RE: Hazardous Materials Survey – Glenview Elementary School

Dear Wil:

ACC Environmental Consultants, Inc., (ACC) is pleased to present this proposal to perform an asbestos, lead paint and other hazardous materials survey at Glenview Elementary School, 4215 La Cresta Avenue, Oakland, CA. By way of background, ACC conducted an Asbestos Hazard Emergency Response Act (AHERA) survey of the subject site with the report dated April 20, 2007 and also re-visited the school on May 12, 2015 to verify existing conditions and to look over additional materials. ACC did not sample for the presence of lead paint in 2007 and will incorporate this sampling into this current project. The two-story building was built in 1927 and has a crawlspace and four (4) outside portable structures. Common materials identified from the walk thru and from the previous survey include, but are not limited to, various types of vinyl floor tile and vinyl sheet flooring with underlying mastics, rough (hallways) and coarse (auditorium) types of plaster, thermal system insulation from the boiler/fan rooms and crawlspaces, roofing materials, ceiling tiles, grout from wall ceramic tiles and exterior stucco.

This assignment will differ from ACC's original AHERA survey in that it will entail a Pre-Demolition survey using destructive means to sample concealed suspect materials. As a cost saving measure, ACC will utilize existing sample data from the original survey. This will include re-confirming materials already sampled and analyzed by collecting up to one (1) sample instead of sampling in triplicates for materials already assessed. In some cases, the underlying mastic was not sampled originally and was assumed to contain asbestos; ACC will sample any layered material (or any general material) that was assumed or not sampled during the original survey. ACC will also re-quantify materials already sampled as well as newer materials encountered.

SCOPE OF SERVICES

ACC will perform asbestos and lead surface surveys in accordance with local, state and federal regulation at the subject property in order to determine the presence of asbestos containing materials, lead-base and lead containing paints that may be disturbed during the planned demolition work.

Task 1: Pre-Demolition Asbestos Survey: ACC will first review and utilize information collected from our AHERA survey in 2007 to incorporate into this project. Following review of the existing report, ACC will perform an asbestos survey and will provide a written report of findings for the subject site. Qualified personnel certified by the California Division of Occupational Safety and Health as Certified Asbestos Consultants (CAC) and/or Certified Site Surveillance Technicians (CSST) and California Department of Health Lead Paint inspectors will perform the surveys. The asbestos survey will be performed in accordance with 40 CFR Part 763 AHERA

and the report will conform to the requirements defined by Bay Area Air Quality Management District (BAAQMD).

If present, friable materials to be sampled include, but are not limited to, spray applied fireproofing on structural steel members, spray applied acoustic ceiling material and suspect thermal systems insulation (including pipe insulation, boiler insulation, heating and cooling ducts insulation etc.). If present, non-friable materials to be sampled include, but are not limited to, acoustic ceiling tiles, floor tiles and sheet flooring, wall and ceiling plaster, gypsum drywall mudding compound, duct tape, flooring adhesive, and fire doors. ACC will sample roofing materials as part of this survey.

The material sampling strategy will be performed in accordance with guide lines outlined in the EPA publication "Asbestos in Building: Simplified Sampling Scheme for Friable Surfacing Materials". At a minimum, 3 to 7 samples per homogeneous area of accessible friable material will be obtained for analysis. For non-friable materials, three (3) samples of each homogeneous material will be obtained and analyzed. All samples will be sent, to a United States Environmental Protections Agency certified laboratory for analysis. The asbestos samples will be analyzed using Polarized Light Microscopy (PLM), any sample result reported as > 1% or trace asbestos may be reanalyzed using PLM - Point Counting a minimum of 1,000 fields as defined in 40 CFR Part 61 upon receipt of written approval of the client.

The number of asbestos bulk samples ACC estimates (see attached Cost Estimate Sheet) is based on assumptions of suspect building materials normally found at properties of this nature. ACC will only charge for the actual number of samples obtained.

The samples will be collected at the site by a Cal/OSHA, Certified Asbestos Consultant (CAC) or Certified Site Surveillance Technician (CSST) and will be delivered to an independent laboratory for analysis by Polarized Light Microscopy (PLM) with a 72-hour turn-around time. PLM samples include up to 3 layers within each sample; additional layers beyond the first 3 layers will be treated and charged as a separate sample. Potential Multi-layered materials include floor tile and adhesives, gypsum wallboard, taping compound, texturing compounds, roofing materials, etc. The number of samples provided is an estimate based on our experience with this level of work using protocols defined by regulations governing the conduct of Asbestos surveys.

Task 2 - Lead Paint Inspection: ACC proposes the following inspection protocol to comply with the requirements of Title 8, CCR - 1529 - Lead. This protocol will provide the Client with appropriate and sufficient data to rebut the presence of lead-base paint or lead-containing paint or to inform the Client of the presence of either, in order to allow for proper management of suspect materials or to plan for future construction activities at each subject site. This survey is not to be construed in any way as a risk assessment for the purposes of abatement or as a scope of work for work activities or construction and demolition work.

The lead survey will be performed to comply with reporting requirements of Cal/OSHA - Title 8, CCR 1532.1 - Lead, ACC will obtain bulk paint chip samples of representative paints where the XRF readings report 0mg/cm², these samples will be analyzed by atomic absorption (AA) by an AIHA accredited laboratory* in order to determine if any level of lead is present in the paint. *NOTE: XRF instruments do not detect or accurately report the presence of lead in paint below a reading of .1mg/cm². Bulk sampling of paints is required to determine whether paints have "any detectable" amounts of lead per Cal-OSHA requirements.

Suspect materials that are determined to not be Lead-Based Paint - will be identified in the field and bulk samples will be collected by a California Department of Public Health (CA-DPH) Certified Lead Inspector Assessors and Sampling Technicians. A minimum of one sample of each homogenous suspect lead-containing material from each building will be collected. Visible color and texture of suspect materials will determine homogeneity. Analysis of lead samples will be by NIOSH 7082 Flame Atomic Absorption (Flame AA). Samples will be delivered to an American Industrial Hygiene Association (AIHA ELLAP) and California Department of Public

Health certified laboratory for metals analysis using NIOSH 7082 under a 24-hour turn-around time.

Task 3 – Asbestos and Lead Paint Report: ACC will prepare a report of findings which will include material descriptions, sample locations, descriptions of locations of materials tested, and quantities of asbestos-containing materials or lead-based and lead-containing damaged/peeling paints or materials at the subject sites.

SCHEDULE OF SERVICES

The surveys will be scheduled upon receipt of an executed copy of this proposal. ACC anticipates being on site for three and one-half (3.5) days in order to accomplish both Tasks.

ACC will schedule the survey(s) upon receipt of written authorization by Client. ACC will commence the survey work with a five working-day notice. The reports of findings will be provided 7-working days after receipt of the final laboratory reports for the final survey inspection.

COST OF SERVICES

See attached project cost estimate sheet.
