### **Deferred Maintenance is not just an OUSD issue!**

Deferred maintenance of streets leads to a deterioration of road surfaces, creating hazards like potholes and uneven pavements. This not only affects the comfort and safety of drivers and pedestrians but also can lead to increased vehicle maintenance costs and accidents.

Additionally, poorly maintained streets can impact emergency response times and overall urban mobility.

Deferred maintenance of the electrical grid and streets can have significant impacts on communities and their daily functioning. For the electrical grid, deferred maintenance can lead to increased outages, reduced efficiency, and even safety hazards like fires. Over time, this neglect can result in the need for more extensive and costly repairs, as well as a higher risk of catastrophic failures, particularly under stress from extreme weather or increased demand.

### **Routine Vs. Deferred Maintenance**

#### **Routine Maintenance**

This involves regular, ongoing upkeep tasks to keep school facilities in good working order. It includes tasks like cleaning, minor repairs, safety checks, and general maintenance.

Routine maintenance helps prevent small issues from turning into bigger, more expensive problems.

#### **Deferred Maintenance**

This refers to repairs and maintenance activities that are postponed for various reasons, typically due to budget constraints.

Over time, deferred maintenance can lead to a backlog of repairs, often resulting in more significant, more costly problems. In an educational system, this could mean delaying repairs on buildings, technology upgrades, or equipment renewals.

#### **Facilities Inspection Tool**

The key connection between deferred and routine maintenance is the impact on the school's physical environment and, consequently, on the quality of education. **Regular routine maintenance helps to avoid the accumulation of issues that would require larger-scale deferred maintenance.** When routine maintenance is neglected, it often leads to a build-up of deferred maintenance tasks, leading to more significant disruptions and higher costs in the long run.

### Fremont High School Facilities Project and Life cycle

Proactively maintaining a new building is more cost effective in the long run.

Taking care of minor problems quickly usually costs less than handling major repairs or replacements that could become necessary if maintenance is postponed, ensuring a safe and healthy school environment for students.

## **Budget Solutions Solved with Deferred Maintenance**

- Deferred Maintenance (DM) was eliminated for 4-years to provide the district financial solvency in the General Fund (01) from 2015-16 to 2018-19.
- In February of 2019- 2020, the Board approved funding Deferred Maintenance Budget at \$7M per year for 5 years totalling a \$35M commitment to DM.
- The District could only fund the DM Program at \$5M a year based on district budget constraints.
- The Board later reduced the funding to \$3M to provide budget solutions for the Blueprint Cohort 3 savings.
- In FY 2022-23 and 2023-24 the Board approved \$3M to fund districtwide DM projects

# How Are We Spending the 3% RRMA Budget Expenditures Over Time

### **Preventative Maintenance Team**

FTE reduction required department to adjust staffing from a preventative maintenance program to a reactive maintenance program by tickets.

**Theory of Action:** If we implement regularly scheduled maintenance checks, tasks and replacements, then we will identify and address potential issues before they become major problems for school sites.

**The Buildings and Grounds Preventive Maintenance** Team proactively maintains school facilities and equipment, ensuring longevity and optimal performance.

The PM Team's responsibilities include checking and repairing plumbing, electrical work, carpentry, inspecting building structures, and conducting routine safety inspections.

This active approach helps minimize disruptions to daily operations, reduce the need for emergency repairs, lower overall maintenance costs, and create a safe and conducive learning environment for both students and staff.

It is worth noting that this proactive maintenance also assists the District in complying with the **State of California's William inspections**. The Preventive Maintenance Team consisted of:

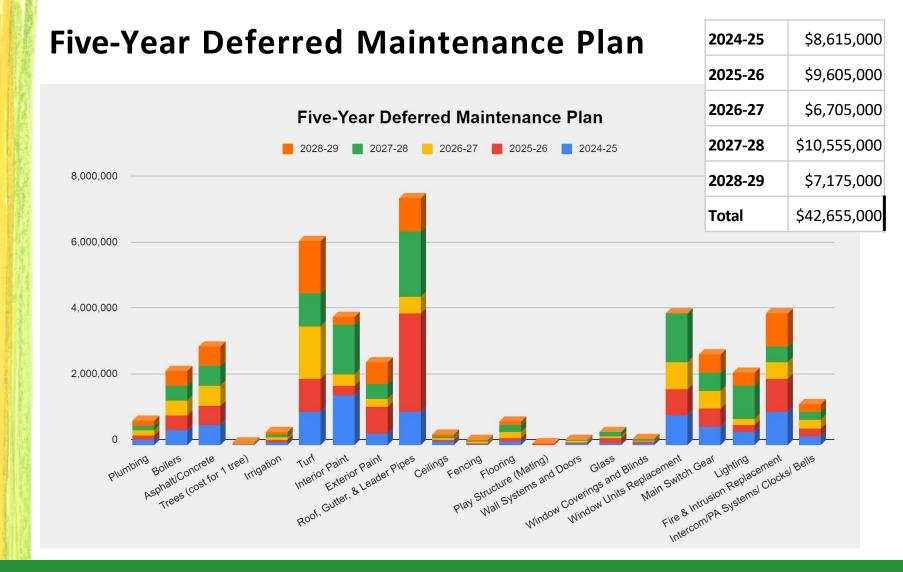

- 1 Manager
- 2 Electricians
- 1 Plumber
- 2 Carpenters
- 2 Painters

and supported by other Buildings and Grounds trades as needed.
