Local Business Participation Percentage 100.00%

Strategic Alignment Among the key purposes of the District's Facilities Master Plan is to provide an academic environment for the Oakland community that will give every student, educator, and community member using our facilities the best possible opportunity for learning.

Through implementation of the Facilities Master Plan, the District intends to improve the District's facilities in terms of structural integrity, safety, reliability of operating (mechanical) systems, access to modern resources, number and type of appropriate laboratories and specialized instruction rooms, opportunities for physical education, and attractiveness, such that the Oakland Public Schools are second to none. Operation of the District schools under the planned approach is intended to ensure safety, cleanliness, and orderliness for all individuals participating in the learning process.

The basic facility needs of students such as proper lighting, functional roofs, noise control and well maintained buildings, not only convey the message that we value our students and teachers but may foster a sense of school pride and community ownership which may improve attitudes towards learning. The implementation of the Facilities Master Plan is our first step in that direction.

Recommendation

Attention: Mr. Eric Scheuermann, Project Manager

Subject: Request for Contract Amendment
James Madison Middle School Expansion
400 Capistrano Drive, Oakland, California 94603
Geosphere Project No. 91-03352-A and C

Dear Mr. Scheuermann:

Geosphere Consultants, Inc. (Geosphere) has prepared this contract amendment request to the Oakland Unified School District (District) to perform additional geotechnical engineering services in support of the preparation of the Geotechnical Engineering and Geologic Hazards Study for the proposed improvements at James Madison Middle School in Oakland, California. Our services currently being performed for the project are being provided in accordance with our approved proposal to the District dated July 21, 2014. In that proposal, the approved amount for Phase A services, including preparing a Geotechnical Engineering and Geologic Hazards Study and performing limited analytical sampling of onsite soils, was approved by the District for a lump sum of \$15,300.00. The proposal also noted that performance of a site-specific seismic ground motion analysis was not included in the project scope and cost, and stated that it was possible that the California Geological Survey (CGS), report reviewers on behalf of the Division of State Architect (DSA), could require that such an analysis be performed.

Subsequent to the approval of our proposal, we were informed by CGS that based on their recent enforcement of CGS Note 48, Section 16 requirements, they are now requiring that regardless of school building structural type, site-specific seismic ground motion analyses be performed for all sites where seismic parameter S_1 is 0.75g or greater, which essentially occurs where sites are within a few miles of a major earthquake fault such as the Hayward and San Andreas faults, and analyzed using 2013 California Building Code (CBC) procedures instead of 2010 CBC procedures. The effect of this newly enforced requirement is that most schools within the OUSD system are likely subject to this requirement for DSA projects reviewed by CGS. The computed S_1 value for the James Madison Middle School site is 0.79g.

This amendment request also includes Phase C services consisting of CGS permit application and processing, which Geosphere can provide in order to expedite DSA approval of the project.

Additional Phase A Services - Site Specific Seismic Ground Motion Analysis

In order for the already authorized geotechnical engineering and geologic hazards study currently in the process of being completed, a site-specific seismic ground motion analysis will need to be completed for the project. We will perform the required computer analyses and generate the required site specific seismic ground motion analysis results based on the applicable procedures of the 2013 CBC and ASCE 7-10. Results will be included in the geologic hazards and geotechnical engineering study report currently in progress.

Phase C - CGS Permit Application and Processing

We can assist in the processing of CGS report review and clearance. Phase C would consist of the following scope of work:

- Prepare the new CGS application form for your project, including the submission of the required \$3,600 plan check fee.
- Submit the required hard copies of Geotechnical Engineering and Geologic Hazards Report along with plans provided by you.
- Prepare one response letter if required by CGS.

Cost and Schedule

We will perform the additional required analyses for a lump sum of **\$4,000.00**, resulting in the increase of our Phase A services from a lump sum of \$15,300.00 to a new total of **\$19,300.00**. We anticipate that the additional services could increase our time of completion of the geotechnical engineering and geologic hazards study by one or two weeks, but we recognize the time constraints for obtaining DSA approval on this project and will expedite the work as best we can.

Phase C services would be provided for a lump sum fee of **\$4,500.00**, including the basic cost of the permit application, markup and associated in-house costs for performing the work.

If our amendment request is acceptable, we anticipate you will provide a District contract amendment following Board approval. In the meantime, your verbal authorization is sufficient for us to proceed with the work. If you have any questions regarding this proposal, please contact the undersigned at 925-314-7100, cdare@geosphereinc.net or eswenson@geosphereinc.net. We appreciate the opportunity to continue to provide our services to the Oakland Unified School District.

Sincerely,

This proposal is based on information provided by you, as well as the conceptual plans by the project architect, Byrens Kim Design Works, also provided by you.

We understand that the District proposes to construct a new classroom building totaling approximately 22,000 square feet in building footprint. At the time this proposal was prepared, two possible configurations were being considered at a single site on the eastern side of the school property located south of the existing paved parking lot, east of the main school building, and west of the baseball diamond. The proposed site is currently occupied by a paved play yard.

A - GEOTECHNICAL ENGINEERING/ GEOLOGY & GEOLOGIC HAZARDS STUDY

The Geotechnical Field Study will meet Title 24 requirements, including the most recent Note 48 requirements of the California Geological Survey (CGS), as enforced by the Division of the State Architect (DSA). These requirements include drilling a minimum of two borings representing each structure and at least one boring for every 5,000 sf of building footprint. Based on satisfying the CGS requirements, we judge that five borings will be required to cover the 22,000 square feet of building footprint. In addition, since the school site is located within a State of California Seismic Hazard Zone for required liquefaction hazard evaluation, one of the borings will be drilled to a depth of 50 feet. The project site was not found to be located within an Aquist-Priolo Earthquake Fault zone. In addition, we will perform a limited assessment of the near surface soils for potential contaminants. The services to be provided for our study include the following:

Preliminary Field Activities

- 1) Review available geotechnical and geologic literature for the site.
- 2) Coordinate access with District personnel.
- 3) Meet with school and District personnel at the site.
- 4) Mark the locations of the subsurface explorations at the site and contact Underground Service Alert.
- 5) Utilize an underground utility locating subcontractor to better define the location of existing buried utilities.
- 6) Obtain an Alameda County Public Works Agency drilling permit.
- 7) Perform a geologic site reconnaissance by a California-registered Certified Engineering Geologist (CEG).

Field Exploration

- 1) The field exploration program will consist of drilling five borings at the site. The borings will range in depth between 20 and 50 feet.
- 2) Sampling will occur in roughly five-foot intervals in the borings, with more frequent sampling within the uppermost five feet. The soil will be sampled with a Modified California sampler fitted with six-inch long inner brass liners and a Standard Penetration Test (SPT) split spoon sampler. The relatively undisturbed liner samples will be sealed and the SPT samples will be placed in plastic bags. The samplers will be driven 18 inches with a 140-pound hammer with an approximate 30-inch drop. Blowcounts for the last foot will be logged as the penetration resistance. The blowcounts from the SPT sampler will be utilized to determine subsurface soil characteristics for correlation with USCS soil types. Bulk soil samples may be obtained from the upper few feet of auger cuttings in the borings.
- 3) During the sampling, we will also obtain samples representative of the upper five-feet of soil within the possible construction area. We will obtain a composited sample from all of the borings from a depth of one to two feet and a composited sample from three to five feet. These samples will be tested for potential contamination as detailed in our laboratory testing section. The intent of this testing is to screen soils which may be off-hauled during construction. This scope of work is not an all-encompassing study of potential contaminants nor is it a study of groundwater in the area. If there is a known concern regarding contamination, we should be advised so we can make any needed changes to this scope of work.
- 4) The borings will be backfilled with cement grout under the supervision of an Alameda County Inspector. Per the District's request, the excess drill cuttings may be temporarily stored in 55-gallon drums but will subsequently be off hauled from the site.

Laboratory Testing

- 1) Several in-situ moisture and density tests will be performed on selected brass tube liner samples.
- 2) Up to three Sieve Analysis tests will be performed to help determine subsurface soil characteristics and help evaluate liquefaction susceptibility, if applicable.
- 3) One to two Unconfined Compression tests or Direct Shear tests will be performed to measure soil strength parameters.
- 4) One or two Atterberg Limits tests will be performed to measure the plasticity and expansive potential of the near surface soil, assuming cohesive materials are encountered.
- 5) One R-value test will be conducted to derive information needed for flexible pavement design.
- 6) One set of Corrosion tests will be performed as required by the 2013 California Building Code (CBC) to help evaluate the corrosive potential of the subsurface soils on buried concrete and metal structures.
- 7) The two composited samples will be sealed, labeled and stored on ice. The samples will be transported to a California Licensed Analytical Laboratory and proper Chain-of-Custody procedures will be followed. The soil samples will be tested for the presence of CAM 17 Metals (EPA 6010B), TPH gasoline with BTEX and MTBE (EPA 8260), TPH diesel and motor oil (EPA 8015), PCBs and Pesticides (EPA 8081 and 8082), Volatile Organic Compounds (EPA 8260), Semi-Volatile Organic Compounds (EPA 8270). The standard turnaround time for testing is five days upon receipt of the samples.

Geology and Geologic Hazards Study

In accordance with the requirements of Title 24 and the 2013 CBC, a Geologic Hazards Study is also required. This is dictated by Note 48 of the California Geologic Survey. The Geology and Geologic Hazards Study would include site plans, geology maps, soil series maps, geologic cross-sections, a fault map, a liquefaction susceptibility map, and a flood map. A California-registered Certified Engineering Geologist will perform a site reconnaissance of the property. Pertinent geologic maps, literature, and aerial photographs will also be reviewed. The local and regional geology and

geologic hazards will be discussed. Based on our understanding of the size and type of the buildings, as well as the anticipated subsurface materials, we do not anticipate that a site-specific ground motion response analysis will be required for this project, except if excessive liquefaction settlement (liquefaction settlement exceeding one inch) is found to exist and CBC requirements as a result dictate, or the structural engineer requests that a site-specific response analysis be performed.

Report Preparation

- 1) A Geotechnical Engineering/ Geologic Hazards Study report will be prepared and will contain the aforementioned Geology and Geologic Hazards Study, plus a site plan showing boring locations, boring logs, subsurface cross-sections, and a summary of the site soil and groundwater conditions. 2013 CBC seismic design parameters, a preliminary corrosion evaluation, and other pertinent information will be provided. A liquefaction analysis will be conducted if liquefaction-susceptible subsurface materials are encountered.
- 2) Geotechnical recommendations will be provided for:
 - Site clearing, preparation, grading, and drainage;
 - Recommended or allowable fill materials;
 - Foundations, including allowable bearing capacities, dimensions and embedment;
 - Interior floor slabs and slabs-on-grade;
 - Exterior concrete hardscape;
 - Temporary cut slope excavation and trench slope stability;
 - New site pavements; and
 - Underground utility trench backfilling.
- 3) The analytical testing results will be presented with a comparison to Environmental Screening Levels developed by the San Francisco Regional Water Quality Control Board. Waste profiling or other environmental consulting services are not included in this proposal.

B - CONSULTATION DURING DESIGN

Consultation during design may be required to provide information to other engineers or architects. This consultation is typically minor and may consist of supplemental geotechnical recommendations for specific project elements not identified by the project team at the time the geotechnical study was performed; ideas for value engineering from a geotechnical engineering standpoint; or plan review services and letter preparation by a Principal Engineer or Geologist, or other engineering staff.

Summary of Fees

The following table provides our estimated breakdown of the fees for this project:

Scope Item	Amount	Fee Basis
<i>Phase A - Geotechnical Engineering Study and Geologic Hazards Report</i>		
Permitting and Planning	\$ 800.00	Lump Sum
Alameda County Public Works Agency Permit/Inspection	\$ 300.00	Lump Sum
Utility Location-USA and Private Locating Contractor	\$ 1,000.00	Lump Sum
Drilling with Engineer; Off Site Soil Disposal	\$ 5,800.00	Lump Sum
Lab Testing	\$ 1,800.00	Lump Sum
Analytical Sampling and Testing (5 day turnaround time)	\$ 1,800.00	Lump Sum
Engineering Analysis & Geologic Hazard Evaluation	\$ 1,400.00	Lump Sum
Report Preparation	\$ 2,400.00	Lump Sum
Total - Required Geologic Report and Geotechnical Report	\$15,300.00	Lump Sum

Phase B services (i.e., response to CGS comments and consultation fees during the design of the project) are not included in our aforementioned cost budget, and would be provided on a Time and Materials basis. Assuming that a site-specific response analysis is not required for the project by either CGS or the project structural engineer, we suggest an initial budget of \$1,500.00 be allocated for Phase B services. Site-specific ground motion response analyses can cost in the range of \$2,000 to \$5,000, depending on required complexity, and are not included in the aforementioned budget. Construction-phase services are dependent on the project's final design as well as the construction schedule and can be provided for a budget to be determined and authorized prior to the start of construction.

Schedule

The field exploration program is anticipated to take a total of one to one and a half days of drilling and the base estimate above is based on the assumption that the drilling can take place on a summer weekday. We would coordinate with District and school personnel so that disruption to daily summer school operations, if any, would be minimized. Laboratory testing will take approximately one to two weeks to complete following the fieldwork.

The report can be issued within about four to five weeks after the drilling is completed. If needed, prior to completion of the report, specific design recommendations can be transmitted to the project design consultants. Adjustments to our schedule are possible if needed to meet the overall project schedule.

If this proposal is acceptable, we anticipate you would provide us your District authorization to perform our services. We greatly appreciate the opportunity to provide this proposal to the Oakland Unified School District.

If you have any questions regarding this proposal, please contact Mr. Dare at cdare@geosphereinc.net or 925-580-7343.
