$	L_{dn}[1]
ST-1: Across Poplar Street Near Northwest Corner of Site, ~275 feet Southwest of California Cereal Products Site (Wednesday, 7/15/2020, 8:30 a.m. – 8:40 a.m.)	67	67	67	66	65	66	71

[1] L_{dn} for short-term measurement ST-1 was calculated through comparison with corresponding long-term measurement LT-1.

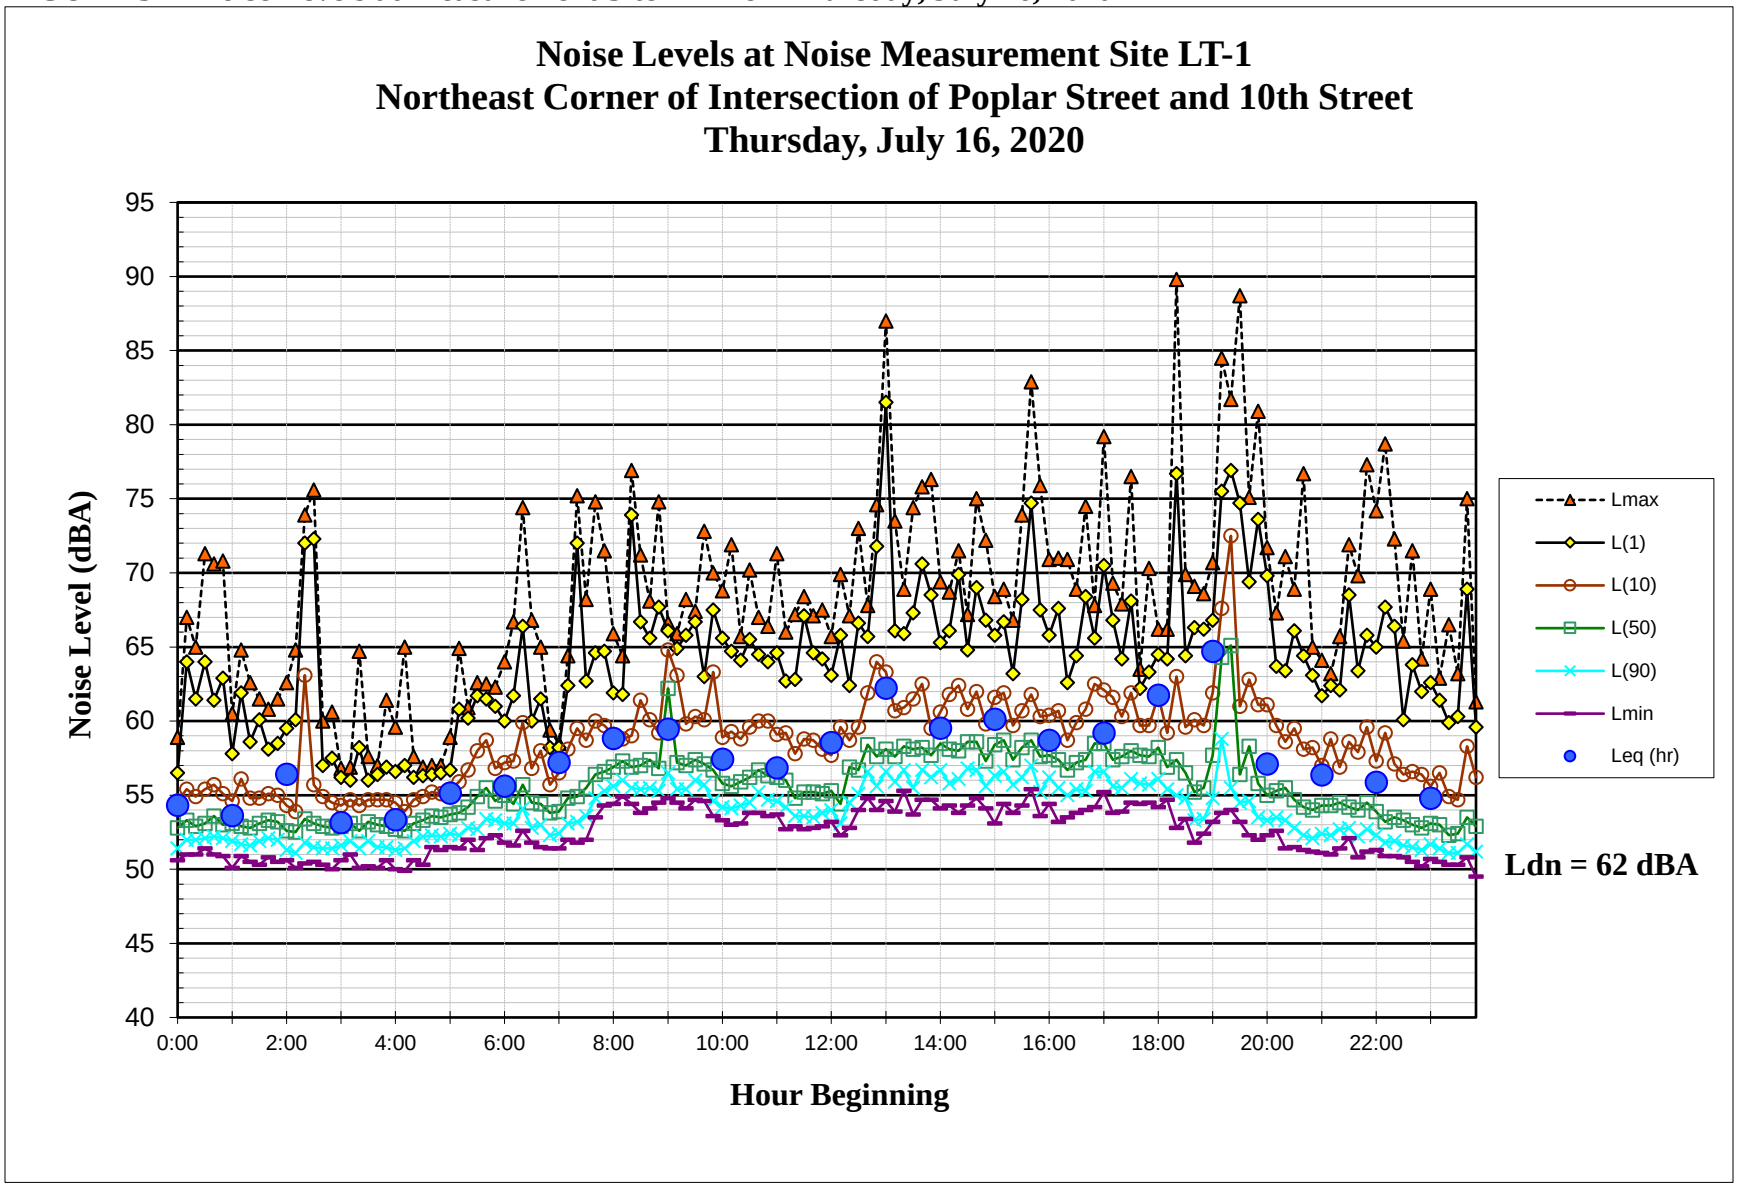

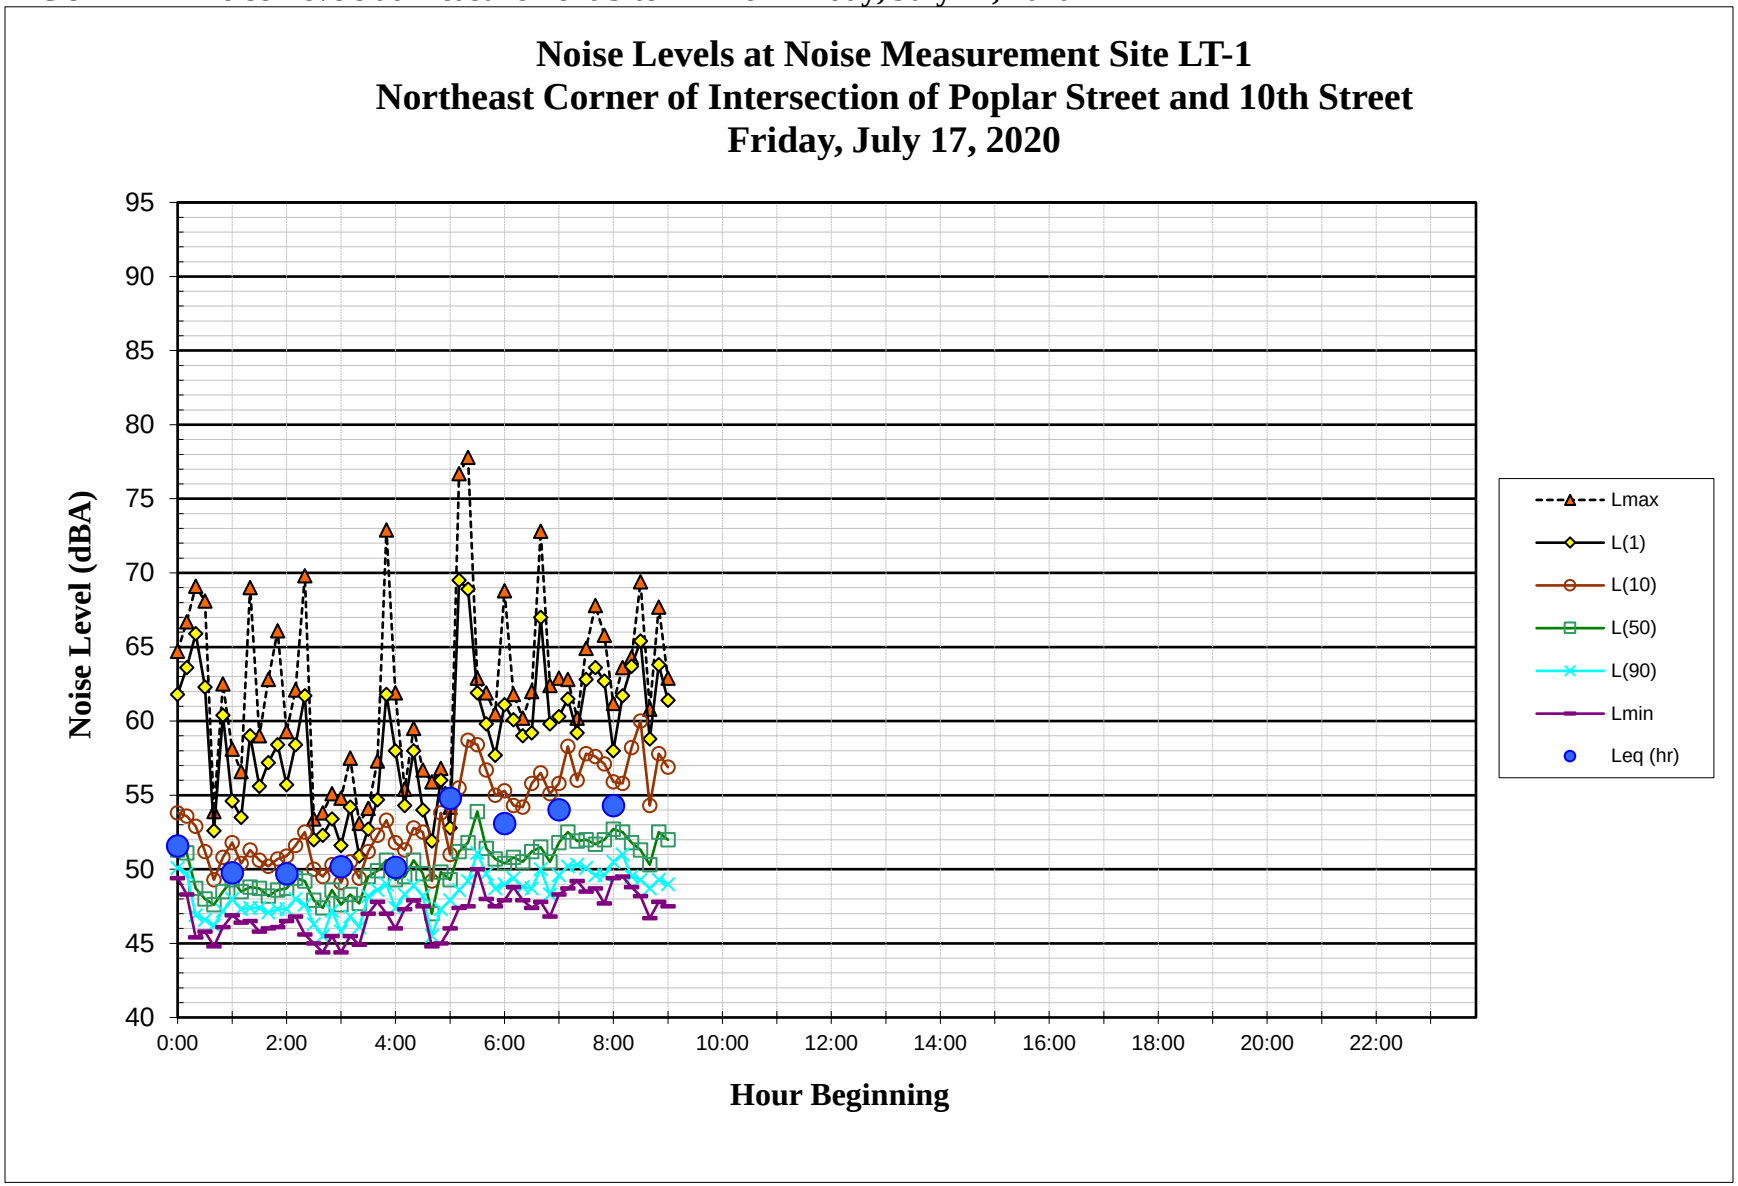

FIGURE 4 Noise Levels at Measurement Site LT-1 on Friday, July 17, 2020

GENERAL PLAN CONSISTENCY ANALYSIS

The impacts of site constraints such as exposure to excessive levels of noise and vibration are not considered under CEQA. This section addresses Noise and Land Use Compatibility for consistency with the policies set forth in the Oakland General Plan and California Green Building Standards Code.

Noise and Land Use Compatibility

The applicable State of California and City of Oakland General Plan policies were presented in detail in the Regulatory Background section and are summarized below:

- The City of Oakland General Plan specifies exterior noise level standards for office uses. An exterior noise level of 65 dBA L_{dn} is considered 'normally acceptable' and an exterior noise level of 75 dBA L_{dn} is considered 'conditionally acceptable.'

- The Cal Green Code establishes a maximum interior noise limit of 50 dBA $L_{eq\ (1\text{-}hr)}$ for occupied areas of non-residential buildings during any hour of operation.

Future Exterior Noise Environment

The future exterior noise environment at the project site would continue to result primarily from operations at the California Cereal Products industrial site. This analysis assumes that noise resulting from activity at the industrial site will continue in the future and not substantially change from existing, measured levels.

Based on measurement data, noise levels throughout the site would be dependent on distance from the industrial site to the north. Noise levels would range from 62 dBA L_{dn} along the southern property line and increase to about 74 dBA L_{dn} along the northern property line. This falls within the 'conditionally acceptable' range of noise levels specified for office land uses in the City of Oakland General Plan.

Project plans indicate a small playground space would be constructed at the northeastern corner of the site. This space would be located next to the southern end of the existing Wade Johnson Playground. Given the proximity of the California Cereal Products industrial site and its size, mitigating noise at the project site, in particular at the northern end where the playground would be located, is not practical. To adequately shield the playground space from industrial noise such that the day-night noise level would not exceed the 'normally acceptable' criterion of 65 dBA L_{dn}, the playground would have to be substantially if not fully enclosed. Revising the site plan to relocate the playground to the southern end of the site along 10th Street would have the potential to reduce the noise level to below the 65 dBA L_{dn} criterion. However, this would potentially diminish the function of the playground by no longer being adjacent to the Wade Johnson Playground and may therefore also be considered impractical. No exterior noise mitigation is recommended.

Future Interior Noise Environment

The Cal Green Code requires that interior noise levels attributable to exterior sources not exceed 50 dBA $L_{eq\ (1\text{-}hr)}$ in occupied areas of non-residential uses during any hour of operation. Based on the results of the noise monitoring survey, peak-hour noise levels would be about 3 dBA higher than day-night average levels and would range between 65 dBA $L_{eq\ (1\text{-}hr)}$ at the southern end of the site to 77 dBA $L_{eq\ (1\text{-}hr)}$ at the northern end of the site. The greatest noise exposure would occur along the northern façades of the administration building and multi-purpose room.

Floorplans for the first and second floors dated June 8, 2020 and February 19, 2021, respectively, indicate that rooms along the northern façades of the proposed building would include noise-sensitive uses such as offices, conferences rooms, and classrooms. As peak-hour noise levels along the northern façades are expected to reach up to 77 dBA $L_{eq\ (1\text{-}hr)}$, a minimum exterior-to-interior noise reduction of 27 dBA would be required to ensure compatibility with the Cal Green Code standard of 50 dBA $L_{eq\ (1\text{-}hr)}$.

Standard office construction with windows in the closed position typically provides for a noise reduction of about 25 dBA, with noise-rated construction materials being required to achieve a greater reduction. Preliminary calculations were made based on building elevations dated January 24, 2020. Rooms near the center of the northern façade would feature large windows resulting in a window-to-wall ratio of up to 48%. Considering this, and metal panel exterior wall construction, windows with a minimum Sound Transmission Class (STC) rating of 30 would be required along the northern façade of the administrative building in order to provide the noise reduction necessary to meet the Cal Green Code standard of 50 dBA $L_{eq\ (1\text{-}hr)}$. Due to shielding provided by the proposed building and attenuation resulting from an increased distance from the California Cereal Products industrial site, noise levels along eastern, western, and southern façades of project buildings are not expected to exceed 75 dBA $L_{eq\ (1\text{-}hr)}$, and therefore standard construction with windows in the closed position would be sufficient. Forced-air mechanical ventilation would be required to allow occupants to keep windows closed to control noise.

Recommended Conditions of Approval:

- Provide all occupied areas of the proposed building with a forced-air mechanical ventilation system to allow for windows to be closed to control noise at the occupant's discretion.

- Special building techniques (e.g., sound-rated windows and building façade treatments) are required to maintain interior noise levels at or below acceptable levels. These treatments would include, but are not limited to, sound-rated windows and doors, sound-rated wall construction, acoustical caulking, and protected ventilation openings. Preliminary calculations indicate that rooms located along the northern façade of the proposed building would require windows with a minimum STC rating of 30 to ensure that the 50 dBA $L_{eq\ (1\text{-}hr)}$ Cal Green Code standard is met.

IMPACTS AND MITIGATION MEASURES

Significance Criteria

The following criteria were used to evaluate the significance of environmental noise resulting from the project:

1. **Temporary or Permanent Noise Increases in Excess of Established Standards:** A significant impact would be identified in the following cases:

    a. Operational Noise in Excess of Standards. A significant impact would be identified if project operations were to exceed the noise level standards specified in Table Oakland-2.

    b. Permanent Noise Increase. A significant permanent noise increase would occur if a) the noise level increase is 5 dBA L_{dn} or greater, with a future noise level of less than 60 dBA L_{dn}, or b) the noise level increase is 3 dBA L_{dn} or greater, with a future noise level of 60 dBA L_{dn} or greater.

    c. Temporary Noise Increase. Construction noise impacts would be considered significant if project construction were to exceed the City of Oakland's Construction (or Demolition) Noise Performance Standards for activities that occur for more than 10 days (70 dBA at commercial uses and 65 dBA at residential uses during weekday daytime hours).

2. **Generation of Excessive Groundborne Vibration:** A significant impact would be identified if the construction of the project would expose persons to excessive vibration levels. Groundborne vibration levels exceeding 0.3 in/sec PPV would have the potential to result in cosmetic damage to buildings.

Impact 1: **Temporary or Permanent Noise Increases in Excess of Established Standards.** The proposed project would not generate operational noise levels in excess of the standards established in the City's General Plan or Municipal Code at nearby sensitive receptors. With the implementation of Oakland's standard controls and recognizing that noise generated by construction activities would occur over a temporary period, the temporary increase in ambient noise levels occurring during construction would also be in compliance with the City's Code. **This is a less-than-significant impact**.

a. Permanent Noise from On-Site Operations

Operational noise sources proposed with the Project include mechanical equipment, parking, and testing of an emergency backup generator. Table Oakland-2 of the City of Oakland Planning Code establishes maximum allowable noise levels for daytime and nighttime hours at residential, civic, and commercial receiving land uses.

Mechanical Equipment

Heating, ventilation, and air conditioning (HVAC) equipment for the project would include a variable refrigerant flow (VRF) system of outdoor heat pumps and interior fan coil units. Information regarding the number, size, model, and location of HVAC equipment was not available at the time of this study. Typical VRF heat pumps for office buildings of this size would generate noise levels around 58 to 68 dBA at a distance of 3 feet. Noise from mechanical equipment would typically drop off at a rate of about 6 dBA per doubling of distance. Outdoor heat pumps are usually located on building rooftops. For rooftop equipment, shielding from the rooftop and screens would be anticipated to provide 10 to 15 dBA of additional reduction, assuming the screen/rooftop would be constructed without any gaps or cracks. Any barriers should have a minimum surface weight of 3 pounds per square foot (such as 1-inch-thick wood, ½-inch laminated glass, masonry block, concrete, or one-inch metal).

Property lines of residential and civic land uses nearest to potential locations for HVAC equipment are located at residences approximately 65 feet to the west, residences approximately 70 feet to the east, and the Wade Johnson Playground approximately 20 feet to the north. One commercial use, the Oakland Housing Authority office building, is located approximately 250 feet to the south. The most restrictive standard for operational noise set in Table Oakland-2 of the City of Oakland Planning Code limits operational noise sources at receiving residential and civic land uses to 60 dBA L_{33} during daytime hours and 45 dBA L_{33} during nighttime hours. The L_{33} metric represents a noise level that is exceeded for one third (20 minutes) of any given hour. As noise from HVAC equipment is fairly stable when operating, the average noise levels for VRF heat pumps described above can be applied to the Table Oakland-2 standards.

Without considering shielding and attenuation from rooftops and parapet walls, noise from VRF heat pumps would not be expected to exceed 45 dBA beyond a distance of 46 feet from the equipment, or to exceed 60 dBA beyond a distance of 11 feet from the equipment. VRF equipment would not exceed daytime noise limits at any surrounding land uses. Under worst-case placement conditions, nighttime operation of VRF equipment could potentially exceed the 45 dBA L_{33} limit at the Wade Johnson Playground. However, the City of Oakland Parks and Recreation Advisory Commission has established park hours at the Wade Johnson Playground to be from dawn to dusk, and therefore the park would not be used during nighttime hours. This is a **less-than-significant** impact.

Generator Testing

A data center used by OUSD would be relocated from the existing Cole Middle School building to the new administration building. Continuous operation of data centers is ensured through use of emergency backup generators. The project proposes to include a 150 kW Cummins QSB7-G5 diesel backup generator at the southwestern corner of the site. The generator would be housed in a level 2 sound enclosure and surrounded by a 12-inch thick, 15-foot high CMU wall. Generator operations during emergency situations would be exempt from City regulations. However, testing of generators is typically considered an operational noise source and Table Oakland-2 limits would apply.

Sound data for the generator was made available and analyzed. When equipped with the level 2 sound enclosure, testing of the generator at full capacity would result in a noise level of 73 dBA at a distance of 23 feet. Noise resulting from generator testing was modeled in SoundPLAN, a three-dimensional noise modeling software that considers site geometry, the characteristics of the noise sources, and shielding from structures and barriers. Based on noise modeling results, the 15-foot CMU wall surrounding the generator is anticipated to provide a noise reduction of about 17 dBA, resulting in a noise level during testing at full capacity of 56 dBA at a distance of 23 feet. The nearest noise-sensitive land uses to the generator are residences to the west and south, with property lines located approximately 75 feet from the center of the generator enclosure. At this distance, noise from generator testing is anticipated to reach approximately 47 dBA. Generator testing is typically only conducted during daytime hours and for a period of 15 minutes to two hours. With the level 2 sound enclosure and 15-foot CMU wall surrounding the generator, noise from generator testing would not exceed any daytime noise limits set in Table Oakland-2 of the City of Oakland Planning Code. This is a **less-than-significant** impact.

Parking Lot

Parking for the project would be provided in two separate parking lots; a 63-space lot at the southern portion of the site and a 30-space lot on the westerly portion of the site. The parking lots would be located approximately 70 feet from the property lines of the nearest noise-sensitive land uses including residences to the east and west and the Oakland Housing Authority office building to the south.

Noise sources associated with the use of the parking lots include vehicular circulation, engines, car alarms, squealing tires, door slams, and human voices. The sound of engines starting, doors slam closing, and people talking in the parking lot typically reach maximum levels of 50 to 60 dBA L_{max} at a distance of 50 feet. Parking lot noise would generate maximum noise levels in the range of 47 to 57 dBA L_{max} at a distance of 70 feet, not taking shielding from terrain into account. The hourly average noise level resulting from all these noise-generating activities in a small parking lot would be anticipated to reach 40 dBA L_{eq} at a distance of 50 feet from the parking area.

Maximum noise levels generated in the parking lot would be lower in level than existing maximum noise levels generated by the California Cereal Products industrial site and would be below the daytime threshold established by the City of Oakland. This is a **less-than-significant** impact.

Mitigation Measure 1a: None required.

b. Permanent Noise Increases from Project Traffic

Trip generation numbers for an earlier iteration of project design which occupied the same footprint were provided by Fehr & Peers. Daily operations at the site for this version would result in a peak hour generation of 73 trips. District board meetings would bring in greater traffic, resulting in 190 trips entering and leaving the site for maximum attendance meetings. For the current version of the project, it is anticipated that there will be approximately 70 total OUSD staff employees working on a typical day. Adult and Career Education programs to be held at within

the Education Center floor of the building are assumed to offer classes on its current schedule, with certain classes offered between 9:00 to 12:00 a.m., certain classes offered between 1:00 and 4:00 p.m., and other classes offered between 6:00 and 8:30 p.m. It is also assumed that a total of approximately 100 students and faculty would attend the morning class schedule, approximately 100 students and faculty would attend the afternoon class schedule, and as many as 175 students and faculty would attend the evening class schedule.

Traffic noise increases resulting from daily operations and board meetings were modeled in the Federal Highway Administration's Traffic Noise Model 2.5. Based on traffic noise modeling using peak hour trip generation numbers provided for the previous iteration of the project design, the project would generate a traffic noise level of 48 dBA L_{eq} at 50 feet during peak-hour daily operations and a traffic noise level of 52 dBA L_{eq} at 50 feet during maximum attendance board meetings. An additional worst-case scenario was considered wherein a trip would be generated for each of the 70 employees working on a typical day and for each of the 175 students attending an evening class session. In this scenario, the project would generate a traffic noise level of 53 dBA L_{eq} at 50 feet.

Traffic resulting from daily operations would not measurably increase noise levels in the site vicinity. Noise resulting from traffic generated by maximum attendance board meetings would have the potential to increase noise by about 2 dBA when occurring during the quietest measured existing ambient hour. The imagined worst-case scenario of 245 total trips occurring resulting from departure of all evening students and employees would have the potential to increase noise by about 3 dBA when occurring during the quietest measured existing ambient hour. Hourly trip generation resulting from typical daily project operations would not significantly increase noise levels above that of the existing ambient noise environment, which ranged from 54 to 65 dBA L_{eq} during the measurement survey. As board meetings would happen occasionally and with different levels of attendance, board meetings would not contribute significantly to the existing ambient noise environment in the site vicinity. Additionally, noise levels in the vicinity of the site are dominated by California Cereal Products industrial noise and small increases in roadway traffic would not be noticeable above the dominant industrial noise source. Typical project traffic would result in noise increases below 3 dBA and noise from the California Cereal Products would continue to dominate the noise environment in the vicinity of the site. This is a **less-than-significant** impact.

Mitigation Measure 1b: None required.

c. Temporary Noise Increases from Project Construction

Table Oakland-1 of the City of Oakland Planning Code regulates hours of construction and noise from construction activity. Construction activities are limited to the hours of 7:00 a.m. to 7:00 p.m., Monday through Friday, and 9:00 a.m. to 8:00 p.m. on weekends. Daytime construction noise levels for project lasting more than 10 days are limited to a maximum of 65 dBA at receiving property lines of residences and 70 dBA at receiving property lines of commercial and industrial uses, except for areas where the existing ambient noise level exceeds these limits and the limit is then set to the ambient level. Based on noise measurement data, existing ambient noise levels

exceed 65 dBA at some residences to the west, east, and northeast of the site. Section 8.18.020 of the Planning Code includes provisions to mitigate noise from construction activities.

The first phase of construction would include demolition of the existing cafeteria building, removal of the existing single-story freestanding modular building, and removal of all existing building foundations on the northerly portion of the site. All existing concrete, pavement and asphalt, existing on-site utility infrastructure and fencing on the northerly portion of the site would be removed and disposed of, and this portion of the site would be graded to accommodate a new building. After this preparatory phase is complete, construction of the new, two-story Cole Administrative Center/Education building would begin. After construction of the building shell is complete, the existing Cole Middle School building on the southerly portion of the site would be demolished, and the remaining area of the site would be graded to accommodate new parking. The final phase of construction would include landscaping and hardscape improvements.

During each stage of construction, there would be a different mix of equipment operating, and noise levels would vary by stage and vary within stages, based on the amount of equipment in operation and the location at which the equipment is operating. Typical construction noise levels at a distance of 50 feet are shown in Tables 5 and 6. Table 5 shows the average noise level ranges by construction phase, and Table 6 shows the maximum noise level ranges for different construction equipment.

Project construction is expected to last for a period exceeding one year. Construction would take place Monday through Friday during the hours of 7:00 a.m. to 7:00 p.m., consistent with the Planning Code. Specific information on numbers of and types of construction equipment to be used per phase was not available. Pile driving is not proposed as a method of construction.

Using typical construction noise levels for office buildings as shown in Table 5, noise from construction may reach 75 to 89 dBA L_{eq} at a distance of 50 feet. Residential property lines nearest the site are located about 170 feet east and west of the approximate center of construction. At this distance, construction noise levels may reach 64 to 78 dBA L_{eq} during busy periods of construction when multiple pieces of equipment are in operation. This would result in an increase of 6 to 20 dBA over the existing daytime ambient noise level of 58 to 69 dBA L_{eq} at these residences. The nearest nonresidential property lines are located at the Wade Johnson Playground, about 250 feet north of the approximate center of construction, and at the Oakland Housing Authority building, about 300 feet south of the approximate center of construction. Noise levels during busy periods of construction with multiple pieces of equipment in operation may reach 61 to 75 dBA L_{eq} at the Wade Johnson Playground and 59 to 73 dBA L_{eq} at the Oakland Housing Authority building. This would result in an increase of up to 10 dBA over the existing daytime ambient noise level of 64 to 75 dBA L_{eq} at Wade Johnson Park, and an increase of 6 to 20 dBA L_{eq} over the existing daytime ambient noise level of 53 to 64 at the Oakland Housing Authority Building. The use of noise control would be anticipated to reduce construction noise levels by 5 to 10 dBA.

TABLE 5 Typical Ranges of Construction Noise Levels at 50 Feet, L_{eq} (dBA)

	Domestic Housing		Office Building, Hotel, Hospital, School, Public Works		Industrial Parking Garage, Religious Amusement & Recreations, Store, Service Station		Public Works Roads & Highways, Sewers, and Trenches

Notes:

[1] Measured at 50 feet from the construction equipment, with a "slow" (1 sec.) time constant.

[2] Noise limits apply to total noise emitted from equipment and associated components operating at full power while engaged in its intended operation.

[3] Portable Air Compressor rated at 75 cfm or greater and that operates at greater than 50 psi.

Source: Mitigation of Nighttime Construction Noise, Vibrations and Other Nuisances, National Cooperative Highway Research Program, 1999.

The City of Oakland allows for an exemption if an acoustical analysis is performed that identifies measures to reduce potential impacts. The following standard controls, consistent with the Oakland Municipal Code, are assumed to be included in the project:

- Limit all exterior construction activities to within the hours of 7:00 am and 7:00 pm on Weekdays, with no construction occurring on Sundays or federal holidays. Use of the concrete saw shall be limited to the hours between 8:00 am and 4:00 pm on weekdays. Interior construction would also be allowed from 9:00 am and 5:00 pm on Saturdays.

- Work with adjoining properties to determine the best days and times to conduct heavy construction located within 50 feet of shared property lines.

- Equipment and trucks used for project construction shall utilize the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures and acoustically attenuating shields or shrouds), wherever feasible.

- Impact tools (e.g., jackhammers, pavement breakers, and rock drills) used for project construction shall be hydraulically or electrically powered to avoid noise associated with

compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust shall be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves shall be used, if such jackets are commercially available and this could achieve a reduction of 5 dBA. Quieter procedures shall be used, such as drills rather than impact equipment, whenever such procedures are available and consistent with construction procedures.

- Use temporary power poles instead of generators where feasible.

- Locate stationary noise sources as far from adjacent receptors as possible, and they shall be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures as determined by the City to provide equivalent noise reduction.

- Stage large equipment, compressors, or generators at least 25 feet from the site perimeters when work is not being done near these uses.

- The noisiest phases of construction shall be limited to less than 10 days at a time. Exceptions may be allowed if the City determines an extension is necessary and all available noise reduction controls are implemented.

- Construction activities should be conducted in a manner that minimizes the noise impact at the adjacent property boundaries wherever possible. Construction equipment shall be positioned as far from noise sensitive receptors as possible.

- Prohibit unnecessary idling of internal combustion engines.

- Erect temporary plywood noise barriers around the construction site when construction is located adjacent to property lines shared with residential uses.

- Utilize noise control blankets on the building structures as the buildings are erected.

- Conduct a preconstruction meeting with the City of Oakland and Contractor to identify potential sources of noise and how to mitigate them.

- Notify property owners and occupants located within 300 feet of construction activities at least 14 calendar days prior to commencement of construction.

- Designate an on-site construction complaint and enforcement manager for the project.

- Post a large on-site sign near the public right-of-way containing permitted construction days/hours, complaint procedures and phone numbers for the complaint manager and City Code Enforcement unit.

- Maintain a complaint log that records received complaints and how complaints were addressed, which shall be submitted to the City for review upon the City's request.

- Construction noise monitoring should be undertaken if reliable noise complaints are received during demolition, excavation, and/or construction activities. Noise levels should be monitored representative of ground level outdoor use areas and/or the worst-case ground level façade window exposure at the location from which the noise complaints originated by a qualified acoustical professional. Integrated average (L_{eq}) noise level measurements on an hourly basis should be made of activities representative of those that generated the complaint. If the measured noise levels during this test are found to exceed the City's construction noise performance standards, an acoustical professional should be retained to specify additional noise attenuation measures to reduce noise levels to City Standards. These measures may include operational considerations, the use of additional ground level noise barriers or noise control blanketing of the building structure.

Implementation of the above standard controls would reduce construction noise levels emanating from the site, limit construction hours, and minimize disruption and annoyance. With the implementation of these controls and recognizing that noise generated by construction activities would occur over a temporary period, the temporary increase in ambient noise levels would be **less-than-significant**.

Mitigation Measure 1c: **None required**.

Impact 2: **Exposure to Excessive Groundborne Vibration.** Construction-related vibration would not be excessive at nearby residential land uses or existing school buildings. **This is a less-than-significant impact.**

The construction of the project may generate perceptible vibration when heavy equipment or impact tools (e.g., jackhammers, hoe rams, etc.) are used in areas adjacent to developed properties. Construction activities would include demolition of existing structures, parking lot renovation, and construction of the office building and multi-purpose building.

The City of Oakland does not establish a vibration limit for construction. The California Department of Transportation recommends a vibration limit of 0.3 in/sec PPV for buildings that are found to be structurally sound and designed to modern engineering standards and a vibration limit of 0.25 in/sec PPV for historic and some old buildings (see Table 3). The nearest historic building to the site is the Herbert Hoover House located approximately 1,000 feet to the east at 1079 12th Street. Groundborne vibration levels exceeding 0.3 in/sec PPV at surrounding structures of modern construction and/or vibration levels exceeding 0.25 in/sec PPV at the Herbert Hoover House would have the potential to result in a significant vibration impact.

Project construction activities, such as drilling, the use of jackhammers, rock drills and other high-power or vibratory tools, and rolling stock equipment (tracked vehicles, compactors, etc.) may generate substantial vibration in the immediate vicinity of the work area. Table 7 presents typical vibration levels that could be expected from construction equipment at a distance of 25 feet and calculated vibration levels at distances representative of nearby structures. Pile driving would not be used as a method of construction for the project.

TABLE 7 Vibration Source Levels for Construction Equipment

Equipment		PPV at 25 ft. (in/sec)	PPV at 55 ft. (in/sec)	PPV at 75 ft. (in/sec)	PPV at 1,000 ft. (in/sec)
Clam shovel drop		0.202	0.085	0.060	0.003
Hydromill (slurry wall)	in soil	0.008	0.003	0.002	0.000
	in rock	0.017	0.007	0.005	0.000
Vibratory Roller		0.210	0.088	0.063	0.004
Hoe Ram		0.089	0.037	0.027	0.002
Large bulldozer		0.089	0.037	0.027	0.002
Caisson drilling		0.089	0.037	0.027	0.002
Loaded trucks		0.076	0.032	0.023	0.001
Jackhammer		0.035	0.015	0.010	0.001
Small bulldozer		0.003	0.001	0.001	0.000

Source: Transit Noise and Vibration Impact Assessment, United States Department of Transportation, Office of Planning and Environment, Federal Transit Administration, September 2018 as modified by Illingworth & Rodkin, Inc., April 2022.

Vibration levels would vary depending on soil conditions, construction methods, and equipment used. Residences are located as close as about 55 feet from the eastern property line of the site and 75 feet from the western and southern property lines of the site. At these distances, vibration levels resulting from heavy equipment use (e.g., vibratory rollers, clam shovel drops) would be expected to be about 0.060 to 0.088 in/sec PPV, which would be well below the 0.3 in/sec PPV limit recommended by the California Department of Transportation. Vibration levels at the Herbert Hoover House are not expected to exceed 0.004 in/sec PPV and would also not exceed any recommended limits. This is a **less-than-significant impact**.

Mitigation Measure 2: None Required

Appendix K

Cole Administrative Center/Education Project – Transportation Assessment

Fehr & Peers, April 25, 2022

FEHR PEERS

DRAFT MEMORANDUM

Date: April 25, 2022

To: Scott Gregory, Lamphier-Gregory

From: Sam Tabibnia, Fehr & Peers

Subject: The Cole Administrative Center/Education Project – Transportation Assessment

OK19-0343

This memorandum presents the transportation impact review conducted by Fehr & Peers for the proposed Oakland Unified School District (OUSD) Cole Administrative Center/Education Project in Oakland.

Based on our analysis:

- At full occupancy, the Project would generate approximately 710 daily, 94 AM peak hour, and 133 PM peak hour new automobile trips on a typical weekday.
- The off-street parking provided by the Project would be adequate to meet the parking demand generated by the site employees and students during both daytime and nighttime on a typical weekday.
- The Project would not cause a significant impact on transportation and circulation under CEQA, including a less-than-significant impact on vehicle miles traveled (VMT).

The remainder of this memorandum presents a brief description of the Project, summarizes the trip and parking generation for the Project, and evaluates the impacts of the Project on transportation and circulation under CEQA.

1. Project Description

The Project site is located at 1011 Union Street on the northwest corner of the 10th Street/Union Street intersection in Oakland. The Project site was formerly occupied by the Cole Elementary

School which is no longer in use. Although the site is currently used by several OUSD uses, this analysis conservatively assumes that the site is currently vacant.

The Project would demolish the existing uses and the site and construct a two-level building providing about 56,200 square feet of space, which is expected to accommodate the following:

- ***Adult and Career Education Program*** - The 28,800 square feet of space on the first level of the building would accommodate the OUSD Adult and Career Education programs, which would primarily relocate from their current location at McClymonds High School in West Oakland. It is expected that the Adult and Career Education program would continue to offer programs on most weekdays from 9:00 AM to noon (morning), from 1:00 to 4:00 PM (afternoon), and from 6:00 to 8:30 PM (evening). It is estimated that up to about 100 students and faculty will attend the morning classes, up to about 100 students and faculty will attend the afternoon classes, and up to about 175 students and faculty will attend the evening classes.
- ***Administrative Offices*** – The 27,400 square feet of space on the second level of the building would accommodate the OUSD Administrative Offices which would primarily relocate from its current location in downtown Oakland. Although about 157 OUSD administrative staff would be assigned to the Cole Building, it is expected that about 70 staff would be at the Cole Building on a typical weekday based on the following assumptions provided by the OUSD:
    - About 50 percent of the assigned employees (78 employees) would permanently work from home and are expected to be at the Cole Building once per week, resulting in about 15 work-from-home employees at the site on a typical weekday.
    - About 30 percent of the assigned employees (47 employees) would work a hybrid schedule and are expected to be at the Cole Building half of the time. Thus, about half (24 employees) of the hybrid employees would be at the site on a typical weekday.
    - About 20 percent of the assigned employees (31 employees) would work at the Cole Building every day.

The Project would provide 93 parking spaces in two surface parking lots. A 63-space parking lot on the south end of the Project site accessed through one full-access driveway on 10th Street, and a 30-space parking lot along the east side of the Project site accessed through two one-way driveways on Union Street.

2. Trip Generation

Trip generation is the process of estimating the number of motor vehicles that would likely access the Project on a typical day. **Table 1** summarizes the trip generation for the Project. Overall, the Project is estimated to generate about 710 daily, and 94 AM and 133 PM peak hour trips on a typical weekday. The trip generation for both Project components on a typical weekday are described below.

- ***Adult and Career Education Program*** – Since applicable published data for this type of use is not available, the trip generation is estimated based on the expected number of students and faculty at the site with full occupancy of the site as described above.
- ***Administrative Office Uses*** - Trip generation data published by the Institute of Transportation Engineers (ITE) in the *Trip Generation Manual* (11th Edition) for School District Office is used to estimate the trip generation for the administrivia office uses.

TABLE 1
PROJECT AUTOMOBILE TRIP GENERATION SUMMARY

Land Use	Size	Daily Trips	Weekday AM Peak Hour			Weekday PM Peak Hour		
			In	Out	Total	In	Out	Total
Adult and Career Education Program[1]	375 students and faculty	940	100	10	110	175	18	193
Administrative Office[2]	27,400 square feet	400	50	16	66	10	47	57
	Subtotal	*1,340*	*150*	*26*	*176*	*185*	*65*	*250*
	Non-Auto Reduction[3]	*-630*	*-70*	-12	-82	-87	-30	-117
Adjusted Total Automobile Trips		**710**	**80**	**14**	**94**	**98**	**35**	**133**

Notes:
1. Based on the following assumptions:
   Daily: assume 2.5 trips per person per day
   AM Peak Hour: all morning class attendees arrive and about 10 percent leave during the AM peak hour
   PM Peak Hour: all evening class attendees arrive and about 10 percent leave during the PM peak hour
2. ITE *Trip Generation (11th Edition)* land use category 538 (School District Office, General Urban/Suburban):
   Daily: T = 14.72 * X -6.60
   AM Peak Hour: T = 2.50 * X – 2.81 (76% in, 24% out)
   PM Peak Hour: T = 2.19 * X – 2.81 (17% in, 83% out)
3. Reduction of 46.9% assumed, based on City of Oakland *TIRG*, based on Census data for an urban environment within 0.5 miles of a BART station.

Source: Fehr & Peers, 2022.

The estimated trip generation for the Adult and Career Education Program assumes that all students and faculty would drive to and from the site. In addition, the ITE data is primarily based on data collected at single-use suburban sites where the automobile is often the only travel mode. However, the Project site is located near local and regional transit service in an area where many trips are walk, bike, or transit trips. Since the Project is about 0.5 miles from the West Oakland BART Station, this analysis reduces the trip generation by 47 percent to account for the non-vehicular trips. This adjustment is consistent with the City of Oakland's *Transportation Impact Review Guidelines* (TIRG, April 2017) and is based on US Census commute data for Alameda County from the 2014 5-Year Estimates of the American Community Survey (ACS), which shows that the non-automobile mode share for urban areas within 0.5 miles of a BART Station is about 47 percent.

3. Parking Demand

Table 2 summarizes the estimated parking demand for the Project site on a typical weekday based on the maximum occupancy of the site as described in the Project Description section of this memorandum and the number of people expected to drive to and from the site as described in the Trip Generation section of this memorandum. It is estimated that the 93 off-street parking spaces provided by the Project would meet the parking demand generated by the Project employees and students during both daytime and nighttime on a typical weekday. It is expected that the site visitors would use on-street parking on the adjacent streets because the Project parking lots would be at or near capacity when the site is fully occupied.

TABLE 2
PROJECT AUTOMOBILE PARKING DEMAND SUMMARY

Use	Daytime		Nighttime	
	Population[1]	**Parking Demand[2]**	**Population[1]**	**Parking Demand[2]**
Adult and Career Education Program	100	53	175	93
Administrative Office	70	37	0	0
Total	***170***	***90***	***175***	***93***
Parking Supply		93		93
Parking Surplus		**+3**		**0**

Notes:
1. Population estimates provided by OUSD

2. Assuming that 53 percent of the population would drive to the site, consistent with the City of Oakland *TIRG*, using Census data for an urban environment within 0.5 miles of a BART station

Source: Fehr & Peers, 2022.

4. CEQA Analysis – Transportation and Circulation

Since OUSD does not have its own thresholds of significance, this document relies on the following City of Oakland's thresholds of significance to determine if the Project would have a significant impact on the environment:

A. Conflict with a plan, ordinance, or policy addressing the safety or performance of the circulation system, including transit, roadways, bicycle lanes, and pedestrian paths (except for automobile level of service or other measures of vehicle delay)
B. Cause substantial additional VMT per capita, per service population, or other appropriate efficiency measure
C. Substantially induce additional automobile travel by increasing physical roadway capacity in congested areas (i.e., by adding new mixed-flow lanes) or by adding new roadways to the network

Each of the above thresholds are discussed below.

Conflicts with Plans, Ordinances, or Policies Relating to Safety, or Performance of the Circulation System (Criterion A)

The Project would not cause a significant impact by conflicting with adopted plans, ordinances or policies addressing the safety and performance of the circulation system, including transit, roadways, bicycle lanes and pedestrian paths. Various City of Oakland's plans and policies, such as the City's General Plan, the Equitable Climate Action Plan, and the Public Transit and Alternative Mode and Complete Streets policies, state a strong preference for encouraging the use of non-automobile transportation modes such as transit, bicycling and walking. The Project would encourage the use of non-automobile transportation modes by locating in a medium-density, walkable urban environment and within 0.5 miles of both local and regional transit. It is expected that more than half of the Administrative Office employees at the Project site would work remotely on typical weekdays, further reducing the automobile trips generated by the Project.

The Project would not make any modifications to the existing pedestrian or bicycle facilities in the surrounding areas, including the existing BayWheels bike-share station located on Union Street

along the Project frontage just north of 10th Street. Although neither the 2017 City of Oakland Pedestrian Master Plan (*Oakland Walks!*) or the 2019 Oakland Bike Plan (*Let's Bike Oakland*) identify any future facilities along the streets adjacent to the Project, the Project would not adversely affect installation of any planned facilities because it would not make any major modifications to the public right-of-way or include features that would adversely affect installation of potential facilities in the future. The Project would provide long-term bicycle parking for Project employees within the Project building and short-term bicycle parking for students and visitors in the form of bike racks in the Project parking lot.

Project construction activities could potentially temporarily disrupt transportation, bicycle, and/or pedestrian movement, as well as reduce parking availability in the Project area. The Project will prepare and implement a Traffic Control Plan prior to start of construction, which will be approved by the City of Oakland. The Traffic Control Plan will ensure that the Project construction activities would not excessively disrupt motor vehicle, bicycle, and/or pedestrian circulation.

The Project is consistent with applicable plans, ordinances, and policies, and would not cause a significant impact by conflicting with adopted plans, ordinances, or policies addressing the safety and performance of the circulation system, including transit, roadways, bicycle lanes, and pedestrian paths (except for automobile level of service or other measures of vehicle delay). For these reasons, the Project would not conflict with adopted plans, ordinances, or policies resulting in a less-than-significant impact.

Cause Substantial Additional Vehicle Miles Traveled (Criterion B)

According to the City of Oakland TIRG, the following are thresholds of significance related to substantial additional VMT:

- For residential projects, a project would cause substantial additional VMT if it exceeds existing regional household VMT per capita minus 15-percent.
- For office projects, a project would cause substantial additional VMT if it exceeds the existing regional VMT per worker minus 15-percent.
- For retail projects, a project would cause substantial additional VMT if it results in a net increase in total VMT

Consistent with the State Office of Planning and Research's (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018), City of Oakland uses screening criteria that can be used to quickly identify projects that can be expected to cause a less-than-significant impact on VMT without conducting a detailed study. The City of Oakland TIRG includes several screening

criteria. The criterion applicable to the Project is Criterion #2, Low-VMT Area, which states that VMT impacts would be less-than-significant for a project if the following screening criterion is met:

- Low-VMT Areas: The project meets map-based screening criteria by being located in an area that exhibits below-threshold VMT, or 15 percent or more below the regional average.

The City of Oakland uses the Metropolitan Transportation Commission (MTC) Travel Model to apply the Low-VMT Areas criterion. The MTC Travel Model is a model that assigns all predicted trips within, across, or to/from the nine-county San Francisco Bay Area region onto the roadway network and the transit system by mode (single-driver and carpool vehicle, biking, walking, or transit) and transit carrier (bus, rail) for a particular scenario. The MTC Travel Model estimates VMT per resident and VMT per worker for transportation analysis zones (TAZs) throughout the Model area. TAZs are geographic areas that vary in size from a few city blocks in dense downtown areas to larger geographic areas in lower-density areas.

Since the City of Oakland TIRG recommends treating educational land uses (K-12 schools and post-secondary institutions) as office uses for VMT screening and analysis, the VMT per worker, as estimated by the MTC Model, is applicable to both Project components (the Adult and Career Education Program and the Administrative Office).

Table 3 shows the estimated VMT per worker for TAZ 985, the TAZ in which the Project is located, as well as the applicable VMT thresholds of 15 percent below the regional average. The average daily VMT per worker in the Project TAZ (TAZ 985) is 17.8 miles. The regional average daily VMT per worker is 21.8 miles, and the threshold (15 percent below the regional average) is 18.5 miles. The average daily VMT per worker in the Project TAZ is more than 15 percent below the regional average, satisfying the Low-VMT Areas criterion.

In addition, the Adult and Career Education Program component of the Project, which would be relocated from its current location at McClymonds High School, would continue to primarily serve West Oakland and the surrounding areas. Since OUSD operates similar Adult and Career Education Programs at other sites throughout the City of Oakland, the Project is considered local-serving.

Since the Project would satisfy the City of Oakland's Low-VMT Areas criterion and the Adult and Career Education Program component of the Project is considered local-serving, the Project is presumed to have a less-than-significant impact on VMT.

TABLE 3
PROJECT VMT SUMMARY

Geographic Area	Total VMT per Worker (2020)[1]
Project TAZ (TAZ 985)	17.8
Bay Area Region Average	21.8
Bay Area Region Average minus 15% (i.e., threshold of significance)	18.5
Significant Impact?	***No***

Source: Fehr & Peers, 2022.

Substantially Induce Additional Automobile Travel by Increasing Physical Roadway Capacity in Congested Areas or by Adding New Roadways to the Network (Criterion C)

The Project would not modify the roadway network surrounding the Project site. Therefore, the Project would not substantially induce additional automobile travel by increasing the physical roadway capacity in congested areas (i.e., by adding new mixed-flow lanes) and would not add new roadways to the network and would have a less-than-significant impact on inducing additional automobile traffic.

Please contact Sam Tabibnia (s.tabibnia@fehrandpeers.com or 510-835-1943) with questions or comments.
