RL. 9-10.2 Determine a theme or central idea of a text and analyze in detail its development over the course of the text, including how it emerges and is shaped and refined by specific details; provide an objective summary of the text.

ntroductory Activity: Redesigning the School Lunch

Multimedia & Design Focus:

- Students create photo essays showcasing a personal "Day in the Life"
- In pairs, students conduct, film, and edit video interviews of each other & Latitude staff, discussing their personal journeys

Model Analysis:

- Students view and analyze existing media featuring Oakland, including documentaries, photography, podcasts, written media, as well as virtual and augmented reality (VR & AR) experiences

Field Experiences:

1. Students visit multimedia-based museum exhibits and participate in "Escape Room" experiences to analyze multimedia-enhanced immersive learning experience models.

Media Literacy Competencies:
Analyze Media

- Understand both how and why media messages are constructed, and for what purposes
- Examine how individuals interpret messages differently, how values and points of view are included or excluded, and how media can influence beliefs and behaviors
- Apply a fundamental understanding of the ethical/legal issues surrounding the access and use of media

Creating Media

- Basic Photography
- Basic Videography

Design Competencies:

Navigate ambiguity

Introducti Chalk Talks, For A's Text Protocol Deepening work with Socratic Seminars **Writing Focus:** Nonfiction Writing - The Anatomy of a Radio Story. Students will deconstruct the structure of a journalistic narrative and analyze the narrative strategies used by the journalists who crafted the "Bay Curious" audio podcasts. **Latitude Competencies Targeted:** **ELA:** Conducting Research, Engaging in Text Based Discussions **History:** Analyzing Historical Perspectives **Anchor Writing Focus Competencies** Writing piece: 3. Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details, and well-structured event sequences. • Engage and orient the reader by setting out a problem, situation, or observation, establishing one or multiple point(s) of view, and introducing a narrator and/or characters; create a smooth progression of experiences or events. • Use narrative techniques, such as dialogue, pacing, description, re ection, and multiple plot lines, to develop experiences, events, and/or characters. • Use a variety of techniques to sequence events so that they build on one another to create a coherent whole. • Use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or characters. • Provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative. **Social Justice Standard** IDENTITY	ostering an Inclusive Computing Culture Building an inclusive and diverse computing culture requires strategies for incorporating perspectives from people of different genders, ethnicities, and abilities. Incorporating these perspectives involves understanding the personal, ethical, social, economic, and cultural contexts in which people operate. Considering the needs of diverse users during the design process is essential to producing inclusive computational products. Developing and Using Abstractions Abstractions are formed by identifying patterns and extracting common features from specific examples to create generalizations. Using generalized solutions and parts of solutions designed for broad reuse simplifies the development process by managing complexity. Creating Computational Artifacts The process of developing computational artifacts embraces both creative expression and the exploration of ideas to create prototypes and solve computational problems. Students create artifacts that are personally relevant or beneficial to their community and beyond. Computational artifacts can be created by combining and modifying existing artifacts or by developing new artifacts. Examples of computational artifacts include programs, simulations, visualizations, digital animations, robotic systems, and apps.

sources oı subject, demonstrating understanding of the subject under investigation. W.9-10.8 Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the usefulness of each source in answering the research question; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and following a standard format for citation. W.9-10.9 Draw evidence from literary or informational texts to support analysis, reflection, and research. RI.9-10.1.a Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text. a. Develop factual, interpretive, and evaluative questions for further exploration of the topic(s).	

Phase 3: Podcast Creation/ Sound Design and Production

Overview – The drafting, location writing, and the photography will take place during this phase of the project. Students will spend a great deal of time working through their scripts, documenting the evidence they captured and turning all of that material into a media package for various media channels it will be used for when published.

Humanities Studio & Workshop	Design & Engineering Studio
WEEKS 9 & 10: Story Pitch. Story Mapping and Writing Sound Design and Production (KQED) **Goal:** Learn how to pitch a radio story, and the various ways of producing media for that genre. **Preparation for Field Work:** • How to pitch a story • Storyboarding and interview preparation • Additional research for their topic	**WEEKS 9 & 10:** Wiring Things Up **Goal**: Use digital tools and programming to turn digital Oakland & Me map into an interactive ("clickable") website, where clicking on different "geomarkers" plays student-created audio or video related to that location. **Model Analysis:** • Studying students' favorite and go-to applications and websites to analyze for usability, aesthetic appeal, and functionality • Interview potential users of Oakland & Me website and map to map out key design requirements **Design & Engineering Focus**

Social Just tandard DIVERSITY	his is the ability to form, capture, and relate stories, ideas, cc pts, reflections, and learnings to the appropriate audiences. Design your Design Work This meta ability is about recognizing a project as a design problem and then deciding on the people, tools, techniques, and processes needed to tackle it.
WEEKS 11 & 12: Recording and Refinement **Goal:** Begin to develop the skills necessary to produce a high quality new story and audio package. **Preparation for Field Work:** • Reviewing this American Life and other podcast examples • Speaking and performance tutorials **Field Research Experiences:** • Speaking exercises led by Gritty City Youth Repertory Theater **Grounding Text:** Excerpts from *Acting One* by Robert Cohen **Writing Focus:** Refinement for scriptwriting **Oracy and Performance Focus** Integrate multiple sources of information presented in diverse media format **Latitude Competencies Targeted** **ELA:** Oracy- Recording high quality audio for a podcast **History:** Research to build present knowledge. Production and distribution of writing. RI.9-10.1a Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.	**WEEKS 11 & 12: Wiring Things Up, Part 2** **Goal**: Use digital tools and programming skills to connect the audio and video Oakland & Me assets to the physical and digital maps of Oakland. **Model Analysis:** • Studying students' favorite and go-to applications and websites to analyze for usability, aesthetic appeal, and functionality • Interview potential users of Oakland & Me website and map to map out key design requirements **Design & Engineering Focus** • Building interactive hardware: Introduction to Arduino • Internet of Things: How the future (and present) consists of interconnected everyday devices **Group Deliverables:** Students turn physical Oakland & Me map into an ***interactive physical device***, where **pressing** different "geomarkers" plays student-created audio or video related to that location. **Computing Competencies** Recognizing and Defining Computational Problems The ability to recognize appropriate and worthwhile opportunities to apply computation is a skill that develops over time and is central to computing. Solving a problem with a computational approach requires defining the problem, breaking it down into parts, and evaluating each part to determine whether a computational solution is appropriate. Collaborating Around Computing

Phase 4: Exhibition Preparation

Overview- During this final phase of the project, students will prepare the location for their exhibition. Exhibitions of learning are a powerful way for students to engage with an authentic audience for their work. Students will have the opportunity to study exhibition spaces in the community to learn how to create a semi-permanent installation at our school site. By working in groups, students will prepare the spaces (virtual and on-site) with the various multimedia packages they create for the project.

Weeks 13 & 14 Product Completion and Package Upload
Weeks 15 & 16 Audience Critique, Exhibition and Reflection

Goal: Prepare for exhibition of student learning and documenting the project to archive on project webpage as well as the students' individual digital portfolio.

Preparation for Field Work:

Depending on the final product deliverable that students are assigned to, they will have an opportunity to visit any of a number of locations:

Field Research Experiences:

Oakland Heritage Room
Oakland History Room
Pochino Press

Humanities Studio & Workshop	Design & Engineering Studio
Writing Focus Preparing copy for the various online and in-person exhibition spaces **Latitude Competencies Targeted** Web/blog writing Social media writing and photography Exhibition of learning oracy strands Reflection of learning W.9-10.8 Gather relevant information from multiple authoritative print and digital sources, using advanced searches effectively; assess the usefulness of each source in answering the research question; integrate information into the text selectively to maintain the flow of ideas, avoiding plagiarism and following a standard format for citation.	**Engineering and Design Focus** Prepare the physical and digital Oakland maps for exhibition and display. Resolve technical issues and craft a beautiful, friendly end-user experience. **Computing Competencies** Testing and Refining Computational Artifacts Testing and refinement is the deliberate and iterative process of improving a computational artifact. This process includes debugging (identifying and fixing errors) and comparing actual outcomes to intended outcomes. Students also respond to the changing needs and expectations of end users and improve the performance, reliability, usability, and accessibility of artifacts. Communicating About Computing Communication involves personal expression and exchanging ideas with

Work that matters

The teacher's guide to project-based learning

"This guide is an unusually thoughtful and valuable resource for teachers. It is distinguished by a powerful focus on the integrity and quality of projects – not just doing them, but doing them well."

RON BERGER
CHIEF PROGRAM OFFICER – EXPEDITIONARY LEARNING SCHOOLS

"There are always those adventurers in education who are wanting to push the frontiers of what is possible and are driven by a passionate belief in what schooling should and could be like. Here is a guide that can help and inspire others to try too. It is such people who have always found ways to unlock the future for many youngsters who would otherwise spend their lives realising only a fraction of their potential."

PROFESSOR TIM BRIGHOUSE
EX-CHIEF ADVISOR TO LONDON SCHOOLS

This guide has grown out of the partnership between the High Tech High schools in San Diego, California, and the Learning Futures project, in England.

High Tech High

High Tech High is a group of 11 public charter schools in San Diego. It is non-selective: applicants are chosen by lottery according to postcode, using an algorithm to ensure that the school populations mirror the demographics of San Diego County.

When High Tech High began in 2000, its founders decided that rather than focusing on a range of metrics and test scores, they would measure their success by how many of their graduates went on to university. Since then, 99% of High Tech High students have gone on to two-year colleges or universities. 35% of these are the first generation of their family to do so.

High Tech High has achieved this remarkable success by building the entire school culture around a carefully designed project-based curriculum.

For more information about High Tech High, visit: www.hightechhigh.org

Learning Futures

In 2008, the Paul Hamlyn Foundation (a charity) and the Innovation Unit (a social enterprise) launched the Learning Futures project in order to find ways to improve educational outcomes in secondary school by increasing young peoples' engagement in learning.

The project has worked with over 40 schools on developing innovative methods of teaching and learning aimed at increasing students' engagement in learning.

Learning Futures has found that well-designed project-based and enquiry-based learning gets young people engaged, and leads to positive learning outcomes. As a result of this finding, Learning Futures formed close links to High Tech High – this guide is one of the results of that relationship.

Contents

How to use this guide

This guide is for teachers. It explains how to design and run projects for students that begin with an enquiry and end with a tangible, publicly exhibited product.

There are six main sections:

Section 1: Introduction
Explains what project-based learning is, and why more and more teachers are doing it.

Section 2: Inspiration
Shows the work that students created in five real life projects, with some information about how the projects worked.

Section 3: Foundations
Introduces the three keys to successful project-based learning: multiple drafts, critique, and exhibition.

Section 4: Execution
A guide to planning and running projects.

Section 5: Integration
Explains how to build a 'culture of excellence', which will encourage students to do great work of lasting value.

Section 6: Conculsion
The final section wraps it all up.

In the back of the guide you can find recommended further reading, advice on connecting with like-minded teachers around the world, examples of project documents, and protocols for critique.

In project-based learning, teachers design the curriculum, rather than just 'delivering it'. In that spirit, we hope you will treat this guide as a toolkit that you can draw on, rather than as a prescription.

Understanding the icons

This guide is marked with a set of icons that will help you find what you are looking for.

QUESTIONS: Questions, concerns, and anxieties from teachers about project-based learning

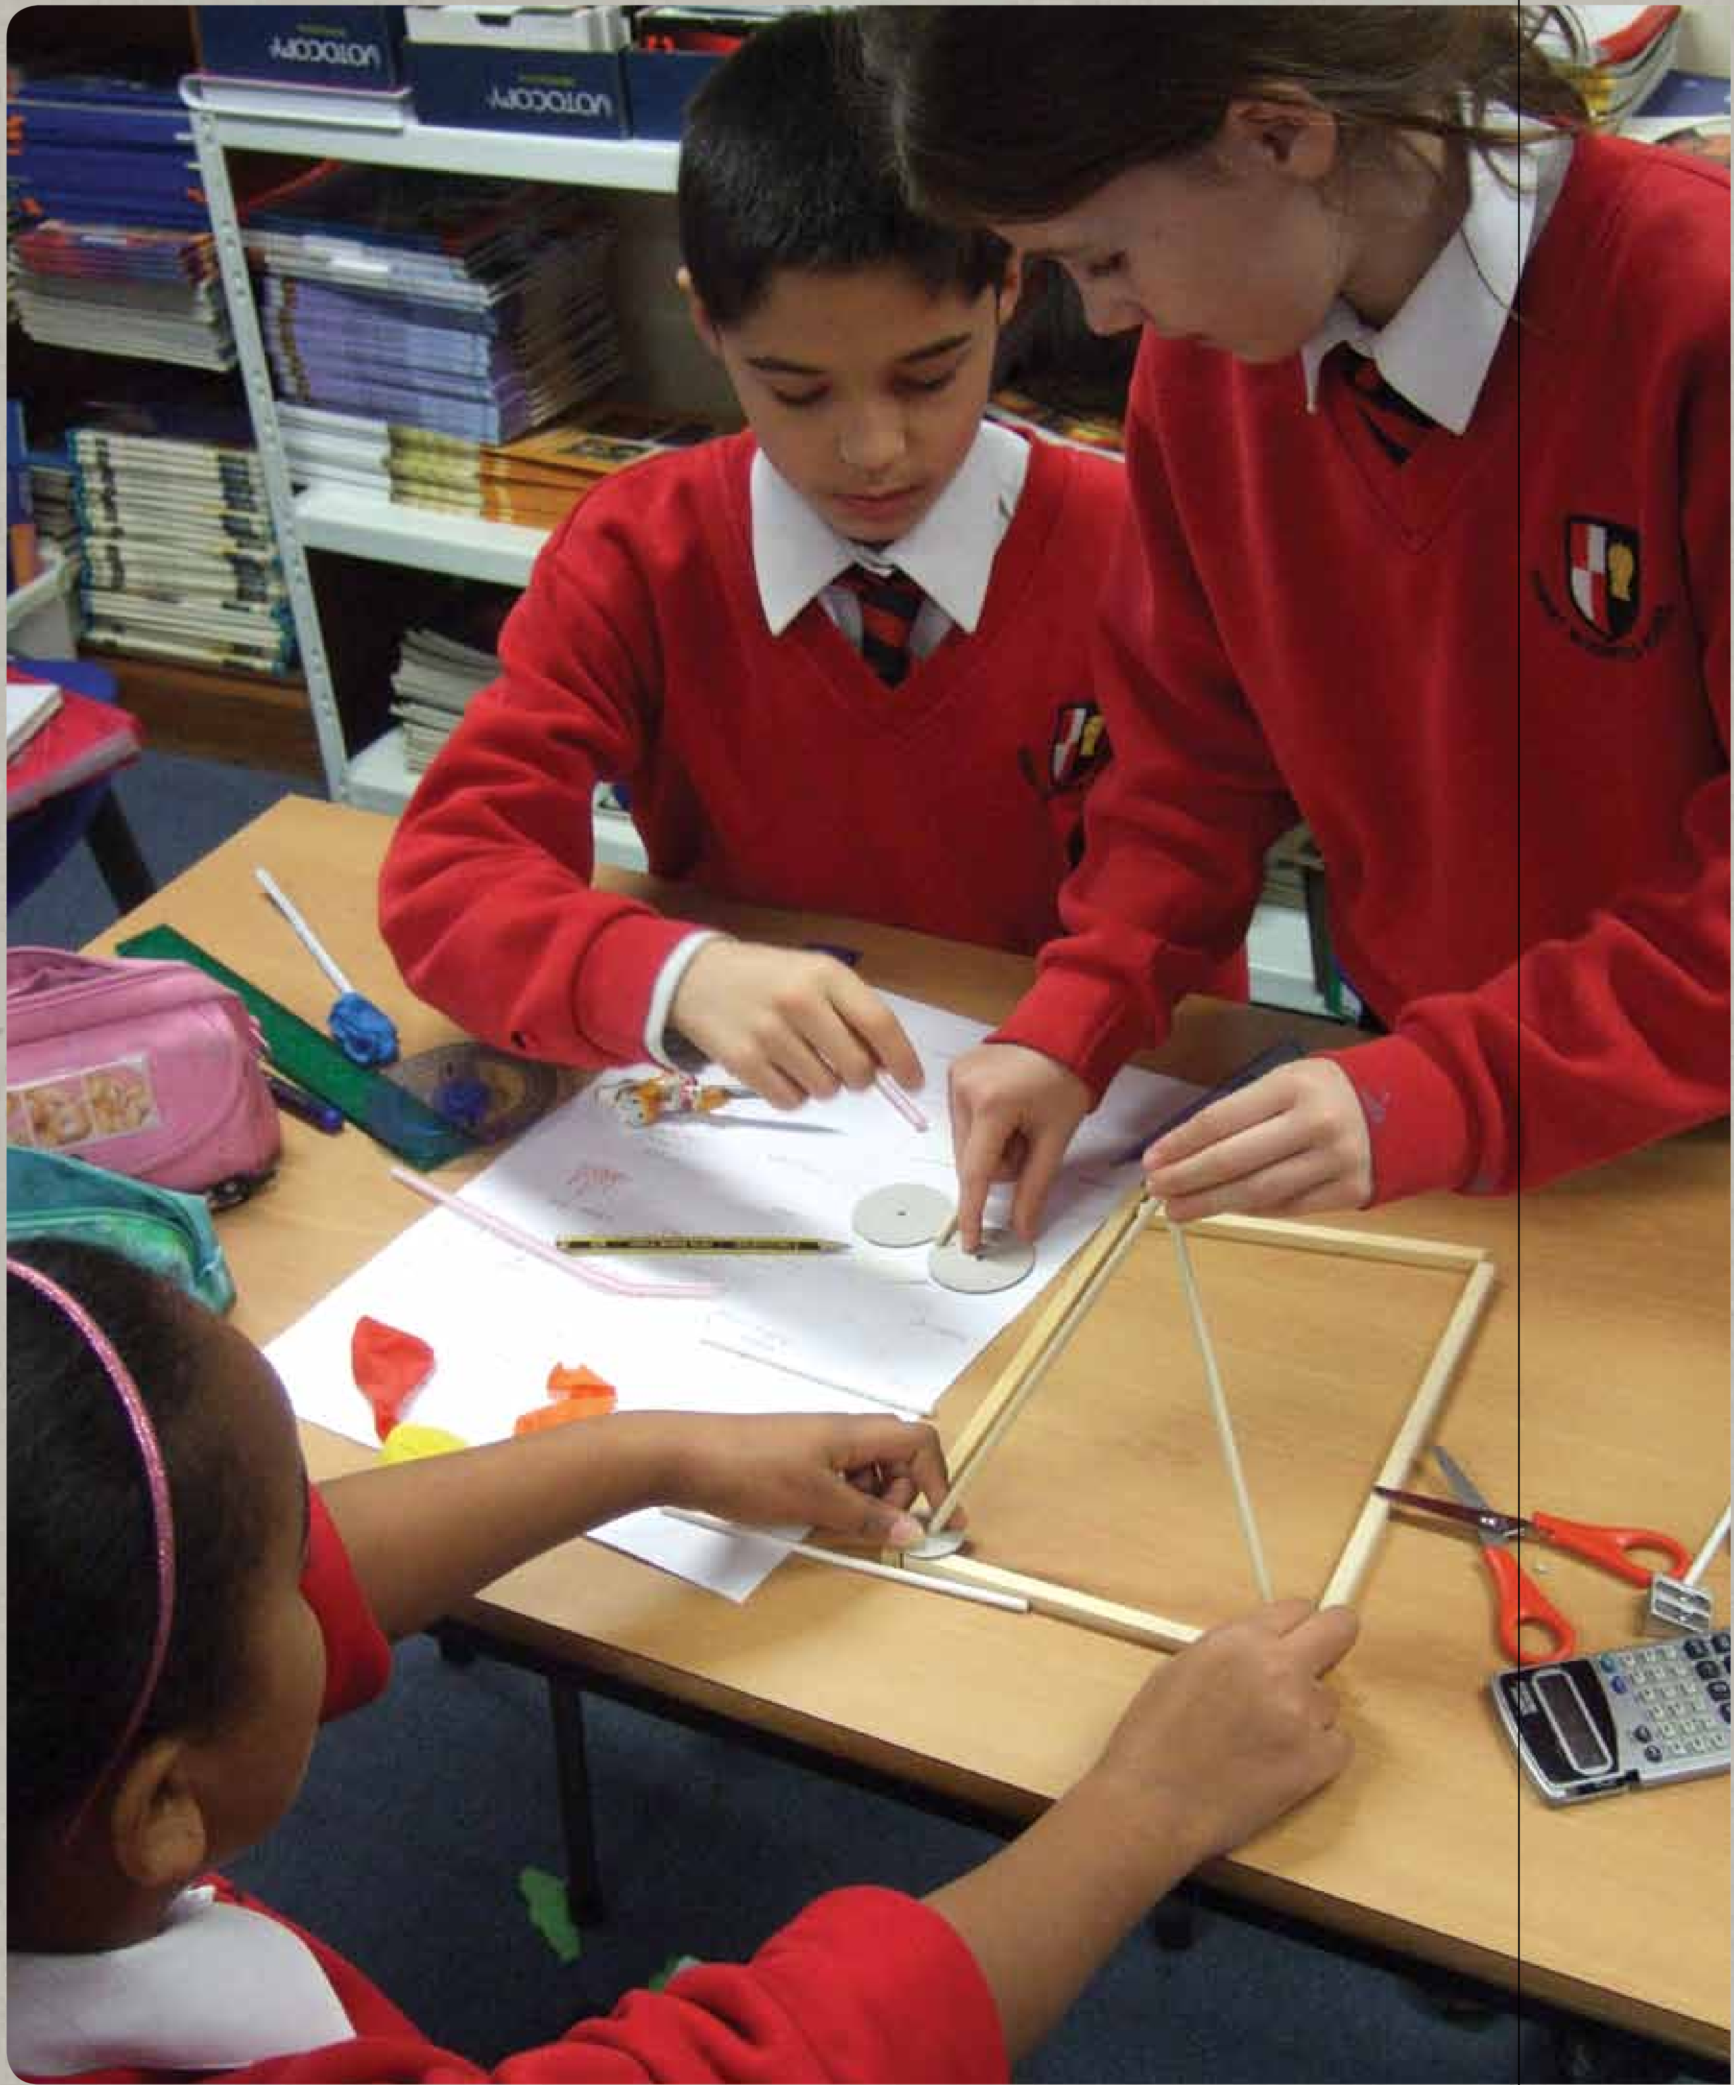
STORIES: Stories of project-based learning in schools

TIPS: Tips and strategies that other teachers have found useful

PROTOCOLS: Protocols for conducting workshops and activities

QUOTES: Comments from students and teachers

LEARN MORE: Where to find extra resources to learn more



SECTION 1

Introduction

Introduction

It's Saturday morning, and Cramlington Learning Village, in Northeast England, is buzzing with activity. In the courtyard, students stand proudly beside an enormous birdhouse that they built themselves, and submitted to the Guinness Book of World Records for consideration. In a tent nearby, more young people are performing music that they spent the week perfecting in impromptu gigs on the streets of Newcastle.

Inside, students offer samples of food cooked to recipes developed with help from professional chefs, using seasonal produce grown in the school's own garden. The students have tested and refined their recipes all week, until they reached a professional standard. They have also self-published a combined gardening guide and cookbook. Another group shows off their guide to birdwatching in the local area, complete with meticulously hand-drawn maps and pictures of local birds.

Today is Cramlington's annual Festival of Learning, and the school's halls are packed with students, parents, siblings, teachers, volunteers, local historians, musicians, amateur birdwatchers – all the people who have helped make the students' projects possible.

In one room, the audience climbs into a boat to experience a multimedia tour of the River Tyne's history. Another room is full of the picture books that students wrote, illustrated, and then read aloud to pupils in a local primary school.

The work on display today has not been specially-selected: the whole school is putting their accomplishments on show. Some students have produced work that exceeds everyone's expectations. Some are only now becoming conscious of the disparity between the quality of their work and that of their peers. Nobody is thinking about the marks they hope to receive – they are all worrying about how the audience will respond.

In preparation for today, students have been conducting research both online and throughout their town. They have produced draft after draft of their work, had it critiqued by their classmates, and refined it until it was ready for presentation. Their work with local people and local businesses has broadened their horizons at the same time that it deepened their understanding of the place they come from.

Teachers are no longer their students' primary sources of information. Instead, they are the designers of learning who created the conditions for the students to conduct their own enquiries, and advisers to whom learners can come as they create their product.

For both students and teachers, this is work that matters.

What project-based learning is, and why more and more teachers are using it

'Project-based learning' refers to students designing, planning, and carrying out an extended project that produces a publicly-exhibited output such as a product, publication, or presentation.

It is related to enquiry-based learning (also known as inquiry-based learning), and problem-based learning. The distinctive feature of project-based learning is the publicly-exhibited output. We have chosen to focus on project-based learning because it incorporates enquiry, and because, in our experience, public exhibition is a tremendously powerful motivator for both students and staff.

The Recent Resurgence of Project-based Learning

Project-based learning isn't a new phenomenon – it was popular at the beginning of the 20th century (most notably championed by John Dewey) and again in the 1970s. During the 1970s, it picked up a bad reputation (in some circles) for being unstructured and lacking rigour.

However, since then there have been two key shifts that have reignited teachers' interest in project-based learning and helped it to shake off its stigma.

Firstly, and most obviously, digital technology makes it easier than ever before for students to conduct serious research, produce high-quality work, keep a record of the entire process, and share their creations with the world.

Secondly, we now know much more about how to do good, rigorous project-based learning, and we can evaluate its effectiveness. This guide draws upon a substantial (and growing) body of knowledge, bringing together tried-and-tested strategies and protocols that all teachers can use.

Today, teachers around the world are designing projects for their students because they ignite a shared passion for learning in both students and staff; they foster a wide range of skills (such as time management, collaboration, and problem solving) that students will need at college, university, and in the workplace; and they can be tailored to suit students with a wide range of abilities and learning needs.

In addition, teachers who are frustrated by narrow standardised tests are finding that students can acquire the curriculum content they need through projects, without letting the test dictate the curriculum.

This is a very exciting time to begin doing projects with your students – and this guide will give you everything you need to get started!

SECTION 2

Inspiration

The Blood Bank Project

The Blood Bank Project came about when the San Diego Blood Bank commissioned High Tech High students to create video installations for San Diego's JETT gallery, in order to educate the public about blood diseases and the importance of blood banking. The students also sold the work in order to raise money for the blood bank.

HIGH TECH HIGH, SAN DIEGO, CALIFORNIA

Designers:
Jeff Robin (art teacher) and Blair Hatch (biology and multimedia teacher)

Students:
50 students, 17–18 years old

Time:
15 weeks (15–20 hours per week)

Exhibition venue:
JETT Art Gallery, San Diego

Examples of content covered:
human anatomy, cellular biology, diseases and treatment, history of medicine, history of art, history of cinema, world religions

Working in pairs, students began the project by researching 'bloody' topics such as leukemia, sickle cell anemia, the role of blood in religion, and the difference between how blood responds to injuries in real life and in films. This entailed gaining a detailed understanding of blood on a chemical, anatomical, and cellular level.

The students produced an animated video illustrating the key information about their topic, and made a painting on plywood, which housed the video.

See more examples here (click on the paintings to watch the videos): bit.ly/xuH9Fm

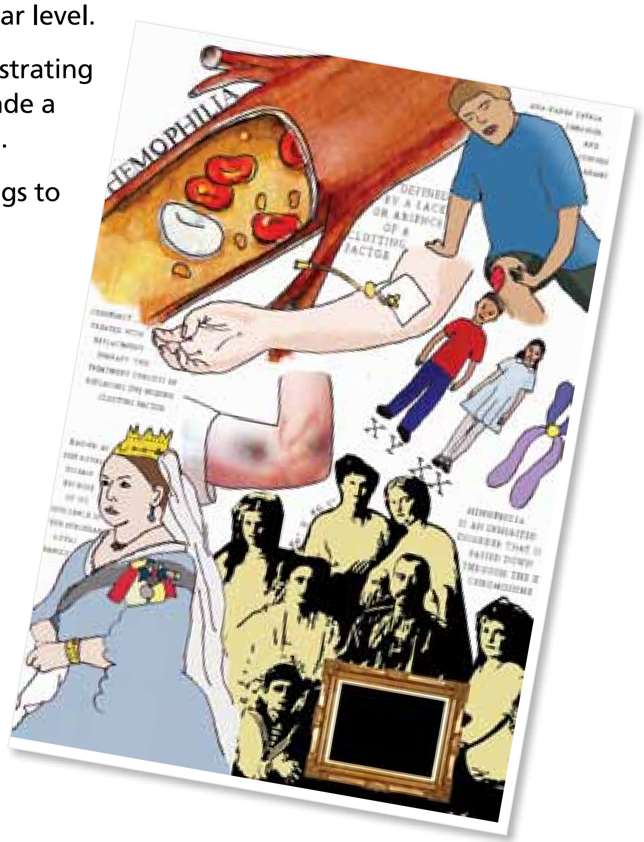


Image: Design Poster for 'Haemophilia', by Ana-Karen Zavala Zimmerer and Stephen Adams

Should the US government apologise for the 'genocide' of the Native Americans?

This project happens every year as part of a unit on the American West in preparation for national examinations.

COPLESTON HIGH SCHOOL IPSWICH, UNITED KINGDOM

Designer:
Neal Watkin (history teacher), with help from academics at University Campus Suffolk and University of East Anglia

Students:
Approximately 160 students each year, 14–15 years old

Time:
5 weeks (approximately 2 hours per week)

Exhibition venue:
Lecture Hall at local university

Examples of content covered:
overview of American West 1830–1900, nature of change on the plains, roles of US government and army in destruction of plains tribes

Students work in groups to create an answer to the big question 'Should the US Government apologise for the "genocide" of the Native Americans?' They work with local historians and learn from experts online in order to develop a thoroughly-researched, persuasive argument to be presented at a local university.

The first incarnation of this project involved creating imaginary emails to send to the American Embassy, but in recent years students have instead split into two 'teams' (for and against the US apologising) and travelled to a local university to publicly debate the issue with academics who hold the opposing view.

Photo: Copleston students have their work critiqued by a Holocaust survivor

Wild About Cramlington

Wild About Cramlington took place during 'sustainability week', when the regular timetable is suspended for five days so that students can pursue intensive projects.

Students worked with local birdwatchers and learned map-making techniques in order to make a guide to the wildlife in green spaces near the school (including a section about the school grounds).

Darren Mead, who designed this project, originally intended to use photographs in the guides, but after students started doing sketches, the group decided that it would be better to use drawings.

See the full 'Wild About Cramlington' guide here:
bit.ly/wIPiWA

CRAMLINGTON LEARNING VILLAGE
NORTHUMBERLAND,
UNITED KINGDOM

Designer:
Darren Mead (science teacher), with help from birdwatchers Phil Allott and Cain Scrimegour

Students:
28 students, 13–14 years old

Time:
1 week (working full time on the project)

Exhibition venue:
Whole-school exhibition day (on a Saturday)

Examples of content covered:
zoology, ecology, mapmaking, desktop publishing, nature drawing

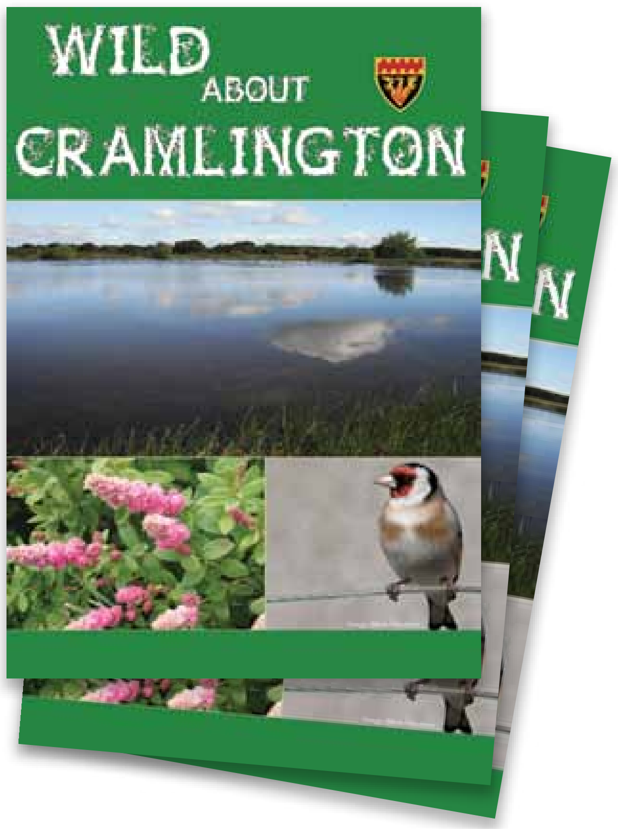

Image: 'Wild about Cramlington' guide

SECTION 2: INSPIRATION

Field guide to San Diego Bay

Students conducted an environmental assessment of the fauna along the intertidal zone of San Diego Bay, which included analysing species' abundance and diversity, and assessing human impact upon different sites within the Bay.

To provide a complete picture of their fieldwork, the students produced a Field Guide, which included scientific studies, creative writing, photographs, histories of human development, and maps of human impact on the bay.

Since the project was carried out in 2004, the students' research has been used by organizations including the City of San Diego and the State of California in order to evaluate the health of the Bay and seek solutions to improve its ecology.

Read more about this project here:
www.sdbayguide.com

HIGH TECH HIGH
SAN DIEGO, CALIFORNIA

Designer:
Jay Vavra (science teacher) and Tom Fehrenbacher (humanities and sociology teacher)

Students:
50 students, 16–17 years old

Time:
16 weeks (15–20 hours per week)

Exhibition venue:
book-signing events at the Scripps Institution of Oceanography, San Diego Natural History Museum, and San Diego Maritime Museum

Examples of content covered:
biology, US history, American literature, pre-calculus

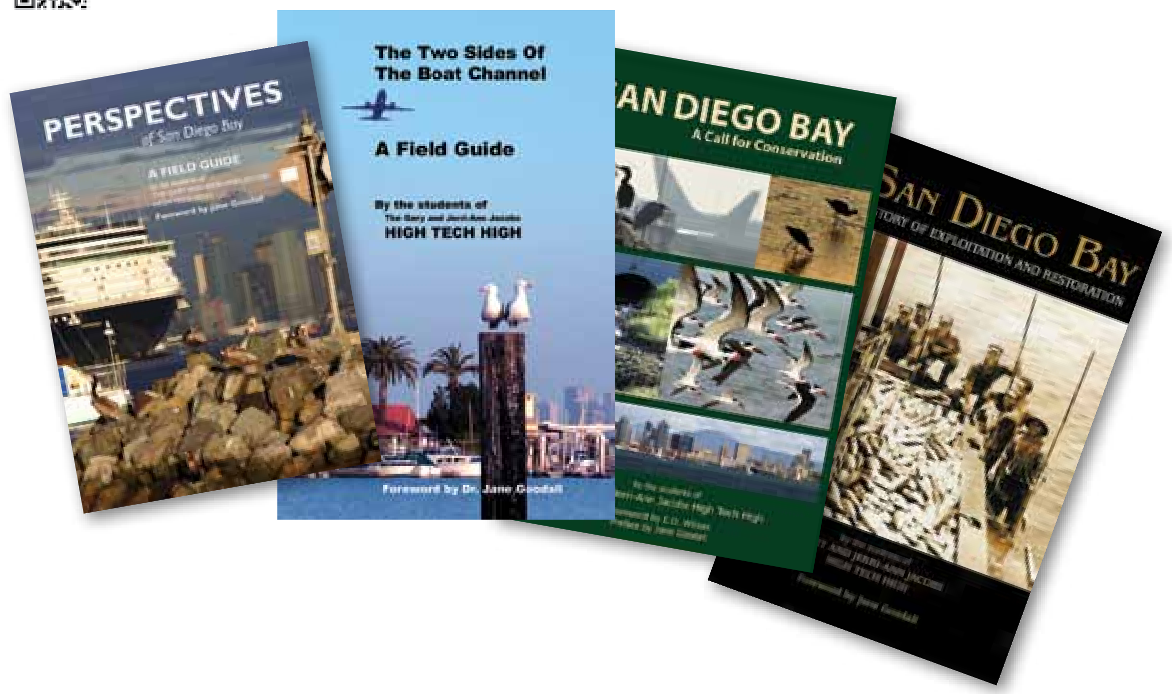

Image: Field Guides produced by students of High Tech High

Kindergarten tools

Each student in Kelly Flahive's kindergarten class became an expert in a carpentry tool of their choice, and produced a drawing and a written description of their tool for a book on tools produced by the class.

This project took place within an extended unit on tools, in which students interviewed adults from within and beyond the school about the tools that they used in their jobs, engaged in fieldwork research to interview workers about their tools, learned woodworking techniques, and designed, built, and painted their own wood sculptures. For the students, tools became a way of connecting to the adult world. The tools also gave them a way to understand their new school – by taking tours in which teachers, secretaries and janitors showed them the tools that they use in their work.

Read more about the project here: bit.ly/pb1NH0

ALICE B. BEAL ELEMENTARY MAGNET SCHOOL, SPRINGFIELD, MASSACHUSETTS

Designer:
Kelly Flahive (kindergarten teacher), with support from Expeditionary Learning

Students:
21 students, 5–6 years old

Time:
Three weeks

Exhibition venue:
School exhibition night

Examples of content covered:
descriptive writing, identifying and using titles and tables of contents, interviewing, critiquing, public speaking, identifying and drawing two-dimensional shapes, sorting and categorizing objects

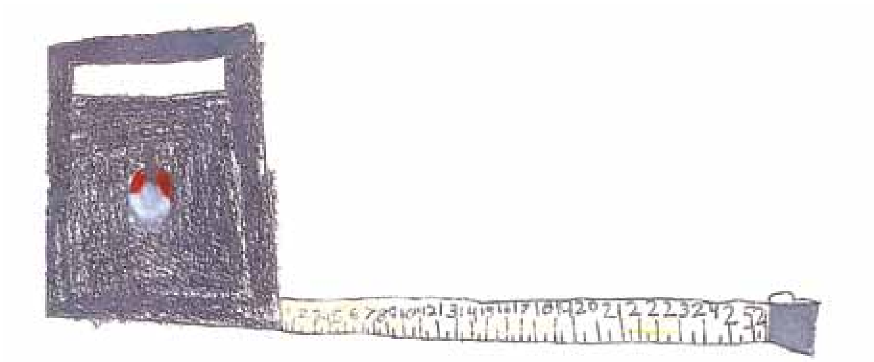

Image: 'Measuring Tape', by Breanna

SECTION 2: **INSPIRATION**

SECTION 3

Foundations

The three keys to successful projects: exhibition, multiple drafts, critique

The five projects in the previous section were done with different age groups, for different lengths of time, in different subjects – the ages range from five to eighteen, the lengths vary from one week to 15 weeks, and the subjects span the curriculum. But there are three components that all five projects share: they culminate in a public exhibition or presentation, they require students to produce multiple drafts, and they incorporate frequent peer critique. These are the three keys to a successful project.

If you're new to project-based learning, it's probably tempting to regard multiple drafts, peer critique, and public exhibition as 'advanced' project methods – stuff to move on to once you've got the basics right. But these are the basics.

Certain things can be jettisoned when you plan your first project – perhaps don't go off-site, keep it single-subject, and make it last less than a week. But if your students get a taste of multiple-draft working and peer critique early on, it will make a huge difference later, when you are doing big projects. Public exhibition will also have a big impact: it drives up the standards of student work, gets teachers talking to each other, and creates a sense of healthy competition between both teachers and students.

Even if you decide never to do big projects, these three 'keys' will have a huge impact on the culture, and particularly the work ethic, within your classroom – and your students will take this ethic with them when they leave at the end of the year.

This section will address each of these 'keys' in turn:

1. Exhibition
2. Multiple drafts
3. Critique

Because critique is the most complicated of the three keys, we've included a special section on how to do it (see page 28)

Key 1: Exhibition

When students know that the work they are creating in a project will be displayed publicly, this changes the nature of the project from the moment they start working – because they know they will need to literally 'stand by' their work, under scrutiny and questioning from family, friends, and total strangers.

This inspires a level of ambition and commitment much greater than is fuelled by the incentive of 'getting good marks'. In addition, students' families, as well as other people from the local community, get to see what is going on in the school, providing an opportunity to strengthen the relationship between the school and community.

You can read more about exhibition on page 66.

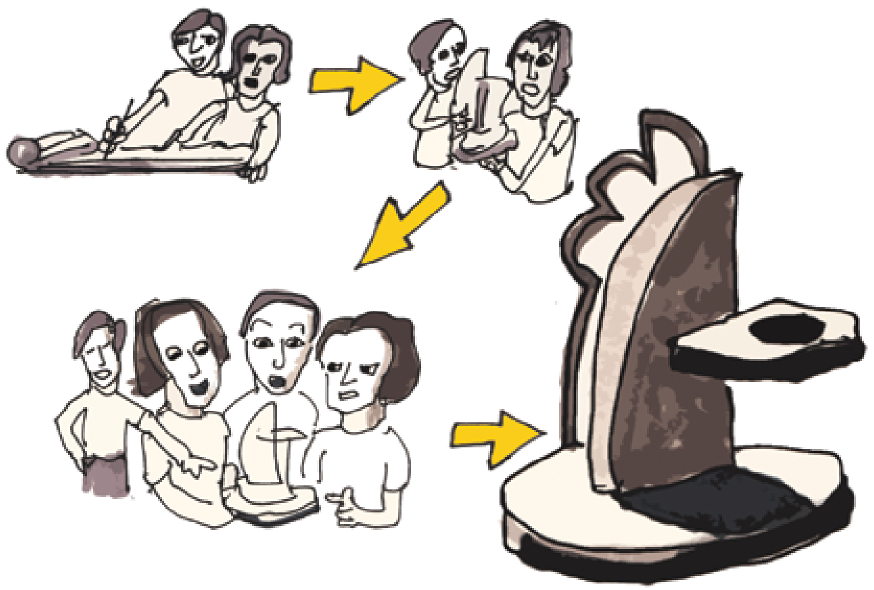
Key 2: Multiple drafts

Ron Berger, Chief Programme Officer at Expeditionary Learning, gives an eloquent explanation of the value of multiple drafts:

> *"In most schools, students turn in first drafts – work that doesn't represent their best effort and that is typically discarded after it has been graded and returned. In life, when the quality of one's work really matters, one almost never submits a first draft. An ethic of excellence requires revision."*
>
> RON BERGER, CHIEF PROGRAMME OFFICER AT EXPEDITIONARY LEARNING

The case for giving students time to make multiple drafts of their work is hard to refute – the trouble is that it's difficult to make time for more than one draft, which is one reason why it is so important to produce a realistic project timeline when you are designing your project.

Multiple drafts are also valuable for personalising assessment, because they provide you with the means to assess, not only a student's final product, but also the extent to which they have improved their work since the first draft. This can be valuable for all students, but it is particularly helpful for students with special educational needs, and students for whom English is not a first language.



Key 3: Critique

Getting into the habit of creating multiple drafts of work has a huge impact on how students regard their assignments, their learning, and themselves. It is especially effective when students are critiquing each other's drafts, rather than just handing in drafts to a teacher.

Formal critique sessions give students the opportunity to learn from each other's work and from each other's feedback in a structured, safe context – this can include critique of the process ('how I made this thing') as well as product ('the thing I made'). Critique sessions can become lessons in their own right, because they provide the opportunity for teachers to introduce concepts and skills at a point when students will be eager to learn them. Equally importantly, they bring students' misconceptions about the project to the surface, so that the group can respond to them.

On the following pages, you can find some more information about how to run critique sessions.

Critique: How to do it

The three ground rules of critique

These are the basic rules that students at High Tech High follow when they are holding critique sessions (teachers also use them when they are tuning a project). They were developed by Ron Berger:

1. Be kind

Presenting your work for critique puts you in an incredibly vulnerable position. For the critic, on the other hand, it's easy to get carried away when you're critiquing work, especially when you feel like you know exactly what a piece of work would benefit from, and inadvertently say very hurtful things. Thus, this ground rule cannot be stressed enough.

2. Be specific

Even if you are being kind, you are not doing anybody any favours if you are vague. 'I think Melanie's writing is really good' does not cut it in a critique. 'I like the way Melanie uses lots of different verbs in her writing so that you feel like you're a part of the action' is much better.

3. Be helpful

Critique is not just about naming what is strong and weak in a piece of work, it is also about working out how to go about improving that work.

The first critique session: introducing the model

Whatever students are making for a project, they are likely to be making it for the first time, so it will be difficult for them to know what they are aiming for.

Thus, before they start a project, students should be shown what Ron Berger calls 'examples of excellence' – high-quality work made by previous students, by professionals, or by you. The whole class can then discuss the attributes that make the 'model' so good. This way, students not only know what they are aiming for, they understand its characteristics.

It's important to stress to students that their task is not to replicate this model, but to use what they learn from their discussion of its attributes in order to make something unique of their own.

There is another reason that models are important: if you aren't sure what a model of a successful project would look like, you probably haven't thought the project through well enough!

For more about introducing and critiquing the model, see page 62.

TIPS: Suggest to students that they use the following questions in their critique

- What strikes you about this piece?
- What strengths do you see?
- If you didn't know the topic, what extra information would you need to fully understand the topic from this piece?
- How do the visuals/graphics/sounds help you understand the concept? If parts are unclear, what could be changed to help you understand the concept better?
- What questions do you have for the presenter?
  — Clarification: What do you mean?
  — Elaboration: Tell me more about…
- What suggestions would you offer as the work moves to the next draft?

When to hold critique sessions

The best rule of thumb is to hold critiques whenever you want students to revise a draft. It is valuable to hold a few 'formal' critique sessions, but it's good to also have informal critique sessions that feel like less of a 'big deal', because it is this informal critique that will embed the rhythm of critique and revision into your class's culture.

If you are working with experts from outside the school, it can be very rewarding to invite one of them to take part in a critique session. For an example of this, see the text box entitled Working with local experts (below).

STORIES: Working with local experts

Copleston High School, in Ipswich (UK), took on the challenge of staging the Remembrance Day Service at their Church. In recent years attendance at the service had fallen, so Copleston's students were asked to create a unique exhibition and experience to be held on 11 November at the church.

The vicar and community youth worker from the church were invited to offer advice and to critique the developing work of the students. After visiting the church, grand ideas involving light shows and dry ice machines began to flow and thoughts of troops of actors playing out the Christmas Truce were conjured up.

Once the students had formed relatively tight drafts, the vicar was invited in. He was able to stimulate thinking on the congregation's expectations, and how to deal with space limitations. He had the expertise of building a coherent church service and was able to help students move closer to shaping their event around keywords (something he does every Sunday). From this, students were able to gain a stronger sense of what tone they wanted to achieve.

Once exposed to authentic expertise, the students asked for more. A professional art curator was invited to critique the design of the space and the exhibition; professional photographers, contemporary dancers and computer programmers all helped them realise their visions of commemoration. They all worked within the local community and were generous with their time. National expert historians, from the National Army Museum, Imperial War Museum and local archivists also assisted in gathering the necessary background information.

Involving experts from the local community has transformed the way Copleston operates: it is not only a dynamic and exciting way to teach, but is raising standards to levels we would never have anticipated. Experts expect work of a professional standard, and students are now starting to aspire to meet this expectation.

NEAL WATKIN, COPLESTON TEACHER

Instructional critique and peer critique

There are two basic types of critique session: instructional critique, and peer critique.

PROTOCOLS: Instructional critique

Instructional critique is led by the teacher, and usually involves the entire class. You will conduct an instructional critique when you introduce the model at the start of a project (see page 62).

You can find an instructional critique protocol on page 98.

Peer critique

Peer critique is what students use in order to get feedback on their drafts. Peer critiques are usually carried out in pairs or small groups, though they can also be carried out by a full class. Types of peer critique include the following:

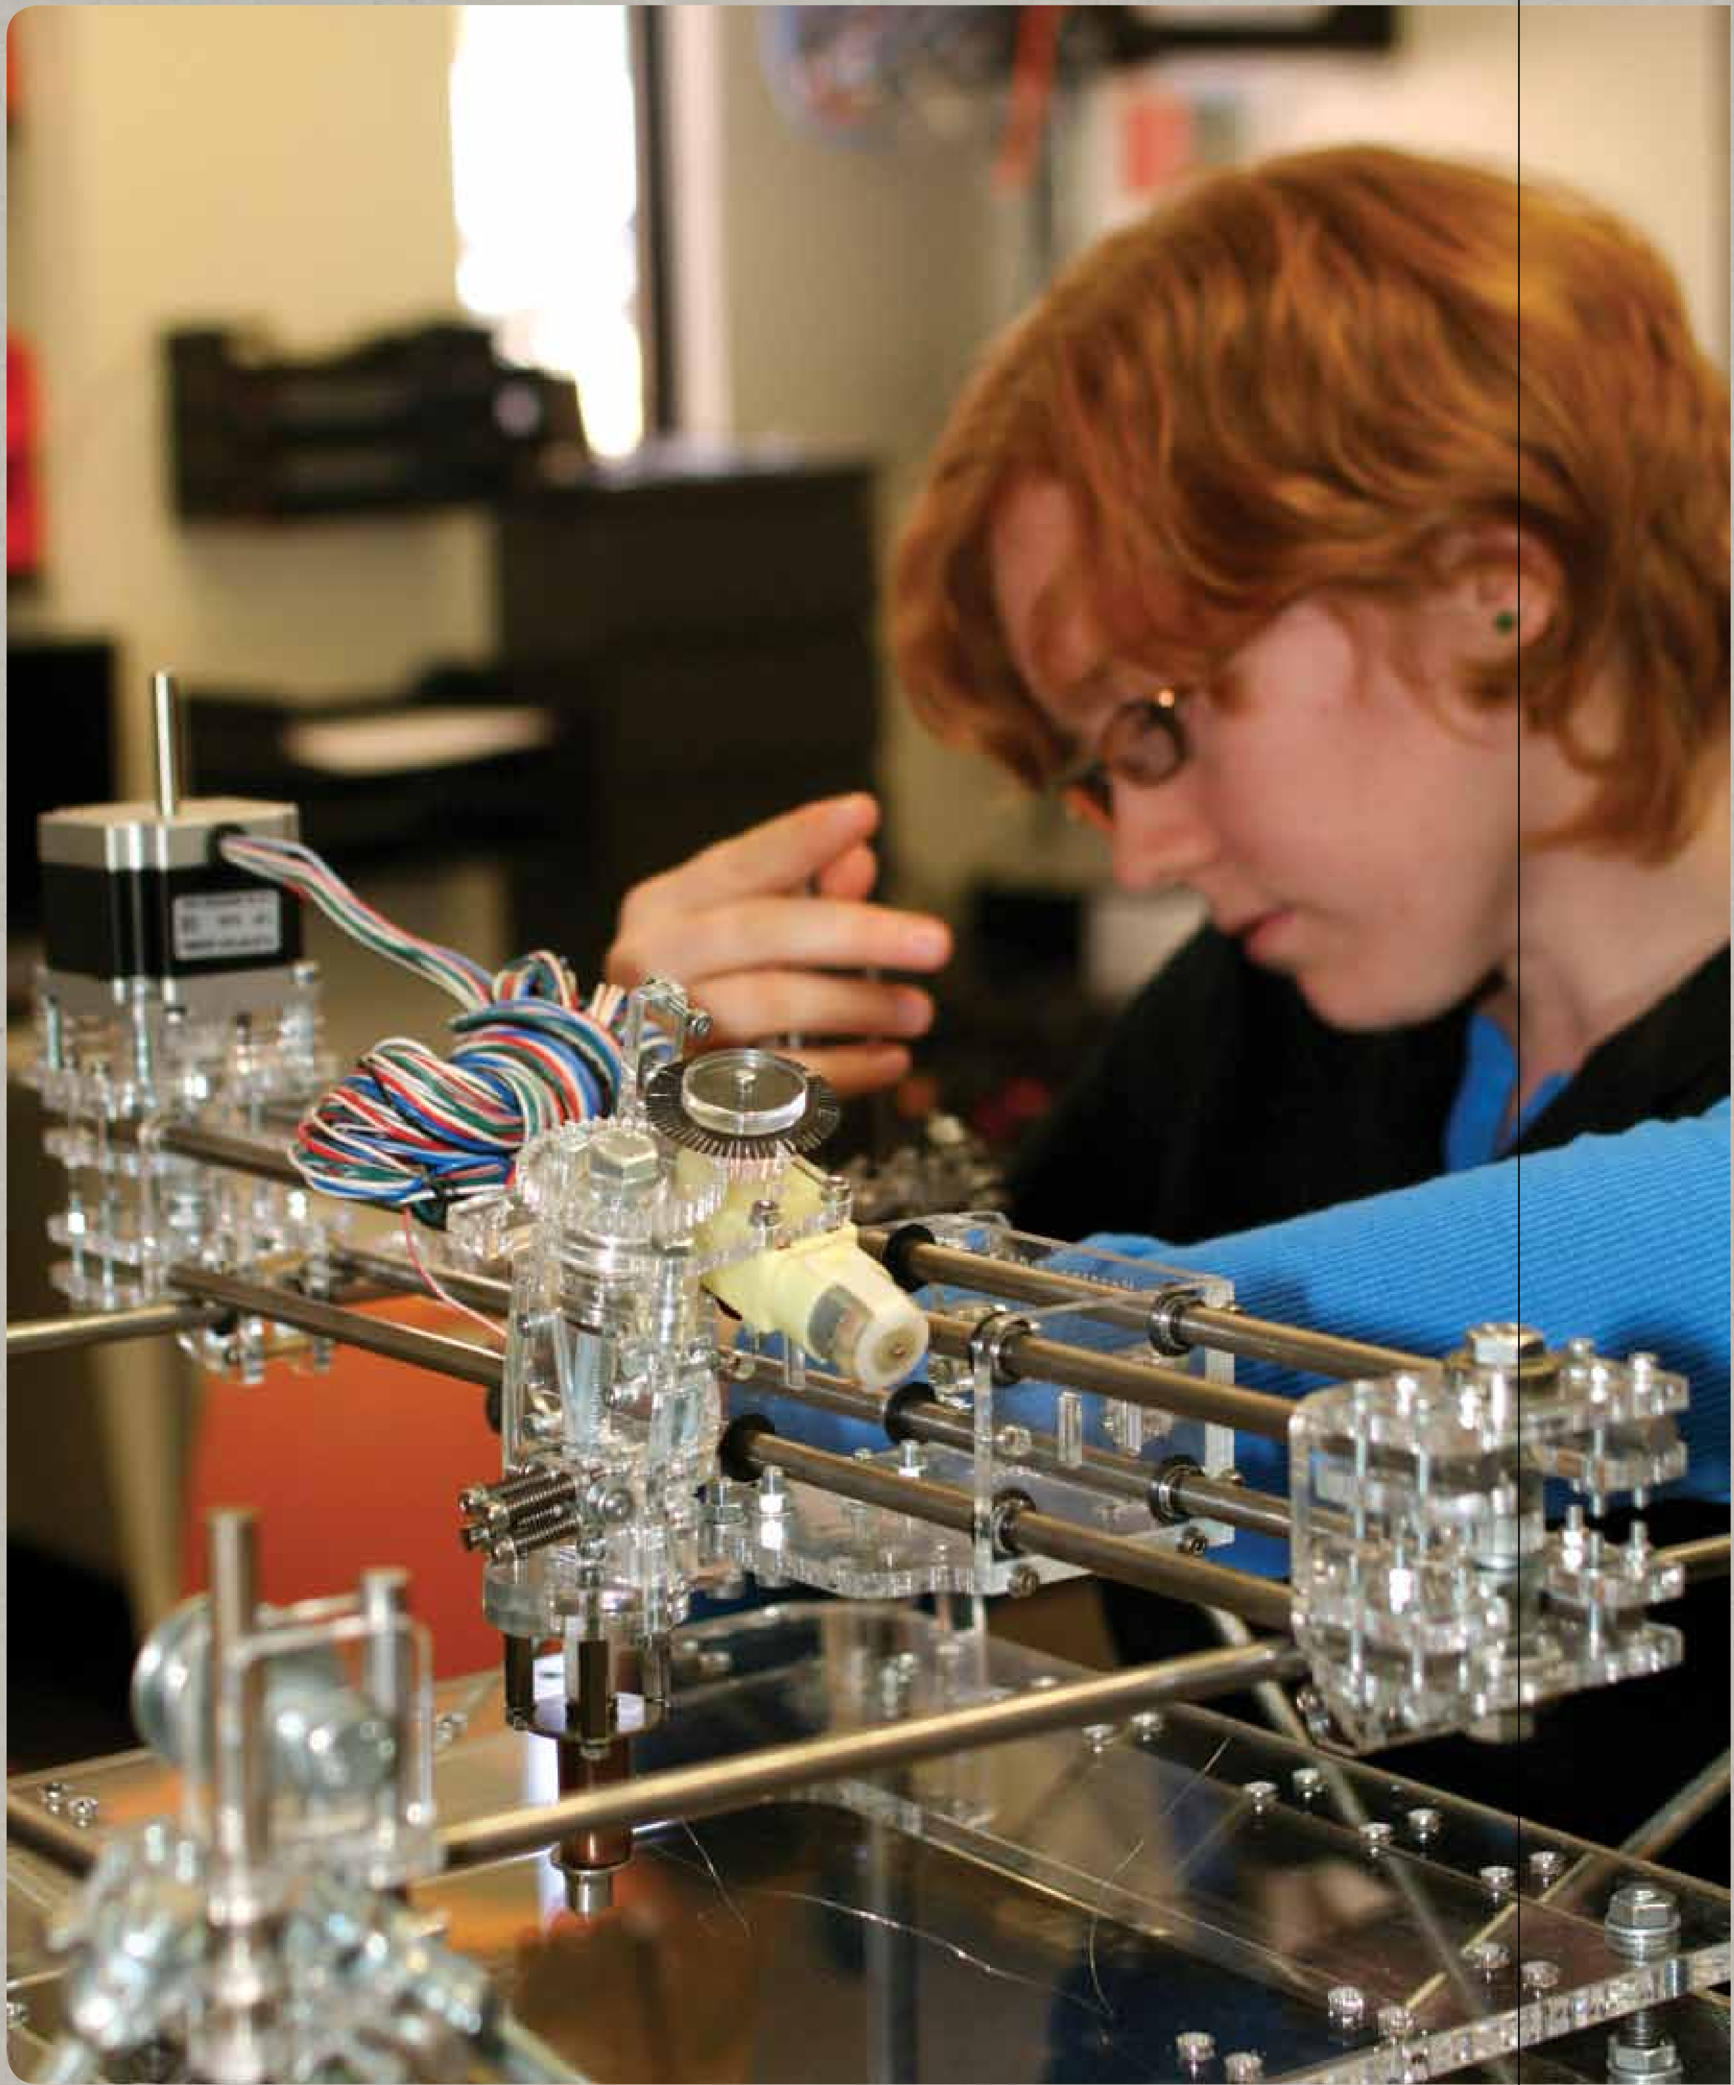
Gallery walk: Students display their drafts around the classroom. The class then wanders the room taking notes on the drafts and affixing post-its offering general impressions and suggestions. Allow about 20 minutes. Monitor to make sure every product is being critiqued.

You can find a full gallery critique protocol on page 99.

Dilemma protocol: Students are placed in groups of four (five can work too if necessary). Students share something they're struggling with on their product, share their draft, answer clarifying questions, and then allow remaining students to discuss possible solutions while the sharer remains silent (only taking notes) for about 6–7 minutes. The sharer then rejoins the group's conversation, restates helpful suggestions, and asks for clarification. The next student does the same until all students have had a chance to pose a dilemma and get feedback.

Workshop-style critique: Students are in groups of three with specific teacher-generated questions about the product in hand. Students take turns presenting their product to the two other students and then discussing the questions as a way to improve product quality. Each student spends about 10–15 minutes on presenting and receiving feedback/critique.

Pair critique: This allows for deeper critique with critical friends really digging into the product, evaluating the work, and pushing each other. 15–20 minutes per student usually works well for this. This is often a good final critique to do before the product is to be turned in for final assessment.



SECTION 4

Execution

1. Get an idea
2. Design the project
3. Tune the project
4. Do the project
5. Exhibit the project

1. Get an idea

Look for project ideas everywhere

I started thinking about projects while doing all sorts of things I love to do. Checking out music at local venues, I thought about starting a music magazine to teach writing, photojournalism, editing and advertising. On hikes, I thought about nature reflections, the history of parks and the history of nature conservation. It seemed that every time I was doing something I truly enjoyed, a new idea for a potential project sprang into my head. Some of the project ideas had been done before, but somehow, this new revelation made them feel fresh, pristine.

ANGELA GUERRERO, TEACHER

Different professions have different ways of seeing the world: writers see a world full of stories, architects see a world of structures to be imitated and spaces to be built on, and teachers who do project-based learning see a world full of projects.

This is where the initial spark for a project comes from: from your passions, or from a colleague's passion, or, indeed, from a student's passion. The important thing is that somebody is very excited about the idea, and that person's excitement is infectious. Of course, there is much more to projects than excitement, but if you don't start with something that you feel passionate about, the project won't be much fun, and the quality of the work will suffer.

A project's initial spark may take many forms: it could be a question, such as 'why don't more people like contemporary art?', or it could be a product that you'd like students to make, or it could even be an exhibition venue that you want to take advantage of (for example, a local museum that would be interested in displaying student work).

TIPS: Find project ideas online

Not all successful projects grow out of a teacher's moment of inspiration. It can be a good idea to try out a project that a colleague has done in the past that you find interesting.

You can find a list of websites with project examples on page 82.

The importance of products

The final outcome of a project, which might be a product (such as a machine or an artwork), a performance (such as a theatre piece or a debate), or a service (such as giving a lesson to younger students), creates a focus for the project that gives it a feeling of purpose from day one. Think about your own work – you probably carry out tasks with much more confidence when you have a clear idea of what you are meant to produce at the end of it than you do when the final output is vaguely defined.

It is also important that the outcome be something that students (as well as other people) value. A good test for this is whether students' work is being kept at the end of a project, or thrown away.

Designing a project based on curriculum content

Wherever you are in the world, whatever age you teach, chances are there is specific content that that your students are required to learn each year.

Fortunately, you can design projects so that they help students to master the content that they are required to learn. The best way to do this is by using 'backwards planning'. To find out how to do this, see page 42.

Looking further afield for project ideas

You can also talk to local businesses, charities, and government, and find out what your students could do to help them. Or there may be an area of the curriculum that you want to address with a project based in the community.

Three big questions to ask yourself

Once you have your idea, there are three important questions you should ask yourself, because being rigorous and honest with yourself at this point might save you a lot of anxiety later on (and reassure you that's it's worth the impending investment of time and effort):

1. Will this project engage my students?

Our first instinct, particularly if it was our own idea, is to say 'yes'. But is this a dispassionate response? How will you know?

The Learning Futures schools use a checklist to gauge the likely engagement of students in any given project idea. We call it 'the Four Ps of Deep Engagement'. Before going too far with an idea for a project ask yourself whether the project is:

- Placed – is it located in a place that is important to students (e.g. their home, community, town, city or virtual environment)?
- Purposeful – will it result in a product, service or body of knowledge that others will make use of? Will the process seem authentic to students?
- Pervasive – will students be sufficiently engaged in the project's activities that they'll want to voluntarily take the learning outside school and school hours? Is it likely to broaden students' horizons?
- Passion-led – Does the project tap into students' passions?

2. Will this project engage me?

Projects are extended learning opportunities, and not just for students. Your own enthusiasm will be required when students hit blocks and dead-ends. It's important that you are personally curious about the project's outcome, that you will learn new things from it.

If the outcome of the project doesn't matter much to you, it probably won't matter much to the students, either.

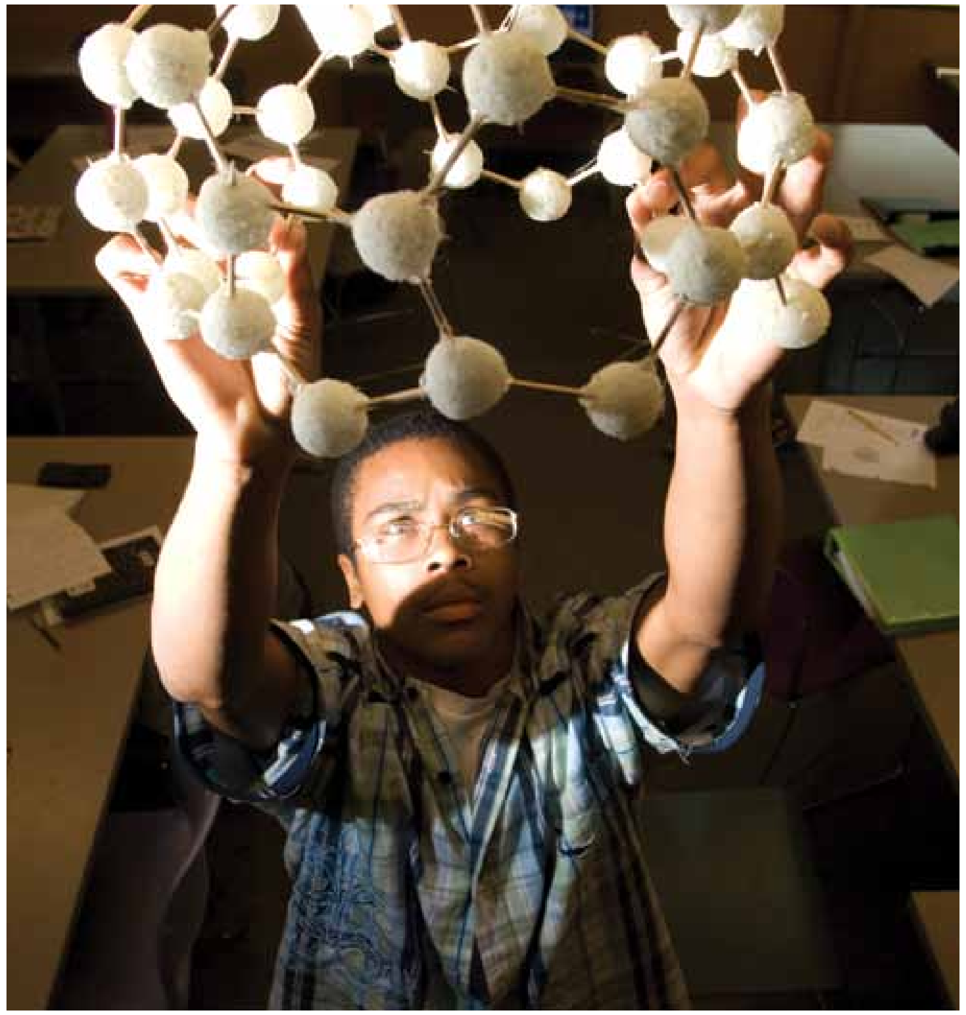
One of High Tech High's mantras is 'teach to your passion' – because that's what's going to drive you, and your students, to produce high-quality work.

3. Will my students learn something meaningful from this project?

There are highly engaging, enjoyable projects that will not add much to students' learning.

In order to avoid this, it's a good idea to make a list of the things you expect your students to have learned: this should include subject content, skills, as well as attributes to be developed (e.g. confidence, resilience, resourcefulness). You can read more about this in the section on backwards planning (see page 42).

These three questions are difficult questions to ask, but, if the answer to either of the first two questions is 'probably not', or if the list you've written in response to the third question feels too thin, your project will benefit from a rethink.



Coming up with an 'essential question'

The best projects always contain an 'essential question' that both inspires and requires students to conduct serious research.

It's never too early to start thinking about the essential question (or questions) that your students will be pursuing. However, the essential question will probably change as you design your project, and it may be that once you have finished the design, your essential question has transformed completely since you first started thinking about it.

There are three criteria for a compelling essential question:

- It should be a question that people ask in the 'real world'
- It should be a question that has no easy answer, and stretches students' intellectual muscles
- It should be a question that ignites students' imaginations.

Finding a question that fits these three criteria is not easy: it takes time, trial and error, and lots of discussion with your colleagues (many teachers say that they never finalise an essential question until after they have had a project tuning).

Some of the best essential questions are ones that students come up with themselves. You can help them to do this by introducing a 'burning issue' (for example, the fact that the planet appears to be running out of oil). By discussing the issue and doing some initial research, groups (or individual students) can come up with a question that will guide each of their enquiries (for example, 'Is manufacturing as efficient as it could be?', 'Do electric cars have a future?', and 'How have past civilisations coped when they ran out of resources?').

Another way to start with students' questions is to run a student-led enquiry (see page 54), in which students come up with their own essential questions to pursue, based on their own passions.

Essential questions that are specific to your local context can be particularly effective. For example, a project at High Tech High (which is less than twenty miles from the Mexican border) started from the essential question 'How are things different when you cross the US-Mexico border, and why?' This elicited more specific sub-questions including 'Why do people illegally cross the border into the U.S. from Mexico but not vice versa?', 'Why can't I drink the water in Mexico?', and 'Why is a McDonalds so hard to find in Tijuana?'

TIPS: Try using a variation on one of these essential questions from past projects

- How have the simple inventions of the past helped to create the complex life of today?
- How can an idea be transformed into a product that could make us millions?
- Why do humans need to protect the earth, and how can we as 12-year-olds play a role in this?
- How have ancient civilizations influenced each other?
- How do drugs impact our bodies, our families, our community, and our world?
- Is war ever justified?
- How have maritime discoveries, advancements, and events shaped our world?
- How can an election candidate effectively persuade voters to elect her/him?
- How can a home be designed to have minimal impact on the environment?

Time to start talking to your colleagues

The sooner you start talking to your colleagues about your ideas, the better your project will be. If you don't want to talk to people at your own school, you can find lots of teachers who are excited about project-based learning by going online (see page 84).

Once you've got a more fully developed project plan, you will want to hold a formal project tuning (see page 58), but at this stage it's better to keep it informal.

Bring a summary of your project ideas, and a list of things you're excited about and things you're worried about. Then, try using the following prompts for discussion:

TIPS: Check your project against Adria Steinberg's 'six As' of project-based learning

Educationalist Adria Steinberg has developed a set of design principles for project-based learning that she calls the six As. It is useful to check your project against these at all stages of design.

AUTHENTICITY

Projects should:
- use a real world context
- emanate from a problem that has meaning to students
- result in a product or performance that has personal and/or social value.

ACADEMIC RIGOUR

Projects should:
- address key learning standards (could be national, local, school specific…)
- pose essential question(s) of relevance to the student
- develop habits of mind and work associated with academic and professional disciplines

APPLIED LEARNING

Projects should:
- engage students in solving semi-structured problems
- demand skills expected in high-performance work organisations
- require students to develop organisational and self-management skills

- How well does this project fulfil Adria Steinberg's six As of Project-based Learning? (See below)
- How could I make the project more rigorous, or connect it to the community?
- Could the final output be presented in a different format?
- Between us, can we think of other teachers, friends, parents, or anyone else who we could approach about getting involved in this project? What roles might they play?
- Are there any organisations that might be able to help, such as businesses, museums, social enterprises, universities, clubs, or other schools?
- What are our initial venue ideas for the exhibition?

(CONTINUED)

ACTIVE EXPLORATION

Projects should:
- extend beyond the classroom
- connect to field-based investigations, community explorations, and work internships
- require real investigations using a variety of methods, media, and sources.

ADULT RELATIONSHIPS

Projects should:
- connect students with adult mentors and coaches from the wider community
- expose students to adults with relevant expertise
- engage adults in the design and assessment of student projects.

ASSESSMENT

Projects should:
- provide milestones/checkpoints
- involve lots of reflection for students and teachers
- result in exhibitions and performances
- be grounded in personal, school, and real-world standards of performance.

2. Design the project

Decide what you want your students to learn, and plan 'backwards' from there

So you've got an idea for a project, and you've sharpened it up in a discussion with a colleague. Now it's time to get serious about designing it.

'Backwards planning' is a very simple way of working. To begin, write down everything that you expect your students to learn from doing this project. This could include all kinds of things: knowledge of course-specific content, 'generic' skills like working in teams and critiquing drafts, specialist skills (which could range from statistical analysis to carving wood), and personal attributes such as self-confidence. It's helpful to write everything down in your own words, but this is a good time to see what 'required' content (such as national curriculum or state standards) your project can cover. For more on how to design projects based on required content, see 'Designing a project based on the 'power standards' (page 43).

Once you have your list of 'learning goals', decide how you will be able to tell whether or not a student has learned each item on the list.

Once this is done, you have the project's learning outcomes and a plan for assessing them. This will make your project more robust, and give you something to show anyone who comes around asking to see some evidence that you're doing 'serious' work.

Also, don't forget about the exhibition – it's never too soon to start thinking about how and where the work will be exhibited.

TIPS: Design a project based on the 'power standards'

For most teachers, the curriculum requirements, or 'standards', constitute the single greatest barrier to doing project-based learning.

Expeditionary Learning, an organisation in the US that works with schools to engage hard-to-reach students through projects, helps teachers to deal with this by starting with what they are required to cover, before they do anything else. First, the teachers sit down with an Expeditionary Learning 'coach' and look at everything that they are expected to cover in a year. Usually, the list is so long that it will be impossible to teach it all, so the coaches ask two questions: 'What on this list do you believe the kids absolutely must know by the end of the year?', and 'What will they be penalised on standardised tests for not knowing?'

The teachers use their responses to these two questions to narrow the list of required content down to a set of 'power standards'.

Now, they can design projects that the students cannot complete successfully without mastering the 'power standards'.

Ron Berger, Chief Programme Officer at Expeditionary Learning, gives an example of a project built around the 'standards':

Let's say your students are required to learn the history of World War Two. It's unlikely that you will be able to design a product that will include all the content they'll be tested on, but that doesn't mean you can't make a project that requires that they learn it. For example, if the kids are going to go out and interview World War Two veterans and create a book honouring them by featuring their stories, then at the beginning of the project you can say 'Everyone in this class needs to know all about World War Two, because when you're interviewing somebody and they start talking about a battle, you need to know what that battle is, and how it relates to the rest of the war. To respect these veterans, we need to be experts! So over the next two weeks, we are going to work flat out to bring ourselves up to speed on World War Two, using all kinds of resources.'

RON BERGER, CHIEF PROGRAMME OFFICER, EXPEDITIONARY LEARNING

Do the project yourself

If you are asking your students to conduct research and build, design, paint, draw, or write something, you will have much more success if you do it yourself before you ask them to. There are several reasons for this:

- If the project is unworkable, you'll find out in advance (this does happen).
- You will have a sense of where your students may run into difficulty, and you can plan accordingly.
- You will get a feel for how long it is going to take.
- You will have a model to show the students before they begin, so your students know what your expectations are.

There are some projects that it is difficult or impossible to 'do yourself first' – for example, projects in which students have the total freedom to choose their medium, projects that include public performance, or extended projects in which students (for example) set up a shop, or run a local political campaign. In these instances, it is a good idea to identify discrete sections that you can do in advance, and give them a try.

Make contact with experts outside the school

Draw on the list of experts and organisations that you brainstormed with your colleagues, and ring up some people. Explain the project, and ask them to help make the project more authentic by providing models, working with students (in school or on a field trip), or offering an exhibition venue. A few tips are listed below:

- Be bold about this. Just make sure you can explain clearly what the project is about, and what they could do for you, and you'll be fine (but don't phone people until you're clear about both of these things).
- You'll be surprised by how willing people will be to help you set up meaningful work for your students. And remember, you're contacting them because they are experts, which is a nice thing to be seen as, so they're likely to be particularly receptive.
- Once you have made your project plan, make an abbreviated version of the plan that you can give to your project partners from outside school. This will be a more useful reference to them than the full project plan.

Fill out a project plan

Particularly when you're starting out, it's much easier to plan your project using a template than to just write up your own document – following a template will also ensure that you don't forget about anything important. You can use our template (see page 88).

The first thing to do is fill in the plan with everything you've already done: the project idea that you've already sharpened up with a colleague, the things that you want every student to have learned by the end of it, and the ways that you intend to assess them.

Your project plan won't be complete until you've gone through every step in this section – and even then, it will be substantially revised after you hold a tuning session.

Who should see the project plan?

Your full project plan will be useful to you and the teachers you are working with, and you will want to share it with the teachers and students who help you to tune your project.

For everyone else who is involved in your project (such as students, parents, outside experts, and the exhibition venue), you will want to produce a shorter 'project sheet'. You can see an example of this on page 94.

TIPS: Offer students choice, but not unlimited choice

If you offer limited options (three to five) for final products you will allow students to become experts and be able to teach other students. This will free you up so you can push the more advanced students and bring up the struggling students. The first year I did my music instrument building project I allowed students to choose to build whatever instrument they wanted. I had students building xylophones, guitars, ocarinas, flutes, pan flutes, acoustic guitars, electric guitars, mbiras, marimbas, and synthesizers. As a result, many students had to look to me for help instead of their fellow students. I have always found that students learn more when they learn from each other instead of the teacher.

CHRIS WAKEFIELD, TEACHER

Work out your project's timeline

This is one of the most important 'structures' a teacher imposes on a project, because it makes a potentially daunting project feel manageable to students, and helps you make sure that they will have time to accomplish everything that you expect from them.

If possible, post your timeline online so that students, parents, and other members of staff can check it whenever they need to.

Set interim deadlines and plan regular check-ins with your students

You can never check your progress against your projected timeline too often. This goes for your management of the project as a whole, and for each individual student's management of their project.

It's a good idea to hold weekly check-ins with all your students (or all the groups, if the students are doing the project in groups).

At each check-in, work with students to set tasks for completion by the next check-in, and make sure you both have a copy of the tasks you've agreed (again, it's best if this can be stored online). Check-ins also give you the opportunity to find out how the project is going so that you can make adjustments to your plans.

In addition to the check-ins, you will need to set interim deadlines. This will include deadlines for drafts, and final deadlines for specific components of a product (such as the videos in the Blood Bank project – see page 92).

You may also want to schedule quizzes to make sure students are gaining the knowledge that they need to be acquiring.

Schedule critique sessions

Critique sessions will tend to follow draft deadlines (since students will be critiquing each other's drafts), but they are distinct events, and they will usually take at least forty minutes.

You can learn more about critique on page 28.

Plan your exhibition

See Section 5: Exhibit your project (page 66).

Plan your assessment

Assessing throughout the project

Assessment is not something that happens once, at the end of a project – you assess your students' work throughout the process.

On your timeline, plan in a series of 'check-ins' to take place throughout the project, to make sure students are on track. These may be short papers, quizzes, journal entries, meetings with the teacher, and critiques.

Use multiple drafts in assessment

Assessing multiple drafts means you can assess a student's improvement, as well as assessing the quality of their final version. For more on this, see page 26.

Assessment isn't just about the final product

"Teachers often mistakenly presume that a project's final product is the only thing they should assess, which leads them to assume that they should be able to tell whether the kids learned what they needed to learn by looking at the final product.

Actually, assessing what kids know is ongoing throughout a project. The product is the motivation for learning the material, but it won't demonstrate that they learned it all. For example, in the physics standards project (see page 51) each kid only demonstrated one physics concept, so how do you know that they learned the rest of the material?

The answer to this question is that the book isn't the assessment. You can assess what they've learned before the book comes out, and afterwards. In Physics Standards they gave all the students a physics test with all the concepts in it.

You need to do assessment throughout the project so that when they're doing great artistic stuff, you know that they know what they need to know. You can't leave it all to the end."

RON BERGER, CHIEF PROGRAMME OFFICER,
EXPEDITIONARY LEARNING

The final assessment

Your final assessment will focus on the products that your students have produced, and how they went about producing them (the process). If you have established criteria for assessment, as described above, this will be fairly straightforward. Remember that not everybody needs to produce the same product in order to demonstrate their learning (see 'Personalise the project', page 52).

Assessing the process can be more challenging – this is where it can be helpful for students to have kept project journals or blogs throughout the project. You can then assess their work throughout the project by referring to these as a supplement to your own observations.

You may want to have a separate assessment of knowledge, such as an exam. This could come before or after the exhibition (just make sure you space out the exam and the exhibition, so you and your students have time to give both the attention they deserve). One effective way of doing this is to make an exam that covers information presented by all of the groups during the project. This will ensure that students learn a wide range of content, as well as giving them an incentive to study each other's work closely.

TIPS: Avoid group marks

Avoid the impulse to give 'group marks' (that is, giving the same mark to everyone in a group). These can lead to bad feeling in groups if people aren't 'pulling their weight', and it encourages students to over-specialise (one student does all the research, one student handles everything technical, and nobody gets to experience the full scope of the project). Find a way to identify and assess individual contributions to the product: peer assessment, student journals and teacher/expert observation will all help you with this.

Questions that your final assessment should address

Does the product meet or exceed the criteria we set at the start at the project?

You can come up with assessment criteria at the beginning of the project by taking the 'model' that you produced, a product from a previous year, or a product made by a professional, and asking the students to describe what's good or interesting about it. The words they use (guided and, if necessary, supplemented by you) can then be categories for assessment. For this exercise, use the instructional critique protocol (see page 98).

Has the student developed the skills required for the execution of this project?

Here, you will want to refer back to the learning goals you identified in your backwards plan (see page 42). You will have identified a range of skills that you want your students to have learned. By doing the project yourself, you will have verified that these skills are still pertinent. All you really need to do now, is to involve the students in identifying what 'good practice' looks like, at every step of the way, and build your agreed criteria around that.

Has the student learned the curriculum content required for this project?

The process followed here is much the same as for the assessment of skills, with one important difference: your project plan should include the essential curriculum content for the project. As a result, much of this will be considered 'non-negotiable', though it is still important to have students co-construct the process. So, for example, you might ask students to determine how they will present the content knowledge they've acquired through the project (they might do this through an essay, quiz, presentation, film, etc).

Where possible, your project design should avoid the separation of content knowledge from technique and skills development. Your assessment strategies should reflect this too.

Sources of assessment

Having assessment data from a variety of sources is essential to project-based learning, as it reflects the independence, interdependence and adult world connections integral to the learning process. So you want to ensure that assessment includes the following:

- Self-assessment – This should emphasise the importance of student reflection, not just the mark that the student feels they deserve.
- Peer assessment – This a key element in assessment of project-based learning: you can't be with every group all of the time, and this will make it easier to assess students individually within a group.
- Teacher assessment – You can use the same assessment methods within a project that you would in any other context.
- Outside expert/audience – This can take place as an event in its own right (such as a critique session), or it can happen as part of the exhibition. Remember that the audience will need guidance from you in what to look for, and what questions to ask. One effective strategy is to ask a few people to attend an exhibition as 'panellists' who will assess students' work. You can see an example of a rubric for panellists on page 96.

TIPS: Use 'Spaced Learning' to help students learn a lot of curriculum content in a hurry

'Spaced Learning' is a technique for getting a large amount of information into your long-term memory in about an hour, using three 'inputs' (usually in the form of short lectures) divided by ten-minute breaks. Teachers are combining Spaced Learning with project-based learning in order to ensure that their students are getting both a deep understanding of subjects, and acquiring a wide breadth of required curriculum content.

Learning Futures has developed a free guide to Spaced Learning in partnership with Monkseaton High School, in Northumberland (UK). You can download it here: bit.ly/o6rA3u

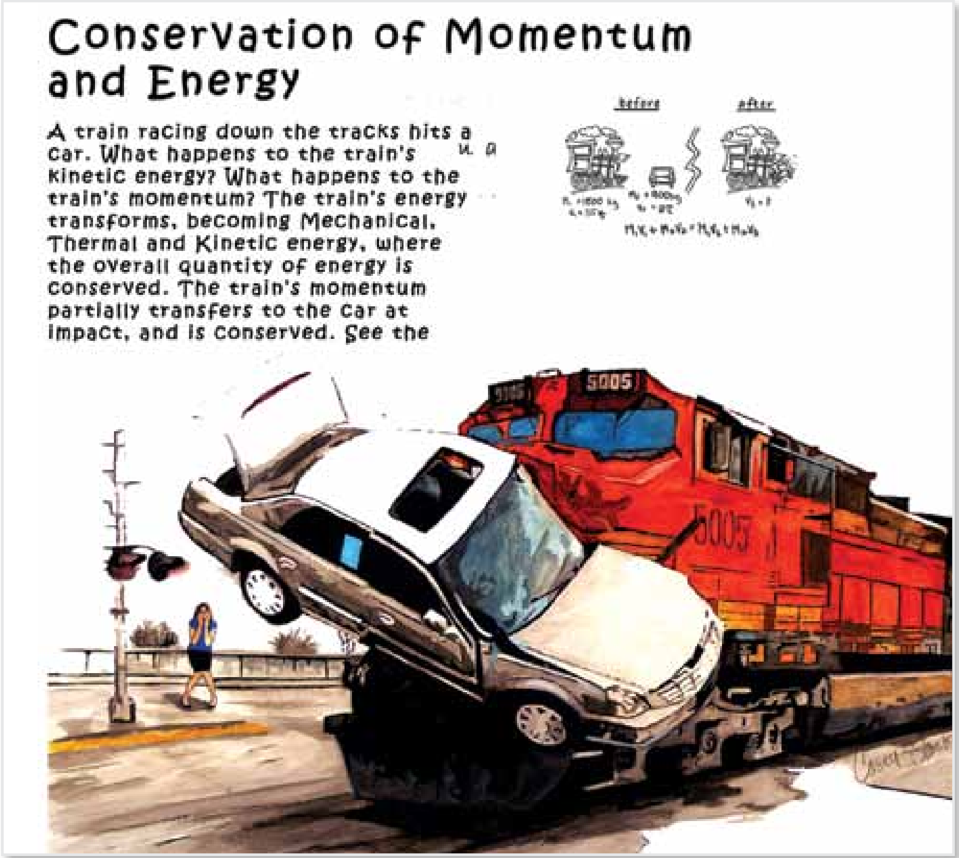
STORIES: Making the Standards into a project

Teachers Andrew Gloag and Jeff Robin have found an inventive way to demonstrate how one can cover standardised curriculum content through projects. They put the state curriculum standards at the heart of a project by having students illustrate the California state standards for physics.

This is the page one student created in order to illustrate conservation of energy as it applies to falling objects:

It's worth mentioning that all the pages in the book were produced to a standard similar to this one – not because the students doing the project were unusually talented, but because of the combination of extensive instruction, redrafting, and critique that they all went through.

You can read more about this project and see more examples of student work here: bit.ly/yrryva



Personalise the project

You can do project-based learning with students of all abilities, and all ages – in fact, for struggling students, projects can spotlight a whole range of different talents and skills that may not be brought out by 'traditional' work. Projects offer students many 'points of entry', and many ways to shine.

Successful projects are designed so that students make decisions for themselves throughout the process. For example, a teacher might set the area of the curriculum that a project will focus on, but let students choose the medium of their response (film, comic strip, news article, etc). Or, a teacher might predetermine the medium of students' response, but let each student choose what to focus on.

However, you need to make sure you are designing the project with all your students' needs in mind, so that each student can demonstrate their learning in a way that will be challenging, but not impossible. A few tips are provided below.

Decide which parts of the project are non-negotiable, and which are flexible

Every project will have some 'non-negotiables', and some elements that students can personalise to suit their own interests and needs. For example, in the physics standards project (see page 51), every student was required to make a painting that illustrated a physics concept, but they chose their own concept, and came up with their own example to illustrate it (these examples included two surfers colliding on a surfboard, a speed skater making a turn, a clown being fired out of a cannon, and a man dragging an enormous cupcake by a rope).

At the conclusion of another project, a student who spoke very little English decided to give a bilingual spoken-word performance in addition to producing a written piece of work. Giving a performance did not exempt the student from the writing assignment, but it gave him an opportunity to shine: rather than just being 'the student who struggles with English', he was the student who gave the great performance.

Personalise through 'Voice, Choice, and Audience'

Project design should indicate a clear direction but offer many pathways to a solution.

Rob Riordan, President, High Tech High Graduate School of Education:

"These more flexible parameters may be determined by input from your students ('voice'), by giving your students the freedom to choose between options or propose their own ('choice'), and by helping your students decide who the audience will be for their project – and what that audience will be looking for."

Make sure that the whole class benefits from what each student learns

A project requires students to do in-depth research into a particular area of the curriculum. The price for this in-depth knowledge is that their focus will necessarily be narrow.

However, this narrow focus does not need to prevent your students from gaining a broad knowledge of the subject. You can make sure all your students benefit from each other's research by requiring that each group teach their topic to the rest of the class, and testing the whole class on everybody's topics.

You can also use online tools to make sure that each student's research benefits everybody. For example, teacher Martin Said uses a programme called WallWisher (www.wallwisher.com), which allows people to stick 'post-its' on a virtual wall, to collect links to online resources. So, for example, if students produce podcasts about different periods of twentieth century history, they can all contribute to making a 'wall' full of useful links that everyone can use.

In addition to making sure that students encounter a wide breadth of knowledge, it's important to make sure your students encounter a wide breadth of skills – you can ensure this by requiring students to rotate roles within their groups during a project, and making sure the same students don't fill the same roles from project to project (much like adults, students will tend naturally to drift into a specialism).

It's worth saying something about competition here. Competition between groups can be a great motivator, but it also puts a limit on how many people each student can learn from. If groups of five are competing against each other, each student only has four other people available to learn from (since everyone else will be in competition with them). On the other hand, if an entire class of thirty students are all working together (albeit on individual projects), each student has twenty-nine other people they can learn from. In fact, many teachers embed collaboration into a project's success criteria by declaring that the group has not succeeded unless everyone's project was a success.

STORIES: Putting students at the centre: the student-led enquiry

Not all projects begin with a teacher's idea: projects can also begin with students deciding to learn more about a subject, or master a skill, refining their plan with help from their teacher and peers, and then carrying out a project of their own devising. This type of project is particularly good for fostering student engagement, as well as helping students to take responsibility for their own learning.

At Matthew Moss High School in Greater Manchester (UK), students have taken on projects including building a catapult, designing and making tee shirts 'from scratch', building a car engine from parts, and refereeing a netball match (this last one chosen by a student with severe learning difficulties).

Teacher Mark Moorhouse gives an account of how the 'car engine' project developed from a vague interest in fast cars to a serious undertaking:

A group of three students wanted to do a project on cars. In this instance, the scrutiny phase, in which their learning plan is challenged to destruction by both me and the rest of the class, was paramount. I suggested that the learning from taking a high-performance engine apart would be real and significant and they'd actually get to find things out and push themselves. They were really excited by the reality of it: real engine, real tools, and off we went.

As luck would have it, I had three expired Subaru EJ20TT engines at a friend's garage. Initially I planned to bring a complete unit in for them to strip, but I started to worry about the toxicity of old engine oil and health and safety. Then I remembered that my friend and I had one stripped and cleaned in bits already. So the challenge evolved to building the engine from bits – just as good and far cleaner and safer.

Whilst the lads were searching on the internet for the engine's 'build-sheet', I was working out how to get all these engine parts to school. Finally got the engine delivered in sections in bin bags to my house and then transferred it all into one of my local authority refuse wheelie bins. The next morning I was in suit and tie dragging the bin through the streets of Castleton to school. The few cars about at that time seemed happy enough to drive around me, albeit staring a bit in the process, presumably wondering 'What's that teacher from Matthew Moss doing nicking someone's wheelie bin?'

I put the bin at the back of school, and by 9.30am the three learners had everything out and spread around. These students spend all of Monday morning on their projects, and I visited them a couple of times until break started at 10.50am. A light drizzle was setting in now as I went to tell them to come in for break time, but they politely refused the invitation.

2. DESIGN THE PROJECT

CONTINUED

What was clear was that they were in the current of a real learning flow, and had built up significant momentum. They had hypotheses in the air about which sections were going to fit where. It was absolutely intense. And how many times does our traditional timetable interrupt flow when it takes off? With myself and the Head teacher watching them through the window, I left them to it, still seriously and seamlessly engaged.

MARK MOORHOUSE, TEACHER

STORIES: A Student's take on project-based learning

High Tech High Graduate Zachary York had a brain tumour removed in 2000, when he was twelve years old. Following his surgery, he had trouble retaining information in his short-term memory. He started studying at High Tech High and found that he could learn more effectively through project-based learning than through 'traditional' approaches. Zachary has since graduated from the University of Arizona, and now works at High Tech High as an academic coach.

Here, Zachary explains why he finds project-based learning so effective:

One of the great things about project-based learning is that the students are able to personalise their learning for themselves, a process which begins when they start thinking about how to respond to the project model or the essential question.

From the advent of this learning style in my life, to adapting it into a university lifestyle, the use of project-based learning enabled a learning of self. When I was a student at HTH and presented with the task of my senior project, I knew that in order to shine I would need to use all that I had learned through my four years in one grand exposé. I chose to work on a philanthropic front, to raise money and awareness for paediatric brain-tumour research by climbing Mt. Whitney in California in order to directly fund my surgeon and his research. With this project, I was given the opportunity to use all that project-based learning had taught me.

In short, project-based learning allows one to translate what they have learned into a language and method that allows individual growth in addition to team growth. It is with extreme honesty that I pledge the entirety of my future success on how High Tech High taught me to examine the world, and further the advent of project-based learning in my life.

You can read more about Zachary on his blog at zacyork.wordpress.com

SECTION 4: EXECUTION

TIPS: Try these ways of personalising projects for students with special educational needs

Projects can work especially well for students with special educational needs, though you need to plan with those needs in mind. Here are a few tips:

- Sit down with the student, their parents, and any other adults who are working with the student, to see how the project fits into their broader educational plan, and what accommodations may be necessary.
- Have predetermined partners.
- Have specialists help with daily tasks by reinforcing routine.
- Reserve computers for kids who need them – this can help some students to be much more productive.
- If needed, book specialist support workers early – this can be especially useful for helping students prepare for presentations.
- Make sure there are quiet spaces to go if the classroom gets too loud to concentrate.
- Work out the best way for an individual student to show what they know – not everyone needs to demonstrate their learning using the same medium.

Of course, many of these strategies apply to all students.

Checklist: What you should have at the end of the design process

You've now taken your initial idea and turned it into a project design, made a project plan, tried the project yourself, and worked out how you will assess the project.

Once you've finished designing your project, you should have the following:

- A model of the product that students will be creating, made by you
- A full project plan
- A project timeline
- A 'project sheet' for students, parents, and partners from outside the school, that describes the project, lists the milestones, and explains the plan for exhibition and assessment (including key dates).

You can find examples of a whole range of project documents, as well as overviews of seven different projects, at www.hightechhigh.org/pbl.

3. Tune the project

Once you've planned your project, it's time to have a 'project tuning' session.

This means presenting your plans to a group of colleagues, who will give you constructive feedback, come up with ideas that you haven't thought of, and warn you of potential problems that you may not have anticipated.

It is also very helpful to invite students to be part of the tuning – they will have insights into the process of doing a project from their perspective, which may take you by surprise. Doing a project tuning also sets the stage for the peer critique that your students will be doing during the project, so it's good for them to see you modelling how to receive critique graciously and constructively. Tuning is critique for teachers, and the benefits of 'tuning' and 'critique' are exactly the same.

You don't necessarily need to conduct a project tuning with colleagues from your own school. In fact, you don't need to have everyone in the same room: some teachers conduct tunings remotely, using conference calls or web-conference software.

A project tuning follows a tight protocol – this was developed by the National School Reform Faculty and refined by High Tech High, and tends to be much more useful than a more open-ended discussion. The formality of the structure may feel a little bit stilted or unnatural at first, but it normally starts to feel natural about partway through your first tuning session.

What to bring to the tuning

Bring the following items to the tuning:

1. Your project plan
2. The model you've made of the product
3. One or two 'burning questions' for the tuning group – in other words, what you would like them to focus on.
    a. Examples of burning questions:
        i. 'How will I make sure that students acquire the knowledge that I want them to acquire, as well as developing skills?'
        ii. 'How can I give students enough time to be comfortable working in an unfamiliar medium?'

Ground rules for tuning

High Tech High uses the following three ground rules for tuning. You can use these if you want, modify them, or come up with your own. Whatever you do, it's useful to remind everyone of the ground rules at the beginning of every tuning session.

- **Share the air:** If you tend to talk a lot, make sure you don't dominate the conversation, and that everyone has the opportunity to speak. Equally, if you tend not to speak very much, make sure that you are contributing – otherwise nobody will get the benefit of your insights.
- **Be hard on content, soft on people:** Make sure that discussion (especially criticism) is focused on the project, not the person. This distinction needs to be crystal-clear in order to maintain a culture that is both rigorous and collegial.
- **Be Kind, Specific, and Helpful:** For more on this, see page 28.

TIPS: How to distinguish between 'clarifying' and 'probing' questions

It's not always easy to distinguish between 'clarifying' and 'probing' questions, particularly when you're new to project tuning.

Ben Daley, Chief Operating Officer at High Tech High, uses the following rule of thumb: 'If I think the presenter knows the answer to my question, it's probably a clarifying question. If I think they might struggle to give me an answer, it's probably a probing question'.'

Project tuning protocol

Time: 40 minutes

Size of group: One facilitator, one presenter (or more, if the project is a collaboration), and 3–10 other people (optimally).

Who should be there: staff whose opinions you value, and students who will be thoughtful and honest (it's best to have students with a range of ability levels in the room).

Step 1: **As everyone arrives, hand out the project plan**

- The group should either sit in a circle, or around a table.
- Take a moment to remind everyone of the ground rules for tuning (see page 59)

Step 2: **The presenter introduces their project** (Time: 10 minutes)

- The presenter explains what their goals are for the project, gives an overview of how it will work and what will be produced, and (if appropriate) explains how the project fits into the wider context of their class.
- At the end of the introduction, the teacher gives the tuning group their burning question.

Step 3: **Clarifying questions** (Time: 5 minutes)

- Clarifying questions are used to get a clearer understanding of the project. They have short, factual answers.
- Examples: 'How long will the project last?' 'How many hours per week will students have to work on it?' 'Where will the work be exhibited?' 'Who are you planning to invite to the exhibition?'
- It's very easy to slip into asking probing questions at this stage. If somebody does so, the facilitator should gently intervene and ask the person who asked to hold onto that question until the next step of the tuning.

Step 4: **Probing questions** (Time: 5 minutes)

- Probing questions help the presenter to think about their project more deeply, and more expansively.
- Examples: 'How will students demonstrate their understanding through the final product?' 'What will you do if a draft takes longer than you anticipated?'
- Probing questions should not be 'advice in disguise' – for example, questions that begin 'have you thought of trying…' are not probing questions, and should be held back for the next step.

Step 5: **Discussion** (Time: 10 minutes)

- The presenter restates their burning question (the presenter may also wish to reframe their burning question at this point, in light of the clarifying and probing questions).
- The presenter then physically leaves the circle, goes off to the side, and listens silently to the discussion.
- The discussion should begin with positive feedback about the project. Depending on the group, the facilitator may want to state this explicitly, or just let it be implicit.
- After about eight minutes, the facilitator should ask the group whether they feel they've answered the presenter's burning question.

Step 6: **Presenter's response** (Time: 5 minutes)

- The presenter may share what struck them most during the discussion, how they now think about their project, and what next steps they plan to take as a result of the ideas that have been generated.
- It is not necessary to respond point by point to what the tuning group has said.

Step 7: **Debrief** (Time: 5 minutes)

- This is a time to reflect on the process of the tuning itself. The facilitator leads it by posing questions to the whole group.
- Examples: Did we have a good burning question? Did we stick to the question? When was a moment when the conversation made a turn for the better? Was there any point where we went off track? Did our probing questions really push the thinking of the presenter?
- There will be a tendency to veer back into a discussion of the project you've been tuning. Resist this.

Step 8: **Closing the loop** (Time: 5 minutes)

- This is a chance to say that one final thing you've been dying to say during the tuning. Participants share one of their take-aways with a partner or everyone in the group shares one take-away with the rest of the group.
- Participants may also share how participating in this tuning session will impact their own practice.

At the end, thank the presenter for sharing their work and their concerns, and thank the tuning group for their questions and advice. A tuning requires effort on everybody's part, and it's important to acknowledge this.

4. Do the project

Engage your students

How you introduce a project to your students can have a dramatic effect on how that project progresses, all the way through to the exhibition.

There are many ways to begin a project: one is to start by giving your students space to talk about what they are concerned about and interested in, and then talking about how the project can speak to these concerns and interests. You can also begin with a more formal project 'hook' – an event that is unmistakably different from your day-to-day classes, which introduces the product, the theme, or the essential questions of the project.

The most important thing is to convey your own passion for the project, because your class will pick up on this and it will help to overcome the resistance that can greet the beginning of a project (or, for that matter, anything unfamiliar that defies students' expectations). However, we recommend against putting on too much of a 'show' for students – or if you do start with a show, make sure you also create a forum for students to speak. The hook is as much about listening as it is about performing.

Teacher Cady Staff begins her projects with a silly video shot by her and her partner teacher, then follows this up immediately with a writing prompt for the students in which they can respond directly to the issues that the video has raised. This shows Cady where her students are coming from – what knowledge, preconceptions, and specific areas of interest they are bringing to the project. Then, when she explains the project in more detail the following day, she can draw on the students' writing in order to connect it to them.

Another teacher, Pam Baker, began a project on peaceful protest by inviting in a local musician (whom she knew already) who performed for the students, and then answered their questions about why, and how, he wrote protest songs.

Other teachers begin with a student discussion of the project's theme or essential question. This can be sparked by film or television clips.

Show your students a model of the type of product they will be creating (set clear expectations)

This might be your project hook, or you may do it after the hook. Either way, it is absolutely critical to the success of the project (if you're choosing between a flashy hook and a careful, full-class examination of a model, go with the model every time).

This is a good opportunity to show students the model that you made yourself. You might also want to show another student's work (though this will only work if you're doing a project that has been done before) or the

work of a professional. Teacher Vanessa Ryan introduces one project by bringing in students who did the project the previous year to show their own work and talk about the process of creating it.

Whatever you use, make sure that the model you show your students matches what you are asking them to produce – or if it doesn't, make sure they understand what aspects are different from what they will be doing.

Looking at a model together serves two purposes:

- First, it shows students what they are aiming for. Remember that they have probably never before attempted to produce whatever it is that they will be producing at the end of the project. If you have already done the project yourself, you know how difficult it is to create something without a model to work from.
- Second, it gives the class something to base its standards on. As a group, discuss the model – what is its purpose? How well does it meet that purpose? What looks most difficult to do? What looks easiest to do? What aspects are most important? What are least important? By having this discussion at the beginning of the project, the class develops a shared understanding of what 'good' looks like. You can use this as a basis for your assessment criteria.

The introduction of the model is your first critique session.

QUESTION: If I start the project by showing my students a model of what they're going to produce, how do I keep them from just copying the model?

You can handle this in the initial critique session, in which your students analyse the model as a group in order to identify the attributes that make it 'work'. Once they have done this, students will have a sophisticated understanding not just of the model itself, but of the issues that they will need to consider when making their own products.

When possible, it is good to show students a range of models with different qualities – all of which come from the same (or a similar) assignment.

Once your students have critiqued a model and identified its important attributes, it's important to stress to them that their task is not to replicate this model, but to use what they have learned from identifying its attributes in order to make something unique of their own.

Now, as long as you have regular check-ins with your students, you will be able to identify work that's too derivative early on in the process and sort it out before the students have invested too much time in it. But don't worry if student projects retain some derivative attributes – almost all student work, and most adult work, is partly derivative.

For more about check-ins, see page 46.

TIPS: Advice on logistics

Projects are logistically complicated. You may need to acquire materials that you have never needed before, use computers in ways that you haven't used them before, and rethink the way you use your classroom. The following are a few tips from teachers on the 'nuts and bolts' of project-based learning:

Getting the supplies you need for your project

Acquiring supplies is not always easy on a school's budget. Here are some ideas:

- Take an inventory of what the school has currently – you may be surprised by what's lurking around currently unused.
- Take a creative approach to materials, and don't be afraid to go to charity shops and go skip-diving.
- Ask for donations (governors, local businesses, parents).

Being strategic about software

In our digital age, software is likely to be at least as important to your students' projects as hardware. Here's some advice:

- Rely on your students: find out what computer programmes they've used before, and appoint knowledgeable students as 'technology experts'.
- Go online to ask tech-savvy teachers for advice (see page 84 for places to get in contact with tech-savvy teachers).
- Have a chat to whoever runs your school's IT very early on in your planning – tell them what programmes you're hoping to use and why, so that together, you can make sure that everything will work on your school's system.

Making your classroom work for you

You can't do anything about the shape of the room you work in, but you can plan it out so that it serves your project. For example:

- Designate specific work areas for specific kinds of tasks (eg online research, writing, rehearsing presentations).
- Plan how you will store works in progress before the project starts.
- Always leave time for clean up, no matter how close students are to deadlines (even if they're working outside the classroom).

Monitor the process

You may have designed your project within an inch of its life, with a timeline that tells you everything you expect to happen each day for the next six weeks, but your plan will start going out-of-date the moment the project starts. This doesn't need to be a bad thing – in fact, lots of the adjustments that happen to projects are improvements – but it means you need to have strategies for keeping track of how everyone's doing every step of the way.

Don't be afraid to adjust your design once the project is going

The project will never go according to plan. Don't fight this, embrace it – as long as you know how your students are doing, you can always make adjustments to your design. The only big problem would be not knowing how your students are doing – which is why you have check-in sessions built into your timeline.

Make sure that students' drafts are being archived

When you're in the middle of a project, archiving will probably be the last thing on your mind. But once the project's over, you'll be very glad to have copies (or photos) of your students' drafts – both because the record will be useful to your current students, and because you will be able to show the drafts to future students as models of project work.

Many teachers put students in charge of this, by appointing a few students to be a project's 'official archivists'.

QUESTION: Is teaching allowed?

When project-based learning is working, teachers' roles are transformed. Once they cease to be the sole assessor of their students' work, they become less like referees at a sporting event, and more like coaches, every bit as invested in their success as the players are (and every bit as uncertain about the outcome).

This is exciting, unfamiliar, and potentially terrifying, but it does not mean you won't be using all the skills you have developed as a teacher. Teachers of project-based learning do everything that other teachers do, from lectures, to seminars, to plenaries – it's the context for all of this that changes.

5. Exhibit the project

The first thing to say here is that booking the exhibition venue should be one of the first things you do when you're planning a project. There are lots of possible venues for exhibitions: museums, galleries, parks, cafes, churches, community centres, etc. Teacher Vanessa Ryan held a premier of student-produced films in a local movie theatre by guaranteeing that the audience would spend at least £250 on food and drink.

Promoting the exhibition

Once you have your exhibition venue booked, start planning for how your students will advertise the event. Promotion is a part of the project, and students will need to devote time to it if the event is to be well attended.

Students have promoted exhibition in a variety of ways: for example, they have put posters up in local businesses, distributed flyers, harnessed their social networking links, and contacted local radio and television stations.

When your students are working on a project with a local organisation, you can ask them to mention the exhibition on their website, and in any newsletters that they send out.

Most importantly, when students work with local people as part of a project (for example, by interviewing them), the students make a flyer with information about the exhibition right at the beginning of the project, then hand out copies to everyone that they interview.

Assigning roles for the exhibition day

Once you've secured a venue and made time in the schedule for students to develop and run a promotional campaign, you can start thinking about the event itself. The best way design an exhibition is to start by think about what 'roles' everyone will play. Here are some examples of roles you might assign:

- **Student organisational team:** make sure AV equipment is working, make sure event runs to time, go-to people for last-minute crises
- **Student front-of-house:** greet the audience and manage the crowd
- **Student presenters:** stand by their work in order to explain it and answer questions
- **Teacher:** getting to know the parents.
- **Audience:** looking at everybody's work, asking questions, providing constructive feedback.

As you can see, on the day of the exhibition the teacher plays a minor role. This is because it's important that the students take ownership of the event – it is all about their work, and they should be in charge of it. Also, it can be a very good idea to tell the audience explicitly what their role is – people often feel uncertain about what is expected of them at exhibitions, and will appreciate being given a clear brief. You can explain the audience's role by handing out a flyer to everyone as they come in.

The exhibition is a celebration of the project, not necessarily an assessment event. For some projects, however, assessment will be an important part of the exhibition. For example, you may have a panel of experts from outside the school come in to assess the work (to see an example of an assessment rubric for panellists, see page 96). In other projects, assessment may play a minimal role in the exhibition – for example, students might get points for showing up, and their management of the exhibition itself might be assessed. The important thing to remember is that the assessment component of exhibitions is optional, but the celebration component is essential.

There's one last thing to say about exhibitions: they offer a great opportunity to connect with parents: parents come to exhibitions who don't come to anything else, and they come because their children insist on it.

Be an archivist of your students' projects

The products that your students have produced for this year's projects can be the models at the start of next year's project. Make sure you have digital photographs of all the products, including the drafts. Over time, you will build up a rich 'archive of excellence'.

Don't give up!

Chances are, your first project will have had some big problems: students may have found it difficult to work in groups, the essential questions may not have been as productive as you'd hoped, critique may have been a struggle, and the final products may have been disappointing.

Even if all of this – and more – went wrong in your project, don't give up! Like pretty much everything in life, projects get better with practice. And, of course, they get even better with critique – so talk to your students and your colleagues about what went well, what didn't go so well, and what you might want to try in the future.

SECTION 4: EXECUTION

QUESTION: Can I pull the plug midway through a project that's going badly?

It's better not to, if you can avoid it, because it sends the wrong message to your students, and means that you need to do extra work in order to fill in the time that would have been taken up by your project. Revising a project, changing course to address new needs or understandings, is always preferable to giving up.

Mostly, projects start out feeling like they will be amazing, and reach a point in the middle at which they appear to be heading for disaster. But in the end, all projects occupy a wide grey area between perfection and total failure. Some are better than others, but the bad ones end up with some surprisingly positive results, and the good ones are never quite as good as they could be.

Having said that, it's awful to be in the middle of a project that feels like it's falling apart. The best thing to do if this happens to you is to talk to someone who's been there, and get some advice. If you don't feel like you can talk to your colleagues, then go online: ask a question on twitter, contact a blogger for advice, post a question on a forum (for a few places to start, see page 83). But don't suffer in silence – people who care about project-based learning like nothing better than to help out other people who are giving it a try!

QUESTION: How do I convince my headteacher of the value of project-based learning?

You know your headteacher, so you'll know what their priorities are. If they're worried that students won't learn the facts that they need to learn, explain that you'll be designing projects based around the curriculum content that your students need to learn. If they're worried about students' safety, make sure you have a good plan for this (you should do this anyway, really).

Also, if you're able to do a small project, make sure you invite your headteacher to the exhibition. You can convince many people of the value of projects by showing them the impact that an exhibition has on students – and on their families.

It's worth reading up on project-based learning in order to build up a strong case for it. You can find a good list of resources on page 82.

QUESTION: How do I convince parents of the value of project-based learning?

If you are concerned that parents will be suspicious of project-based learning, the first thing to do will be to provide them with a copy of the project sheet that you give to your students (see page 94 for an example). This will make it obvious that students are doing 'real work' that is structured, well thought-out, and rigorous. It will also put them in a better position to support their child, and give them a window into what is happening in your class.

However, in our experience, what really convinces parents is coming to an exhibition and seeing both what their children have produced, and how proud their children are of their achievements. So make sure you give parents the date, time, and location of the exhibition as early as possible.

SECTION 5

Integration

Building a culture of project-based learning in your classroom

All of the well-meaning project-based learning books combined could not have prepared me for the deluge of frustration that I experienced my first year as a project-based teacher. I worked hard, but at times it seemed like my students and I were going nowhere...

> *Eventually, I learned that nothing could replace careful preparation and planning on my part. That said, I also knew that the most beneficial learning experiences allowed for active exploration. Through many mistakes and by observing my students and my colleagues, I discovered that my role was not to try to hold students' attention during forty-five minute lectures. It was to inspire students with a well-organized project that addressed real world problems, and then to create an environment conducive to learning.*
>
> KARL R.C. WENDT, 'AN ARTICLE OF FAITH' (UNBOXED 3)

Good projects depend on a classroom culture that respects (and demands) excellent work. And as Karl Wendt discovered, projects can be difficult to get used to, both for teachers and for students.

That's what this section is all about: we've identified five things you need to do in order to create a classroom culture that is conducive to project-based learning – what Ron Berger, chief programme officer at Expeditionary Learning, calls a 'culture of excellence'.

1. Ask your students about their prior experiences, skills, and interests

As with all teaching, projects work best when they are appropriate to the age and abilities of the students taking part, so if you aren't sure where your students are at NOW (and if this is the first time you've done a project with them, you probably won't be) then your first step is to find out.

One way to do this is to have your students write 'project CVs' with past project experience (both in and out of school) and personal interests. This will tell you not only how much experience your students have, but will also reveal untapped expertise and interests within the room (you never know who might turn out to be a model rocket enthusiast, or a breakdancer).

2. Foster student ownership of the learning

It might sound counterintuitive to build a culture of excellence by ceding control to students, but think about it this way: if students don't feel like they 'own' their own learning, why should they care about it? (as Thomas Peters and Nancy Austin pointed out in their 1985 book A Passion for Excellence, 'nobody washes a rental car').

There are many ways to help students to 'own' their learning: you can give them freedom to choose how to respond to a project brief, or the issue they want to pursue – or even design a project in which students decide both their topic and what they will produce (see the student-led enquiry, page 54).

You can also help your students to set the criteria against which their work will be judged, you can invite students to participate in 'tuning' sessions when you design your project (see Tune the Project, page 58), and you can introduce critique sessions (see page 28).

3. Establish a set of classroom 'norms', or 'ground rules', in which everyone feels invested

We've said a lot about protocols in this guide. We're big fans of using protocols, because they are great for certain kinds of activities. However, they only get you so far – at a certain point, you will need to have discussions that are not mediated by formalised rules.

This is where the 'norms', or 'ground rules', come in. Norms are the accepted behaviour in a group. Every group of people in the world has norms. Some are formalised, some are unspoken. Some are positive, and worth encouraging, and some we could really do without (such as the common norm that it isn't 'cool' to work hard in class).

The best way to create a set of norms in a classroom is to decide them as a group (taking suggestions from everyone), then write them on the wall and go through them as a group at the start of each project (and refer to them, as needed, throughout). Teacher Cady Staff's class does this at the start of every year. Past classes have come up with norms such as 'We are a team who serves as role models for younger students and each other,' 'We are a team who shares our passions,' and 'We are a team who says hi to each other in the hallway.'

You can also take time at the end of the day to point out students who are utilising the norms during an activity. This both reinforces the language of the classroom norms, and allows you to publicly recognise students who are not otherwise regarded as 'high status' within the classroom.

Probably the most important area to have a set of norms is group work – children (and adults) do not naturally work effectively in groups, but a clear set of norms can help things to run more smoothly.

The simplest set of norms we know comes from Ron Berger: 'Be Kind, Be Specific, Be Helpful'. They are designed specifically for critique, but they are useful for all kinds of interaction in the classroom.

4. Help your students learn to fail, and learn from failure

Broadly speaking, students take one of two approaches to failure: either they are terrified of it and rarely if ever encounter it, or they regard it as their natural state of being. One could describe these two groups as 'novices at failure' and 'experts at failure' respectively.

It isn't helpful for students to be either novices or experts at failure. Instead, students should be 'connoisseurs of failure'. They should be able to recognise it, respond to it, and learn from it, understanding that as well as being a temporary frustration, it is an opportunity to learn.

However, failure on its own is not enough – if you want students to value and learn from failure, they must have time to improve what they've done. This means planning projects to take longer than you expect them to, and trusting your instincts if a project feels too ambitious for the time allotted to it.

5. Trust your students, and give them reason to trust you

It is our experience that when you give more responsibility to students, they generally step up and surprise you with their maturity.

Having said that, trust on its own is not enough – you, the teacher, are responsible for creating the conditions in which your students learn from their failures, and ultimately be successful. Furthermore, your students need to trust you to, as Karl Wendt puts it, 'lead them to the edge of their ability, but not past it.'

Your students also need to trust each other, and trust themselves to be able to achieve something that may, at the outset, look pretty unattainable.

Karl Wendt advises attending to the process of building trust at the beginning of the year, and letting it happen slowly:

> *I have learned that trust does not grow quickly using scripted team building exercises. Instead, trust occurs when students feel like they are known and understood. Executing a small hands-on project early in the semester gave my students confidence that they could do engineering, as well as the chance to get excited about it. It gave me the opportunity to talk one-on-one with the students and hear what they were interested in.*
>
> KARL R.C. WENDT, 'AN ARTICLE OF FAITH' (UNBOXED 3)

In fact, carrying out a small, low-stakes project at the beginning of the year will also help you to implement the other four strategies for creating a culture of excellence: it helps you find out what students have done before, it gets them used to taking control of their own learning and following a set of classroom norms, and it gives them a chance to make mistakes and learn from failure.

SECTION 6

Conclusion

Conclusion

We hope this guide has inspired you to bring project-based learning into your classroom, and that it has provided lots of ideas, tips and tools to engage and challenge your students. High Tech High have been perfecting their approaches for over a decade, and they'd be the first to acknowledge they're still learning. The Learning Futures schools are at a much earlier stage in their journey, and can testify that doing rigorous, purposeful project-based learning that leads to results that students take pride in is not easy.

But it's worth it. When students do projects, they surprise themselves, their parents, and their teachers with what they are capable of. When they present their work to a wide audience, they become confident and articulate advocates for themselves, who will go on to stand out at university and in the world of work. When making multiple drafts and seeking critique becomes the norm, students develop a work ethic that demands that they achieve excellence – not in order to satisfy anyone else, but in order to satisfy themselves.

Projects also draw subjects together so that students experience learning as an integrated whole, rather than a series of separate silos across the hours of the day.

And projects foster not just student engagement, but also school engagement with local communities, families and business. They help overcome false separations between intellectual and practical skills and the world of adults and students.

So one final time, we want to drive home what you need to do in order to design and run great projects:

- Design from your own (and your students') passions
- Make sure you tune projects with your colleagues and students
- Make sure your students create multiple drafts, and critique each other's work
- End every project with an exhibition.

And, always, remember to have fun with it. Good luck!

- Ways to get in touch with other teachers doing project-based learning

Further reading

Books

Ron Berger, *An Ethic of Excellence: Building a Culture of Craftsmanship with Students* (Heinemann 2003)

- It's only 156 pages long, but as far as we know, this is the world's best book about project-based learning. Berger draws on thirty years of experience as a primary school teacher, and his advice on teaching is peppered with anecdotes about real projects. Adults are routinely moved to tears (in a good way) by this book – just read it.

Juli Ruff, *Collaboration and Critique: Using Student Voices to Improve Student Work*

- This is a rich source of information and advice about student critique, based on research carried out by a teacher at High Tech High..
- You can download a free PDF here: bit.ly/p3sqO7. You can order a hard copy from here: bit.ly/pAVq8G

***Project Based Learning Handbook: A Guide to Standards-Focused Project Based Learning for Middle and High School Teachers* (Buck Institute for Education, 2003)**

- This is a very thorough guide to project-based learning, from the world's foremost organisation dedicated to project-based learning. Full of good advice and useful resources. You can order a copy from here: bit.ly/oOcjsA.

Journals

Unboxed: A Journal of Adult Learning in Schools
(www.hightechhigh.org/unboxed)

- Unboxed is a quarterly journal published by High Tech High. Each issue is packed with articles about running projects, with analysis of what works and what doesn't.

Websites

Buck Institute for Education (www.bie.org)

- As we said above, The Buck Institute is the world's foremost organisation dedicated to project-based learning. Their website is full of videos and other useful resources for teachers.

Edutopia (www.edutopia.org)

- Another great website full of resources. Some overlap with the Buck Institute, but the two are distinctive enough that it's worth looking at both. The blogs and discussion forums are particularly worth exploring.

West Virginia Department of Education (bit.ly/westvirginiapbl)

- This houses a collection of very thorough project examples and project document templates for teachers of every year group.

Enquiring Minds (www.enquiringminds.org.uk)

- This project, run by Futurelab (a UK-based organisation specialising in innovative education) and Microsoft, has produced a collection of useful materials on enquiry-based learning.

High Tech High: Seven Successful Projects (www.hightechhigh.org/pbl)

- This website looks in detail at seven high tech high projects, with examples of learning goals, project timelines, assessment rubrics, and other useful stuff.

Expeditionary Learning (elschools.org)

- Expeditionary Learning is an organisation that helps schools in America to engage hard-to-reach students, in part through project-based learning. Their website has useful resources for teachers here: bit.ly/nmQ4ab
- They are in the process of creating an open archive of over 300 project examples from around the world. For now, you can see a smaller collection of projects here: bit.ly/qqf6NS

Envision Schools Project Exchange (bit.ly/qIzxzR)

- Envision Schools is a group of charter schools in America that use a great deal of project-based learning in their curriculum. In the Project Exchange, they have created an extensive and accessible collection of projects for high school students.

Blogs

Experts and Newbies (biepbl.blogspot.com)

- The Buck Institute for Education's official blog. Good writers, good information, and opportunities to participate in online discussion sessions.

Connect! (calgaryscienceschool.blogspot.com)

- The 'professional learning journal' of the Calgary Science School, in Canada – resources, discussions, new ideas, and reflections by teachers.

Inquire Within (inquiryblog.wordpress.com)

- This blog is all about doing enquiries with students and writing about what happens. They are always looking for new contributors, so you could end up writing for this one as well as reading it.

Ways to get in touch with other teachers doing project-based learning

Social media has been very good for the teaching profession: it is now possible to meet, share ideas with, and get advice from teachers and researchers from around the world. Here's how to get started.

Get a Twitter account

If you don't have a twitter account yet, set one up (there's a good step-by-step guide here: bit.ly/r6MJqs).

Once you've set up your account, search for the phrase #edchat, #pbl and #ukedchat (that last one is specific to the UK). People add this little tag (known as a hashtag) to messages about education, and hold regular themed discussions on Twitter. Once you're involved, you can suggest topics for the themed discussions – and you can ask for advice at any hour of the day or night.

Go to a teachmeet

Teachmeets are free events organised by and for teachers to get together and share the things they're most excited about, from projects they've run, to websites they've built, to innovative teaching methods that they're trying for the first time.

Teachmeets started in the UK, and the vast majority still take place there, though they are beginning to spread internationally. Go to the Teachmeet Wiki (bit.ly/o1ahnU) to sign up to attend.

Even if you can't make it to one, you may be able to watch it remotely, or watch videos of the presentation later on.

Take part in a High Tech High 'collegial conversation'

Every few months, High Tech High holds 'collegial conversations' online, which you can take part in wherever you are in the world. To find out when the next one is happening (and to look at what took place at past conversations), take a look here: bit.ly/pr4NtG

APPENDIX 2

Project documents and protocols

- Project planner
- Project timeline
- Project sheet
- Assessment rubric for exhibition 'panellists'
- Critique protocols
  - Instructional critique protocol
- Gallery critique protocol

Project planner

You can use this to help you to design your project, and to help you to explain the project to your colleagues during the project tuning.

PROJECT NAME:

TEACHER(S):

SUBJECT(S):

1. Project summary

What are your students going to do, and why are they doing it?

2. Essential questions

An essential question should inspire students, require them to conduct serious research, and relate to a real world issue

3. Products

What do you want students to do/write/create/build?

4. Learning goals

What do you want students to learn?

Identify the **curriculum content** that students will learn in this project.

Identify key **skills** students will learn in this project. List only those skills you plan to assess.

5. Timeline/milestones

List the key dates and important milestones for this project.
(eg check-ins, critique sessions, deadlines for drafts and specific product components)

6. Personalisation

Say how you will personalise the project, especially for individual students who will need specialized support

7. Exhibition venue

Where will the exhibition take place?

8. Exhibition plan

How will the exhibition be promoted? How will your students exhibit their work? Who will you be inviting?

9. Assessment criteria

How will you be assessing the learning goals you identified?

Curriculum content:

Skills:

(Note: Once you've completed this section, make sure you add all the assessment points to the project timeline)

Sample project timeline: The Blood Bank Project

The following sample timelines come from High Tech High's Blood Bank project. This project used two timelines – one that gave a high-level overview, and one that gave a day-by-day breakdown. We have included both.

This timeline gives an overview of what will take place during the project:

Week	General	Biology	Multimedia
1–2	Introduce the Blood Bank and what they do, how it works, who it helps. Students will choose partners and instructional content.	Blood physiology, blood cotting-Platelets. The immune system, role of blood, white blood cells and lymphatic system	Storyboarding. Photoshop to After Effects
3–4	Present to classes	Biofeedback – role of hormones and pituitary glands. Circulatory system Interaction wtih respiratory alveoli Erythropoetin physiology and relationship to blood bank	Video editing and capture Storytelling technique Voiceovers
5–6			Finish diorama and hang with working DVD *DEADLINE WEEK 6*
7–8	Make a book about each others' projects, know the science because there is a test at the end of week 10 and you can use your books. Promotional designs		
9–10	Secondary community reaction video and teaching outreach to middle schools and high schools		
11–14	Special event groups will plan and execute Blood Bank event at HTH first week of December		
	Presentation		Diorama with DVD community reaction videos

SAMPLE PROJECT TIMELINE

This timeline shows what will take place in Art on every day in the project:

Week 1	**8–25**	**8–26**	**8–27**	**8–28**	**8–29**
	Look at assignment and talk about planning. Make three shapes out of paper.	Draw each of these shapes and combine the three.	Combine multiple shapes together and work on shading, colored pencils, charcoal pencils, link.	Still lifes with charcoal	Still lifes with charcoal. Shading and critique.
Week 2	**9–1**	**9–2**	**9–3**	**9–4**	**9–5**
	No school	Sketch up and/or graphic options	Trace collage. Images to apply polygons. Start to scan.	Scan, recolor, learn value, create a digital image.	Look at the digital and the hand drawn, critique and start to plan.
Week 3	**9–8**	**9–9**	**9–10**	**9–11**	**9–12**
	We will look at different artists and their sculptures and how they plan their work.	Start planning with your partner to solidify subject and shape.	Work on plan.	Present your ideas to me, Blair and the class. 20 points.	Present your ideas to me, Blair and the class. 20 points.
Week 4	**9–15**	**9–16**	**9–17**	**9–18**	**9–20**
	Present your ideas to me, Blair and the class. 20 points.	Make changes and resubmit before you start on your design and construction.	Make changes and resubmit before you start on your design and construction.	Start design poster.	Work on poster.
Week 5	**9–22**	**9–23**	**9–24**	**9–25**	**9–26**
	Work on poster.	Work on poster.	Poster due. 50 points	Get posters back and start to build diorama.	Build diorama.
Week 6	**9–29**	**9–30**	**10–1**	**10–2**	**10–3**
	Build diorama.	Build diorama.	Build diorama.	Build diorama.	Build diorama.
Week 7	**10–6**	**10–7**	**10–8**	**10–9**	**10–10**
	Check diorama and make changes. 10 points.	Check diorama and make changes. 10 points.	Finished and with video. 220 points.	Finished and with video. 210 points.	Finished and with video. 200 points.
Week 8	**10–13**	**10–14**	**10–15**	**10–16**	**10–17**
	Look at dioramas and have critique. Quality of components (multimedia, construction, poster). The goal is to find 3 changes and fix them.	3 changes and fix them.	3 changes and fix them.	3 changes and fix them.	Fixed and finished. 50 points.
Week 9	**10–20**	**10–21**	**10–22**	**10–23**	**10–24**
	Start working on the books that each group will produce that will help them learn about each other dioramas in both...				
Week 10	**10–27**	**10–28**	**10–29**	**10–30**	**10–31**
	..sections of the class. Students will learn book production and graphics that will help them get the information across				
Week 11	**11–3**	**11–4**	**11–5**	**11–6**	**11–7**
	in the most efficient and clear manner. They will also use these books to study from for their test and exhibition.				
Week 12	**11–10**	**11–11**	**11–12**	**11–13**	**11–14**
Week 13	**11–17**	**11–18**	**11–19**	**11–20**	**11–21**
			Book due. 220 points.	Book due. 210 points.	Book due. 200 points.
Week 14	**11–24**	**11–25**	**11–26**	**11–27**	**11–28**
	No school	No school	No school	No school	No school
Week 15	**12–1**	**12–2**	**12–3**	**12–4**	**12–5**
				Check all books. 50 points.	
Saturday December 6th – SHOW					
Week 17	**12–8**	**12–9**	**12–10**	**12–11**	**12–12**
			Books due. 100 points.	Senior exhibition	
Week 18	**12–15**	**12–16**	**12–17**	**12–18**	**12–19**
				TEST 200 points	

Sample project sheet to give to students and parents: Economics Illustrated

When you begin a new project, it's important to give your students a document that sets out what the project is about, and how it is going to work. You may also want to share this with parents.

The following sample project sheet comes from High Tech High's Economics Illustrated project. It is designed for 15–16 year old students.

Project title: Economics Illustrated

Length: Eight weeks

Instructors: Dan Wise (email@address.com) and Jeff Robin (email@address.com)

Essential questions:

- How do economists view the world? What language do they use?
- What can economics teach us about human behaviour?
- What can economics teach us about current events?

Deliverables:

- A two-part book entry on an economic term
  - Part One (the "left side") contains a definition of the term, at least three examples of its application, and a corresponding linoleum block print
  - Part Two (the "right side") contains an article, of approximately two pages, applying the economics terms to a current event or facet of human behaviour
- A lesson for peers on the economic term

Expected outcomes:

Students will know	**Students will be able to**
• What economics is • The basic principles of supply and demand • Twenty-five to fifty economic terms; their definition, illustrative examples, and how they apply to human behaviour and current events	• Read and discuss a non-fiction book on economics • Conduct research about an economic term • Give a lesson to peers on an economic term • Conduct research and write a non-fiction article about the application of an economic principle

Timeline:

Timeframe	Content / Deliverables	Assessment
Week 1	• Students learn basic economic principles, including supply and demand • Students choose book club books	• Quiz on lecture content
Week 2	• Students continue to learn basic economic principles • Students begin reading book club books in small groups (two to four students each) • Students fill out survey on interests related to economics	• Quiz on lecture content • Book club responses and discussions
Week 3	• Students are assigned economic terms, based on their survey responses • Students research their terms	• Students provide five sourced definitions of their term and seven sourced examples of their term • Book club responses and discussions
Week 4	• Students begin to deliver lessons on their economic terms • Students continue to research their own terms	• "Left side" paper • Quiz on other students' terms • Lessons evaluated (1/3 teacher feedback, 1/3 student feedback, 1/3 peers' quiz results) • Book club responses and
Week 5		• "Right side" paper draft • Quiz on other students' terms • Lessons evaluated (1/3 teacher feedback, 1/3 student feedback, 1/3 peers' quiz results) • Book club responses and discussions
Week 6		• Completed "Right Side" paper • Quiz on other students' terms • Lessons evaluated (1/3 teacher feedback, 1/3 student feedback, 1/3 peers' quiz results) • Book club responses and discussions

Model rubric for exhibition panellists

Exhibitions are a great opportunity to get people from outside school involved with assessment – this brings fresh perspectives to the project, and means students aren't just getting feedback from you and their classmates. Approach a few people in advance about being panellists, and give them a rubric like this one to help them structure their response to what they see.

Rubric for panellists: Vermicomposting project

Thank you for coming to our exhibition of learning! You will be roving the room and watching students present their work, asking them questions and rating the level of their responses and performances as a whole. Please try to visit all stations if possible.

Use this guide to help you rate the level of student responses:

Level of response:	**Expectation:**
1	Student's answer is ***incorrect***. Student's communication is unclear. Student does not show an understanding of the science content of the question.
2	Student's answer is ***mostly correct***. Student's communication could be improved. Student shows surface-level understanding of the science content of the question.
3	Student's answer to question is ***correct***, clear and well communicated. Student demonstrates a strong understanding of the science content of the question.

Suggested questions: Here is a list of questions to help get conversations with students started. Interviewers may also ask other questions or expand on these.

- Tell me about the significance of your poster.
- Why is vermicomposting beneficial?
- How is vermicomposting done?
- How did your group teach the class about your subject?
- Tell me about the nutrient cycle.
- What are producers, consumers, and decomposers?
- What is the message of your Public Service Announcement (PSA)?
- Tell me about the worms.
- How can I make a worm bin?

*Please make use of the student nametags and use names whenever possible while writing your comments

Station number ______________

Student Responding:	Level of Response:	Comments:

Additional Comments on Presentation as a whole (please use student names as much as possible or appropriate):

We would love your feedback:

Are the students conducting themselves professionally and scholarly?
Are the students being kind to one another and working together?
Are the students knowledgeable when communicating about the science content?

We thank you for your support!

Critique protocols

For more information about critique, see page 28.

Instructional critique protocol

Time: 35–40 minutes
Group size: Whole class (20–30 students)

Preparation: Selection of work for critique

- There are two important criteria for the work you are choosing: it should exemplify the kind of thing your students will be producing, and it should be work of quality (though it doesn't need to be the work of an 'expert' – for example, it's likely you'll want to hold a critique of the model of the product that you've produced yourself).

Step 1 (optional): Framing the critique (5 minutes)

- The teacher tells students what aspects of the work they should be focusing on, and displays them at the front for everyone to see.
- This step is especially useful with a group that has never done critique before, because it gives a clear focus to the critique.
- The downside of this step is that it imposes boundaries on the discussion, which may prevent other insights from emerging – so in some instances, it will be better to skip this step and have a more open-ended critique.

Step 2: Silent examination (10 minutes)

- Every student studies their own copy of the work, taking notes on what impresses them most about it, and what they think could be done to improve it.

Step 3: Discussion in small groups (10 minutes)

- In groups of 3–5, students discuss their observations about the work. As a group, they decide on six aspects of the work that they admire, and three recommendations for improving it.
- If you are framing the critique, remind students to make sure their list covers all the aspects of the work that you have told them to focus on.

Step 4: Whole-class discussion (15 minutes)

- The goals of this discussion are to identify the attributes of excellent student work for this particular assignment, and to show how these could be applied to the work under examination (thereby modelling the process of revising your work). Once those attributes are identified, they need to be named by the students so they so that they can be used.
- By the end of the discussion, the class will have a list of attributes of excellent work, as well as a set of strategies for revising their drafts so that they become excellent. If you used a set of lessons to 'frame' the critique, the list should cover them, though it may also include things that you hadn't thought of before.

Gallery critique protocol

Time: 30 minutes
Group size: Whole class (20–30 students)

Step 1: Students display work (5 minutes)

Step 2: Silent gallery walk (5 minutes)

- Students walk around the classroom, silently observing all the displayed work. They may take notes if they wish.
- Students can also stick post-its with their comments on pieces of work.

Step 3: What did you notice? (5 minutes)

- In this discussion, students can only comment on what they have noticed (eg. this portrait is centred on the left eye, this poem doesn't use any punctuation except commas, this solar oven uses mirrors as well as foil). They cannot offer any opinions or judgments.
- The purpose of this is to get people to notice aspects of the work that they may have missed, and to listen each other before they begin to debate.

Step 4: What do you think? (15 minutes)

- In this discussion, students point out what they found most compelling and interesting in the work they observed. Each time they choose a piece of work, they must say exactly what they found compelling about it – being as precise as possible (they may need help from the teacher and their peers in order to draw this out).
- The teacher also points out what they found particularly interesting in the work that they observed.
- The teacher writes down students' insights in order to identify and codify specific strategies that any of them could use to improve their work.

Acknowledgements

First of all, thanks to Dave Price, Laura McBain, and Rob Riordan, who have been contributing to and critiquing this guide from the beginning. Thanks also to Mark Moorhouse from Matthew Moss High School, Darren Mead and Martin Said from Cramlington Learning Village, Kelly Flahive from Alice B. Beal Elementary School, Neal Watkin from Copleston High School, and Jeff Robin, Blair Hatch, Chris Wakefield, Jay Vavra, Tom Fehrenbacher, Andrew Gloag, Bobby Shaddox, Stacey Lopaz, Pam Baker, Ben Daley, Karl Wendt, Dan Wise, Ben Krueger, Cady Staff, and Larry Rosenstock from High Tech High, for their contributions and advice. Thanks also to Adria Steinberg, who came up with the six As of Project-based Learning, and to the Buck Institute for Education for inspiration.

Thanks to the rest of the Learning Futures Project Team: Denise Barrows, Abigail Knipe, Matthew Horne, David Jackson, Valerie Hannon, Ruth Deakin-Crick, and Vicki Selby.

Special thanks to Ron Berger from Expeditionary Learning for comments, advice, and inspiration, and to the whole Expeditionary Learning team for their work in project-based learning, which has been a rich source of insight and ideas both to High Tech High, and to this guide.

Finally, thanks to everyone else who read drafts and gave advice. You know who you are.

Innovation Unit

We are the innovation unit for public services. As a not-for-profit social enterprise we're committed to using the power of innovation to solve social challenges. We have a strong track record of supporting leaders and organisations delivering public services to see and do things differently. They come to us with a problem and we empower them to achieve radically different solutions that offer better outcomes for lower costs.

Website: www.innovationunit.org
Twitter: @innovation_unit

Paul Hamlyn Foundation

Paul Hamlyn Foundation is an independent grant-making organisation. Founded by the publisher and philanthropist Paul Hamlyn (1926–2001), it operates three UK programmes – in the Arts, Education and Learning, and Social Justice – and a programme of support for NGOs in India.

The Foundation's mission is to help people to fulfil their potential and enjoy a better quality of life. The Education and Learning programme provides funds through an Open Grants scheme, open to eligible organisations at any time. The programme also develops and funds Special Initiatives – strategic, targeted interventions in specific areas of need – such as Learning Futures.

Website: www.phf.org.uk

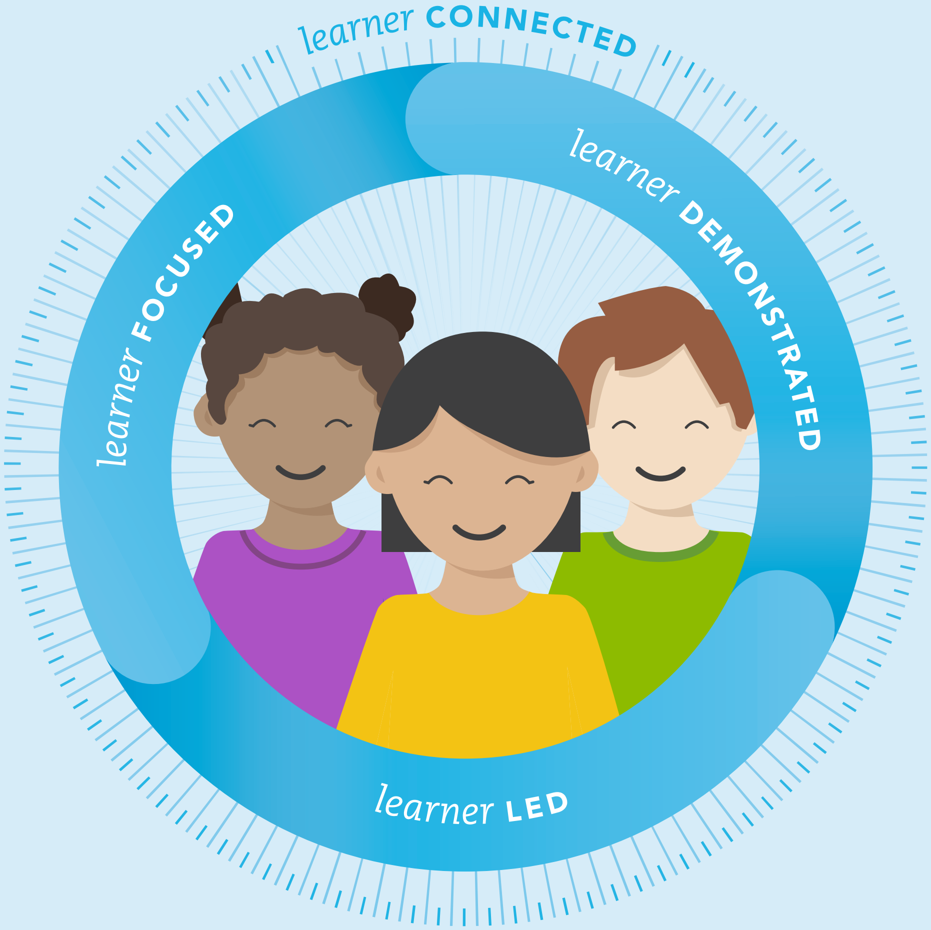
LEAP innovations

LEAP learning framework

for personalized learning

Spring 2017 Edition



Overview

What is personalized learning, and what does it look like in practice?

At LEAP Innovations, we've considered this question a great deal as we work with educators to innovate in their classrooms. What are the core components of a truly learner-centered approach, and how do these translate into strategies for creating this experience for learners?

Originally released in 2016, we developed the LEAP Learning Framework alongside teachers, school leaders, and other national experts in order to answer these questions, and to provide educators with a clear definition of personalized learning and the strategies to put it into practice.

A year later, we're excited to release our second edition. What's different? In this edition of the framework, we've include strategies for LEAP Learner Connected, which detail how learning can transcend the classroom in relevant and valued ways, connected to families, educators, communities and networks. To develop these strategies, we assembled a special working group of leading connected learning experts from across the country. You'll find their names in the *Acknowledgements* section of this document.

Included with the framework is a growing sample of strategies for each core component, designed for school-based educators, to help them create personalized learning experiences for their students. Also new in this edition, across all four core components, are examples for each strategy, making the shift to personalized learning more tangible and actionable for educators.

We have also continued our work on the LEAP Personalized Learning Surveys – for teachers and for students – to help measure the degree of personalization in the classroom, and how this changes over time. Both surveys were developed with the highest standards in partnership with American Institutes for Research, an independent behavioral and social science research and evaluation organization. Both were piloted with Chicago teachers and students, and were further informed by expert-teacher focus groups, as well as interviews with students and teachers to check for understanding and look for biases. These surveys are available as a resource to personalized learning classrooms and schools across the country. Already, more than 12,500 student surveys and 2,000 teacher surveys have been completed across the country.

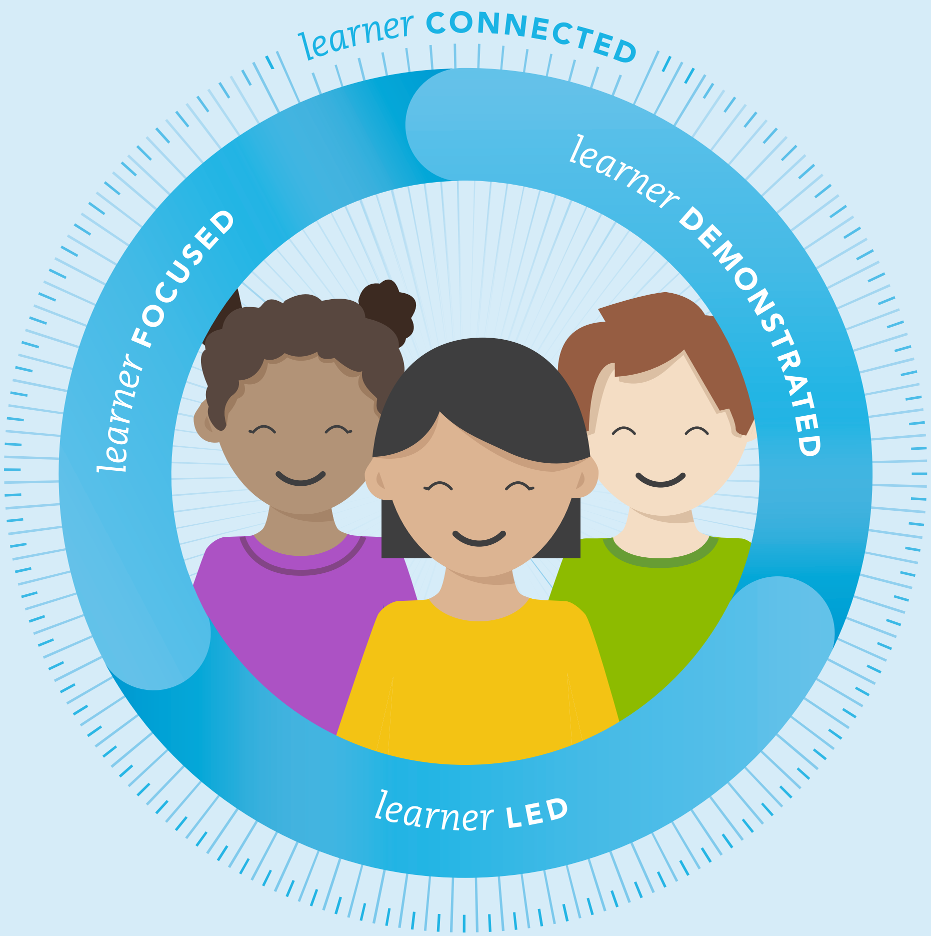
Using the data from these surveys, we have developed a set of national standards for personalized learning. These will help us further inform measurement of personalized learning, as well as capture and codify best practices for the field. By measuring teacher practice, student experience, and change over time using our survey and observation data, we'll be able to better identify indicators of personalization in a classroom. Using these indicators, we'll be able to create better causal connections between personalized learning practices and student outcomes, providing valuable data back to the field and the practitioners themselves on which practices can make the most difference.

Ultimately, we believe that personalized learning at scale can be the game-changer in helping all students reach their full potential. As we learn more, and the field of personalized learning continues to evolve, so will we. We welcome your feedback at hello@leapinnovations.org.

LEAPinnovations

LEAP learning framework

for personalized learning



LEARNER CONNECTED

Learning transcends location in relevant and valued ways, connected to families, educators, communities and networks

Learner Connected: Anytime, Anywhere and Socially Embedded
Learners collaborate with peers, family, educators, and others; cultivate meaningful relationships; advance personal opportunities through connections; engage in real-world experiences to develop academic knowledge, community engagement, workplace experience and global citizenship; and earn valued recognition for all demonstrated competencies (regardless of where and when it happens)

LEARNER FOCUSED

Empower learners to understand their needs, strengths, interests and approaches to learning

Learner Focused: Tailored Learning Experiences
Learners develop a deep understanding of needs, interests and strengths around academics, health & wellness, social-emotional development, culture & language, living situation, and cognitive skills; and they experience learning that is relevant, contextualized and designed for their individual needs, interests and strengths.

LEARNER DEMONSTRATED

Enable learners to progress at their own pace based on demonstrated competencies

Learner Demonstrated: Competency-Based Progression
Learners begin at a level appropriate to their prior knowledge and learning needs; engage in productive struggle; progress at a pace that fits their learning needs; demonstrate competency when ready; demonstrate evidence of learning in multiple ways; and receive recognition based on demonstrated competency, not seat time.

LEARNER LED

Entrust learners to take ownership of their learning

Learner Led: Learner Agency
Learners co-design their learning experiences; articulate their interests, strengths and needs; assess, monitor and reflect on their own progress; partner in setting their learning goals and plans; and advocate for support from teachers, peers, technology and other sources.

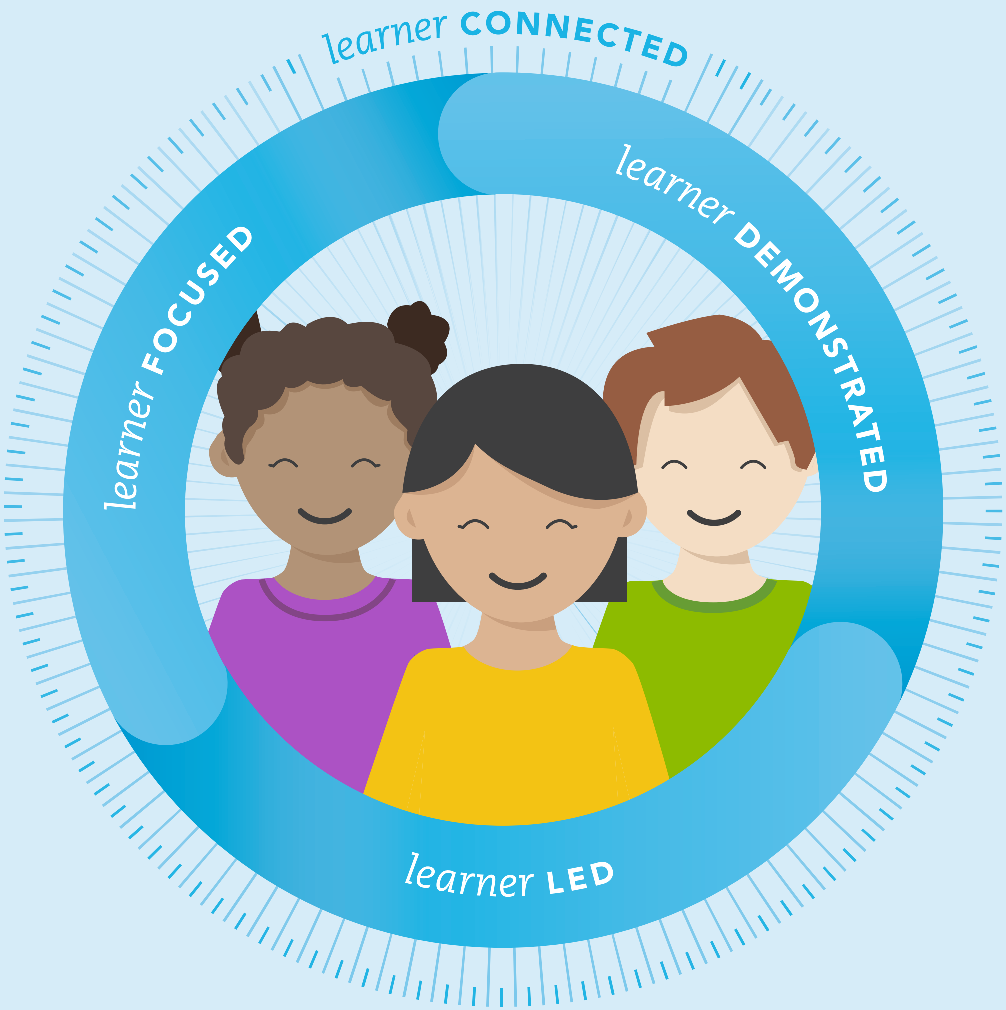
CORE COMPONENT

Learner Connected: Learning transcends location in relevant and valued ways, connected to families, educators, communities and networks

ELEMENTS *of* LEARNER CONNECTED

LEARNERS...

- Collaborate with peers, family, educators and others
- Cultivate meaningful relationships
- Advance personal opportunities through connections
- Engage in real-world experiences through multiple mediums to develop:
  - Academic skills & knowledge
  - Community & civic engagement
  - Workplace experience
  - Global citizenship
- Earn valued recognition for all demonstrated competencies (regardless of where and when it happens)



Strategies for being *Learner Connected*

CORE COMPONENT

Learner Connected: Learning transcends location in relevant and valued ways, connected to families, educators, communities and networks

ELEMENTS *of* LEARNER CONNECTED

- Collaborate with peers, family, educators and others
- Cultivate meaningful relationships
- Advance personal opportunities through connections
- Engage in real-world experiences to develop academic knowledge, community engagement, workplace experience and global citizenship
- Earn valued recognition for all demonstrated competencies (regardless of where and when it happens)

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN…

Collaborating with peers, family, educators and others?

STRATEGIES

Create projects and activities that require family/caregiver participation

Example: A teacher creates an at-home, place-based project in which the learner must collaborate with caregivers to identify an issue and design a solution.

Leverage internet-based tools that enable synchronous school-home sharing of learning, data and progress

Example: A teacher uses a digital ePortfolio platform with parent access to have learners capture their experiences, progress and performance on a daily basis to spark new conversations between home and school.

Work with parents/caregivers to ensure that the learner has the supports and opportunities needed for learning

Example: A teacher meets with parents a few weeks prior to school to discuss the learner's needs across all aspects of Learner Focused and collaborates with school staff and third-party organizations to connect the family to a custom suite of support for the learner.

Regularly re-sort teams based on diversity, choice and interests

Example: A teacher changes the grouping strategy for every project throughout the year to avoid unintentional tracking and increase how well learners know each other.

Set expectations and support for the development of "team" skills (e.g., negotiation, conflict resolution, giving and receiving feedback, and assertion)

Example: A teacher shares a formal rubric of team skills that teammates on a project then use to score each other for formative feedback.

Strategies for being *Learner Connected*

CORE COMPONENT

Learner Connected: Learning transcends location in relevant and valued ways, connected to families, educators, communities and networks

ELEMENTS *of* LEARNER CONNECTED

- Collaborate with peers, family, educators and others
- Cultivate meaningful relationships
- Advance personal opportunities through connections
- Engage in real-world experiences to develop academic knowledge, community engagement, workplace experience and global citizenship
- Earn valued recognition for all demonstrated competencies (regardless of where and when it happens)

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN…

Cultivating meaningful relationships?

STRATEGIES

Establish a daily journal or reflective practice that is shared with parents and teachers
Example: A teacher has all learners complete a daily reflection that is shared through an online platform with his/her family and teacher.

Develop planning templates for learner, family and community-initiated experiences that specify how to interact with other networks
Example: A teacher creates a guided template to scaffold the process of reaching out to family members and contacts for support on a project.

Hold community meetings across the school to celebrate and share
Example: The art department runs monthly gallery walks for the entire school to see each other's work and provide feedback to each other.

Create zones of safety that provide scaffolding for pursuing new relationships and opportunities
Example: A teacher mentors a learner through the process of contacting a company for an internship and pursuing the opportunity, offering constructive feedback along the way.

Create safe communities of practice for peers dealing with the same issues to provide support to one another
Example: A teacher creates a community of practice consisting of learners who have younger siblings for them to discuss and share experiences as older brothers and sisters.

Strategies for being *Learner Connected*

CORE COMPONENT
Learner Connected: Learning transcends location in relevant and valued ways, connected to families, educators, communities and networks

ELEMENTS *of* LEARNER CONNECTED

- Collaborate with peers, family, educators and others
- Cultivate meaningful relationships
- Advance personal opportunities through connections
- Engage in real-world experiences to develop academic knowledge, community engagement, workplace experience and global citizenship
- Earn valued recognition for all demonstrated competencies (regardless of where and when it happens)

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN…

Advancing personal opportunities through connections?

STRATEGIES

Provide an online database of sites and partners to learners to enable self-discovery and proactive habits
Example: Teachers in the department actively curate a list of local and national partners aligned with their curriculum that is shared with learners.

Develop rubrics to guide habits and reflection of social intelligence
Example: A team of teachers co-develop a rubric for expected social and empathy skills that learners are assessed and coached on regularly.

Connect learners to social networks of peers and others with shared interest (affinity groups)
Example: A teacher connects an interested learner to a trusted neighborhood group focused on urban planning.

Model skills to locate and manage social connections and proper responses in the professional world
Example: A teacher incorporates lessons of professional networking to learners prior to the start of a cross-school collaboration project.

Integrate interviews and other workplace habits and protocols into regular class habits
Example: A teacher designs a team-based project and has learners interview to be part of different teams, versus being automatically assigned.

Strategies for being *Learner Connected*

CORE COMPONENT

Learner Connected: Learning transcends location in relevant and valued ways, connected to families, educators, communities and networks

ELEMENTS *of* LEARNER CONNECTED

- Collaborate with peers, family, educators and others
- Cultivate meaningful relationships
- Advance personal opportunities through connections
- Engage in real-world experiences to develop academic knowledge, community engagement, workplace experience and global citizenship
- Earn valued recognition for all demonstrated competencies (regardless of where and when it happens)

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Engaging in real-world experiences to develop academic knowledge, community engagement, workplace experience and global citizenship?

STRATEGIES

Establish public blogs for sharing of learner work to an expanded audience
Example: A teacher creates and co-manages a single classroom blog that showcases outstanding learner work with parents and the public.

Help learners plan experiences that reflect and expand their personal identity, values and family backgrounds
Example: A teacher helps a student who is a recent immigrant to get involved with different cultural activities around the community.

Create forums for public performances and authentic final products
Example: Teachers guide learners through "problem-based" projects that produce solutions for needs in their neighborhood.

Include working professionals as advisors or establish an advisory committee on the overall curriculum
Example: Teachers partner with parents that are healthcare professionals to inform their STEM curriculum.

Co-design opportunities with learners for advocacy and independent study in the workplace, community and online
Example: Teachers partner with advocacy groups and connect learners with those that match their interests.

Strategies for being *Learner Connected*

CORE COMPONENT

Learner Connected: Learning transcends location in relevant and valued ways, connected to families, educators, communities and networks

ELEMENTS *of* LEARNER CONNECTED

- Collaborate with peers, family, educators and others
- Cultivate meaningful relationships
- Advance personal opportunities through connections
- Engage in real-world experiences to develop academic knowledge, community engagement, workplace experience, and global citizenship
- Earn valued recognition for all demonstrated competencies (regardless of where and when it happens)

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN…

Earning valued recognition for all demonstrated competencies (regardless of where and when it happens)?

STRATEGIES

Hold public, community-wide gallery walks or themed expos for authentic presentation of work beyond the classroom
Example: At the end of each semester, a summit is held at the local town hall for learners to present developed, new business ideas to local leaders and the public.

Leverage an online portfolio system for formalized documentation of learners' artifacts and experiences
Example: Teachers across the grade use an online ePortfolio system to have learners capture all work and share it across teachers and with their parents.

Expand dual-enrollment and credit programs with partner institutions and third-party organizations
Example: Teachers formalize dual-credit options with the local community college and professional organizations to help students build their college transcript.

Work directly with outside mentors and experts to identify measurable criteria and how it can be demonstrated
Example: Teachers converse with engineers from a local firm/factory to identify key skills and co-develop how they can be appropriately assessed at the fifth-grade level.

Identify target skills and how gains will be validated
Example: A team of grade-level teachers co-develops a scope of target skills and protocols for assessment and validation during the year.

CORE COMPONENT

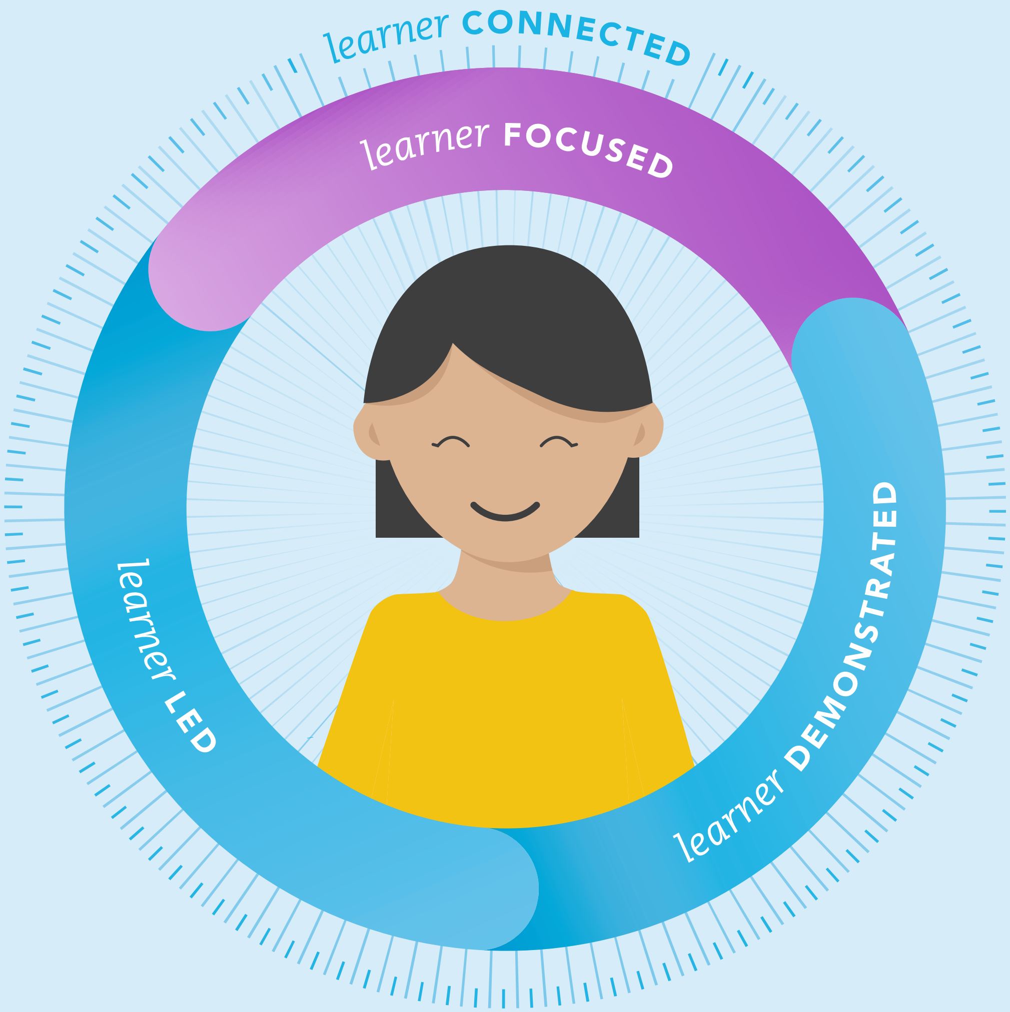
Learner Focused: Empower learners to understand their needs, strengths, interests and approaches to learning

ELEMENTS *of* LEARNER FOCUSED

LEARNERS…

- Develop a deep understanding of needs, interests and strengths around:
    - Academics
    - Health & wellness
    - Social-emotional development
    - Culture & language
    - Living situation
    - Cognitive skills

- Experience learning that is relevant, contextualized and designed for their individual needs, interests and strengths



Strategies for being *Learner Focused*

CORE COMPONENT

Learner Focused: Empower learners to understand their needs, strengths, interests and approaches to learning

ELEMENTS *of* LEARNER FOCUSED

- Develop a deep understanding of needs, interests and strengths around: academics, health & wellness, social-emotional development, culture & language, living situation and cognitive skills
- Experience learning that is relevant, contextualized and designed for their individual needs, interests and strengths

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Developing a deep understanding of needs, interests and strengths?

STRATEGIES

Co-design a milestone map with learners on their past experiences and future goals/dreams
Example: A teacher talks one-on-one with each incoming learner about his/her previous experiences in school and influential moments, and then co-author a shared plan for future goals.

Engage in cultural competence training and actively seek to learn more about the cultures of their learners
Example: A teacher serving a primarily Puerto Rican population actively researches major holidays and traditions and engages with learners and their families to better understand the nuances and values of the cultures.

Review available information regarding learners' prior academic performance (e.g. testing, work samples and portfolios)
Example: A teacher reviews a historical portfolio of a learner's prior performance that includes sample work and areas of success or struggle, and reviews it with the learner to confirm the findings.

Conduct observations and assessments to confirm learners' current academic level and their response to varying levels of academic challenge
Example: A learner takes a pre-assessment before starting a new topic in school, so both the learner and the teacher can see what the learner already knows and what he/she still needs to learn.

Meet regularly with key supporters (parents, teachers, extracurricular staff, therapists, etc.) to inform the strategy for the learner's development
Example: Learner-led conferences are held prior to the start of the new school year with parents and others to discuss the learner's needs and co-develop a support plan that is revisited throughout the year.

Strategies for being *Learner Focused*

CORE COMPONENT

Learner Focused: Empower learners to understand their needs, strengths, interests and approaches to learning

ELEMENTS *of* LEARNER FOCUSED

- Develop a deep understanding of needs, interests and strengths around: academics, health & wellness, social-emotional development, culture & language, living situation and cognitive skills
- Experience learning that is relevant, contextualized and designed for their individual needs, interests and strengths

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Experiencing learning that is relevant, contextualized and designed for their individual needs, interests and strengths?

STRATEGIES

Redesign curricula and learning experiences to reflect the learners' cultures and expand their self-awareness
Example: A teacher integrates works of literature that feature protagonists of the same culture or background as different learners in the class.

Create flexible learning environments to adapt to key needs (time, space, content)
Example: A team of teachers removes the doors between their classrooms and changes the furniture layout to create different learning "nooks" and dynamic groupings based on learner needs.

Partner with learners to explore ways to modify or vary content to align with their interests, strengths and needs
Example: A teacher works with her English language learners to incorporate more drawing and sketching of ideas in their science class.

Offer flexible modalities, groupings and times/places for learning to help meet individual learner needs, strengths and interests while balancing these individual needs with the needs of the class community
Example: A teacher has several "centers" set up in his classroom for learners to learn about reducing fractions. They can watch a video, practice with an online program, use manipulatives, work with a partner on a worksheet or do a mini-lesson with a teacher.

Design lessons and information using the principles of Universal Design for Learning, including multiple means of representation to support learners with limited working memory skills
Example: A teacher redesigns content in an English lesson to reduce the number of concepts a learner reads at a single time and shows the target concepts in multiple ways.

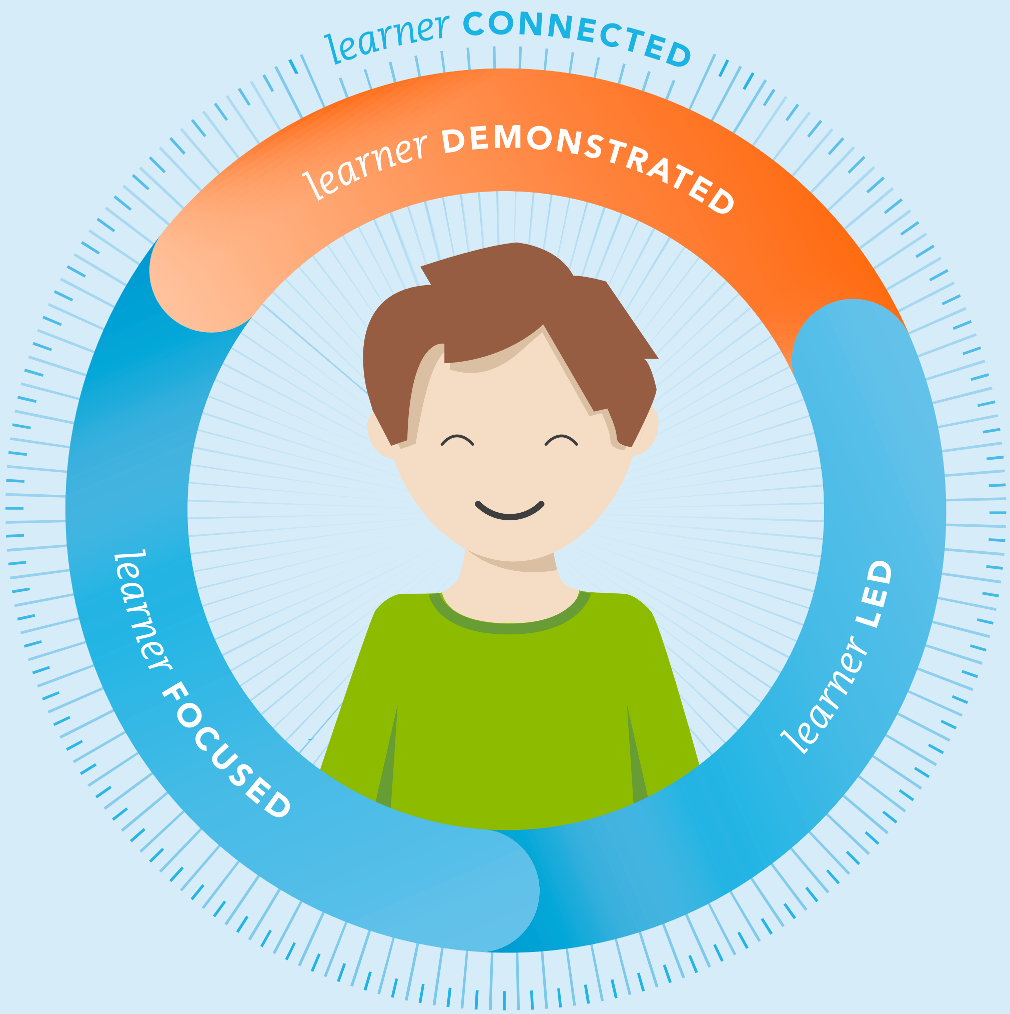
CORE COMPONENT

Learner Demonstrated: Enable learners to progress at their own pace based on demonstrated competencies

ELEMENTS *of* LEARNER DEMONSTRATED

LEARNERS...

- Begin at a level appropriate to their prior knowledge and learning needs
- Engage in productive struggle
- Progress at a pace that fits their learning needs
- Demonstrate competency when ready
- Demonstrate evidence of learning in multiple ways
- Receive recognition based on demonstrated competency, not seat time



Strategies for being *Learner Demonstrated*

CORE COMPONENT

Learner Demonstrated: Enable learners to progress at their own pace based on demonstrated competencies

ELEMENTS *of* LEARNER DEMONSTRATED

- Begin at a level appropriate to their prior knowledge and learning needs
- Engage in productive struggle
- Progress at a pace that fits their learning needs
- Demonstrate competency when ready
- Demonstrate evidence of learning in multiple ways
- Receive recognition based on demonstrated competency, not seat time

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Beginning at a level appropriate to their prior knowledge and learning needs?

STRATEGIES

Use all available data to determine where a learner falls on the appropriate learning progression for major and sub skills
Example: Teacher and learners regularly review data to set goals and adjust learning and instruction.

Partner with learners to identify the most suitable learning format for their current academic level (e.g., class, groupings, activities, software)
Example: A teacher has regular check-ins with individual learners after learning activities to discuss how successfully they learned something, and what that says for the types of learning activities they should focus on moving forward.

Design learning experiences that explicitly connect new content to prior knowledge and skills
Example: Using a learner profile, a teacher intentionally designs mini-lessons to build upon her learners' past experiences and strengths.

Articulate short- and long-term learning expectations that are appropriate for learners' current academic levels
Example: A teacher sets goals with learners on which steps of a project learners will complete in a week.

Assess learners during the first parts of any lesson/unit to determine the starting points on their learning paths, then continue with dynamic, fluid grouping changes to prevent "tracking"
Example: A teacher starts each class with an entrance ticket to check for understanding, and then creates dynamic groups for mini-lessons or independent work that learners can opt into based on their needs.

Strategies for being *Learner Demonstrated*

CORE COMPONENT

Learner Demonstrated: Enable learners to progress at their own pace based on demonstrated competencies

ELEMENTS *of* LEARNER DEMONSTRATED

- Begin at a level appropriate to their prior knowledge and learning needs
- **Engage in productive struggle**
- Progress at a pace that fits their learning needs
- Demonstrate competency when ready
- Demonstrate evidence of learning in multiple ways
- Receive recognition based on demonstrated competency, not seat time

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Engaging in productive struggle?

STRATEGIES

Provide feedback that is objective and non-judgmental to reinforce a learner's sense of control for improving his/her mastery

Example: A teacher eliminates all language from his feedback that denotes fixed conditions such as "you're smart" or "you're talented."

Encourage learners to experiment and try multiple strategies to solve problems

Example: A teacher gives an assignment where learners are assessed not only on successfully solving a problem, but by how many ways they can think of to solve the problem.

Create rigorous learning experiences that involve multiple points of "failure" and require perseverance by learners

Example: A teacher has a board in her room where learners publicly share examples of times they have "failed" and what they learned from the experience.

Encourage learners to reflect and report on effort and strategies as often as reporting on results

Example: A teacher ends every class by having learners publicly share examples of peers putting forth great effort or using successful strategies.

Provide flexible time to allow learners to struggle/work on a problem or project for an extended period of time

Example: A teacher implements a "workshop" block of time each day for learners to work on a range of projects and tasks at their own pace, but with set deadlines to maintain rigorous expectations. It allows learners to spend more time on challenging content and accelerate through easier content based on their skills.

Strategies for being *Learner Demonstrated*

CORE COMPONENT

Learner Demonstrated: Enable learners to progress at their own pace based on demonstrated competencies

ELEMENTS *of* LEARNER DEMONSTRATED

- Begin at a level appropriate to their prior knowledge and learning needs
- Engage in productive struggle
- Progress at a pace that fits their learning needs
- Demonstrate competency when ready
- Demonstrate evidence of learning in multiple ways
- Receive recognition based on demonstrated competency, not seat time

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Progressing at a pace that fits their learning needs?

STRATEGIES

Create learning menus and vertical alignment of activities

Example: A teacher creates a document listing out multiple activities and sources of information for learning about and practicing a specific learning target. Students then choose which resources to use to reach the given target.

Use formative assessment and learner feedback to enable advancement if a learner has mastered the objective needed to move onto the next objective

Example: Students are allowed to skip a unit test and move on to the next topic if they have shown mastery of the content through earlier quizzes and assignments.

Allow learners to move through content at varied rates regardless of their starting level

Example: A teacher has designated "assessment blocks" during the week when students may take mastery assessments on a topic when they feel ready.

Provide a daily workflow of formative assessment, intervention and feedback to learners

Example: A teacher establishes a transparent system using an online learning management system (LMS) for learners to take micro-assessments, receive or seek support based on results, and get direct feedback from a teacher or peer.

Clarify deadlines about the pace of progress and what happens when learners take a longer or shorter time than peers

Example: As students work through content at their own pace, the teacher provides a suggested pace guide which explains to students by when they should master different concepts. It also explains the different supports that will be given to students who are not keeping up with the pace guide.

Strategies for being *Learner Demonstrated*

CORE COMPONENT

Learner Demonstrated: Enable learners to progress at their own pace based on demonstrated competencies

ELEMENTS *of* LEARNER DEMONSTRATED

- Begin at a level appropriate to their prior knowledge and learning needs
- Engage in productive struggle
- Progress at a pace that fits their learning needs
- Demonstrate competency when ready
- Demonstrate evidence of learning in multiple ways
- Receive recognition based on demonstrated competency, not seat time

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN…

Demonstrating competency when ready?

STRATEGIES

Offer learners opportunities to gauge and discuss their readiness for demonstrating competency
Example: A teacher offers learners "Checks for Understanding" throughout a unit, where learners can self-assess on how much they understand so far. They then discuss with a partner what they know and what they need to go back and learn some more.

Allow learners flexible, ongoing and repeated opportunities to demonstrate competency
Example: A teacher creates a system so if learners don't "pass" on an attempt, they may go back, learn and practice the content in different ways, and attempt the assessment again when ready.

Provide learners with on-demand access to assessments
Example: A teacher "flips" the classroom and learners are given assessment options to choose from when they feel ready.

Coach learners to self-reflect on their level of competency
Example: A teacher has his learners rate their perceived level of mastery in their journals on a daily basis to build self-awareness.

Model strategies for learners to confirm their level of competency prior to formal assessments
Example: A teacher creates a system of "peer-teacher-pretest" in which learners teach another learner a topic and determine, through that experience, if they are ready for a formal assessment.

Strategies for being *Learner Demonstrated*

CORE COMPONENT

Learner Demonstrated: Enable learners to progress at their own pace based on demonstrated competencies

ELEMENTS *of* LEARNER DEMONSTRATED

- Begin at a level appropriate to their prior knowledge and learning needs
- Engage in productive struggle
- Progress at a pace that fits their learning needs
- Demonstrate competency when ready
- Demonstrate evidence of learning in multiple ways
- Receive recognition based on demonstrated competency, not seat time

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Demonstrating evidence of learning in multiple ways?

STRATEGIES

Provide learners with access to multiple assessment options
Example: A teacher provides learners a menu of options for how to show their understanding of a concept.

Support learners to co-create the rubric based on the learning objective(s)
Example: A teacher and a subgroup of learners co-create a rubric that will be used for assessing their project.

Co-design with learners multiple ways for demonstrating competency with standards
Example: A teacher works with their class to develop a menu of options for how to show understanding at the end of a unit (make a movie, draw a diagram, give a presentation, etc.).

Leverage digital platforms and multimedia to capture multiple forms of learning and build an ePortfolio
Example: A teaching team shifts to an ePortfolio platform to capture all work on a daily basis and provide multiple means of documenting and showing learning progress.

Partner with learners to select the content, product or process they will use to demonstrate proficiency, as well as devise the methods that will be used to show evidence of their learning
Example: A teacher and learner work together to develop learning plans, including goals, strategies for learning, tools needed and how learning will be demonstrated.

Strategies for being *Learner Demonstrated*

CORE COMPONENT

Learner Demonstrated: Enable learners to progress at their own pace based on demonstrated competencies

ELEMENTS *of* LEARNER DEMONSTRATED

- Begin at a level appropriate to their prior knowledge and learning needs
- Engage in productive struggle
- Progress at a pace that fits their learning needs
- Demonstrate competency when ready
- Demonstrate evidence of learning in multiple ways
- Receive recognition based on demonstrated competency, not seat time

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Receiving recognition based on demonstrated competency (not seat time)?

STRATEGIES

Identify which competencies need to be met to obtain credit, advance and/or receive other recognitions for learning

Example: A team of teachers establishes a competency map across levels that enables assessments to be taken regardless of perceived "grade level."

Ensure that learners are clear about expectations and requirements for recognition

Example: The team of teachers adjusts their report card to be proficiency based and hold regular mini-conferences with learners to check their understanding of their progress.

Create an organized and accessible system for tracking evidence of learning (e.g., performance, assessment, credits and competency progression)

Example: A school team adopts a digital portfolio platform that is accessible by parents, learners and teachers and provides transparent issuing of recognition for work.

Change classroom policies for learning recognition and progression that take into account varying speeds of learner competency

Example: A teacher removes the weekly summative assessment on the same standard for all learners, and she implements a new system with flexibility – but with set expectations – around when learners demonstrate competency.

Provide learners with copies of standards/objectives to keep in their digital data binder. Learners can record when each standard/objective is taught, learned, mastered, etc.

Example: A teacher models for and supports science learners to design and develop their digital data binder over time.

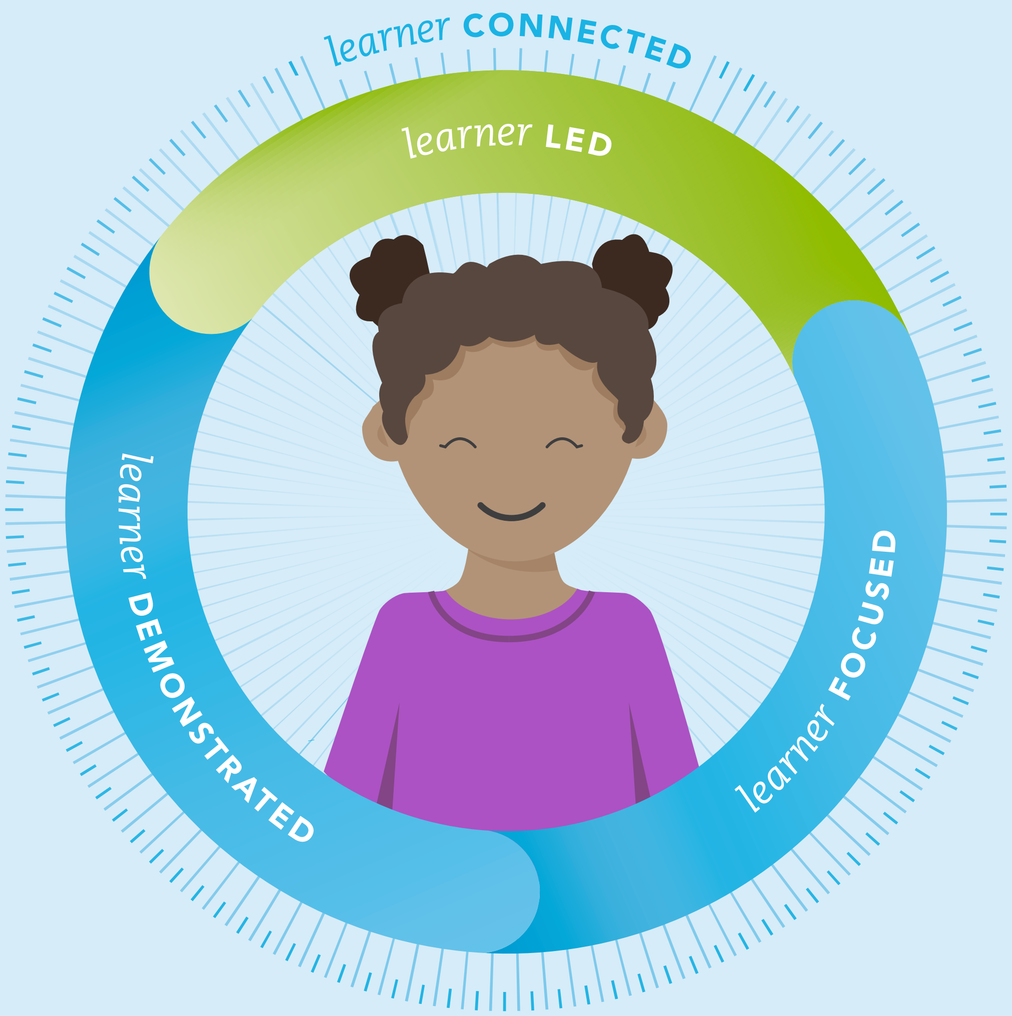
CORE COMPONENT

Learner Led: Entrust learners to take ownership of their learning

ELEMENTS *of* LEARNER LED

LEARNERS...

- Co-design their learning experiences
- Articulate their interests, strengths and needs
- Assess, monitor and reflect on their own progress
- Partner in setting their learning goals and plans
- Advocate for needed support from teachers, peers, technology and other sources



Strategies for being *Learner Led*

CORE COMPONENT

Learner Led: Entrust learners to take ownership of their learning

ELEMENTS *of* LEARNER LED

- Co-design their learning experiences
- Articulate their interests, strengths and needs
- Assess, monitor and reflect on their own progress
- Partner in setting their learning goals and plans
- Advocate for support from teachers, peers, technology and other sources

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN…

Co-designing their learning experiences?

STRATEGIES

Collaborate with learners to develop standards-aligned activities to meet their learning goals
Example: At the start of the week, learners complete a shared online document that outlines their proposed activities for the week. The teacher reviews the plans and provides guidance as necessary.

Allow learners to choose their best learning place and medium to work on their goal
Example: During an ELA block, two teachers open up their doors and create one quiet and one "active conversation" room that students can choose between for their work.

Enable learners to choose with whom to work based on goals and needed expertise
Example: A class creates a peer working group and identifies adult mentors for their upcoming projects.

Support learners to use their reflections in the development of their next learning goal
Example: A teacher holds one-on-one conferences with learners every two weeks to review their reflections on their progress and co-design their next learning goals.

Empower learners to choose their own approach to learning a new concept
Example: A teacher empowers her learners to choose between 10-blocks, tallies or other mediums for learners to practice their math.

Strategies for being *Learner Led*

CORE COMPONENT
Learner Led: Entrust learners to take ownership of their learning

ELEMENTS *of* LEARNER LED

- Co-design their learning experiences
- Articulate their interests, strengths and needs
- Assess, monitor and reflect on their own progress
- Partner in setting their learning goals and plans
- Advocate for support from teachers, peers, technology and other sources

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Articulating their interests, strengths and needs?

STRATEGIES

Encourage and model articulation of interests/needs/strengths to inform future learning
Example: A teacher provides his learners with a "Reflection Binder." At the end of each day, they reflect on their work, identifying what worked well for them, what they struggled with and what support they need.

Offer tools to help learners identify their own interests, strengths, needs and preferences (e. g., interest inventories, checklists, reflection exercises)
Example: Over the course of six weeks (beginning at the start of the school year or when a new learner arrives), teachers and learners complete several inventories to identify learning drivers and gaps.

Establish a culture that encourages learners to actively share their feelings and experiences while learning
Example: A teacher creates a system of small book clubs and public share-outs during independent reading time that helps the community of learners share their excitement for books.

Provide learners with a systematic method (e.g., learner profiles) for documenting learning needs and preferences
Example: A teacher uses a platform for learners to regularly update their interests, needs and strengths in focus areas to inform conferences, interventions and/or upcoming lesson plan design.

Guide learners to generate questions that lead to further curiosity and/or self-directed learning
Example: A teacher does a KWI (Know, Wonder, Interest) chart to have learners share what they know, wonder and are interested in regarding a theme.

Strategies for being *Learner Led*

CORE COMPONENT

Learner Led: Entrust learners to take ownership of their learning

ELEMENTS *of* LEARNER LED

- Co-design their learning experiences
- Articulate their interests, strengths and needs
- Assess, monitor and reflect on their own progress
- Partner in setting their learning goals and plans
- Advocate for support from teachers, peers, technology and other sources

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Assessing, monitoring and reflecting on their own progress?

STRATEGIES

Guide learners in on-going reflection on learning outcomes, products and processes
Example: A teacher provides time at the end of every rotation for learners to complete a template for reflection on what they learned and what they find challenging.

Provide learners with ongoing access to their data to help identify academic and non-academic needs
Example: A teacher has learners track their growth in skills (via assessment scores) in a binder, so they can see which of their skills are strong and which skills they need to work on.

Partner with learners to reflect upon and document their own learning needs and progress
Example: A teacher helps learners create a system to track their progress in an edtech product and reflect on their progress.

Model examining data, discussing progress and identifying challenges and needed supports
Example: A teacher meets with a learner and models how to look at the learner's data to identify areas of progress and areas where the learner needs support.

Help learners reflect upon their learning strategies and efforts, as well as the result of those strategies and efforts in regard to meeting desired learning goals
Example: A teacher helps a learner reflect on her use of a reading strategy, and then the learner chooses to try a new strategy from a given list.

Strategies for being *Learner Led*

CORE COMPONENT

Learner Led: Entrust learners to take ownership of their learning

ELEMENTS *of* LEARNER LED

- Co-design their learning experiences
- Articulate their interests, strengths and needs
- Assess, monitor and reflect on their own progress
- Partner in setting their learning goals and plans
- Advocate for support from teachers, peers, technology and other sources

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN...

Partnering in setting their learning goals and plans?

STRATEGIES

Collaborate with learners to set specific and challenging short-term goals and develop learning plans
Example: An advisory teacher has learners craft a daily goal at the start of each day that is reviewed among their peers at the end of the day.

Support learners to imagine a desired future and then think through what challenges they will need to overcome to attain it
Example: A teaching team has learners complete a WOOP (Wish, Outcome, Obstacles, Plan) template at the start of each month.

Offer learners an organized approach to outline and document their learning plan (e.g., template, rubric)
Example: A teacher provides learners with a template to plan and track their learning activities for the week.

Partner with learners to establish a timeline and a plan for monitoring progress in meeting goals
Example: A teacher meets with a learner to set dates on which the learner will finish key steps towards a long-term project. They also include days that she will get feedback from a peer or teacher.

Utilize mentor conferences to review progress and determine next steps
Example: A classroom has a system of "learning buddies," or peers that regularly check in with each other on goals and learning plans for reading.

Strategies for being *Learner Led*

CORE COMPONENT

Learner Led: Entrust learners to take ownership of their learning

ELEMENTS *of* LEARNER LED

- Co-design their learning experiences
- Articulate their interests, strengths and needs
- Assess, monitor and reflect on their own progress
- Partner in setting their learning goals and plans
- Advocate for support from teachers, peers, technology and other sources

HOW MIGHT EDUCATORS SUPPORT LEARNERS IN…

Advocating for support from teachers, peers, technology and other sources?

STRATEGIES

Coach and model for learners how to identify and advocate for their needs according to degrees of urgency
Example: A teacher works with his class to create anchor charts that give suggestions for how learners can know if they need support and provides prompts for how to ask for help.

Actively encourage learners to independently problem-solve by seeking help from peers, technology and other sources
Example: A teacher establishes a classroom culture of "Three Before Me," in which learners must seek help from three other sources before consulting the teacher.

Establish routines for regular learner-led conferences
Example: A teacher sets up a rotation of short, five-minute check-ins with learners throughout the week for them to vocalize their progress and needed supports. Experienced learners teach others how to be more effective in learner-led conferences.

Actively nurture a class culture of self and team advocacy
Example: A teacher guides learners to reflect on their rights and identify barriers to their learning. Learners then work individually or as a collective group to advocate to the proper authorities for changes or expanded privileges.

Provide a system for learners to provide their status and request support
Example: A teacher gives each learner a popsicle stick and flag to decorate. When the learner needs assistance, he/she places it in the "up" position to notify the teacher and peers that help is needed.

Academic Mindsets as a Critical Component of Deeper Learning

April 2013

Camille A. Farrington

University of Chicago

Consortium on Chicago School Research

A White Paper prepared for the William and Flora Hewlett Foundation

The William and Flora Hewlett Foundation's Deeper Learning Framework

In 2010, the William and Flora Hewlett Foundation's Education Program announced its strategic focus centered on "deeper learning." The Foundation's Board of Directors has made clear its commitment to supporting an approach to K-12 and community college education in the United States to prepare students for a rapidly changing world, with the ultimate goal of increasing economic opportunity and civic engagement, particularly for children and youth in high-poverty communities. According to the Education Program's strategic plan, reaching this goal requires "improving what students learn, how they learn it, and how they demonstrate their knowledge."[1] The Foundation asserts that American public schools must significantly "shift course" in their approach to teaching, learning, and assessment to ensure that students develop the skills, knowledge, and competencies they will need to meet the quickly evolving demands of life, work, and global citizenship in the 21st century. The Hewlett Foundation set its strategic priorities to promote these shifts in schooling practices – to "provide all students with access to rigorous, relevant, and innovative educational opportunities"[2] – so that every young person in the United States would graduate from high school well-prepared to actively engage in the world.

To meet its ambitious goals and guide funding in this area, the Hewlett Foundation developed a framework articulating the components of deeper learning, drawing on current research and expert opinion by commissioning research briefs and interviewing leading thinkers in education, business, and public policy. The deeper learning framework identifies key content knowledge, academic skills, and learning competencies that should be the products of any child's K-16 education. The original framework included five components:

- master core academic content through
- critical thinking and complex problem solving,
- working collaboratively
- communicating effectively, and
- learning how to learn.

Students who developed these competencies over the course of their elementary, secondary, and postsecondary schooling would be able to productively engage in work and civic life. The deeper learning framework was intended to provide educators, school administrators, reformers, and policymakers with clear guideposts for the goals of a K-16 education.

The Hewlett Foundation set a high bar for the competencies it included in the deeper learning framework. The core criteria for inclusion were that competencies must be *measurable, teachable,* and *evidence based.* The Foundation recognized that measures of important competencies may still be in their infancy in some cases, but it chose to only include competencies that could be clearly conceptualized and for which measures existed or were being developed. The deeper learning framework also included only competencies which could be taught and learned, rather than qualities understood to be innate or immutable. Finally, the Foundation only included competencies for which there was reasonably strong evidence of their relationship to positive life outcomes, particularly in relation to economic opportunity and civic engagement.

For the Foundation to make wise, targeted investments that yield desired results, the components of deeper learning must be clearly articulated and the guiding framework must accurately reflect the best understanding to date of how and why learning happens, as well as the instructional, psychological, and material conditions that support deeper learning. To that end, the Hewlett Foundation recently announced the addition of a sixth component in its deeper learning framework: "Develop academic mindsets." This competency meets the Foundation's core criteria of being measurable, teachable, and evidence-based, and adds a critical component to the overall deeper learning framework. Drawing upon ongoing research activity, this paper lays out the rationale for and evidence supporting the inclusion of academic mindsets as an essential part of deeper learning.

Academic Mindsets as Motivational Components of Deeper Learning

The original components of the deeper learning framework represent important processes and products of deeper learning instructional practices. What was missing from the framework, however, were the motivational components that influence a student's engagement in learning. Why and under what conditions might students choose to employ problem-solving skills or engage in collaborative work to meet a learning goal? What motivates students to expend the energy to master core academic content? In essence, what would be the energy source that could fuel students' engagement in deeper learning activities? Academic mindsets are "the psycho-social attitudes or beliefs one has about oneself in relation to academic work,"[3] and these attitudes and beliefs are often what compel students to engage in learning – or not. As psychology researchers Carol Dweck, Gregory Walton, and Geoffrey Cohen put it, "students need to think of themselves and school in certain ways in order to want to learn and in order to learn successfully."[4]

The inclusion of academic mindsets in the deeper learning framework puts due emphasis on a crucial set of learning variables. First, positive academic mindsets are associated with the persistent academic behaviors that lead to learning. Recent research reviews by the National Research Council, the University of Chicago Consortium on Chicago School Research (CCSR), and the John W. Gardner Center at Stanford University all concluded that students' psycho-social beliefs and attitudes have a profound effect on their engagement and learning in school.[5] In this way, academic mindsets can be seen as precursors to or motivators for participation in deeper learning instructional activities. Second, academic mindsets are also likely products of deeper learning experiences. Ideally, over the course of students' K-16 school experience, children and youth will come to see themselves as competent, productive people able to contribute meaningfully to their communities and the larger world. As students engage in deeper learning experiences and develop the other five deeper learning competencies, another likely outcome is the development of an efficacious sense of self, a valuing of education, and a positive disposition toward further learning. Academic mindsets are therefore both motivators for and outcomes of engagement in deeper learning experiences. Below are brief summaries of the research on academic mindsets that support its inclusion as a core component of deeper learning.

Academic Mindsets as Drivers of Academic Perseverance and Academic Behaviors Essential for Deeper Learning Outcomes

In June 2012, our research team at CCSR published a critical literature review on "noncognitive factors" in student learning – meaning the skills, attitudes, beliefs, and strategies that play a role in school performance but which are not directly measured by most "cognitive" academic tests. We focused on academic performance, as measured by course grades and GPA, as our outcome of interest because grades are strong predictors of future educational attainment,[6] which in turn strongly predicts adult earnings, civic engagement, and a wealth of other positive adult outcomes.[7] In our review, we found that *Academic Behaviors* (attending class, doing homework, engaging in classroom activities, studying) have the most proximal relationship to grades. The most direct way to improve students' academic performance is to improve their academic behaviors (i.e., increasing their attendance, increasing the amount they study, increasing the number of assignments they complete, and/or improving their class participation). Also important are the quality, intensity, and duration of effort invested in these academic behaviors, a factor we referred to as *Academic Perseverance* (i.e., tenacity or grit). The more perseverance a student exhibits, the more likely he or she is to attend class even when other things interfere, to complete homework even when it is challenging, and to continue pursuing academic goals even when setbacks or obstacles get in the way.

The research evidence suggests that one of the best levers for increasing students' perseverance and improving their academic behaviors is by supporting the development of *Academic Mindsets*. Students with positive academic mindsets work harder, engage in more productive academic behaviors, and persevere to overcome obstacles to success. Conversely, students with negative mindsets about school or about themselves as learners are likely to withdraw from the behaviors essential for academic success and to give up easily when they encounter setbacks or difficulty.[8] Intervention research has demonstrated that academic mindsets are malleable factors that can be changed intentionally through contextual or instructional variables.[9] This suggests that the most fruitful way to improve academic perseverance and to help students build the other competencies associated with deeper learning is to attend to the development of positive academic mindsets.

The CCSR report identified four key mindsets, each of which is independently associated with increased perseverance, better academic behaviors, and higher grades. These mindsets draw directly from seminal research on human motivation and basic psychological needs. In our review, we expressed these four mindsets in the first person from the point of view of the learner:

1) *I belong in this academic community*. Mazlow noted long ago that one of our basic human needs is for "belongingness" and "a place in [one's] group."[10] In an academic setting, this refers to students' sense of connectedness to peers and adults in their classes and their school. Belonging is particularly important in an educational context because human learning is socially constructed: we come to understand the world through our interaction with others.[11] Feeling part of a community of learners is a powerful motivator. Students with a strong sense of academic belonging see themselves as members of not only a social community, but an intellectual community. They tend to interpret setbacks and difficulty in their studies as a normal part of learning, rather than as signs that they are "out of place" in a particular academic environment.[12] Conversely, students who do not feel a sense of belonging in school tend to withdraw from interaction with their peers; to the extent that they associate academic work with their sense of alienation from the school community, they are likely to put forth little effort to learn.[13]

   A large study of students in grades 4-6 across six school districts found that students' sense of belonging in school was positively related (with moderate to large effects) to their enjoyment of class, liking for school, and task orientation toward learning, as well as being significantly (but more weakly) related to mean reading scores.[14] In a separate intervention study designed to mitigate the effects of "belonging uncertainty" on college freshmen, researchers found improved grades over time among African American students in the treatment group significant enough that the black-white grade gap was reduced 79 percent by senior year. Researchers also found effects on the health and well-being of African American students in the treatment condition, who, three years post-intervention, reported better health and fewer doctor visits than African American students in the control group.[15] Further, the percentage of African American students in the top quartile of their class had tripled following the intervention due to improved performance among treated students.[16]

2) *I can succeed at this*. The degree to which students believe they are "good" at a particular kind of task or field of study is strongly associated with academic perseverance. Research shows that self-efficacy and the belief in one's likelihood of success are generally more predictive of academic performance than one's actual measured ability.[17] Individuals more willingly engage in tasks of any kind when they anticipate success.[18] For students to expend the sustained effort necessary for learning, they must believe their efforts will be successful. This mindset also derives from our basic "need or desire for a stable, firmly based, (usually) high evaluation of [our]selves, for self-respect, or self-esteem, and for the esteem of others."[19]

Students who anticipate failure or believe they cannot do something well will likely refrain from investing effort or devalue the importance of the task in order to maintain a sense of their own competence.

Studies of children's self-efficacy have found that, within each level of math ability (i.e., high, medium, and low ability), students with greater math self-efficacy outperformed their similar-ability peers.[20] In studies of students' math performance, the direct effect of self-efficacy was as strong as the effect of ability.[21] Researchers have found similar effects of self-efficacy beliefs across a variety of other academic domains and contexts.[22] Research suggests that students who believe they will succeed at an academic task are more likely to persist longer in the task and use cognitive and metacognitive strategies that improve their performance.[23] There is also clear empirical evidence that self-efficacy is malleable. Providing feedback on students' prior performance (e.g., commenting that students have been working hard), feedback on ability (e.g., commenting that students are good at a particular academic task), setting goals, or providing skill training all had the effect of increasing students' expectations of success as well as their performance.[24]

3) *My ability and competence grow with my effort*. Much attention has been given to what Carol Dweck calls a "growth mindset," which relates to one's ideas about the nature of intelligence. Students with a growth mindset believe that "the brain is like a muscle" that gets stronger with use. Accordingly, growth-mindset students are more likely to interpret academic challenge or mistakes as opportunities to learn and develop their brains.[25] Having a growth mindset is also associated with a "mastery goal orientation," meaning that students are motivated by wanting to learn as much as they can in order to master the material; they enjoy challenging themselves to take on the next new idea.[26] Dweck contrasts a growth mindset with a "fixed mindset." Students with a fixed mindset think of intelligence as something that is predetermined and not within their control. Students with fixed mindsets are more likely to be performance oriented rather than mastery oriented, meaning that they are motivated either by the desire to show off their smarts by outperforming others or by their desire to not look dumb by underperforming. Unfortunately, neither of these manifestations of performance orientation is associated with perseverance. Students motivated to outperform others tend to give up quickly when success does not come easily. Students who are driven by the desire to hide what they fear is a substandard level of intelligence are likely to refrain from engaging in a task at all, lest they risk public failure.[27]

   In an experiment designed to encourage growth mindsets in college students, researchers found that students in the treatment group had higher GPAs the following term (average = 0.23 grade points) and that, among African American students, those in the treatment group reported higher levels of enjoyment and engagement in school following the intervention.[28] In a study of seventh graders with declining math scores, those in a randomized treatment group focused on the development of a growth mindset were able to stabilize their grades, ending the school year with an average 0.30 higher grade points than their peers in a control group.[29] Measures before and after the intervention also showed that students in the treatment group changed their understanding of the brain as well as their beliefs about intelligence during the study period, suggesting the malleability of student mindsets. In further evidence that growth mindsets can be cultivated, researchers found that "retraining" students to attribute poor academic performance to a lack of effort or to the use of an ineffective strategy (rather than a lack of ability) "has been shown to produce sizeable changes in persistence in the face of failure, changes that persist over time and generalize across tasks."[30]

4) *This work has value for me*. Human beings are continually interpreting and making meaning of experience. Our brains naturally look for connections in order to process new information and ideas. For academic work to penetrate students' consciousness and become a focus of attention, it has to mean something to them.[31] Students value academic tasks and topics that connect in some way to their lives, their future educational pursuits/careers, or their current interests. When students value their coursework, they are much more likely to expend effort on completing it. The value a student places on a given academic task is strongly associated with both persistence and performance on that task.[32] When a task is not valued, students have to expend significantly more energy to focus their attention on it; further, they are much less likely to remember information related to it.

   Researchers tested the importance of value in an intervention study with ninth-grade science students. Students in the treatment group were asked to write about how the weekly science topics applied to their lives. Students in the control group instead wrote summaries of the weekly science topics. Students in the treatment group who entered ninth grade with low expectations for success in science earned significantly higher grades (average=0.80 grade points difference) than students in the control group. Students in the treatment group also reported higher interest in science after the intervention and indicated wanting to take more science courses.[33] In a similar study with seventh-graders, students who wrote about values that were important to them in connection with school earned higher grades than students in the control group; the largest effects were seen with low-performing African

> American students, who increased their grades by 0.41 grade points, an improvement which was sustained over two years.[34]

Across a broad collection of studies and lines of research, the evidence strongly supports the relationship between positive academic mindsets, increased academic perseverance, and improved academic performance. In short,

> When a student feels a sense of belonging in a classroom community, believes that effort will increase ability and competence, believes that success is possible and within his or her control, and sees school work as interesting or relevant to his or her life, the student is much more likely to persist at academic tasks despite setbacks and to exhibit the kinds of academic behaviors that lead to learning and school success. Conversely, when students feel as though they do not belong, are not smart enough, will not be able to succeed, or cannot find relevance in the work at hand, they are much more likely to give up and withdraw from academic work, demonstrating poor academic behaviors which result in low grades.[35]

Low grades, in turn, predict lower educational attainment and poor career and civic outcomes.

Thus, academic mindsets are critical levers for increasing student engagement and the persistence necessary to develop the other five deeper learning competencies. Moreover, research across a range of studies suggests that educators play a key role in building positive mindsets. Students' academic identities and attitudes and beliefs about schooling are strongly influenced by the school and classroom environment in which learning is situated; the structure of academic work, goals, support, and feedback in that environment; and the implicit and explicit messages conveyed to students about themselves in relation to that academic work.[36] Increasing student motivation to learn is ultimately contingent upon "creat[ing] a set of circumstances in which students take pleasure in learning and come to believe that the information and skills they are being asked to learn are important and meaningful for them and worth their effort, and that they can reasonably expect to be able to learn the material."[37]

Academic Mindsets and Identity Development

In addition to motivating a student's engagement in deeper learning instructional practices, positive academic mindsets can also be seen as important deeper learning *outcomes*. The outcomes of schooling are not only content knowledge and academic competencies, but also the people that students become from having participated in their educational experiences. To develop young adults with a positive and efficacious sense of self and confidence in their abilities to engage with and contribute to the world, schools need to provide deeper learning opportunities in which students can follow their interests, strengthen bonds with peers, collaborate with a diverse range of people, build their competence over time, and come to see that accomplishment is built upon sustained hard work.

Unfortunately, it is too seldom the case that students get these opportunities in school, particularly in urban districts serving low-income and racial/ethnic minority students. Rather than building students' content knowledge, problem-solving abilities, collaborative capacities, communication skills, and learning strategies over time, traditional urban schools too often fail to provide opportunities for students to develop deeper learning competencies. Instead, they rely on rote, low-level instruction and reinforce to students messages of inadequacy and limited potential. Thus, a significant percentage of young people leave school "thoroughly trained in failure," to borrow a phrase from Leonard Ayres.[38] Across a number of U.S. cities, rather than inspiring students to work hard and meet rigorous academic standards, it is common for urban school systems to see half their students fail at least one course upon entry to high school, with upwards of a third of ninth graders routinely failing three or more courses.[39] Academic failure reduces students' interest in school and attenuates their relationship to whole fields of study that might have otherwise provided potential career opportunities. Currently about 25 percent of American youth drop out of high school without a diploma,[40] generally after repeated failure and deepening credit deficiency. For chronically failing students – or for students in chronically failing schools – the most important result of schooling may be not only a lack of knowledge and skills, but an image of themselves as having little to offer and few capabilities worth developing.

Decades of research consistently conclude that the consequences of academic disengagement are detrimental and debilitating, setting off a downward spiral of low self-esteem, impeded effort, and escalating failure.[41] Pockets of exceptional schools across the country serving low-income and racial/ethnic minority students have demonstrated ways to engage students' interest and provide opportunity and support for them to meet high academic standards. We should no longer accept the myth that struggling students don't care about their education or that failure is the best they can do. The evidence is clear that failure in this context has "a negative and sometimes devastating effect" on a student's sense of self, making young people "feel incapable and inadequate" rather than prepared for the future.[42] Certainly, schools are not fulfilling their desired public function to the extent that they take in young children who are able and naturally eager to learn and over the course of 12 or 16 years produce young adults with few marketable skills and who have become convinced of their intellectual deficiency. By neglecting to consider the psycho-social dimensions of students' schooling experience, teachers, administrators, policymakers, and education reformers can inadvertently enact policies and practices that cause irreparable harm to children.

A more holistic view requires that the goals of K-16 education include the development of students' content knowledge, problem-solving skills, and related academic competencies as well as the development of efficacious young people whose confidence is solidly based in demonstrated expertise. The graduates of an education system focused on developing the six deeper learning competencies will be well prepared to engage in their careers and their communities to solve the pressing social, political, environmental, and technical problems facing us in the 21st century. The deeper learning framework will provide guidance to practitioners, researchers, and policymakers in this regard by including academic mindsets among its core competencies.

PERSPECTIVES FOR A DIVERSE AMERICA

20 Face to Face Advisories

ORIGINS DEVELOPMENTAL DESIGNS®

PERSPECTIVES *for a* DIVERSE AMERICA

A K-12 LITERACY-BASED ANTI-BIAS CURRICULUM

20 Face to Face Advisories

Teaching Tolerance is proud to partner with The Origins Program (originsonline.org/about) to present 20 advisory activities selected from *Face to Face Advisories: Bridging Cultural Gaps in Grades 5-9* by Linda Crawford (originsonline.org/bookstore/face-face-advisories).

PURPOSE OF ADVISORY ACTIVITIES

When properly facilitated, advisory period can be a time for the authentic relationship and community building that students need to feel safe and supported in their schools. School must be relevant and engaging to adolescents before they will make an effort to do what schools ask of them. "A homeroom or advisory at the start of the day, when properly structured to meet adolescent needs, can promote social development, assist students in their academic programs, facilitate positive involvement among teachers, administrators, and students, and provide adult advocacy and a positive climate in the school community" (*Middle Grades Research Journal,* Fall 2011, page 148).

The meetings in *Face to Face Advisories: Bridging Cultural Gaps in Grades 5-9* expose students to diverse perspectives and guide them to understand those perspectives and to critically and honestly analyze ideas from a variety of cultures. It all happens through safe, engaging, guided peer-to-peer activities that build social emotional skills and connections across differences.

Students greet each other respectfully and then share interesting, meaningful activities that draw them together. They become more open to diverse people and cultures, ready to take a stand for equity. Such connections and understandings help create the optimal social emotional conditions for learning. They foster awareness of social biases and reveal possibilities for transforming them.

The 20 advisory meetings selected for Teaching Tolerance provide a sample of the movement *Face to Face Advisories* makes from awareness to action. They are grouped by the domains of Teaching Tolerance's Anti-bias Framework: Identity, Diversity, Justice and Action, with five advisories in each domain.

TWO ADVISORY FORMATS

Each advisory activity includes a goal, meeting components and teacher tips, and there are two types of Face to Face advisories—Circle of Power and Respect (CPR) and Activity Plus (A+). Both formats create a safe, inclusive atmosphere in which students and their teachers may learn about each other and grow closer—even when discussing challenging subjects like racism and heterosexism.

For a detailed discussion of the *Developmental Designs* CPR and A+ advisory meeting structures, see *The Advisory Book* (originsonline.org/bookstore/advisory-book-revised-edition-0).

CPR ADVISORY FORMAT

The Circle of Power and Respect (CPR) format for advisories is ideal for creating inclusive communities. Each activity contains four key components:

Daily News—Previews the advisory activity's focus and helps students shift into thinking gear as they transition from home to school.

Greeting—Teaches students to respectfully greet someone they hardly know or don't particularly like.

Share—Provides time to talk about daily issues as well as challenging topics like bias, discrimination, justice and acceptance.

Activity—Connects students through play and activities that allow them to voice their opinions and discover commonalities.

ACTIVITY PLUS (A+) ADVISORY FORMAT

The A+ format allows more time for the final activity, which allows students to reflect on the implications of what they have learned or thought or heard—for them personally, for the school community and/or for society.

Identity Advisory 1 (CPR)

Advisory goal: Know one another culturally.

DAILY NEWS (WRITTEN MESSAGE TO STUDENTS)

Ciao, friends! (Italian)

Be thinking about an informal greeting you can use to greet the person next to you today. The sharing question today will be: What do you know about the meaning of your name and why your family chose it? We'll be looking for volunteers to share out.

GREETING

Informal English Greeting

A selected student begins. She greets the student to her right using informal English (e.g., "Howdy, ____."). The greeted student responds repeating the first student's language then turns to the next person and greets her with the same or a different informal greeting. The process is repeated around the circle. All greetings must include the person's name.

➔ Informal English Greeting examples: "Hi,____." "Howdy, ____." "How's it going, ____?" "S'up, ____?" "Hey, ____."

SHARE

Partner Share on Topic

Partners share their answers to these questions: "What do you know about the meaning of your name and why your family chose it? Was it because they liked the sound of it? Were you named for someone? Does your name have special meaning?"

Students share on topic for a specific length of time with a time warning halfway through the share to ensure balanced sharing/listening. Afterward, volunteers share out to the whole group.

➔ Suggest that students who do not know about the significance of their given names ask about it at home. Students could decide to include the information in the shares they begin developing in Identity Advisory 2. To lessen any discomfort students may have about a lack of information about their names, assure all that this will be just one of many items that might comprise the shares.

ACTIVITY

When the Cold Wind Blows

Students sit in a circle. One student stands in the middle of the circle, and his chair is removed. He says, "When the cold wind blows, it blows for anyone who ____," filling in the blank with a category such as "has a dog" or "is left-handed." Everyone who fits that category rises and quickly finds a new place to sit, including the person in the middle. The one student who doesn't find a seat stands in the center of the circle and continues the game by saying, "When the cold wind blows, it blows for anyone who ____," naming a new category. The activity continues for several rounds.

➔ For this game, in order to learn more about each other's lives, limit categories to ones that relate to interests, hobbies and family, rather than allowing students to focus, say, on clothing or appearance. For example, the cold wind blows for anyone who

- has more than two siblings
- has moved in the last year
- speaks more than one language

- is the oldest child in the family
- has a grandparent living with them
- enjoys playing a sport
- enjoys music
- has a hard time getting up in the morning

➔ Model and practice safe chair changing before playing, including how to claim a chair by tagging it first, so students know how to move quickly and safely during the game.

Identity Advisory 2 (CPR)

Advisory goal: Learn how to share about your identity by describing the cultural influences that have shaped you.

DAILY NEWS

Bienvenidos, students! (Spanish)

Today I will do an Identity Share and describe ways that my culture has influenced me and helped shape my identity. On other days, I hope some of you will also be amenable to doing an Identity Share so we can learn about some ways that your culture has influenced your life.

GREETING

High-Five Greeting

In sequence around the circle, students greet each other with a high-five. For example, Kim says, "Hi, Ahmed," and gives him a high-five. He replies, "Hi, Kim," and gives her a high-five.

SHARE

Identity Share by Teacher on Topic

The teacher explains ways that his culture has shaped his identity.

➔ Model this share format by going first. Familiarize yourself with the Identity Share Guidelines, and use them to design your share. Explain that students will have a chance to develop and do an Identity Share in the near future.

IDENTITY SHARE GUIDELINES

If you're not sure how to share what you want people to know about your culture, try some of the suggestions in the list below.

- Bring one or two objects that represent part(s) of your life and culture.
- Describe how the following things have influenced you:
  - family traditions and characteristics (e.g., family members, favorite activities, holidays, customs, religion, foods you eat, native languages, attitudes toward education, family rules)
  - physical environment and neighborhood
  - race and ethnicity
  - appearance
  - media/advertising
  - gender
  - school
  - law and government
  - economics (e.g., how much money your family has)
- Describe the origins of your name and why it was chosen for you.

- If your ancestors weren't indigenous (native) to the United States, describe the countries from which they came.
- Explain the work the adults in your family do at home, in the community or at paid jobs.
- List the responsibilities you have in your family.
- Describe one way your family has supported you.
- Describe what other aspects of your life have influenced who you are.

➔ Before you share, establish audience guidelines. Ask the students, "What do supportive listening and participation look, sound and feel like?" See below for suggestions. After you share, direct the audience to ask questions or make relevant comments, allowing you to fill out your story by responding. Post the Identity Share Guidelines from which the audience can draw questions about topics the share hasn't already covered. Encourage students to ask open-ended questions (e.g., "How do you feel about having to take care of your little sister?" "In what ways does advertising affect how you dress?" "What does your mom say about how you dress and wear your hair?").

Audience Guideline Suggestions

- Focus on the sharer, not on yourself or fellow audience members.
- Listen actively and get ready to comment or ask questions about the share. Even if you don't get to ask or comment, preparing helps you be an active listener.
- Be ready to support with details any opinions you express.
- Listen to other people's questions; you will get more out of the answers, and you can avoid repeating someone else's question.
- Listen and watch for interesting, original, entertaining, enlightening and well-expressed aspects of the share, and be ready to comment on them.
- Think about whether and how the performance could be improved. Be ready to offer respectful suggestions if they are invited. If a comment won't help the sharer, say it another way, or don't say it.

➔ Now that you have modeled the Identity Share for students, give them the Identity Share Guidelines and a week or two to prepare Identity Shares of their own. If you want advisory content suggestions for the interim, see the *Developmental Designs* online resources (originsonline.org/educator-help#for-middle-level) or *The Advisory Book* (originsonline.org/bookstore/advisory-book-revised-edition-0) for ideas on greetings, share topics and activities.

ACTIVITY

Shuffle 'Em Up

Students sit in a circle and write their names on large note cards. On the teacher's prompt, "Shuffle 'em up," students switch cards with one or more other players, then hold the new one in front of them like a name tag. A selected student stands in the middle of the circle. He rearranges the cards in students' hands as quickly as possible so that everyone is once again holding his own name card. If there is time, when all students have their own names back, the teacher may say again, "Shuffle 'em up."

➔ If students do not know each other's names well, each student can hold up her own name card and say the name out loud before the first round of Shuffle 'Em Up. This will familiarize everyone with the names and their correct pronunciation and help avoid embarrassment.

Identity Advisory 3 (CPR)

Advisory goals: Become more able to describe your culture and how it has shaped you. Learn about each other's cultures.

DAILY NEWS

Good morning, good listeners!

Today ____ and ____ will be doing the first student Identity Shares. Use your attentive listening skills, and be ready to ask interesting questions.

➔ Plan additional advisory meetings for more student Identity Shares.

GREETING

Basic "Good Morning" Greeting

A selected student begins. She greets the student next to her in the circle, "Good morning, ____"; the person greeted responds, "Good morning, ____," then turns to the person next to her and greets her. The process is repeated around the circle. The audience's job is to watch each greeting politely and quietly.

SHARE

Identity Share by Student Volunteer on Topic

The student explains ways that her culture has shaped her identity.

As support for the sharer and the audience, post the Identity Share Guidelines from Identity Advisory 2. If the pace seems to lag, prompt questions by directing the audience to the list. Listen carefully to the questions the audience asks of a sharer, and intervene if a question seems to make the sharer uncomfortable. Establish that the audience will close the shares with a brief acknowledgment (see more below).

➔ Watch over the conversation to make sure students present a balanced picture. As needed, direct students to

- notice similarities and differences
- balance stories of victimization of one culture by another with descriptions of celebrations of joyful, productive aspects of cultures
- share both negative and positive facts and emotions about cultures

You can help maintain balance in the conversation by interjecting a question. If the sharer's emphasis is on how different a culture is from others, ask about broadly shared characteristics (e.g., "Is there an age when a boy or girl is considered an adult?" "Is there a holiday when families gather and relax together?"). If the share emphasizes persecution, ask questions that might bring out sources of strength or hope (e.g., "Are leaders and others working for peace at this time?"). If facts are overemphasized, ask a question about feelings (e.g., "Do you like being a member of a large family? What are the advantages and disadvantages?").

➔ Acknowledge students who do Identity Shares. The audience can do a cheer (originsonline.org/educator-help/cheers) for the sharers or offer comments about what they specifically appreciated in the shares. Comments should be specific and descriptive, not general praise such as "You were great." The social skill of giving a compliment requires thinking in order to be authentic: What specifically was interesting in the share? What specifically was something you admired or something you learned? Empty praise doesn't mean much, but a thoughtful compliment can mean a lot to the sharer, especially coming from a peer.

ACTIVITY

Name ’Em All

Volunteers try to correctly name everyone in the circle.

➔ If the volunteer gets stuck, students can give a clue about a person not mentioned yet, for example the letter the name begins with or a word it rhymes with. This will show the person whose name has been forgotten that others do remember her name.

Identity Advisory 4 (CPR)

Advisory goals: Develop an inclusive view of language. Build community.

DAILY NEWS

Dear group,

Sometimes we use formal speech, and other times we relax into slang. The trick in life is to know how and when to use each. Today we'll play with our names, both our formal full names and informal nicknames. Think of a nickname or baby name to share with us, and then we'll play a name game.

GREETING

Full Name Greeting

One at a time, students greet the person to their right using that person's first and last names ("Good morning, Sarah Roberts."); middle names are optional. They shake hands politely, and the person responds with the same format ("Good morning, Ana Garcia.").

➔ Whole-group alternative: Each person greets the group by saying her first and last names ("Good morning, everyone. My name is Sarah JoAnne Roberts.") The group in unison responds back, including the name ("Good morning, Sarah JoAnne Roberts.") This alternative avoids the problem of students not knowing how to pronounce certain names. Students can begin with the whole-group greeting and on another occasion try out the Full Name Greeting.

➔ Smiles and giggles often result when adolescents try on formality. This is fine, but sarcasm or mockery is not. If you detect either, direct the student to try it again with friendly respect (or to sit out if it was intentional).

SHARE

Whip Share on Topic

"What is your nickname?" Each student offers a brief response to the topic; nicknames quickly "whip" around the circle.

ACTIVITY

Name Race (Team-Building Activity)

Seated or standing in a circle, students see how quickly they can say their names (see variations below) one time around the circle. The teacher times the rounds to compare results.

➔ Variations: Go faster and faster. You can try to set your best time for first names only and then try with first and last names or first, middle and last names. You can go the opposite direction around the circle and use nicknames. (A stopwatch is useful!) As you have fun with the Name Race, the students' names become more familiar and the community more connected.

Identity Advisory 5 (CPR)

Advisory goals: Identify similarities in the midst of differences. Develop teamwork skills. Experience leadership and followership.

DAILY NEWS

Hello, friends!

Sometimes we're surprised when we discover that we share characteristics or preferences or experiences with a person from whom we think we are quite different. Today our task is to note as many similarities and differences as we can.

GREETING

Same and Different Greeting and Share

Partners greet each other with a high-five, low-five or fist tap. As always, each greeting and response includes the name of the person. Then they identify three ways they are different from each other and three things they have in common.

SHARE

Venn Diagram Partner Share: Similar and Different

Using a Venn diagram, partners record ways they are different and similar, naming as many commonalities and differences as they can. Students draw two circles, each about six inches in diameter and overlapping by about three inches at the center. They write one of their names above the circle on the left and the other name above the circle on the right. They bring up cultural and personal characteristics (e.g., "has five siblings," "likes spring rolls," "good at baby-sitting") and determine where in the Venn diagram the characteristic should be placed—in an area representing one of them or the area in the middle, representing both. To the whole group, volunteers share out examples of characteristics the pairs found that they have in common.

➔ The first time students do this, you may give teams a list of characteristics to consider, such as differences or similarities in ages, families, favorite foods, things they are good at, native languages, favorite colors, places they've been and ambitions.

ACTIVITY

Shape Up

Students form teams of four, five, or six, with each team choosing a leader. Using five pieces of flat elastic nine feet long, teams recreate a geometric shape drawn on the board by the leader. All team members must have contact with the elastic at all times. At first, the shapes should be simple (triangle, square, pentagon); as the students succeed, the figures should become more challenging (circles, regular and irregular polygons).

➔ For the greatest difficulty, blindfold all but one team member, who gives instructions to the others.

➔ You'll probably have time for only a few shapes.

➔ Flat elastic about 3/8 inch wide works best. You can buy it at craft stores and fabric stores.

➔ This is an activity where leaders tend to emerge. The team can't complete the figure unless they are somewhat organized, and the one who steps up to direct the organizing emerges as a leader. If there is time after the activity, students can discuss who helped the group organize its efforts. It's also interesting to note who was willing to follow. No one can lead unless others are willing to follow. In fact, it is said that great leaders are made by great followers—another example of our connectedness that you can point out to your students.

Diversity Advisory 1 (CPR)

Advisory goal: Understand that certain cultural characteristics can raise or lower your social status.

DAILY NEWS

OhayĐ gozaimasu, everyone! (Japanese—transparent.com/learn-japanese/phrases.html)

One of the things people do when they see each other is look for differences. "Has he changed his hair?" "She always wears that black scarf on her head." "He talks with an accent." Today we'll play a little with the differences we notice. They can make life interesting but also sometimes uncomfortable.

GREETING

Reach Out Greeting

Students stand. When the teacher states a category from the list below, the students find people who fit it and greet them. Tell students that the idea is to greet as many people as possible before the category changes. The teacher can gradually increase the degree to which students reach out:

"Greet people whose eyes are not the same color as yours."

"Greet people who have the same middle initial as you."

"Greet people you haven't talked to yet today."

"Greet people you don't know very well."

➔ To minimize seeking certain people, keep this greeting moving along by calling out a new category before movement stops.

SHARE

Think Ink Pair Share on Topic

Students respond to the following prompt: "There are many differences among us. At our school, are there some characteristics that tend to make people more or less popular? Write some down."

Students think quietly about the topic for a minute or two, write their thoughts on paper, and then share with their partners for a specified time and with a warning halfway through the share to ensure balanced sharing/listening. Volunteers share out.

➔ Thinking time is important so students seriously consider how popularity works in your school. Students write their thoughts before sharing them. If there isn't time for students to share out with the whole group or if they are reluctant to do so, you can collect the ideas and read them anonymously at this meeting or the next one.

ACTIVITY

Something's Different

Partners start by facing each other and observing details about appearance. Then partners turn back to back. Each person makes a quick change in appearance (e.g., tucks in shirt, rolls up sleeves, switches a ring from one hand to the other). When both are ready, they turn around and face one another again. The objective is for each person to detect the change that the other has made. If there is time, the partners can play another round.

➔ Variation: Groups of four play, and the pairs try to detect changes the other pair has made.

Diversity Advisory 2 (CPR)

Advisory goal: Recognize positive and negative responses to others who are different from us.

DAILY NEWS

Hola, compadres! (Spanish)

Most of us have had moments when we felt like the odd person out, the one who was different from the group in some way. Often people seem to want to hang out with others who are like them. Today we'll get clear about different ways of dealing with difference.

Have you ever felt that you were the "different" one in a group? Initial below.

YES__________________ NO__________________

GREETING

Huddle Up Greeting

As the teacher makes statements about personal interests, students respond by coming to the middle of the circle if it applies to them and greeting the others in the middle with them. After each huddle, students return to their seats. Those for whom the statement doesn't apply stay where they are, quietly waiting for the next statement. For example, the teacher might say, "Huddle up if you enjoy watching football." Everyone who likes to watch football comes to the middle of the circle and greets everyone else who shares this trait, while those who don't enjoy watching football remain seated. Categories of personal interests that demonstrate "soft" commonalities and differences in the group are less likely to divide students in a negative way.

Here are some examples:

- Huddle up if you have a pet.
- Huddle up if you like scary movies.
- Huddle up if you like to sleep late.
- Huddle up if you like to cook.
- Huddle up if you like to talk on the phone.
- Huddle up if you text.

➔ Make sure that everyone gets into the circle to greet at least once. The last two topics on the list above are aimed at getting everyone into the circle.

SHARE

Think Pair Share on Topic

Each student tells about a time when she felt she was the only one (or one of few) who was different in some way from the rest of a group (e.g., she was older or younger, she was the "new kid," or she was the only person of her gender, race and ethnicity, etc., in the group).

Students think about the topic for a minute or two and then discuss their thoughts with their partner for a specified time with a warning halfway through the share to ensure balanced sharing/listening. Volunteers share out.

ACTIVITY

Responding to Differences Scenarios

The teacher explains that the scenarios are all examples of ways we respond when we interact with people whom we perceive as different from us. Every three or four students receive one scenario. In each of the scenarios, whether the differences are described or not, students should assume that the people described are different from one another in race and ethnicity, language, sexual orientation, socioeconomic class, ability, and/or religion. Using the categories defined in the Responding to Differences Continuum, partners take a few minutes to decide which category best matches the events in their scenario. Partners then share out with the whole group their scenario, the number they assigned it and why. Thinking about the behaviors in each scenario will sharpen student appreciation for the nuances of behavior among people.

Responding to Differences Continuum

How do you respond to differences in the people you know?

1. EXCLUDE 2. AVOID 3. ALLOW 4. ACCEPT 5. APPRECIATE

1. Exclude
You purposely keep this person out or deny him access to places, information, groups and activities. For example, you do not let him join your game after school.

2. Avoid
You intentionally arrange things so you have as little contact as possible with this person. For example, if she is eating lunch at a certain table, you choose a different table, but you don't prevent her from sitting at your table if she chooses to.

3. Allow
You see the differences in this person as somewhat negative. You say that people who are different in this way are OK, as long as they don't get in your way.

4. Accept
This person's difference doesn't bother you. You work with her in class sometimes and it's not a problem, but you don't seek her out for friendship.

5. Appreciate
You see the person's difference in a positive way and enjoy being around him. Sometimes you go out of your way to be with him.

Responding to Differences Scenarios

Identify where the following scenarios fall on the Responding to Differences Continuum.

1. Alonzo and John are assigned to be lab partners. They don't hang out together at all outside of school. During lab work, they talk only when necessary. They get the work done and then wait silently for the period to end. When the bell rings, each goes to his friends and moves to the next class.

2. Mary finds out that Delores will be working on the dance decorations, so she joins a different committee.

3. Robert asks Anthony, "Where'd you get those shoes, Anthony—the Goodwill?"

4. Jane often goes to Miriam's house after school. Miriam's mother and father are immigrants, and Jane enjoys listening to Miriam's mom tell stories about the old country. She enjoys the food Miriam's mom prepares, which is new to her.

5. Ed and Derek have been friends a long time. Sometimes Ed asks Derek for advice about what to do in certain situations when he feels social pressure. Derek encourages him to be himself and acknowledges his

positives. Ed appreciates his friendship with Derek because Derek seems like the only person at school who understands him.

6. Francine is starting a new after-school group to raise money for the nearby community center. She invites other students to be involved, many of whom are people she hasn't hung out with at all outside of school. She understands that it will take many people with a variety of skills and working styles to launch this group, and she's willing to approach people she hardly knows.

7. Georgia intentionally does not invite Jessie or Ralph to her party.

8. David is Catholic, and Martin is Jewish. They live in the same neighborhood and ride the same bus to school. They talk to each other almost daily about school and sports, and sometimes they hang out together after school. They have never discussed their religious differences.

Diversity Advisory 3 (CPR)

Advisory goals: Appreciate the value of heterogeneity. Understand the tendency toward homogeneity.

DAILY NEWS

Dear heterogeneous students,

Diversity is everywhere, so the ability to socialize and work with people who are different from us is an important personal strength. Is your main group of friends more homogeneous or more heterogeneous? Indicate on the continuum below:

Homogeneous_______________________________________Heterogeneous
(I avoid mixed groups) (I hang out with lots of different people)

GREETING

Name Card Greeting

Students write their names on note cards and then place them randomly face down in the middle of the circle. One at a time, each student selects a card, reads it and greets the student indicated. The teacher can save the cards for reuse in a future Name Card Greeting.

SHARE

Simultaneous Share on Topic

Students respond to the following prompt: "Use a show of fingers, one to five, to indicate how often you are an explorer: someone who likes to mingle with a variety of folks, many of whom seem different from you. Show one finger for rarely and five for most of the time."

➔ Give students a moment to think before they respond. Assure them that the number they show is just a rough indication of who they hang out with most of the time. On your count of three, all give their responses simultaneously.

ACTIVITY

Responding to Differences: My Relationships

Students think about the people they know and describe someone for each of the categories below from the Responding to Differences Continuum. *This exercise is private and anonymous.* To protect privacy, students should not name the people they are describing. Students return their completed papers to the teacher at the end of the meeting, sharing the work with no one else.

➔ You can share an example with your students so they understand how it works. Here's an example for category 2 (Avoid):

Example: She is a lesbian and everybody knows it. I don't hang out with her because when I do I get teased. I really don't care that she's a lesbian, but I don't want people thinking that I am.

1. Exclude

You purposely keep this person out or deny him access to places, information, groups and activities. For example, you do not let him join your game after school.

Example:

2. Avoid

You intentionally arrange things so you have as little contact as possible with this person. For example, if she is eating lunch at a certain table, you choose a different table, but you don't prevent her from sitting at your table if she chooses to.

Example:

3. Allow
You see the differences in this person as somewhat negative. You say that people who are different in this way are OK, as long as they don't get in your way.

Example:

4. Accept
This person's difference doesn't bother you. You work with her in class sometimes and it's not a problem, but you don't seek her out for friendship.

Example:

5. Appreciate
You see the person's difference in a positive way and enjoy being around him. Sometimes you go out of your way to be with him.

Example:

Diversity Advisory 4 (CPR)

Advisory goal: Build trust for others in the group.

DAILY NEWS

Dear students,

This morning I will share with you about a person who is quite different from me, in whom I have a lot of trust. I will invite your questions and comments after I share. We'll also try out an activity that requires us to have confidence in each other: Knots!

GREETING

Psychic Shake Greeting

Everyone silently picks a number from one to three. That is the number of times students will shake everyone else's hands in this activity. Students mingle in the circle and start shaking hands, seeking others with their number. For instance, if a student's number is two, she shakes twice with each person. If the person she is greeting tries to shake a third time or resists shaking after one shake, then she has not found a match, so the two separate and continue greeting others. If the person shakes exactly twice, the two stay close together as they seek others who shake twice. The greeting has been completed when there are three clusters of people.

SHARE

Venn Diagram Share: Differences and Trust, Modeled by Teacher

The teacher prepares ahead of time a Venn diagram, using himself and a person he trusts who differs from him culturally. Areas of difference include religion, urban/rural childhoods, native language, age, ability, race and ethnicity. The teacher uses the Venn diagram to show the commonalities and differences and asks for questions and comments afterward. (Students will prepare and share their own Venn diagrams in Diversity Advisory 5.) A student should write down the questions so the group can use them as a resource when students share their diagrams.

ACTIVITY

Knots (Trust-Building Activity)

Students stand in a circle and link right hands with someone across from them. Then they link left hands with someone else: The "knot" is complete. Students must untangle the knot without letting go of hands.

➔ You can have students hold a strip of cloth in each hand and grab the cloth rather than hands (stretchy cloth makes the activity easier but less challenging). This reduces the closeness and touching required by the activity. Decide what degree of contact will work for your group, or separate groups as you see necessary. This activity, like handshakes and high-fives, can be a context for teaching about respectful touching.

Diversity Advisory 5 (CPR)

Advisory goal: Understand how community can influence performance.

DAILY NEWS

Get ready to race, speedy ones!

We're going to see how fast we can go when we have a team behind us for support. Also, we need two volunteers to share about their trustworthy people today.

GREETING

High-Five/Low-Five Greeting

In sequence around the circle, students greet and high-five their neighbors. The neighbors greet and low-five them back. For example, Jake says, "Hi, Roberta," while giving her a high-five, and Roberta replies in the same way while giving Jake a low-five.

SHARE

Venn Diagram Share: Differences and Trust

Volunteers share with the group their Venn diagrams of someone they trust.

➔ A follow-up question: "What else might the two people in this diagram have in common?"

You can explain that searching for our commonalities helps keep us positively connected.

ACTIVITY

Number Race

Divide the group into two or three teams. The teacher creates circles on the floor, outlined with yarn or string, with one circle for each team. The teacher then places inside each circle paper plates or something similar numbered from one to 10 and scatters them, number side up. At the start signal, teams send one member at a time into their circle to touch all 10 numbers consecutively. Team members encourage and assist each other in finding the plates in the proper order (e.g., "Turn around! Number seven is behind you."). Each team times the process and shares their results with the other teams or tries to better their result if there's time to repeat the course.

➔ Variation: Experiment with the impact of group support on performance: Time the course first without support and then with support. Compare the results and ask students to reflect: "How did it feel/impact your performance to do the course without and then with support?"

Justice Advisory 1 (CPR)

Advisory goal: Understand that the experience of school is different for different students.

DAILY NEWS

Good morning, students!

For sharing today, think about the institution of school and the effect it has had on you. Do you believe school is easier for some students, depending on their gender, race and ethnicity, size, appearance, ability or socio-economic class? Mark your answer below on the continuum:

No____________________Yes

GREETING

Language Greeting: Using American Sign Language

To sign "hello" in American Sign Language, students smile, make eye contact and make a friendly salute toward the people they are greeting. The first student starts by greeting the person on his right; that person returns the greeting and then greets the person on her right, and so on.

SHARE

Think Ink Pair Share on Topic

Students respond to the following prompt: "Is school easier for some students, based on their gender, race and ethnicity, size, appearance, ability or socio-economic class? Is school easier for girls than for boys? In what ways might school be different depending on how much money your family has?"

Students quietly think about the questions for one or two minutes and write down their thoughts. Then students form groups of two or three and share what they've written. The teacher keeps time, prompting groups to change sharers every two minutes to ensure balanced participation. Volunteers share out their responses with the whole group.

ACTIVITY

Talking Cards on Topic

Students respond to the following prompt: "What would help students make friends more easily at school and do well academically?"

Students write and then sort ideas and opinions so they are "heard" anonymously. The cards do the "talking."

1. The teacher passes out two small note cards to each student, putting extras in the middle of the circle.

2. The teacher asks, "What would help students make friends more easily at school and do well academically?"

3. Students write responses on cards (one response per card). They write a suggestion and explain why they think it would help students do well socially and academically.

4. The teacher collects and shuffles the cards.

5. The teacher asks for one volunteer to read the cards and one to record responses, grouping similar ones.

6. Everyone discusses the suggestions.

➔ In the Talking Cards activity, remind students that opinions are only as good as the evidence that supports them. Encourage students to give examples and data that will substantiate their suggestions for improvements to the school culture.

➔ The discussion of how to make school a place where all students can do well both socially and academically may call for an additional meeting.

Justice Advisory 2 (CPR)

Advisory goal: Be aware of the damage bullying does to everyone in the school.

DAILY NEWS

Hello to all!

We often remember long afterward things that people say and do. People who have been bullied never forget it. Here is the definition of bullying we will use in this advisory: repeated, aggressive behavior against a person who has to defend herself from someone who has more power than she does. Intimidation, rumors, gossip and media can all be used to bully someone.

GREETING

Handshake Greeting

Students greet each other with, "Good morning, ____" and a handshake, going around the circle.

➔ Model and discuss how you want handshakes to look and feel. Components of a good handshake include body position (standing 12 to 18 inches apart), eye contact, grip, squeeze, flow, duration and release.

SHARE

Partner Share on Topic

Students respond to the following prompt: "What is a comment someone made to you quite a while ago—positive, negative or neutral—that you have never forgotten?"

Students share for a specified length of time with a time warning halfway through the share to ensure balanced sharing/listening. Volunteers share out.

➔ As students share out, note the characteristics of the comments we tend to remember, and discuss them with students. Examples:

"I still remember my cousin saying that I was really stupid because I couldn't divide yet." (generalization)

"I remember when a girlfriend told another friend that my hair always looks like I just woke up, and it went around as a big joke." (teasing)

"Once a teacher said that I was an eager learner." (praise)

ACTIVITY

Watch *Bullied: A Student, a School and a Case That Made History*

Bullied, produced by the Southern Poverty Law Center, is available for free along with a teaching kit for the asking at the Teaching Tolerance website. If the teacher doesn't acquire the documentary, he can use the quotes below to tell the story.

Quotes From the Documentary

Bullied: A Student, a School and a Case That Made History tells the true story of Jamie Nabozny, a student who endured persecution from anti-gay students, stood up to his tormentors and filed a federal lawsuit against his school district. The suit led to a landmark federal court decision holding that school officials could be held accountable for not stopping the harassment and abuse of gay students. In *Bullied*, Jamie tells the story of the persecution he endured every day. The following are quotes from the film. Jamie is speaking.

"I just know that it hurt a lot to hear those words on a daily basis—people calling me queer, fag, homo … saying really disgusting things about … sex …"

"When I was walking down the hallway I'd have things thrown at me … I'd be kicked, tripped, spit on …"

One day when Jamie's science teacher stepped out of the classroom, anti-gay students attacked Jamie in the room.

"And the two boys started harassing me. And they had started touching my legs and telling me, you know, that 'you like it' and stuff, and I kept pushing them away. And then eventually I tried to get away from them and they pushed me to the ground. One of them got on top of me and were just continuing to—to touch me and being vulgar, I guess."

Justice Advisory 3 (CPR)

Advisory goal: Know the facts about inequalities between American men and women today and in the past.

DAILY NEWS

Greetings, young people!

Today we'll look at some sad facts about the status of women in the United States and think about what might be done to alleviate the inequality. We all pay a price for living in a sexist society.

GREETING

Partner Greeting

Basic greeting done in pairs: "Good morning, ________," simultaneously, rather than around the circle.

SHARE

Partner Share on Topic: Status of Women in the United States

The teacher reads aloud the statistics below or distributes them to students and has them read off the list, one person per bullet. Then everyone discusses the following: "What ideas do you have for increasing women's rights?" The teacher specifies a length of time to share and issues a warning halfway through the share to ensure balanced sharing/listening.

Status of Women in the United States

Although the 20th-century feminist movement brought advances, there is still a big gender gap in the United States. As women age, the wage gap increases. Here are some facts about the wage gap:

- For working women between the ages of 25 and 29, the annual wage gap is $1,702.
- In the last five years before retirement, the annual wage gap is $14,352.
- Over a 40-year working career, the average woman loses $431,000 to the wage gap.
- In 2010, women who worked full time year round earned 77 percent of what men earned.
- In all ethnic groups, women earn less than men in comparable jobs.
- College-educated women earn 5 percent less the first year out of school than their male peers; 10 years later, they earn 12 percent less.
- Women are more likely to work in low-wage jobs, such as retail sales, child care, waitressing and cleaning.
- Single women are even more adversely affected by the wage gap than married women. Single women earn only 78.8 percent of what married women earn, and only 57 cents for every dollar that married men earn.

ACTIVITY

Simultaneous Clap

Students clap their hands around the circle in varying patterns. There are several rounds to this activity, and they become increasingly challenging.

1st round: With everyone standing in a circle, the first person claps, then the person next to him claps, then the person next to her, and so on around the circle, keeping a smooth, steady rhythm and with no hesitations.

2nd round: The first person claps with both hands the two hands of the person next to him, who does the same with the next person, and so on around the circle.

3rd round: The first person claps his own hands at the same time that the person next to him claps her hands. She turns to the third person and they do the same, and so on around the circle, with every pair trying each time to clap at the very same moment.

4th round: With hands at the ready, everyone tries to clap at exactly the same moment. This may take some practice—it requires students to pay very close attention to each other.

Justice Advisory 4 (A+)

Advisory goal: Raise awareness that everyone in the world is affected by an uneven distribution of resources.

DAILY NEWS

Welcome!

Today we'll have an experience that will show us just how unbalanced a world we live in. We'll begin by standing in a circle. Do this now: Gather in a standing double circle, the two circles facing each other, for an inside-outside greeting.

➔ Before the advisory meeting begins, designate eight areas of the room to represent eight regions of the world, as listed in the population and wealth distribution chart below. Distribute students' chairs into these areas in proportion to *wealth* distribution in those eight regions (e.g., put 34 percent of the chairs in the area designated for North America, and only 3 percent of the chairs in the area for China).

GREETING

Inside-Outside Greeting

Students stand in a double circle (one inside the other). As the inside circle slowly rotates, members of the inside circle greet people in the outside circle with a handshake and "Good morning, _____." The people in the outside circle return the greeting. Many variations are possible; for example, high-fives or low-fives can replace handshakes.

➔ There are no chairs in the meeting area because all the chairs are distributed in the eight areas representing wealth distribution.

ACTIVITY

Competing for Resources Around the World

1. The teacher explains that the areas of the room represent eight regions of the world. She will tell certain numbers of students to go to each area, based on the world's population distribution. For example, the teacher will send 6 percent of the students to the area for North America (where there are more chairs than needed) and 23 percent of the students to the area for China (where there are far fewer chairs).

2. Now the teacher asks everyone to sit down in their areas. There will be too few chairs for some groups and a surplus for others. Students reflect on what they notice about wealth inequalities.

➔ After the activity, read aloud the reflection questions below.

➔ An alternative, faster (chairless) method is to divide students into eight groups according to population and then distribute fake money to illustrate wealth inequalities. Students can observe the greater money given to smaller groups and less money given to larger groups.

Percentage of world population and wealth: example with 25 students

Region	Population	Wealth	Population	Wealth Chairs
North America	6.1%	34.4%	1.5 (2)	8.6 (9)
Latin America and Caribbean	8.2%	4.3%	2 (2)	1.07 (1)
Europe	14.9%	29.6%	3.7 (4)	7.4 (7)
Africa	10.2%	1.0%	2.5 (0)	0.25 (0)
China	22.8%	2.6%	5.7 (6)	0.65 (1)
India	15.4%	0.9%	3.8 (4)	2.25 (2)
Wealthy Asia-Pacific	5.0%	24.1%	1.2 (1)	6.02 (6)
Other Asia-Pacific	17.5%	3.0%	4.3 (4)	0.75 (1)

Reflection

1. What do you notice about the way the world's population is distributed?

2. What do you notice about the way the world's wealth is distributed?

3. How might uneven distribution of wealth affect those who have more? Those who have less?

Justice Advisory 5 (A+)

Advisory goal: Expand your view of yourself and others to be all that you and they might be, not just what you and they have been in the past.

DAILY NEWS

Greetings, friends!

Even when we think we know someone, we can miss small but important changes he or she makes, day by day. It takes vigilance to guard against the "stereotype slide," the tendency to see someone else as unchanging. Today we'll all choose alter egos, and we might surprise each other!

GREETING

Ball Toss Greeting

The first person starts by greeting someone by name ("Good morning, Jake") and tossing a soft ball or beanbag to him. The person greeted responds in the same fashion ("Good morning, Roberto"), catches the object, greets another person ("Good morning, Miles") and then tosses it to him. He returns the greeting, and so on. Once someone has received and tossed the object, he puts his hands behind his back to signal that he has been greeted.

➔ Before playing, model and practice tossing appropriately. The objective is to play quickly and smoothly, without dropping the object, and not taking time to choose someone to greet. Make sure students say the name clearly *before* tossing the object, alerting the recipient.

ACTIVITY

Secret Identity

Students play in two teams, except for one student who becomes the announcer. Each team chooses a speaker. Every team member writes an "identity" or "alter ego" on a note card. The identity represents a part of herself that may be quite different from her public face. The identity may be expressed by naming a famous person with whom the student identifies, or it could be a general designation such as "movie star" or "circus performer." Team members give the cards to the announcer, who keeps the two team piles separated. The announcer reads an identity from Team B. Team A decides together which member of Team B might have chosen this identity as her alter ego and tells their speaker who they think it is. The Team A speaker says the guess chosen by the team. If the guess is correct, the person identified moves from Team B to Team A. Then Team A gets another chance, and they continue to guess the identities of people on Team B until they guess incorrectly. When an incorrect guess is made, the announcer reads an identity from Team A, and Team B gets to guess.

➔ After the activity, discuss the reflection questions below.

Reflection

Were you surprised by any of the alter egos chosen by your classmates? We tend to stereotype others, even our friends, family members, and classmates, thinking we know them thoroughly. Share about a time when someone you thought you knew well surprised you.

Action Advisory 1 (CPR)

Advisory goal: Become aware of how we speak to and treat one another at school.

DAILY NEWS

Welcome, all!

Today we're going to begin investigating our school's culture and its language. On the continuum below, indicate with a mark your estimate of how often we (adults and students) use biased language here at our school. Biased speech includes offensive or hurtful words that demean people.

Rarely — Many times a day

Pick up a copy of the Tracking Biased Speech Survey we will use to evaluate how much biased speech is going on in our school. Tomorrow we will tally our results.

GREETING

Fist Tap Greeting

Students greet each other around the circle silently or with "Good morning, _____," adding a gentle fist tap.

➔ You can also use the Fist Tap Greeting as a quick simultaneous partner greeting when time is short. Model and practice fist-tapping before beginning: Make a fist and then gently tap your partner's fist as "Good morning, _____" is exchanged.

SHARE

Whip Share on Biased Speech Topic

Students show fingers, one to five, to indicate how often they hear students put down others in their school on a typical day: one finger for rarely and five for many times a day.

Each student offers a brief response; responses quickly "whip" around the circle. The teacher then discusses the Tracking Biased Speech survey with the class.

➔ Give students some examples to help them understand what is meant by biased speech:

- "You're so lame!"
- "You're acting like a girl!"
- "That's so gay!"
- "There go the nerds."
- "He's a Sped kid."
- "Another dumb jock."
- "You're a retard."
- "Let's ask the Asian—he'll fix it."
- "That looks really ghetto!"

➔ Ask students and then brainstorm: "How can you record an incident of biased speech if you don't have your form with you at the moment?"

ACTIVITY

Zoom

Students see how quickly they can say “Zoom!” around the circle. A student begins the activity by saying, “Zoom!” and turns his head quickly to a neighbor on either the right or the left. The neighbor passes the “Zoom!” to the next player and so on around the circle, as fast as the group can. A leader can time the “Zoom!” around the circle and challenge the students to go faster.

Tracking Biased Speech Worksheet

Definition of biased speech: prejudiced, offensive, hurtful words that demean or exclude people because of age, gender, religion, race and ethnicity, social class, sexual orientation or physical or mental traits.

During one full school day, listen carefully to the conversations around you: things said by students and adults anywhere in the school, including by you. Tally derogatory remarks you hear in any of the categories listed. *Do this privately*. Don't comment on the biased remarks—just record with a tally mark that you heard them.

CATEGORY	TALLY
Race and Ethnicity	
Gender	
Religion	
Sexual Orientation	
Physical or Mental Ability	
Appearance	

On the back of this page, write down a couple of the biased statements you overheard. Discuss how you felt before, during and after doing the assignment. Also answer these questions:

1. Was any of the biased speech your own?

2. Was any of it language you sometimes use?

Action Advisory 2 (CPR)

Advisory goal: Become aware of the amount and nature of biased speech in our school.

DAILY NEWS

Good morning, sociologists!

Today we'll compile the results of our surveys. Below is a chart about biased speech with the same headings as your Tracking Biased Speech survey forms. Do this now: Record your data on this master chart, and we'll see the results we got as a group. Make a tally mark for every comment you have heard under each category.

Race and Ethnicity	Gender	Religion	Sexual Orientation	Physical/Mental Ability	Appearance

➔ Have students organize their tally marks in clusters of five. If some do not know how to use tally marks, teach them.

GREETING

Partner Greeting

Students greet each other by shaking hands and saying, "Good morning, ____." Partner greetings are done in pairs, simultaneously, rather than sequentially around the circle in the usual style.

➔ This greeting format is useful when time is short or the risk level needs to be lowered.

SHARE

Partner Share

Partners discuss the results of their surveys on the frequency of biased speech and any specific examples they recorded. A whole-group tally and discussion of the data on the master chart follows the partner share. Volunteers share out any examples they collected. Students brainstorm in response to this question: "What might we say in response to biased speech that might shut it down or at least reduce its frequency?"

➔ Possible responses to biased speech:

- "I don't think that's funny."
- "That's the kind of language that really hurts people."
- "I'm surprised to hear you talk like that—I don't think of you as a person who is so prejudiced."

Explain that these phrases allow people to speak up against bias in a simple, straightforward manner. Sometimes they may open a dialogue. Other times, they simply allow people to challenge bias and take a vocal stand against it. And they could draw a snide comment from the person being addressed.

➔ If many students did not collect data, you can tally whatever results you have, take one more day to tally and compile the results the next day.

➔ Keep your own tally. Add your results to the chart, and share language you heard in school.

ACTIVITY

Yes!

Students stand or sit in a circle and look around at each other's eyes. When eye contact is made, both players say, "Yes!" They then switch seats, high-fiving as they walk across the circle.

Action Advisory 3 (A+)

Advisory goal: Understand the courage and character needed to take a stand.

DAILY NEWS

Welcome, friends!

Today we'll begin talking about what it takes to survive hard times, even atrocities, and come away with the courage and determination to help others.

GREETING

Cambodian Greeting

For a formal greeting, the greeter places her palms together with thumbs close to her chest and says, "Chum reap suor" (pronounced "choom reb suah") as she leans toward the person and lowers her head slightly. For an informal greeting that could translate into something like "How's it going?" she can simply say, "Suk sa bye" (pronounced "sook sah bye") with no hand gesture or bow.

➔ Do not permit disrespect. The gesture in the formal greeting is a small bow toward the person being greeted; it shows respect and friendliness. You can introduce the formal greeting by saying that you know everyone can do this respectfully. The informal greeting does not include the gesture. Choose the one your students can handle.

ACTIVITY

Arn Chorn-Pond, Cambodian Genocide Survivor, and Moments of Courage

The teacher reads the Arn Chorn-Pond resource to students. After the partner reflection, the teacher introduces the Moments of Courage project.

Arn Chorn-Pond

The Khmer Rouge was a political and military regime that controlled Cambodia with immense cruelty from 1975 to 1979. During its reign, more than 1.5 million Cambodian men, women and children were murdered. Millions of Cambodians fled to refugee camps just over the border, in Thailand, where they lived in fear and hunger for years. Arn Chorn-Pond's family was murdered in a Khmer Rouge death camp when Arn was nine years old. Of the 500 children in the camp, only 60 survived. The Khmer Rouge forced Arn to undress the children and hold their hands as they killed them. Arn finally escaped. He survived on his own in the jungle for a time, and then got to a refugee camp in Thailand. Eventually, he was adopted by an American couple and moved with them to New Hampshire, where he graduated from high school. But he was haunted by dreadful memories. The fact that he had survived when so many had died depressed him. In 1984, Arn co-founded Children of War, dedicating his life to ending the suffering of children who survived the Khmer Rouge nightmare. He has helped Cambodian youth in Cambodia and in the United States and has also worked to preserve Cambodian traditional music.

➔ Optional: Listen to Arn Chorn-Pond (facinghistory.org/video/arn-chorn-pond-everyone-has-story) on the Facing History and Ourselves website (10 minutes).

Reflection

Partners, discuss as many of these questions as you have time for. Be sure to include question 4: It is the beginning of a project in which your group gathers your thoughts, memories and observations about moments of courage when people take a stand against prejudice and for justice.

1. How might the saying "What doesn't kill you strengthens you" apply to Arn's life? What qualities does Arn exhibit that probably helped him survive his ordeal?

2. Do you know someone who survived hard times and helped others? Have you?

3. If Arn had come to your school when he left Thailand, would you have gone out of your way to be his friend? Why or why not?

4. Describe any courageous acts you have witnessed, heard about or done yourself, recently or in the past. Using an index card for each act, record three facts. Here are some questions to help you:

- Who took the action? (Identify the person in some way: name, age, gender or relationship to you.)
- Where did you witness the event?
- What happened?
- What were your thoughts and feelings about it at the time?
- Do you think you could do this yourself?

Moments of Courage Cards
While students read and interact with the Daily News message for the next week or so, the teacher should give them time to record on note cards moments of courage they experienced recently or remember from the past, in school or elsewhere. The teacher collects these cards as students write them by having students drop them in a box next to the Daily News.

➔ Before this advisory meeting, write down on note cards moments of courage you have witnessed, heard about or done yourself. Read your cards to students to help them understand the purpose and method of this project. Point out that small acts are important, too, like smiling at a stranger or sitting next to someone who's alone at lunch and starting a conversation.

Action Advisory 4 (CPR)

Advisory goal: Become aware of people who take a stand.

DAILY NEWS

Good morning, storytellers!

Today we'll share the Moments of Courage we have been collecting, and we'll hear stories collected by other people.

➔ Be sure to wait to do this advisory until each student has had a chance to record at least one moment of courage. See Action Advisory 3 for the start of the project.

GREETING

High-Five Greeting

Moving in sequence around the circle, students greet each other with a high-five. For example, Roxanne greets Arie with "Hi, Arie" and a high-five. Arie replies in the same way.

SHARE

Moments of Courage Share by Teacher

The teacher reads aloud a few of the moments of courage cards collected so far. She then acknowledges students for contributing to the project and points out that acknowledging such acts is a way of speaking up.

ACTIVITY

Giraffe Stories

The teacher shares the following with students: "From students who speak up when someone is being bullied to young people who establish organizations to reduce the violence that cultural hatred breeds, there are young people who take action instead of walking away. The Giraffe Heroes Project honors risk-takers—ordinary people who 'stuck their necks out' for what was right, in the U.S. and around the world."

Distribute Giraffe Stories

Before the advisory meeting, the teacher copies and cuts apart the 10 stories below. For the activity, the teacher divides the class into 10 groups and gives one story to each group. After deciding how they want to do it (in unison or one reader at a time) each group reads aloud the description of their "giraffe."

➔ If you need more giraffe stories, you can find them at the Giraffe Heroes Project website (http://www.giraffe.org).

Giraffe Heroes Project Stories

1. Sarah Cronk was a high school cheerleader when she decided to create a more inclusive cheerleading squad in her school. Her brother was excluded from many activities because he was on the autism spectrum, and this made her aware of the outsider status of students with disabilities. The Spartan Sparkles cheerleading team now includes 10 cheerleaders with disabilities. Her goal is to start 100 inclusive cheerleading squads through her organization, the Sparkle Effect.

2. Eric Love was a college student when he led protests against white supremacist rallies and worked to make Martin Luther King Day a state holiday in Idaho. He also spoke publicly against homophobia at a rally and lost some support by doing so, but he continued his anti-bias stand.

3. Tammie Schnitzer, Sarah Anthony, Wayne Inman, Margaret Macdonald, Brian Schnitzer and Keith Torney all responded to intimidation from anti-Semitic Aryan supremacists in Billings, Mont., by showing solidarity with Jewish families at Hanukkah time. Like the Jewish families, they all put menorahs in their windows, despite the possibility that their homes might become targets of the bigots.

4. Cheryl Perara, of Toronto, Canada, was inspired as a teenager to work to protect children being used as sex slaves in countries around the world. Cheryl founded OneChild, run by youth working to stop commercial sexploitation of girls and boys.

5. Desiray Bartak wanted all kids who have been sexually abused to know they could stand up for themselves, so she went public about being abused by a relative. She convinced a high-profile attorney to bring a suit for damages against her abuser, and she won. Despite harassment from her classmates, Desiray continued to speak out and founded a support network for abused kids.

6. John DeMarco was 13 when he reported a neighbor for painting “racial” epithets on a home in his neighborhood—a home that a black family was considering buying. Neighbors objected to John’s action, but he persisted and testified against the perpetrator, who was convicted.

7. Ernesto Villareal was a star high school football player who took a stand to stop racist taunts at football games. He risked his spot on the team by organizing Latino players to boycott football practice. The action stopped the name-calling.

8. Franklin McCabe III, a Navajo/Sioux teenager in Parker, Ariz., used a music and light show he created in seventh grade to speak out against substance and alcohol abuse at Native American social events.

9. Roosevelt Johnson, a high school student in Selma, Ala., founded a local chapter of 21st Century Leadership, an organization that enlists gang leaders in confronting racism. He also helped pressure slumlords to improve housing and established study groups, peer counseling and voter registration drives.

10. Alberto Esparaze took a stand to use his time and knowledge to help others. He created programs that help especially poor people and minorities in Arizona improve their lives.

Action Advisory 5 (CPR)

Advisory goal: Imagine yourself intervening on behalf of the target in a situation of bias or discrimination.

DAILY NEWS

Welcome, walkers!

Today we'll see how many ways we can dream up to walk across the circle and greet each other. After the Let Me See Your Walk Greeting, we'll discuss spreading the word about people who have had the courage to stick their necks out for others.

GREETING

Let Me See Your Walk Greeting

The first student pantomimes doing something he enjoys (e.g., playing ball, operating a video game, eating) as he walks across the circle to another student. He greets her and asks to see her "walk." She returns his greeting, they exchange places, and she pantomimes a favorite activity as she crosses the circle to another student. This is repeated until all have been greeted.

Here is an example: Ted enjoys baseball, so he mimes swinging a bat as he walks across the circle to Shalana. He says, "Good morning, Shalana. Let me see your walk." Shalana replies, "Good morning, Ted. Watch this!" and crosses the circle pretending to paint. Shalana then continues her walk and greets another student.

SHARE

Partner Share

Students discuss ways the group might publicize the Moments of Courage (e.g., create a hall display, write a letter to the principal, send a letter to the editor, or create a presentation for another advisory group or for an assembly). Volunteers share out ideas.

➔ Optional: Determine if the group wants to share courageous moments with others. If so, pursue the possible ideas presented.

ACTIVITY

Count Up (Team-Building Activity)

Students count to 10 as a group. Only one person may speak at a time, and students blurt out numbers without following a pattern or sequence to help them take turns. If more than one student says a number at the same time, the group starts from one again.

Advisory FAQS

Want to know more about leading advisory activities?

Q. What can I do to encourage students who aren't participating?
Build trust. Students must feel safe and included. Everyone needs to give and receive a friendly greeting, with eye contact and a pleasant manner, with no one left out. Try playing cooperative games (see DevelopmentalDesigns.org for many greetings and games that adolescents enjoy). *The Advisory Book* has an appendix of dozens of games that help bring adolescents together, and *Face to Face Advisories: Bridging Cultural Gaps in Grades 5-9* includes a section on community-building advisories. It describes in detail 15 meetings to build the trust and connection that facilitates open, honest conversations about culture and bias.

Q. What if students misbehave during meetings and don't respect the rules and/or others?
Chapter 1 of *The Advisory Book* includes a section on establishing a healthy social climate in advisory by establishing rules, practicing routines and responding to rule-breaking. Corrections are made in a democratic and respectful manner that preserves the feeling of community while addressing misbehavior.

Q. What if an activity seems inappropriate for my students?
Skip it or adapt it. You are the best judge of what they are ready for and what is right for them developmentally. Use your judgment, but preserve the basic sequence of meetings, which are designed to build upon one another.

Q. Why are some words underlined in the Daily News messages?
The underlined words are often relevant to the day's conversation; most are meant to stretch adolescent vocabularies and perhaps bridge cultural differences.

Q. I'm a high school teacher. Are these meetings appropriate for 15-to-18-year-olds?
The content of these meetings is definitely appropriate for older students and even for adults (you might try out a few of the meeting activities at a staff meeting). Although high school students may resist participating in games, if you can get them past the "I'm too mature for that kid stuff" attitude, they will probably enjoy them.

Need more information? Check out this special *Face to Face Advisories* excerpt (originsonline.org/developmental-designs/support-face-face-advisories-selection-teachingtoleranceorg) for the Teaching Tolerance advisory selection.

Advisory Best Practices

Developmental Designs Advisory Best Practices

The *Developmental Designs* approach recognizes that schools have complex cultures. And in order to create healthy, empowering school climates, educators must examine the entire system: curriculum, instruction, materials and equipment, and the adult community. This approach directs efforts toward the social emotional climate of the system, considering the quality of relationships among staff, among students, and between students and staff.

The following practices in advisory meetings support an integrated, comprehensive approach to creating a school climate that calls for each person to be respected and valued.

Goals and Declarations
Ensure that everyone in the advisory, including the teacher, declares a personal stake in the group. Ask "If things went really well for you in this advisory, what would it look like? What is the best outcome for you personally that you can imagine?" Then have each person convert the answers to those goals into declarations: *I will personally do* _________ *in advisory to make [my goal] happen.*

Social Contract
Create an agreement among all the stakeholders in the advisory that draws from the group's personal goals and binds the advisory community to rules for respect for all individuals and cultures.

Modeling and Practicing
Model and practice the routines and activities of the advisory so that students know the expectations and competencies essential to their success.

The Loop
Follow a two-step reflective process that includes thoughtful planning of activities and assessment afterward of the content and the process, the ideas and opinions generated in the activity, and how they relate to students' own lives and opinions. The Loop helps students develop well-founded ideas.

Empowering Language
Ensure that self-expression by students and teachers respects guidelines to ensure that communication in advisory is respectful of many points of view, never debasing.

Pathways to Self-control
Guide students to be both authentic and respectful. If they disrupt the community, provide techniques for correction that maintain the individuality and dignity of the rule-breaker.

Collaborative Problem-solving
Teach students to make decisions through a consensus process that includes everyone.

Power of Play
Help your advisory community bond with games that ensure no one is left out.

Practices for Motivating Instruction
Give everyone opportunities for leadership and self-direction during meetings. Conversations should be relevant to students' home and neighborhood lives, and activities should be designed to appeal to many learning styles.

Advisory Acknowledgements

Our thanks to the Origins Program for the use of these advisory activities.

THE ORIGINS PROGRAM AND THE *DEVELOPMENTAL DESIGNS* APPROACH

Face to Face Advisories is The Origins Program's (TOP) latest effort in accomplishing its mission "to promote an equitable and humane multicultural society through quality education for all." The Origins Program, a nonprofit based in Minneapolis, Minn., has worked with educators since 1979, providing school residencies in cultural understanding through the arts, as well as workshops, consulting and publications to create open, equal and connected school environments in grades K-12 in 45 states. In 2004, TOP created the *Developmental Designs* approach for advancing social emotional and academic growth in adolescents.

LEARN MORE, DIG DEEPER

These 20 advisory meetings on culture and bias provide a taste of the more than 125 meetings described in detail in *Face to Face Advisories*. The book provides the tools you need to guide conversations about culture that will take students from initial exchanges about their cultures to an understanding of the interconnectedness of everyone on our planet, the terrible price we have paid for bigotry, the realization that change is not only possible but inevitable, and opportunities to direct change toward justice and equality for all.

Explore the book at The Origins Program bookstore (originsonline.org/bookstore/face-face-advisories), including excerpts from six chapters.

LEARN MORE ABOUT THE *DEVELOPMENTAL DESIGNS* APPROACH BEHIND *FACE TO FACE ADVISORIES*

The Advisory Book—Begin every day productively for all students, and build inclusive classroom communities where students are engaged and successful in their learning and develop the social skills for responsible independence (originsonline.org/bookstore/advisory-book-revised-edition-0).

Classroom Discipline: Guiding Adolescents to Responsible Independence—Create a classroom climate for student growth. Explore this practical guide for building relationships with students, setting goals, creating rules and practicing them, redirecting and problem-solving when students break the rules, and engaging students in learning (http://www.originsonline.org/bookstore/classroom-discipline).

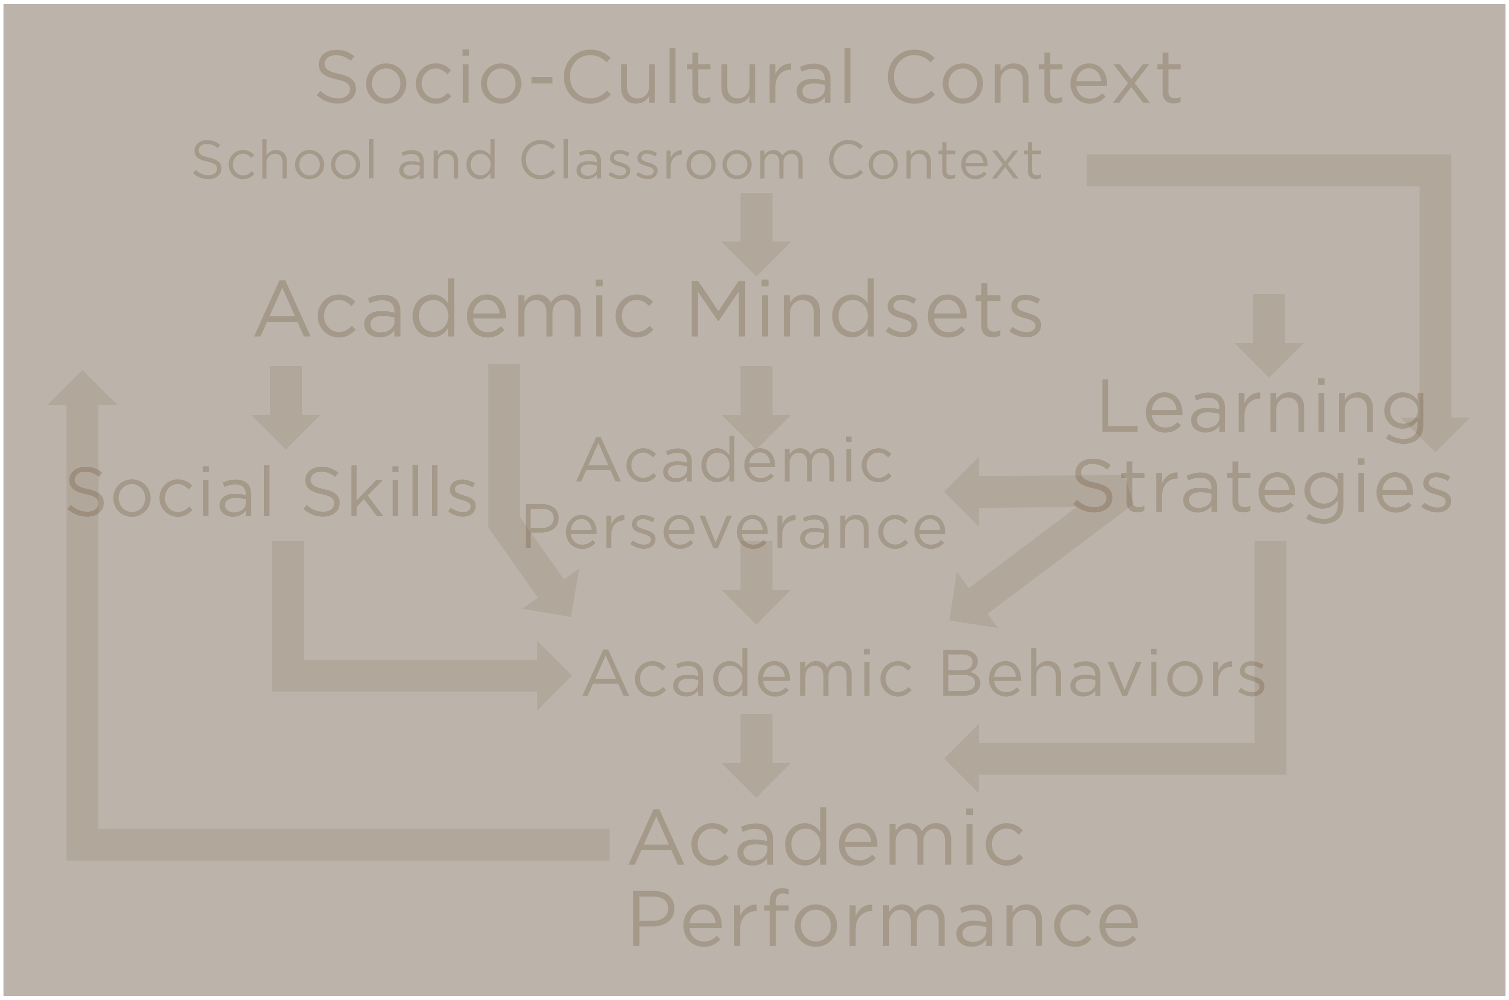
LITERATURE REVIEW JUNE 2012

Teaching Adolescents To Become Learners

The Role of Noncognitive Factors in Shaping School Performance: A Critical Literature Review



Camille A. Farrington, Melissa Roderick, Elaine Allensworth, Jenny Nagaoka, Tasha Seneca Keyes, David W. Johnson, and Nicole O. Beechum

TABLE OF CONTENTS

ACKNOWLEDGEMENTS We would like to recognize the many people who contributed to this review. Our research colleagues at the University of Chicago Consortium on Chicago School Research and our practitioner colleagues at the Network for College Success gave critical feedback and helped us think through the implications of the existing literature for both research and practice. We would particularly like to thank Eliza Moeller, Faye Kroshinksy, Kersti Azar, Kafi Moragne, Thomas Kelley-Kemple, Mary Ann Pitcher, Sarah Howard, Rito Martinez, Jackie Lemon, Catherine Whitfield, LaKisha Pittman, Cecily Langford, Michael Kristovic, Sue Sporte, W. David Stevens, Marisa de la Torre, Julia Gwynne, Bronwyn McDaniel, and Penny Bender Sebring for their feedback on our model of noncognitive factors and their critical comments on and contributions to the report. We are indebted to members of the CCSR Steering Committee who provided substantive feedback on our research, particularly Lila Leff and Kim Zalent. Angela Duckworth and David Yeager gave us very helpful critical commentary that strengthened our final product. CCSR Associate Director, Communications, Emily Krone and Communications and Research Manager, Bronwyn McDaniel were instrumental in shepherding this through the production process. Welcome to baby Caroline Mary Phillips, whose conception and birth coincided very closely with the conception and delivery of this project.

This work was supported by Lumina Foundation and Raikes Foundation. We thank them for their support and close collaboration in this project.

The University of Chicago Consortium on Chicago School Research created this report in partnership with Lumina Foundation and Raikes Foundation. We gratefully acknowledge their substantive intellectual contributions and financial support.

RAIKES FOUNDATION

The Raikes Foundation believes the rapidly evolving demands of life, work and citizenship in the 21st century require a more comprehensive approach to educating young people. Content knowledge remains critical, but a growing body of research suggests students' attitudes and beliefs about their education, and the learning strategies they deploy, can have a powerful influence on their ability to succeed. The Raikes Foundation's Student Agency strategy is exploring ways to help young people develop the academic mindsets and learning strategies that have been demonstrated to advance achievement. The Raikes Foundation is funding research to understand the best practices for building student agency and fostering awareness and excitement about student agency among teachers, administrators and policymakers across the country. Based in Seattle, the Raikes Foundation's grantmaking strategies also include a collaborative effort to prevent and end youth homelessness in King County, and an initiative to improve the quality of after-school programs across Washington State.

LUMINA FOUNDATION

Lumina Foundation is committed to enrolling and graduating more students from college. It is the nation's largest foundation dedicated exclusively to increasing students' access to and success in postsecondary education. Lumina's mission is defined by Goal 2025—to increase the percentage of Americans who hold high-quality degrees and credentials to 60 percent by 2025. Lumina pursues this goal in three ways: by identifying and supporting effective practice, by encouraging effective public policy, and by using communications and convening capacity to build public will for change. Lumina has worked with and made grants to many colleges, universities, peer foundations, associations, and other organizations that work to improve student access and outcomes across the nation.

THE UNIVERSITY OF CHICAGO CONSORTIUM ON CHICAGO SCHOOL RESEARCH

The University of Chicago Consortium on Chicago School Research (CCSR) conducts research of high technical quality that can inform and assess policy and practice in the Chicago Public Schools. CCSR seeks to expand communication among researchers, policymakers, and practitioners as it supports the search for solutions to the problems of school reform. CCSR encourages the use of research in policy action and improvement of practice, but does not argue for particular policies or programs. Rather, CCSR researchers help to build capacity for school reform by identifying what matters for student success and school improvement, creating critical indicators to chart progress, and conducting theory-driven evaluation to identify how programs and policies are working. A number of features distinguish CCSR from more typical research organizations: a comprehensive data archive, a focus on one place—Chicago, engagement with a diverse group of stakeholders, a wide range of methods and multiple investigators, and a commitment to sharing research findings with diverse publics.

BACKGROUND OF THIS REPORT

Early in 2011, Program Officers from Lumina Foundation and Raikes Foundation approached researchers at CCSR about undertaking a joint project, focused on the role of noncognitive skills in students' school performance and educational attainment. In addition to their financial support, Lumina and Raikes brought their respective interests and expertise in postsecondary attainment and middle grades education. CCSR brought its trademark approach to school reform: using research and data to identify what matters for student success and school improvement, creating theory-driven frameworks for organizing the research evidence, and asking critical questions about the applicability of research to practice.

A NOTE ON TERMINOLOGY

Noncognitive Factors

School performance is a complex phenomenon, shaped by a wide variety of factors intrinsic to students and in their external environment. In addition to content knowledge and academic skills, students must develop sets of behaviors, skills, attitudes, and strategies that are crucial to academic performance in their classes, but that may not be reflected in their scores on cognitive tests. Other researchers have described these factors as *noncognitive skills*; we broaden the term to *noncognitive factors* to go beyond a narrow reference to skills and include strategies, attitudes, and behaviors. This change in terminology suggests a more expansive understanding of noncognitive factors, requiring that we look beyond individual-level skills to consider the ways students interact with the educational context within which they are situated and the effects of these interactions on students' attitudes, motivation, and performance.

While we are strongly persuaded by the evidence of the importance of these factors for students' course performance, we find "noncognitive" to be an unfortunate word. It reinforces a false dichotomy between what comes to be perceived as weightier, more academic "cognitive" factors and what by comparison becomes perceived as a separate category of fluffier "noncognitive" or "soft" skills. As others have pointed out, contrasting cognitive and noncognitive factors can be confusing because "few aspects of human behavior are devoid of cognition" (Borghans, Duckworth, Heckman, & Weel, 2008, p. 974). In reality, these so-called cognitive and noncognitive factors continually interact in essential ways to create learning, such that changes in cognition are unlikely to happen in the absence of this interaction (Bransford, Brown, & Cocking, 2000). How could one's study skills, for example, not be part of a cognitive process? How could one's intelligence not come into play in the exercise of one's social skills? Alas, the word *noncognitive* is already deeply embedded in educational policy circles, in the economics literature, and in broader discussions of student achievement. Though we agree with others' objections to this terminology, we feel compelled to use it. To try to substitute in another word now would likely confuse rather than illuminate our collective understanding of this important area of research.

One further clarification is in order. Throughout this review, we use the term *cognitive factors* to refer generally to the "substance" of what is learned in school, namely a student's grasp of content knowledge and academic skills such as writing and problem-solving. This is distinct from a student's *capacity* to learn. Advances in cognitive science over the last 30 years have highlighted the limitations of the concept of an individual's intelligence "quotient" (IQ) as a fixed and quantifiable amount of intellectual capacity. Research in human cognition has moved away from the idea of cognition as being isolated within an individual brain to depending on the contexts in which it exists, "including the environment, perception, action, affect, and sociocultural systems" (Barsalou, 2010, p. 325). Barsalou summarizes 30 years of research in cognitive science by saying that "continuing to study cognition as an independent isolated module is on the fast track to obsolescence." In our review, then, we work from the idea that learning is an interplay between cognitive and noncognitive factors and that intelligence is embedded in both the environment and in socio-cultural processes.

CHAPTER 1

The Promise of Noncognitive Factors

Over the past 20 years, changes in the U.S. economy have raised the stakes for educational attainment, resulting in dire economic consequences for workers without a high school diploma and some college education. American adolescents have responded by dramatically increasing their educational aspirations; almost all high school students in the U.S. now say they expect to go to college (Engel, 2007). Education policymakers have attempted to ensure students' qualifications for college by ratcheting up academic demands through more rigorous high school graduation requirements, increasing participation in advanced coursework, and raising standards within courses. Test-based accountability measures have been enacted with the intention of holding schools accountable for reaching these higher standards.

Currently, there is considerable optimism around the new Common Core State Standards, with expectations that this articulated framework of content knowledge and core academic skills will lead to more high school graduates who are ready for college and the workforce. There is also growing consensus that schools need to "ramp up" expectations in the middle grades, resulting in policies to start the study of algebra in eighth grade, for example. Many states and districts are simultaneously developing measures of high school and college readiness that rely on specific patterns of coursework (e.g., AP courses) and standardized test scores as readiness benchmarks. These efforts suggest that students' readiness for high school or college depends almost entirely on their mastery of content knowledge and academic skills as developed through the courses they take.

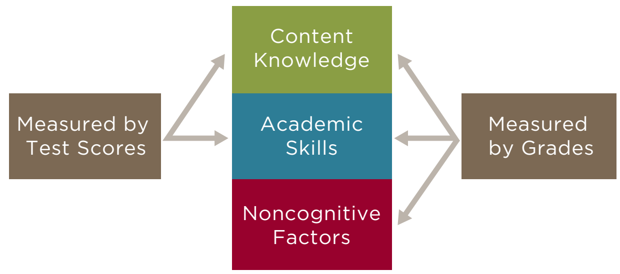
Unfortunately, there is little to no rigorous evidence that efforts to increase standards and require higher-level coursework—*in and of themselves*—are likely to lead many more students to complete high school and attain college degrees. Current policy efforts rest on the assumption that a more rigorous high school curriculum will improve student performance on standardized tests, which will reflect that students are better prepared for college. But what matters most for college graduation is not which courses students take, or what their test scores are, but how well students perform in those courses, as measured by their high school course grades.[1] Students' course grades, grade point average (GPA), or class rank are vastly better predictors of high school and college performance and graduation, as well as a host of longer-term life outcomes, than their standardized test scores or the coursework students take in school (Allensworth & Easton, 2005, 2007; Camara & Echternacht, 2000; Geiser & Santelices, 2007; Hauser & Palloni, 2011; Hoffman, 2002; Hoffman & Lowitzki, 2005; Moffat, 1993; Munro, 1981; Tross et al., 2000; Zheng et al., 2002). GPA is not only important in predicting whether a student will complete high school or college; it is also the primary driver of differences by race/ethnicity and gender in educational attainment (Allensworth & Easton, 2007; Jacob, 2002; Roderick, Nagaoka, & Allensworth, 2006). **Box 1.1 and the Appendix (p. 102)** further illustrate this point.

The findings on the critical importance of GPA for students' future outcomes suggest that we need to better understand why they are so predictive of later success. Grades must capture some other important student attributes—over and above the content that test scores measure—but what? The prevailing interpretation is that, in addition to measuring students' content knowledge and core academic skills, grades also reflect the degree to which students have demonstrated a range of academic behaviors, attitudes, and strategies that are critical for success in school and in later life, including study skills, attendance, work habits, time management, help-seeking behaviors, metacognitive strategies, and social and academic problem-solving skills that allow students to successfully manage new environments and meet new academic and social demands (Conley, 2007; Farkas, 2003; Paris & Winograd, 1990) (**see Figure 1.1**). To this list of critical success factors, others have added students' attitudes about learning, their beliefs about their own intelligence, their self-control and persistence, and the quality of their relationships with peers and adults (Ames & Archer, 1988; Bandura, 1997; Bandura & Schunk, 1981; Keith, Keith, Troutman, Bickley, Trivette, & Singh, 1993; Pintrich, 2000; Schunk & Hanson, 1985; Wentzel, 1991; Zimmerman, 1990). There is a long list of factors—beyond content knowledge and academic skills—shown to have an impact on student performance.

Economists refer to these factors as "noncognitive" because they are not measured by commonly administered cognitive tests such as IQ tests or academic examinations. In a wide range of studies, many of these noncognitive attributes are shown to have a direct positive relationship to students' concurrent school performance as well as future academic outcomes. Economist and Nobel laureate James Heckman (2008) argues that noncognitive factors such as motivation, time management, and self-regulation are critical

FIGURE 1.1

Factors Measured by Test Scores versus Grades



BOX 1.1

Measuring Academic Performance: The Case for Focusing on Grades

Despite all the attention to standardized tests, a growing body of research shows that achievement test scores are not strong predictors of whether students will graduate from high school or college. Research on early indicators of high school performance finds that passing courses and GPA in the middle grades and even earlier in elementary school are among the strongest predictors of high school outcomes (Kurlaender, Reardon, & Jackson, 2008; Neild & Balfanz, 2001; Zau & Betts, 2008). Likewise, high school grades are stronger and more consistent predictors of college persistence and graduation than college entrance examination scores or high school coursetaking (Geiser & Santelices, 2007; Roderick, Nagaoka, & Allensworth, 2006). In a study using data from the University of California, Geiser and Santelices (2007) found that high school grades were a stronger predictor of both college GPA and likelihood of college graduation than students' SAT scores, class rank, and family background.[2]

In *Crossing the Finish Line*, Bowen, Chingos, & McPherson (2009) also found that high school grades were much better predictors of college graduation than ACT or SAT scores. Like others with similar findings, Bowen and colleagues speculate that, beyond measuring content mastery, grades "reveal qualities of motivation and perseverance—as well as the presence of good study habits and time management skills" and "often reflect the ability to accept criticism and benefit from it and the capacity to take a reasonably good piece of one's work and reject it as not good enough" (p. 124). Ultimately it is these qualities, more so than content knowledge, that signal which students are likely to excel in their studies and persevere in their schooling.

Furthermore, it is not just course grades and educational attainment that are better predicted by grades than by tested performance. Miller (1998) found that high school grades had strong, significant relationships with earnings nine years after high school, for both men and women, even after controlling for educational attainment and school effects. Earnings were higher by about 20 percent for each GPA point earned in high school (As versus Bs; Bs versus Cs; Cs versus Ds). Hauser and Palloni (2011) found that students' class rank (as determined by their grades) accounted for all of the relationship between IQ and length of life, and suggested this was due to having established responsible patterns of behavior during adolescence.

These findings make sense. Students who come to class and complete their work are likely to have developed the kind of work habits they will need in college as well as in the workforce. Students who struggle with self-discipline or productivity in high school will likely find the challenges of college overwhelming, regardless of their intellectual ability or content knowledge. The finding that course grades matter over and above achievement test scores suggests that grades do indeed capture something important about students that test scores do not.

for later life outcomes, including success in the labor market. Recent research on noncognitive factors has not only suggested their importance for student academic performance but has also been used to argue that social investments in the development of these noncognitive factors would yield high payoffs in improved educational outcomes as well as reduced racial/ethnic and gender disparities in school performance and educational attainment.

Interest in noncognitive factors has been propelled in recent years, in part, by some compelling results from a number of psychological studies. This body of work has shown some short-term interventions that target students' psycho-social beliefs—such as interventions that work to change students' beliefs about their intelligence, that promote social belonging, or that connect performance to future goals—as having substantial effects on school performance that are sustained over time (e.g., Blackwell et al., 2007; Good, Aronson, & Inzlicht, 2003; Oyserman, Terry, & Bybee, 2002; Walton & Cohen, 2007). Two widely cited psychologists, Duckworth and Seligman (2005), suggest that academic performance depends in large part on students' self-control or Conscientiousness, concluding that "a major reason for students falling short of their intellectual potential [is] their failure to exercise self-discipline" (p. 939). They claim that measures of self-discipline are far more predictive of positive academic outcomes than are measures of IQ. Carol Dweck and her colleagues (2011) conclude in a review of the evidence on academic mindsets and what they term "academic tenacity" that "educational interventions and initiatives that target these psychological factors can have transformative effects on students' experience and achievement in school, improving core academic outcomes such as GPA and test scores months and even years later" (p. 3).

Just as importantly, researchers are increasingly turning to noncognitive factors to explain differences in school performance by race/ethnicity and gender. Brian Jacob (2002) notes that academic difficulties are often attributed to poor "noncognitive skills" among boys, including "the inability to pay attention in class, to work with others, to organize and keep track of homework or class materials and to seek help from others" (p. 590). Interventions that focus on developing academic mindsets, moreover, are being designed and evaluated as a method to reduce stereotype threat and improve the academic performance and educational attainment of racial/ethnic minority students (Aronson, Cohen, & McColskey, 2009). As we review later, much of this work shows promising results. Thus, a collection of research suggests not only that noncognitive factors contribute to students' academic performance but also that racial/ethnic and gender differences in school performance can be reduced by focusing on students' attitudes and behaviors.

Unfortunately, knowing that noncognitive factors matter is not the same as knowing how to develop them in students. And what exactly is the nature of these noncognitive factors? Are they inherent student characteristics that some students have and others do not? Are they fixed traits, or do they change in response to context or environment? Can they be taught and learned in a school setting? Are noncognitive factors more important—or more problematic—for one race/ethnicity or gender over another? Many of the big claims about noncognitive factors have little clear evidence about their implications for educational practice. The suggestion that educators would see big returns from developing academic mindsets, self-discipline, and other noncognitive factors rests on the assumption that these factors are malleable and that educators or researchers have practical knowledge of how to change them. It also requires that educators understand the potential payoffs of different approaches to developing student noncognitive factors, that they have concrete strategies to address their development, and that tools exist to reliably measure changes in these factors.

If indeed noncognitive factors are malleable and are critical to academic performance, a key task for educators becomes the intentional development of these skills, traits, strategies, and attitudes in conjunction with the development of content knowledge and academic skills. In essence, teachers would play a vital role in helping students move from being passive recipients of academic content to active learners who can manage their workload, assess their progress and status, persist in difficult tasks, and develop a reliable set of strategies to master increasingly complex academic content as they proceed through school.

While evidence increasingly suggests that college and career readiness is driven by more than just content knowledge and core academic skills—that noncognitive factors play a key role in student success—it is unclear how all the different types of noncognitive factors interact to shape academic performance or what their implications are for educational practice. Studies of noncognitive factors often examine one particular skill, mindset, or behavior in isolation, making it unclear how all of these factors work together to affect student outcomes. There is, as yet, little coherence to the broad array of research findings and claims around the role of noncognitive factors in students' performance in school. In this report, we seek to bring this much-needed coherence as we review the research on noncognitive factors with a focus on students in the middle grades, in high school, and in the transition to college. We are particularly interested in identifying which noncognitive factors matter for students' long-term success, clarifying why and how these factors matter, determining if these factors are malleable and responsive to context, determining if they play a role in persistent racial/ethnic or gender gaps in academic achievement, and illuminating how educators might best support the development of important noncognitive factors within their schools and classrooms. In reviewing the literature, we use students' course grades as the outcome of interest. For each noncognitive factor, then, we examine the research evidence on the relationship between that factor and students' course grades or GPA, which we refer to broadly in this report as "academic performance."

In Chapter 2, we bring together the existing literature into a conceptual framework that organizes the broad body of research on noncognitive factors. In this framework, we identify five general categories of noncognitive factors related to academic performance: 1) academic behaviors, 2) academic perseverance, 3) academic mindsets, 4) learning strategies, and 5) social skills. We evaluate the research evidence behind each of the five categories in Chapters 3 through 7 in order to identify gaps in the knowledge base and help policymakers and practitioners judge potential high-leverage points for improving student achievement. For each category, we review the research evidence, asking:

- How is this factor related to academic performance?
- Is this factor malleable?
- What is the role of classroom context in shaping this factor?
- Are there clear, actionable strategies for classroom practice?
- Would changing this factor significantly narrow existing gaps in achievement by gender or race/ethnicity?

Table 9.1 on page 78 summarizes our review of evidence on noncognitive factors, organized by these five questions.

After reviewing the evidence on the five noncognitive categories, in Chapter 8 we examine the implications of this work for student learning at three key points in an adolescent's educational trajectory: the middle grades, entrance to high school, and the transition to college. We present case studies on these three periods to shed light on the role of noncognitive factors in students' academic performance across educational transitions. The report closes with an interpretive summary and recommendations for practice, policy, and future research.

In this work, we try to develop a coherent and evidence-based framework for considering the role of noncognitive factors in academic performance and to identify critical gaps in the knowledge base and in the link between research and practice. We see this as a prerequisite for policymakers, practitioners, and education funders who would wish to assess the potential of noncognitive factors as levers for increasing student educational attainment. In our review, we found evidence to suggest that the best leverage points for improving student performance are in helping teachers understand the relationship between classroom context and student behaviors, providing teachers with clear strategies for creating classrooms that promote positive academic mindsets in students, and building teacher capacity to help students develop strategies that will enhance their learning and understanding of course material.

Our review shows that academic behaviors have the most immediate effect on students' course grades. In relation to behaviors, much of the recent attention to noncognitive factors focuses on the idea of developing students' "grit" or perseverance in challenging work.

However, despite the intuitive appeal of this idea, there is little evidence that working directly on changing students' grit or perseverance would be an effective lever for improving their academic performance. While some students are more likely to persist in tasks or exhibit self-discipline than others, *all* students are more likely to demonstrate perseverance if the school or classroom context helps them develop positive mindsets and effective learning strategies. In other words, the mechanisms through which teachers can lead students to exhibit greater perseverance and better academic behaviors in their classes are through attention to academic mindsets and development of students' metacognitive and self-regulatory skills, rather than trying to change their innate tendency to persevere. This appears to be particularly true as adolescents move from the middle grades to high school, and it again becomes important in the transition to college.

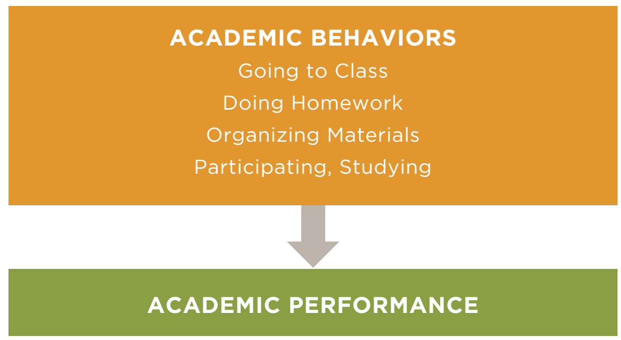
CHAPTER 2

Five Categories of Noncognitive Factors

Five General Categories of Noncognitive Factors Related to Academic Performance:

1. ACADEMIC BEHAVIORS
2. ACADEMIC PERSEVERANCE
3. ACADEMIC MINDSETS
4. LEARNING STRATEGIES
5. SOCIAL SKILLS

1. Academic Behaviors

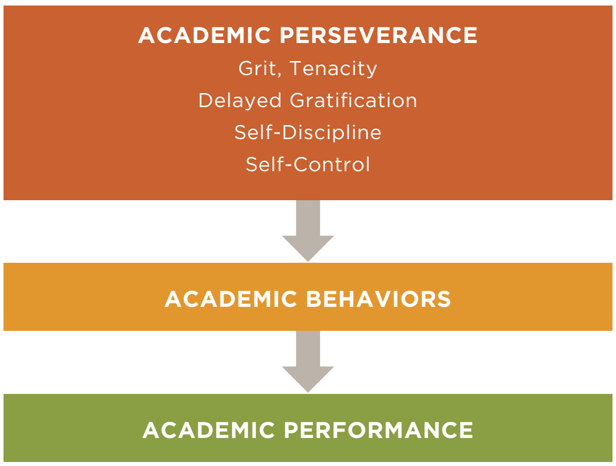


What does it take for students to graduate from high school, go to college, and persist to earn a degree? The list of potential answers to this question is long and extends far beyond content knowledge and academic skills. The noncognitive factors we considered for this review included: persistence, resilience, grit, goal-setting, help-seeking, cooperation, conscientiousness, self-efficacy, self-regulation, self-control, self-discipline, motivation, mindsets, effort, work habits, organization, homework completion, learning strategies, and study skills, among others. We pushed to clarify the meanings of a number of loosely defined concepts and to reconcile disparities between researchers from different disciplinary backgrounds (economists, psychologists, sociologists) who occasionally used different terms for similar constructs or the same terms to describe concepts that were measured quite differently. To synthesize the vast array of research literature on each of these concepts, we organized the wide range of traits, skills, behaviors, and attitudes into categories of similar constructs. We then created a conceptual framework, using empirical research and theory to hypothesize the relationships among categories and the relationship of each category to student academic performance. We describe each of the five categories briefly below, followed by a systematic review in the subsequent chapters of the quality of the research evidence in each category.

Academic Behaviors are those behaviors commonly associated with being a "good student." These include regularly attending class, arriving ready to work (with necessary supplies and materials), paying attention, participating in instructional activities and class discussions, and devoting out-of-school time to studying and completing homework. It is easy to see how these behaviors would directly relate to how well one does in a class. We start here in reviewing the relationship of noncognitive factors to academic performance because academic behaviors are most proximal to one's performance in school. Academic behaviors are the visible, outward signs that a student is engaged and putting forth effort to learn. Because they are observable behaviors, they are also relatively easy to describe, monitor, and measure. Academic behaviors are quite often an outcome of interest in evaluating interventions designed to improve students' school performance. Many programs, policies, and even curricula could reasonably be considered effective if they lead to an increase in student attendance, homework completion, studying, or class participation.

Academic behaviors are extremely important for achievement; we will show that virtually all other noncognitive factors work *through* academic behaviors to affect performance. We will return to this point in our review of academic perseverance, academic mindsets, learning strategies, and social skills, but it is hard to imagine how noncognitive factors could improve student performance *without* working through the classroom behaviors that directly shape academic performance. Chapter 3 provides a summary of the research on academic behaviors.

2. Academic Perseverance



Academic Perseverance describes a set of psychological concepts with a long research history. Broadly, academic perseverance refers to a student's tendency to complete school assignments in a timely and thorough manner, to the best of one's ability, despite distractions, obstacles, or level of challenge. However, evaluating the literature on the range of concepts under our catch-all heading of "academic perseverance" proved challenging. To persevere academically requires that students stay focused on a goal despite obstacles (grit or persistence) and forego distractions or temptations to prioritize higher pursuits over lower pleasures (delayed gratification, self-discipline, self-control). Academic perseverance is the difference between doing the minimal amount of work to pass a class and putting in long hours to truly master course material and excel in one's studies. While academic perseverance is—by definition—a critical factor for students' long-term educational attainment and is often the explicit goal of the growing focus on noncognitive factors, the literature that falls under the umbrella of perseverance is not conclusive in its implications for educational practice or its generalizability to a broad range of students. Chapter 4 provides a summary of the research on academic perseverance.

3. Academic Mindsets

Academic Mindsets are the psycho-social attitudes or beliefs one has about oneself in relation to academic work. Positive academic mindsets motivate students to persist at schoolwork (i.e., they give rise to academic perseverance), which manifests itself through better academic behaviors, which lead to improved performance. There is also a reciprocal relationship among mindsets, perseverance, behaviors, and performance. Strong academic performance "validates" positive mindsets, increases perseverance, and reinforces strong academic behaviors. Note that this reciprocal, self-perpetuating system also works in a negative loop. Negative mindsets stifle perseverance and undermine academic behaviors, which results in poor academic performance. Poor performance in turn reinforces negative mindsets, perpetuating a self-defeating cycle.

A long history of psychological research undergirds the concept of academic mindsets. This includes foundational work in goal theory (Dweck, 1986; Dweck & Leggett, 1988); social learning theory (Bandura, 1977; Rotter, 1954); attribution theory (Weiner, 1979); expectancy-value theory (Eccles, Adler, Futterman, Goff, Kaczala, Meece, & Midgley, 1983); and the concepts of self-efficacy (Bandura, 1986) and locus of control (Rotter, 1954). Psychology research has also addressed the way context and experience can undermine positive academic mindsets, such as the theories of learned helplessness (Seligman & Maier, 1967) and stereotype threat (Steele, 1997; Steele & Aronson, 1995). In Chapter 5 we review the literature on the relationship of four academic mindsets to academic performance, as well as the effects of learned helplessness and stereotype threat. Each of the four academic mindsets is briefly described here.

1. I belong in this academic community. The first mindset involves a sense that one has a rightful place in a given academic setting and can claim full membership in a classroom community. Educational theorists have long held that learning is a social activity and that understanding is constructed through interaction with others (Dewey, 1958; Vygotsky, 1978). Accordingly, students need to feel as though they belong to a community of learners and that their academic self is a "true" self (Harvey & Schroder, 1963; Oyserman, Bybee, & Terry, 2006). A long line of research evidence shows that having a sense of belonging in a school or classroom improves a student's academic performance.

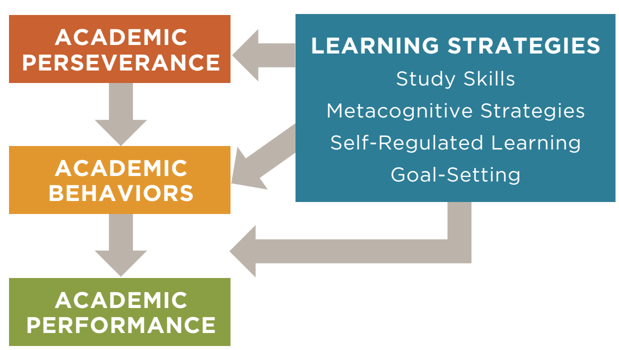
2. My ability and competence grow with my effort. The second mindset rests on the belief that one's academic ability can improve in response to one's efforts, rather than being fixed at a given level and outside of one's control. Notably, across the empirical literature, one's beliefs about intelligence and attributions for academic success or failure are more strongly associated with school performance than is one's actual measured ability (i.e., test scores).

3. I can succeed at this. A third mindset that impacts the degree to which students persevere in academic work and exhibit strong academic behaviors relates to beliefs about their abilities to succeed at a given task. Individuals tend to engage in activities that they feel confident in their ability to complete and to avoid those in which they lack such confidence (Bandura, 1986).

4. This work has value for me. A fourth mindset involves a student's sense that the subject matter he or she is studying is interesting and holds value. Value can be variously defined as the importance of doing well on a task (attainment value); gaining enjoyment by doing a task (intrinsic value); or serving a useful purpose or meeting an end goal that is important by completing a task (utility value) (Eccles et al., 1983).

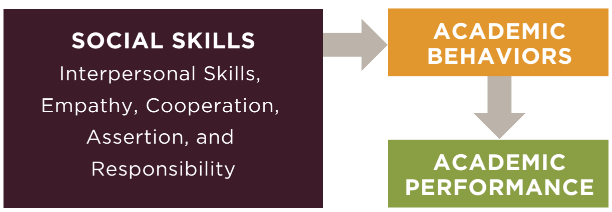
Overall, the evidence clearly demonstrates that the four academic mindsets outlined above each increase students' academic perseverance and improve academic behaviors, leading to better performance as measured by higher grades. When a student feels a sense of belonging in a classroom community, believes that effort will increase ability and competence, believes that success is possible and within his or her control, and sees school work as interesting or relevant to his or her life, the student is much more likely to persist at academic tasks despite setbacks and to exhibit the kinds of academic behaviors that lead to learning and school success. Conversely, when students feel as though they do not belong, are not smart enough, will not be able to succeed, or cannot find relevance in the work at hand, they are much more likely to give up and withdraw from academic work, demonstrating poor academic behaviors which result in low grades. Concepts such as stereotype threat and learned helplessness rest upon the same theoretical underpinnings and illustrate ways that positive academic mindsets can be undermined by negative contextual conditions or experiences, thus interfering with students' academic performance. Chapter 5 provides a summary of the research on academic mindsets.

4. Learning Strategies



Learning Strategies are processes and tactics one employs to aid in the cognitive work of thinking, remembering, or learning. Effective learning strategies allow students to leverage academic behaviors to maximize learning. These include strategies to help one recall facts (e.g., mnemonic devices); strategies for monitoring one's own comprehension (such as while reading or doing math problems); and strategies to self-correct when one detects confusion or errors in one's thinking. Learning strategies may also include goal-setting and time management, both of which help students manage the process of learning. Unlike the research on other noncognitive factors, which comes primarily from economists, motivation researchers, or developmental and social psychologists, the research on learning strategies also draws on work in cognitive science. Helping students to learn effectively is an area of research that bridges academic behaviors (e.g., studying), subject-specific cognitive domains of learning (e.g., understanding how to divide fractions in mathematics), metacognition, and self-regulated learning processes. Chapter 6 provides a summary of the research on learning strategies.

5. Social Skills



Social Skills are a fifth group of noncognitive factors which includes such interpersonal qualities as co-operation, assertion, responsibility, and empathy. Social skills are acceptable behaviors that improve social interactions, such as those between peers or between student and teacher. Social skills repeatedly appear in the literature as important for future work and life outcomes, although their direct relationship to academic performance is more tenuous.

Development of students' social skills has long been a focus of early childhood and elementary educators. In the primary grades, educators aim to develop students' social skills to enable them to work with peers and adults to accomplish academic goals. More recently, social skills have gained increasing attention as a critical factor for adolescents in connection with career readiness. Research has suggested that employers in the twenty-first century economy need workers with "people skills" that enable them to communicate effectively, work with diverse groups, and solve problems collaboratively (Casner-Lotto, Barrington, & Wright, 2006; Murnane & Levy, 1996). While the development of social skills may be an important educational goal in itself, particularly in the primary grades, social skills are also logically related to academic performance. For example, it stands to reason that cooperating in groups or participating appropriately in class discussions would lead to better academic performance. Perhaps social skills have a weak direct relationship with course grades because many classrooms—particularly at the high school level—still tend to rely on lecture-style instructional delivery which minimizes the social and cooperative aspects of learning. In contexts where individuals must work collaboratively in problem-solving teams, social skills are likely to be more directly related to performance.

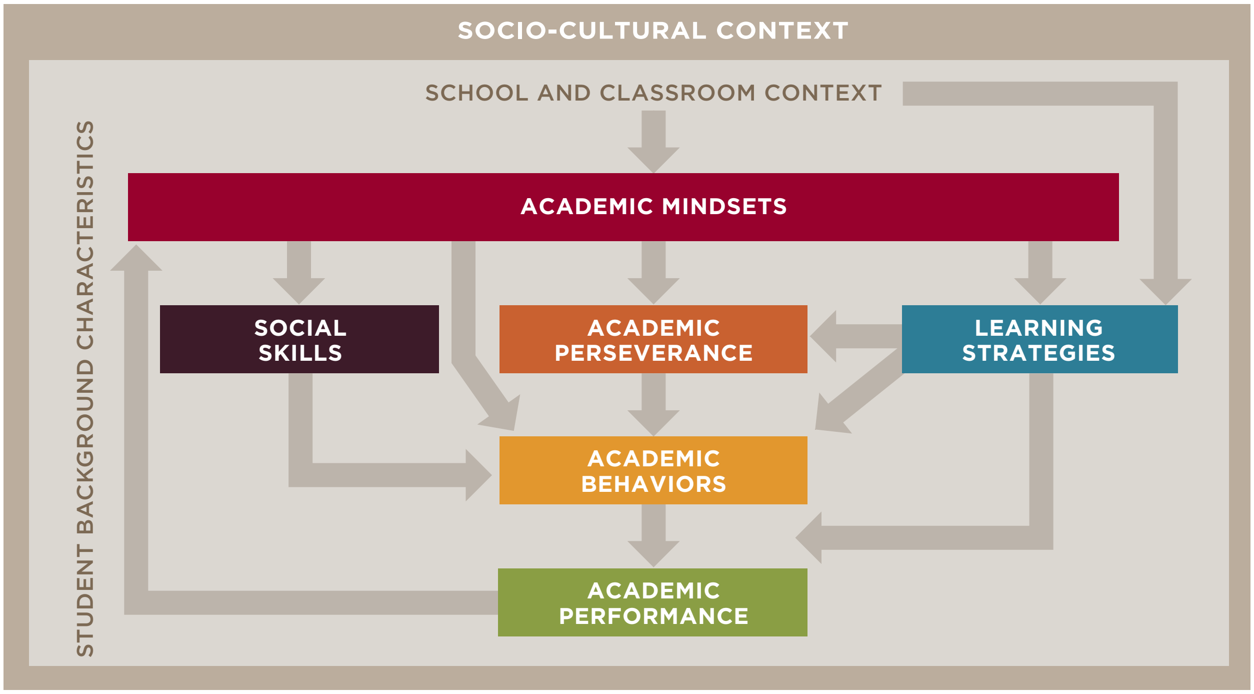
As with our other noncognitive factors, most of the research and theory behind the development of social skills suggest that their effects on academic performance are largely indirect; they are enacted through students' behaviors in the classroom. Thus, we conceptualize social skills as affecting academic performance primarily by affecting academic behavior. Chapter 7 provides a summary of the research on social skills.

Putting Noncognitive Factors into One Framework

In reviewing the literature on these five noncognitive categories, we tried to conceptualize the relationships among factors as well as the relationship of each factor to academic performance, as measured by grades. **Figure 2.1** illustrates our working understanding of these relationships, although, as our review will make clear, much more research is needed to test the relative strengths of the paths in this model, the importance of each category controlling for the others, and the ways they interact. We anticipate that many noncognitive factors are mutually reinforcing and that relationships are often reciprocal. We used one-way arrows to illustrate the strongest hypothesized effect of each category on academic performance, but we anticipate that students' academic performance, in turn, will very likely affect their behaviors, their mindsets, their social interactions, and perhaps even their use of learning strategies. While the actual relationships among these factors are no doubt messier and more complex than indicated in the illustration, our review of the research suggests support for the ordering displayed in the model. For example, mindsets have been shown to affect academic perseverance, which

FIGURE 2.1

A Hypothesized Model of How Five Noncognitive Factors Affect Academic Performance within a Classroom/School and Larger Socio-Cultural Context



affects academic behaviors (e.g., completing work), which affects students' academic performance.

Importantly, as seen in the diagram, we set the noncognitive factors model within a "School and Classroom Context." Any given school and classroom context will reflect a wide variety of variables affecting student motivation and opportunity to learn. For example, how supports are made available and to whom, grading structures and policies, available course tracks, the ways students are assigned to those tracks, the nature of the academic tasks students are asked to do, the relationships among student peers and their orientation toward academic work, the level of safety one experiences in school, and the availability of adequate resources for learning are all important parts of any school and classroom context. Some of these variables—e.g., grading structures, feedback, and norms of behavior—are quite proximal to students' course performance and have been shown to affect academic mindsets, academic behaviors, and/or academic performance.

Note that the school and classroom context box also includes the presence of "Student Background Characteristics." For simplicity's sake, our noncognitive factors model does not specifically illustrate how these individual characteristics are related to other factors, but we assume student background would affect virtually every aspect of the model. Student background would include all the individual characteristics a student brings to a learning situation. These include demographic variables such as race/ethnicity, age, gender, language, and socio-economic status, as well as family and neighborhood characteristics that might affect academic performance. A student's previous academic achievement (including both grades and test scores), prior knowledge, past experiences in school, and pre-existing academic mindsets are also part of his or her background characteristics. These individual academic characteristics have likely coalesced in a particular "academic identity" and degree of self-efficacy within the student, whether these are positively or negatively charged. We would anticipate that the student's previous schooling experiences and existing academic mindsets would affect his or her interpretation of any new classroom or academic work encountered. In this way, student background characteristics are very likely to mediate the relationships among the classroom context; the student's further development or enactment of noncognitive skills, behaviors, attitudes, and strategies in that classroom; and academic performance. We note too that classrooms consist of multiple individual students, creating peer effects as well as individual student effects.

Finally, we situate the model within a larger "Socio-Cultural Context" that shapes the structural mechanisms of schools and classrooms, as well as the interactions and subjective experiences of the human beings within schools. Opportunity structures in the larger society; economic conditions that shape employment opportunities as well as schooling costs; the presence of racism, sexism, and other types of discrimination that give rise to stereotypes and prejudice; and stark inequalities in resources across neighborhoods and schools all contribute to the larger context in which American students learn. The interrelationships between cognitive, psychological, and structural variables and school performance are exceedingly complex. We offer this model as a simplified framework for conceptualizing the primary relationships among these factors, for the purpose of framing our discussion.

The next five chapters provide more detailed evidence on each of the five noncognitive factors in the model. In Chapter 8, we offer three case studies to illustrate how these noncognitive factors interact to affect students' success during specific periods of academic development: in the middle grades, the transition to high school, and the transition to college. The case studies underscore the importance of context when considering the relationship between noncognitive factors and students' academic performance.

BOX 2.1

How We Organized Our Review of the Evidence

The next five chapters review the research on each of the five categories of noncognitive factors. For each set of factors, we first want to know about its relationship to academic performance (course grades). Does the research suggest that having more of a particular factor is related to getting better grades? If multiple factors affect grades, we want to know which factors are most important because we want to know which leverage points are likely to have the biggest payoff. What are the relative effect sizes, and where are we likely to get more "bang for the buck" if we want to improve student performance? Therefore, the first and most obvious criterion for judging the state of research knowledge in a field is to evaluate the quality of the existing research and the strength of effects.

But even if a set of noncognitive factors is clearly related to academic performance, that does not mean that educators or policymakers can do anything to leverage that fact. Validating the claim that schools would get high payoffs from working on noncognitive factors requires an evaluation of whether the supporting evidence is "actionable" for practitioners. To evaluate whether the research evidence is actionable, we ask whether it is clear that the relevant noncognitive factor is malleable (i.e., do we know it can be changed), whether it is affected by classroom context (i.e., do we know that teachers can change it), and whether there are research-based strategies for developing that factor (i.e., do we know how teachers can change it through classroom practice).

A critical tension in research on noncognitive factors is the question of which factors can be intentionally developed and which are traits or dispositions that either are not malleable or are not likely to be changed by schools. Even when certain noncognitive factors are shown to be malleable and are shown to be related to academic performance, it does not necessarily follow that teachers would be able to change the factor to improve student performance. Much of the existing research on noncognitive factors is correlational (merely showing a relationship between two factors) rather than causal; this makes unclear the extent to which particular factors can be intentionally developed in classroom and school contexts, as well as whether changing them would actually improve student performance. For example, evidence that students who report high levels of self-control have higher grades than students who report lower levels of self-control does not demonstrate that the latter group of students would start earning higher grades if they were to increase their self-control. Nor does evidence of a correlation between self-control and course performance provide any guidance to teachers on how they might improve students' self-control.

It is therefore not enough for researchers to merely *identify* factors associated with better academic performance. That is a first step, but teachers and administrators also need clear research evidence about *how and why* various factors influence student performance. Then they need a set of strategies designed for use in a classroom context, aligned with their regular instructional work, to address these factors in ways that are consistent with the research. Ideally, practitioners would also have a way to track change or growth in the targeted factor to assess whether their strategies are having an effect.

Experimental studies using randomized trials, when properly designed, can yield data on both malleability and causality. For instance, researchers might show that an intervention is effective both at getting students to increase their effort and at improving their grades in class. But the *mechanism* by which these changes happen is often unclear. In much of the research we review in this report, the experiments inadvertently create a "black box" in which the actual mechanisms of change cannot be observed, leaving teachers with little understanding of why a particular intervention worked and what it implies for their practice.

For research on noncognitive factors to be actionable for practice, then, we have to go beyond merely establishing which factors contribute to students' academic performance. We must also ask questions about malleability, the role of classroom context, and the availability of clear strategies that teachers can use to develop important noncognitive factors. By "classroom context," we are referring broadly to everything about a classroom that might influence student performance. This includes the teacher, curriculum, instructional practices, materials and resources, classroom policies, grading practices, behavior of peers, and all social and academic interactions that take place during a class period. All of these factors can influence whether or not students develop or choose to enact any of the five categories of noncognitive factors, in addition to affecting the development of students' content knowledge and academic skills.

Beyond this attention to classroom context in a broad sense, we are also interested in whether or not there are specific classroom-based strategies that teachers can use to intentionally support students' development of noncognitive factors. For example, if a high school teacher wants to help her students develop learning strategies to use while studying geometry, what ought she to do? How can a middle school teacher best develop students' homework habits? What specifically can college instructors do to help students place a higher value on the work they do in class? It is not enough to merely know that classroom contexts have an influence on noncognitive factors. Teachers also need to understand *how* these influences work and to have specific strategies to develop students' academic behaviors, perseverance, mindsets, learning strategies, or social skills directly as part of their day-to-day work in the classroom.

Finally, we also want to examine the evidence on whether attention to any particular set of factors could make a difference in reducing educational inequality. One of the most significant claims of the research on noncognitive factors is that gaps in school performance by race/ethnicity or gender could be reduced by focusing on certain noncognitive factors. Unfortunately, researchers often ascribe observed differences in students' grades and educational attainment to gaps in underlying noncognitive factors without actually measuring these factors or establishing that there are group-based differences in these factors. By accurately measuring noncognitive factors such as homework completion or self-efficacy across race/ethnicity or gender, researchers can start to pinpoint what factors might be contributing to existing achievement gaps. In this report, we examine whether claims that certain noncognitive factors could reduce gaps in student academic performance are supported by evidence that these factors are contributing to the gaps in the first place.

To accomplish the goals described above, we structure our review of the research in each chapter to address five key questions:

1. What is the relationship of each factor to student academic performance?
2. Is the factor malleable?
3. What is the role of classroom context in shaping the factor?
4. Are there clear, actionable strategies for developing the factor as part of classroom practice?
5. Is there evidence that attention to the noncognitive factor would address racial/ethnic or gender gaps in student achievement?

Evidence on Academic Behaviors

Academic Behaviors occupy an important place in our consideration of noncognitive factors because virtually *all* the ingredients that go into students' academic performance, whether cognitive, noncognitive, or metacognitive, are expressed *through* their academic behaviors. Academic behaviors such as completing class assignments and participating in classroom activities are how students develop and demonstrate their content knowledge and academic skills. Conversely, if a student thoroughly masters the material in a course but does not turn in homework or does not come to school to take a test, the teacher would be unable to judge what the student knows or is capable of doing. Behavior acts as a mediator of other cognitive and noncognitive factors to affect students' grades (Conrad, 2006). This is borne out by evidence as well as by theory.

What Is the Relationship Between Academic Behaviors and Academic Performance?

There is a great deal of evidence that academic behaviors play a central role in determining students' grades. For example, in one CCSR study, Allensworth and Easton (2007) looked closely at academic behaviors and their relationship to course grades and course failures for CPS ninth-graders. While students' prior test scores and background characteristics, such as gender, race/ethnicity, economic variables, school mobility, and age at entry into high school, together only explained 12 percent of the variation in ninth-grade course failures, students' absences and self-reported study habits explained an additional 61 percent of the variation in ninth-grade failures. In the Chicago study, attendance and studying not only strongly predicted course failures but also were the strongest predictors for getting high grades—more so than test scores or student background characteristics.

The single most important academic behavior may well be attending class. Attendance has a strong effect on students' academic performance, and this relationship holds true regardless of students' test scores. Moreover, small differences in attendance can have large impacts on students' grades. The lowest-achieving students entering high school in Chicago (those with eighth-grade test scores in the lowest national quartile) who had less than a week of absences per semester passed more of their ninth-grade courses than students who entered high school with test scores in the top quartile but who missed just *one more week* of class (Allensworth & Easton, 2007). The exact mechanisms whereby attendance exerts such strong effects on grades are unclear, and it may well be that different mechanisms are at work in different cases. Obviously students who are not in class do not benefit from lesson activities or instruction that they miss; this could create potential "holes" in their understanding that might impact subsequent course grades. Common teacher grading practices can also deal a strong blow to absent students' grades by disproportionately penalizing missing work. Critics have long argued for "no zero" policies to lessen the impact of late or missing assignments on students 'course grades, and several schools and districts have passed policies to that effect (e.g., Ashland SD, 2012; Dallas ISD, 2008; Pittsburgh Public Schools, 2009). Extended or repeated absences and truancy can indicate other problems interfering in an adolescent's education that would affect both attendance and course performance. But even where there are no apparent underlying issues, attendance has a stronger effect on grades and is more predictive of course failure than are students' test scores.

Beyond attending class, spending time on homework is another academic behavior shown to have a positive effect on students' grades in both middle school and high school (Cooper, 1989; Keith et al., 1993; Peng & Wright, 1994). Using a large, nationally representative sample of over 20,000 high school seniors from the High School and Beyond study, Keith (1982) conducted a path analysis and found that time spent on homework had a significant positive effect on grades across achievement levels, controlling for race, background, ability, and field of study (college preparatory versus vocational). Furthermore, Keith demonstrated a compensatory effect of homework; students who scored in the bottom third on achievement tests and spent one to three hours per week on homework were able to raise their grades to Bs and Cs, equivalent to students with test scores in the middle one-third who did not do homework. If the students with test scores in the bottom third spent over 10 hours per week on homework, they could raise their grades to mostly Bs, which was equivalent to the grades of top-scoring students who did not do homework.[3] A meta-analysis (Cooper, 2006) evaluating a range of homework studies in different contexts found that virtually all demonstrated positive and significant relationships between homework and grades.

Academic behaviors can affect grades both directly and indirectly. Directly, virtually all student grades are based on student work, and completing and submitting work are academic behaviors. One might argue whether or not the content and substance of the work should (or does in practice) account for a higher proportion of a student's grade than merely the act of submitting the work, but it is important to remember that in the *absence* of submitting work and attending class, a student will fail the course. In other words, while good academic behaviors might combine with content knowledge and academic skills to earn passing grades, poor academic behaviors all by themselves can earn failing grades. Academic behaviors can also affect grades directly if teachers award points to students specifically for the acts of completing assignments, participating in activities, or even attending class.

Academic behaviors can have an indirect influence on grades as well if, as a result of engaging in the academic behaviors, students complete higher-quality work or simply learn more content and develop more skills. Students who attend class regularly and do all of their homework are likely to know more or be able to do more as a result—which would contribute to earning better grades. Indeed, across several studies, time spent on homework had a positive effect on learning as measured by both grades *and* achievement test scores (Keith, 1982; Keith & Benson, 1992; Keith & Cool, 1992; Keith, Diamond-Hallam, & Fine, 2004; Natriello & McDill, 1986).

Academic behaviors might also affect students' grades indirectly by influencing the nature of student-teacher interactions. Teachers may have preference for students who exhibit positive academic behaviors—teachers may spend more time helping these students or more closely monitor their learning—such that students who demonstrate positive academic behaviors receive a differential instructional benefit that improves their performance in a class.

While it seems logical that attending class, studying, and completing homework will lead to better grades, there are also likely reciprocal effects—where students' success at earning high grades gives them encouragement to continue to work hard. As shown by the psychological research on mindsets, the grades students receive have a marked effect on their attitudes about school and about their own academic identities in ways that strongly influence their subsequent behavior and future school performance. While the nature of the relationships and various pathways between academic behaviors and other noncognitive factors is not yet entirely clear, the connection between academic behaviors and academic performance is strong.

Academic behaviors are so tightly bound up with each of the other noncognitive factors that they are sometimes used by researchers as proxies for these other factors. No one can directly "see" intangible characteristics such as perseverance, motivation, or a sense of belonging, but one can infer their presence or absence by the way a student behaves toward his or her schoolwork (e.g., through students' persistent effort at academic tasks, completing homework assignments, and working well with other students). Many of the studies of unobservable noncognitive factors (such as academic perseverance) are actually based on observable academic behaviors from which these unobservable factors are then inferred. For example, in a study of predictors of performance in introductory college-level courses, Kruck and Lending (2003) used students' early homework grades in the course as a measure of "student motivation or effort." Reasoning that these homework assignments are often optional, the authors concluded that "the more motivated students will do the earlier homework and quizzes and score higher grades than the less motivated students" (p. 10). Similarly, research shows that academic behaviors are largely interpreted by teachers as signs of student "effort." Where students receive a grade for effort, that grade is most often based on the teacher's observation of their academic behaviors (Brookhart, 1994, 2004; Frary, Cross, & Weber, 1993; Marzano, 2000; Nava & Loyd, 1992; Robinson & Craver, 1989; Stiggins, 1997; Stiggins, Frisbie, & Griswold, 1989).

However, the use of observable behaviors like homework completion to infer and measure unobservable noncognitive factors such as motivation or effort conflates what could be very distinct factors (feeling motivated versus doing homework), making it difficult to tease out the relationships between them or to ascertain the ways one factor might influence another to shape student academic performance. Conflating observable and unobservable factors creates the possibility of misdiagnosing poor academic behaviors in any given instance (erroneously attributing them to a lack of perseverance, for example) and makes it difficult to pinpoint the leverage points whereby teachers, parents, or others might intervene to help improve student performance.

Are Academic Behaviors Malleable?

Human behavior generally is viewed as malleable. While it may be difficult to change one's personality or one's core values, a basic tenet of psychology is that it is almost always possible to change one's behavior (Deci & Ryan, 1985; Skinner, 1953; Staats, 1963). Virtually all educational reform efforts rest on this basic assumption. Whether through new policies, programs, structures, supports, curricular materials, or instructional approaches, the premise underlying all efforts to improve schools is that students, teachers, and school leaders can be motivated, mandated, cajoled, or trained to act differently in the classroom. Students' academic behaviors *can* change. The important question is *how* educators can best facilitate these changes in ways that promote student learning and course performance.

What Is the Role of Classroom Context in Shaping Academic Behaviors?

The evidence is quite clear that classroom context shapes students' academic behavior. If we keep in mind that academic behaviors are the medium through which all other cognitive and noncognitive factors are expressed, then it stands to reason that any ways in which classrooms affect any of those cognitive or non-cognitive factors could also shape academic behavior. For example, classrooms may affect students' mindsets by creating excitement about an upcoming project. If that excitement translates to more active engagement in and completion of the project, then the classroom context will have affected behavior by working through mindsets. Likewise, if classroom instructional practice helps students develop learning strategies that allow them to derive more tangible benefits from the time they spend studying, they may be more likely to study. If teachers present material in a way that makes it more accessible and students feel like they understand what is going on, students are more likely to engage in classroom discussions. Thus, classroom context shapes academic behavior indirectly through other non-cognitive factors, as well as affecting behavior directly through behavioral expectations and strategies.

Are There Clear, Actionable Strategies for Developing Academic Behaviors as Part of Classroom Practice?

There have always existed a wide range of classroom-based and school-wide strategies for improving students' academic behaviors (e.g., increasing attendance, reducing tardiness, bringing materials to class, completing homework, promoting active participation in discussion). These mostly fall into the category of "local practice wisdom," and surprisingly few of these have been empirically studied on a large scale. For example, teachers use a range of strategies to support students in completing homework, such as: providing clear and explicit directions and expectations for assignments; requiring students to write assignments into planners (that schools often provide for this purpose); starting homework assignments in class to "get kids going" and to troubleshoot any problems before students get home; and setting up procedures for students to collect missed work when they are absent. Unfortunately, few of these individual teacher-selected strategies have been rigorously or systematically studied or evaluated.

Still, we do have evidence of the effectiveness of some classroom strategies focused on academic behaviors. Research suggests that academic behaviors such as course attendance and assignment completion can be affected by the degree to which students' performance is closely monitored, with teachers or other adult advocates intervening when students' behavior falls below expectations. CCSR's work in Chicago shows that course attendance and grades are better in schools where teachers provide close monitoring and support for students (Allensworth & Easton, 2007; Allensworth, Sebastian, Gwynne, & Pareja, 2012; Stevens et al., forthcoming).

Several programs external to the classroom that emphasize monitoring and support also have been shown to have positive effects on students' grades and retention in school. For example, programs in which teachers or other adult advocates monitor students' attendance and grades to provide support when students start having problems have been shown to significantly improve students' academic behaviors and performance. Potentially effective school-wide initiatives include student advisories (Galassi, Gulledge, & Cox, 1997; Van Ryzin, 2010) and programs such as Check & Connect and ALAS (Larson & Rumberger, 1995; Sinclair, Christenson, Evelo, & Hurley, 1998). Whole school reform approaches such as the Talent Development High School Model—which houses freshmen in a Ninth Grade Success Academy emphasizing closer student-teacher relationships and additional supports—have also been shown to improve students' academic behaviors as measured by attendance rates, course passing rates, and promotion rates to the next grade level (Kemple, Herlihy, & Smith, 2005).

In short, while teachers and schools utilize a wide range of home-grown strategies to improve students' academic behaviors, few such individual strategies have been formally evaluated by outside researchers on any large-scale basis. Some whole school reform models show effects on students' academic behaviors, but it is unclear which aspects of these comprehensive models were most responsible for changing student behavior. Moreover, short of adopting these models entirely or knowing which aspects of the model to replicate, the whole school reform research provides little clear direction to teachers, other than to emphasize the importance of ongoing monitoring and support—two elements which are also supported by other studies as important to students' academic behaviors.

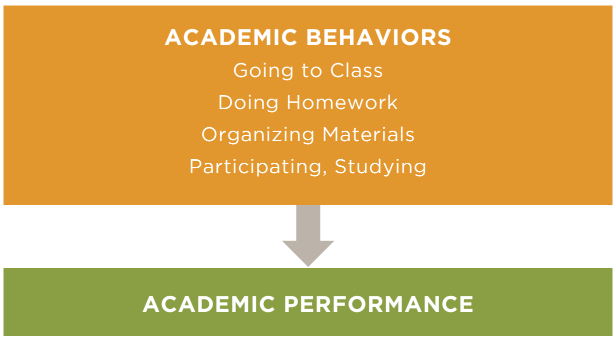
Would Changing Academic Behaviors Significantly Narrow Achievement Gaps?

While some researchers have claimed that differences in academic behaviors contribute to achievement gaps among different racial and gender groups (e.g., Duckworth & Seligman, 2006; Jacob, 2002), these differences only account for a limited portion of existing gaps. In Chicago, CCSR researchers looked at the extent to which students' attendance and study habits contributed to differences in students' grades by race/ethnicity and gender (Allensworth & Easton, 2007). The gender gap in GPA decreased by 21 percent after taking into account students' course attendance and study habits, and differences in failure rates decreased by one-third. Attendance and study habits explained none of the racial gap in grades, when comparing students with similar test scores and economic status. In fact, the racial gap increased once students' study habits were taken into account. African American students received lower grades than White students with similar test scores, attendance, and study habits.

In his analysis of data from over 10,000 students from the National Educational Longitudinal Study (NELS) which followed a nationally representative sample of eighth-graders from 1988 to 1994, Jacob (2002) found a slight gender difference in academic behaviors in eighth grade, when boys reported doing 5.87 hours of homework per week compared to girls who spent 6.21 hours per week on homework (0.34 hours per week difference). That gender difference in behavior decreased to 0.11 hours per week by twelfth grade, with boys and girls reporting weekly homework time of 9.74 hours and 9.85 hours respectively. Jacob did not report homework data by race/ethnicity.

Overall, there is evidence that academic behaviors explain part, but not all, of the gender gap in grades. There is little evidence that academic behaviors explain differences in grades by race/ethnicity, particularly when controlling for test scores and economic status.

Summary of Research on Academic Behaviors



Academic Behaviors are the most proximal noncognitive factors to student academic performance. Virtually all other factors that affect school performance—including content knowledge, academic skills, student background characteristics, and the full range of noncognitive factors—exercise their effect through students' academic behaviors. This suggests that there are multiple indirect pathways to improving academic behaviors (by targeting these other factors) in addition to those strategies that directly target behaviors. There is strong evidence that academic behaviors are a major determinant of course grades and that improving students' academic behaviors would increase students' course performance. There is also strong evidence that academic behaviors are malleable and affected by classroom context, and there are some clear strategies for classroom practice around monitoring and support. However, there is little evidence that working solely on students' academic behaviors would eliminate gaps in course grades by race/ethnicity or gender. Furthermore, given the pivotal role of academic behaviors in academic performance, the number of rigorous studies testing the effects of specific strategies to directly improve students' behaviors is surprisingly small.

CHAPTER 4

Evidence on Academic Perseverance

In Chapter 3, we made the case that academic behaviors are the noncognitive factor that most immediately affects a student's course performance. But high performers in school do not simply *do* the things necessary for good grades, they do them *well*. Academic perseverance is a concept that, in its most basic form, addresses student effort and the resulting *quality* of academic behavior. By quality we refer to the intensity, direction, and duration of a student's academic behavior. An academically perseverant student would behave in an engaged, focused, and persistent manner in pursuit of academic goals, despite obstacles, setbacks, and distractions.

Academic Perseverance requires not only an initial surge of momentum in a focused direction but also the ability to maintain that momentum regardless of what gets in the way. As a result, students with academic perseverance would continue working hard for a good grade in a challenging class even after failing several tests, and they would continue looking for new ways to understand difficult material instead of giving up. Academically perseverant students also would be more likely to achieve longer-term academic goals, such as earning consistently high grades over time, graduating from high school with a good GPA, qualifying for and getting admitted to a desired university, or completing a college degree. In essence, academic perseverance represents a desirable quality of academic behavior that seems essential for both short-term and long-term educational achievement and degree attainment.

The concept of "academic tenacity" has gained recognition in recent years as an important factor underlying students' academic performance. As it has been defined, however, this term incorporates a range of noncognitive factors that are conceptually quite distinct. In a working paper commissioned by the Gates Foundation, one of the most widely cited manuscripts on the topic, academic tenacity is defined as the "mindsets and skills that allow students to look beyond short-term concerns to longer-term or higher-order goals, and to withstand challenges and setbacks to persevere toward these goals" (Dweck, Walton, & Cohen, 2011, p. 5). This definition not only encompasses whether students work hard or see work through to completion despite obstacles but also incorporates the factors that affect perseverance—the mindsets and skills that underlie student persistence. Specifically, according to this expanded definition, whether or not students display tenacity can be affected by their academic mindsets (which encourage or inhibit continuing effort), their academic skills (which make it easier or harder to complete tasks), whether they have learning strategies (which make their efforts more effective), and their innate personality. While there is strong evidence that these factors are associated with academic perseverance, there are reasons for keeping them conceptually distinct from the degree to which one persists in academic work. As educators think about how to improve students' academic performance, they need to understand the specific mechanisms through which they can affect change in the degree to which students persist at tasks. Thus, we ultimately found it most helpful to separate out the demonstration of perseverance from the factors—such as mindsets—that influence it.

Even when we distill academic perseverance to center on the idea of persistent effort in school, the psychological literature identifies various kinds of persistence, each with potentially different implications for improving students' academic performance. In this review, we focus on two related concepts: "grit"—the degree to which students stay focused on a long-term goal despite obstacles; and self-control—whether students forego short-term temptations to prioritize higher pursuits (related to delayed gratification and self-discipline).

Grit and Self-Control

The idea of "grit," from University of Pennsylvania researcher Angela Duckworth, is one conception of perseverance that has gained much attention in the popular press. *The New York Times Magazine* recently ran a cover story on the importance of "character" to school and career success which prominently featured Duckworth's research (Tough, 2011). Another conception of perseverance is captured by the concept of self-discipline or self-control, and the related idea of delayed gratification. As we asked our five framing questions of the research on grit and on self-control, we found that these two sets of literature sometimes produced very different answers, with potentially different implications for classroom practice. In reviewing this work, we rely heavily on the work of Duckworth and her colleagues; she has been the most prolific researcher developing and studying these concepts over the last several years, and it is her work that is generally cited in this area.

Grit is how world-class performers and high achievers—whether musicians, athletes, doctors, actors, inventors, or business leaders—get to the top of their game. In a TED talk in 2009, Duckworth emphasized that it takes at least 10 years of sustained practice to truly become an expert in any given field (Duckworth, 2009). Grit is what allows a select group of people to sustain that effort. Duckworth, Peterson, Matthews, and Kelly (2007) refer to grit as "perseverance and passion for long-term goals" (p. 1087). They emphasize this *long-term* quality, noting that "gritty" individuals will work steadfastly on one significant goal over a prolonged period. Grit, they argue,

> ...entails working strenuously towards challenges [and] maintaining effort and interest over years despite failure, adversity, and plateaus in progress. The gritty individual approaches achievement as a marathon; his or her advantage is stamina. Whereas disappointment or boredom signals to others that it is time to change trajectory and cut losses, the gritty individual stays the course. (pp. 1087-1088)

Duckworth and colleagues developed the Grit Scale, a 12-item self-report questionnaire, to measure what they saw as the two distinct dimensions of grit—consistency of interests and persistence of effort. Importantly, the Grit Scale was designed to identify a trait that was not specific to or dependent upon any given context but rather that would characterize an individual's general tendency to persist in pursuit of important long-term goals over several years duration. Gritty individuals are those who strongly endorse statements like "I am a hard worker," "Setbacks don't discourage me," and "I have achieved a goal that took years of work," and who dismiss as "not like me" statements such as "My interests change from year to year," "I become interested in new pursuits every few months," and "I often set a goal but later choose to pursue a different one" (Duckworth, Peterson, Matthews, & Kelly, 2007). Based on studies that link students' responses on the Grit Scale to later educational outcomes, Duckworth et al. conclude that grit "is essential to high achievement," over and above the contributions of intelligence and ability (p. 1088).

Duckworth and her colleagues draw a distinction between grit and self-control, conceptualizing self-control as the ability to avoid impulsive behavior and fulfill *short-term* obligations (Duckworth, Peterson, Matthews, & Kelly, 2007). Tied to self-control is the ability to delay gratification, because part of self-control involves resisting temptations to veer from one's course and being able to put off treats or rewards until one meets a goal or finishes a task. Self-control is largely a matter of making choices of one thing over another in the short term. Duckworth and Seligman (2006) give examples of how students might exhibit self-control in school-related situations by engaging in behaviors such as "reading test instructions before proceeding to the questions, paying attention to a teacher rather than daydreaming...choosing homework over TV, and persisting on long-term assignments despite boredom and frustration" (p. 199). The researchers reason that grit and self-control—as measures of long-term and short-term goal pursuits, respectively—could well have differential effects on academic performance. Where course grades require an ongoing series of small exercises of self-control (to overcome "hourly temptations"), educational attainment (e.g., a college degree) may well be more dependent on long-term persistence over years.

In multiple studies, Duckworth and colleagues sought to identify noncognitive factors that distinguished the very top performers among other high-achieving peers in a variety of contexts: West Point military academy, the Scripps National Spelling Bee, the University of Pennsylvania undergraduate psychology department, and a private preparatory school. The researchers were interested in two related questions: In elite settings, what besides intelligence or talent sets apart certain "exceptional individuals" who distinguish themselves as the best of the best? And what accounts for the difference between highly intelligent people who are high achievers and highly intelligent people who are not? The researchers wanted to understand if either grit or self-control helped to explain extraordinary achievement. Unfortunately, because these studies are focused on understanding variables that affect outstanding achievement among groups of high achievers, their findings cannot easily be generalized to broader populations. Still, their findings of relationships between grades and grit or self-control suggest that academic perseverance—however defined—does contribute to academic performance among students with strong academic skills.

What Is the Relationship Between Academic Perseverance and Academic Performance?

A number of studies have examined the relationship between academic perseverance—whether defined as grit or self-control—and educational outcomes. Two pertinent studies examined the relationship between college students' grades and their grittiness as measured on Duckworth's Grit Scale. In a relatively small sample of undergraduates at the University of Pennsylvania ($n = 139$), when controlling for SAT scores, grit was associated with college GPAs ($r = 0.34$), roughly equivalent to the association between GPA and SAT scores ($r = 0.30$). Interestingly, the students with higher grit scores tended to have higher GPAs but lower SAT scores than their less gritty peers, suggesting perhaps that what students lack in tested achievement they can make up for in grit or, alternatively, that students who score higher on tests are also more able to achieve high grades without as much dependence on grit. One should be cautious in drawing conclusions from these findings, however. The average SAT score of students in the University of Pennsylvania study was 1415, a score achieved by less than 4 percent of SAT test-takers nationally (Duckworth, Peterson, Matthews, & Kelly, 2007). It is unclear if the relationship they observed between grit and grades would hold with a more heterogeneous student population in a less elite context.

In the University of Pennsylvania study, grit was measured during the fall term and students reported their cumulative GPA at the same time; thus, the relationship between these measures could have been overstated if students' college performance at that time point influenced their self-reports of grit. Students who knew they were doing well in school (as evidenced by their grades) may have rated themselves more favorably as a result of this knowledge, while students who knew they were performing poorly may have rated themselves more harshly when completing the Grit Scale. A study by the same researchers of military cadets at West Point was longitudinal, with new cadets completing the Grit Scale upon entrance to the military academy. A year later, their grit scores were used to predict grades. In the West Point study, the observed relationship between grit and grades was much smaller than at Penn, although still significant ($r = 0.06$), suggesting that while grit measures might correlate highly with current grades, they may not be as strong a predictor of future academic performance (Duckworth, Peterson, Matthews, & Kelly, 2007).

In the West Point study, the researchers also tested the effects of self-control. They found a stronger relationship between grades and self-control (based on student reports on a self-control scale) than between grades and grit ($r = 0.13$ versus $r = 0.06$; Duckworth, Peterson, Matthews, & Kelly, 2007). The Brief Self-Control Scale (BSCS; Tangney, Baumeister, & Boone, 2004) includes items such as, "I am good at resisting temptation," "I have a hard time breaking bad habits," and "I do certain things that are bad for me, if they are fun," to which students respond on a five-point scale from "not at all like me" to "very much like me" (p. 323).

In a similar study of eighth-grade students at a selective magnet school, Duckworth and Seligman (2005) found self-control measures collected in the first semester—including students' self-reports of impulsiveness and self-control, combined with teachers' and parents' reports of students' self-control (e.g., ability to get things done, follow instructions)—added to the prediction of second semester grades beyond test scores and first semester grades alone (Beta = 0.08). They found a very high correlation between reports on students' self-control and grades (0.55 to 0.67), without controlling for prior semester grades. However, while the study used self-control reports from one point in time (semester 1) to predict grades in another point in time (semester 2), the context remained constant across time. At both time points, students were enrolled in the same school and were taking the same classes. This makes it impossible to disentangle the effects of the context on students' performance from the effects of their self-control or the effects of context on their ratings of self-control.

Thus, while there are studies that show relationships between grit or self-control and students' grades, these findings tend to be stronger when both dependent and independent variables are measured concurrently. When grit or self-control is measured before students have engaged in much of the coursework on which their grades are based, these measures show smaller relationships with (subsequent) performance. This suggests that the strong relationships in the cross-sectional analyses may occur because students' perceptions of their grit and self-control may be affected by their concurrent course performance. More research is needed that examines the relationship of various measures of perseverance with performance in a causal way—with perseverance measured prior to enrollment in courses and without questions on the scale that elicit responses that might be influenced by that performance.

Another series of studies that is often cited to emphasize the importance of self-control for academic achievement comes from an experiment conducted by Walter Mischel and colleagues, sometimes referred to as the "marshmallow" experiment (Mischel & Mischel, 1983; Mischel, Shoda, & Peake, 1988; Shoda, Mischel, & Peake, 1990). In this experiment, children at the Stanford University preschool were left alone with one marshmallow after being told they could have two marshmallows if they waited to eat the one until the experimenter returned. Follow-up studies showed a relationship between waiting for the second marshmallow and higher SAT scores many years later (Shoda, Mischel, & Peake, 1990).

While this study has been used to suggest that self-control in early childhood predicts later academic achievement, Mischel and colleagues found that wait time was only associated with later achievement under particular conditions. When the marshmallow was put in plain sight—which made it difficult for children to avoid thinking about it—and when the children were not given strategies for distracting themselves from thinking about the marshmallow, then Mischel saw differences in wait time that were later associated with higher SAT scores. Mischel's interpretation was that children who could wait longer for the second marshmallow were those with stronger cognitive skills; their higher cognitive skills in preschool allowed them to come up with their own means of distracting themselves while in full view of the marshmallow. The fact that they showed higher SAT scores many years later suggests that this interpretation was correct. However, the message from these studies is not necessarily that self-control predicts higher intelligence but that higher intelligence may make it easier to show self-control.

While the experiment does not provide evidence that self-control leads to better test scores independent of the effects of students' initial intelligence levels, it does provide evidence that whether children exhibit self-control depends on *context* (e.g., whether the marshmallow is in plain sight or not), and on whether the children are given *strategies* that allow them to complete a task successfully (i.e., distraction strategies provided by the experimenter), as well as on children's *cognitive skills* (i.e., whether they can come up with ways to distract themselves). Thus, while students may have different innate levels of perseverance as a personal trait, the degree to which they demonstrate *behavior* that appears perseverant depends on the context they are in and the skills and strategies that they possess, all of which can alter the difficulty level of the task in front of them.

Is Academic Perseverance Malleable?

To a large extent, the malleability of academic perseverance depends on how one defines perseverance. There is a great deal of evidence that students' persistence at tasks, and the degree to which they exhibit self-discipline, changes over time and in different situations. A person who appears perseverant in a particular setting with a particular task might appear unmotivated or half-hearted in another setting with another task. Moreover, changes in classroom context or in the psychological condition of students have been associated with an increase in persistent effort by students. This suggests that perseverance is malleable and responsive to context.

The concept of grit, however, was designed to be consistent across time and context. Duckworth and colleagues suggest that grit behaves like an inherent character trait—in other words, that it is fairly stable over time—and perhaps is most fruitfully understood in the context of the "Big Five" personality traits. Over the past several decades, personality psychologists have come to general agreement on grouping the myriad human psychological characteristics into five universal personality traits, each of which is expressed along a spectrum (such as introversion to extroversion). One of the Big Five—*Conscientiousness*—is the only personality trait that consistently shows a relationship to academic performance. In a meta-analysis, Porporat (2009) found the size of the effect of Conscientiousness on academic performance to be similar to the size of the effect of intelligence on academic performance. While Conscientiousness increases across the lifespan as individuals mature, psychologists generally agree that Conscientiousness is a "fixed trait," meaning that there is little evidence that interventions or environment can substantially change this aspect of a person's basic nature (Srivastava, John, Gosling, & Potter, 2003). Duckworth and colleagues (2007) suggest that grit should also be understood as a stable personality trait—perhaps a mistakenly overlooked facet of Conscientiousness. This does not mean that it is impossible to change a person's grittiness but rather that doing so would be difficult. Duckworth's current work focuses on how to intentionally cultivate grit and self-control, but to date there is little conclusive research showing grit to be a malleable factor.

Do the research and theory behind the concept of "grit" mean that teachers cannot change the degree to which students persist at challenging tasks in their classrooms? No. Even if one's innate tendency to persevere is hard to change, there is ample evidence that people can change the intensity, direction, and duration of their behaviors *despite* their personalities. In other words, whether or not a student has a gritty personality, he can learn to change the quality of his behavior—in effect to *act* perseverant even if that is not in his core nature (McCrae & Costa, 1994; Roberts & Del Vecchio, 2000).

Second, our focus here is on *academic* perseverance rather than perseverance in some general sense. When we make this distinction, the answer to the question of malleability in a given context becomes a resounding "yes." There is significant empirical evidence that students demonstrate different amounts of perseverance at academic tasks under differing conditions, supporting the idea that academic perseverance as a behavior in a specific context is highly malleable. The research suggests that, while there may be little return to trying to make students more gritty as a way of being (i.e., in ways that would carry over to all aspects of their lives at all times and across contexts), students can be influenced to demonstrate perseverant behaviors—such as persisting at academic tasks, seeing big projects through to completion, and buckling down when schoolwork gets hard—in response to certain classroom contexts and under particular psychological conditions.

What Is the Role of Classroom Context in Shaping Academic Perseverance?

In questioning what prevents many students from working hard in school, Dweck, Walton, and Cohen (2011) ask, "Is it something about [the students] or is it something about school?" (p. 2). While there are aspects of student characteristics that affect perseverance, as shown by the research on grit, overall the evidence suggests it mostly may be something about the school. The degree to which students persevere at academic tasks is quite responsive to changes in school and classroom context, although the effect of classrooms on perseverance works indirectly; in other words, classrooms make an impact on something else that then influences a student's perseverance.

The findings from the Mischel "marshmallow" study described earlier show that context plays a large role in whether children exhibit behaviors that may be viewed as impulsive or contrary to short-term goals. In the experiment, when the marshmallow was *shielded from sight* or the subjects were *given strategies* to avoid thinking about the desired object, children were less likely to act in an impulsive manner by taking the single marshmallow. This turns out to be very similar to the findings from research about the classroom antecedents of academic perseverance. Classroom contexts that are structured to support students' success at assigned tasks and that provide students with strategies to make the tasks easier are likely to increase students' perseverance and persistence in completing those tasks.

One way classroom contexts might affect academic perseverance is by influencing students' academic mindsets (classroom context → academic mindsets → academic perseverance). Think, for example, of a persistent and ambitious high school student who works hard to get to college, where she opts to take calculus in her freshman year. Her college instructor does a poor job of explaining the course material and grades harshly on quizzes, causing the student much anxiety. Her attempt to get help during the instructor's office hours ends with him denigrating her intelligence. After failing her second quiz in a row, she sees no way to be successful and drops the course. Despite the innate tenacity that got her to college in the first place, she gave up on calculus when, in a particular context, she thought it was futile to keep trying. The context in which this student tried to learn calculus gave rise to a mindset that she could not succeed, which affected her ability to persevere in that context.

Another way that classroom context can affect academic perseverance is by giving students opportunities to develop metacognitive and self-regulatory strategies. Where teachers share strategies with students that help them be more effective in their learning and allow them to more fully engage in academic tasks, students are more likely to persist despite difficulty. By building students' repertoire of learning strategies, classroom teachers can indirectly increase students' perseverance because they see a payoff from their efforts (classroom context → learning strategy → academic perseverance).

There is cross-sectional research that suggests a strong relationship between learning strategies and perseverant behavior. Bembenutty and Karabenick (1998) looked specifically at the relationship between what they called "academic delay of gratification" and various learning strategies. College students completed a series of items in which they had to choose between two activities, one that would contribute to academic success in a specific class and another that would provide more immediate pleasurable returns (e.g., "Go to a favorite concert, play, or sporting event and study less for this course even though it may mean getting a lower grade on an exam you will take tomorrow," or "Stay home and study to increase your chances of getting a higher grade" p. 333). The researchers found that students' reported use of metacognitive strategies such as planning, monitoring, and self-regulation was associated with increased likelihood to delay gratification and choose the academic task ($r = 0.49$). They found similarly strong relationships between academic delay of gratification and a host of other learning strategies (e.g., managing one's time and study environment, $r = 0.62$; effort regulation, $r = 0.58$; and cognitive strategies such as rehearsal, $r = 0.42$ and elaboration, $r = 0.38$).

In short, psychological research suggests that classroom contexts shape students' academic mindsets, which in turn affect their academic perseverance within that context. Likewise, classrooms can provide students with opportunities to develop learning strategies which have also been shown to increase students' academic perseverance.

Are There Clear, Actionable Strategies for Developing Academic Perseverance as Part of Classroom Practice?

If classrooms can support positive academic mindsets and help students build effective learning strategies, then classrooms could contribute significantly to increasing students' perseverance in completing school assignments and hence to improving their academic performance. Two potential classroom strategies for influencing academic perseverance are either to "teach" perseverance directly (changing the student) or to influence perseverance indirectly through other mechanisms (changing the context). First we explore strategies for increasing perseverant academic behavior by teaching these behaviors directly, and then we look at ways to increase perseverance indirectly by changing the context in which students learn.

Direct instruction around perseverance is most often seen with students with identified behavioral disabilities. Some psychological interventions are designed to improve particular aspects of perseverance for these students by teaching them behaviors associated with impulse control and persistence. Unfortunately, there is little rigorous research examining the long-term effectiveness of such interventions. Often, existing studies do not include a control group and only examine short-term outcomes—such as improvements that are observed at the end of the intervention. Rarely is there long-term evidence of their effectiveness, even six months after treatment. Most of the research on these interventions has been conducted with elementary-aged children, and there is little work studying effectiveness at the high school or college level. There is also little research that examines the effectiveness of these interventions on different types of populations, including nonclinical versus clinical populations, such as students with and without ADHD (Pelham & Fabiano, 2008; Durlak, Furhrman, & Lampman, 1991; van de Weil, Matthys, Cohen-Kettenis, & van Engeland, 2002). Thus, there is an insufficient research base on which to recommend these types of strategies.

A second approach to increasing students' academic perseverance focuses on changing school or classroom contexts in ways that would indirectly influence academic perseverance. As described previously, the literature suggests two distinct pathways: supporting positive academic mindsets and helping students develop effective learning strategies.

There is clear research evidence that students' mindsets have strong effects on their demonstration of perseverant behaviors such as persistence at difficult tasks. When students value the work they are doing, feel a sense of belonging in the classroom context in which they are working, feel capable of succeeding, and believe they will master challenging material with effort, they are much more likely to engage in difficult work and see it through to completion. Dweck, Walton, and Cohen (2011) explicitly suggest that the ways to improve academic tenacity are through interventions aimed at changing students' mindsets directly or by establishing classroom conditions that support the development of positive mindsets. When teachers can present tasks in ways that make success seem attainable, and when they provide students with the support and tools to be successful, students are more likely to engage and persist in those tasks (Dweck, Walton, & Cohen, 2011). What is less clear is whether these effects are lasting and transferable, e.g., whether—post such interventions— students would continue to behave in a tenacious manner if put in a different context. Nonetheless, the evidence is strong that context-specific interventions that increase academic perseverance can have clear payoffs in terms of improved academic performance within the targeted context.

Lastly, teachers may be able to increase academic perseverance by changing their instructional practice in ways that help students develop and practice effective learning strategies. While more research is needed to show a causal link between teaching learning strategies and students' perseverance in completing assignments, theory and correlational evidence strongly suggest it is an important mechanism. A continued discussion of the relationship between academic perseverance and other noncognitive factors is presented in Chapter 5 (Academic Mindsets) and Chapter 6 (Learning Strategies), along with a more detailed description of the classroom contexts that have been shown to contribute to building academic perseverance.

Would Changing Perseverance Significantly Narrow Achievement Gaps?

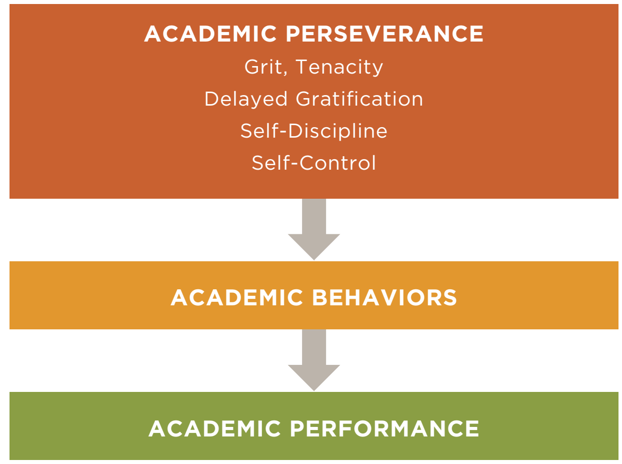
It is unclear from the empirical literature whether improving students' academic perseverance would narrow achievement gaps by race/ethnicity. Much of the research tying academic perseverance to student performance has been conducted on high-achieving students at elite institutions (Duckworth, Peterson, Matthews, & Kelly, 2007; Duckworth & Seligman, 2005, 2006). In a population of high-achieving, college-bound eighth-graders, Duckworth and Seligman (2006) did show a gender gap in self-discipline, with girls rated higher than boys in self-discipline by their teachers and parents as well as in their own self-reports. As a result of these differences in self-control, over the course of a year, girls spent roughly twice as much time on homework on average as boys. They found further that this gender difference in self-discipline explained about half of the gender difference in students' grades. However, this work is limited in scope in that self-discipline was measured concurrently with grades—potentially biasing the measurement and not allowing for causal inference—and it was conducted on a select group of already high-achieving students.

Bembenutty and Karabenick (1998) also looked at gender differences in academic delay of gratification in their study of college students. While girls showed higher mean levels of academic delay of gratification than boys, these differences were not statistically significant. The two studies taken together provide suggestive evidence that differences in self-discipline might underlie some of the gender gap in academic achievement, although much more work needs to be done in this area.

There is less research on racial/ethnic differences in academic perseverance. The two biggest racial groups in the Duckworth and Seligman study (2006) were White and African American students, comprising 55 percent and 32 percent of the sample, respectively, but the authors did not report differences in self-discipline by race. Bembenutty and Karabenick (1998) did report racial/ethnic comparisons by grouping White versus non-White students and found academic delay of gratification was significantly higher for non-White students ($p < 0.05$). This would not explain differences in achievement where White students outperform non-Whites. The broader research evidence on this point is mixed, with varying reports of higher levels of delay of gratification among Whites versus African Americans (Ward, Banks, & Wilson, 1991). There is a need for more research that shows whether there are consistent differences in academic perseverance among different subgroups of students. More longitudinal research and causal studies are needed to determine whether attempts to improve academic perseverance would be likely to improve academic outcomes for all subgroups of students.

Summary of Research on Academic Perseverance

A challenge of studying **Academic Perseverance** is that it is only evident through students' academic behaviors, and the research often conflates students' innate tendency to be perseverant with the actual behavior of doing work. Another complexity arises from how academic perseverance is defined and measured. On one hand, evidence suggests that grit is fairly stable as an individual trait. However, other work clearly shows that students are more likely to exhibit academic perseverance in contexts that promote positive mindsets or when they have the strategies to successfully manage classroom tasks.



Academic perseverance describes a quality of student engagement in success-oriented academic behaviors and attitudes that is empirically associated with increases in student grades. As such, increasing students' academic perseverance is appealing as a goal for both education policy and classroom practice. However, an isolated focus on academic perseverance as a thing unto itself may well distract reformers from attending to student mindsets and the development of learning strategies that appear to be crucial to supporting students' academic perseverance. As a field, we do not know how to make people innately grittier in a way that transfers across contexts. But the evidence suggests that finding ways to support positive academic mindsets can help students persevere in a given context, and that helping students build effective learning strategies is likely to lead students to more easily handle and hence complete difficult tasks.

While academic perseverance shows moderate relationships to student performance in cross-sectional designs (measuring both perseverance and performance at the same point in time), longitudinal studies find more modest relationships, making it difficult to establish evidence of a causal relationship between perseverance and performance. Although perseverance by race or gender have been suggested as an explanation for racial/ethnic or gender differences in student academic performance, there is little research that has examined this directly and no research that has studied it in a way that would allow for more than very modest causal inference.

CHAPTER 5

Evidence on Academic Mindsets

Academic Mindsets are beliefs, attitudes, or ways of perceiving oneself in relation to learning and intellectual work that support academic performance. The theory and empirical evidence on academic mindsets draws on a long history of psychological research. Most commonly, this research has involved correlational studies in which researchers administer questionnaires to measure student beliefs or attitudes, observe students performing academic tasks in either clinical experiments or natural classroom settings, and then analyze the relationship between their measurements of psychological factors and students' task performance.

Lately, mindsets have garnered much attention among researchers because several simple, short-term interventions directed at changing student mindsets have been shown to have surprisingly lasting effects on school performance. These studies suggest that "it can be as important to change people's…interpretations of the social world and their place in it—as it is to change the objective environment" of schools and classrooms (Wilson, 2006, p. 1252). The extensive body of research on mindsets further suggests that a psycho-social approach could have major implications for reform efforts aimed at closing racial/ethnic gaps in student performance and educational attainment.

In Chapter 2 we identified four academic mindsets shown to contribute to academic performance, which we express in the first-person from the point of view of a student:

1. I belong in this academic community;
2. My ability and competence grow with my effort;
3. I can succeed at this; and
4. This work has value for me.

As suggested in Chapter 4, each of these four academic mindsets is positively related to persistence at academic tasks. One of the mechanisms by which mindsets improve students' academic performance is by increasing their perseverance. This leads to improved academic behaviors which result in higher grades. We briefly summarize below the way each mindset affects perseverance.

1. I belong in this academic community. A student's sense of belonging in a school or classroom has a strong impact on academic performance (Battistich, Solomon, Kim, Watson, & Schaps, 1995; Cohen & Garcia, 2008; Furrer & Skinner, 2003; Goodenow, 1992; Goodenow & Grady, 1993; McMillan & Chavis, 1986; Ryan & Deci, 2000; Solomon, Watson, Battistich, Schaps, & Delucchi; 1996; Wentzel & Asher, 1995; Wentzel & Caldwell, 1997). Feeling part of a school or classroom community has significant psychological benefits for students and makes them more likely to engage in productive academic behaviors. In an extensive review of research on school belonging, Osterman (2000) concluded that:

> …the experience of belongingness is associated with important psychological processes. Children who experience a sense of relatedness [in school]… perceive themselves to be more competent and autonomous and have higher levels of intrinsic motivation [than students with a low sense of belonging]. They have a stronger sense of identity but are also willing to conform to and adopt established norms and values. These inner resources in turn predict engagement and performance… [Students who experience belongingness] have more positive attitudes toward school, classwork, teachers, and their peers…They invest more of themselves in the learning process (p. 343).

Conversely, "rejection or the sense of exclusion or estrangement from the group is consistently associated with behavioral problems in the classroom (either aggression or withdrawal), lower interest in school, lower achievement, and dropout" (p. 343).

2. My ability and competence grow with my effort. Students who believe they can increase their academic ability by their own effort are more likely to work toward building competence, more likely to be self-motivating and persistent, and more likely to exhibit behaviors associated with higher academic achievement (Cury, Elliott, Da Fonseca, & Moller, 2006; Dweck & Leggett, 1988). In contrast, these researchers found that students who believe their academic ability is fixed and cannot be changed by their own efforts are more likely to be focused on discerning the opinions of others as to their level of ability, less likely to be self-motivating and persistent, and less likely to do well in school.

A closely related line of research draws on attribution theory, exploring students' attributions for success and failure. If students attribute an incident of poor performance to their lack of ability, they tend to withhold further effort when faced with a similar task (Kelley, 1973; Weiner, 1986; Vispoel & Austin, 1995). Conversely, if students attribute low performance to a lack of effort, they are more likely to increase effort on the next try. As Dweck (1975) summarized:

> The manner in which a child views an aversive event, such as failure, determines, in large part, the way in which he reacts to that event. Specifically, if a child believes failure to be a result of his lack of ability or a result of external factors beyond his control, he is unlikely to persist in his efforts. On the other hand, if a child believes failure to be a result of his lack of motivation, he is likely to escalate his effort in an attempt to obtain the goal. (pp. 682-683)

Believing that ability and competence grow with effort is associated with effort attributions. Notably, in the studies above and replicated elsewhere, beliefs about intelligence and attributions for academic success or failure are more strongly associated with school performance than is actual measured ability (i.e., test scores).

3. I can succeed at this. A third mindset that impacts the degree to which students put forth effort and exhibit strong academic behaviors relates to beliefs about the likelihood they will succeed at a given task. Individuals tend to engage in activities that they feel confident in their ability to complete and to avoid those in which they lack such confidence (Bandura, 1986). People's efficacy beliefs (the perception that they will be able to do something successfully) in both in-school and out-of-school contexts are positively associated with how long they will persevere at a given task, as well as their likelihood to bounce back when faced with adversity (Pajares, 1996). Conversely, when people do not believe they can succeed at something, they are unlikely to put in persistent effort (Oyserman & James, 2009, p. 381). Efficacy beliefs mediate the effect of skills and of other self-beliefs on performance as they impact the level of students' effort, persistence, and perseverance (Bandura, 1986; Bandura & Schunk, 1981; Bouffard-Bouchard, 1990; Lent, Brown, & Larkin, 1984; Pajares, 1996; Schunk & Hanson, 1985). When students believe they are likely to succeed in meeting academic demands in a classroom, they are much more likely to try hard and to persevere in completing academic tasks, even if they find the work challenging or do not experience immediate success. Believing one can be successful is a prerequisite to putting forth sustained effort.

4. This work has value for me. The degree to which students value an academic task strongly influences their choice, persistence, and performance at the task (Atkinson, 1957; Damon, 2008; Eccles et al., 1983; McKnight & Kashdan, 2009; Wigfield, 1994; Wigfield & Eccles, 1992). Learners are naturally motivated to learn when they perceive a task to be inherently interesting (McCombs, 1991, 1993, 1994). Bruner (1960) noted that "interest in the material is the best stimulus to learning" (p. 14). For example, in a small qualitative study, Lee and Anderson (1993) interviewed sixth-grade students while they were engaged in a classroom science activity. The researchers found that students who valued science prior to the activity were more likely to be "thinking beyond the lesson content and engaging in tasks beyond the requirements or expectations of the classroom" (p. 590). When students are interested in a subject or see a connection between academic tasks and their own future goals, students are more likely to expend persistent effort and exhibit academic behaviors that support school success.

In short, when students feel a sense of belonging in a classroom community, believe that their efforts will increase their ability and competence, believe that success is possible and within their control, and see work as interesting or relevant to their lives, they are much more likely to persist at academic tasks despite setbacks and to demonstrate the kinds of academic behaviors that lead to learning and school success. Conversely, when students feel as though they do not belong, are not smart enough, will not be able to succeed, or cannot find relevance in the work at hand, they are much more likely to give up and withdraw from academic work by demonstrating poor academic behaviors which result in low grades.

What Is the Relationship between Academic Mindsets and Academic Performance?

Drawing on this seminal research from the 1980s and 1990s, much newer lines of work involve implementing psycho-social interventions—often brief treatments or short-term programs designed to promote positive student mindsets—and then comparing the academic performance of students who experienced the intervention to a control group that did not. Researchers such as Carol Dweck, Daphna Oyserman, Greg Walton, and their colleagues have used randomized experiments to evaluate the effect of carefully constructed brief treatments focused on students' mindsets and find compelling evidence that these treatments have lasting effects on students' academic performance. Several intervention studies have tested the effect of promoting what researchers call a "growth mindset," wherein students ascribe to the belief: *my ability and competence grow with my effort.* Students with a growth mindset believe that academic ability is changeable rather than being fixed at a particular level, and they tend to attribute their academic performance to the amount of effort they put into their work, rather than to innate ability, luck, or other factors beyond their control.

In an early example of an intervention study targeting students' attributions for academic performance, Wilson and Linville (1982, 1985) showed a video to a group of first-year college students that depicted older students at the same university discussing their initial difficulty in college, expressly making the point that their performance and GPA improved over time. Students in the control group also received a booklet illustrating what claimed to be normative growth in college students' GPA over time. The researchers' goal was to expose the treatment group to the suggestion that academic setbacks upon entering college are common and not indicative of a lack of innate ability or some other unchangeable factor. The control group saw a video of the same older students discussing their academic interests, with no discussion of their grades or course performance. The entire treatment consisted of reading the booklet with the GPA information and viewing these brief videos. Although groups were randomly selected and looked similar on key variables before the experiment began, one week after the video screenings students in the treatment group outscored control group students on practice GRE questions. A year later, treatment students had higher college GPAs (0.27 grade point difference) and were 80 percent less likely to have dropped out of school than control students (reviewed in Yeager & Walton, 2011). The authors interpret the findings as evidence that students can be influenced to have a growth mindset, and that a growth mindset contributes to lasting improvements in academic performance.

In a study of the same underlying mindset, Aronson, Fried, and Good (2002) had college students write "pen pal" letters and a short speech about the nature of intelligence that were ostensibly being sent to encourage younger students in middle school. In the treatment group, the letter writers were supposed to promote the idea that intelligence is malleable (a growth mindset). In one control group, letter writers were supposed to write about the existence of multiple kinds of intelligence. A second control group did not engage in any letter writing. The researchers found that students in the treatment group had overall college GPAs that were 0.23 grade points higher than the control groups by the end of the following school term, with African American students in the treatment group also reporting more enjoyment of and engagement in school than African American students in either control group.

In another study on growth mindsets, seventh-grade students in a randomized treatment group participated in a weekly 25-minute advisory group for eight sessions in the spring where they learned that intelligence is changeable and that the brain is like a muscle which grows with use. Prior to the intervention, math grades for both groups had been declining over the course of the year. After the intervention, the math grades of students in the treatment group stabilized while the grades of students in the control group continued to decline, for an overall difference between groups of 0.30 grade points by year's end (Blackwell, Trzesniewski, & Dweck, 2007).

In a separate line of work building on expectancy-value theory (*This work has value for me*), Hulleman and Harackiewicz (2009) had ninth-graders write essays each month about weekly topics in science class. Students in the treatment group wrote about how the science topics applied to their lives. Students in the control group wrote summaries of weekly science topics. The researchers found that students in the treatment group who started out with low expectations for success saw sizeable improvements in their grades at the end of the semester relative to the control group (0.80 grade points difference). There was no significant difference in the grades of treated students who already expected to do well. The researchers concluded that interventions that increase the value of academic work for disinterested students can have positive effects on grades, though these interventions are not likely to affect students who are already positively disposed toward a subject.

The results of these various school-based interventions suggest not only that mindsets are important but also that changing students' mindsets can result in improvements in academic performance as measured by grades. This is clearly good news; it is important work that builds on earlier studies of academic mindsets, and it warrants investment in further research. The implications of the intervention studies, however, should be considered somewhat cautiously. To date, much of the intervention research has included small samples in single schools. Moreover, of the many recent reviews of psycho-social intervention research in education, most have been written by the same people who conducted the studies (see Dweck, Walton, & Cohen, 2011; Garica & Cohen, in press; Walton & Dweck, 2009; Walton & Spencer, 2009; Yeager & Walton, 2011). A broader evidence base would strengthen the claims from these authors. It is also unclear how interventions addressing various mindsets fit together: If a group of students was exposed to multiple interventions targeting different mindsets, would the effects be additive? Who is most likely to benefit from which interventions and under what circumstances? While many questions remain to be answered, the intervention evidence to date—particularly in combination with the earlier theoretical and empirical work upon which it is built—continues to make a strong case that mindsets are an important non-cognitive factor in student academic performance.

Are Academic Mindsets Malleable?

The apparent success of the interventions cited above suggests that mindsets can be changed intentionally. Indeed, many of these studies demonstrate the malleability of the targeted mindset. Of 13 psycho-social intervention studies reviewed by Yeager and Walton (2011), several specifically measure the targeted psychological variables both before and after the intervention; all of these show changes as hypothesized by the researchers as well as expected differences in student performance (Aronson, Fried, & Good, 2002; Study 2 in Blackwell, Trzesniewski, & Dweck, 2007; Cohen et al., 2006; Hulleman & Harackiewicz, 2009; Oyserman, Bybee, & Terry, 2006; Walton & Cohen, 2007, 2011).

For example, in the Hulleman and Harackiewicz (2009) study intended to increase students' valuing of science through personal connection, we know that, of the students who did not expect to do well in science at the beginning of the study, those who wrote about science in connection with their own lives earned higher grades at the end of the course than those who just wrote summaries of science topics. After the intervention, students in the treatment group also had a higher interest in science and were more likely to indicate plans to take science-related courses in the future than were students in the control group. Walton and Cohen (2007, 2011) measured students' sense of belonging after an intervention meant to activate belonging uncertainty in the treatment group. As hypothesized, African American students who received the treatment had a lower "sense of academic fit" in computer science than African American students in the control group. Also, there were no significant differences in sense of belonging between Whites in the treatment and control groups, supporting the researchers' hypothesis that racial group stigmatization would interfere with African American students' sense of belonging in a way that would not be true for White students.

Blackwell, Trzesniewski, and Dweck (2007) provide contrasting examples of studies in which the malleability of mindsets is demonstrated and those in which it is can only be inferred. The researchers conducted a study in which seventh-graders participated in weekly workshops over eight weeks. Treated students learned math study skills as well as learning that the brain is like a muscle that grows with use. Students in the control group learned only the math study skills. In Study 1, psychological variables (students' implicit theories of intelligence and achievement-related beliefs) were only measured once, at the start of seventh grade, and then correlated with later achievement through seventh and eighth grades. In Study 2, after the eight-week intervention in which students in the treatment condition were taught that the brain can grow with use, the researchers tested the understanding of all students (treatment and control) about how the brain works, as well as measuring changes in their attitudes about the nature of intelligence (before and after intervention). They found that treated students changed their understanding of the brain, changed their beliefs about intelligence, and performed better than students in the control group. Unlike Study 1, Study 2 provides strong and direct evidence that mindsets are malleable.

While not all psycho-social intervention studies have taken this last step of including before and after measures of the targeted variable, those that do have shown changes in the targeted mindset in the expected direction as a result of the intervention. Overall, the evidence suggests that academic mindsets are malleable. They change as the result of experimental interventions, and they also respond to contextual conditions in natural classroom settings.

What Is the Role of Classroom Context in Shaping Academic Mindsets?

A long history of research literature suggests that mindsets are a product of the interaction between students and educational contexts, rather than being predetermined characteristics of individual students (Deci, 1992; Hattie, Biggs, & Purdie, 1996; Masten & Coatsworth, 1998; Stipek, 1986; Wang, Haertel, & Wahlberg, 1994; Yair, 2000). In fact, three of the four academic mindsets we have identified explicitly reflect the attitudes or beliefs of a student *in a specific context:* "I belong in *this* academic community," "I can succeed *at this*," and "*This work* has value for me." The fourth mindset, "My ability and competence grow with my effort," is likewise either reinforced or refuted by the context in which a student is expending effort to learn.

Classroom conditions have powerful influences on students' feelings of belonging, self-efficacy, and valuation of schoolwork and can also reinforce or undermine a growth mindset. Conditions in the classroom that have been shown to affect students' mindsets include the level of academic challenge and teacher expectations for success (Conchas, 2006; Rosenthal & Jacobson, 1968; Shouse, 1996; Wentzel, 2002); student choice and autonomy in academic work (Stefanou, Perencevich, DiCintio, & Turner, 2004): the clarity and relevance of learning goals (Grant & Dweck, 2003); availability of supports for learning (Gordon & Bridglall, 2006); grading structures and policies (Assessment Reform Group, 2002; Berliner, 1984; Black & Wiliam, 2004; Brookhart, 1994, 2004; Butler & Nisan, 1986; Covington & Müeller, 2001; Crooks, 1988; Harter, Whitesell, & Kowalski, 1992; Kaplan, Peck, & Kaplan, 1997; Weiner, 1979); the nature of the academic tasks students are asked to do (Bridgeland, DiJulio, & Morison, 2006; Eccles & Wigfield, 1995); the type, usefulness, and frequency of feedback on student work (Brookhart, 1994, 2004; Brophy, 1981; Cohen, Steele, & Ross, 1999; Hamre & Pianta, 2005; Harber, 2004; Stipek, 2001); and classroom norms of behavior and level of trust and safety (Bryk & Driscoll, 1988). As a National Research Council study concludes, positive engagement and self-efficacy in any given subject is contingent upon "creat[ing] a set of circumstances in which students take pleasure in learning and come to believe that the information and skills they are being asked to learn are important and meaningful for them and worth their effort, and that they can reasonably expect to be able to learn the material" (National Research Council and the Institute of Medicine, 2004, p. 14).

Research in both psychology and sociology emphasizes the importance of context in shaping an individual's identity and self-efficacy. Within schools and classrooms, students draw upon frames of reference shared with social groups that are important to them to determine how to act and "who to be" in school, which has implications for how they interpret the world of school and for their subsequent academic behavior

(Berger & Luckmann, 1966; Kaplan & Kaplan, 1982). Social context works powerfully with students' social identities to both define and constrain their sense of what is possible (Weick, 1995). The experience of membership in important social groups shapes students' sense of their own capabilities. As Oyserman & Fryberg (2006) explain, "We can become the kind of person that people of our group can become [and] we fear disappointing important groups by failing to attain group norms and standards" (p. 21). If students feel part of a learning community that values academic work, they are much more likely to share this orientation and act accordingly.

However, the need to meet group norms and standards becomes problematic for students for whom membership in particular social groups may be felt to be at odds with academic achievement. To the extent that students identify with a social group for whom academic achievement is not the norm, they may lower expectations for their own academic success to match those perceived as being normative for the group (Harvey, 1963; Harvey & Schroder, 1963). This effect of classrooms on student mindsets is particularly salient for racial/ethnic minority students and has led to a body of research on stereotype threat, which is addressed in **Box 5.1**.

School Transitions

The role of context in shaping students' academic mindsets becomes apparent when looking at what happens when students move from one school context to another (e.g., in the transition to middle school, high school, or college). Students are particularly vulnerable across school transitions, which are associated with declines in both academic performance and students' attitudes toward school (Alspaugh, 1998; Eccles, Lord, & Midgley, 1991; Hagborg, 1992; Harter, Whitesell, & Kowalski, 1992; Neild & Weiss, 1999; Simmons & Blyth, 1987). School transitions make contexts particularly salient, as students enter a new school milieu, have to reorient themselves to new social and academic demands, and have to renegotiate their sense of self, of academic competence, and of belonging in a new and unfamiliar social space. Many of the intervention studies discussed earlier were conducted on students in either the beginning of their first year in college or their entrance to middle school or junior high (seventh grade). Effective interventions aimed to normalize academic difficulty, bolster students' sense of belonging, or reinforce a growth mindset to inoculate students from declines in performance following a school transition.

One question that arises is whether these interventions would be as effective among students who were not changing schools. Blackwell, Trzesniewski, and Dweck (2007) found no significant correlation between students' theories of intelligence (fixed versus malleable) and their sixth-grade achievement; however in seventh grade (after entering middle school), having a fixed theory of intelligence was highly predictive of lower performance. In interpreting these results, the authors hypothesized about the role of context in activating the salience of particular mindsets: "In a supportive, less failure-prone environment such as elementary school, vulnerable students may be buffered against the consequences of a belief in fixed intelligence. However, when they encounter the challenges of middle school, [the evidence suggests that] these students are less equipped to surmount them" (p. 258). A fixed mindset constrains students from expending effort to adapt to higher intellectual demands because they do not believe that effort will be enough to overcome the limits of their academic ability.

Recursive Effects

Recent intervention research suggests that contexts contribute to what social psychologists call "recursive effects," which can magnify the interaction between contexts and student mindsets by launching this interaction in a positive or negative feedback loop. Consider the example of a ninth-grader who enters high school unsure of his academic ability and worried about finding friends. When he struggles with the problems on his first math assignment and has a hard time finding a lab partner in science class, he interprets these situations as evidence of his intellectual and social shortcomings. These experiences contribute to growing preoccupations with a lack of belonging and ability which then begin to undermine the student's academic performance, leading to further academic difficulties and lack of confidence. Though the student entered high school feeling unsure of himself, his interactions within the high school context and his participation in its routines

BOX 5.1

Stereotype Threat

Stereotypes about minority students' intellectual inferiority are particularly salient in schools and classrooms. Minority students in the U.S. must struggle to disentangle their own personal narratives of ambition and achievement from dominant societal messages about worth, capability, and academic success sent often unintentionally by schools and teachers. A large body of empirical literature suggests that salient societal stereotypes about minorities' alleged intellectual inferiority or indolence can exert a powerful pull—described as *stereotype threat*—on minority students' self-perceptions, attitudes towards learning, and academic performance (Steele, 1997; cf. Steele & Aronson, 1995; Walton & Spencer, 2009; Walton & Cohen, 2007). Minority students' fears of confirming negative stereotypes about their intellectual ability may lead to underperformance on specific tasks or tests, as students' anxiety about stereotypes interferes with their cognitive processing. Over time, this cycle of threat and the frustration of underperformance may give rise to self-doubt and undermine minority students' commitment to education and achievement. Ultimately, such underperformance may well increase racial gaps in academic achievement and attainment. For example, Perry, Steele, & Hilliard (2003) argue that subtle American narratives about Black intellectual inferiority make the messages African American students receive about their academic capabilities seem ambiguous and even untrustworthy. How are students to know, the authors ask, whether a teacher's feedback is a genuine response to their work or a reaction to what they represent in American culture as an African American?

Previous research suggests that uncertainty about the genuineness of feedback—often termed *attributional ambiguity* by psychologists—can be threatening to minority students' identity and performance in academic settings, both when feedback is positive and when it is negative or harshly critical (Mendoza-Denton et al., 2010; cf. Crocker et al., 1991; Mendes et al., 2008). The mistrust created by uncertainty about teachers' feedback can lead students to discount that feedback, to disengage from specific tasks, and, over time, to disidentify with school altogether (Mendoza-Denton et al., 2010; cf. Major & Schmader, 1998; Steele, 1992, 1997; Cohen & Steele, 2002). A number of studies suggest that strong and supportive relationships with teachers can play a critical role in building a foundation of trust and establishing a basis for minority students to develop positive, stable academic identities (Flores-González, 2002). These relationships provide teachers and students with a platform for delivering and receiving critical feedback, linked to messages conveying high expectations, encouragement, and consistent support that can be used to construct a counter-narrative of success and achievement among minority students (Mendoza-Denton et al., 2008; Cohen & Steele, 2002; Perry, Steele, & Hilliard, 2003).

Intervention studies conducted to address the operation of stereotype threat and belonging uncertainty among minority students provide strong evidence that students' self-evaluations and attitudes respond to conditions and cues in the learning environment. Walton and Cohen (2007, 2011) find evidence that interventions that modify conditions aimed at subtly bolstering minority students' sense of belonging in academic environments substantially affect their performance. These findings suggest that many of the critical challenges facing racial and ethnic minority students in the formation of strong, positive mindsets for academic achievement can be alleviated through the careful work of creating supportive contexts that provide consistent and unambiguous messages about minority students' belonging, capability, and value in classrooms and schools.

Messages about belonging, ability, effort, achievement, success, and value (both one's own intrinsic value and the value of one's education)—intended and unintended, explicit and implicit—are at the core of building students' academic mindsets. Teachers and schools participate in creating school and classroom contexts that either foster the development of academic mindsets and strong, positive attitudes towards learning among minority students or thwart the development of these positive mindsets. Perry, Steele, and Hilliard (2003) suggest that adults need to play specific, predictable, and unambiguous roles in redefining both the content and import of the messages minority students receive about the relationships among belonging, ability, effort, success, and, ultimately, value.

reinforce his initial self-doubts and lead to increasingly negative mindsets. These mindsets can become self-perpetuating as the student interprets his school experiences in a way that further undermines his self-efficacy and self-confidence. He withdraws effort from his schoolwork, which results in further poor performance. The ongoing interaction between the student and the school context thus creates a recursive, negative loop between academic mindsets, academic behavior, and academic performance.

It is by breaking this self-reinforcing cycle that interventions around mindsets can cause lasting improvements in achievement (Yeager & Walton, 2011). The theory underlying intervention work is that a well-timed intervention can change an adolescent's schooling trajectory by disrupting this recursive process and resetting the student on a more productive cycle where success and positive expectations are mutually reinforcing. Interestingly, many of these psycho-social interventions aim to *change student perceptions and interpretations* of the school and classroom context rather than changing the context itself.

Are There Clear, Actionable Strategies for Developing Academic Mindsets as Part of Classroom Practice?

There is strong evidence that mindsets matter for student performance, growing evidence that mindsets are malleable, and both a theoretical and empirical basis for the importance of context in shaping mindsets. Unfortunately, the research does not directly translate into classroom strategies that teachers can use to support positive mindsets in their students. Even in the case of experimental research that focuses on specific intervention strategies, it is not clear how these experimental strategies might be used more globally to improve educational contexts. Videotaped interviews of older students at a selective university talking about their difficulty in freshman year might be helpful to incoming students who are experiencing daunting academic challenges, but they provide little direction to the university on how best to support students so routine challenges would seem less overwhelming. Thus, a central tension arising from the research on academic mindsets revolves around how best to apply the research to improve student outcomes.

If we start with the premise that schools and classrooms often do not provide the positive psychological conditions that research shows to be important for building academic mindsets, then we have two potential approaches to address this. One approach would be to change institutional structures and practices so that students' everyday school and classroom experiences promote positive academic mindsets. Another approach would be to leave schools and classrooms as they are, but to use the findings from intervention research to help students achieve positive mindsets and thus inoculate students from potentially unsupportive environments.

This second option may have great appeal. Investing in a short-term intervention program aimed specifically at building or supporting students' academic mindsets seems like an easier route than reforming instructional practice or changing a whole school culture. Further, the research points to a variety of short-term interventions that have evidence of success in school settings—from programs focused on promoting the growth potential of intelligence to interventions for developing students' sense of belonging. Some of these interventions have become the basis of programs available for purchase by teachers or parents. This raises the possibility that investing in an intervention program could be a prudent way to build students' academic mindsets without changing existing school and classroom practices.

While intervention programs that target academic mindsets might benefit students and contribute to improved academic performance, there is also reason for caution in this approach. First, there are a number of very different intervention programs available: How should educators choose among them? The findings from many intervention studies seem to be consistent (the interventions lead to better school performance), but the treatments are quite different across the studies. Which is the right program for a given school? Furthermore, the effects in most of these studies were selective, affecting some students (e.g., African American college students, seventh-grade girls in math) while not having any impact on the performance of other students—suggesting that specific interventions must be tailored to the psycho-social needs of specific groups of students in particular contexts. How can schools accurately assess the needs of their students so as to apply the right intervention to the right subgroup? Would it be cost-effective to invest in multiple interventions that target different mindsets? Would the effects across these programs be additive or redundant?

Second, it is unclear how big the overall payoff to such interventions would be. While the effects of many of these interventions are significant, some are modest; they average on the order of about 0.3 GPA points. Investing in one of these strategies may be insufficient because they might only have a modest, one-time effect on achievement. There is also evidence that the effectiveness of interventions may be compromised if students become aware of their purpose (Sherman, Cohen, Nelson, Nussbaum, Bunyan, & Garcia, 2009). Thus, attempts to implement them as part of the normal course of school may not have the same payoff as the initial intervention under experimental conditions.

Third, relying solely on intervention programs while not addressing the larger psychological conditions embedded in existing school and classroom contexts will necessarily constrain the effects of the intervention. Learning that the brain is like a muscle that grows with effort motivates students to continue working hard to learn despite setbacks or early failures. But this message may lose its persuasive power if a student's school relies largely either on competitive, one-shot summative assessments to evaluate her performance or on other similar practices that reinforce the value of natural ability over persistent work. Likewise, programs designed to increase students' sense of belonging will have limited impact if their teachers do not know their names and do not recognize or address their particular interests or learning needs.

Instead of, or in addition to, relying on intervention programs to change student mindsets, another strategy involves changing institutional structures and practices so that everyday educational experiences lead students to conclude that they belong in school, that they can succeed in their academic work, that their performance will improve with effort, and that their academic work has value. While there is substantial evidence that changing teachers' instructional practices could improve students' academic mindsets, reforming instructional practice can be difficult. Still, improving classroom contexts would seem likely to have a larger and broader impact on student achievement and achievement gaps than one-time interventions that only can address a limited sample of students. And while interventions might be easier than instructional reforms in the short run, there is much evidence to draw upon in devising actionable classroom strategies.

The National Research Council and Institute of Medicine (2004) summarized decades of research to identify school conditions that promote strong student engagement and positive academic mindsets. These included: presenting students with challenging but achievable tasks; communicating high expectations for student learning and providing supports that allow students to meet these expectations; making evaluation practices clear and fair and providing ample feedback; reinforcing and modeling a commitment to education and being explicit about the value of education to the quality of one's life; providing students with opportunities to exercise autonomy and choice in their academic work; requiring students to use higher-order thinking to compete academic tasks; structuring tasks to emphasize active participation in learning activities rather than passively "receiving" information; emphasizing variety in how material is presented and in the tasks students are asked to do; requiring students to collaborate and interact with one another when learning new material; emphasizing the connection of schoolwork to students' lives and interests and to life outside of school; and encouraging teachers to be fair, supportive, and dedicated to student learning while holding high expectations for student work.

Many of the strategies that promote positive academic mindsets relate directly to classroom practices around grading and feedback on student work. Supporting positive mindsets around self-efficacy requires that teachers be transparent in their grading practices and explicit about how and why different aspects of student work will affect grades (Assessment Reform Group, 2002; Black & Wiliam, 2004). Instructional contexts that provide students with clear learning goals, and assessment practices that provide students with regular feedback on their progress toward those goals, are essential for creating a school or classroom culture where success is perceived as possible (Kellaghan et al., 1996; Marzano, 2000; Popham, 2000; Tyler, 1949; Tyler, 2000). Students also need repeated opportunities to demonstrate their learning. Giving feedback to students on their progress toward a goal becomes irrelevant if the classroom is not structured to provide students additional opportunity to learn and improve their performance. Researchers have also found that specific kinds of feedback are much better than others in promoting positive mindsets. Praising students for their effort or for their choice of strategy supports the development of a growth mindset and reinforces student effort and enjoyment of academic challenge, while praising students for their talent or ability tends to undermine student effort, cause students to be preoccupied with their ability, and lead to a withdrawal from academic challenge (Mueller & Dweck, 1998).

Classrooms that emphasize cooperation and a sense that everyone can achieve the learning goals are much more supportive of self-efficacy and a valuing of academic work than classrooms that emphasize competition and a zero-sum environment where only a limited number of students will earn good grades (Carr & Walton, 2011; Dill & Boykin, 2000; Johnson & Johnson, 2009; Johnson, Maruyama, Johnson, Nelson, & Skon, 1981; Midgley & Urdan, 2001; Roseth, Johnson, & Johnson, 2008; Slavin, 1995). In their review on academic tenacity, Dweck, Walton, and Cohen (2011) document a number of additional school and classroom practices that promote positive mindsets and increase academic tenacity. These include establishing trusting relationships that instill a sense of belonging, holding high expectations for students, and scaffolding challenging work so that students are able to reach high standards.

While research is clear that classroom context shapes student mindsets and that certain teacher strategies support these mindsets, it is difficult to know how to change classrooms on a broad scale without further research based in actual classrooms aimed at helping teachers acquire such strategies. One potentially fruitful place to start may be in exposing middle and high school teachers and college instructors to the research on academic mindsets and helping them understand the mechanisms by which classroom variables can affect student beliefs about themselves and their schoolwork. However, understanding psychological theory does not automatically lead to knowing what to do differently in one's instructional practice. There are few resources available currently that would translate social-psychological theory into classroom-based instructional practices that could be readily employed by teachers in a variety of school settings to support positive academic mindsets.

Would Changing Academic Mindsets Significantly Narrow Achievement Gaps?

A number of interventions targeting mindsets have been shown to reduce gender and racial achievement gaps. Positive academic attitudes and mindsets that support school performance are important for all students, but racial/ethnic minority students are more likely to face contexts with additional, distinctive challenges to the development of positive academic mindsets. A number of the interventions designed to change mindsets demonstrate large effects on racial/ethnic minority students—or on girls, in the case of math and science performance—suggesting that it is particularly critical to pay attention to the ways in which minority status may shape how students view themselves in relationship to a given learning context. Research on stereotype threat, in particular, suggests that racial/ethnic minority students could benefit from greater attention to academic mindsets.

Many psycho-social interventions are specifically designed to inoculate students against the negative effects of stereotype threat, and indeed they show differential effects on minority students. For example, Cohen, Garcia, Purdie-Vaughns, Apfel, and Brzustoski (2009) had African American and White seventh-graders complete brief writing exercises about values that were important to them. Compared to a control group, students in the value-affirmation group had higher grades, with low-performing African American students seeing the biggest increase in grades (0.41 grade points), sustained over two years. In the Walton and Cohen study (2011), first-year African American and White college students were shown videos designed to help them normalize academic difficulties in the transition to college rather than attributing them to their own personal or racial identity. The significant effect was on African American students' grade point average, which was 0.24 grade points higher than that of control group students from sophomore through senior year of college (Walton & Cohen, 2011) and reduced the racial achievement gap by 52 percent.

The same intervention had no significant effect on the grades of White students.

Ultimately, whether a focus on mindsets can narrow current racial/ethnic or gender gaps in academic performance and college degree attainment depends on the size of these gaps relative to the size of the effects of mindset interventions. It also depends on how much of the achievement gap is caused by stereotype threat or other negative mindsets that would differentially harm minority students in the first place. There is evidence that negative mindsets exist among minority students, as well as among girls in math and science; interventions designed to target mindsets are differentially effective for these groups. Additionally, several studies demonstrate a measured difference in mindsets before and after intervention. There is theoretical reason to believe that the size of the effects of these interventions may actually underestimate the negative impact of stereotype threat and other threats to positive academic mindsets for minority students. The interventions in these studies are generally targeted to change students' construals of their academic environments. To the extent that these interventions are not able to fully counteract potentially harmful psychological messages in those environments or that other factors outside of those academic settings (family, peers, larger socio-cultural context) also exert negative pressures on students' academic performance, the effect sizes of these interventions will be lower-bound estimates of the size of racial/ethnic or gender performance gaps.

One limitation for psycho-social interventions targeting college students is that they may come too late to substantially increase the number of minority students who earn college degrees. This is, of course, true for any intervention aimed at college students. The number of minority students who have successfully made it into college already represents roughly half the age-eligible population nationally. In many urban school districts, half the entering ninth-grade class will not even graduate from high school. Of high school graduates, a large number of minority students either do not proceed to college or enroll in two-year colleges that have low rates of degree completion. Although the interventions targeted at changing the mindsets and improving the performance of college students are beneficial for students who make it to college, greater leverage points for reducing gaps in educational attainment would likely focus on students in the middle grades and early in high school.

Summary of Research on Academic Mindsets

There is strong evidence that mindsets affect student performance. Strong, positive mindsets make students much more likely to engage with academic work, demonstrate positive academic behaviors, and persist despite setbacks. Mindsets are shaped by school and classroom contexts, but they also are malleable at an individual level through experimental interventions. Generally the reported effects from intervention studies are moderate, about 0.2 to 0.3 grade points in size, although these effect sizes may underestimate the actual impact of mindsets on student achievement. It is unclear if mindset interventions transfer across contexts or if students would benefit from more than one intervention. Furthermore, different sets of interventions target different mindsets, and it is unclear whether one intervention would have added value on top of another. While numerous studies have identified specific aspects of classroom context that contribute to strong academic mindsets, a gap persists between research findings and teachers' intentional use of strategies to promote positive student mindsets. Because academic mindsets are so critical to strong student performance, figuring out how to bridge this research/practice gap seems to be a prudent avenue for future work.

CHAPTER 6

Evidence on Learning Strategies

Noncognitive factors are "noncognitive" only insofar as they are not measured directly by cognitive tests. In order to affect learning and academic performance, however, noncognitive factors must engage a student's cognitive processes. The use of **Learning Strategies** is one example of this. As a category, learning strategies encompass several related psychological processes: metacognition, self-regulated learning, time management, and goal setting. Together, these concepts constitute a group of learner-directed strategies, processes, and "study skills" that contribute to academic performance.

Learning strategies have important relationships with other noncognitive factors. Utilizing appropriate learning strategies can make students' academic behaviors more productive and effective, contributing to improved academic performance. As a result, learning strategies tend to increase students' self-efficacy (the *I can succeed at this* mindset), which in turn is related to increased academic perseverance when schoolwork gets challenging. There is also clear evidence that students either with higher self-efficacy or who place a high value on the work they are doing are much more likely to use metacognitive and self-regulatory strategies to engage in learning. Positive academic mindsets drive strategy use, which makes students' academic behaviors more persistent and effective, leading to improved performance. Successful academic performance, in turn, reinforces positive mindsets.

Conversely, a lack of effective learning strategies can contribute to poor academic behaviors and poor performance. Students are less likely to complete homework if they do not know how to organize themselves to get it done, and they are less likely to study for tests if they do not have study strategies that help them review effectively. Not completing homework and not studying have a depressive effect on students' grades. Poor grades in turn undermine positive student mindsets, which then can diminish students' academic perseverance. Likewise, students with low self-efficacy or who place a low value on the work they are asked to do are much less likely to use metacognitive strategies or to self-regulate their learning; their academic behaviors are less likely to produce learning and quality work, even when students do complete the work. Thus, learning strategies are an important component in a chain of noncognitive factors that shape students' academic performance.

Theorists and researchers have studied many concepts and processes in the broad category of learning strategies over several decades (much of this work is from the 1990s), but there is as yet no single agreed-upon model for what the various components of learning strategies are, how to measure them, or how they affect learning. Across this work, however, there is consensus on a number of points. First, learning strategies involve *metacognition*, defined as an individual's knowledge of and control over his or her cognition (Flavell, 1979; Hacker et al., 2009) or knowing how to monitor one's own understanding (Credé & Kuncel, 2008). Self-regulated learning refers to students' intentional use of metacognitive strategies to achieve learning outcomes (Zimmerman & Schunk, 1989). Rather than being general styles of learning, self-regulated learning and metacognitive strategies are goal-oriented efforts to influence one's own learning behaviors and processes. Students self-regulate their learning by focusing awareness on their thinking and selecting strategies and environments that will be most conducive to learning (Zimmerman, 2001).[4]

A second and related point is that students learn more effectively when they monitor their own learning processes, determine when they are having difficulty, and adjust their behavior and/or strategies to tackle the task at hand (Ford et al., 1998; Pintrich & De Groot, 1990; Winne & Hadwin, 1998; Zimmerman, 2001). Self-regulating learners monitor the process of their learning, ascertain how effectively they are addressing a given learning task, and adjust their efforts accordingly. The process of academic self-regulation can be compared to the thermostat of a furnace, which continually monitors the temperature in a room and responds by adjusting the output of heat (Boekaerts, Zeidner, & Pintrich, 2000). In the absence of this self-regulation, students are apt to give up prematurely, before fully mastering the work at hand, and gain less understanding from the time they do devote to learning.

Researchers also agree that self-regulated learning is a multi-phase process that involves a number of distinct tactics or strategies. These strategies are embedded in behavioral, emotional, cognitive, and executive operations and therefore encompass several simultaneous psychological tasks—which range from invoking judgments about one's personal cognitive abilities, assessing the factors involved in a particular task and how it will influence one's cognition, and selecting cognitive strategies which may facilitate performance (Paris & Winograd, 1990). Winne and Hadwin's (1998) model of self-regulated learning includes four phases. The first phase involves defining or identifying the learning task one is encountering: *What does the task require of me? How is it related to other things I've done? What do I know about this already? How hard will this be?* Once the student defines the task, the second phase involves setting goals in relation to the task and developing plans to reach those goals.[5] This planning aspect entails selecting strategies or tactics to meet the goals the student has set. The second phase also includes deciding on some kind of standard for success: *What will it look like if I've done this successfully?* In Phase 3 the student enacts the tactics/strategies and monitors what happens: *How well is this tactic working? Why didn't it work? Am I as good at this as I thought I was? Should I try a different strategy? Did I learn this well enough?* Phase 4 involves a major reconfiguration of the student's approach to future tasks, based on his or her cumulative experience. As such, Phase 4 only happens occasionally. Winne and colleagues emphasize that these four phases, while conceptually distinct, are recursive or iterative and are only "weakly sequenced" as they occur in the mind of the learner (Winne, Jamieson-Noel, & Muis, 2002).

Other researchers have offered different models of self-regulated learning, but all involve multiple steps or a diverse collection of strategies. Zimmerman (1990) defines self-regulated learning as consisting of "self-evaluation, organization and transformation, goal setting and planning, information seeking, record keeping, self-monitoring, environmental structuring, giving self-consequences, rehearsing and memorizing, seeking social assistance (peers, teacher, or other adults), and reviewing (notes, books, or tests)" (p. 7). Other researchers differentiate between three categories of learning strategies: *cognitive* strategies such as rehearsal, organization, and elaboration; *metacognitive strategies* such as planning, monitoring, and regulation; and *resource-oriented* strategies such as "creating a favorable learning environment, controlling attention, and sustaining concentration" (cited in Helmke & Schrader, 2001, pp. 13553-13554; see also McKeachie, Pintrich, Lin, & Smith, 1986; Snow & Swanson, 1992; Weinstein & Mayer, 1986). Within these three larger categories, researchers have specified additional levels of elaboration. For example, task awareness, strategy awareness, and performance awareness have been identified as distinct components of metacognitive knowledge (Reynolds, Wade, Trathen, & Lapan, 1989).

While learning strategies generally involve metacognition (monitoring one's understanding) or organizing time and resources (setting aside an hour with the TV turned off in order to read), other strategies are entirely cognitive and have the express purpose of increasing a student's understanding or transferring information into memory. Weinstein and Mayer (1986) identify three such subcategories of cognitive learning strategies: rehearsal strategies, elaboration strategies, and organizational strategies. Generally, the more a learning strategy involves manipulating or organizing material rather than just reviewing it, the more likely it is to result in deep understanding (Weinstein & Mayer, 1986). Winne (1996) describes "deep processing" as the application of studying tactics such as "retrieving concepts and ideas relevant to material currently being studied, monitoring relationships between new information and prior knowledge, assembling propositions into elaborated structures, rehearsing and transforming information into meaningful schemata, and metacognitively monitoring and adapting learning tactics according to the requirements of a task" (Winne, 1996, p. 344, with reference to Schmeck, 1988; Winne, 1985). Note that while these strategies involve both cognitive and metacognitive processes, they fall under the broad umbrella of noncognitive factors because—while they *contribute* to a student's mastery of content knowledge and skills—they are nonetheless *distinct from* knowledge and academic skills as measured by cognitive achievement tests. Still, the category of learning strategies brings us to a particular awareness of the inadequacy of the term *noncognitive*.

For learning strategies to be effective, students must accurately perceive the nature of a task and its demands, and they then must choose and enact appropriate strategies to meet those demands. Learning strategies may often be quite conscious and require focused effort, particularly when tasks are set within a domain of knowledge (e.g., molecular chemistry or the works of Emily Dickinson) that is unfamiliar to a student. As learners move from novice to expert status within a given domain, the selection and use of learning strategies become increasingly automatic (Ericsson & Smith, 1991; Winne, 1996), to the point where students may not even be aware that they are using strategies.[6]

A key component of students' ability to monitor their own thinking is what is called *judgment of learning* (JOL), meaning one's ongoing determination of how much one has learned and whether or not one's level of understanding at any point in time is adequate to the task. This is another important characteristic that distinguishes "expert" learners from less effective students: more accomplished learners know what they know and they know what they have yet to learn; hence, they can tell when they need to put in more effort to accomplish a goal. Researchers studying undergraduates' metacognitive strategies concluded: "One of the critical barriers to success for many students may be their inability to objectively assess their mastery of the academic tasks they are facing" (Isaacson & Fujita, 2006, p. 39), and hence they withdraw effort too soon.

There is considerable evidence that students learn more when they have better metacognitive strategies and use them to facilitate and self-regulate their learning. However, there are several limitations in the research on metacognition and self-regulated learning (see Lennon, 2010). First, most studies are cross-sectional (with evidence collected at only one point in time), yielding little information about how self-regulation may change during adolescence and making it difficult to link strategy use directly with subsequent academic performance. Of equal importance, "this field of research is still struggling to develop a widely accepted assessment" of self-regulated learning (Lennon, p. 85), with studies using a variety of different instruments to measure similar concepts and a heavy reliance on student self-reports to measure metacognitive strategy use (Winne, Jamieson-Noel, & Muis, 2002). Recently, much of the work on self-regulated learning is within the context of online or computer-assisted instructional delivery (Azevedo, 2005; Hadwin et al., 2007; Winne et al., 2006).

What Is the Relationship Between Learning Strategies and Academic Performance?

Despite the limitations noted above, research shows that students who utilize self-regulation strategies tend to perform better in classroom tasks and activities. Pintrich and DeGroot (1990) examined the self-regulated learning, motivational orientation, and classroom academic performance of 173 seventh-graders in science and English. Using the Motivated Strategies for Learning Questionnaire (MSLQ), a self-report scale[7] that measured student self-efficacy, intrinsic value, test anxiety, self-regulation, and use of learning strategies, they found that students with high self-efficacy used metacognitive strategies more and were more self-regulating than students with low self-efficacy. While self-efficacy and intrinsic value were both strongly associated with self-regulation and strategy use, these motivational variables themselves did not predict performance directly. Rather, it was through students' use of self-regulation strategies that motivational variables affected performance (academic mindsets: self-efficacy/value → learning strategies → academic performance). Self-regulation was the strongest predictor of student performance in both English and science, with significant relationships across a number of measures of achievement (semester grades, as well as grades on seatwork, exams/quizzes, and essays/reports). The authors conclude that teaching students to use self-regulatory strategies in the classroom is vitally important, as the use of such strategies "is essential for academic performance on different types of actual classroom tasks" (p. 38).

McKeachie, Pintrich, Lin, and Smith (1986) tested the validity and reliability of the Motivated Strategies for Learning Questionnaire (MSLQ) to measure college students' motivation and use of learning strategies. They showed strong predictive validity of the motivational subscales and good internal reliability. The motivational scales were related to academic performance in the expected direction, with the learning strategies scales indicating a positive relationship to course grades.

Pokay and Blumenfeld (1990) examined the use over time of both subject-specific strategies and general metacognitive strategies in high school geometry classes. The researchers looked at the relationships among motivation, learning strategies, and academic performance for 283 geometry students in three high schools. At the beginning of the yearlong course, students were asked to complete a questionnaire about their perceptions of ability in math, the value they placed on the class, the likelihood they would be successful in the class, and their use of learning strategies. The authors also obtained students' geometry grades at two points in the course, as well as their prior algebra course grades which were used as a measure of entering math achievement. Early in the course (after proofs were first introduced), the use of specific geometry strategies, metacognitive strategies, and effort management strategies (as well as prior algebra achievement) were all significant predictors of course performance, accounting for 41 percent of the variance in grades. Interestingly, later in the course, metacognitive strategies were the only type of strategy use that predicted grades. These findings suggest that subject-specific strategies may be more useful when a student is learning a new subject such as geometry, and that some level of subject-area proficiency may be necessary before the use of meta-cognitive strategies can lead to successful outcomes.

In another high school study, Zimmerman and Martinez-Pons (1986) identified 14 commonly used self-regulated learning strategies and developed a structured interview tool called the self-regulated learning interview schedule (SRLIS). The SRLIS was used to assess the use of metacognitive strategies of high-achieving and low-achieving tenth-grade students attending a middle-class suburban high school. The researchers found that students' total score for self-regulated learning strategies was the best predictor of both English and math performance (Zimmerman & Martinez-Pons, 1986). Strategy use predicted with 93 percent accuracy students' membership in the high- versus low-achievement groupings.

Finally, researchers explored cross-cultural patterns of high school students' use of self-regulation strategies and their predictive value for academic success. In Australia and Japan, Purdie and Hattie (1996) found within-country patterns of strategy use, such that exchange students from one country were likely to exhibit the strategy use patterns in their host country. However, Japanese students in both countries relied more heavily on memorization strategies than did Australian students. Across both countries, students who viewed learning as understanding (as compared with learning as memorizing, learning as knowledge, or learning as performing academic tasks, for example) used a wider variety of learning strategies and were more likely to engage in strategy use in order to learn, as compared with students with other conceptions of learning (Purdie, Hattie, & Douglas, 1996). In another international study, Nota, Soresi, and Zimmerman (2004) found that Italian students' use of self-regulation strategies in high school—particularly organizing and transforming—predicted their high school course grades as well as their college grades.

Collectively, research provides evidence that knowing and understanding how and when to use learning strategies are associated with higher overall learning and better academic success. These relationships were demonstrated with students in middle grades, high school, and college, across a variety of subject areas, in the United States as well as internationally.

Are Learning Strategies Malleable?

Research supports the idea that metacognitive strategies are malleable and can be developed or learned. Many of the studies reviewed thus far measured strategy use and performance concurrently. While these studies show strong relationships between the two, they leave open the questions of whether learning strategies can be effectively taught and, if so, if teaching such strategies results in improved performance. The research demonstrating malleability uses two common experimental formats. The first involves teaching a skill where students' competence with that skill is measured before and after the skill training. The second measures the aptitude of learners who have been trained in a particular skill against a group of learners who have not had any skill training. While much evidence links learning strategies with better grades, the weakness of many of these studies is their reliance on student self-reports of strategy use or teacher reports on the basis of observable student behavior (Lennon, 2010; Winne, Jamieson-Noel, & Muis, 2002).

Learning strategies can be domain specific, and much of the research focuses on the effects of strategy use on either reading and literacy or mathematics performance. In a meta-analysis by Haller, Childs, and Walberg (1988), the average effect size of metacognitive instruction on reading comprehension across 20 studies was 0.72, a very large effect. Seventh- and eighth-graders benefitted most from metacognitive strategy instruction, which is consistent with Piaget's theory that the formal operational stage of cognitive development occurs around age 12 (Flavell, 1963). During this developmental stage, children begin to think about abstract ideas as well as developing deductive reasoning skills and systematic planning, making it an ideal time to introduce learning strategies that draw upon these processes. The most effective metacognitive strategies were awareness of textual inconsistency and self-questioning to monitor and regulate comprehension. Researchers also found that reading comprehension was greatest when instruction combined the use of several metacognitive strategies rather than focusing on only one or two (Haller, Childs, & Walberg, 1988).

Hattie, Biggs, and Purdie (1996) meta-analyzed 51 studies in reading and other subject areas and found that the average effect sizes due to training in cognitive and metacognitive skills were 0.57 on performance, 0.16 on study skills expertise, and 0.48 on positive affect. While they found memorization techniques to be highly effective for low-level learning tasks such as simple recall of formulas, procedures or facts, learning strategies that aid in higher-level learning require much more from both teacher and learner. Teaching such strategies in the context of the subject-area classroom is much more effective than teaching strategies or study skills in isolation. Findings show training has immediate benefits, but it is unknown if the positive effects of training persist and transfer to other contexts. For students to be able to transfer learning strategies from one context to another,

> the student needs to understand the basis of how the strategy works, when and under what circumstances it is most appropriate, what it requires of the learner; to the extent that this conditional knowledge is properly understood, the strategy may be deployed in contexts "farther" from those in which it was first learned...the further the extent of transfer, the more conditional knowledge and the deeper the content knowledge required. (p. 130)

Dignath et al. (2008) meta-analyzed research investigating whether primary school children could be taught self-regulation skills which would benefit reading, writing, math, science, and self-efficacy. Overall, across 48 studies, self-regulation training produced a weighted effect size of 0.62 on academic performance, using a variety of tactics.

Use of learning strategies in mathematics has also been shown to be malleable. Several studies tested whether math performance benefited from "metacognitive prompting" in which students were asked such questions as "what is this problem about?" or "what steps are you using to solve the problem?" Such cues led to better math performance by prompting students to identify problem structure and task characteristics, draw upon prior knowledge, and evaluate the appropriateness of strategies to solve problems (Butler & Winne, 1995; Kramarski & Gutman, 2006; Kramarski & Zeichner, 2001; Mevarech & Kramarski, 1997; Schoenfeld, 1987; Winne, 1979). There is similar evidence across all major school subjects that learning strategies can be effectively taught (Graham & Harris, 1994; Pressley & Woloshyn, 1995; Wood, Woloshyn, & Willoughby, 1995).

Even if students are not taught learning strategies directly, researchers hypothesize that they learn them anyway. Winne (1996, 1997) refers to this process as "bootstrapping" as students learn to appropriately apply new strategies to learning tasks by trial and error or by observation of the strategy use of others. As reviewed in Chapter 5, students with positive academic mindsets—who value the work or the content area, believe they can succeed in learning it, feel a sense of belonging in a class, and/or believe their efforts will lead to better performance—are more likely to work to acquire strategies to help them learn new material. Regardless of the mechanism whereby new strategies are acquired and applied, there is clear evidence that learning strategies are malleable and can be taught or otherwise developed in students from preschool to college and across a wide range of subjects.

A limitation of the research on learning strategies is its reliance on self-reporting to determine the effectiveness of metacognitive skills training. In any given study, researchers cannot be sure whether metacognitive strategies have actually been "learned" and put to use or if students are simply telling researchers what they think they are supposed to say, based on the content of the training. Conversely, there is evidence that strategy use becomes increasingly automatic as students develop expertise, meaning that students use strategies without being consciously aware that they are using them (Ericsson & Smith, 1991; McKoon & Ratcliff, 1992; Rabinowitz & McAuley, 1990; Schoenfeld, 1985; Winne, 1996). This, too, can confound research based on student self-report of strategy use.

Some of the research is further limited by not specifically addressing student motivation to engage in the strategy use being studied. Researchers often make the assumption that students will be motivated and see the value of participating in the additional tasks and putting forth the additional effort required to utilize strategies to improve learning. A long line of research has shown a strong relationship between student motivation (e.g., academic mindsets) and strategy use, and attention to this relationship is sometimes missing from experimental studies of learning strategies.

What Is the Role of Classrooms in the Development of Learning Strategies?

The development of students' self-regulation and metacognitive strategies is crucial if schools are to teach adolescents to become effective learners. Students can improve their learning by paying attention to their thinking as they read, write, and solve problems. Many metacognitive strategies are subject-specific, meaning that strategies that help one learn math may be different from the strategies one would employ while reading history. Content-area classrooms are therefore primary sites for the development of students' learning strategies.

Beyond being places where the direct teaching of strategies could most beneficially occur, classrooms play another important role in students' use of learning strategies. Across several of the studies reported earlier, researchers found strong relationships between motivational factors and strategy use. As seen in Chapter 5 on academic mindsets, classroom context is a critical factor in the development of positive academic mindsets, which have been shown to have a strong positive relationship to strategy use in learning.

Pintrich and DeGroot (1990) found that seventh-graders' self-efficacy in science and English, as well as the degree to which they valued those subjects, were strongly related to their use of cognitive strategies and self-regulated learning strategies. Likewise, Pokay and Blumenfeld (1990) found that high school students who placed a high value on learning geometry were much more likely to use learning strategies of all kinds in geometry class. This is consistent with Paris, Lipson, and Wixson's (1983) earlier conclusion that it was not enough for students to know about learning strategies; only when students truly valued the work in a class did they voluntarily use strategies they knew about. To the extent that classrooms foster academic mindsets that help students believe that *I can succeed at this* and *This work has value for me*, they play a crucial role in encouraging students' use of learning strategies shown to improve academic performance. Further, teachers can directly teach students how to most effectively learn course material through the use of both subject-specific and more general learning strategies.

Are There Clear, Actionable Strategies for Developing Learning Strategies as Part of Classroom Practice?

All students can benefit from classroom instruction that builds metacognitive skills and learning strategies, such as monitoring, planning, and self-regulating. Self-observation and self-evaluation are critical metacognitive skills that enable students to self-regulate their behaviors and become effective learners (Bandura, 1986; Zimmerman, 1990). When teachers provide timely, ongoing feedback through formal and informal assessments (e.g., discussions, papers, or tests), students are better able to understand which strategies worked for them and where they need to improve. Prompting students to complete self-assessments of their performance provides them with opportunities to practice self-reflection and critique of their learning.

Students benefit when they learn subject-specific metacognitive strategies in the context of subject-area learning. Ironically, they are more apt to be able to transfer strategies across contexts when those strategies are first introduced and learned in very specific contexts. (Bransford et al., 2000). For example, Haller et al. (1988) point out that reading comprehension can be taught by engaging metacognitive strategies through a variety of mental activities involving awareness, monitoring, and regulating. One important metacognitive activity associated with reading consists of training students to be aware when they are not comprehending what is being read and then devising strategies to redirect and compensate for poor comprehension. Rereading, backward and forward search strategies, self-questioning, contrasting textual information with prior knowledge, and comparing main ideas with each other and with details from the text are all examples of learning strategies that may facilitate better understanding while reading.

Another effective instructional practice for teachers is to encourage students to talk about their thinking processes when planning out an academic task. Blakey and Spence (1990) offer the strategy of paired problem-solving where one student talks through a problem by describing his thinking processes while his partner listens and asks questions to help clarify thinking. Similarly, in reciprocal teaching (Palincsar, 1986), a "dialog between teacher and students that involves summarization of the text, question generation, clarification, and predictions about what will next occur in the passage" promotes enhanced learning through the direct teaching of these metacognitive strategies (p. 188). Other strategies enlist teachers to model for students their thinking process while engaged in a task (a "Think Aloud") which in turn provides students with the necessary language to talk about their own thinking processes.

Advances in technology and curriculum development are providing opportunities for teachers to take a more active role in promoting and teaching learning strategies, as reviewed by Bransford et al. (2000). For instance, White and Fredericksen (1998) used an innovative software tool called the Thinker Tools Inquiry Curriculum when teaching physics to typical seventh-, eighth-, and ninth-grade students in urban public middle schools. This is a physics curriculum which allows students to perform virtual physics experiments and compare their results with experiments performed using actual objects. The curriculum encourages students to use a metacognitive approach by highlighting the inquiry cycle and bringing awareness to students' own process of investigation, with time to reflect on their questions and the inquiries of others. Students learn not only about physics but also about processes of inquiry.

In one study, younger students who participated in Thinker Tools outperformed older students taking a traditional physics curriculum. Despite their younger age and lower pretest scores, the Thinker Tools participants (in grades seven through nine) scored higher than traditional physics students in grades 11 and 12 on qualitative problems in which they were asked to apply the basic principles of Newtonian mechanics to real-world situations. By using "an inquiry-oriented, model-based, constructivist approach to science education" that emphasizes metacognitive skills, Thinker Tools "appears to make science interesting and accessible to a wider range of students than is possible with traditional approaches" (White & Fredericksen, 1998, pp. 90-91, as quoted in Bransford et al., 2000, p. 217).

Teachers can use instructional strategies that promote self-regulation without technological aides. For instance, planning and time management are improved when students keep a detailed log of their use of time for one week and use the log to plan their future use of study time (Weinstein & Mayer, 1986). Researchers have also found that if students visualize completing their homework and intentionally think about ways to make it more challenging, it increases the likelihood that they will finish their work and be more deeply engaged in it (Snow, Corno, & Jackson, 1996). Researchers at the University of Victoria in British Columbia teach an on-campus course for college freshmen called "Learning Strategies for University Success," designed to help students develop a toolkit of strategies to learn more effectively and overcome academic challenges in all of their other university courses. A key part of the learning strategies course involves identifying the kinds of challenges one is encountering and then applying appropriate strategies to move forward in learning.

Duckworth, Grant, Loew, Oettingen, and Gollwitzer (2011) tested an intervention on high school students preparing for the PSAT exam using "mental contrasting" and "implementation intentions," two self-regulation strategies previously shown to improve goal commitment and goal attainment in adults. Mental contrasting involves juxtaposing one's vision for a desired future with the constraints or obstacles that might impede reaching one's goals. Implementation intentions refer to the identification of action steps to achieve one's goals, in the form of if-then statements: "if I encounter this obstacle, then I will take these steps." In the Duckworth et al. intervention, 66 students completed written exercises in May of tenth grade regarding the PSAT exam they planned to take the following October. Everyone answered some preliminary questions about their goals for the PSAT and their intentions to use practice tests to prepare for the exam over the summer. Students in the treatment group wrote more extensively about visualizing the successful completion of their goals for completing practice tests and identified foreseeable challenges to their test-preparation plans. Treated students also developed "if-then plans" which involved identifying specific action steps for how they would respond to the challenges they anticipated in completing their summer study goals. Students in the control group wrote about influential people or events in their lives. The May writing intervention took less than an hour total. In July students each received a PSAT practice booklet in the mail, which was collected immediately after completion of the PSAT exam in October. In analyzing the results of the intervention, researchers found that students in the treatment group had completed over 60 percent more practice items over the summer than students in the control group. The authors conclude that

> the present investigation suggests that adolescents can learn relatively simple self-regulation strategies that dramatically improve their ability to attain long-term academic goals. Teachers and schools may therefore consider whether their missions should extend to modelling and instructing students directly in optimal self-regulatory strategies, as well as offering structured opportunities to practice them. (Duckworth et al., 2011, p. 24)

Teaching adolescents to become learners depends in large part on the identification of effective strategies that teachers can share with students to help them achieve their academic goals.

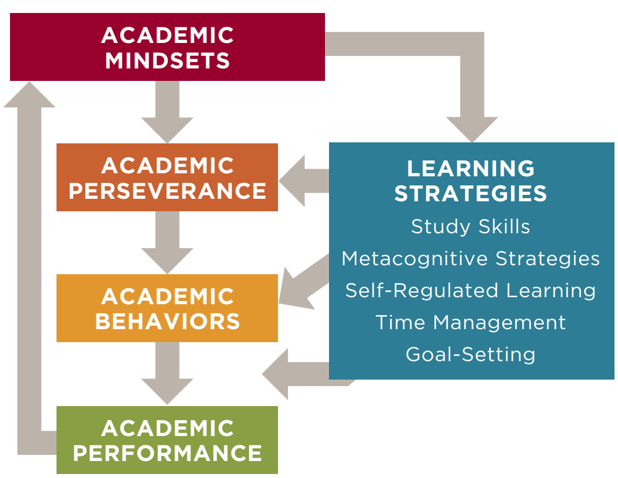
Beyond what we learn from research, practitioners are also a source for classroom practices designed to increase students' awareness and use of learning strategies. In the July 19, 2011, online issue of *Education Week Teacher*, middle school teacher Cossondra George offered teachers a variety of instructional strategies to help students "become responsible for their own learning" by explicitly modeling techniques for notetaking, reading, and studying. George had suggestions for demonstrating literacy techniques in class such as previewing reading passages and restating main ideas in one's own words; modeling how to take notes using a sample passage and giving students time to take notes in groups and compare strategies; encouraging students to set personal learning goals and dedicating time in class to reviewing progress toward those goals on a regular basis; and showing students different approaches to studying for tests, including using note cards to quiz themselves, making up test questions for one another, or playing review games. George also encouraged teachers to advise students to set aside small chunks of study time several days in a row rather than cramming the night before a test. All of these suggested instructional practices are consistent with the research on learning strategies.

Would Changing Students' Use of Learning Strategies Significantly Narrow Achievement Gaps?

There was very little evidence across studies about measured differences in learning strategies by race/ethnicity or gender. None of the research we reviewed reported collecting or analyzing data about students' race or ethnicity. While several studies included gender in their analysis, only the study of high school geometry students by Pokay and Blumenfeld (1990) reported differences in strategy use by gender. Girls used more learning strategies than boys, particularly early in the geometry course. The researchers suggest that this difference in strategy use could account for the finding that boys with low math self-concepts earned lower grades than girls with low math self-concepts, controlling for prior achievement. However, boys with high math self-concepts outperformed girls with high math self-concepts, leading the researchers to conclude that perhaps motivational factors "may be more facilitative for boys' achievement, whereas strategy use may be more facilitative for girls' achievement" (p. 48).

Further research is necessary to see if these conclusions are borne out. As with the other categories of noncognitive factors, the lack of research evidence does not mean that there are no differences in learning strategy knowledge or use by race or gender. Rather, this is a significantly under-investigated area about which we currently know very little. Hopefully future studies will examine these questions directly.

Summary of Research on Learning Strategies



We know that academic behaviors are the most proximal lever for improving student academic performance: better attendance, more studying, and higher homework completion rates would go a long way in improving students' grades. The evidence suggests that using appropriate learning strategies makes each of those academic behaviors more effective, resulting in deeper learning and higher performance. The use of effective metacognitive and self-regulation strategies may lead students to more actively engage in strong academic behaviors. After all, students are likely to spend more time studying, doing homework, and coming to class if they feel that engaging in such behaviors will lead to academic success. While much of the research is correlational rather than causal, there is a clear link between the use of learning strategies and academic performance.

Research also shows that students who place a high value on the work in a class and who believe they will be successful at it are much more likely to use metacognitive and self-regulated learning strategies when doing that work. Academic mindsets and use of learning strategies have a strong and consistent positive relationship across a wide variety of studies in several different subject areas with students in middle grades, high school, and college. This suggests that classrooms are important both as sites for the explicit teaching of learning strategies and as contexts that set motivational conditions for learning and strategy use.

We found numerous examples of short-term studies designed to evaluate the effectiveness of particular programs or the teaching of specific strategies, usually involving researchers specifying the strategies they wanted to test. However, we could not find any studies of teachers' "natural practice" in developing students' learning strategies or of the effectiveness of existing practice across grade levels and academic subjects. We also found little longitudinal research on any potential long-term effects of learning strategy use on student motivation and academic performance. This is surprising, given the important role of learning strategies in facilitating student understanding of course material and improving students' grades. The learning strategies course at the University of Victoria is the only formalized example we found of explicit instruction in learning strategies designed to improve student performance across subject areas.

CHAPTER 7

Evidence on Social Skills

Social behaviors or **Social Skills** have been linked to academic performance in elementary, middle, and high school, although the preponderance of this research is at the elementary grade level, with a particular focus on primary grades (DiPerna & Elliott, 1999; Feshbach & Feshbach, 1987; Green, Forehand, Beck, & Vosk, 1980; Gresham & Elliott, 1990; Lambert & Nicholl, 1977; Wentzel, 1991). The effect of social skills or behaviors on academic performance is often unclear from the literature. Most studies of social skills come from a broader field of research on social and emotional learning.[8] Gresham & Elliott (1990) give an expansive definition of social skills as "socially acceptable learned behaviors that enable a person to interact effectively with others and to avoid socially unacceptable responses" (p. 1). Such skills include cooperation, assertion, responsibility, empathy, and self-control (Malecki & Elliott, 2002). The Collaborative for Academic, Social, and Emotional Learning (CASEL) lists five "social-emotional learning core competencies" of self-management, self-awareness, social awareness, relationship skills, and responsible decision-making. Examples of ways students demonstrate responsible decision-making include "studying and completing their homework and [using] problem-solving and relationship skills to overcome obstacles" (Greenberg et al., 2003, p. 470). Given the overlap of social behaviors, mindsets, and academic behaviors in much of this work, it is difficult to extract the "social skills" components from other noncognitive factors in this body of research. For the purposes of our review, where research focused on social skills in combination with other factors, we tried to isolate the findings on social skills. However, because studies tend to confound social skills with other variables, we were not able to always isolate the effects of social skills from other noncognitive factors.

What Is the Relationship Between Social Skills and Academic Performance?

There is evidence that work on students' social-emotional skills can have positive effects on school performance but, again, most of this research examines other noncognitive factors in combination with social skills. In a longitudinal study following students through grades one, three, and six and at age 16, researchers found that "socio-emotional adjustment in school" was predictive of achievement test scores at every time point (Teo, Carlson, Mathieu, Egeland, & Sroufe, 1996). Much of the work done in the area of social skills training programs focuses on younger children (pre-K and elementary grades) and often measures results in terms of improved behavior rather than measures of academic performance (Bierman, 1986; Bierman & Furman, 1984; Bierman, Miller, & Stabb, 1987; Coie & Krehbiel, 1984; Ladd, 1981). CASEL published a review of research on 80 programs focused on "social and emotional learning" (SEL), only 20 of which even considered academic outcomes; others were directed toward substance abuse prevention, violence prevention, healthy sexual development, and overall promotion of health (Collaborative for Academic, Social, and Emotional Learning, 2003).

A recent meta-analysis of school-based interventions for enhancing social and emotional learning in students from kindergarten to high school concluded that there were positive effects of social-emotional interventions on academic achievement (Durlak et al., 2011). They found that, in the 35 studies that included academic achievement measures, SEL interventions had an average effect size of 0.33 on student grades and 0.27 on achievement test scores, the latter translating to a percentile difference of 11 percent. Grades only improved in studies where classroom teachers were responsible for delivering the intervention (as opposed to delivery by nonschool personnel). Unfortunately, this analysis cannot disentangle the effect of "social skills" from myriad other social-emotional development concepts. Search terms used to identify relevant studies for Durlak and colleagues' meta-analysis included: *social and emotional learning, competence, assets, health promotion, prevention, positive youth development, social skills, self-esteem, empathy, emotional intelligence, problem-solving, conflict resolution, coping,* and *stress reduction*, and studies qualified for inclusion if they targeted the development of at least one of these skills (Durlak et al., 2011, pp. 408-409).

One theory behind social-emotional learning is that the effects on academic performance are largely indirect, enacted through students' behaviors in the classroom. In other words, if one could develop students' competencies in the areas of self-awareness, self-management, social awareness, relationship skills, and responsible decision-making, then students would engage in more positive social behaviors and have fewer problems with misconduct and less emotional distress, resulting in more engagement in the classroom and hence better test scores and grades (Collaborative for Academic, Social, and Emotional Learning, 2003; Greenberg et al., 2003). Therefore, social skills may improve learning by enhancing social interaction that gives rise to learning (Vygotsy, 1978; Bandura, 1997) or may minimize disruptions to learning and thus have an indirect effect on students' grades (social skills → learning → grades).

Alternatively, it could be that teachers value prosocial behavior; they reward "good" social behavior directly with higher grades while penalizing behavioral interruptions with lower grades (social skills → grades). Indeed, studies of classroom grading practices show that teachers often do include student behavior as a factor when calculating grades. In one study of 307 middle and high school teachers, 37 percent reported including student behavior in their grades (Cross & Frary, 1999). In another study of district and school grading policies, while only 11 percent of school board and district documents specifically mentioned student behavior and attitude as a criterion in grading, 21 percent of school-level documents in those same districts acknowledged behavior and attitude as a factor considered in students' grades (Austin & McCann, 1992). This suggests that social skills may improve student performance not because they improve learning, but because they are sometimes considered directly in the calculation of students' grades.

Evidence from elementary and middle school suggests that social skills increase academic performance because they allow students to participate productively in classroom activities that foster learning. Slavin's work (1995) on the positive associations between cooperative learning and academic achievement would contribute to this idea. Likewise, Wentzel (1993) found that prosocial behavior (e.g., helping, sharing, and cooperating) and antisocial behavior (e.g., breaking rules and fighting) of sixth- and seventh-grade students (n = 423) each significantly and independently predicted GPA, although only prosocial behavior predicted achievement test scores. In a study of both positive social skills and problem behaviors in third- and fourth-graders in an urban Massachusetts district, Malecki and Elliott (2002) found that student social skills were positively correlated with concurrent grades, while problem behaviors were negatively correlated with concurrent grades. Positive social skills also predicted future academic performance. The study's findings affirmed earlier research by Wentzel (1991) that social skills acted as "academic enablers in school environments" for the elementary students they studied (Malecki & Elliott, p. 18). Wentzel (1993) found that most of the positive effects of social skills on grades were mediated by academic behaviors. She suggested that students who exhibit positive social skills in the classroom (e.g., cooperation or willingness to follow rules) would likely finish schoolwork as expected by their teachers.

A serious limitation of the studies showing a link between social skills and academic performance is that almost all are correlational rather than causal, meaning that measures of social skills and academic performance are taken at the same time. They generally do not provide evidence of the direction of the association between social skills and achievement: Do positive social skills contribute to increased learning, while problem behaviors decrease learning? Or does academic success contribute to positive social and academic behaviors in school, while academic difficulty contributes to problem behaviors? It is likely that social skills and academic performance are mutually reinforcing, but current research does not answer these questions definitely.

Most of the work showing relationships between social skills and grades was done at the elementary school level. Perhaps social skills have a weak direct relationship with course grades in high schools because most high school classrooms tend to minimize the social and cooperative aspects of learning. In contexts where individuals must work collaboratively in problem-solving teams, social skills may be more directly related to performance. Longitudinal studies at the middle school and high school levels are needed if we are to better understand the potential effects of social skills on academic performance over time and the mechanisms whereby social skills may impact grades.

Are Social Skills Malleable?

There is extensive research on social skills training programs that shows they are generally effective interventions, although the methodological strength of these studies varies (Quinn, Kavale, Mathur, Rutherford, & Forness, 1999; Beelmann, Pfingsten, & Losel, 1994; Coleman, Pfeiffer, & Oakland, 1992; Boyle & Hassett-Walker, 2008; McGinnis & Goldstein, 1997). Many of these programs address skill deficits of elementary school aged children, and effect sizes generally vary as a function of the extensiveness and scope of the particular program. Programs that are led by well-trained professionals are more likely to produce change, and outcomes are greater for normal populations of children than children who exhibit clinically significant deficits. Intervention programs address a range of outcomes, which include problem-solving skills training, interpersonal relationship development, coping skills enhancement, and aggression replacement training. Those programs that draw upon behavioral skill-building approaches have also been found to lead to more enduring change, compared to those that do not focus on a specific behavioral skill. Programs designed to be implemented on a formal, school-wide level include those aimed to address problem behaviors in students through such approaches as behavior modification (Lee & Axelrod, 2005; Sarafino, 2001), or, more recently, School-wide Positive Behavior Supports (SWPBS) or Positive Behavioral Interventions and Supports (PBIS) programs (Bradshaw, Reinke, Brown, Bevans, & Leaf, 2008). In their meta-analysis of 213 universal, school-based social-emotional development programs, Durlak et al. (2011) found an average effect size of 0.69 on social-emotional skill performance, indicating that indeed social skills such as emotions recognition, stress management, empathy, problem-solving, or decision-making skills can be intentionally developed through school-based programs.

What Is the Role of Classrooms in Shaping Social Skills?

Schools and classrooms play an important role in shaping students' social skills. Even where educators view poor student social behavior as a property of individual children that has to be addressed, the strategy for changing student behavior often involves implementing school- or classroom-level systems or programs of behavioral supports. Nonetheless, there is often little acknowledgement that school and classroom systems and structures might be implicated as either causing or exacerbating poor social behavior. A review of the What Works Clearinghouse Personal/Social Development outcome domain reveals that the majority of interventions are focused on "character education" at the elementary and middle school levels. The handful of school-based programs—such as Too Good for Violence (Hall & Bacon, 2005), Skills for Adolescence (Eisen, Zellman, & Murray, 2003), and Connect with Kids (Page & D'Agostino, 2005)—that show positive effects on behavior involve scripted curricula intended to be taught by teachers trained specifically by the curriculum developer. These curricula often include role-playing and cooperative learning exercises that promote good classroom citizenship. Research on these programs focuses on behavioral outcomes that are not tied directly to academic performance.

Durlak et al. (2011) emphasize the importance of school and classroom contexts for positive social-emotional functioning. In addition to "person-centered explanations of behavior change," they note that research also demonstrates that interpersonal, instructional, and environmental factors affect students' social behavior and academic performance, including:

> …(a) peer and adult norms that convey high expectations and support for academic success, (b) caring teacher-student relationships that

> foster commitment and bonding to school, (c) engaging teaching approaches such as proactive classroom management and cooperative learning, and (d) safe and orderly environments that encourage and reinforce positive classroom behavior (e.g., Blum & Libbey, 2004; Hamre & Pianta, 2006; Hawkins et al., 2004; Jennings & Greenberg, 2009). It is likely that some combination of improvements in student social-emotional competence, the school environment, teacher practices and expectations, and student-teacher relationships contribute to students' immediate and long-term behavior change (Catalano et al., 2002; Schaps et al., 2004). (Durlak et al., 2011, p. 418)

In reviewing the research on SEL, they note that effective SEL programming fosters students' social-emotional development "through establishing safe, caring learning environments involving peer and family initiatives, improved classroom management and teaching practices, and whole-school community-building activities" (Cook et al., 1999; Hawkins et al., 2004; Schaps, Battistich, & Solomon, 2004), further noting that "together these components promote personal and environmental resources so that students feel valued, experience greater intrinsic motivation to achieve, and develop a broadly applicable set of social-emotional competencies that mediate better academic performance, health-promoting behavior, and citizenship (ref. Greenberg et al., 2003)," (Durlak et al., 2011, p. 407).

Are There Clear, Actionable Strategies for Developing Social Skills as Part of Classroom Practice?

Social and emotional skills programs we reviewed are primarily geared for elementary-aged students or are designed to move students in special education programs into a mainstream or inclusive classroom. In their review of "universal" school-based programs, meaning those designed for all children in a school rather than particular subpopulations of students, Durlak et al. (2011) note such programs generally involve teaching students to process, integrate, and selectively apply social-emotional skills in appropriate ways, given students' stage of developmental, as well as contextual and cultural norms (Crick & Dodge, 1994; Izard, 2002; Lemerise & Arsenio, 2000). By systematically teaching and modeling SEL skills and giving students opportunities to practice and apply them in a variety of situations, the goal is to encourage students to include SEL skills "as part of their daily repertoire of behaviors (Ladd & Maze, 1983; Weissberg, Caplan, & Sivo, 1989.)" (p. 406).

All the research reviewed here was based on intervention programs designed to develop students' social-emotional competencies which include social skills in addition to other noncognitive factors. Effective training programs involved sequenced step-by-step approaches that actively involved students in skill development over extended periods of time and had clear and explicit goals, and programs were most effective when implemented with fidelity (Bond & Hauf, 2004; Durlak, 1997; Durlak et al., 2011, Dusenbury & Falco, 1995; Gresham, 1995). Unfortunately, this leaves little direction for classroom teachers wanting to support the positive development of social skills in their students outside of a formal program.

Would Changing Social Skills Significantly Narrow Achievement Gaps?

The research cited here gives little indication as to whether changes in students' social skills would narrow racial and/or gender achievement gaps. In attempting to validate their Academic Competence Evaluation Scale (ACES) and its relation to social skills and problem behaviors, DiPerna and Elliott (1999) found differences between White and minority students on teacher-report measures of interpersonal skills, among other measures of academic competence. Overall, minority students were given ratings lower than White students on each of the ACES components, yet further analyses were not able to determine whether the differences were a function of the instrument or of actual sample differences between White and minority students. Malecki and Elliott (2002) found no significant differences between White and minority elementary school students in social skills or problem behaviors at two time points. They noted higher correlations between teacher assessments of social skills and academic competence for White students than minority students. Wentzel (1994) found that White middle school students were perceived to be more prosocial by their peers and teachers and more likely to pursue prosocial and academically responsible goals than African American students. In the same study, girls scored higher than boys in social goal pursuit, social behavior, social acceptance, and perceived support. Attempting to isolate the effects of both prosocial and antisocial behavior, Wenztel (1993) finds a significant negative relationship between antisocial behavior and academic achievement (as measured by GPA), but does not indicate the extent to which this relationship differs significantly by race or gender.

These findings are limited in the conclusions that can be drawn about social skills differences in adolescents. The correlational nature of most research on social skills makes causal interpretation difficult, and in none of these studies do the authors offer interpretations of measured racial/ethnic or gender differences when they found them. Additionally, much of this work looks at social skills in elementary and middle school contexts; it is likely that social skills will manifest differently as young people progress through adolescence and enter high school and college settings that require different ways of interacting with one's environment.

Beyond the difficulty in determining causation, another issue looms large in the discussion of social skills and achievement gaps: the disproportionate number of minority students, and African American males specifically, who experience disciplinary action in school because of behavioral infractions (Gregory, Skiba, & Noguera, 2010). Given the racial and gender disparities in patterns of disciplinary action, it is necessary to consider whether certain aspects of social skills (i.e., antisocial behavior) are interpreted differently for different groups of students. In the report, *America's Youth: Transitions to Adulthood* (2011), the National Center for Education Statistics (NCES) reports that 57 percent of high-school-age African American males had been suspended[9] in 2007, a significantly higher percentage than any other grouping of students by race or gender.

In synthesizing the literature on the "discipline gap" and how it potentially affects the achievement gap, Gregory et al. (2010) point to research that suggests minority students may experience undue disciplinary action in school. The authors consider several explanations for the disproportionality in discipline patterns, including demographic background information, prior achievement, and differential behavior as possible student-level contributors (Anderson, 1999; Bauer et al., 2008; Brantlinger, 1991; Kuther & Fisher, 1998; McCarthy & Hoge, 1987; Stewart, Schreck, & Simons, 2006; Wallace et al., 2008; Whelage & Rutter, 1986), and differential selection and processing as potential school-level contributors (Skiba et al., 2002; Vavrus & Cole, 2002; Whelage & Rutter, 1986). Overall the literature suggests that race is the most significant of student characteristics that explains the discipline gap. While correlational evidence suggests that exposure to violence and low achievement are also related to the discipline gap, race still remains as a strong predictor. Socio-economic status had little effect, and one study found that African American students in a higher-income suburban school district still were more likely to be suspended (Rausch & Skiba, 2004). Gregory et al. (2010) also highlight research suggesting that schools may be disproportionally responding to antisocial behavior with harsher punishment for minority students than for White students who display similar behavior (McFadden et al., 1992; Skiba et al., 2008; Wallace et al., 2008).

As it stands, further research is needed to disentangle how discipline patterns, antisocial behavior, and social skills are related, and how each affects academic outcomes or contributes to group-based achievement gaps. The correlational evidence available does not either specify the mechanisms through which these factors may affect academic performance or accurately specify causal direction.

Summary of Research on Social Skills

In our model of noncognitive factors, **Social Skills** have the weakest evidence of a direct relationship with grades, in part because measures of social skills or social-emotional competencies overlap extensively with other noncognitive factors. Without more concise boundaries delineating the concept of social skills, the existing evidence cannot distinguish the effects of social skills from other effects. Social skills are important for adolescents as they prepare for future work and interacting in the "real world," but social skills are less utilized in the way classrooms are currently structured where independent tasks and assignments largely determine a student's individual grade. The exception to this may be when the context of the classroom focuses on collaboration and group work; in this situation, stronger social skills may prevail as having a stronger, direct relationship with grades. More research is needed which takes school and classroom context into consideration in examining how social skills may contribute to grades and learning for adolescents across a variety of school settings.

CHAPTER 8

The Role of Noncognitive Factors in School Transitions

Throughout this review, we argue that if research and initiatives around noncognitive factors are to be useable, we need to move beyond evidence from isolated studies to a broader framework that situates the discussion within classrooms and schools. Making the research actionable requires addressing three problems. First, we need to be much more specific about *what matters and why,* which means understanding what noncognitive factors most shape school performance during adolescence and how these factors interact. Second, we need to understand *when noncognitive skills matter,* which means situating the research evidence within a framework of the cognitive, social, and academic development of adolescents. Are there key developmental points of intervention? When in students' school careers is the development of specific skills, behaviors, attitudes, or strategies most critical in shaping academic performance? And, third, we need to understand *how* critical noncognitive factors can be taught or developed. We illustrate how these issues come together with case studies of three transition points in students' academic careers—the middle grades, the transition to high school, and the transition to college.

CASE STUDY 1

Noncognitive Factors in the Middle Grades Context

The story of the middle grades illustrates how the elements of our conceptual framework come together—how context influences academic mindsets, and how mindsets shape the development of noncognitive factors. The specific focus on the middle grades highlights the importance of considering students' developmental stage when setting up a context where they are likely to be successful.

As shown in this case study, students' developmental stage interacts with the types of tasks they face to promote or discourage academic mindsets that foster engagement and academic success in school.

In the late 1980s and early 1990s, developmental psychologists studying adolescents focused on understanding a critical phenomenon: for many early adolescents, the middle grades are characterized by decreases in school performance and engagement. These declines are observed both in measures of school performance (e.g., grades) and in attitudinal measures of students' confidence in their academic abilities, motivation, and attitudes toward school (Anderman & Maehr, 1994; Blyth, Simmons, & Carlton-Ford, 1987; Roderick, 1991).

The story that emerged is critical for understanding the role of noncognitive factors—particularly academic perseverance—in declining motivation and school performance during early adolescence. Developmental psychologists have long described cognitive changes in early adolescence, particularly how students begin to have new capacities for formal thought, regulation of behavior, and attributions (e.g., distinguishing between "working hard" and "lacking ability"). How-ever, instructional environments in the middle grades often do not take into account these new capacities or help students develop the academic mindsets and learning strategies they need to successfully take on and persist in new academic demands. As early adolescents are starting to equate having to work hard with lacking ability, changes in classroom environments and teacher practices begin to emphasize the relative ability of students and to reward students for whom achievement comes easily rather than those who have to put in effort to achieve. At the same time, there is evidence that early adolescence is a key window of opportunity where students are cognitively ready to develop new learning strategies and skills around persistence.

Cognitive Change During Adolescence

Developmental psychologists have long characterized adolescence as a period marked by major developmental shifts in children's cognitive and emotional capacities, including the ability to take the perspectives of others, to self-regulate, and to engage in more formal thought. Piaget characterized adolescents as developing the capacity for "formal operations" and being able to consider multiple dimensions of problems and develop more sophisticated approaches to processing information (Flavell, 1963). It is clear that adolescents begin to "think" differently than they had as children. Until recently, however, the mechanisms for why these changes in cognition occur were not clear. Recent research in neurobiology using brain imaging has filled in these important pieces of the puzzle. The prevailing evidence suggests that the prefrontal cortex matures later than other regions of the brain, developing during adolescence. The prefrontal cortex is the area of the brain that controls "executive functioning" and is linked to social cognition, specifically the ability to see the perspectives of others. In addition, brain synapses—the timing and pathways that the brain uses to process information—also advance significantly during adolescence. Deborah Yurgelun-Todd provides a succinct account of these changes:

> Adolescence is a critical period for maturation of neurobiological processes that underlie higher cognitive functions and social and emotional behavior.... The prefrontal cortex matures later than other regions and its development is paralleled by increased abilities in abstract reasoning, attentional shifting, response inhibition and processing speed. Changes in emotional capacity...are also seen during adolescence.... In summary, brain regions that underlie attention, reward evaluation, affective discrimination, response inhibition and goal-directed behavior undergo structural and functional re-organization throughout late childhood and early adulthood. (Yurgelun-Todd, 2007, abstract)

Thus, as children enter early adolescence they begin to use their brains and process information differently: they think more abstractly, they problem-solve differently, and they have greater capacity to use information to shape behavior. This information processing difference is reflected in adolescent behavior. First, an increased capacity for perspective-taking means that, as students enter the middle grades, adolescents become much more aware of how others see them. The perceptions of others, in turn, begin to shape adolescents' views of themselves to inform their behavior. Second, an increased capacity for decision-making and control means that adolescents become autonomous social actors—they become players in their environment in real ways, making motivation, coping, choices, and relationships ultimately more important to shaping their behavior. Third, the ability for more abstract thought and self-assessment means that adolescents begin to make decisions about motivation and engagement on the basis of feelings of competence, their valuation of the task for both present and future, and their feeling of belonging and social connectedness.

The increasing salience of the distinction between ability and effort during early adolescence is a prime example of how these cognitive shifts converge to influence students' academic performance. Covington (1984) argues that younger children are not able to distinguish between ability and effort. However, as adolescents enter the middle grades, they begin to equate working hard with a lack of ability (e.g., the greater the amount of work required, the less able I must be). Research finds that adolescents' beliefs about learning and the nature of intelligence fundamentally shift to underscore the importance of ability as a latent characteristic (Dweck & Leggett, 1988; Nicholls, 1986, 1989; Nicholls & Miller, 1985). The salience of social comparison heightens a sense of vulnerability and exposure—underscoring a perceived relationship between working hard and a lack of underlying ability. This heightened sense of vulnerability, combined with a growing sense of self-efficacy and a greater recognition of the ability to manipulate their environments through their behavior, underlie adolescents' decisions about whether to engage or withdraw effort in classroom settings. In an effort to not look dumb, adolescents may adopt behaviors and strategies to avoid failures—devaluing challenging tasks, self-handicapping, and withdrawing effort altogether.

In summation, the accelerated development of students' cognition during early adolescence sets the middle grades apart as a key window of opportunity and of risk. On the one hand, during early adolescence, children are developing the capacity to define and establish goals, regulate their behavior, and articulate an increasingly clear sense of themselves as efficacious learners. On the other hand, students' failure to develop strategies and skills during the middle grades can both create skill deficits and reinforce maladaptive patterns of withdrawal and disengagement. Central to addressing declines in school performance is attending to adolescents' conceptions about the nature of intelligence and hard work. Given these changes in students' attribution of efforts, developing approaches to teach students that ability is not fixed would appear to be critical and a high payoff approach to addressing declines in engagement during adolescence as well as improving the degree to which students persevere in academic tasks.

What is critically important about the body of knowledge in the middle grades is that declines in motivation and engagement are not inevitable. Indeed, the general conclusion that arose in this work was that declines in school engagement in this period are largely the product of classroom and school environments. So what goes wrong in the middle grades?

What Goes Wrong: Stage-Development Mismatch in the Middle Grades

In the 1980s, Jacquelynne Eccles and Carol Midgley began a series of seminal studies that situated the problem of declining student motivation and effort during the middle grades within school and classroom contexts (Eccles, Lord, & Midgley, 1991; Eccles & Midgley, 1989; Eccles, Midgley, & Adler, 1984). Eccles and her colleagues argued that changes in middle grades classroom environments and teacher practices, coinciding with developmental changes in adolescent cognition and social behavior, help to explain declines in students' effort, grades, and attachment to school across the transition to middle school. The story is simple: there is a mismatch between the developmental needs of adolescents and the conditions set by teachers within middle grades classrooms. Paradoxically, at a time when adolescents are becoming developmentally ready to assert increasing personal autonomy and assume greater responsibility for their learning, middle grades classrooms become more (not less) restrictive, placing greater emphasis on teacher control and diminishing opportunities for student choice and independence. Second, at a time when early adolescents become increasingly sensitive to social comparison, instructional practices in middle grades classrooms tend to reward ability over effort and highlight social comparison. Third, at a time when adolescents develop the ability to engage in more complex, abstract forms of problem-solving, the academic demand of class assignments declines during the middle grades—schoolwork often becomes less (not more) challenging. Thus, Eccles and her colleagues conclude that declines in school performance largely resulted from a developmental mismatch between the needs of adolescents and their school environment. They summarize the differences observed between elementary and middle school classrooms:

> First, junior high school classrooms, as compared with elementary-school classrooms are characterized by a great emphasis on teacher control and discipline, less personal and positive teacher-student relationships, and fewer opportunities for student decision making, choice and self-management... Second, the shift to junior high school is associated with an increase in practices such as whole-class task organization, between-classroom ability grouping and public evaluation of the correctness of work, each of which is likely to encourage the use of social comparison and ability self-assessment leading to a decline in the motivation of all but the most able students. Third, there is evidence that class work during the first year of junior high school requires lower-level cognitive skills than class work at the elementary level. Finally, junior-high-school teachers appear to use a higher standard in judging students' competence and in grading their performance than do elementary school teachers, which leads to a decline in the grades received by most students. (Eccles, Lord, & Midgley, 1991, pp. 533-534)

Research on motivation theory would suggest that these contextual conditions and teacher practices work to undermine rather than promote engagement in learning among early adolescents.

Teaching Adolescents To Be Learners in the Middle Grades

The misfit between the developmental capacities and needs of adolescents and the structures and demands of middle grades classrooms helps us understand the widely observed declines in effort, grades, and school attachment. At a critical moment, adolescent students and teachers are moving farther apart rather than converging in their needs and demands. What we also know, however, is that we can close the gap between students' needs and classroom practices. These studies suggest that the intentional choices adults make about assignments and the structure of middle grades classrooms can set conditions that give students opportunities to develop the academic mindsets and learning strategies that will lead them to persevere towards their goals and act in a persistent manner.

Creating successful school and classroom contexts requires that students be developmentally ready to meet new challenges; that learning environments be structured to give students scaffolded opportunities to engage in and wrestle with new challenges; and, finally, that schools and classrooms be intentionally structured to support teachers and students in that work over time. Evidence from developmental psychology suggests that students entering the middle grades are developmentally ready to tackle and solve a variety of new types of problems; however, extensive research finds that middle grades classrooms provide few meaningful opportunities for students to take ownership of and engage in this work.

CASE STUDY 2

Supporting Positive Academic Behaviors in Ninth Grade

While developmental psychologists in the 1990s were studying the transition into middle school and junior high school to explain declines in school engagement during early adolescence, education researchers began to focus attention on the transition to high school as a potentially important point of intervention to address school dropout.

The Transition to High School as a Critical Point of Intervention

In one of the first studies to draw attention to the high school transition, Roderick (1994) found a clear pattern that distinguished the academic trajectory of dropouts from graduates. Students who later dropped out of high school experienced dramatic declines in their grades and attendance—and equally as dramatic increases in course failures—as they moved into high school, regardless of the grade in which they dropped out. Indeed it was largely during normative school transitions that the academic trajectories of dropouts diverged from those of students who would later graduate.

This finding—that a student's capacity to manage the high school transition plays a unique role in predicting school dropout—has now been replicated in multiple studies (Allensworth & Easton, 2007; Felner, Ginter, & Primavera, 1982; Neild, Stoner-Eby, & Furstenberg, 2008; Roderick & Camburn, 1999). In Chicago, CCSR researchers estimate that the link between ninth-grade course failure and eventual dropout is so strong that each additional failed semester course in the first year of high school is associated with a 15 percentage point decrease in the probability of graduating. In other words, failing one full-year course in ninth grade decreases the likelihood of graduating by 30 percentage points (Allensworth & Easton, 2007).

Why would a student's performance in this one period of time be so strongly linked to school dropout? In this case study, we draw on findings from studies of ninth grade at CCSR and research from other places to summarize what we know about why students' school performance declines so significantly, the role of noncognitive factors, and the link to school dropout.

To summarize the story we have assembled, as students start high school, particularly in urban areas, they experience dramatic increases in the complexity of their school environment—in the number of classes and teachers they interact with, in the academic demands of their coursework, and in the size of their school and peer groups. Students must learn to deal with increased independence and more diverse academic demands. They must negotiate and manage relationships with a new set of peers and multiple teachers. This is an important developmental period for the formation of academic behaviors.

The problem is that high school environments are not structured to support the development of those academic behaviors. High school teachers, moreover, are often ill equipped to develop these skills in their students. Thus, at the same time that adolescents are facing new academic and developmental challenges, they experience striking reductions in support and in the monitoring of their performance. Not surprisingly, many students have difficulty managing these new demands. While grade failure in Chicago is not common in the middle grades, ninth-grade failure is widespread. Over half (53 percent) of ninth-graders in Chicago fail at least one semester of a course; 41 percent fail two or more.

Most educators assume that high rates of course failure in ninth grade and declines in students' grades upon entrance to high school are due to students' low skills: the problem, the argument runs, is that students do not have the academic skills to meet the new higher levels of content demands in high school courses. However, the evidence does not support that explanation. Indeed, what is particularly important about the high school transition is that students' grades drop in ninth grade because of dramatic changes in their *academic behaviors*, and this decline occurs among students with strong academic skills as well as among students with weak skills. Because few, if any, teachers are making ninth-grade students come to class and get their work done, they come to view as optional key behaviors like regular attendance, studying, and completing homework. The changes in academic behaviors during the transition to high school are striking. Absences in Chicago nearly triple between eighth and ninth grades, and students' homework completion declines dramatically.

The good news is that these declines in academic behaviors and school performance are largely avoidable. While high schools cannot directly change the entering skills or family background of their students, they can intervene to ensure that students are attending class regularly and they can monitor and intervene quickly when students begin to fall behind in their homework. As we will discuss, efforts in Chicago to improve the proportion of students who are "on-track" to graduation have led to significant increases in the proportion of ninth-graders passing their classes. Evaluations of interventions, such as Talent Development High School's Ninth Grade Success Academies, similarly find that interventions designed to improve support for freshmen are effective in reducing course failure and create impacts that are sustained over time.[10]

Ninth Grade: A Place Where Students "Get Stuck"

School transitions are a challenging time for any adolescent. Studies consistently find that, on average, students' grades, attendance, and attitudes towards school decline following a normative school move—whether they are making the transition to middle school, junior high school, or high school (Blyth, Simmons, & Carlton-Ford, 1983; Crockett, Petersen, Graber, Schulenberg, & Ebata, 1989; Eccles, Lord, & Midgley, 1991; Feldlaufer, Midgley, & Eccles, 1988; Felner, Ginter, & Primvera, 1982; Roderick, 1994; Schulenberg, Asp, & Petersen, 1984; Seidman, LaRue, Aber, Mitchell, & Feinman; Simmons, Black, & Zhou, 1991; Simmons & Blyth, 1987). Urban and minority students are particularly at risk. Urban adolescents' school performance, involvement, and perception of the quality of their school environments decline markedly as they move to middle school and high school (Reyes, Gillock, & Kobus, 1994; Roderick, 1994; Seidman et al., 1994; Simmons, Black, & Zhou, 1991).

Declines in school performance, however, are even more striking in the transition to high school in urban areas because of high rates of absenteeism and course failure. Course failure makes the impact of the ninth-grade transition particularly acute. Failing individual subjects in high school takes on a significance that it did not have in elementary school. In a system where progress is measured by credits accumulated toward graduation, the failure of even one or two classes retards expected progress and represents a large barrier to advancement. Academic failure also undermines school engagement and a sense of belonging, leading students to begin adopting negative school attitudes and behaviors with an eventual downward spiral in performance (Kaplan, Peck, & Kaplan, 1997; Roderick & Camburn, 1996). Just as importantly, without adult intervention, there is little recovery from failure. Students who fail a course in the first semester are at increased risk of failing additional courses the next semester (Roderick & Camburn, 1999).

Lack of credit accumulation is critical to the link between the ninth-grade transition and school dropout. In a review of research on the high school transition, Ruth Neild (2009) characterized ninth grade as a "place in the educational progression where students...are at increased risk of getting stuck" (p. 56). Using data from Philadelphia, Neild and her colleagues found that one-third of dropouts had never accumulated enough credits to move to sophomore standing, even though they had been enrolled in high school for several years. Roderick (1996) documented a similar pattern in Chicago: nearly half (46 percent) of Chicago students who left high school at age of 17 or older left with fewer than five credits (never having completed ninth grade) after being enrolled approximately three years; 70 percent had fewer than 10 credits.

Ninth-Graders with Strong Attendance and Good Grades Are More Likely to Graduate

The importance of ninth-grade course failures was brought into sharp focus with the development of CCSR's on-track indicator. The on-track indicator assesses whether freshmen were "on-track" to graduate on time by having failed no more than one semester of a core subject and having completed enough credits by the end of ninth grade to be promoted to tenth grade.[11] In 2005, 40 percent of CPS first-time freshman were off-track at the end of ninth grade. Ninth grade "on-track" proved to be a powerful leading indicator of graduation. Students who are on-track at the end of ninth grade are nearly four times more likely (81 versus 22 percent) to graduate four years later than students who are off-track.

Importantly, students' course performance in ninth grade has an impact on the likelihood of graduation independent of their academic skill levels. Many educators attribute high rates of course failure to students not being academically ready to manage new high school environments. In this view, course failure is simply a reflection of what skills students bring with them into high school. The evidence, however, is that while academic difficulty in ninth grade is more prevalent among students with low achievement, it is not isolated to these students. **Figure 8.1** presents ninth-grade on-track rates and graduation rates by students' entering achievement. Of students who entered CPS high schools with eighth-grade test scores in the third quartile (roughly equivalent to being in the third quartile on national norms), fully 35 percent were off-track at the end of freshman year, and only one-quarter (26 percent) of those who were off-track graduated. Thus, many freshmen who entered high school with test scores at or above national norms had difficulty in the transition, and that difficulty was a significant predictor of whether they would graduate. Conversely, many students with weaker skills managed to be successful freshman year and, if they did so, they had much higher probabilities of graduating than students with higher entering achievement who fell off-track in ninth grade. This does not mean that entering test scores do not matter. Ninth-graders with lower test scores were more likely to be off-track. But the difference in graduation rates between high- and low-achieving students was not nearly as large as the difference in graduation rates between those ninth-graders who were on- and off-track within achievement levels. What this means is that a student's freshman year performance shapes his or her chances of graduating independent of prior achievement (Allensworth & Easton, 2007).[12]

FIGURE 8.1

Four-Year Graduation Rate by Freshman On-Track Status and Incoming Reading and Mathematics Achievement (Students Entering High School in 2000)

Academic Behaviors, More Than Tested Achievement, Predict Course Failure in Ninth Grade

The pattern in **Figure 8.1** suggests that being on-track in ninth grade is more important than a student's tested achievement in shaping the likelihood of school dropout. In fact, if we try to predict ninth-grade course failure using students' eighth-grade test scores, we only explain 8 percent of the variation in failure rates across students (Allensworth & Easton, 2007). Students' background characteristics—such as gender, race/ethnicity, economic variables, school mobility, age at entry into high school—are also not very predictive of ninth-grade performance. Background characteristics combined with test scores only explain 12 percent of ninth-grade failures (Allensworth & Easton, 2007). Thus, students' academic skills and backgrounds provide only a small indication of whether students will succeed when they enter high school.

The central reason that we cannot predict course failure well is because most students who fail courses in freshman year do not fail because they lack the academic skills to succeed. Rather, students fail courses because they are not attending class, are not doing homework, and are not studying. New evidence from CCSR's more recent high school transition study suggests that the declines in grades and increases in failure between eighth and ninth grades are driven by quite dramatic changes in academic behaviors. This begins with attending class. Students who entered ninth grade in Chicago in the fall of 2008 were absent from school on average for about 10 days when they were in eighth grade. Half of those absences were excused; half were unexcused. The next year, when these students entered ninth grade, their unexcused absences quadrupled. Just one year later, they missed on average 27 days of school, with 21 days being unexcused absences. That is equivalent to missing over five weeks of class.

Students' study habits also decline as they move from eighth to ninth grade. Every two years, CCSR surveys Chicago students in grades six through 10 about their study habits. Because students answer the same questions in middle school and high school, we can compare what they say about how they study in high school (ninth and tenth grades) to what they said when they were in middle school (seventh and eighth grades). On average, study habits decline by about a fifth of a standard deviation in ninth and tenth grades, compared to seventh and eighth grades (Stevens et al., forthcoming).

After entering high school, students are less likely to report that they: set aside time to do homework, study for tests, do well on schoolwork that isn't interesting, and study before going out with friends.

How important are these changes in attendance and student effort? In Chicago, students' grades in both English and math are almost a half of a grade point lower in ninth grade than they were in eighth grade. **Figure 8.2** presents an analysis of how much of the decline in students' GPA in freshman year can be attributed to changes in academic behavior (Rosenkranz et al., forthcoming). The decline in grades can be explained almost completely by the increase in absences and the decrease in good study habits.

FIGURE 8.2

Reasons for Decline in Grades from Eighth to Ninth Grade

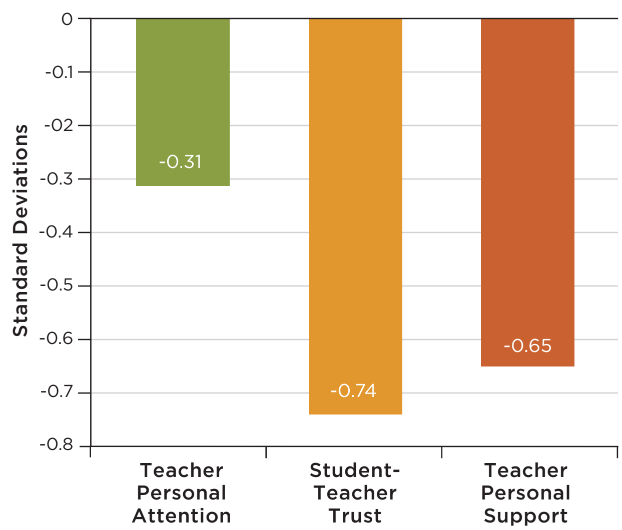
A Ninth-Grade Problem, Not a High School Readiness Problem

A common response to the problems students encounter in ninth grade is to assume that students are not "ready" for high school; we assume that if we could identify earlier the students who are at risk, we could support them to more successfully navigate the high school transition. Abrupt changes in academic behavior, however, complicate the story: these trends suggest that, contrary to expectations, it is actually extremely difficult to identify which students will struggle in the transition to high school. There is a group of students who show poor academic behaviors in the middle grades, failing at least one course or missing school frequently. Those students who have course failures or very poor attendance in the middle grades are very unlikely to graduate from high school; certainly, we can identify them early because their middle school performance is quite different from that of their peers (Balfanz & Neild, 2006). The problem is that many later dropouts who had difficulty in the transition to high school did not raise warning flags in eighth grade. For example, Balfanz & Neild (2006) found that using middle grade indicators only identifies about 50 percent of eventual dropouts. This means that a substantial portion of dropouts are students who exhibit better academic behaviors in eighth grade; then in a very short time period, they are not demonstrating those behaviors. This highlights the importance of context for students to enact expected academic behaviors. It is the change in environment that leads students to show worse academic behavior when they move to high school.

What is it about the high school environment that leads students to demonstrate worse academic behaviors? Paralleling the middle grades case study, it appears that changes in students' academic behavior reflect both students' struggle to meet developmental challenges and the lack of a developmentally appropriate adult response from schools and teachers—what Eccles has termed "stage-environment" mismatch (Eccles & Midgley, 1989). The change that is most immediately apparent to students when they move to high school is the decline in adult control of their behavior (monitoring) and decreases in academic support. Looking again at changes in Chicago students' responses to surveys across time (**Figure 8.3**), the same students assessed their relationships with their teachers quite differently in the middle grades and in high school (Johnson et al., forthcoming). The CCSR surveys include measures of the personal attention students receive from teachers, of the level of trust students feel towards their teachers, and of the personal support students feel they receive. The trend across the transition to high school is uniform across all three measures.

FIGURE 8.3

Differences Between Middle Grade and Ninth-Grade Student Perceptions



Source: From Johnson, D.W., Stevens, W.D., Allensworth, E., de la Torre, M., Rosenkranz, T., and Pareja, A.S. (Forthcoming). *Free to Fail Research Series: Student-teacher relationships decline at a critical time.* Chicago: University of Chicago Consortium on Chicago School Research. p. 1.

Across the transition to high school, students feel broadly less supported by their teachers. At the same time, ninth-grade students also appear to become aware that there is much less adult monitoring of their behavior occurring in high school. Students can more easily skip class—a behavior largely unheard of in Chicago's K-8 system. These declining measures of teacher attention and support suggest that high school teachers are also much less likely to monitor and control students' effort in class or to make sure they get their homework done. When students begin to struggle with more challenging material in classes, getting help becomes their own responsibility—ninth-grade teachers rarely force students to catch up or seek assistance when they need it, compared to teachers in eighth grade.

There are several possible reasons for this decline in support. First, high school teachers are teaching upwards of 150 students; outside of the window of time they have available during class, they may simply have too many students to monitor, to know well, or with whom to develop supportive relationships. Second, Farrington (2008) finds that many teachers strategically withhold support to help students develop independence. High school teachers generally do see ninth grade as a pivotal year—a time when students must learn to become more independent in order to succeed. Many teachers believe that students are most likely to develop the academic behaviors associated with independent learning if teachers refrain from "hand holding" as students struggle to adjust to new institutional demands. By withdrawing support, many teachers believe they are forcing students to "step up"—to take greater responsibility for their own learning—which will allow them to be successful in high school. In essence, students are supposed to learn the importance of academic behaviors by suffering the consequences when they fail to exhibit them.

Unfortunately, a significant portion of students cannot consistently meet these developmental challenges on their own; without adult guidance and support, students have few strategies to draw upon. When students exhibit poor behaviors (skipping class, not completing homework, missing deadlines), the consequences for these behaviors come swiftly in the form of low or failing grades. In Chapter 3, we presented evidence on the direct link between grades and academic behaviors, and here we see that link in action. Grades are not only the most proximal tool teachers have to influence students' academic behaviors; grades are essentially derived from behaviors. If a student does not turn in homework, the homework grade becomes an F.

These patterns can quickly become a vicious cycle: The consequences to students of poor academic behavior may be immediate and costly, but merely suffering these consequences may not help students adapt to their new environment and improve their behaviors. From the student perspective, the work demands of high school can seem overwhelming and the directions or expectations unclear. On top of that, they begin accumulating poor grades despite their efforts. From the teacher perspective, frustration with student behavior is compounded by their own lack of effective strategies to turn things around. Under deteriorating conditions, the threat of failure too often becomes teachers' primary tool for addressing students' poor academic behaviors.

If we step back and consider the research literature, what are the noncognitive factors that most strongly influence academic behaviors? Students who are equipped with effective learning strategies and possess academic mindsets of belonging, relevance, self-efficacy, and the valuing of effort are most likely to exhibit positive behaviors and the academic perseverance to succeed in their courses. Classrooms that build these strategies and support these mindsets are characterized by clear goals and high expectations for student success, the teaching and practice of strategies that help students become effective learners, significant levels of teacher monitoring and support, multiple opportunities for students to achieve success, and an absence of fear of failure.

Ironically, in attempting to help ninth-graders build the independent academic behaviors that are essential for high school success, teachers often end up creating classroom conditions that completely undermine the development of academic mindsets that would support those behaviors. By focusing narrowly on changing student behaviors through punitive grading practices, teachers lose sight of what really matters: creating classroom conditions and employing instructional practices that help students develop positive academic mindsets and learning strategies that research shows will lead to improved academic behaviors.

The Avoidable Failure

Of the three cases we present in this report, the transition to high school is the period where the evidence is strongest about what matters, the link between noncognitive factors (in this case, academic behaviors) and student outcomes is clear, and the connection to the classroom and the day-to-day work of school is evident. We also have strong evidence that schools can influence students' freshman-year performance.

The experiences of two urban school districts—Philadelphia and Chicago—illustrate how intentional programming and supports for incoming freshmen in the transition to high school can make a significant difference in students' ninth-grade performance and can have lasting effects on high school performance and graduation rates. MDRC evaluated the effects of the Talent Development High School Model's Ninth Grade Success Academy in seven low-performing high schools in Philadelphia (Kemple et al., 2005; Kemple & Herlihy, 2004). The Talent Development High School (TDHS) Model was developed in response to national research showing increased failure rates and large declines in attendance and academic performance, particularly for low-income and minority students as they entered high school.

A central feature of the TDHS model is the Ninth Grade Success Academy, designed to combat key problems common to low-performing urban high schools. To address the problem of student anonymity, Ninth Grade Success Academies have their own separate space from the rest of the high school, and teachers and students are grouped in small learning communities to foster closer and more personal relationships among students and adults. To combat low student expectations, all ninth-graders are programmed into rigorous college preparatory courses that meet in 90-minute blocks and have an emphasis on real-world projects that are aligned with the interests of students. To address poor prior preparation of incoming students, TDHS puts students in double-blocked English and math classes to provide them with additional time and support, as well as "catch-up courses" and a "Twilight Academy" as flexible options for students who need either additional focused instruction to prepare them for an upcoming class or who need to make up missing course credits. All ninth-graders also take a Freshman Seminar "designed to prepare students more broadly for the demands of high school" by combining "study skills, personal goal-setting, and social and group skills" (Kemple et al., 2005, p. 23). While these components are not necessarily framed in the language of academic mindsets, the Ninth Grade Success Academies are designed to support students to believe that they belong in the academic community, that the work is relevant, and that they can succeed with effort.

According to a rigorous analysis by MDRC, the seven Talent Development High Schools in Philadelphia "produced substantial gains in attendance, academic course credits earned, and promotion rates during students' first year of high school. These impacts emerged in the first year of implementation and were reproduced as the model was extended to other schools in the district and as subsequent cohorts of students entered the ninth grade" (Kemple et al., 2005, p. iii). The TDHS schools experienced a 28 percentage point increase in students passing algebra and a 9.5 percentage point increase in the proportion of ninth-graders promoted to tenth grade (Kemple et al., 2005). Matched control high schools, in comparison, showed little improvement. Early evidence also suggests that these ninth-grade improvements were sustained through tenth grade and are correspondingly translating into improvements in high school graduation rates.

CPS took a different approach to supporting incoming students in the transition to high school. Building off the CCSR research about the "on-track indicator" and the importance of students' performance in ninth-grade classes, CPS added schools' "freshman on-track" rates to its accountability metrics and provided data supports to help high schools monitor the performance of its ninth-graders. Using freshman transition programs, "on-track labs," and new watch lists and data tools, CPS high schools began to focus on ensuring that high school freshmen attend school regularly, get appropriate interventions and support, and pass their classes. Between 2007 and 2011, the ninth-grade on-track rates in CPS increased from 57 to 73 percent district-wide, with one quarter of traditional high schools showing improvements of over 20 percentage points. This means that a significantly smaller number of students was failing courses as a result of the additional monitoring and support provided by the high schools. In preliminary analyses of cohort data, it appears that the percentage of students on-track at the end of freshmen year held constant or increased by the end of sophomore year, even though students did not receive additional supports after they became sophomores.

The evidence from both Philadelphia and Chicago suggests that educators can structure school and classroom contexts in ways that wrap developmentally appropriate supports around students as they enter high school, resulting in better academic behaviors in he form of improved attendance and higher rates of homework completion which translate to improved academic performance and a reduction in course failures. The early indications from both cities are that strong supports for students in ninth grade may act as protective factors that carry students forward with better performance throughout high school. There is a strong theoretical basis for this effect. If increased monitoring and support help ninth-graders to develop strong academic behaviors and if a more personal learning environment supports them in building academic mindsets of belonging and self-efficacy, students are likely to demonstrate more persistence in their schoolwork and to earn better grades.

Ninth grade is a crucial point of intervention; as students enter high school they encounter institutions that demand much of them but provide little in the way of appropriate supports, as evidenced by systematic increases in absence and failure, even from students who performed well in eighth grade. Ninth-grade course failure sets up students for further failure. Not only do they face structural barriers in trying to regain missing credits, but the research on noncognitive factors suggests that these experiences may foster negative or counterproductive mindsets as students feel like they do not belong and cannot succeed in high school. Conversely, by coupling interesting and challenging classes with appropriate monitoring and support, there is evidence that high schools can help students build good academic behaviors and positive academic mindsets that may well provide them with a critical foundation that can carry them forward to high school graduation.

CASE STUDY 3

The Postsecondary Transition

Research evidence has identified a number of promising strategies for building and sustaining school environments and classroom contexts that support the development of the strong academic behaviors that ninth- and tenth-grade students need to succeed in the transition to high school. However, much less is known about what either high schools or colleges can do to ensure students' success in higher education.

More In, Fewer Out: Educational Attainment in the Twenty-First Century

Put bluntly, too few students attend college, and fewer still complete four-year college degrees. The U.S. is facing a crisis of educational attainment. As U.S. President Barack Obama observed in his 2009 State of the Union address, some three-quarters of the fastest growing occupational sectors in the American economy require more than a high school diploma; yet, barely over half of Americans have the education to qualify for those jobs. Beginning in the last two years, for the first time in U.S. history, American retirees have greater levels of educational attainment than young adults entering the workforce (OECD, 2011). This is, President Obama noted, "a prescription for economic decline."

At the center of this crisis in educational attainment is the college retention puzzle: why do so few students who enroll in college complete their degrees? Over the last two decades, there have been substantial increases in the numbers of minority and first-generation students enrolling in college; however, gaps in college graduation by race and income have remained steady or widened (Bowen, Chingos, & McPherson, 2009). Across all racial/ethnic groups, just over half of students who enroll in college graduate; over the last decade, it has taken college graduates progressively longer (five and six years, in many cases) to complete their degrees (Bowen, McPherson, & Chingos, 2009). Why has college completion not kept pace with college enrollment? Could noncognitive factors represent part of the solution to the college retention puzzle? This is perhaps the most critical issue on the national education policy agenda. However, despite the urgency of this effort, research evidence remains limited.

Weak Preparation and Declining Financial Aid Only Partially Explain Low College Degree Attainment

The national policy discussion around college retention has generally seized on two explanations of why the U.S. is failing to produce greater numbers of college graduates:

- Weak academic preparation for college coursework, particularly among African American and Latino students; and
- The combination of rising college costs and the declining value of financial assistance (Roderick & Nagaoka, 2008).

While there is clear evidence that prior academic achievement and financial constraints affect college retention, new research strongly suggests that a range of additional factors, including noncognitive factors, plays a critical role in students' postsecondary success. Academic mindsets interventions targeting students' sense of belonging, for example, have shown significant effects on both college retention and grades, However, as a growing number of researchers has begun to recognize, none of these explanations of low attainment accounts for college context. Previous research finds that students with similar levels of academic achievement and college qualifications (e.g., similar grades and test scores) have substantially different college outcomes, largely driven by where they attend college (Allensworth, 2006; Bowen, Chingos, & McPherson, 2009; Roderick, Nagaoka, Coca, & Moeller, 2008).

Colleges are not interchangeable; vast institutional differences exist in how colleges organize and structure the tasks associated with students' academic and social transitions, reflected in the tremendous variation in institutional four-year graduation rates—ranging from over 90 percent of each incoming cohort to under 10 percent. Colleges vary in whether and how they approach and support students' social adjustment, in how they provide academic resources and support, in how (and how much) financial aid is distributed, and in whether and how the campus climate itself is organized to support positive interactions with peers. On the one hand, despite the growing public attention paid to college readiness, there remains relatively little empirical evidence on what precisely it means for students to be "college ready." On the other hand, evidence shows that where students attend college will ultimately determine whether and in what measure their incoming academic achievement and/or noncognitive factors will affect their college persistence. In colleges with low institutional graduation rates (often those that provide few of the developmentally appropriate intellectual and/or social opportunities, challenges, and supports that stretch and grow students), even well-developed noncognitive factors are unlikely to improve students' probability of graduating on time.

How Colleges Organize and Structure the Tasks of Transition Matters

In *Potholes on the Road to College,* CCSR researchers documented the links between CPS students' social capital for college-going, their academic achievement in high school, and their likelihood of enrolling in college (Roderick, Nagaoka, Coca, & Moeller, 2008). That research showed that even highly qualified minority and first-generation college students struggle during the college search and application processes, in large measure because of deep social capital deficits. These students have access to few resources for college-going in their communities, putting them at substantial disadvantage during competitive admissions processes. High-achieving CPS students and others like them, researchers concluded, were especially dependent on the support and direct assistance of high school staff members—primarily counselors and teachers—to focus and refine college searches; to close gaps in college knowledge (Conley, 2007); and particularly to manage the complex process of applying for federal, state, and college scholarships and financial aid. However, while high schools may effectively attenuate the negative impact of social capital deficits in the college choice process, they do not eliminate those deficits as students enter college. Ultimately, college retention is influenced more by the institutional characteristics of colleges than by students' entering characteristics.

Substantial prior research demonstrates that college retention is substantially driven by how colleges organize and structure the tasks associated with students' academic and social integration. Previous studies show that institutional characteristics of colleges are connected with student activities and behaviors that broadly promote social adjustment to campus (e.g., living on campus, attending college full-time, being involved in campus activities, having strong social networks) (Berger & Milem, 1999; Cragg, 2009; Hurtado & Carter, 1997; Oseguera & Rhee, 2009; Pascarella et al., 1986; Ryan, 2004; Scott, Bailey, & Kienzl, 2006; Thomas, 2000; Tinto, 1987; Titus, 2004; Titus, 2006a; Titus, 2006b). Likewise, previous research also connects institutional factors with college retention, including how colleges structure students' interactions with faculty, per-student expenditures on instruction, and student academic support (Arum & Roksa, 2011; Astin, 1993; Berger & Milem, 1999; Bradford et al., 1997; Cragg, 2009; Gansemer-Topf & Schuh, 2006; Nagda et al., 1998; Pascarella et al., 1986; Ryan, 2004; Scott, Bailey, & Kienzl, 2006; Tinto & Goodsell-Love, 1993). How colleges structure students' financial aid packages—particularly whether financial aid is provided in the form of grants or loans—also affects student retention (Bailey & Kienzl, 2006; Blanchfield, 1972; Braunstei, McGrath, & Pescatrice, 2000; Cabera, Nora, & Castaneda, 1992; Cragg, 2009; DesJardins, Ahlburg, & McCall, 1999; Hu & St. John, 2001; Li & Killian, 1999; McDonough & Calderone, 2006; Nora, Barlow, & Crisp, 2006; Oseguera & Rhee, 2009; Somers, 1995; Somers, 1996; St. John et al., 1994). Finally, multiple studies have shown that whether and how colleges structure campus climates to minimize particular challenges minority and/or first-generation college students face related to cultural transitions not experienced by their peers affects college persistence for those students (Astin, 1993; London, 1989; Phelan et al., 1991; Pike & Kuh, 2005; Terenzini et al., 1996; Tierney, 1999; Titus, 2006a).

Noncognitive Factors Matter, But How?

How colleges organize and structure students' experiences on campus affects college retention, but to what extent are the differential effects of institutional characteristics due to student noncognitive factors? What do we know about which noncognitive factors are associated with college retention, and what do we understand about how the college context affects the salience of those factors? Which noncognitive factors matter and how? The research evidence on these questions is surprisingly weak.

College Requires Strong Academic Mindsets and Intellectual Engagement

Previous research suggests somewhat vaguely that in the transition to college, students must become new kinds of learners, not only harnessing a growing body of content knowledge across high school and college courses but also developing and deploying key academic mindsets and learning strategies. In addition to the quality and rigor of students' high school classes, research on the expectations that college faculty hold for students in college courses underscores the importance of developing students' academic mindsets during high school: their beliefs that ability and competence grow with effort; the notion that they can be successful in college coursework; and the conviction that courses are relevant and valuable (Conley, 2003, 2007; Farkas, 2003). Conley (2003, 2005) provides one of the most widely recognizable models of college readiness. He argues for the importance of a broad array of skills and knowledge that students putatively need to succeed in college, variously referred to as "tools" or "habits of mind" (p. 39), described in detail elsewhere as

> …critical thinking, analytic thinking and problem solving; an inquisitive nature and interest in taking advantage of what a research university has to offer; willingness to accept critical feedback and to adjust based on such feedback; openness to possible failures from time to time; and the ability and desire to cope with frustrating and ambiguous learning tasks. (Conley, 2003, p. 8)

Conley's work also contrasts the "conceptually oriented curriculum" of colleges with the "content-based curriculum" of high schools, arguing that, in order to succeed at the college level, students must master "interpretation," "thinking skills and habits of mind," "independent work, initiative, sustained effort, inquisitiveness, and attention to detail and quality" (pp. 75-76). Despite the breadth and intuitive appeal of Conley's framing, however, it is critical to note that the intellectual demands and institutional climates students encounter in the transition to college will depend in large measure on where they choose to attend college. In colleges and universities with higher institutional graduation rates—a rough proxy for the quality of the college environment and the social and academic supports available to students there—students are likely to face new and more complex demands from college faculty and their peers. Previous studies suggest that college faculty in these institutions expect and demand a higher level of intellectual engagement from students—one which requires students to cultivate a thoroughgoing inquisitiveness and an engagement with intellectual problems and puzzles without clearly evident solutions (Conley, 2005). Conversely, high school students who enter nonselective four- and two-year colleges may encounter similar or even diminished levels of academic demands as compared to those they faced in high school courses.

Students Also Face Challenges Becoming Integrated Into the Social and Academic Life of College Campuses

In addition to mastering not only new course content but also new ways of learning and engaging with peers, adults, and course materials, prior studies of college departure underscore that students must be prepared to translate existing knowledge and skills into a new context, becoming integrated into the social and institutional life of colleges. For minority and first-generation college students, the transition to the college environment may also represent a first encounter with an unfamiliar and sometimes subtly hostile racial climate. Extensive research in social psychology suggests that minority and first-generation college students experience strong but often imperceptible racial pressures on college campuses, which can undermine minority students' sense of belonging (Yeager & Walton, 2011) and their commitment to obtaining a college degree, undercut their academic behaviors, and even artificially depress their cognitive performance (Steele, 1992, 1997).

Steele argues that racial minorities, particularly African Americans, must compete with the stigma attached to highly racialized images that exist across various social spaces and actively work to perpetuate pre-existing notions of intellectual inferiority. On the one hand, previous research suggests, actively attempting to combat stereotypes about minority intelligence can become an exhausting performance in which one comes to understand that proving one's knowledge in one realm can have no bearing on another; thus, being accepted in one educational setting does not automatically "vouch" for students' skills in the next class setting (Steele, 1992). As a result, over time, minority students may feel a loss of control over their academic performance and a loss of scholarly identity, ultimately resulting in poor academic performance, perhaps particularly among higher-achieving students (Steele, 1992). The direct and indirect effects of such identity threats may ultimately undercut not only minority students' confidence but also their commitment and attachment to the goal of obtaining a college degree, particularly in educational settings where professors fail to convincingly separate academic potential from incoming skill sets (Steele, 1992). Recent research in psychology, highlighted elsewhere in this report, suggests that isolated, relatively short interventions targeting students' sense of belonging in school can produce significant and lasting effects (Walton & Cohen, 2007; Walton & Spencer, 2009; Yeager & Walton, 2011). This research suggests that the effects of students' self-perceptions—as well as the underlying perceptions themselves—are largely context-dependent. Although promising, this line of research has yet to fully explore how particular dimensions of college context may attenuate or exacerbate the negative effects of stereotype threat and low sense of belonging.

Students' Academic Goals and Sense of Self-Efficacy Modestly Predict College Retention

Beyond the limited evidence linking students' academic mindsets and particularly their sense of belonging with college outcomes, there is also modest empirical support for the notion that students' goals, self-efficacy, and study skills also influence college retention. Robbins et al. (2004) conducted a meta-analysis of 109 studies examining the relationship between noncognitive factors, sorted along nine broad, theoretically determined constructs (Robbins et al., 2004). They found a very modest association between college retention and three noncognitive factors: academic goals, academic self-efficacy, and academic-related skills. Academic goals were measured using constructs including goal commitment, commitment to the goal of college graduation, preference for long-term goals, desire to finish college, and valuing of education. Academic self-efficacy was measured using constructs including academic self-worth, academic self-confidence, course self-efficacy, and degree task and college self-efficacy. Academic related skills were measured using constructs including time management skills, study skills and habits, leadership skills, problem-solving and coping strategies, and communication skills (Robbins et al., 2004, 267). However, beyond the confusing, overlapping array of concepts and terms, findings such as these suggest little about how these factors affect students' college retention prospects and provide no information whatsoever about the malleability of these constructs or their responsiveness to context. While important, these results are little help to policymakers and practitioners seeking to identify appropriate levers for improving students' college persistence and degree attainment.

Other studies, including recent work by the College Board (Schmitt et al., 2011), ACT ENGAGE (Le, Casillas, Robbins, & Langley), and private, for-profit corporations (Gore, Leuwerke, & Metz, 2009) have sought to capitalize on the limited evidence connecting noncognitive factors with college outcomes by developing research-based survey tools to measure high school students' noncognitive skills. Marketed at the intersection of practitioners' concerns about college retention and institutional decision-making surrounding college admissions, these products attempt to transform the limited insights of the existing research base into early indicators of students' college prospects. In these products, information about students' noncognitive factors is viewed as complementing existing information about students' prior academic achievement (e.g., high school GPA and standardized test scores) to give college admissions staff a fuller view of an applicant's potential for success. However, as Schmitt et al. note in a report for the College Board, the incremental validity of the measures of noncognitive factors used is small, and the measures themselves may be especially subject to manipulation by test-takers (e.g., in situations where individual scores might be used in college admissions decisions). These limitations suggest that, despite the interest in tools measuring students' noncognitive preparation for college, there is substantial warrant for skepticism about their validity and broader utility.

Context Matters: College Choice and the Postsecondary Transition

Taken together, the prior research linking noncognitive factors to college outcomes suggests at least three conclusions: first, while there are strong theoretical reasons to believe that noncognitive factors are connected with college outcomes, there is still little empirical research directly exploring these connections, especially between noncognitive factors and college retention. Additionally, research studies have yet to explicitly explore the ways in which the importance of various noncognitive factors examined may be driven by specific elements of the college context. This first conclusion strongly points up a second: the large body of research on institutional strategies for improving college retention strongly suggests that colleges substantially influence students' experiences and outcomes in the transition to college. However, to this point, the existing research base has not investigated in detail how the institutional contexts of college campuses may influence the relative importance of particular noncognitive factors. In short, while existing literature suggests strongly that noncognitive factors matter in college, we still understand much less about how those factors matter—and how much—depending on where students choose to attend college.

Finally, there is much about the connection between noncognitive factors and college retention that we simply do not know. What empirical evidence exists suggests some connection between students' mindsets, behaviors, and skills, on the one hand, and their outcomes in college on the other—but research has provided far too little useful evidence on what these factors really mean, whether they are in fact amenable to change, and whether they can be manipulated effectively in the high school context. These are not reasons to believe that noncognitive factors do not matter in the transition to college. On the contrary, these are reasons, we argue here, for researchers to double down on the bet that high schools and colleges each have a role to play in setting institutional and classroom-level contexts that foster students' intellectual and noncognitive growth. In one sense, research on the college transition lags far behind what we know about the middle grades and the transition to high school: there is a great deal of ground to be made up in bringing up to speed our understanding of how noncognitive factors matter in the transition to college and what we can do about it.

CHAPTER 9

Interpretive Summary

Leveraging Noncognitive Factors to Improve Student Outcomes

Since the mid-1980s, test score-based accountability has dominated American public education. This movement took on the force of federal law in 2001 with the No Child Left Behind Act, as every state in the country administered standardized tests to measure student and school performance. Ask any teacher, principal, or educational administrator about goals for the year; increasing test scores is the most likely response.

President Obama's first address to Congress signaled a shift in educational priorities. He committed his administration to ending the dropout crisis in the nation's public high schools and ensuring that by 2020 America would once again lead the world in the proportion of its population with college degrees. This shift has brought a host of education policies geared at increasing academic demand: adding graduation requirements, increasing participation in advanced coursework, and setting more rigorous curricular standards. The widespread adoption of the Common Core State Standards reflects an agreement across states to set a higher bar for college and career preparation.

What has not been talked about is that a shift to making high school and college completion our national educational goal requires a corresponding shift in educational policy and practice, *away from a focus on test scores* and toward a new emphasis on developing the cognitive and noncognitive factors that lead students to earn high course grades.

The emerging recognition of the importance of noncognitive factors to young people's long-term success raises new challenges for teachers seeking to prepare their students for college and careers. It also creates a conundrum for educators who have been told to focus on raising test scores, not only for purposes of accountability but also because test scores have been touted as strong indicators of student learning and college readiness. The evidence on the relationship between noncognitive factors and student grades—and between grades and long-term outcomes—challenges this focus on tests. If teachers want their students to be successful—both within their current courses and in their future endeavors—then teachers must attend to students' engagement in class material and their coursework performance, not just their tested performance. To make this shift, educators need to understand how best to help adolescents develop as learners in their classes. This should not be framed as an *additional* task for teachers, though for many it may mean teaching in new ways. By helping students develop the noncognitive skills, strategies, attitudes, and behaviors that are the hallmarks of effective learners, teachers can improve student learning and course performance while also increasing the likelihood that students will be successful in college.

The importance of students' grades—rather than test scores—for later outcomes requires that we better understand how to structure classrooms and schools in ways that improve student effort and performance in the daily tasks of the classroom. Of all the challenges posed by the implementation of the Common Core State Standards, this may be the greatest: if we are truly to be a nation of college-goers, we must not only raise the bar on *what* students learn but we must also leverage an understanding of noncognitive factors to teach adolescents *how* to become effective learners. In the absence of developing students as learners, current reform efforts are unlikely to succeed at increasing students' readiness for college.

This report grew out of the understanding that it is not enough to know that noncognitive factors matter for learning. Researchers from a range of disciplines have provided evidence that such factors are important to students' grades and long-term educational outcomes. However, little work has been done to bring clarity to this wide-ranging evidence, to examine its relevance for practice, or to review actionable strategies for classroom use. Our goal was to develop a coherent and evidence-based framework for considering the role of noncognitive factors in academic performance. We conclude by summarizing the most promising levers for change as well as critical gaps in the knowledge base and in the link between research and practice.

Students Earn High Grades When They Show Perseverance and Strong Academic Behaviors

The best ways to improve students' perseverance and strengthen their academic behaviors is through *academic mindsets* and *learning strategies.* This is the central point emerging from our review. Academic behaviors and perseverance reflect the level of students' engagement in their work— the degree to which they are coming to class, completing assignments on time, participating, studying, trying to master material, taking time to do challenging work, and sticking with a task until it is done well. Students who do these things get higher grades, and students who do not do them struggle academically. This becomes increasingly true as students transition from the middle grades to high school and on to college. Strong academic behaviors and academic perseverance are the noncognitive *outcomes* that teachers want to achieve in developing their students as learners. These are the noncognitive factors most directly associated with good grades.

It is hard to change academic behaviors and academic perseverance directly without addressing academic mindsets and effective learning strategies. Ironically, trying to directly change behaviors and perseverance is not the best lever for improving students' academic performance. The critical levers for improving student grades seem to be through the development of academic mindsets and learning strategies. Academic mindsets strongly influence the degree to which students engage in academic behaviors, persevere at difficult tasks, and employ available learning strategies. In turn, the use of appropriate learning strategies strongly influences the quality and effectiveness of academic behaviors and helps students stick with a task and persevere despite obstacles. Thus, building students' academic mindsets and teaching them appropriate learning strategies are the best ways to improve academic behaviors and perseverance, which leads to better grades. Unfortunately, these are often areas in which teachers have little training. In the absence of a strong framework that clarifies the role of schools and classrooms in the development of noncognitive factors and a toolbox of strategies to effectively support this development, teachers often attribute differences in students' academic behaviors and perseverance to individual characteristics of their students—something they cannot control.

Unfortunately, teachers often misdiagnose poor academic behaviors and lack of perseverance not as a lack of strategies or a problem with mindsets but as indications that students are not motivated or do not care. Students who are not working hard in school are often diagnosed as being lazy or lacking motivation, with teachers seeing these as personal characteristics that students bring with them to the classroom. The conclusion that follows is this: if students would just work harder and not give up, they would do better in school; their academic performance is poor because either they do not care enough to try or they lack the grit or determination necessary for success.

Our research framework of noncognitive factors sheds a different light on the phenomenon of students who exhibit poor academic behaviors. Perhaps what looks like a lack of caring or persevering could be a student indicating that she is convinced that she cannot do the work. Another student may not have effective strategies for engaging in classroom tasks. Students who cannot see the relevance of a class may have difficulty finding a way to engage in the work. Others may withdraw from participating in classroom activities because they are afraid of public failure or feel ostracized by their peers. In our own research, we find that the vast majority of students want to succeed in school, but many obstacles get in the way of their putting forth effort.

Developing adolescents as learners requires paying attention to students' mindsets, skills, strategies, and behaviors as well as their content knowledge and academic skills. If students are not demonstrating strong academic behaviors, teachers need to be able to determine and address the obstacles that deter their learning. We hope that the framework presented in this report can serve as a tool to diagnose potential underlying causes for weak engagement and poor academic behaviors and to develop strategies for re-engaging students as learners.

School and classroom contexts play a crucial role in shaping these noncognitive factors in individual students. Within a given course, students' sense of belonging, self-efficacy, and interest will be shaped by their experiences in the classroom, their interactions with the teacher and fellow classmates, their prevailing beliefs about their own ability, and the nature of the work they are asked to do. Their endorsement of a growth mindset will be shaped by the structure of learning opportunities and assessment practices, as well as by the messages they receive from teachers that emphasize ability or effort. Likewise, students are not likely to develop learning strategies in the absence either of explicit instruction or classwork that requires the use of such strategies.

It may be most helpful to think about noncognitive factors as properties of the interactions between students and classrooms or school environments. Rather than being helpless in the face of students who lack perseverance and good academic behaviors, teachers set the classroom conditions that strongly shape the nature of students' academic performance. The essential question is not how to change students to improve their behavior but rather how to create contexts that better support students in developing critical attitudes and learning strategies necessary for their academic success. Thus, teaching adolescents to become learners may require educators to shift their own beliefs and practices as well as to build their pedagogical skills and strategies to support student learning in new ways. Academic behaviors and perseverance may need to be thought of as creations of school and classroom contexts rather than as personal qualities that students bring with them to school.

The Role of Noncognitive Factors in Academic Performance: Implications for Research

The role of noncognitive factors in students' academic performance has gained increasing attention from both researchers and practitioners in recent years. While some very interesting and promising work has emerged recently, the state of the research evidence and the development of practice models still lag far behind the high level of interest. In this review, we were focused primarily on the implications and actionable pathways for teachers and classrooms that emerge from the research evidence. For this reason, we asked a different set of question of the research literature than one might ask in a traditional literature review conducted by an academic in this field. For each noncognitive factor, we asked:

- How is this factor related to academic performance?
- Is this factor malleable?
- What is the role of classroom context in shaping this factor?
- Are there clear, actionable strategies for classroom practice?
- Would changing this factor significantly narrow existing gaps in achievement by gender or race/ethnicity?

With this lens, we saw four major challenges that must be addressed if research on noncognitive factors is going to be useful for educational practice.

1. The need for conceptual clarity. One of the primary challenges to making research accessible to practitioners and relevant to policy is the lack of conceptual clarity among the many noncognitive factors that affect student performance. Much of the research conflates constructs that are conceptually very distinct. For example, work on social-emotional learning has used the demonstration of academic behaviors as indicators of having social-emotional core competencies (e.g., using studying and completing homework as measures of responsible decision-making). Likewise, academic tenacity has been described not only as showing persistence in tasks despite obstacles (the usual connotation of the word *tenacity*) but also as the mindsets that encourage tenacity—such as self-efficacy, sense of belonging, and a growth mindset. However, perseverance, mindsets, and behaviors are each conceptually distinct categories—a student can have a strong sense of self-efficacy but still not participate in a given class, for example. To really understand the mechanisms by which noncognitive factors affect academic performance requires conceptual clarity and a delineation of each step in complex interactive processes.

2. The need for direct evidence. A related shortcoming of some of the existing research is that researchers sometimes use noncognitive factors as a "catch-all" explanation for differences in student achievement without directly identifying or measuring specific factors. Some very influential research merely infers the existence of noncognitive factors when researchers are unable to find a measured cognitive explanation for differences in educational or workforce outcomes across different groups. In Heckman and Rubinstein's (2001) seminal study of the economic returns to a GED, for example, they attribute wage differences between GED recipients and high school graduates to differences in noncognitive skills without directly measuring any noncognitive skill differences or demonstrating their direct relationship to wages. Heckman and Rubinstein acknowledge this, explaining that there are too many different traits subsumed under the name "noncognitive skills" and no one way to measure them all. What they then attribute to differences in "noncognitive skills" is simply the difference in wages between high school graduates and GED recipients that could not be explained by tested achievement. Their evidence that noncognitive skills matter rests on their interpretation of the error term in statistical analysis, rather than the empirical identification of specific skills, traits, or behaviors that contribute to wage differences.

Clearly identifying and measuring specific noncognitive factors becomes particularly important when we try to understand why there are differences in educational attainment by race/ethnicity, gender, or income. Knowing what to do to reduce these gaps requires knowing the extent to which they reflect underlying differences between groups in specific noncognitive skills, beliefs, behaviors, or strategies, or whether attainment differences are better explained by other factors entirely. Without identifying or measuring what these important noncognitive factors are, research does little to help practitioners or policymakers take action to impact differences in students' noncognitive factors as it is not clear what they need to address.

It is also possible that practitioners might develop strategies that are ineffective or even counterproductive if researchers do not make clear distinctions between evidence on noncognitive factors and inference about them. For example, a much-cited study by Brian Jacob (2002) found that students' grades in middle school predict a large proportion of the gender gap in college enrollment and attributed differences in grades to noncognitive factors, reasoning that "conditional on cognitive ability, [grades are] determined by a variety of non-cognitive skills such as the ability to follow directions, work in groups, pay attention in class, and organize materials" (p. 591). The study did not actually measure students' ability to follow directions, work in groups, pay attention, or organize materials, and provided no evidence that there are gender differences in these behaviors. (It did measure time spent on homework and found that girls spent slightly more time per week than boys.) Yet practitioners might conclude from Jacob's assertion that they should invest time in further developing boys' academic behaviors. In fact, there are many different potential explanations for why boys in the middle grades have lower GPAs than girls, explanations that should be investigated if the GPA gap is to be addressed. For example, teachers might discriminate against boys when grading work. Parents could give boys more freedom to do their homework alone while monitoring their daughters more closely. Ten years ago, the American Association of University Women (AAUW) attributed the same gender differences we observe today—girls get better grades; boys get higher test scores—to gender bias in testing. Each of these interpretations is plausible, and there is nothing wrong with interpretation and debate; for research to be relevant for practitioners, however, it is important to delineate what is actually known from what seems promising but needs further study.

3. The need for more research on the role of school and classroom context in students' development and demonstration of noncognitive factors. Throughout this review, we have noted the role of classroom context in shaping noncognitive factors. Ultimately the practical goal of research on noncognitive factors is to help individual students become stronger learners who earn higher grades. This might suggest that a primary strategy to improve students' grades would be to focus on developing noncognitive factors as characteristics of individuals—implying that the "fix" is at the individual level. However, the research evidence to date suggests that trying to change noncognitive factors at the individual level in isolation from context may not be effective in the long term. Our case studies of school transitions highlight the importance of context for the enactment of noncognitive factors. For example, the large rise in absences and decline in studying behaviors when students move into high school show that students who exhibit strong academic behaviors in one context might not do so in another. To what extent are noncognitive factors located within individuals in ways that are transferable across context, and to what extent are they dependent on context?

Intervention studies of academic mindsets suggest some long-term effects on student achievement. However, it is not clear if they are helping students perform better in a particular context or whether they have changed something fundamental about each student's academic identity that will transfer across contexts. For example, seventh-graders who benefit from a growth mindset intervention have been shown to improve their performance during seventh grade with lasting effects to eighth grade, but we do not know what will happen as these students move from middle grades to high school. Likewise, interventions that normalize difficulty in the first year of college or increase the sense of belonging of African American students on elite college campuses improves their college performance, but we do not know if these benefits transfer from college to the workplace. Teaching students learning strategies seems promising, but again there is little research on its effectiveness across school contexts. At this point, we do not know to what extent interventions that focus on individuals can have lasting impacts on their engagement in learning across contexts.

We also want to recognize the role of the larger school context in shaping student performance. Throughout this review, we have looked at evidence on the role of classroom context and the availability of classroom strategies, but we know that teachers do not work in isolation. School-wide initiatives and structures, as well as school culture and environment, play a role in shaping students' experiences and performance in the classroom (Bryk, Sebring, Allensworth, Luppescu, & Easton, 2009). Research is also needed on the role of school contexts in promoting positive academic mindsets and on the work of school leaders in providing supports and professional development for teachers to build their capacity to address noncognitive factors in the classroom. Whether the best approach to leveraging noncognitive factors to improve student performance is through changing school and classroom contexts to be more supportive of students as learners or through targeting interventions at the individual level to address individual challenges depends in large part on the transferability of effects across contexts.

Designing future studies to address longitudinal questions will be very important for research going forward.

4. Teachers need coherent, actionable strategies for developing students as learners in the context of regular classroom instruction. If researchers strive for conceptual clarity and precise identification and measurement of individual noncognitive factors, this will help illuminate the mechanisms whereby each individual factor interacts with the others to affect student performance. However, where researchers need to pull everything apart and understand how it works, teachers need a coherent, integrated approach to build academic mindsets, learning strategies, social skills, academic behaviors, and academic perseverance as part of their everyday classroom practice. We cannot expect a teacher to implement separate interventions for all of the noncognitive factors that matter for their students' performance. Instead, they need guidance about how best to build classroom contexts and utilize pedagogical strategies that will leverage the body of research on noncognitive factors as they teach content and skills.

This is not to say that teachers are not an important audience for the research on noncognitive factors or that teaching as a profession does not need to take this research into account. But teachers should not be expected to focus on noncognitive factors as "another thing" to teach in isolation from the development of content knowledge and core academic skills. Fortunately, research from the learning sciences shows the tight interconnection between cognitive and noncognitive factors in shaping student learning and academic performance. For example, the evidence suggests that positive academic mindsets and learning strategies are developed through supporting students in engaging in challenging work. Teachers can design their classrooms so that they build mindsets, skills, behaviors, and strategies in pursuit of handling challenging content knowledge and developing core academic skills. Studies that seek to illuminate how this is all best pulled together in actual classrooms will provide an important step in bridging research and practice.

To the extent that we already have some knowledge base about how to develop positive mindsets and which learning strategies produce high learning gains, this knowledge needs to be much more accessible to teachers. Currently the vast majority of research on noncognitive factors is not written for a practitioner audience, and the literature is not available in places teachers are likely to go for professional learning. Bridging the gap between existing researcher knowledge and teacher practice is another important step.

There is also diffuse knowledge among practitioners that could inform practice broadly if it were systematically collected and disseminated. The most successful teachers may already have developed strategies that leverage noncognitive factors to engage students in learning. Researchers could gather evidence from practice to broaden our knowledge about how to do this. Such studies would need to be designed both to address unanswered questions and to incorporate what we already know. For example, we have strong evidence that noncognitive factors need to be understood along a developmental continuum. Separate studies of techniques and strategies used by effective instructors at the middle school, high school, and college levels would be helpful. Researchers should also consider gathering student-level data on mindsets, behaviors, skills, and strategies; any changes in these noncognitive factors should be measured over time for students in a given classroom as part of any study of effective classroom practices. In short, both empirical evidence and practice wisdom exists that could contribute to a broader understanding of the role and development of noncognitive factors in academic achievement, but this evidence and wisdom is too often isolated by disciplinary boundaries as well as the gulf between research and practice. Collectively, we still know too little about how teachers and school leaders can incorporate attention to noncognitive factors into the everyday work of schools and classrooms. Future research should aim to bridge this divide.

The Promise of Noncognitive Factors in Teaching Adolescents To Become Learners

As this review indicates, we know much about the role of noncognitive factors in academic performance. But there is still much to be learned about how to leverage noncognitive factors to transform educational practice from its current focus on content knowledge and testable academic skills to the broader development of adolescents as learners. Decades of research inform our understanding and point us towards promising practices in the classroom. Our conceptual framework organizes different categories of noncognitive factors and models how they fit together to affect student performance. This provides a foundation for future research and a framework for practice. Teaching adolescents to become learners requires more than improving test scores; it means transforming classrooms into places alive with ideas that engage students' natural curiosity and desire to learn in preparation for college, career, and meaningful adult lives. This requires schools to build not only students' skills and knowledge but also their sense of what is possible for themselves, as they develop the strategies, behaviors, and attitudes that allow them to bring their aspirations to fruition.

TABLE 9.1

Summary of Evidence on Noncognitive Factors

Relationship to Academic Performance	
Academic Behaviors	All aspects of academic performance, cognitive and noncognitive, are expressed through academic behaviors. They have both a strong direct and indirect effect on grades.
Academic Perseverance	Research often conflates students' innate tendency to be perseverant with the actual behavior of doing work. While academic perseverance shows moderate relationships to student performance in cross-sectional designs, longitudinal studies find more modest relationships, making it difficult to establish evidence of a causal relationship between perseverance and performance.
Academic Mindsets	The effects of various school-based interventions suggest not only that mindsets are important but also that changing students' mindsets can result in improvements in academic performance.
Learning Strategies	Despite limitations, research shows that knowing how and when to use learning strategies is associated with higher overall learning and better academic success
Social Skills	Weakest evidence of direct relationship to grades. Much of the work done in the area of social skills training programs focuses on younger children, and there is only an indirect link between social skills and academic performance. A serious limitation of the studies showing a link between social skills and academic achievement is that almost all are correlational rather than causal. Studies tend to confound social skills with other variables, making it difficult to isolate the effect of social skills on academic performance.
Malleable	
Academic Behaviors	All types of human behavior are considered to be possible to change.
Academic Perseverance	The malleability of academic perseverance depends on how one defines perseverance. Evidence suggests that grit is fairly stable as an individual trait. However, students are more likely to display academic perseverance when they have positive academic mindsets or strategies to successfully manage tasks.
Academic Mindsets	The apparent success of many of the mindsets interventions suggests that mindsets are malleable, that is, they can be changed intentionally.
Learning Strategies	Research strongly supports the idea that learning strategies are malleable and can be directly taught. But many of the studies reviewed measured strategy use and performance concurrently. While these studies showed strong relationships between the two, they left open the question of whether learning strategies can be effectively taught, and if so, if teaching such strategies would result in improved performance.
Social Skills	Research on social skills training programs has found that they are generally effective, although the methodological strengths of these studies vary.

TABLE 9.1 *CONTINUED*

Summary of Evidence on Noncognitive Factors

Role of Classroom Context	
Academic Behaviors	Clear evidence that classroom context matters. Context shapes academic behaviors indirectly through its effect on other noncognitive factors, as well as directly through behavioral expectations and strategies.
Academic Perseverance	Classroom contexts that are structured to support students' success at assigned tasks and that provide students with strategies to make the tasks easier, make it more likely for students to persevere at those tasks.
Academic Mindsets	There is a theoretical and empirical basis for the importance of context in shaping mindsets. The effect of classrooms on student mindsets is particularly salient for racial/ethnic minority students.
Learning Strategies	Classrooms are important both as sites for the explicit teaching of subject-specific learning strategies and as contexts that set motivational conditions for learning strategy use.
Social Skills	Schools and classrooms play an important role in shaping students' social behaviors. Student behaviors are responsive to interpersonal, instructional, and environmental factors in the classroom.

Clear Strategies	
Academic Behaviors	While there are a wide range of classroom-based and school-wide strategies, few strategies have been evaluated on large scale basis. Academic behaviors such as attendance and assignment completion can be affected by close monitoring and support. Whole school reform shows some effects, but it is unclear what is responsible for changing behavior.
Academic Perseverance	There are numerous instructional practices which have been shown to improve students' perseverance in their coursework by changing students' mindsets. There is little research on whether and how teachers might structure classes to develop students' perseverance in the long run.
Academic Mindsets	There are a variety of short-term interventions that have evidence of success—from programs focused on envisioning "future possible selves" to "developing a sense of belonging." But while each individual study points to a relationship between mindsets and school performance, educational attainment, or other life-course outcomes, the broad array of findings across studies is confusing, and the directions for practice are unclear. There are few resources available currently that would translate social-psychological theory into classroom-based instructional practices that could be readily employed by teachers in a variety of school settings.
Learning Strategies	There are numerous short-term studies that provide evidence for the effectiveness of the teaching of specific strategies. Teacher feedback can provide ongoing formal and informal assessments so students can understand which strategies worked for them and where they need to improve. Student self-assessments can also provide opportunity for students to critique their strategies. Students can talk about their thinking with their teachers when planning out an academic task.
Social Skills	There is little direction for classroom teachers wanting to support the positive development of social skills in their students outside of a formal program.

TABLE 9.1 *CONTINUED*

Summary of Evidence on Noncognitive Factors

Would Changing This Factor Narrow the Achievement Gap?	
Academic Behaviors	There is evidence that academic behaviors explain part, but not all, of the gender gap in grades. There is little consistent evidence that academic behaviors explain differences in grades by race/ethnicity, particularly when controlling for test scores and economic status.
Academic Perseverance	Despite the fact that differences in perseverance by race or gender have been suggested as an explanation for race/ethnicity or gender differences in student academic performance, there is no research that has examined this directly.
Academic Mindsets	A number of interventions targeting mindsets have been shown to reduce gender and racial/ethnic achievement gaps. Ultimately, whether a focus on mindsets can narrow current gaps in performance and degree attainment depends on how much of the gap is caused by stereotype threat or other forces that differentially harm minority students in the first place.
Learning Strategies	Little evidence across studies about measured differences in learning strategies by race/ethnicity or gender.
Social Skills	Research gives little indication as to whether changes in students' social skills would narrow racial/ethnic and/or gender achievement gaps.

Endnotes

Chapter 1

1 This is not to suggest that the academic content of a course does not matter. Challenging academic work is an essential ingredient in preparing students for college. However, mere exposure to rigorous content does not increase learning. Students' performance in their classes—how well they are doing the work that is assigned to them—is a much better indicator of their future success than is the course title or their test scores.

2 A one standard deviation increase in high school GPA was associated with a 0.34 standard deviation increase in college GPA. The SAT II writing test, the SAT component that has the strongest association with grades in college, was correlated with only a 0.19 standard deviation increase in college GPA.

Chapter 3

3 Both studying time and senior grades were self-reported, which may account for the relatively high average course grades reported. The authors suggest that truncated measures from self-reports are likely to attenuate the size of the effects. In other words, if study time were measured directly and course grades were taken from transcripts, the effect of homework time on grades would likely be larger.

Chapter 6

4 Self-regulated learning is a very specific form of self-regulation, and should be considered as distinct from behavioral self-regulation more broadly, which is largely about impulse control. Self-regulated learning shares with self-regulation a focus on the ability to make conscious choices to direct the self and the ability to alter one's responses or one's behavior to align or conform to particular ideals, standards, norms, rules, agreements, or plans. However, self-regulated learning deals primarily with mental processes and metacognition rather than behavioral control.

5 Winne and Hadwin (1998) note that the learner's goals are not necessarily aligned with the teacher's goals. The teacher might assign a task that involves reading a chapter from a physics textbook and then completing a set of questions, while a student's goal might be to find someone from whom he can copy the homework and thus avoid reading the chapter.

6 This becomes a challenge in measuring students' use of learning strategies when those measures rely on student self-report of strategy use.

7 Sample items include: "I ask myself questions to make sure I know the material I have been studying," "I find that when the teacher is talking I think of other things and don't really listen to what is being said," and "I often find that I have been reading for class but don't know what it is all about. "

Chapter 7

8 Note that in this review we do not examine the broader work on social-emotional learning. An adolescent's demonstration of social skills can be understood as the physical manifestation of underlying social-emotional factors such as emotional awareness or emotional "intelligence" and emotional self-regulation. This is an area worthy of further study which could well contribute to a deeper understanding of the role of noncognitive factors in school performance.

9 Suspension is defined as "temporarily removed from regular school activities either in or out of school...due to a behavior problem."

Chapter 8: Case Study 2

10 The Ninth Grade Success Academy is part of the Talent Development High School model. The Success Academy is designed to increase structure and support for freshmen by combining three approaches: 1) keeping groups of ninth-graders together who share the same classes and same teachers in a school-within-a-school model; 2) using blocked scheduling to reduce the number of classes freshmen take and providing specialized courses for ninth-graders to transition them to high-school-level work, and 3) providing professional development supports and structures for teachers to work together (Kemple, Herlihy, & Smith, 2005).

11 A student is considered on-track if he or she has accumulated five full credits (10 semester credits) and has no more than one semester F in a core subject (English, math, science, or social science) by the end of the first year in high school. This is an indicator of the minimal expected level of performance. Students in CPS need 24 credits to graduate from high school, so a student with only five credits at the end of freshman year will need to pass courses at a faster rate in later years (Miller, Allensworth, & Kochanek, 2002).

12 Allensworth & Easton (2007) estimate that, even after controlling for the demographic characteristics and entering test scores of freshmen, the predicted probability of graduation was 55 percentage points higher (81 versus 26 percent) for a student who was on- versus off-track at the end of freshman year.

Appendix

Educational Attainment by Gender, Race/Ethnicity is Driven by Differences in GPA

There are large and persistent gaps in educational attainment by students' race, ethnicity, and gender. Asian American and White students graduate from high school and attend college at much higher rates than African American and Latino students. Girls graduate from high school and attend college at higher rates than boys. Much of the conversation around college readiness focuses on students' college entrance exams—scores on the ACT and the SAT. However, it is not low test scores that explain gaps in educational attainment. What really drives the differences in educational attainment by gender and race/ethnicity are differences in students' course grades, or GPA.

While African American and Latino CPS students have lower average ACT scores than White and Asian American CPS students, it is actually course failures and low GPAs that create significant barriers to high school graduation, college access, and college graduation for African American and Latino students. Differences in course grades by race and ethnicity explain most of the gaps in educational attainment (Allensworth & Easton, 2007; Roderick, Nagaoka, & Allensworth, 2006). Differences in high school GPA also explain all of the gender gap in college attendance and college graduation among Chicago high school graduates. Boys do not have lower ACT scores than girls, on average, but their grades are considerably lower; almost half of boys (47 percent) graduate with less than a C average, compared to about a quarter of girls (27 percent) (Roderick, Nagaoka, & Allensworth, 2006). These patterns are mirrored in national data. Using a nationally representative sample, Jacob (2002) found that students' course grades explained a large proportion of the gender gap in college enrollment. Despite similar test score performance, males were less likely to attend college because of lower grades.

In order to address racial, ethnic, and gender differences in educational attainment, it becomes crucial to focus on the GPA gaps as an important lever to explain high school graduation and college enrollment. Yet, the 2009 National Assessment of Educational Progress (NAEP) transcript study shows that from 1990 to 2009 gaps in GPAs by race/ethnicity and gender were persistent and showed no sign of improving (see Figures A.1 and A.2).

ABOUT THE AUTHORS

CAMILLE A. FARRINGTON, PHD, is a Research Associate (Assistant Professor) at the School of Social Service Administration (SSA) at the University of Chicago and a research affiliate at CCSR. She serves as Director of Curriculum, Instruction, and Assessment at the Network for College Success at SSA, working with Chicago Public Schools (CPS) transformation high schools as part of a federal School Improvement Grant. Her research interests focus on policy and practice in urban high school reform, particularly classroom instruction and assessment, academic rigor, tracking, and dropout. She is author of a forthcoming book on school structures and practices that perpetuate student failure (winter 2012, Teachers College Press). She worked for 15 years as a public high school educator and administrator. Dr. Farrington received a BA from the University of California at Santa Cruz and a PhD in Policy Studies in Urban Education from the University of Illinois at Chicago.

MELISSA RODERICK, PHD, is the Hermon Dunlap Smith Professor at SSA and a senior director at CCSR where she leads the organization's postsecondary research. Professor Roderick is also the co-director of the Network for College Success, a network of high schools focused on developing high-quality leadership and student performance in Chicago's high schools. Professor Roderick is an expert in urban school reform, high school reform, high-stakes testing, minority adolescent development, and school transitions. Her new work focuses on understanding the relationship between students' high school careers and preparation, their college selection choices and their postsecondary outcomes through linked quantitative and qualitative research. From 2001 to 2003, Professor Roderick served as Director of Planning and Development for CPS. Professor Roderick has a PhD from the Committee on Public Policy from Harvard University, a master's degree in Public Policy from the John F. Kennedy School of Government at Harvard University, and an AB from Bowdoin College.

ELAINE ALLENSWORTH, PHD, is the Interim Executive Director of CCSR. She conducts research on factors affecting school improvement and students' educational attainment, including high school graduation, college readiness, curriculum and instruction, and school organization and leadership. Her work on early indicators of high school graduation has been adopted for tracking systems used in Chicago and other districts across the country. Dr. Allensworth is one of the authors of the book, *Organizing Schools for Improvement: Lessons from Chicago*, which provides a detailed analysis of school practices and community conditions that promote school improvement. One of her current projects examines the ways in which students' achievement in the middle grades interacts with their experiences in high school to affect postsecondary success, funded by the Bill & Melinda Gates Foundation. Dr. Allensworth holds a PhD in Sociology from Michigan State University. She was once a high school Spanish and science teacher.

JENNY NAGAOKA is the Deputy Director of CCSR. Her current work uses linked quantitative and qualitative methods to examine the relationship among high school preparation, college choice, and postsecondary outcomes for CPS students. Her research interests focus on urban education reform, particularly developing school environments and instructional practices that promote college readiness and success. Her previous work includes research on quality of classroom instruction, Chicago's retention policy, and an evaluation of the effects of a summer school program.

TASHA SENECA KEYES is a second-year doctoral student at SSA. She worked as a school social worker in Utah before returning to school. She received her MSW from the University of Utah and her BA from Brigham Young University. She is currently working with the Chicago Postsecondary Transition Project at CCSR, to understand college choice and college match. Her research interests include how school context matters for adolescent identity and self-concept development, particularly for mixed race and Native American youth, and creating supportive school settings to increase sense of belonging and engagement for minority students and families.

DAVID W. JOHNSON is a research assistant at the Chicago Postsecondary Transition Project at CCSR and a doctoral candidate at SSA. His dissertation research focuses on how high school culture and climate affect students' college search, application, and college choices. His research interests broadly include school culture and climate, adolescent development, and postsecondary access and attainment among low income, minority, and first-generation college students.

NICOLE O. BEECHUM is a third-year doctoral student at SSA. She received her AM from SSA in 2006 and a BA in Political Science from Mount Saint Mary's College in Los Angeles in 2001. She is currently working on various projects for the Chicago Postsecondary Transition Project at CCSR, including research examining the International Baccalaureate (IB) program at CPS and understanding college match among CPS graduates. Her research interests include the school-level factors that affect academic identities and academic outcomes for African American adolescent males in large urban school districts.

This report reflects the interpretation of the authors. Although CCSR's Steering Committee provided technical advice, no formal endorsement by these individuals, organizations, or the full Consortium should be assumed.

OUR MISSION The University of Chicago Consortium on Chicago School Research (CCSR) conducts research of high technical quality that can inform and assess policy and practice in the Chicago Public Schools. We seek to expand communication among researchers, policymakers, and practitioners as we support the search for solutions to the problems of school reform. CCSR encourages the use of research in policy action and improvement of practice, but does not argue for particular policies or programs. Rather, we help to build capacity for school reform by identifying what matters for student success and school improvement, creating critical indicators to chart progress, and conducting theory-driven evaluation to identify how programs and policies are working.

HS PLT Lab - Structures Summary (2016-2017)

	Quick Summary

PLT Lab (~ 30 minutes, M, T, W, F):

Students work on applying specific Habit-aligned strategies to real-life Case Studies, and personal situations.

- Daily Digital Check-in
- Case Study (every ~ 2 weeks)
    - Student facilitators facilitate small-group "Case Study" analysis, with a Case Study that introduces a real-life problem aligned to the upcoming Strategy of focus
- "Key Strategy" (every ~ 2 weeks)
    - Students are introduced to a "Key Strategy" aligned to the Habit of focus
    - Students work in groups to come up with ways to apply the strategy to the Case Study before working independently to apply the strategy to a real-life personal situation
- **Independent Work Time**
    - **Case Study Week:**
        - Students apply the strategy to the Case Study scenario
    - **Second Week:**
        - Students apply the strategy to their own, real-life situations
- **Check-out**

Thursday PLT Lab (~ 45 minutes, Th):

Students meet with their Advisory groups to go over weekly goals and adjust for the next week. Students then rotate through "Dilemma Consultancies" with their peers - with individual students sharing personal "dilemmas" that align to the Habits/Strategies of focus.

- **Grade-check and Goal Update (~ 7 minutes)**
    - Students update grades and record progress toward goals in their Advisory Progress Trackers.
    - Students set deadlines for action steps for their goals in their planners.
- **Leadership Habit Development and Advisor Check-ins (~ 30 minutes; every-other week)**
    - Students work independently on PLT Modules.
    - Students who have achieved Trainer status may also give Spot Checks to students who complete modules.
- **Dilemma Consultancies (~ 30 minutes; every-other week)**
    - In small groups, students walk through a "Dilemma Consultancy" protocol with one of their peers, who has brought a personal Habit-aligned real-life dilemma to get advice on
- **Appreciations and Celebrations (~ 5 minutes)**
    - Students give shout outs to show appreciation or celebrate one another's achievements.

	Time Frame

HS PLT Lab - Structures Summary (2016-2017)

	PLT Lab (M, T, W, F): ● Four, ~ 30-minute classes: ○ ~ 3 minutes Daily Digital Check-in ○ ~ 20 minutes Case Study or Key Strategy work ○ ~ 3 minutes closeout **Thursday:** ● One, ~ 45-minute class: ○ ~ 7 minutes Grade Check and Goals ○ ~ 30 minutes Leadership Habit work or Dilemma Consultancy ○ ~ 5 minutes Appreciations/Shout-outs

	Materials/Resources
	All Specific Curriculum Materials on the PLT Website. See below for samples of various other materials: ● Digital Check-in Guidelines ● Advisory Progress Tracker ● CAHS Grading Policy ● Teacher “Spot-Check” Guide ● HS PLT Proficiency Tracker **(template - make your own, class-specific sheet)** ● "Organization and Time Management" Proficiency Scale ● Materials Management Proficiency Flowchart ● Time Management Case Study Facilitation Packet

Personalized Leadership Training

HS PLT Lab - Structures Summary (2016-2017)

PLT Lab (Case Studies) Day 1:				
Time	**Activity**	**Grouping**	**Teacher Actions**	**Student Actions**
~ 0:03	**Digital Check-in**	Whole Class	Facilitates student completion of Daily Digital Check-in.	Complete Daily Digital Check-in.
~ 0:20	**Case Study Introduction**	Small Groups	Divide students into groups of ~ 5 - 6, including one trained student facilitator. Handle classroom management and monitoring of discussions.	Student facilitators (SF) facilitate overview of Case Study problem and opening discussion of the problem. Student participants respond to SF prompts
~ 0:03	**Check-out**	Whole Class (Circle)	Facilitate closing process (teacher discretion).	Participate in closing process.

PLT Lab (Case Studies) Day 2:				
Time	**Activity**	**Grouping**	**Teacher Actions**	**Student Actions**
~ 0:03	**Digital Check-in**	Whole Class	Facilitates student completion of Daily Digital Check-in.	Complete Daily Digital Check-in.
~ 0:20	**Case Study**	Small Groups	Facilitate quick return to Case Study groups. Handle classroom management and monitoring of discussions.	SF facilitate group problem-solving and note-taking re: the Case Study problem. Students take notes on process and participate in discussion.
~ 0:03	**Check-out**	Whole Class (Circle)	Facilitate closing process (teacher discretion).	Participate in closing process.

PLT Lab (Case Studies) Day 3:

HS PLT Lab - Structures Summary (2016-2017)

Time	Activity	Grouping	Teacher Actions	Student Actions
~ 0:03	**Digital Check-in**	Whole Class	Facilitates student completion of Daily Digital Check-in.	Complete Daily Digital Check-in.
~ 0:20	**Case Study Presentations**	Small Groups	Facilitate group presentations of Case Study solutions and rationale.	Student facilitators (SF) facilitate group presentation (roles and responses). Student participants take various roles in presentation and take notes on other groups' presentations.
~ 0:03	**Check-out**	Whole Class (Circle)	Facilitate closing process (teacher discretion).	Participate in closing process.

PLT Lab (Case Studies) Day 4:				
Time	**Activity**	**Grouping**	**Teacher Actions**	**Student Actions**
~ 0:03	**Digital Check-in**	Whole Class	Facilitates student completion of Daily Digital Check-in.	Complete Daily Digital Check-in.
~ 0:20	**Case Study (Individual)**	Individual	Facilitate independent work on Case Study solutions reflections.	All students independently complete a Case Study solutions reflection based on how they would choose to resolve the problem.
~ 0:03	**Check-out**	Whole Class (Circle)	Facilitate closing process (teacher discretion).	Participate in closing process.

PLT Lab (Strategy Introduction) Day 1:

HS PLT Lab - Structures Summary (2016-2017)

Time	Activity	Grouping	Teacher Actions	Student Actions
~ 0:03	**Digital Check-in**	Whole Class	Facilitates student completion of Daily Digital Check-in.	Complete Daily Digital Check-in.
~ 0:20	**“Key Strategy”**	Whole Class	Facilitate introduction of the “Key Strategy” for the week.	Follow teacher prompts.
	“Key Strategy” Application	Case Study Groups	Management of fluid movement into Case Study groupings from the previous week. Handle classroom management and monitoring of discussions.	SF facilitates problem-solving protocol applying the “Key Strategy” to the previous week’s Case Study problem. Students participate in discussion and take notes.
~ 0:03	**Check-out**	Whole Class (Circle)	Facilitate closing process (teacher discretion).	Participate in closing process.

PLT Lab (Strategy Introduction) Day 2 and 3:				
Time	**Activity**	**Grouping**	**Teacher Actions**	**Student Actions**
~ 0:03	**Digital Check-in**	Whole Class	Facilitates student completion of Daily Digital Check-in.	Complete Daily Digital Check-in.
~ 0:20	**“Key Strategy” and Proficiency Modules**	Independent	Basic monitoring for engagement, management and facilitation of student seating in relevant groupings.	Students work on “Key Strategy” reflection and practice. SF check-in with other students, conduct “spot-checks,” etc. Work on personal proficiency modules, seated in cohorts, following flowchart prompts.
	Cohort Check-in (rotating - 1 cohort group per day)	Case Study Groups	Rotating amongst different groups (1 per day) to check-in with individuals re: progress and need for support.	Participating in cohort check-in. Asking questions, providing evidence for ratings, etc.
~ 0:03	**Check-out**	Whole Class (Circle)	Facilitate closing process (teacher discretion).	Participate in closing process.

HS PLT Lab - Structures Summary (2016-2017)

PLT Lab (Strategy Introduction) Day 4:				
Time	**Activity**	**Grouping**	**Teacher Actions**	**Student Actions**
~ 0:03	**Digital Check-in**	Whole Class	Facilitates student completion of Daily Digital Check-in.	Complete Daily Digital Check-in.
~ 0:20	**“Key Strategy” and Proficiency Modules**	Independent	Basic monitoring for engagement, management and facilitation of student seating in relevant groupings.	Students work on “Key Strategy” reflection and practice. SF check-in with other students, conduct “spot-checks,” etc. Students should complete activity applying the “Key Strategy” to a personal situation. Work on personal proficiency modules, seated in cohorts, following flowchart prompts.
	Cohort Check-in (rotating - 1 cohort group per day)	Case Study Groups	Rotating amongst different groups (1 per day) to check-in with individuals re: progress and need for support.	Participating in cohort check-in. Asking questions, providing evidence for ratings, etc.
~ 0:03	**Check-out**	Whole Class (Circle)	Facilitate closing process (teacher discretion).	Participate in closing process.

HS PLT Lab - Structures Summary (2016-2017)

PLT Lab (Thursdays):				
Time	**Activity**	**Grouping**	**Teacher Actions**	**Student Actions**
~ 0:07	**Grade-check and Goal Update**	Independent	The teacher circulates to ensure students are on task.	○ Students update grades and record progress toward goals in their Advisory Progress Trackers. ○ Students set deadlines for action steps for their goals in their planners.
~ 0:30	**Leadership Habit Development and Advisor Check-ins** **(alternating weeks)**	Independent	The teacher meets with students individually or in small groups to discuss academic progress and leadership habit development. The teacher may need to support the student in setting goals and writing action steps at this time. At the conclusion of the check-in, the teacher uses Google Voice to update the student's parent/guardian on the student's progress.	○ Students work independently on PLT Modules. ○ Students who have achieved Trainer status may also give Spot Checks to students who complete modules.
~ 0:30	**Dilemma Consultancies** **(alternating weeks)**	Small Groups	Teacher circulates to make sure student groups are on-task and faithfully following the "Dilemma Consultancy" protocol.	In small groups, students walk through a "Dilemma Consultancy" protocol with one of their peers, who has brought a personal Habit-aligned real-life dilemma to get advice on. SF guides the group through the protocol
~ 0:05	**Appreciations and Celebrations**	Whole Class	The teacher encourages students to give shout outs by (1) giving shout outs of his/her own and (2) giving students ideas for shout outs by saying things like "maybe someone in here helped you with a class assignment this past week and you want to show your appreciation for that or maybe you saw someone working really hard on a project and you want to	Students give shout outs to show appreciation or celebrate one another's achievements.

			recognize that they exemplified our value of *Leadership*."

lphaplt.com/) Home Lessons by Habit

PLT Lab Curriculum: Lessons by Habit (*in progress*)

Self-Reflection (/self-reflection.html)

Why? Until you can honestly reflect and know yourself, you cannot improve yourself or develop new habits.
What? Through effective self-reflection, students identify their emotions, triggers, strengths, and areas for growth.

Learning from Failure (/learning-from-failure.html)

Why? Accepting opportunities to try and fail as learning opportunities is a key aspect of persistence and appropriate risk-taking. Developing a habit of learning from failure helps develop self-confidence and contributes to a Growth Mindset.
What? Students will learn how neurons work, identify methods to increase persistence, and learn how our brains make memories and use "short-cuts" to view the world.

Deliberate Practice for Growth (/deliberate-practice-for-growth.html)

Why? We often practice skills and develop habits in ways that actually make us worse. Deliberate practice for growth enables students to determine effective practice habits that help them improve - especially in areas where they are "stuck" or feel less successful.
What? Students will leverage deliberate practice to aid in successful achievement of goals, academic growth, and Growth Mindset.

Being a Pro-Active Problem-Solver (/being-a-pro-active-problem-solver.html)

Why? Pro-active problem solving addresses root causes and contributes to successful goal-setting and achievement, "big-picture" understanding, and self-efficacy. This is in contrast to reactionary problem solving which focuses on momentary band-aids without bringing about lasting change.

Why? [ ]ig middle ground and creating "win-win" situations leads to effectively me[ ]g conflict and creating buy-in with groups, which is another key aspect of Leadersı ıı.ı. This contributes to improved group success, community building, and generaı conflict resolution and positive social relationships.
What? Students will learn to determine underlying needs and then propose a compromise or help peers build collaborative solutions to a problem.

Creative Thinking (/creative-thinking.html)

Why? Creative Thinking contributes to higher-order problem solving, innovation, and increased adaptability and flexibility.
What? Students will begin with simple use of visuals, metaphors, and observation before moving into creative questioning and design thinking to be better able to make connections between seemingly unlike things (and systems).

Developing a Critical Consciousness (/developing-a-critical-consciousness.html)

Why? Developing a critical consciousness builds an understanding of the dynamics of the world around you, and your place within that world (and those dynamics). This contributes to improved social networking and self-advocacy, big picture understanding and systems thinking as tools in subverting negative social structures.
What? Students will begin with understanding and management of peer pressure before moving into the macro level of implicit culture building, bias, and stereotypes.

College and Career Readiness

Why? While all of the previous Leadership Habits are key to long-term college and career success, there are very specific career-related skills that students need to learn in order to find, get, and keep a job.
What? Students will begin with simple time and task management and organization skills before moving on to interviewing and public perception management.

BIG
PICTURE
LEARNING
Real World Learning

Overview

Philosophy

Students learn and work best when they are passionate and interested in what they are doing. Having students explore their interests is an important step in helping them figure out who they are and what kinds of work and learning will motivate them. Interest exploration isn't just for students who haven't identified their interests. It is an ongoing and lifelong process. Over the course of four years, students will develop many new interests and ideas based on the experiences, explorations and opportunities they've had.

Through the process of Real World Learning, students explore new things and identify their interests. Students also expand their interests and challenge themselves in new ways. By taking advantage of as many opportunities as they can, they will develop work that they are truly passionate about.

Advisors help enrich a student's experiences, work to find outside resources, connect students with projects and programs, and help students find work they are passionate about. Advisors need to know their students' interests and help them develop new ones through exposure to new ideas, fields and experiences.

Before our students can find great real world learning experiences, they need to know what they are looking for. Some will have a clear idea of what they are interested in, and what might make a good experience. Others will have no idea. Begin this work through advisory interest exploration activities. There are many examples in this guide that can help students start to figure out what they'd like to pursue. Interest inventories, interest exploration activities and Who Am I? projects are three ways that students can work to find their interests.

Once students understand what interest they're interested in pursuing, you'll guide them along the journey of the LTI process. Through this work, they'll learn many valuable skills around networking, communication and problem-solving. Once your students begin their internships, they'll work with professional adults to develop project work that addresses real- world concerns. This will take their learning to an entirely new plane, as they begin crafting solutions to complex problems, through application of academic and personal skills.

1

Interest Exploration

Interest Exploration

Your students may come to you with very clear interests and passions. They may have lots of questions about themselves, their families, their communities, and jobs and careers. OR, they may be unsure what it is that they want to learn more about. Either way, it's necessary to develop a plan to expose them to the wider world through the process of Interest Exploration.

Your student may have never heard of 3D printing, or underwater welding, or nutrition counseling, or undertaking, but these may be the careers and interests that pique their curiosity and set them on a path to learning. As you begin exploring potential interests, cast a wide net with your crew, and set a tone of adventure where the sky is the limit!

We provide some example activities in the following section, to help get you started. You can also connect with your school leader and/or LTI coordinator to get some more ideas. More inspiration can be found by visiting the Knowledge Exchange (www.bplknowledgeexchange.org) or the Advisor Guide on Projects.

Let's start exploring!

Questions for Interest Exploration

- If you didn't have to go to school what would you do during the day that would really interest you/ you would love doing/want to get better at?
    - What is it that you like about each of these activities?
    - What traits and skills do each of these activities require?
    - Write about a memorable experience you had with this activity.
    - Where or whom in your community could you go to learn more about each of these activities?
- What are jobs you've always wanted to learn more about?
- Who is someone you look up to?
    - What is it about this person that is appealing to you?
    - What traits would you like to emulate?
- What's your favorite movie? Book? Artist?
    - Why—what is it that attracts you to this piece of art or person?
- If you could change anything about your life, or the world in general, what would it be?
    - Why would you change this?

Advisory Activities

Here, we include some activities to do with your advisory, in small groups or for individual students to learn more about what interests them and what opportunities are available in the community.

As the students in your advisory are getting to know each other, many of these activities can serve a great team-building function. They're fun ways to expose young people to new ideas, and as a jumping-off point for further group or individual investigations.

Conduct Peer Interviews

Break into pairs and interview advisory members about interests.

Interview Older Students

Find students with similar interests to yours and interview them about how they pursued their interests in school.

Write a Journal Entry

Make a list of your favorite things to do – look for common themes.

Explore the Classifieds

Look through the want ads. Do any jobs seem interesting to you?

Search the Mentor Database

Search the mentor database for interesting types of work.

Do an Internet Search

What types of websites interest you the most?

Read a Biography or Autobiography

Choose a book about someone who interests you. How did they pursue their passions?

Look Through a College Catalog

What courses look interesting to you?

Look Through the Yellow Pages

What businesses or organizations would you like to explore?

Talk to Your Family

What are their interests/hobbies? What did you like to do when you were younger? What skills do they think you have?

Go to a Bookstore

Find three books that interest you. Write down the name, author and topic – these might be new areas to explore. Look through a magazine rack to see if anything interests you

Walk Around Your Neighborhood

Break into pairs in advisory. Walk around and write down all the businesses and organizations you see that interest you. What else do you notice that is interesting to you?

Advisories can conduct the following group activities:

Community Interests/Needs Inventory - Have the advisory make a list of things (services, educational opportunities, resources) that the community does and does not provide. A community inventory can show areas where students could learn from community activities/ organizations, such as an active historical society, a literacy program, environmental activities/groups, or health care agencies. Or, an inventory could show what is lacking, such as an after-school youth program, a food pantry, a local arts program, or another needed volunteer organization. Also consider what the community is known for – is it a high-tech area, farming community, health care hub, center for factories, art district, university town? For this activity you can use the phone book, group discussion, a walk through downtown, the internet, and information from the Chamber of Commerce.

Interest Presentations - Ask each student to give a 5-10 minute presentation in advisory about one of his or her interests. Have students describe three new things they learned about their interest(s).

Group Brainstorm - Talk about what types of internships could revolve around each of their interests.

Informational Interviews - Have each student select one or two interests that they would like to further explore through an informational interview with a professional in the community. Help them to develop appropriate questions for the interview.

Jumping into the Real World - Newspaper Activity - Advisors bring in a copy of the day's newspaper, or a local weekly publication. Students are to find an article in the paper that they relate to on a personal level. They journal about how the story in the paper ties into the story of their lives, or ties in with an interest or passion of theirs. After journaling, stories are shared around the advisory.

You Would Never Know - Exercising Imagination. - On two different pieces of paper, Students write one thing that can be easily told by looking at them, and one thing that would never be guessed. The advisor writes these revelations on the blackboard, and students vote on who in their advisory they think the revelations relate to. This is followed by a discus- sion on perception and imagination "you can't judge a book by its cover," etc. Advisors could show pictures and tell stories about people they know personally, or famous/historical figures they know surprising/not obvious things about.

Qualified/Unqualified - Students do an activity similar to You Would Never Know, but with a focus on skills. They list one thing that they are excellent at, and one that they are poor at. Blog posts, cooking, voting, etc. Discussion follows about the spectrum of skills and how that may shape the advisory as a whole. Also brainstorming, student by student, of careers that may be associated with the skills the students have indicated.

Every Job Under the Sun - Advisors use the end of the last activity linking jobs to skills to begin a brainstorming session on all the jobs and careers the students can think of. These jobs are written on poster sheets and posted at the door of each advisory. Then, students engage in an imaginary "job expo," where they comb the halls, looking at the jobs that other advisories have posted. Their task is to come up with a list of three jobs, one that they have never heard of, one that piqued their interest but that they had never thought of doing, and one that they know a lot about or always wanted to do. When they return to their advisory, students all to- gether or in small groups, ask each other questions about the different careers they've chosen and then write down in their journal the skills, traits, talents, etc. they might need to succeed at these jobs.

Cultural Inquiry - This could be presented as part of a general advisory discussion around culture, that might begin by talking about what students know about the different cultures of the world, and then hone into a focused conversation on the culture of home, of the school, and of work. Some activities might include a group creation of a fantasy culture, an envision- ing of what a specific type of work culture might be, and what one might need to know or need to be able to do in order to adapt to different cultures. The term anthropology is intro- duced, as well as an introduction to the ways that the term is used in the LTI process.

Interest Exploration Sample Lesson Plans

Hands On

We have seen throughout the network and throughout time that student work and projects are richer and deeper the more the student is engaged and that there is generally a strong correlation to deep work and student engagement. Because of this, we are re-focusing on continued interest exploration as a need in schools. We've all run into the experience of getting students in who have limited range of interest or have no idea, so we are gathering more ways to help students and advisors eke these out.

One way that Elliot has been focusing on is the connection between the hand and the mind and how working with your hands can help students produce more language and meaning from experiences. In this vein, we have a hands-on interest exploration activity.

Purpose:

- Connecting students to the things they care about through a kinesthetic/tactile activity.
- Relationship-building within the advisory.
- Developing inquiry skills.
  Materials:
  Modeling clay or Play-Doh, enough for all students to have their own.
  The Prompt: (1 min) - "Think about a time in your life an image or scene when you were so engaged and engrossed in what you were doing, that you were truly in the flow–you forgot about time and created something wonderful – made an amazing play in sports, had an a-ha moment reading a book, wrote an amazing poem, cooked a perfect sauce, etc. Create a sculpture that shows this scene, or creates a symbol of this interest."
  Creation (10 Minutes) – Give students 10 minutes to create their sculpture. They can talk with other students, for sure, but suggest later that they share with students who they were not talk- ing with during the creation of the sculpture.
  Inquiry and Discussion (10 Minutes) – (in pairs) (Inquiry + Interest Exploration)
  Divide the group into pairs and ask then to begin asking each other questions about their sculptures. They should try to divide the time equally and you can let them know when 5 minutes has passed. In each time period, one person should be the questioner and the other the explainer. There are two main goals. First, that they will share their interest with another person and with questions begin to probe with that person more about their interest than they might know now. Secondly, to begin asking questions and thinking about what makes a good question. Have one student start as the questioner and one as the describer and the questioner should ask as many questions as possible with the aim of getting to know the person better, and more importantly, helping the person understand their interest better.

Here are some sample questions that students can be guided to ask...

- Describe your sculpture. What does it represent? Why did you choose to represent it in this way?
- What is your passion shown here? How did you become interested in it? What are the qualities of this activity? What about it, which of these qualities, engages you most?
- How long has this been your passion? Is it a long-term or short-term passion?
- Does anyone in your family or do any of your friends share this passion?
- How does this interest identify you? Looking from the outside, in what ways does it make sense that you are matched up with this, in what ways does it seem counter to who you are?
- Do you have any goals you are pursuing with this? If so, what?
- Do you have any other interests similar to this one?

Debrief 1 (5 min):

The advisor should ask students what they learned about other students during the activity. How were their choices of topic different then yours?

How did you feel being asked to do this activity? Did it work out the way you thought? Were you able to create the thing you envisioned?

Did using your hands and creating something allow you to speak in more detail about your interest? Did it encourage you to think differently? If so, how?

Further Work:

Students can journal about their experiences, can select an interest to do a more in-depth proj- ect on, or can create a gallery of their sculptures.

interest exploration activity: the anatomy of interest

This can be done on a sheet of paper or life-size. Life-size is much more interactive and fun. Have your advisory or group divide into groups of four. Give each group a seven foot sheet of banner paper and make sure each group has four different colored markers. Have one member of the group lay down on the paper while another member traces the outline of his or her body. Ask each member of the group to write the answers to the questions below in the appropriate areas of the traced body. Have each group write a key on the paper telling in which color each person wrote. Then, display each group's work and have a gallery walk of the different people. Debrief with questions around similarities and differences.

HEAD – What do I like to think about?

HANDS – What do I like to do?

HEART – What do I care about?

FEET – Where do I like to go or be?

interest exploration: four corners

Materials:
Four corners of room marked – strongly agree, agree, disagree, strongly disagree
Each person gets a check sheet to record their answers.

Process:
Facilitator reads a statement and people go to the corner that corresponds to their answer. One person from each corner says why they chose that corner. At the end, have people tally their responses to identify which "smarts" were their top two. Get into groups by their top category and look at list of occupations.

Statements:

I like fast-moving, scary movies.	Body
I like to dance.	Body
It is easy for me to learn a new sport.	Body
I see pictures in my head.	Image
I notice the way commercials use images.	Image
I can follow directions to a new place.	Image
I love to know how computers work.	Logic
I like to organize things.	Logic
Managing money is easy for me.	Logic
I make up songs.	Music
I like to have music playing when I study.	Music
I'm aware of sounds in everyday life.	Music
I love pets of all kinds and enjoy caring for them.	Nature
I enjoy being outdoors, day or night.	Nature
I like to watch nature shows on TV.	Nature
I am good at understanding what people are feeling.	People
I like group activities and games.	People
I like to help people learn things.	People
I like to spend time alone, thinking.	Self
My ideas are different from my friends.	Self
I consider myself a spiritual person.	Self
I like to listen to stand-up comedians.	Word
I can mimic a funny accent.	Word
I write poetry/short stories.	Word

Adapted from Smart Options pilot program materials.

interest exploration: four corners (continued)

You are BODY SMART if you use your body effectively.
Actor, dancer, swimming instructor, acrobat, athlete, instrumental musician, physiotherapist, recreation worker, surgeon, assembler, mechanic, physical education teacher, carpenter, craftsperson, jeweler, welder, choreographer, ergonomist, model, construction worker

You are IMAGE SMART if you are able to work with images and pictures.
Web developer, surgeon, painter, sculptor, cartographer, architect, surveyor, urban planner, graphic designer, photographer, art teacher, inventor, drafting technician, pilot, fine artist, hairstylist, machinist, interior decorator, art therapist, engineer

You are LOGIC SMART if you approach events in a logical manner.
Travel agent, technician, cook, lawyer, technologist, researcher, astronomer, auditor, accountant, computer systems analyst, underwriter, bookkeeper, purchasing agent, statistician, computer programmer, actuary, stockbroker, mathematician, engineer, physicist

You are MUSIC SMART if you are able to work with melodies, rhythms and sounds.
Solo singer, composer, instrumental musician, conductor, disc/video jockey, instrument technician, piano tuner, music therapist, songwriter, recording engineer, choral director, music teacher, music copyist, choreographer, instrument salesperson, musician, musical arranger, sound engineer, instrument repairer, group singer

You are NATURE SMART if you are aware of the world around you.
Oceanographer, farmer, rancher, gardener, agriculture worker, animal trainer, forester, zoologist, botanist, geologist, aquaculture laborer, meteorologist, paleontologist, astronomer, environmental scientist, climatologist, agricultural engineer, veterinarian, dog groomer, ecologist

You are PEOPLE SMART if you are able to deal effectively with other people.
Politician, religious leader, administrator, anthropologist, arbitrator, businessperson, personnel officer, sociologist, public relations officer, counselor, psychologist, police officer, salesperson, social director, receptionist, food server, nurse, teacher assistant, day care worker, manager

You are SELF SMART if you are able to mange yourself effectively.
Novelist, clergy, consultant, artist, therapist, theologian, fitness instructor, talent agent, writer, mediator, vocational instructor, psychologist, social worker, program planner, wellness consultant, actor, coach, psychology teacher, hones support aide, entrepreneur.

You are WORD SMART if you use language effectively.
Call center operator, tour guide, author, playwright, reporter, talk show host, English teacher, librarian, archivist, curator, editor, legal assistant, lawyer, secretary, proofreader, speech pathologist, radio/TV announcer, translator, writer, journalist

interest exploration: four corners (continued)

Directions:
After the facilitator reads the statement aloud, go to the corner with your answer (agree, strongly agree, disagree, strongly disagree). Record your answer for each statement in the space next to it.

I like fast-moving, scary movies.	____________
I like to dance.	____________
It is easy for me to learn a new sport.	____________
I see pictures in my head.	____________
I notice the way commercials use images.	____________
I can follow directions to a new place.	____________

I like to help people learn things.	____________
I like to spend time alone, thinking.	____________
My ideas are different from my friends.	____________
I consider myself a spiritual person.	____________
I like to listen to stand-up comedians.	____________
I can mimic a funny accent.	____________
I write poetry/short stories.	____________

Scoring:
Each response has a value (strongly agree=3; agree=2; disagree=1; strongly disagree=0). Total up the questions in each trio to find out which categories towards which you are most inclined.

interest exploration activity: community mapping

Suggested introduction: During the next few weeks we will be working together to find a great LTI for each and every one of you! This afternoon we are going to start on this adventure by getting to know the individuals / businesses with whom we share our community!

Through this activity we will each practice communicating with each other and the world beyond our school community.

The Challenge

In a team of four – five students, you will be responsible for:

- Identifying all the Businesses / Services in your given Geographic Area.
- Practicing your Phone Scripts (which you will instead use for a face to face conversation) in order to:
  + Get a Business Card / Contact Information (Name of Business, Name of Contact, Address, telephone #)
  + Ask permission for a MetWest student to call for an Informational Interview
- Each team should encourage each other to practice phone skills at least once!

What Each Team Will Need

- A notebook
- A pen
- A smile
- Patience
- The willingness to go for it!

Materials to Hand Out:

Provide students a sketch of the basic street layout of your neighborhood.

The Final Product

Each Team will report back to their LTI leader with:

- A map that identifies every business in their assigned area.
- Business Cards / Contact Information for each business.
- A sense of satisfaction for having reached out and gotten to know your neighbors!

Speed Mentoring Event

This is a school-wide event that was organized at one of our network high schools. The LTI Coordinator organized the event, and advisors prepared students for it. Students were able to meet with prospective mentors in the comfort of their own school! We've also included the worksheet students were given as a guide for the event.

10:00-10:30 LTI-C and Student Ambassadors set-up the event space in the PMU room 10 tables are arranged in rows, with letters for each mentor (A-J)
taped to them.

10:30-10:35 Advisors bring their students to the event. As students enter, the Ambassadors will give them a sticker with a number on it (1-10), which signifies their group, and will hand them their Worksheet with instructions and information/directions for the event.

10:35-11:00 LTI-C and Student Ambassadors will welcome everyone to the event, and will go over the rules and directions. Each group (of 4-5 students) will have 5 minutes at each mentor's table, to learn about them and their organization.

11:00-12:00 Students rotate through the mentor tables, and write down on the worksheets what they have learned at each table.

12:00-12:30 Students have lunch, mentors are invited to stick around and speak with any student they've connected with. Ambassadors will see them out. Health Care

12:30 - 3:30 The day returns to its regular schedule.

Industries represented:

Cosmetology

General Contracting

Trades

Real Estate

Performing Arts

Health Care

Emergency Services

Child Care

Community Organizing

Law

Advisors are asked to share this information with students in advance of Thursday, and to help them get prepared for the event: reviewing professionalism skills, writing questions to ask, etc.

Speed Mentoring Event Worksheet

Student Name: ____

Directions: You will travel with your small group today, to each mentor. You will have 5 min- utes at each table, and your host will let you know when you're to go to the next table.

Rules to the Game:

1. Move from table to table when you are told to switch. You will have 5 minutes with each mentor. 2. Take turns asking questions with the people in your group.
3. Be professional! Have fun!
4. If you hit it off with a mentor, you will be able to talk with them one-on-one during lunch.

Please write the name and business of each mentor you meet, along with one thing you learned during your conversation at that table. Your advisor will collect this sheet from you when you're done!

Table	Mentor Name	Business Name	One Thing I Learned here
A	________	________	________
B	________	________	________
C	________	________	________
D	________	________	________
E	________	________	________
F	________	________	________
G	________	________	________
H	________	________	________
I	________	________	________
J	________	________	________

Interest Exploration Suggestions

Make sure each student chooses several ways of researching their interests. You should keep track of their interest exploration contacts on the advisory interest exploration list.

Help the students gain access to the information sources they need. Maybe a group trip to the local library to look at magazines and books, a trip to the Chamber of Commerce, or time on the internet would be helpful.

For students who are having a difficult time finding out what they are passionate about, a Who Am I? project may help them gain insight into their interests. You can find resources for the Who Am I? project in the Advisor 101 Guide.

Share your own interests, past jobs, hobbies and your own career path with students.

Work with your LTI coordinator to find guest speakers to address students in advisory or in PMU, to share their experiences and training.

Interest Inventories

These are short activities that help students determine their learning styles, interests and strengths. We include more information on Interest Inventories in the Advisor Guide on Projects.

#1: Self Assessment
#2: Self-Evaluation of Skills and Abilities #3: Your World Needs Your Love
#4: Who Am I?
#5: Ability Inventory
#6: Vocational Interests
#7: Vocational Values

Interest Inventory #1 - Self Assessment

1. Circle the qualities that best describe you:

Alert	Assertive	Attentive to Details	Calm
Candid	Cooperation	Courageous	Creative
Curious	Decision-Maker	Diplomatic	Driven
Easy-going	Energetic	Enthusiastic	Expressive
Funny	Generous	Good Listener	Helpful
Honest	Leader	Loyal	Mature
Open-Minded	Optimistic	Organized	Outgoing
Patient	Playful	Polite	Public Speaker
Punctual	Quick Thinker	Reliable	Respectful
Self-Controlled	Sincere	Spontaneous	Tactful
Team Player	Tidy	Tolerant	Versatile
Work well under pressure	Other:	Other:	Other:

2. What qualities that you DIDN'T circle would you like to develop?

Interest Inventory #2 - Self-Evaluation of Skill and Abilities

Instructions:

Look through the categories and evaluate yourself according to this scale:

1 = No ability at all

2 = Enough ability but need help from others

3 = Some ability on my own

4 = Strong ability

Communication Skills and Abilities			Organization Skills and Abilities	
Writing	Helping	Creating	Managing	Analyzing
☐ Informing	☐ Advising	☐ Composing	☐ Classifying	☐ Budgeting
☐ Editing	☐ Coaching	☐ Designing	☐ Systematizing	☐ Mathematical ability
☐ Translating	☐ Leading	☐ Illustrating	☐ Filing	☐ Financial knowledge
☐ Formatting	☐ Negotiating	☐ Painting	☐ Handling details	☐ Counting
☐ Researching	☐ Mentoring	☐ Playing music	☐ Problem solving	☐ Comparing
☐ Typing	☐ Influencing	☐ Writing: poetry, songs, rap	☐ Decision making	☐ Investigating
☐ Technical writing	☐ Articulating	☐ Sewing	☐ Orderly	☐ Abstract thinking
☐ Foreign languages	☐ Empathizing	☐ Fashion	☐ Supervising	☐ Reviewing
☐ Persuading	☐ Public speaking	☐ Building construction	☐ Follow-through	☐ Evaluating
☐ Letter writing	☐ Training	☐ Dancing	☐ Accomplishing	☐ Analyzing
☐ Summarizing	☐ Teaching	☐ Web design	☐ Setting schedules	☐ Critical analysis
☐ Record keeping	☐ Convincing	☐ Layout	☐ Controlling	☐ Calculating
☐ Note taking	☐ Counseling	☐ Drawing	☐ Effective	☐ Remembering numbers
☐ Writing	☐ Motivating	☐ Writing	☐ Assertive	☐ Statistics
☐ Critical analysis	☐ Supporting	☐ Singing	☐ Organizing	☐ Measuring
☐ Clerical skills	☐ Understanding	☐ Inventing		
	☐ Mediating	☐ Observing		
		☐ Imagining		
		☐ Showmanship		
		☐ Aesthetic sense		
		☐ Acting		
		☐ Landscaping		
		☐ Cooking		
		☐ Photography		

Interest Inventory #3 - Your World Needs Your Love

This activity gives you the opportunity to assess the needs of your world, nation and commu- nity. One of the key components of a satisfying a approach to your world, and will help you determine what you can do to make it better.

1. In your mind, what are the most critical needs on the planet that are going unmet?
2. What are the greatest sources of pain and suffering in the world?
   a. In your country?
   b. In your community?
3. Where would you find people or organizations/businesses that are addressing some of these problems?
4. List three of these people or organizations/businesses here:

Interest Inventory #4 - Interest Inventory – Who Am I?

Number your paper 1-20. Write as many answers to this question as you can, but no fewer than twenty. You can list actual roles, feelings, things you do, or essential qualities. Really think about who you are and how you feel about these various aspects of yourself.

Interest Inventory #5 - Ability Inventory

Rank each ability from 1-5, 1 = small amount of ability, 5 = great amount of ability

[ ] An ability to organize
[ ] An ability to motivate
[ ] An ability to mediate
[ ] An ability to instruct
[ ] An ability to manage
[ ] An ability to execute
[ ] An ability to lead
[ ] An ability to inspire
[ ] An ability to counsel
[ ] An ability to make things work (like mechanical ability)
[ ] An ability to build things
[ ] An ability to design things
[ ] An ability to heal
[ ] An ability to put people at ease (diplomacy)
[ ] An ability to contemplate (philosophize)
[ ] An ability to arrange things beautifully
[ ] An ability to concentrate
[ ] An ability to make beautiful or interesting things
[ ] An ability to perform (entertain)
[ ] An ability to communicate through speech
[ ] An ability to tell stories
[ ] An ability to be playful
[ ] An ability to persist
[ ] An ability to juggle many activities or responsibilities
[ ] An ability to be efficient
[ ] An ability to be loyal
[ ] An ability to be appropriate
[ ] An ability to be self-disciplined
[ ] An ability to be tolerant
[ ] An ability to love
[ ] An ability to be happy
[ ] An ability to be generous
[ ] An ability to be balanced

From the abilities with the highest scores, construct a top ten list of your abilities:

Show this list to people who know you in different ways (friend, teacher, mentor, employer, parent, etc.) Ask them to examine your list and give you feedback on how well you have iden- tified your abilities. Tell them that their honest opinion will be greatly appreciated. Reflect on what you learn in this space below.

Interest Inventory #6

1 - In the first column, check those vocational areas that appeal to you.

2 - In the second column, rank in order those areas you checked in the first

Yes/No	Ranking	Vocational Area
		Artistic: an interest in creative expression of feeling or ideas
		Scientific: an interest in discovering, collecting, and analyzing information about the natural world; and in applying scientific research findings to problems in medicine, the life sciences, and the natural sciences.
		Plants and animals: an interest in working with plants and animals, usually outdoors
		Protective: an interest in using authority to protect people and property
		Mechanical: an interest in applying mechanical principals to practical solutions by using machines or hand tools
		Business detail: an interest in organized, clearly defined activities requiring accuracy and attention to details, primarily in an office setting
		Selling: an interest in bringing others to a particular point of view by personal persuasion, using sales and promotion techniques
		Accommodating: an interest in catering to the wishes and needs of others, usually on a one-to-one basis
		Humanitarian: an interest in helping others with their mental, spiritual, social, physical or vocational needs
		Leading and influencing: an interest in leading and influencing others by using high level abilities
		Physical performing: an interest in physical activities performed before an audience.

Interest Inventory #7 - Vocational Values

Many of your vocational interests come from the aspects of working that you value. These are the feelings or benefits of working that are important to you.

- In the first column, check those qualities of work that are important to you
- In the second column, rank in order those areas you checked in the first column. Start with the number one to indicate the most important.

Yes/No	Ranking	Vocational Area
		Adventure: working in a job that requires taking risk
		Competition: working in a job in which you compete with others
		Creativity and self-expression: working in a job in which you use your imagination to find new ways to do or say something
		Direct service: working in a job in which you provide direct services to persons with problems
		High salary: working in a job where most workers earn a large amount of money
		Independence: working in a job in which you decide for yourself what work to do and how to do it
		Influencing others: working in a job in which you influence the opinions or decision of others
		Intellectual stimulation: working in a job which requires a great amount of thought and reasoning
		Leadership: working in a job in which you direct, manage, or supervise the activities of others
		Outside work: working outdoors
		Persuading: working in a job in which you personally convince others to take certain actions
		Physical work: working in a job, which requires substantial physical activity
		Prestige: working in a job which gives you status, and respect in the community
		Public attention: working in a job in which you attract attention because of your appearance or activity
		Public contact: working in a job in which you have day-to-day dealings with the public
		Recognition: working in a job which you gain public notice

2

The LTI Process

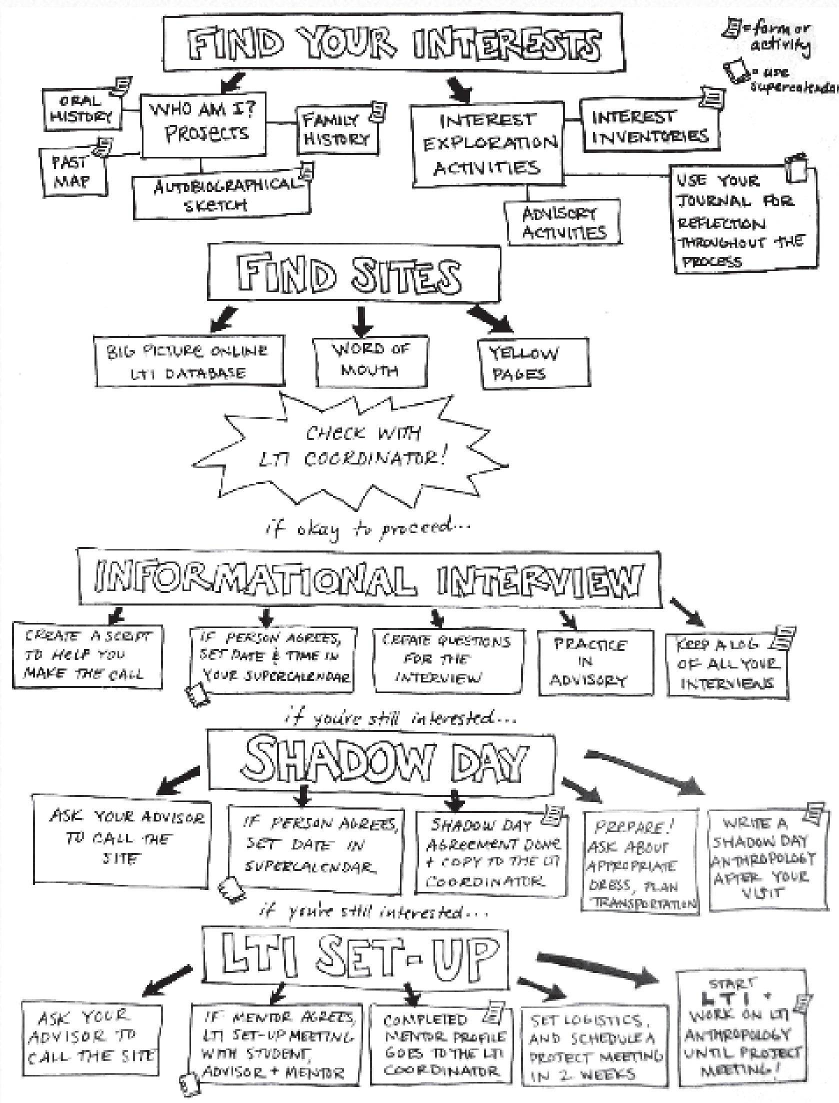
The LTI Process

The process of finding a real-world learning experience begins with having students identify their interests. The process continues with students connecting with adults through infor- mational interviews, shadow days and possibly internship experiences. This entire process is referred to as LTI (Learning Through Interests).

If your students have completed the Interest Inventories, you've already begun a dialogue about the professional world. You should now have a more full picture of what each stu- dent's strengths, weaknesses, passions, interests and values are. This knowledge can help you to guide them in their searches, and help them to develop skills in needed areas.

As you move forward in the LTI Process, it's necessary that your students learn how to com- municate effectively and conduct themselves in a professional manner.

In this section, we will share strategies around the steps of the LTI process, as well as materi- als to help students feel prepared and at-ease in professional settings.



How Do I Get My Students Ready for the LTI Process?

You may think that your students are not ready to enter the great big professional world, but they will surprise you! Young people are perceptive, and they often pick up on subtle cues in different environments and adjust their behavior accordingly. We recommend addressing some basic ideas around professionalism and communication before having students begin the LTI process, but recommend that advisors spend the most effort in helping students craft their phone scripts and emails, and engage in a process of meaningful debrief after each step students take toward their LTI.

According to the BP educational design, the best learning occurs by doing, and sometimes the best learning occurs when we make mistakes. That doesn't mean that we put students out without preparing them, but instead it means that we need to build their confidence, and to trust them and then critique and debrief the experiences with them.

For example, talk with the students about introducing themselves, looking someone in the eye, and shaking their hand. Then have the students go to the school's board meeting and introduce themselves to the board members, take them to a networking event hosted by the Chamber of Commerce, or do a community mapping activity. You will find your LTI process is most successful if you can move students through the preparation phase quickly. Once they begin to conduct Informational Interviews, they will quickly see how exciting internships can be, and will begin to exhibit professional personal qualities, and be motivated to make connections and persevere in their pursuit of an internship.

Here, we include 2 sample readiness checklists that network schools have used to help students track their progress toward LTI readiness.

#1
Internship Skill Building Checklist

Student Name: ____
Advisor Initials / Date:

[ ] I can explain my school to others.
____

[ ] I know what I am interested in and why.
____

[ ] I understand the purpose of internships.
____

[ ] I know internship steps and terms.
____

[ ] I have demonstrated that I can speak professionally on the telephone.
____

[ ] I can conduct a professional mock interview (to be demonstrated on event: __________)

____

[ ] I can dress appropriately for the worksite.

____

[ ] I know how to present myself.

____

[ ] I have prepared thoughtful questions.

____

[ ] I know what materials to bring to an interview.

____

[ ] I understand and can utilize appropriate body language, eye contact and handshake.

____

[ ] I have a professional email account set up and have used it to send documents.

____

[ ] I can successfully organize my internship paperwork.

____

[ ] I can get around the city's transportation system.

____

[ ] I am able to contact potential mentors and my mentor independent of my advisor.

____

[ ] I can tell if a worksite is a good fit for me.

____

LTI Skill Building:

A Competencies Checklist- Advisors and students both initial as each step is completed.

General:	S	A	Comments
I understand the LTI Process			
I understand LTI Vocabulary			
I have built my General LTI Skills			

Interest Exploration and Research:	S	A	Comments
I have completed at least four activities concerning Interest exploration			
I have written at least four journal entries about possible interests.			
I have built my Interest Exploration and Research LTI Skills			

Culture:	S	A	Comments
I have participated in a dialogue around cultures of the home/school/workplace			
I have practiced writing a sample LTI anthropology			
I have built my Cultural LTI Skills			

Appearance and Dress:	S	A	Comments
I have participated in a dialogue around appearance and dress at home/school/workplace			
I have participated in a workplace dress fashion show PMU.			
I have built my Appearance and Dress LTI Skills			

Communication:	S	A	Comments
I have developed, received feedback, and edited a phone script.			
I have practiced this phone script with a student partner			

I have practiced this phone script on a real phone with at least two adults.			
I have developed a list of interview questions related to my passion, and received feedback on those lists from my advisor.			
I have practiced/role-played my interview questions with a student partner.			
I have conducted a trial interview with a adult volunteer and received feedback from that person.			
I have drafted, received feedback, and edited a professional thank you letter.			
I have built my Communication LTI Skills			

Transportation:	**S**	**A**	**Comments**
I have used Google maps and directions to locate a potential LTI site			
I have used the Septa website to find public transportation to a particular site.			
I have turned in a signed copy of my transportation waiver to the front office.			
I have built my Transportation LTI Skills			

How I'm prepared:	**S**	**A**	**Comments**
I know how to use the Real World Learning Directory			
I know how to make a contact request			
I know how to request a street pass.			
I know how to use and update my contact logs for all phone calls made.			
I have built my Logistics and Protocols LTI Skills			

I built my LTI Skills and am ready to start contacting LTIs!!
Student:
Advisor:

First Contact

Students can learn more about interests and potential LTI sites by interviewing adults whose work interests them. The organization or workplace may be secondary to the type of work. For example, there are computers in art museums and a student who is interested in web design (and has no interest in art) may be able to speak with someone who is responsible for that organization's technology systems. By conducting an in-person or telephone interview, the student will gain insight to the type of work the person does.

The student brainstorms a list of people to call who work in his or her area of interest. The student can use the mentor database, yellow pages, and discussions with the LTI coordinator and their advisor. Then, the student creates a list of questions around the profession. The student gives the list of people they'd like to call to their advisor. The student practices talking on the phone professionally, and learns how to send professional emails, later calling and/or emailing the people on the list (the interview may be in person or on the phone). Students should record these phone calls and emails on the informational interview log in their work- ing portfolio. The student should try to get a sense of the person's profession, and decide whether or not to pursue a shadow day at that site. Students should always remember to send thank you notes to people they interview.

The advisor will help the student create a list of people to call and email for informational interviews around his or her interests. Advisors organize activities to prepare the entire advisory for making professional phone calls and emails. Once they have collected the list of potential informational interviews from each student, they must inform the LTI coordinator about who the students would like to call. The advisor should review the informational interview form before students place their calls and help them brainstorm appropriate questions. Advisors should supervise the phone calls and help students when needed. Additional tips for supporting students' phone calls, emails and informational interviews are listed in the following pages.

Tips for Advisors

Preparation

Help each student find sites to do informational interviews. If your school has a mentor database, use it. The internet, local business publications and even the Yellow Pages can be helpful. Keep a box in your room that you can fill with business cards and flyers you en- counter, and which students can add to with their own connections.

- Make sure that the calls are approved by the LTI coordinator so the site doesn't receive too many calls or numerous calls in one day.
- Ask each student to create a list of questions to ask at his or her informational interview (see Informational Interview Questions).
- Go over the informational interview form with your students.
- Encourage students to do some background research on the organizations they will be contacting.
- Arrange for students to conduct practice informational interviews with older students who have had an LTI in the same area of interest.
- Determine whether the students will conduct the interview over the phone or in person. Consider available transportation and scheduling needs for in-person interviews.
- Many students have never called a stranger before and need plenty of coaching. Have students prepare beforehand by creating a script for the call. Students can work in pairs or practice in front of the advisory and have their practice call critiqued. Then it's off to the phones once they're sure they can make a professional call.
- Make sure students know how to use the informational interview log in their working portfolio.

Action

- You may want to sit in with students as they make their first call. If they are doing the interview in person, make sure they are accompanied by an adult.
- Ask to see each student's informational interview log. Suggest new places to call each week, or places students should check back with or follow up on.

Reflection

- Ask your students to write a quick journal entry about the interview.
- Discuss their experiences in advisory. Did they feel confident? Were they respectful and respected? What did they learn about the person or site? Would they like to have a shadow day at the organization? What would they do differently in the next informational interview?
- Have students share or transcribe their interview notes. You may also have a form or worksheet they can complete after their interview.
- Talk within the advisory about how they are working on the Communication Learning Goal through this work.
- Have students share ideas and contact information as new places are identified.
- Follow up with students to be sure that thank you notes were written and sent and new information is added to the mentor database.

Making the Call

Here's a sample training document that was created in one of our schools. It shows both advisors and students how to effectively plan for that first phone call.

Phone Script in One Page or Less!

How to Write a Phone Script:
Advisors: Make sure students write their OWN phone script, and that they are comfortable with it. All students need to go through the LTI Skill-Building Checklist before they can be allowed to make calls.
Students, here are the lists of **Do's** and **Do Not's** with the Phone Script
Do:

- Introduce yourself and get the name of the person you're speaking with
- Stick to the main ideas:
  - ✳School's program
  - ✳My passion
  - ✳Informational interview- where I ask you questions, 30 minutes or so at YOUR place of business
  - ✳Available Tues/Thurs, between the hours of...
  - ✳Get the name of the person you're meeting with (if different than the person you spoke to)
  - ✳Get the job title of the person you're speaking with, and that of the person you're meeting with (if different)
  - ✳Confirm the date, time and location
- Make sure your script is typed or neatly written, free from errors and cross-outs
- Be friendly
- Be relaxed
- Be PRACTICED!
- Speak CLEARLY
- Be patient—you may get juggled from one department to another, or be put on hold multiple times, or the people you speak with might not be too friendly. Don't take it personally-- PERSEVERE!
- Be ready to take a message or leave a message- know what you'll say if you get voicemail
- Be ready to write things down in your Supercalendar and Call Log
- Remember that they won't know what an Informational Interview or Shadow Day are, and that they won't know what a Big Picture School is, and may not have heard of your school
- Tell your advisor what happened afterwards, and update your phone log

DO NOT:

- Mention “internship” (you’ll scare them off or confuse them)
- Mention “three month minimum commitment” (you only need 30 minutes of their time for an informational interview)
- Use the word “interview,” UNLESS you stipulate “where I come in and ask YOU questions” (otherwise, they may think you want to interview for a job, and shut you down because they’re not hiring)
- Make it too wordy (you’ll lose their attention)
- Lose your patience (YOU are asking THEM for a favor, so be polite and patient!)
- And lastly, don’t forget to BREATHE!

Good luck, and make us proud!!!

Event Idea: Advisory Information Interview Call Rehearsal Day
Break your advisory into groups of three with an adult volunteer or older student. They should all have their informational interview form with questions already prepared.
Have each student take a turn pretending to call the adult volunteer or older student who is posing as an interviewee. Students can then give each other feedback and encouragement.
You can also enlist your friends and colleagues in the phone call prep work. Have students call your personal connections, other adults or students at the school, or at another Big Pic- ture school. Those volunteers can then give them feedback on their calls.

Sending the Email

Though we recommend phone calls as the initial contact with a prospective mentor (they are more personal, harder to ignore, and help students develop valuable professionalism skills), it's sometimes appropriate for students to use email as a way of communicating with their contacts. Email skills are a core real-world skill, as well.

When should students use email?

- Students can use email as a follow-up tool with mentors after their initial phone call, if they haven't heard back from the mentor, or to demonstrate their tenacity and interest.
- Students can email follow-up questions that may arise after their informational interview.
- Some students, who may struggle more than usual with oral communication may use email as an initial method of contact.
- Students can email their Thank You messages, after their informational inter views and/or shadow days.
- Once students begin internships, they'll be using email frequently to communi cate with mentors and with you, to send drafts of work for feedback, and as a tool to reach out to other experts in the process of their project work.

What do they need to know?
Make a professional email address. Your email address should include your full name, and be free of slang or other words.

The subject line, and how to use it. Let your recipient know what the email is in regards to.

How to send and receive. Understand how to CC and BCC recipients, and the difference between Reply and Reply All.

The functionality of your email platform. How do you file messages? How do you indicate priority? How do you add contacts?

Tips:

- Have students write their password in their Supercalendar, or share it with you, in case they forget it. Set up security settings that will allow it to be sent to an alternate email address or cell phone number in case it's forgotten.
- Have students send messages to you before they send them to mentors, so you can help them proofread their work. Have them CC you on the initial messages they send to potential mentors.
- Teach students about spam email and viruses that can be transmitted via email message. Tell them not to open emails from senders they do not know, or that look suspicious.
- Integrate responsible email lessons into a larger approach to social media. Connect these lessons with lessons on what to do/not do on other digital media platforms.

Informational Interviews

This is where the fun begins! Your students may be very nervous about leaving the school and meeting with professionals they do not know, but once they finish that initial interview, they will be flying high, and completely energized around the LTI process!

We've shared some strategies around helping students be prepared to meet with prospective mentors. Here, we'll give some information around helping them get ready for the actual interviews. We've included resources to help them construct their questions, to be prepared to conduct themselves professionally, and to follow up appropriately after the interview.

Writing the Questions

Developing Informational Interview Questions

What it is:

Students should have a list of Informational Interview Questions, to bring with them on Interviews. They will also need a pen/pencil, Supercalendar and notebook, as well as a Street Pass and transportation plan/ pass in order show they're ready to go.

Students will need to brainstorm/develop questions, and get advisor input and approval be- fore they can make the initial Interview calls. If possible, the questions should be typed, and at the very least, they should be neatly written in a notebook, or on paper, with space between to jot notes on the mentor's response. Students should be ready to take notes on their mentor's responses.

Areas to consider when writing questions:

- Education & post-secondary work/learning
- A Typical Day
- Stressors
- Highlights
- Connected careers
- Projects
- Personal passions
- Personal Qualities
- History of the site
- Mentor's job history
- Advice?
- Ask for a tour
- Don't forget to say Thank You!

Follow-Up Questions:

When mentors respond to questions, ask yourself if there's a follow-up question you can ask. Follow-up questions will give you more information, if the initial response left you still curi- ous. For example, if you ask Why did you decide to go into this field? and the mentor replies: I like working with children, you could follow up with What is it you like most about working with children? or Have you always liked working with children? Plan on asking at least 2-3 follow-up questions in an interview. Not only will they give you more information, but they will also show the mentor that you're actively listening and interested in what s/ he has to say.

Sample Interview Questions

About the Person

- How did you get interested in this work?
- What are your interests?
- How did you get this job?
- What do you do on the job?
- What prepared you for having this job?
- What skills and education do you need to do this?
- What do you do on a typical day?
- What are your major duties and responsibilities?
- What do you like about your work?

About the Organization

- How big is the organization?
- What is the main purpose of the organization? Of this department?
- What kinds of jobs are in your area?
- How many employees work here?
- How does the organization rely on this department?
- What do people learn when they work here?
- What kind of an impact does this organization have on the community?
- What is it like to work here? What is the environment like?

On the Interview

Once your students have done the work of interest exploration, preparing for and making phone calls, talking about professionalism, writing their questions, and planning their trips, they are ready for the interview! They may not feel like it, but they are prepared.
Here are some tips to help you and your students FEEL prepared. Once they've made it this far, they definitely should BE prepared.

Information Interview- in One Page or Less!

What an Informational Interview Does:

Students will travel to a potential internship site to meet with an adult at the site and ask them questions about what they do. Through this process, students learn to engage with new people, learn more about jobs and careers they're interested in, travel to new places on public transit, document their experiences, and begin to expand their comfort zone.

DO:

- Leave early, get there early or on time
- Be prepared! Bring:
  -Your Supercalendar
  -A pen/pencil
  -Your questions, neatly typed, with space to write the answers
  -A business card, or have your email address handy to share with the person you interview
- Dress appropriately for the organization you'll be visiting.
- Be friendly
- Be relaxed
- Be PRACTICED! Practice your questions, and taking notes with another student before you go
- Speak CLEARLY
- Introduce yourself using your full name, and the purpose of your visit.
- Make eye contact and shake hands
- If they are talking too fast, and you need more time to take notes, ask them to slow down.
- Ask follow-up questions, if you think of something on the fly you'd like more information about.
- Ask for a business card or contact information
- Ask them to show you around, if there are other areas of the site you're interested in seeing
- Remember to say THANK YOU!!!
- Tell your advisor what happened afterwards, and complete the assigned paperwork, which may include a typed reflection and transcript of the interview, a log, a journal, etc.
- Send a follow-up thank you note or email

DO NOT:

- Mention “internship” (you’ll scare them off or confuse them)
- Mention “three month minimum commitment” (you only need 30 minutes of their time for an informational interview)
- Lose your patience (YOU are asking THEM for a favor, so be polite and patient!)
- And lastly, don’t forget to BREATHE!

Good luck, and make us proud!!!

Thank You Letters

This is pretty straightforward. Sending a thank-you note tells prospective mentors that your students appreciate the time and energy they've spent with them. It also helps to butter them up for possible Shadow Days and internships!

Some schools send thank you cards, some use letters—sent through the postal service. It's a nice touch! Many schools use email as their primary method of sending thank you notes. Whichever method you use, be sure to help your students craft their thank you's. Here's a quick overview of what should be included in a thank you note, and a sample from one of our students.

Thank You Letter Outline

- Today's Date
- Greeting
- What are you writing about (what did the recipient do)?
- Name one or more things that you learned or enjoyed.
- Give your thanks.
- Include contact information with your signature.

Sample Student Thank You Letter

Dear Colleen T.,

When you receive this letter I hope you are in good health. As for me, I am doing well in my journey of real world learning. I am writing this letter to thank you for your time, dedication, and support. It was a pleasure being able to lend a hand to you, and the rest of the staff at The Leukemia & Lymphoma Society. Although I did not have the chance to be there long, I have gained much information about the different blood cancers, how they affect both the patient, and family. I have also learned a great deal about your organization. I am pleased that The Leukemia & Lymphoma Society reaches out to help find cures for Blood Cancers [Leukemia, Lymphoma, Hodgkin's disease and Myeloma]. I had no idea that this organization had existed and I would like to spread the word to my classmates as well as family and friends. I wish the best of luck to you and The Leukemia & Lymphoma Society. Thank You!

Sincerely,
Brandon R.

Shadow Days

Students should pursue their interests as thoroughly as they can at the beginning of the year. If a student wants to further explore a workplace after having an informational interview, his or her advisor can set up a shadow day. A shadow day is a day spent at a workplace. Shadow days can help students find out more about their interests and see if the organization and host are a good fit for a future LTI.

Students are active participants in the search for an LTI. The students alert their advisor when they've found a place they'd like to have a shadow day. They dress appropriately for the site, prepare questions for the shadow day anthropology, and are brought to the site by someone from the school or a parent. They spend the day at the site and can ask their advisor to try to set up an LTI afterward if they are interested. Students send thank you notes to the people who host them on their shadow days.

Advisors encourage students to explore their passions through real-world experiences. The advisor helps students make outside connections and set up shadow days. The advisor ex- plains what a shadow day is to the potential host and makes the arrangements. The advisor faxes a cover letter and a shadow day agreement form to the host. The advisor prepares students for shadow days, checks in afterward on students' impressions of the day, and coaches them through writing the shadow day anthropology.

Tips for Advisors

Preparation

- Help students look for sites to shadow. Each student should do informational inter- views and brainstorm shadow day options with the advisor or the LTI coordinator. (Using the mentor database, internet, yellow pages, and networking may be helpful.)
- The advisor or LTI coordinator calls the site to set up the shadow day following the informational interview (see the page on arranging a shadow day in this section).
- Have students fill out their part of the shadow day agreement form. Then, fax or email the form to the shadow day host and ask him or her to fax or email it back to you prior to the scheduled day. These forms should all be kept on file at the school.
- Arrange transportation for each student's shadow day. Can a parent drive? Can a stu- dent carpool with a staff member?
- Have students prepare several questions about their area of interest before they go to their shadow days. Let them share their questions with the advisory to give each other ideas.
- Talk with students about what they want to learn. Go over the shadow day anthropol- ogy with them. Remind them to take notes during their visit to use when writing their anthropology later.
- Have the advisory brainstorm how to have a professional shadow day.
- What should the student wear? Think about each site and what's appropriate (e.g. an artist's studio, zoo and city hall all have different dress requirements).
- How should the student relate to others in the professional world?(e.g. saying please and thank you, listening and asking questions).
- What should the student bring? (e.g. shadow day anthropology, pen, lunch if neces- sary)
- What if the student is interested in having an LTI there, what are the next steps? Re- mind the students that the advisor talks with the host about becoming a mentor. There are many logistical and legal questions that the person may have.
- What if the student isn't interested in having an LTI there? How can s/he keep a good relationship with the site and pass on the opportunity to other students?
- The day before the shadow day, the advisor should call the site to confirm with the host.

Action

- Have each student transported to his or her shadow day site by an adult.
- A typical shadow day is from 9:00am – 3:00pm, but each student and site should make their own arrangements.
- The student may be picked up by the school or parent at the end of the shadow day, or take public transportation.

Reflection

- Ask your students to write a journal entry about their shadow day (see journal prompts in this section)
- Talk with each student one-on-one about his or her shadow day. Find out how it went. What was learned? What the host was like? Would the student be interested in doing an LTI at a place like that?
- Have students write thank you notes to their shadow day hosts during advisory.
- Make sure all that all shadow day contacts and experiences are entered into the mentor database and are known by the LTI coordinator.
- Ask students to complete their shadow day anthropology. They can use the notes they took during their shadow day to write about their experience for their portfolio.
- Have the students each give a short presentation to the advisory about their shadow day experiences and what they learned. Ask them to share their shadow day anthropologies and critique them.
- Students can announce the shadow days they have had during PMU as a way to build the culture and share their learning.

Arranging a Shadow Day

Advisor Resource

You will need to arrange the shadow days for your students because of all the details and legal issues that are involved. Here is a list of notes for making the calls:

- Give a quick overview of the school: Explain that your students pursue personal interests and learn from experiences in real-world internships. If it is a large organization, you may need to talk with a couple of people (it's a good idea to begin in the HR department for large organizations) to figure out who would be the best person for the student to shadow.

- Explain the purposes of shadow day: Students request shadow days based on their personal interests. By being with an adult who works in that field of interest, students have the opportunity for a great learning experience.

- Select the day and time with the host. Make it far enough in advance to get all the forms completed and returned.

- Tell the host you will fax or email a letter with suggestions about what s/he can do with the student during a shadow day (see the shadow day cover letter below).

- Tell the host about the shadow day agreement form that s/he needs to complete and return. Make sure they have both your fax number and email address for return.

- Explain that an adult will escort the student to the shadow day, but will not stay with them.

- Give them a number to call in case there are any questions, an emergency, or in case s/he has to reschedule the day.

Liability
Some sites will ask about liability. Explain that the school carries additional insurance to cover students at off-site activities and that parents have all completed signed agreements for these experiences. Your school leader or LTI-C may be able to provide this documentation if necessary.

Event Idea: Ninth Grade Shadow Day
This is a set day in mid to late October or early November when every ninth grader goes out on a shadow day. The LTI coordinator usually organizes this event and sets the day.
Obviously a lot of work goes into this day beforehand to set up the numerous shadow days. The LTI coordinator should help facilitate this process, arrange for transportation and make sure that each student has a completed Shadow Day Agreement Form. This event can be a great way to kick start your students' LTI searches.

Shadow Day Journal Prompts

- What is something interesting you learned at the shadow day?
- Was this the kind of place you'd be interested in working? Why or why not?
- What did you like the best about the place you went?
- What did you like the least?
- What did you think about the job you shadowed? Was it interesting? Would it be chal- lenging? Would it be boring? What evidence do you have to support this opinion?
- What did you think of the organization? What was the atmosphere like? Did people seem to enjoy being there? What were the people like?
- What neighborhood is this organization in? How long has it been there? What ser- vices does it provide? Who are the clients?
- Can you picture yourself doing an LTI here? Why/why not?
- What do you think you would do on a typical day if this were your LTI?
- Describe the person that you shadowed. Describe his/her job. Is it a job you'd want to do? How do you know?

You can find the Shadow Day Anthropology, Cover Letter and Agreement in the LTI Documents section of this guide.

Securing the Internship

Your LTI Coordinator or school leader will likely provide guidance in how to turn a prospective mentor into an active mentor. The phone calls, initial face-to-face conversations, and print materials/emails you share can wield a great deal of influence.
We've included a few tips to help get those conversations started on the right foot. But we recommend you meet with your LTI-C and principal to develop your plan of attack for potential mentors. They will likely have promotional materials and talking points for you.

First things first

Before calling the mentor to secure the internship, you should be sure you talk with the student beforehand about why s/he is interested in this mentor and worksite. Remind the student that this is a commitment that they need to stick with until the project is complete, so it is a choice that needs to be well thought out.

Best practices for approaching potential mentors

Make sure you've spoken to the mentor prior to the phone call to introduce the possibility of an internship. After your students have a successful informational interview, send an email or make a call to say thanks. You should also speak to them when arranging the shadow day. By the time you reach out to discuss the internship, you should have made contact already at least twice.

Help your students to understand that they should not drop hints about, allude to, or flat-out request an internship. When students do this, it puts mentors on the spot, and does not set the tone you want for a successful relationship going forward.

Have materials that legitimize the program. It's important that you can hand a mentor a flyer, or direct them to a website. Here, they can see images of students working with mentors, read about the rationale behind the internship program, and see that there are schools across the country doing work like this. It can help them to visualize the experience of mentoring a young person, and help them feel part of a larger program.

Express gratitude. When you and your students thank the mentor at each step along the way, it shows them the impact they're having, and helps them to feel appreciated and special. It connects them to you and your student.

Talk about work students have done at internships. Students bring value to the internship site. Their work, and the projects they complete, are built to benefit the site and meet a stated need. Help the mentor understand that young people can make a difference.

Tell the mentor that your student picked *him/her*. Share details of why your student selected this person and site. This is often the most impactful thing you can do. When you let a mentor know that your student has met with several professionals and deemed this mentor to be the one they liked the best, it will resonate.

Give them time to think about it, and make a plan to meet at a later date and discuss it face- to-face. If the mentor is at all reluctant, provide them with materials to review and schedule a time to talk again. Be flexible. Cajoling or pushing a mentor into an internship they're hesi- tant about can result in an internship experience that's uncomfortable for the student and the mentor.

Give them space to ask questions. Make sure you remember to open up the floor to questions. You can also provide them with a copy of your school's Mentor's FAQ. Provide transparency about your internship program, and if possible, connect them to a current mentor so they can have a behind-the-scenes conversation about mentoring.

When you first call a potential mentor, make sure to cover:

- What a Big Picture school and the LTI program are all about.
- What a mentor's role is: a thorough explanation is described in the Mentor Guide. Advisors should become familiar with the Mentor Guide and have copies ready to be,given to mentors at LTI set-up meetings.
- What an LTI consists of – meaning, the student spending two days a week at the organization working on an authentic project.
- That they will need to fill out a mentor profile that includes a police background check. Help them to understand that this is important since the student is the legal responsibility of the school even when they are at their LTI, and we need to insure their safety. This is necessary for ALL mentors, even if they are well known by you or the student.
- That the length of the LTI can vary, depending upon what the student and mentor are interested in achieving. Usually an internship is initially set up for three months.

If the person is not able to be a mentor at this time:

• Determine their reason and be sure all pertinent information is entered into the mentor database. Thank them for allowing the student to have a shadow day and determine if they are still interested in doing informational interviews and/or are willing to host other students for shadow days.

LTI Set-Up Meeting

For a successful LTI experience, the mentor, student and advisor should discuss expectations and responsibilities of each person. An LTI set-up meeting is an opportunity for the group to exchange contact information, create clear expectations for the internship experience, explain the Mentor Guide, and plan future work and meetings.

To review

The student locates a site that might make a good LTI and has a shadow day there. If the student is interested in having an LTI there, the advisor calls the potential mentor. If the mentor agrees, the student attends an LTI set-up meeting with the advisor and mentor.

At the Set-Up Meeting

The student, advisor and mentor will each discuss their expectations for the internship experience, as well as what aspects of the work are interesting to them. The advisor brings materials for the mentor to help him/her understand the possibilities of the internship. S/he has each mentor complete a mentor profile so that a background check can be completed to ensure that it is a safe placement. The advisor also makes sure that the mentor database is updated, and the LTI coordinator and school team know that this student's internship is official.

Make the time

Each LTI setup meeting is different, and some will go more quickly than others. But a good rule of thumb is to plan for at least an hour to go over everything and make sure all questions are answered. Make sure mentors know how long the meeting may run, so they can schedule accordingly.

Plan the meeting with your student

Be sure to go over the LTI set-up agenda and memo with your student before the meeting. Discuss how to take meeting notes individually or with your whole advisory. Ask the student to take notes at the meeting and be responsible for providing copies of the meeting memo to both you and the mentor. Encourage the student to take the lead in the meeting; s/he can use the agenda and memo to guide the discussion and raise questions. This can be a very effective strategy to get students to take ownership of their work and to set the tone with the mentor that the student has questions, interests, and a voice in this work.

Action

At the Meeting:

Give the mentor a Mentor Guide. Have the student introduce the topics on the agenda, and you can follow up with specific questions or important information.

• Decide upon an initial time commitment for the student, including the length of the LTI, the days of the week, and the hours. Discuss any special dress requirements, and plans for transportation and lunch.

- Discuss the process for absences and lateness. The mentor should notify the school if the student doesn't come within a half-hour of the starting time. The student has an LTI timesheet in the working portfolio. Your school will have a specific attendance process for LTI days.

- Plan out the first 2-3 weeks of the LTI. Let the mentor know that the first few weeks are a time for the student to get to know the organization, to develop questions, and to see and determine what they're interested in on-site. During this orientation, the student's specific responsibilities include completing the LTI anthropology, creating a list of questions, and writing regularly in his or her journal.

- Make sure the mentor understands that the student will create an authentic project for the LTI site. Suggest to the mentor that s/he begin to think of some ideas in the next few weeks.

- Arrange a date for the LTI project setup meeting. Usually this meeting takes place 2 or 3 weeks after the start of the LTI. You can also set up your monthly mentor meetings for the quarter.

- Exchange phone numbers, email addresses, school numbers, and fax numbers with the mentor. The Advisor Organizer, Supercalendar and Mentor Guide all have areas to write down contact information.

- Complete the mentor profile. This is a requirement before any LTI is started. Your schools will have a dedicated process for background checks. Your LTI coordinator or principal will give you details on this process.

Reflection

- Enter the new LTI into the mentor database, and share with the LTI Coordinator and your school team.
- Make sure the student has given you and the mentor a copy of the follow-up memo and has placed one in their working portfolio.
- Double check that the student has sent a thank you note to his or her new mentor.
- Ask the student to write a journal entry about the new LTI.
- Help the student prepare for the LTI and make sure that the start date is recorded in the student's Supercalendar.
- Have a one-on-one session the day before the LTI starts to talk about the student's plans, anything s/he is nervous about, and to answer any last minute questions.
- Let students know they can talk to you at any time about what is or isn't working at their LTI sites.
- Go over the LTI anthropology with your whole advisory. Ask students to share and critique each other's LTI anthropologies.
- Celebrate your new internship! Shout it from the rooftops! Make sure that students with new internships are announced at PMU, and contact families to share congratulations.

LTI Setup Meeting in One Page or Less!

What an LTI Setup Meeting Does:

Students, advisors and new mentors can all get on the same page about what the expectations of the internship experience are. This includes: behavior (attendance, lateness, dress, communication), schedule, paperwork, meeting schedule and protocols, an overview of project work expectations, and next steps.

Students should use the LTI Setup Meeting Memo to take notes during the meeting, which will be typed, copied and distributed to the mentor and advisor.

Advisors and students should review the LTI Setup Meeting Agenda, and use it to guide the meeting. The more that the student can take the lead in this meeting, the better. Advisors should have all the meeting paperwork in a packet, copied and ready to go for setup meetings. If possible, students should remain at the site for the rest of the work day- make sure you make arrangements for this with the mentor ahead of time.

A good LTI setup meeting, at the BEGINNING of an internship term can be the difference between a successful, positive and productive internship, and an internship that never gets off the ground.

STUDENTS:

Be prepared! Bring:

- Your Supercalendar
- A pen/pencil
- A street pass for the day
- The LTI Setup Memo sheet

Remember to say THANK YOU!!!
Type your memo out afterwards, and get it to the mentor and advisor before your next LTI day.

ADVISORS:
Have a prepared packet with documents that you'll leave at the site (like the timesheet and LTI policies) and documents you'll take back to the school (like Mentor Profile and safety checklist).

Get your completed Mentor Profile sheet to your LTI Coordinator as soon as you've done the LTI setup.

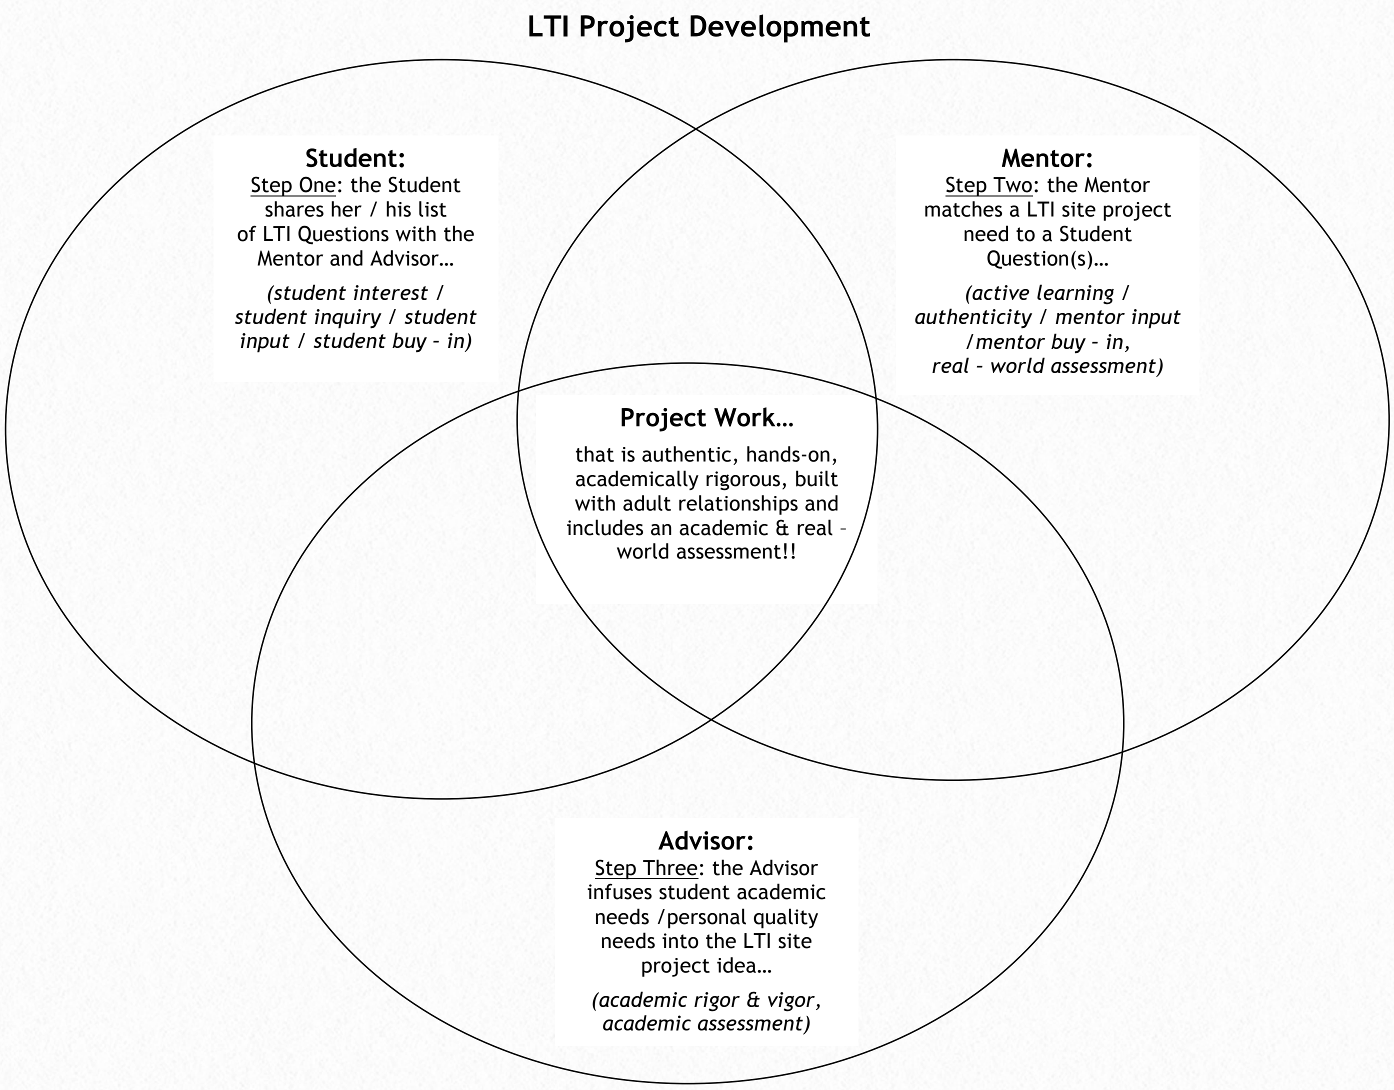
Remind students to complete the memo and get it to you and the mentor.

Good luck, and make us proud!!!

Project Setup Meeting

The definitive source for information on project work is the Advisor Guide on Projects. But we wanted to include some basic information on the project setup meeting in this guide as well, to set the tone for this work.

Two weeks after you've finished the LTI setup meeting, you'll revisit the internship site to conduct the project setup meeting. The goal of this meeting is to combine the interests and questions of the student with the needs and resources of the mentor with the academic challenges the advisor brings to the table. The following graphic illustrates what each party brings to the table.



The most important thing to remember in the Project Setup Meeting is that the student should be talking just as much as the mentor or advisor. If the project setup meeting is miss- ing student voice, the project won't be relevant to the student, and can lead to a less-than-motivated student and a less-than-stellar project.

You may need more than one meeting to fully establish the scope of the project, and all the relevant work. Later meetings should also cover the plans for quality (assessment and evaluation), looking at models for the work, and benchmarks and deadlines. You can read more about these steps in the Advisor Guide on Assessment.

We've included some materials in the Resource section of this guide to help guide your project setup work. You can also find wonderful materials on the Knowledge Exchange (www.bplknowledgeexchange.org).

Types of LTIs

Students' internships should be dictated by their interests. You may be surprised by their in- terests! We've included a full list of LTIs from the MET Center in Providence here, and we've also created a list of common interests to help you in thinking through some of the partner- ships and outreach you'll want to do in advance of your students beginning their LTI process. It's always helpful if you can build relationships with organizations like hospitals, child care centers, veterinary programs, or other large organizations before your students start calling for informational interviews. Your LTI coordinator may take the lead on relationship-build- ing with prospective internship partners.

LTI Documents

Each school has a process to follow in order for students to be in a Real World Learning experience off-site. These processes often include paperwork that the student and advisor need to keep track of, as well as background checks and other paperwork required by the school or district.

Be sure to check with your principal and Real World Learning coordinator to determine what the process is for students in your school. A sample list is printed below, with the materials on the following pages:

Learning Through Internship Documents

- Informational Interview Questions / Responses – Student generates questions and writes mentors' responses
- LTI / LTV Site / Date of Visits
- Shadow Day Agreement Form – Advisor emails or faxes to business prior to Job Shadow
- Shadow Day Anthropology – Student completes
- LTI Anthropology – Student completes
- LTI Policy— School-generated
- LTI Setup Meeting Agenda and Memo— Student completes
- LTI Questions— Student completes
- Mentor Profile— Mentor completes
- Application/Transportation/ Medical Form – Included in application packet prior to enrollment and copy taken to LTI set up meeting
- LTI Health and Safety Checklist – Advisor/mentor completes
- Monthly Time Sheet – Student / Mentor
- Mentor LTI Assessment – Advisor / Mentor
  We've also included samples of all of these materials, in the section to follow.

Shadow Day Cover Letter

Dear Shadow Day Host,

By taking part in a student's Shadow Day, you are taking part in important work to improve high school education. We sincerely appreciate your willingness to participate.
Please complete the attached form and return it as soon as possible. Fax it to the number on the form or mail it. Details about the Shadow Day are provided on the form but don't hesitate to call with questions.

PURPOSE OF THE SHADOW DAY
Each student has requested a shadow site based on a personal interest. By being with an adult who has the same interest, someone who knows a good deal about it, the student has the opportunity to experience learning in a meaningful way.
Students will arrive at the shadow site prepared with questions or ideas of what they'd like to learn that day. If you've never hosted a student before, you may find the following suggestions to be helpful guides.

SUGGESTIONS FOR HOSTS:

- Provide a tour of your workplace and describe the main purpose of what goes on there.
- Share the personal side of how you developed your interest, or why you chose the work you do, and why it's important to you.
- Demonstrate as much of your work as you can, rather then just talk about it.
- Share what it is you do to keep up to date in your field.
- If you're in an organization with more people, let the student know how your work fits in with others in your organization, what role it plays in the overall organization, and what other roles are needed to make your work successful.
- Don't be afraid to show them the fun side–laughing with them is a great way to break the ice.

Your day with the student is important to his or her education, to be sure. But we also think that given your mutual interest, the day will be enjoyable and rewarding for both of you. We look forward to hearing about it from both you and the student. If you have any questions, please feel free to call me.

Sincerely,

Advisor Phone/Fax/E-mail

Shadow Day Agreement

Students request a Shadow Day based on personal interests. The Host agrees to have a student "shadow" all his or her activities in the regular course of a work day, sharing information about the Host's own work as well as the overall work of the organization.

The school is responsible for the student's transportation to and from the Shadow Day site. If possible, the Host site provides lunch for the student, on site, or within walking distance.

The signing of this Agreement indicates the Host understands and agrees to take part in the Shadow Day as described above.

Student (print name)

Follow-up Question	*Follow-up Question*	*Follow-up Question*

Things to look for on your Shadow Day

4. *What is the work area like? Why do you think it's set up this way?*

5. *How do people dress for work in this organization?*

6. *How happy do people seem with their jobs?*

shadow day anthropology (continued)

student form

7. *What is your sense of the work atmosphere? Is it warm? Cold? Friendly? Very serious? Messy? Organized? Casual? Humorous? What do you see that gives you this impression?*

8. *How diverse is the organization in terms of gender, age, and race? How does that suit you?*

9. *How did you feel in this place? What reactions did you have? Does it remind you of anything else you've experienced? Make some comparisons.*

10. *Can you picture yourself doing an LTI there? If so, describe why, and include the kinds of things you can imagine yourself doing. If not, describe why it seems unsuitable for you.*

These questions will help you understand your LTI workplace. Ask your mentor to help you answer these questions. Also ask your mentor who else you can speak with at the organization. Answering these questions will help you sharpen your observation skills and help you better understand your interest. Write a 1-3 page summary of your LTI workplace. You may use the questions below or create questions of your own.

PART 1: OVERVIEW

1. *What is the main purpose of this organization/business/workplace?*

2. *What different kinds of jobs go on here?*

3. *Who are the customers or clients, or who is served by the work of this organization?*

4. *How many people work here? Are they diverse by gender? Race? Age?*

5. *What is it like for people who work here?*
   When do people arrive and when do they leave?
   How long is lunch?
   Is there a dress code?
   In what kind of spaces do people work?

over

LTI anthropology (continued)

student form

PART 2: STRUCTURE

6. *Is this organization broken down into departments? If so, how does the work connect?*

7. *If there are different parts of the organization, what are the ways they use to communicate with each other?*

8. *How are decisions made in your part of the organization?*

9. *Which part of the organization do you find most interesting? Why?*

10. *What kinds of jobs could you see yourself doing in this organization?*

PART 3: ASSESSMENT

11. *How is work evaluated at your LTI?*

12. *Do co-workers critique or review each other's work? How is this done?*

13. *Do people seem to have high standards for their work? How can you tell?*

14. *What are 3 to 5 skills or personal qualities that seem to be important for all employees in order for them to do quality work and receive a good evaluation?*

15. *What skills and personal qualities are important for you to work on in the next few months?*

LTI Policy

LTI POLICY SAMPLE

Mentor Expectations:

- Learning Through Internships (LTI's) are expected to run 12 or more hours per week (at least 6 hours a day, unless schedule does not permit)
- Give students exposure to the rigor and routines of the career
- LTI's take place on Tuesdays and Thursdays, during the work/school day
- LTI's must result in a completed project, developed collaboratively by the student, mentor and advisor
- LTI's are expected to last a minimum of three months
- All internships must have an established start and end time
- Maintain open communication with the student, the advisor and the school
- Time should be allotted each day for the student to work on the LTI project

LTI Student Expectations:

- All students must arrive to their internship at least 15 minutes prior to the designated start time
- All internships end at 3:00 PM or later
- Students are expected to check in with their advisor at el Centro, or via phone, at 8:30
- Students are expected to check in with their advisor, as soon as they arrive at their internship
- Students are expected to remain at their LTI throughout the scheduled hours (deter- mined collectively by the Student, Family, Mentor & Advisor)
- Students may leave the premises of the internship for no more than an hour to eat lunch (students must arrange this with the mentor & must sign in and out for lunch)
- Students may not arrange for time off from the LTI to complete other academic assignments
- Students may remain at the el Centro campus on Tuesdays and Thursdays ONLY if the mentor is absent
- Students are expected to dress appropriately for their internships (determined by mentor, students & advisor)

- Students must get approval from their advisor prior to visiting a site
- Student must consult their advisor and have a successful Shadow Day prior to establishing an internship
- Students are expected to complete LTI projects that satisfy all the Learning Goals
- Students may receive transportation passes from their school, as well as a street pass, in order to attend their LTI's, which will be coordinated between student and advisor
- Students must maintain an LTI Vocabulary Log and a daily LTI journal
- Students must take notes on all meetings and provide typed meeting memos to advisor and mentor within 48 hours of the meeting

Advisor Expectations:

- Advisors are expected every week to keep track of all LTI data
- All potential LTI contacts are to be recorded
- Advisors are expected to keep in close communication with each student's LTI site:
    - ✳ Advisors are expected to visit each LTI site and check in with the Mentor & Student face-to-face a minimum of once a month
    - ✳ Advisors are expected to call and check in and/or email each mentor each week that the mentor is not being visited
- Advisors are expected to make sure that the appropriate materials for the background check are collected from each potential mentor (if applicable)
- Advisors are expected to closely monitor and support each student's LTI search/LTI process
- Advisors are expected to facilitate each student's LTI Setup Meeting and Project Setup Meeting

LTI Setup Meeting Agenda

LTI Set-Up Meeting

Pre-Meeting Agenda:

- Advisors have a discussion with her / his student:
  - ✳ Make sure the student is following her / his passion and not just trying to get an LTI
  - ✳ Introduce the LTI Set-Up meeting Memo. It is the student's responsibility to:
    - ✦ Take notes using the Memo template as a guide
    - ✦ Type up the notes and give a copy to you, the advisor, the mentor and Family
- Review the LTI Set-Up meeting Agenda
- Discuss any possible agenda pieces the student could take ownership of and decide when in the Meeting that may happen
- Advisors get materials to bring to the Meeting
  - ✳ Business card with school website address
  - ✳ Mentor Guide (get this from LTI Coordinator)
- Monthly timesheet for site
- School Policy sheet
  - ✳ School Publications, including newsletter, articles in local papers, flyers, etc.
  - ✳ School Calendar
  - ✳ Your Calendar and the Student should have her / his Supercalendar/Planner
  - ✳ Questions worksheet for student

Meeting Agenda:

- Introductions
- Tour of the LTI Site (? – depends on mentor's time availability)
- Ask mentor if he / she has any questions before the meeting gets underway
- Explanation of the Student's responsibility during the Meeting (LTI Memo)

- Discussion of the "Basic" Logistics:
  - ✳ Share Contact Information
  - ✳ Discuss LTI Schedule (Hours). Student must have 12 hours over the two days/week..
  - ✳ Attendance Plan
- Emphasize the Importance of helping the student respect time commitments - Point out the Time Sheet in the Mentor Guide as a possible tool
- Ask the Mentor to call when a student does not show up

- Explain that if the student is unable to attend, s/he is responsible for calling both the Advisor and Mentor
  - ✳ Transportation Plan
  - ✳ Dress Code
  - ✳ Lunch Plan
- Discussion of the next two weeks
  - ✳ Student will continue to observe / help
  - ✳ Student will be writing a long list of questions about the work / LTI site (this will assist in the project development)
  - ✳ Student will be journaling every Tuesday and Thursday
  - ✳ Mentor can be thinking of work / projects for the student (Invite the Mentor to gaze through the Mentor Guide OR school website to become more familiar w/ the school and the Internship process)
- Discussion of the Project Set-Up Meeting
  - ✳ Goal: Create project(s) for the student that combines interests / questions of the student and needs of the Mentor / LTI Site
  - ✳ Explain that you, the Advisor, will be a facilitator, and that the best projects are created when the Student and Mentor engage and combine each of their needs
  - ✳ Student brings: Supercalendar, list of questions, LTI Journal
  - ✳ Explain that you, the Advisor, will be supporting the Mentor throughout the
- LTI process:
- You will visit the LTI once a month (for at least an hour a visit)
- You will call and check-in with the Mentor on the weeks you are not visiting
- You are always available by phone and / or email if the Mentor has questions
- Calendar
  - ✳ Date the Memo will be Due
  - ✳ Time(s) when Mentor and Student might have regular Check-Ins o Date of the Project Set-Up meeting
  - ✳ Date of the Student's Exhibition
- The Mentor Profile
- Explain that according to the law a Background Check is needed for each Mentor
- Mentors need to:
- Fill out the mentor Profile Sheet, provide SSN# and current address
- Make a copy of her / his Driver's License
- Questions & Answers (Make sure you allow enough time for this!)

- Ask (and record) the Mentor why s/he decided to be a mentor. Ask (and record) why the Student chose this LTI site.
- Quick picture(s) of student and mentor

Post – Meeting Agenda:

- Debrief w/ Student
  - ✳ These are wonderful discussions! Lots of feelings - insights come up.
- Student responsibilities:
  - ✳ Type LTI memo
  - ✳ Write Thank You Letter
  - ✳ Write a Journal Entry

How?, What?, When?, Where?, Who?, Why? – Your LTI Questions

Beginning the very moment your Advisor says to you, "Congratulations, you have an LTI," and your brain begins swirling and whirling with ideas, plans and thoughts, write down all and every question that comes to your mind about your LTI. These questions that are yours and yours alone, these gems, will become foundations for projects and still more questions. Don't hold back and most of all, HAVE FUN!

Mentor Profile

Mentor's Name	Mentor's Work Title		
Workplace	**City**	**State**	**Zip**
Workplace Address	**Workplace Phone**		
Fax	**Email**		

For our students' safety and well being, the school submits all Mentor Profiles to the authorities for background checks. A date of birth, Social Security number, and copy of a photo ID (preferably Driver's License) are required to conduct the check.

- **Mentors who don't want to supply their Social Security number may request their own police check and submit a copy that is no more than 1 year old.**
- **Mentors whose employers have conducted a background check may submit a copy that is no more than 1 year old.**
- **The school must do police checks regularly. Returning mentors must be processed once a year.**

Students do not begin an LTI until the police check has been cleared. Start dates can be targeted and the mentor will be notified as soon as the process is complete and the LTI can begin. Your signature below indicates your agreement to conduct a police check.

Mentor signature	Date	
Please print your name	**Date of birth**	**Social Security #**

Please return this form directly to your intern's advisor. LTIs cannot begin until the police checks are completed.

Intern	Advisor	Targeted LTI Start Date

The school respects the rights of all individuals. The information provided here, as well as all information obtained in the process of the police check, is considered confidential and will not be shared with anyone other than the processing and decision making agents at the school. A copy of the Police Check Procedures for Mentor Profiles is available on request.

Transportation permission form

Dear Parent/Guardian;

As you know, each student's personal learning program is built upon real work – in business, in a craft or trade, in government or social service, in student-run business, and on community projects. Students move outside of the school into the "real world" and learn by doing hands-on work through shadow days and internships.

Workplace sites and mentors are pre-screened by school staff. Students may be in an internship at a worksite for several hours a week. The student establishes a schedule with the help of both the advisor and the mentor. The student's activities are both directed by and incorporated into the student's Learning Plan, which is developed in collaboration with you, the parent or guardian. While neither the advisor nor other school personnel are present with the student at these sites, the advisor is actively involved through direct contact with the mentor and through regularly scheduled visits to the site. The advisor guides and supports the worksite activities for the student, given his or her Learning Plan.

On internship days, students may go from school to an office or workshop or hospital or government agency and back again. There may be some days they go straight to a workplace before coming to school. To get to these sites, they may walk or travel in personal vehicles or via public transportation. This is different than traditional school settings where, during the school day, students stay within the school grounds or travel only on planned field trips.

To affect this kind of education, the school has purchased student accident insurance for injury that may occur when a student is not at the school but is in school-related activities. This insurance, however, cannot cover transportation. Parental/guardian agreement is required to accommodate transportation needs. Please read this form which indicates you understand the transportation requirements, then sign and send it back to the school with your student.

If you have any questions, you can call the school and ask to speak with the LTI coordinator. We'll do our best to answer your questions.

I have read the above explanation and understand that my child, ____________________________

(Student's First and Last Name)

will be involved in off-site activities while enrolled at a Big Picture School and I give permission for her or him to participate in these individual and group activities, as required.

Parent/Guardian (Print name) Parent/Guardian's Signature Date

LTI Health and Safety Checklist

Please indicate areas that student should receive specific safety training, instruction or direction. Student, Mentor and Advisor should sign when indicated information or trainings have been provided.

❑ **Emergency Procedures** ▪ Exits and Escape Plans ▪ Fire Extinguishers ▪ Other Emergency Equipment ▪ In Case of Accident	❑ **Protective Clothing and Equipment** ▪ Eye Protection ▪ Other Personal Protective Equipment ▪ Proper Clothing for the Job ▪ Protection from Heat and Cold
❑ **Physical Demands** ▪ Lifting, Carrying, and Bending ▪ Reaching Above Shoulders ▪ Protection from Falls ▪ Sitting or Standing for Long Periods	❑ **Tools and Equipment** ▪ Ladders and Stepladders ▪ Hand and Power Tools ▪ Cooking and Restaurant Equipment
❑ **Office Hazards** ▪ Computers and Word Processing ▪ Telephones ▪ Paper Cutter, Paper Shredders and Copiers	❑ **Electrical Safety** ▪ In Offices ▪ Working with Electrical Equipment
❑ **Hazardous Materials** ▪ Flammable and Combustible Materials ▪ Cleaning Agents and other Chemicals ▪ Blood and Body Fluids	❑ Other Hazards ▪ Working with the Public ▪ Motor Vehicle Safety ▪ Organization Specific Hazards

I have discussed the safety issues checked off on the following checklist with my mentor and have initialed each item we covered. I understand my responsibility to demonstrate safe work habits.

Mentor's LTI Assessment

Mentors play a key role in the education and development of a Big Picture student. This assessment documents the mentor's perspective on the intern's experience at the LTI. This form should be completed before the exit meeting at the end of the internship, so it can be reviewed and discussed with the student and advisor. The completed assessment will become part of the student's portfolio and portions may be included in the student's narrative or exhibition.

Mentor's Name	**Date**	
LTI site	**Advisor**	**Student**

Have you mentored a student at a Big Picture school before? *Yes* *No*

# of times ________

What were the highlights of your intern's work at the LTI?

____

____

What areas would you suggest the intern continue to work on?

____

____

Please answer the following questions about your intern this year:	*Very Much So*	*Satisfactory*	*Not at All*
1. My intern demonstrated a good overall work ethic at the LTI.	________	________	________
2. My intern had good attendance and was punctual.	________	________	________
3. My intern improved in interpersonal skills.	________	________	________
4. My intern contributed work of real value to this site.	________	________	________
5. My intern's project was good enough to use at this LTI site.	________	________	________
6. My intern demonstrated good project management skills, was organized and met deadlines.	________	________	________
7. My intern was able to pursue his/her passion through the LTI work.	________	________	________

Mentor's LTI Assessment (continued)

Please briefly describe your intern's LTI project:

___

___

Additional Comments:

___

___

I would like to be called again to be a Big Picture mentor *Yes* ________ *No* ________

If Yes, would you prefer: *Same Student* ________ *Different Student* ________ *Any Student* ________

If No, we would appreciate knowing your reason:

___

___

___

I understand my feedback may be included in the student's quarterly report and portfolio.

___

Mentor Signature **Date**

Advisors are always working to improve their communication with interns and mentors. Please take a moment to give us some feedback on the frequency and quality of our communication.

	Very Much So	Satisfactory	Not at All
1. You had enough contact with the advisor.	________	________	________
2. The advisor communicated what the mentor's role is clearly.	________	________	________
3. The advisor supported the student's LTI work.	________	________	________

Additional Comments or Suggestions for the advisor:

___

___

___

LTI Reflection

The student should reflect on the project throughout the quarter. The mentor, advisor, parents and peers can all help the student assess the project. The student can reflect on the project by writing journal entries, writing a project documentation paper, presenting the project at an exhibition and sharing reflections with the panel, and by discussing the process in his or her personal narrative.

Journal:

- Ask the student to write each week about the process of doing the LTI project. (what have they enjoyed, what have they learned, where are they finding obstacles, etc.).
- Share great journal entries with the class (after getting permission from the student).
- Ask the students to write about new things they've learned and experienced as well as what their progress is on the project.
  There are journal reflection prompts included in this guide.

LTI Project Documentation Paper:
This paper is a way for the student to formally share his or her investigation, product and process around the LTI project. This paper usually discusses the answers to the framing questions, describes the products, and assesses the project outcomes. Many students will need strong guidance about how to investigate their framing questions and write a paper (see student guide in this section).

- Establish and go over the paper guidelines with your advisory.
- Establish a paper length that makes sense for the student and project.
- Review research techniques in advisory.
- Help students understand that they will do several drafts.
- Have students critique and edit each other's papers.
- Share models of excellent papers with your students.

Exhibition:
The student will reflect on the process at his or her exhibition. If the project is not yet complete, the student will show documentation and reflect on the experience so far. There is a great deal of information on exhibitions in the Advisor Guide on Assessment.

- Ask students to do a practice exhibition in advisory.
- Have students organize their working portfolios in advisory to prepare for their exhibition.
- Make sure the mentor and parent/guardian can attend the exhibition. It sometimes makes sense to have the exhibition at the LTI site rather than at the school.

Personal Narratives:

The student will write about the project in an end of the quarter in his or her personal narrative (see the Advisor Guide on Assessment).

Narratives (written by the advisor):

- The narrative should talk about the process as well as the finished product.
- Review the notes you took at mentor meetings and student check-ins before you write this section.
- Ask the mentor to comment on the project work and include quotes from the mentor in the narrative as well.
  There is more information on advisor narratives in the Advisor Guide on Assessment.

Deciding Whether to Continue or End an LTI
As a project nears the end, the student, advisor and mentor decide together whether to continue the LTI after the project is done. The length of each LTI varies; one student may have two LTIs in a year, while another student may work with the same mentor for three years. It depends on the interests and needs of the student and mentor. Before a student leaves an LTI, s/he should line up another LTI opportunity so there isn't a lengthy transition.

Ending an LTI
When an LTI ends, it is important to have an exit interview with the student, mentor and ad- visor. Ask the mentor to fill out a mentor assessment form and have the student send a thank you note to the mentor.
If it is the end of the project or the school year, check-in with the student and mentor to see if they want to continue with this LTI.

Exit Interview
If the LTI is ending, hold an exit interview. Make sure the student is present at the exit inter- view. The goal is for the student and mentor to share their thoughts about the LTI. The advisor should also con-tribute to the discussion based on his or her own observations and experience with the process. There are materials around the Exit Interview in the Supporting Mentors section of this guide.
Mentor Assessment

Ask the mentor to fill out a copy of the mentor assessment at the end of each year, or at the end of the LTI. There is a copy of the mentor assessment form in this guide, as well as in the Mentor Guide. This is a great way to get feedback for you and the student as well as a way to collect important data for the school. You can use the mentor's comments when you write the student's narrative as well.

Documenting Learning

A student gains new skills and knowledge at an internship with his/her mentor. Some of this learning will be connected to project work, and some of it will be connected to the day-to- day experience of the work site. Project work is generally documented in the Learning Plan, Personal and Advisor Narratives, and through exhibitions. You can learn more about these processes in the Advisor Guides on Learning Plans and Assessment.

As we connect internship experiences with 21st Century skills and Common Core Standards, it's important to look holistically at the LTI experience, and all the different ways our students are developing skills and knowledge, and learning to apply those skills and knowledge.

This checklist can help to illuminate some of the learning that often is "undocumented" in the LTI experience. It should NOT be considered a comprehensive list of a student's undocumented learning. We encourage students, mentors, and advisors to check any of the objectives listed below and add any learning specific to your field. You can use a checklist like this to record student learning, and students can use this information to chart their own growth, and for a reference for resumes or other professional materials. This information can also be employed on a school level, to examine and monitor outcomes connected with your RWL program.

Documenting Learning Checklists

Communication

Oral

[ ] Phone communication (use of professional language, appropriate

[ ] Contribution to meetings, professional conversations

[ ] Professional language

[ ] Content specific vocabulary

[ ] Communicating with mentor and advisor regarding projects and progress

LTI Journal Prompts

These materials were created by New York's Bronx Guild High School, as part of a comprehensive guide to RWL. You can find the entire set of materials on the Knowledge Exchange (www.bplknowledgeexchange.org).

Real World Learning Experience Journal
Each week you will write 2 entries. One will be assigned each week, and the other you will choose from the bank of prompts at the bottom. You will be expected to bring this journal to your advisor every 2 weeks for review.

PART 1: RESPOND COMPLETELY TO EACH PROMPT. GIVE AS MUCH DETAIL AS YOU CAN (EACH ENTRY SHOULD BE OVER A PAGE LONG). DATE EACH ENTRY.

WEEK 1: Write a list of the things you did at your LTI this week. What tools did you use? (Computers, Photoshop, databases, screwdriver, telephones, etc.) What did you learn from these activities? How did you learn from these activities? How did you come to learn this? (What I did/ What I learned/ How I came to learn?) Who did you work with?

WEEK 2: Summarize something you read at your LTI this week. Include the title, author, where you found it, and why you read it. BRING JOURNAL IN TO BE CHECKED BY YOUR ADVISOR.

WEEK 3: What new vocabulary did you learn at your LTI this week? Write the new words and definitions of these words.

WEEK 4: What are some problems at/ ways to improve your LTI site? Why are they problems? Brainstorm possible solutions to these problems. BRING JOURNAL IN TO BE CHECKED BY YOUR ADVISOR.

WEEK 5: LTI projects are meant to 1. Increase your knowledge and skills (check your Performance Expectations) and 2. Benefit the apprenticeship site. What is your project (or what are your ideas for a project), how will they help meet your performance expectations and how will they help your site?

WEEK 6: Brainstorm the steps necessary to complete your LTI project. Then put them in order. For each step, what resources or help will you need to be able to complete the project? Assign a deadline for each part of the project and write them in your Supercalendar. BRING JOURNAL IN TO BE CHECKED BY YOUR ADVISOR.

WEEK 7: This week a problem I encountered at my LTI (or in my project) was _________________ and some of the solutions I tried were ___________. The solution that worked the best was because... (Or nothing I tried worked because...)

WEEK 8: Reflect on your LTI project progress. Have you met the deadlines set in Week 5? Why or why not? What do you need from your mentor/ advisor to continue to make progress? BRING JOURNAL IN TO BE CHECKED BY YOUR ADVISOR.

WEEK 9: Now that you've been there for 2 months, what do you still wish you knew? How can you get more from your apprenticeship? What do you need to learn more about to function better at your apprenticeship? What personal skills do you think you most need to work on? (Promptness, asking more questions, adult relationships, organization, responsibility, cooperation, etc.

PART 2: PROMPT BANK- CHOOSE ONE EACH WEEK. RESPOND TO EACH PROMPT ONLY ONCE, AND IN DETAIL. EACH ENTRY SHOULD BE AT LEAST 1 PAGE LONG. DATE EACH ENTRY.

Write about what you did this week at your LTI and how you can use it in the future. Describe the good, the bad, and the ugly of this week for you.

What are some problems at your LTI site? Why are they problems? Brainstorm possible solutions to these problems.

On a scale of one to ten, this week was a _____ because...

What do you like about your mentor? How do they help you?

What numerical information can I collect about my LTI? How can I represent this as a formula or diagram?

What has other research shown about my LTI project topic? Who are the main people thinking about this topic?

What can I read about my LTI/ LTI project topic? Do the research and list relevant books, articles, and sites.

What are other people's perspectives on this? How do certain communities (local, national, young, old, etc.) view the issue my project/ LTI is based on? How did they view it in the past? What are the ethical questions around my project?

Describe "a day in the life of you" at your internship. What time do you get there? What is the first thing you do when you walk in the door? What is your work like? What time do you eat lunch? Who do you eat with? How late do you work? What is your work after lunch like?

What did I bring to this process (the LTI and project this week)? How well did I do? Did I demonstrate (responsibility, respect, perseverance, organization, empathy, honesty, coop- eration, leadership, self-awareness)?

Can you see yourself working in a place like your LTI in your adult life? Why or why not?

What are the skills necessary to complete your internship well? What are the steps neces- sary to become what your mentor is? What education will you need? What job experi- ences will you need? What do you need to be good at?

Would you recommend this internship site/ mentor to another student? Why or why not? How specifically have you benefited from your specific site?

3

Mentor support

Mentor support

Part of setting up a real world learning experience is supporting the mentor. Each school should have a process for orienting the mentors to their new role. The Mentor Guide is an excellent resource, and you may also develop materials that are unique to your school.

Think about what you would want to know if you were a mentor, just starting out in this new relationship with a student you barely know. What questions would you have about how the whole internship process works? What would you want to know about your responsibilities in working with this young person? What would you want to know about project work?

A great tool for helping mentors adjust to this new role is a list of Frequently Asked Questions for mentors. Of course, this information will be school-specific, but this model can help to think through the questions and answers you'll want to share with your mentors.

Mentor FAQ

Are students insured through the school?
Big Picture schools carry liability and accident insurance that covers students at LTI sites. Copies of the school insurance policy are available from the school office.

How will the students get to the LTI site?
It is the responsibility of the intern to get to and from the workplace. The school can provide bus tokens and has a fleet of vans prepared to help students with transportation if needed.

Can the student be a passenger in the car with me?
Arrangements are made for each situation. If in the course of the work it is necessary for the intern to travel with the mentor, the parent/guardian will need to sign a permission letter.

What if the intern is consistently late or acts/dresses unprofessionally?
Interns are at their LTI for real world learning. Treat the student like an employee, but realize that they are teenagers. In the beginning of the internship, set the standard you or your company expects. If during the LTI the student deviates from that standard, address it with the student, and feel free to contact their advisor or LTI coordinator to discuss the situation. If the situation is not rectified promptly, hold the student accountable as you would an employee.

What are my responsibilities as a mentor?
Each mentor should demonstrate a commitment to the student's personal growth and workplace learning. Important responsibilities of a mentor include: Communication (with the student and with the advisor), Collaboration (attending exhibitions and mentor trainings), and Organization (planning a schedule with the intern, sharing resources and other skills).

How much of a time commitment am I making?
Big Picture schools ask that you host the intern for a minimum of three months. At the end of three months, the advisor and mentor re-evaluate the internship and either decide to wrap up the experience or to continue. Some interns stay at their internship for a whole year, some several months, and some several years. Each is a case by case situation, depending on the continued interest of both the student and mentor as well as the continued educational rigor.

What resources will be available to me?
The school community supports mentors in any way we can. As a mentor, you will receive a mentor guide and have the chance to attend a mentor orientation and a winter workshop. In addition to the student's advisor being your point person, the LTI coordinator, LTI central office, and the student's principal are all available to help.

What if I am out of the office?
There may be times when you are out of the office. If you should know this in advance, please let the student and advisor know. The three of you can decide what will be the best course of action. It would be a good idea to have another point person at your office available to help if needed.

Can I pay the student?
No. Our curriculum is designed so that the experience of the LTI is an integral part of the student's educational journey.

Can I have more than one intern?
Yes. You can definitely have more than one intern. However, before taking on this task, please be reminded that being a mentor is more than just supervising. As a mentor, you are responsible for giving feedback to the student and the advisor as well as providing opportunities for the student to have a hands-on education.

It is also really important to the mentor/advisor relationship that the mentor knows who to call when they have questions. A sample checklist is listed below – use this to create your own resource for the mentors you work with

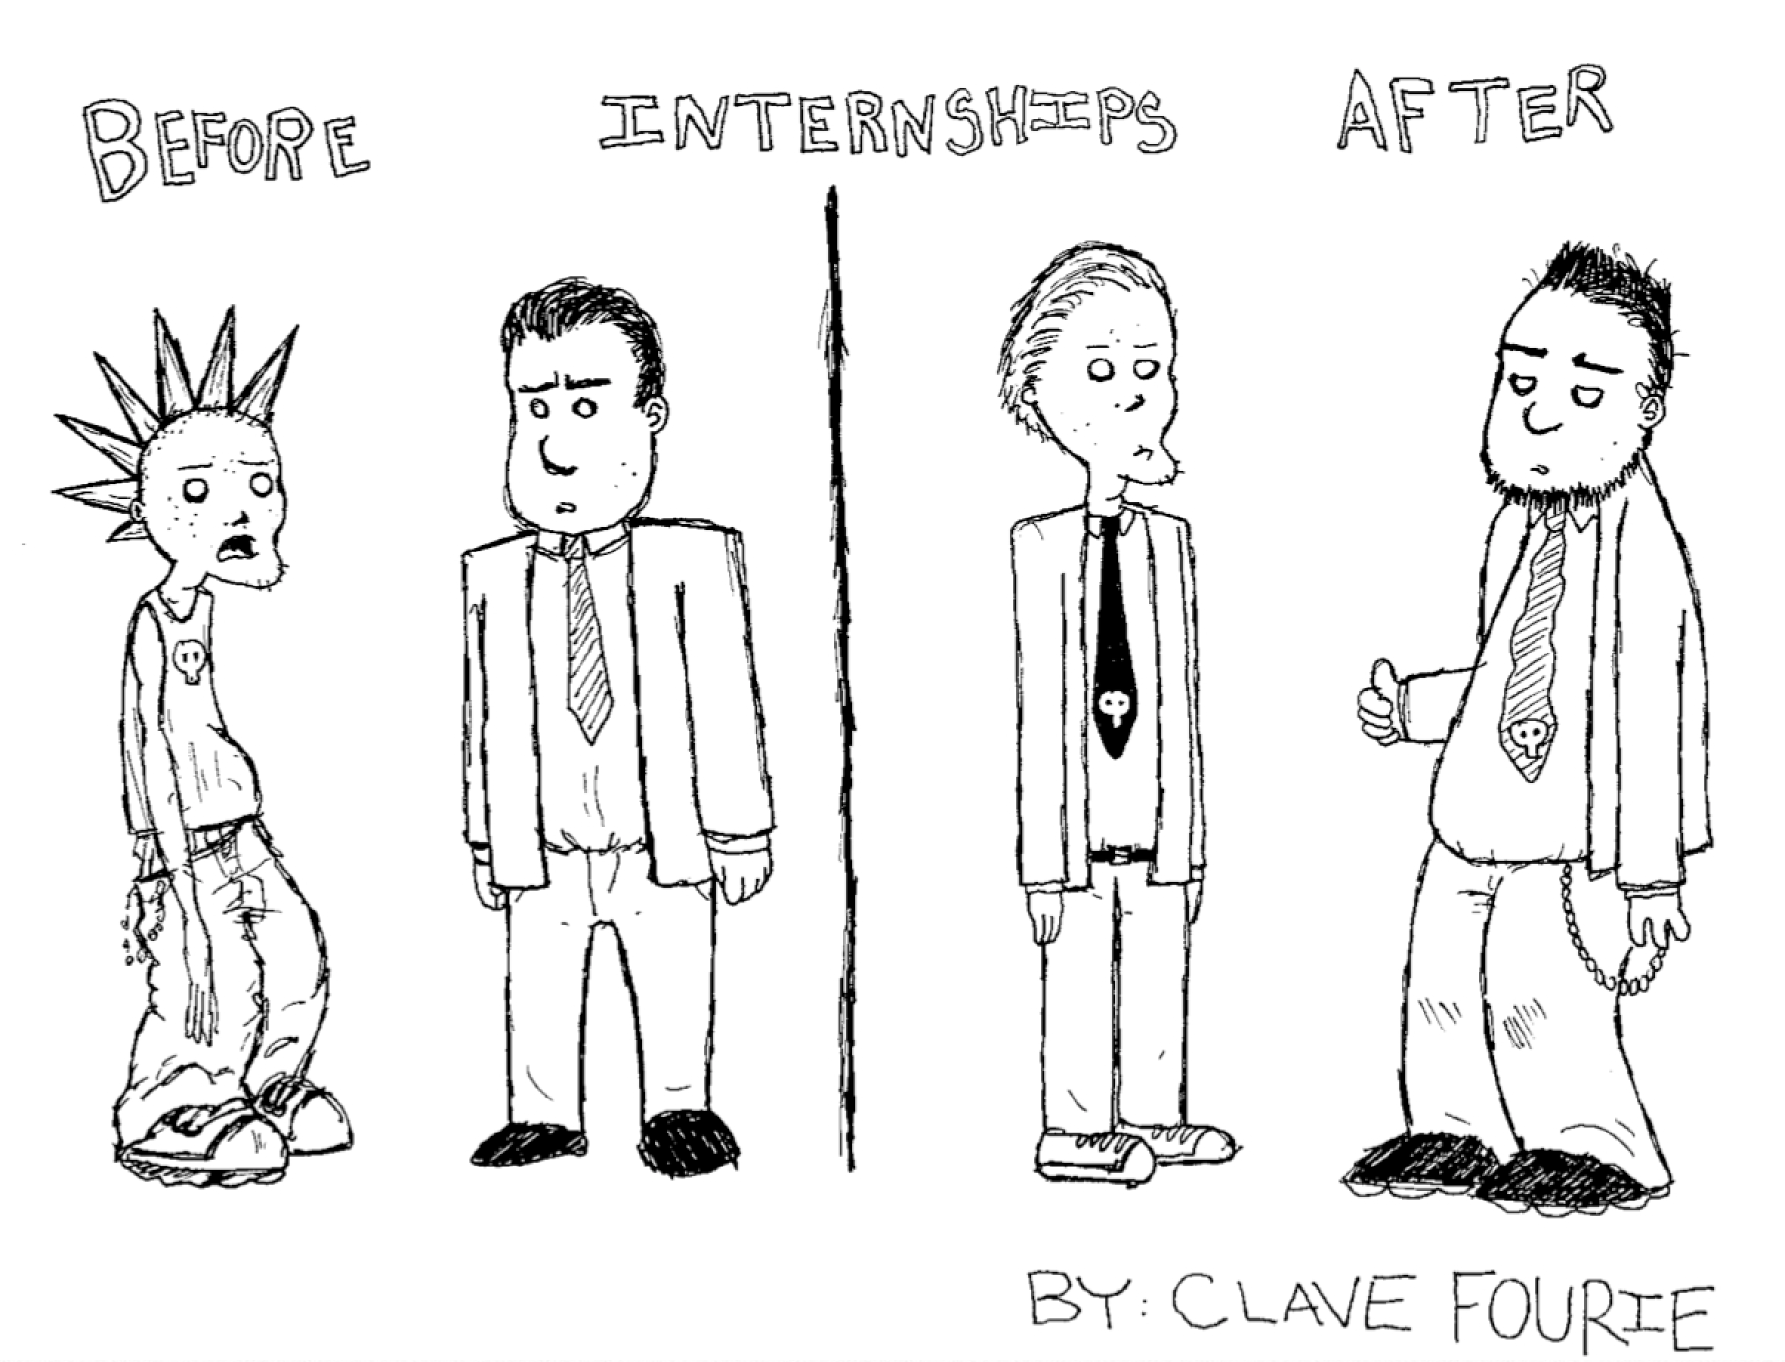
LTI: Who Do I Call?

	Advisor	Student	LTIC
Who should I contact if the student doesn't show up for internship?	X		X
Who should I contact if I can't get in touch with the advisor?			X
Who should I talk about student's use of downtime?	X	X	
Who should I talk to about professionalism issues (dress, language, etc.)	X	X	X
Who should I talk to if my intern asks me to buy him/her lunch?	X	X	
Who should I talk to if my intern isn't completing tasks?	X	X	X
Who can I share positive stories about my intern with?	X	X	X
Who should I speak to when my intern completes his/her project?	X	X	
Contact info: (phone and email)	Joe Advisor 212-212-2121 joeadvisor@gmail.com	Jane Student 917-333-4444 Janestudent@gmail.com	Bonnie LTIC 222-777-8888 ext 123 BonnieLTIC@gmail.com

Your school leadership will have some specific plans for training, communicating with, and celebrating your mentors. As an advisor, you should have a solid plan for how you will stay in touch with your mentors, and how you'll make sure you're keeping up with each student's experiences at their internship. We recommend weekly contact with mentors (via phone or email), and face-to-face contact at least once a month. Most of our advisors develop a regular rotation for their internship visits, and confirm all visits with mentors ahead of time. It's ideal if you can also confirm the reason for the visit (checking in on project work, tackling a specific challenge, doing an assessment of student work, etc.).

Remember that mentors are your best friends! Not only are they giving their valuable time to your students' development, but they also often become advocates for students, help them with job search- ing, college application recommendations, and come to their exhibitions and other school events. Maintaining a strong relationship with mentors is of utmost importance. Visit, call and email often!

If everything is progressing as it should, you'll see your mentors and students forming strong bonds. They may even start to look alike, talk alike and have "inside jokes"!



10 Best Practices for Strong Mentor Relationships

1. Use a spreadsheet or calendar to track your interactions with mentors. Keep notes on when you call, email and stop in. Make sure that you are connecting with the mentor by email or phone for each week that you are not stopping in.

2. Use an agenda for LTI set-up meetings. When you first meet with the mentor, do not try to explain too much at once. Focus on the main objectives: what to expect for the next two weeks before a project set-up meeting, and what each team member's responsibilities and needs are.

3. Use the information in the Advisor Guide on Projects for the project set-up meeting. Work with your student before the meeting to make sure that s/he is ready with questions and ideas. Bring a copy of the stu- dent's learning plan and brief written explanations of the Learning Goals.

4. It is often helpful to have sample LTI projects that the student has done to show the mentor what type of depth to build toward. If this particular student hasn't done an LTI project before, use another student's project. This can help to illustrate how the learning goals connect with the project work, as well as what type of learning occurred through the creation of the project and how it benefited the LTI site.

5. Have your student create a meeting memo each time you meet—this will help to document the meet- ing, and also help with listening comprehension. Have the student work with you ahead of time to develop an agenda for the meeting, so that they can take the lead on facilitating your conversations. It will show the mentor (and the student!) from the beginning that the student should be an active participant in all decisions made around the internship.

6. As soon as the project timeline is created, make sure that the mentor gets a copy, and that there are clear check-ins scheduled with the student and mentor. This insures that the mentor is continuously involved in the project, and that the student will be more motivated to hit deadlines.

7. Make yourself a list of things that you should check on each time you're at the internship: sign-in sheet, project timeline, student-mentor dynamics, vocabulary list, etc. Whatever is important for this particular stu- dent. If you make an effort to be consistent in your expectations and practices, the mentor is more likely to do this as well.

8. Invite mentors to school functions as well as exhibitions. It's a good idea to send an invitation through email, as well as to call and invite them, or do so face-to-face.

9. Keep yourself organized with an LTI binder. You can keep all sorts of extra paperwork on-hand, as well as materials specific to each individual student (project proposals, timelines, notes from prior meetings). This will assure that you have everything you need for each LTI visit, and even unforeseen eventualities!

10. Finish strong! Every internship must eventually come to an end. But that doesn't mean the mentor's relationship to the school should come to an end! Make sure you do exit interviews with students and mentors at the termination of an internship, and mentors should also receive an LTI Assessment, as well. Make sure that the mentor's preference for taking a new intern is noted in school LTI records.

4

RWL Exit Interview Materials

Deciding Whether to Continue or End an LTI

As a project nears the end, the student, advisor and mentor decide together whether to continue the LTI after the project is done. The length of each LTI varies; one student may have two LTIs in a year, while another student may work with the same mentor for three years. It depends on the interests and needs of the student and mentor. Before a student leaves an LTI, he or she should line up another LTI opportunity so there isn't a lengthy transition.

Ending an LTI

When an LTI ends, it is important to have an exit interview with the student, mentor and advisor. Ask the mentor to fill out a mentor assessment form and have the student send a thank you note to the mentor.

If it is the end of the project or the school year, check-in with the student and mentor to see if they want to continue with this LTI.

Exit Interview

If the LTI is ending, hold an exit interview. Make sure the student is present at the exit interview. The goal is for the student and mentor to share their thoughts about the LTI. The advisor should also contribute to the discussion based on his or her own observations and experience with the process.

Here is a sample agenda to use for exit interviews:

What were the highlights of this LTI experience?

What strengths did the student bring to the LTI site?

What areas does the student need to work on most in future LTIs?

What is the student most proud of from the LTI work?

What part of the student's work has been most beneficial to the mentor?

Other comments?

Mentor Assessment

Ask the mentor to fill out a copy of the mentor assessment at the end of each year, or at the end of the LTI. There is a copy of the mentor assessment form in the Mentor Guide. This is a great way to get feedback for you and the student as well as a way to collect important data for the school. You can use the mentor's comments when you write the student's narrative as well.

Mentor's LTI Assessment

Mentors play a key role in the education and development of a Big Picture student. This assessment documents the mentor's perspective on the intern's experience at the LTI. This form should be completed before the exit meeting at the end of the internship, so it can be reviewed and discussed with the student and advisor.The completed assessment will become part of the student's portfolio and portions may be included in the student's narrative or exhibition.

Mentor's Name ***Date***

LTI site ***Advisor*** ***Student***

Have you mentored a student at a Big Picture school before? *Yes* ______ *No* ______

# of times ______

What were the highlights of your intern's work at the LTI?

What areas would you suggest the intern continue to work on?

Please answer the following questions about your intern this year:	*Very Much So*	*Satisfactory*	*Not at All*
1. My intern demonstrated a good overall work ethic at the LTI.			
2. My intern had good attendance and was punctual.			
3. My intern improved in interpersonal skills.			
4. My intern contributed work of real value to this site.			
5. My intern's project was good enough to use at this LTI site.			
6. My intern demonstrated good project management skills, was organized and met deadlines.			
7. My intern was able to pursue his/her passion through the LTI work

Recruiting Potential Mentors

Recruiting Potential Mentors

Everyone you meet is a potential mentor for your students! The accountant who does your taxes, your dentist, the green grocer down the street. Our most successful advisors are self- declared "Mentor Magnets," and they attract mentors by being friendly and constantly giving and collecting business cards. You may have an LTI Coordinator at your school, or a specific process of recruiting mentors, but the business card method rarely fails!

Your school may also develop print materials for recruiting potential mentors. We've included an example here from Philadelphia's Big Picture School, el Centro de Estudiantes.

Are you excited about the work that you do?
Are you patient and willing to share your expertise?
Do you want to give back to the community?

El Centro de Estudiantes High School would like you to become part of our Real World Learning network!

el CENTRO de ESTUDIANTES
A Big Picture Philadelphia – Congreso Community

Learning in the Real World

http://www.bigpicturephiladelphia.org

Host a student for an Informational Interview:
Invite a student to your place of work to have a dialogue with you about who you are and what you do.

Invite a student for a Shadow Day:
Let a student come to your work site and spend the day with you, learning about the particulars of your professional environment.

Be part of a Student Volunteer Service Project:
Sponsor a project for your business or organization where groups of students work together on tasks that help them learn and give you some extra sets of hands to get the job done.

Become a mentor:
Share the ins and outs of your profession. Students will develop projects that have real value for you and your workplace. You'll get fresh perspective, valuable skills in mentoring, and the satisfaction of building stronger ties in the community.

Who We Are:
El Centro de Estudiantes:
A re-engagement high school in Kensington that combines real-world learning, integrated curriculum and post-secondary opportunities to help students succeed.
Small classrooms: With an 18:1 student-teacher ratio, students develop the kind of personal relationship key to quality learning.
Customized Education: Students use their interests and passions to set goals and create their own learning plans and projects.

El Centro's 6 Outcomes for Every Student:
Proficiency in Literacy
Procificiency in Mathematics
Critical Thinking & Research Skills
Intra-Personal Skills
Perseverance & Self-Advocacy
Inter-Personal Skills

6

Organizing It

Organizing It

Organizing yourself and your students during the LTI process can make your experience run much more smoothly. There's a great deal of information to manage:

- Tracking student interests
- Tracking student phone calls & emails to potential mentors
- Tracking your phone calls, emails and visits to current mentors • Managing student project work & documenting learning
- Managing paperwork on mentors/sites
- Tracking attendance at LTIs
- Keeping track of notes from meetings
- Tracking student assignments

Not to mention all the other information and processes you're juggling day-to-day. We've reached out to advisors across the network to get a sampling of tools they use to help them- selves stay organized through their LTI work. We've included some of those tools here, and we encourage you also to visit the Knowledge Exchange (www.bplknowledgeexchange.org) to find other ways of staying ahead of the 8 ball!

Planning

Your LTI Coordinator may have a master plan for when/how to implement the steps of the LTI process. But having a calendar of expectations can help you to have clarity around what's happening now, what's happening next, and what you'll need to keep the train on the tracks!

RWL Timeline

Week 1- September 8, 10:
Interest inventory (Advisor Handbook)

Begin researching passion & interest

Reflective journaling

Movies/newspaper activities

RWL box

Using Supercalendar

Week 2- September 15, 17:
Continue research

Continue journals

Learn RWL Process & where to find materials

Big Picture Message Triangle

Draft phone & email script

Learn phone etiquette
(greetings, formal language, leaving messages, etc.)

Begin practicing phone calls with peers

Week 3- September 22, 24:
Continue research, journals

Fishbowl phone calls

Begin practicing phone calls with adults

Advisor Prep:

- *Interest Inventory*
- *Journal Prompts*
- *RWL Box materials: boxes, magazines, weekly papers, business cards, etc.*
- *Volunteers to practice phone calls with (friends, family, businesses)*
- *Inquiry materials*
- *Organizational materials*
  - *Advisory Calendar*
  - *Bulletin board*
  - *Space in room for paperwork (or digital system):*
    - *Phone logs*
    - *Street pass requests*
    - *I.I. Questions*
    - *II/SD Reflections*
    - *Journals*
    - *Checklist*

Learn phone log

Begin inquiry- develop questions for informational interviews

Email- set up accounts, learn about CC/BCC/Subject/Signature line, etc.

Intro to Google calendar/Advisory calendar

Enter info into Learning Plan

Week 4- September 29, October 1:
Continue research, journals

Transportation & Maps

Street Pass

What items do you bring?

Practice interview technique

Professional dress & behavior

Intro to Contact database & contact request

Research leads

Editing/Revising interview questions

Informational Interview & Shadow Day Reflection Info

Week 5- October 6, 8
Continue research, journals

1:1 Interview practice

If all checklist items/readiness competencies are met, start making those phone calls!

Going Digital

Today, there are so many great ways to organize your time online. You can create, share and synchronize calendars with your students and mentors. Your school may have an online mas- ter calendar, as well.

Your students can manage work online to create materials and share them for feedback with you, their mentor, or their peers.

Many of our advisors have had great success with moving planning and assignment work to online platforms, where they can coordinate with students in the digital world. Since your students will be headed in all different directions on LTI days, this may make a lot of sense.

Having students create and manage work online has many benefits. It's a real-world skill for them, it reduces the amount of paperwork you have to manage, and it creates a digital trail, so work is less likely to get lost. It's also helpful because they will be working on their projects at their internship site, their home and at school, and having work that resides "in the cloud" assures it's accessible no matter where they are.

Many of our network advisors recommend having students use a calendar service like Google calendar. They can post all of their project work deadlines online, share their calendar with you (or anyone else they're working with), and set reminders for themselves via email or cell phone of upcoming meetings and deadlines. You can put items on their calendar, or invite them to meetings.

Your school may have a dedicated platform for work, planning and calendar. Talk to your school leader and see if this is the case.

Materials

Though you may organize yourself, your students and your work digitally, it will likely make sense for you to have paper materials that you bring with you on LTI days. Below is a recom- mendation on how to coordinate necessary materials in an LTI Binder.

Recommendations for LTI Binder:

1. Have a binder for LTI, that you take with you when you leave the building, and keep all students' info in it. Each student would get a section, and in each section would be:

LTI Setup Materials

Project Proposal
Each Student's Learning Plan Notes from meetings

In the front of the binder, it's a good idea to have a master list of all student internships, with the mentors' contact info, address etc., so that at a glance, you can see where all students are. There's a sample below.

1. Keep a calendar or planner with info on all scheduled visits.

2. Keep a list of all LTI sites each week that you check off as you email or call each mentor,

and check off when each student arrives (for attendance purposes).

Ms. G's Advisory LTI Schedule Thursday, October 16

		9:00	10:00	11:00	12:00	1:00	2:00	3:00
Abigail				S.D. at Betsy Ross House				
Jessica		LTI at Habitat						
Troy			I.I. at Creative Arts					
Teaqae		LTI at Sharon Thomas Consulting						
A'Neshia		LTI at Carl Miller						
Janee			S.D. at Washington School, with Ruiz-Thompson					
Jose		Volunteering at Habitat for Humanity						
Nicole						I.I. at David Paul		
Chris		LTI at Cooper Hospital						
Maxie		Volunteering at Habitat for Humanity						
Brandon								
Shikeya		LTI at Washington School						
LiAsia		LTI at Cooper Hospital						
Tyrell								

Site	Mentor	Address	Time(s)	Phone	Check-in at MetEast in AM?		Email Address
Academy of Natural Sciences	Lois X		2:30		Yes	Brandon	
Adventure Aquarium	Nicole X		1:00		Yes	Jose	
Allen's Boarding Kennels	Manager		1:00		Yes	Brandon	
Ben Frankiln	Luis X		9:00		Yes	Maxie	
Betsy Ross House	Michelle		11:00		Yes	Abigail	
Carl Miller Funeral Home	Rasheeda X		9:00-3:00		No	A'Neshia	
Cooper Hospital	Cheri X		10:00-3:00		Yes	Chris	
Cooper Hospital	Lisa X		8:30-2:30		Yes	LiAsia

Washington School	Jacqueline X				Yes	Shikeya	
Washington School	Carol X		10:00-2:30		Yes	Janee	
Dr. W.	Dr. W		10:00		Yes	Maxie	

Organizing the LTI Process

Your students will be doing all sorts of work as they move through the LTI process. Each person will be making their own contacts, setting meetings and completing assignments. The Projects Advisor Guide has some great resources for managing work. We've also included a couple of quick tools to help you keep track of how all of your students are progressing through the LTI search process.

Call Log

Students will need to keep tabs on who they've contacted in their LTI search, what the results of those contacts were, and what their next steps should be. A simple spreadsheet that asks them to record each interaction will be your best friend! The LTI process is arduous for kids precisely because they may not see results of their phone calls for a while, which can make them feel

as though they're spinning their wheels. Having a call log can help them see how much work they've done, and give them ideas about what to do next, and reminders on what they should follow-up on.
You can use the log digitally or on paper—just make sure you have a solid system for keeping track of the logs over time, so they don't disappear.

PHONE LOG Name: ____________________ Date: ____________________

Name of Business	Approval Date (Advisor)	Phone Number	Who I spoke with (first/last name)	What they said	What Time I called	Next Steps

LTI Bulletin Board

Having a physical space in your room where you post information and track student progress through the LTI process can help centralize information. It also can serve as an accountability measure that shows which students are making progress and which are falling behind.

The following worksheet is meant to be posted on a bulletin board, one per student. Each worksheet is updated as a student completes another step in the LTI search process. At a glance, you can see who's moving forward and who's stalled out. Having their progress posted can serve as a motivator to your kids, as well.

You can post new LTI leads, pictures from students' LTI sites, and exemplary LTI project work on this bulletin board, as well. You can also take it to the digital realm, with an advisory web page with this information!

STUDENT INTERESTS

PHONE CALLS MADE DATE

INFORMATIONAL INTERVIEWS DATE

SHADOW DAYS DATE

CONGRATULATIONS!!! YOU HAVE AN LTI!!!

Alternatives to Internships

Alternatives to Internships

One student with one mentor in a professional work environment is the ideal approach for real world learning, as it builds communication skills, professional skills and provides the student with the best of both human and material resources. We recognize, however, that younger students are not ready for the rigors of this experience. Many of our programs that work with younger students, or high school students who are unable to travel to internships twice a week, have developed alternative approaches to internships. Your school may develop your own set of expectations around RWL, but we wanted to share some resources here, to inspire your thinking and perhaps provide a roadmap for some of your work.

RWL experiences that are not 1:1 internships generally break down into four categories:

- **Group RWL/internship**- A group of students (sometimes an entire advisory) travel to a work site, often with an adult mentor from the school. These RWL opportuni- ties partner the same group of students with the same site and mentor(s) over time, to complete a specific project.
  Examples:
  o A group of students works with the local zoo, over the course of two months to record observations around newborn animals.
  o A student group works with teachers at a local after-school program to plan activities and curriculum around tween issues.

- **Group in-school RWL**- Students do a RWL project at the school site. Mentors are recruited to come to the school to work with a group of students. These can be either short-term relationships or long-term relationships. These RWL opportunities are of- ten based around a topic that is a combination of student interest and a school project. Examples:
  o Students partner with an interior designer to remodel the school library.
  o A student group works with a local theater team to write and produce a play.

- **Learning through volunteering/community service**- Students do work with local community groups, to provide a service to the community. These can be long-term, but are often short-term partnerships, so students may experience many different or- ganizations over the course of months.
  Examples:
  o Students work with Habitat for Humanity to help paint rooms in a house. o Students help package foods for Meals on Wheels.

- **Training/certification/dual enrollment programs**- Students attend classes and train- ing programs that are run by outside providers. Participants in these programs often earn credit or a certification for their work. Examples:
  o Certification programs in nursing, childcare, computer technology
  o Classes at the local college or university

Best Practices for Alternative RWL Work:

Give students choice. The relevance of the work is key, so students must be able to select an experience that resonates with them. Whether they're doing a one-day volunteer trip, or signing up for a long-term group internship, it must be something that they want to do, or the experience will be less significant and authentic.

Make it about a project. Students will do a great deal of learning through their RWL work. If you can connect their work with a long-term goal, in service of creating a product that will impact others, it will make the work and learning that much deeper. Have students take the lead on designing and planning the project, and make each step clear to them as you progress. This will set the stage for later independent and LTI project work.

Make it real-world. To the greatest extent possible, take your work outside the walls of the school. Bring students to work sites, bring professionals to the school, and have students working hands-on with real artifacts and products from the real-world.

Debrief often. Help students make connections with their work and academic learning. Talk about college- and career-readiness skills that they're building through this work. Give them opportunities to talk about how they're feeling about the work site, the project and what they're learning. Help them discover new interests and questions.

8

Sample Materials

Artifact #1

This first artifact is from a planning session in a Big Picture school that wanted to develop a RWL program for students who were not ready to engage in the individual internship process. You can see the various goals of the project, and the detailed thinking that went into creating a program that would meet these goals and actively engage students.

Alternative RWL Program Planning Notes

RWL Pod Fast Facts:

1. RWL Pods will be created based on student interest and Community Partnership availability.

2. Advisors will work with a Community Partner. These community members may be involved with organizations, own businesses, be skilled in the field of interest, and/or interested in volunteering their time and experience with el Centro students.

3. These RWL experiences will be utilized as a way to jump-start students into Real World Learning who may not be ready yet for Internships as a way to engage student interest, build comfort in the real world, build skills, create learning experiences that show how academics can be applied in real life situations, and explore interests

4. Student will have a RWL Pod that is separate from their home Advisory. There will be on average 16 students in each Pod.

5. RWL Pods run the duration of a trimester. Students have the option of continuing with the same Pod, for those that will be continuing all year, or transferring to another Pod at the end of the semester.

6. Two of the ten Pods will be devoted to students who will have internships. These students will need to be accepted into these LTI Pods by completing an application demonstrating that they have the skills and responsibility to obtain and maintain an internship. They will need to "earn" the chance to get an LTI with this set up.

7. RWL will be held on Tuesdays and Thursdays, as much off-campus as possible.

8. Students will meet at the school and leave at 9:00am and return by 2:45pm.

9. With the lead of the Advisor and Community Partner, students will design a Pod proj- ect that incorporates all the Learning Goals (ER, SR, QR, COMM, PQ) with tangible end products both individual and group. Students in the LTI pods will be responsible for a LTI project every trimester. All students will have an additional Independent Project to complete in their home Advisory.

10. The Community Partner has the option of committing for one trimester or for the whole year. Having it determined by trimester, allows flexibility to change partnerships or interests groups as the students and community dictate.

11. The goal is to engage students in RWL learning as soon as possible. As such, RWL Pods will be determined and Community Partnerships established prior to the start of the school year. The suggested areas of interests will be based on student interests as identified in this school year.

12. The RWL Pod Team (Advisor and Community Partner) is encouraged to make more community connections and eventually break the students into small groups. These groups of 3 or 4 can work with additional adults in the community in the field of interest during blocks of time on Tuesdays and Thursdays. This is to decrease the student to adult ratio and provide as much individual attention and care as possible. This may be a 2nd trimester goal as time permits.

13. The RWL Pod Team is encouraged not to "reinvent the wheel" and search out resources from already established vocational/technical programs, units of study with lessons on similar topics, and use computer based programs such as Keytrain that help students develop Math/English skills (and perhaps more) based on the career paths they hope to pursue.

14. Students will be required to write a 1-2 page journal entry upon their return to school on Tues and Thurs to communicate with advisor about activities. In addition afternoon circle time in their home advisory will provide students a time to share RWL experiences with classmates each day, to create student to student teaching/learning.

Other Suggestions:

- Have Community Partners that will float between the Pods. For example all Pods will need to engage in fundraising. Have one Community Partner who specializes in this rotate with a lesson to each of the RWL Pods.
- Purchase or have a school van or vans for outside of city trips
- Arrange for bagged lunches on Tuesdays and Thursdays
- If a student is later than 9am they are considered absent for that day
- Have parents, college students, or senior volunteers who would be willing to accompany and assist a Pod on Tues and Thurs
- Create a Tag line that will sell the students on this concept (just as a business would)
- Use already established connections and partnerships
- Some PODS may have 2-3 primary Community Partners.
- Have other school personnel or established and well-versed community partners run a RWL Pod without an advisor to make smaller groups and provide more variety.
- The first week will culminate with a RWL fair, allowing students to choose their Pod for the trimester. The student will apply for his/her top two-three choices and go through an interviewing process (or some other well spelled out process).

Some Concerns:

- When will Advisors and Community Partners have time to collaborate/plan and prepare for these days? They both have other full time jobs.
- Getting smaller adult : student ratios (see suggestions as mentioned above)
- Who has done something like this before? What resources can we get and who can research this?

Suggested RWL Pods Interest Groupings

1. Sports/Fitness/Martial Arts
2. Architecture/Construction
3. Visual Arts
4. Dance/Acting/Singing
5. Healthcare
6. Mechanical Engineering/Auto Repair
7. Fashion/Hair/Makeup
8. Childcare
9. Law/Police/Fire Department
10. Computers/Technology
11. Culinary Arts

Artifact #2

The following piece is a description of a group internship that was offered around Capoeira Angola, a Brazilian martial art. Students were able to self-select this opportunity, and trav- eled in a group, with an advisor to a studio twice a week, where they worked with a Capoeira instructor to learn more about the art. Each student completed an individual project around what they learned through this RWL opportunity, and presented their projects in exhibitions.

Real Word Learning Opportunity Description

Topic/Main Idea:

Capoeira Angola: An Ancient Tradition in Modern Time

Sales Pitch: (how would you describe this in a few sentences to grab students' attention)

Capoeira Angola is a multi-disciplinary African Warrior art form. Brought to Brazil dur- ing the Trans-Atlantic Slave Trade, Capoeira Angola teaches dance, acrobatics, history, culture, music, health, self-confidence, discipline, and instrument construction. Capoeira Angola has been described both as a game and as a conversation between two bodies. The ultimate goal of Capoeira Angola is to Jogo Bonito (play beautifully). Practitioners believe that if you can learn to Jogo Bonito during the ritual of Capoeira Angola, you can learn to live beautifully during daily life.

Why are you interested/passionate about this idea?

Capoeira Angola was once a rites of passage process, designed to guide young adults from the transition from childhood to adulthood. Our communities suffer from adequate resources to help guide young people today through that process. To learn to live beautifully is what makes Capoeira Angola so important to our community. The Capoeira Angola philosophy of being beautiful and resourceful in oppressive circumstances is an invaluable lesson for the youths of today.

Project Description (an overview):

Group will meet twice a week, Tuesdays and Thursdays. Mandatory to participate in Friday night rodas. The roda is where all the training comes together. Each week will highlight and focus on one of the various aspects of the art form (movement, history, culture, songs, etc). Students will also train with The Low Country Capoeira Angola Society (LCCAS), a local community group that teaches Capoeira Angola, under the supervision and guidance of an experienced mestre (teacher, master) who can trace his lineage and connection to the art for four generations.

Student Activities (students will...)

Journal
Research
Train
Interview
Analyze films, videos

Possible Essential Questions:

Study nutrition, health, diet Construct instruments Learn songs (Portuguese) Take part in weekly roda Connect to the real world

How can Capoeira Angola enhance my life perspective and guide me towards my life's passion?

Possible student projects and products:

i. Construct twelve berimbaus (Capoeira Angola's main instrument).

ii. Become adept in the eight traditional rhythms of Capoeira Angola played on the berimbau, and the games associated with each.

iii. Become adept in five traditional lah dahinhas (opening invocation/song) and corridos (group call and response chant/song).

iv. Become adept in the 9 basic movements of Capoeira.

v. Become well versed in the history and culture of Capoeira.

vi. Connect to Real World Learning Experience.

Skills/Competencies students will develop:

Potential Partners and their roles:

The Low Country Capoeira Angola Society (LCCAS) was founded in 1996 by Mestre Chicago and is dedicated to preservation and proliferation of Capoeira Angola to heal com- munities, families, and individuals. LCCAS is willing to provide their training space, instru- ments, films/media, music, and experienced leadership to assist with this internship.

Potential opportunities for learning outside of the school:

To travel to LCCAS Academy; interview experienced players; research African, Brazilian, and American history; make live instruments.

Artifact #3

This piece shows the planning that went into implementing academic rigor and learning goals into an alternative RWL program.

RWL GROUP Portfolio Requirements

Description of RWL Group Portfolio Expectations: The foundation of the Big Picture Design is the assertion that the most powerful learning experiences come from the combination of (1) hands on work that is related to a student's passion and that is useful to his/her community, (2) the development of a relationship with an adult s/he can trust academically, professionally, and personally and (3) work that is relevant to the student and is rooted in his/her interest(s). RWL Groups fulfill those three components using a whole advisory real world learning experiences that is based on a particular theme. The goal of the RWL Groups experience is to provide the students with a rich learning experience while preparing them for an LTI. The RWL Groups provides the students with an authentic, rigorous, hands-on learning experience that utilizes the rich resources of the community. To demonstrate this, the portfolio will contain: Informational Interview Questions, Informational Interview Results with a summary analysis, Worksite Anthropology, Project Proposal with a timeline, and a Final Presentation. In addition, the portfolio will contain specific English, ER and SR work related to each RWL Group.

Informational Interviews... Students will create informational interviews for guest speakers and worksite visits. Students will conduct a minimum of three interviews. Based on the interview results, student will write a summary narrative, which includes their analysis of their findings. The purpose of having students repeats this activity is to show growth in their ability to conduct and process informational interviews. It is an essential component of LTI readiness.

Worksite Anthropology/ Worksite Review... Students will complete a detailed worksite anthropology/ review using a guided worksheet. Through this process students will need to demonstrate a clear understanding of the worksite/business including how it operates, who it serves, and what its purpose is.

Project Proposal / Timeline... The Advisor will with the students to create a class project proposal that will serve both as a framework for the RWL Group as well as an example of the project proposal process. Students will then go through the planning process for their individual project and create a project proposal with a timeline.

Final Presentation... Students will create an individual component of the Group's final RWL Group project. Students will demonstrate their work through a final presentation and with their final sup- porting materials. This will vary depending on the RWL Group and type of final presentation.

English/Comm component: The RWL Group will give students an integrated learning experience, connecting an interest/passion to an authentic project, which brings a real world context to reading & writing. The English Component will be based on one exemplary RWL writing artifact (ie. speech, pamphlet, poem, how-to guide, ...) and the student's daily RWL Group Journal. The artifact must have a minimum of three drafts with a reflective narrative explaining how the final version shows exemplary work. In the Daily Journals with RWL Group specific vocabulary, students will reflect on their daily RWL Group experience. Advisors will provide specific prompts as well as required vocabulary that need to be included in the journals.

ER component: Each RWL Group must use the scientific method to answer the question, “How do I prove it?” The goal is to find an activity in your RWL Group that requires us to think like a scientist. This is accomplished by demonstrating the use empirical evidence and a logical process to make deci- sions or to evaluate hypotheses.

Some helpful questions to guide this work are:

What idea do I want to test? (essential question) What has other research shown?
What is my hypothesis? How can I test it? What information (data) do I need to collect? How will I collect the information?
What are the results of my research? What error do I have?
What conclusions can I draw from my research? How will I present my results?

SR component: Each RWL Group must use Social Reasoning as they answer the question, “What are other people’s perspectives on this?”
This goal is to find an activity in your RWL Group that requires us to think like an historian or anthropologist: to see diverse perspectives, to understand social issues, to explore ethics, and to look at issues historically.

How do diverse communities view this?
How does this issue affect different communities ?
Who cares about this? To whom is it important? What is the history of this? How has this issue changed over time?
Who benefits and who is harmed through this issue?
What do people believe about this?

QR component: Each RWL will incorporate mathematical measures into their work, as they engage with the question, “How can I measure this?”
The goal is to find a quantitative reasoning component to the project work of the RWL Group. Some helpful questions to guide this work are:

What is being measured? How it is being measured?
What financial decisions are being made, or are we making? What information, data or formulas help us make these decisions?
What are different components? How are these components represented as parts of the whole?
What data is being collected? What are the units/measures/method of collecting this data?

Artifact #4

This worksheet was developed by a Big Picture school that began implementing an LTV (Learn- ing Through Volunteering) summer program. You can see some examples of how students were asked to plan and debrief their experiences.

Volunteer Work/Community Service Project Worksheet

Date: _____________

Group Name: __________________________ (You need to come up with one!)
Group Members: __________________________ ________________________
__________________________ ________________________ __________________________
________________________ __________________________ ________________________

Group Advisor Name: _________________________________

Please answer the following questions. These questions are designed to help you get started on your community service project. We will reconvene in November, in order to begin formally planning these events, and timelining them! Also, if you meet with your group outside of school hours, make sure you use the attached timesheet to log your volunteer hours!

What issue facing our city do you want to tackle?

What do you plan to do to help with this issue?

Why do you want to help with this issue?

Who will your work benefit?

When will your work happen?
Are you creating a product or event? When will it happen or be due?

Who in the community can help you?

Can you identify an expert in the community who can guide your work or help you?

How will you let people know about your work— How will you notify people who can HELP?

How will you notify people who can be HELPED BY your work?

What will you need (in terms of materials or supplies) for your work to be successful?

What organizations can help you?

How will your work be accomplished? What are your steps?

Artifact #5

This artifact is from a Big Picture school in LaFayette, NY, where students have an active volunteer program, in addition to the internship program. These materials celebrate the involvement students have in their community, and serve also as promotional materials for the service organizations and the school itself.

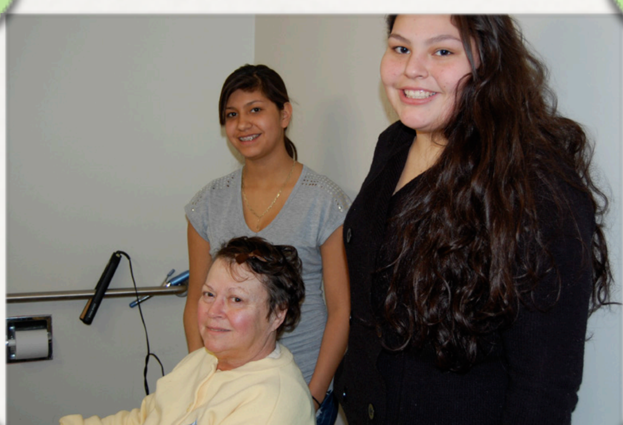
VOLUNTEER WORK

Big Picture students have volunteered for several organizations accumulating 1500 volunteer hours.

- The American Red Cross
- The Salvation Army
- The Rescue Mission
- Iroquois Nursing Home
- Alzheimer's Association
- Community Building Works
- Distribution Day
- Advocates
- LaFayette Clean Up Day

5957 RT 20 W LaFayette, NY (315) 677-5509 Susan Osborn, Principal

Alzheimer's Association Prom



In January, Big Picture students held a prom at the Alzheimer's Association. The event was led by Priscilla Cronin and provided patients with the opportunity to dress up, dance, and have fun.

Familycapped

Familycapped is an organization providing support to families living with disabled children as they navigate through a complex system of medical, social, legal, educational, and bureaucratic issues.

On Friday March 5th, eight Big Picture students helped out at Familycapped's annual Winter Dance Party. They helped children with disabilities get in and out of bouncy houses, play basketball, dance, and complete art projects.

"The time and generosity put forth by your organization were very instrumental in making this a truly wonderful night for many of our children."

-John Miranda, Recreation Director for Familycapped

Community Building Works

Daymon Winder and AJ Pritchard building frames for windows and doors.

Community Building Works is an organization that constructs green affordable housing locally and internationally. Community Building works helps seniors, middle class renters, and low income families afford quality housing.

Big Picture students donated their time to help Community Building Works on selected Thursdays during the school year.

Tony Tarbell and Blaze Bender preparing lumber to be cut by the sawhorse.

Bone Marrow Drive

By Sarah Moses

More than 70 people, 53 of them Native American, joined the national bone marrow registry today at the Onondaga Nation Arena in hopes of finding a match for Cazenovia teen, Taylor Matt.

Matt, 17, suffers from leukemia and needs a bone marrow transplant, but finding a match has been difficult because Matt is one-quarter Native American.

Matt's best chance for finding a match would come from a person with Native American ancestry, said Paula Miller, of the William G. Pomeroy Foundation, who organizes local bone marrow drives.

"The most important thing is that we are getting the right population here today to join the registry," Miller said.

It is very difficult for Native Americans to find matches because there are so few Native Americans donors registered, Miller said.

"There are only 80,000 donors listed as being Native Americans on the registry," she said. This is a little more than one percent of the seven million donors currently on the registry.

Because of the lack of donors, Native American patients have only a 40 percent chance of finding a transplant match on the registry, whereas white patients have an 80 to 90 percent chance of finding a match, Miller said.

When a patient is multiracial, like Matt, that percent drops to lower than 40 percent.

"It's difficult to match people because what we're basically trying to do is match your genetic human finger print with someone else's," Miller said.

The markers used in matching are inherited and patients are most likely to match someone of their own race or ethnicity. This becomes more difficult when a person is multiracial, Miller said.

In the past five weeks, Be the Match Registry has held six donor drives across Central New York and registered more than 500 people.

Priscilla Cronin, 17, a junior at the Big Picture high school in LaFayette, helped organize the two drives on the Onondaga Nation.

"I think everyone should sign up for it," Cronin said. "I think it's important because there are Native Americans out there that need it. You never know, you could be the match and all it takes is a few minutes to register."

To be a donor, volunteers must be between 18 and 60 and have no history of heart disease, cancer, diabetes or HIV.

The collection kit is performed by swabbing four spots on the inside of the cheek. It takes 3 to 6 weeks to test and process the cell samples.

"There is a lot of myths about donating bone marrow," Miller said. "It's not as painful or horrible as the media portrays it."

Eighty percent of the donors can give their bone marrow through a non-surgical out-patient procedure. The donor's blood is removed through a needle in one arm and passed through a machine that separates out the blood-forming cells. The remaining blood is returned to the donor through the other arm. This takes about 4 to 6 hours. The other twenty percent of the time a surgery is performed with a needle through the hip and into the marrow.

Borrowed from The Post Standard online

LaFayette Clean Up Day

On April 16th, four Big Picture students participated in LaFayette Clean Up Day by cleaning up LaFayette Beach.

The students cleaned up around the Lacrosse Box, the lifeguard station, bushes, and around the swimming area.

9

Bringing it all together

Bringing it all together

Big Picture Learning has long been sharing the value of the 3 R's: Rigor, Relevance and Relationships. The Real World Learning process combines these elements into exciting and authentic learning experiences for young people. The projects students create are academically rigorous, relevant to their interests, and to real-world applications, and students build real and meaningful relationships with mentors.

The process of pursuing the internship is just as valuable for students' development as the work they complete once placed in the internship. Through learning to identify and access resources, communicate with adult professionals, follow-up on and organize tasks, to advocate for themselves and to ask questions, young people learn a host of skills they'll need to be successful in their post-secondary lives.

Guiding an advisory of students all searching for internships at the same time is a challenging proposition. Because students are going in so many different directions, with so many variables, so many outcomes to track, and so many connections to make, it's definitely hard to stay on top of it all. But through thoughtful systems, careful organization, and solid networking, you can do it.

There will be times of trial. But you must have faith in the process, and faith in your students. They may make missteps, and they will run into obstacles in the process of pursuing their LTIs, but they will show immense growth in the process. They'll become young professionals who are passionately engaged in their work in learning.

LTI Projects offer students the best of hands-on learning. Students solve authentic challenges in real-world settings through creating unique work that's evaluated using professional standards. This is the true work of our Common Core standards, and students who engage in RWL meet or exceed these standards on a regular basis.

Connections

Real world learning is all about connections. You're helping your students make connections, and you'll be making a lot of your own too. At the school level, connect with your colleagues around your RWL program. The other adults in your school are a great resource for potential LTI leads, tools for getting kids ready for internships, and help with organizing everything. If you're struggling with guiding one of your students through the process, running into walls in their LTI search, partnering them with another advisor, your LTI-C, or another staff member for the short-term can help provide them with fresh energy and perspective.

At the network level, you can find excellent RWL resources on the Knowledge Exchange (www.bplknowledgeexchange.org). Big Picture schools across the country have a variety of different RWL programs, and you can find information and resources on these programs and on advisory activities on the Knowledge Exchange.

Remember that you're asking your students to step outside of their comfort zones in the pursuit of their internships. The best way you can encourage them is by being a role model. Share with them how you interact with potential mentors, how you create a professional network for yourself, and how you continue to push outside of your comfort zone in order to build relationships and gain access to resources. The best advisor is transparent about his/her process. When your students see you making connections, they'll learn to do it themselves. Get out there and make your learning Real World Learning!

10

Resources

Arc of Real World Learning

The materials that follow were developed by Delaware's Positive Outcomes Charter Big Picture school. They show how RWL experiences are scaffolded for the different age/grade levels, and what the expectations are for students at each level.

7th – Who am I?

The 7th grade year delves deeply into who you are as an individual, as a learner, as a group member, as a member of your community, etc… You will explore what interests you and what makes you tick. The idea is that the more you know about you, the more effective you will become at learning. Also, the more the POCS staff learns about you, the easier it is for them to provide you with experiences that matter to you!

Through-line	Know and Be able to do	Activities/Experiences	Assessment	LTIC/SLC Role
Know/Discover Your Interest	Reflect upon real world experiences and determine own preferences	-Advisory volunteer experiences -Advisory service projects	-Journal entries	-Arrange volunteer sites and logistics -Be a resource for community connections to service projects
	Identifying interest areas	-Interest assessments -1 on 1 with advisor -Conversations with family and friends -Show and tell -Advisory volunteer experiences	-Student describes three interests and process of discovery at exhibition	
	Complete an individual project tied to an interest area	-Dependent on individual project	-Individualized rubric for each project	
Understanding Businesses and Organizations	Identify different businesses and organizations in the community	Community mapping		

Working Effectively with Adults	Following single step directions	-Advisory volunteer experiences -Advisory service projects	-Advisor observation	-Arrange volunteer sites and logistics -Be a resource for community connections to service projects
	Asking questions for clarification and deeper understanding	-Advisory volunteer experiences -Advisory service projects	-Advisor observation	-Arrange volunteer sites and logistics -Be a resource for community connections to service projects
	Receive constructive feedback from adults and respond appropriately	-Advisory volunteer experiences -Advisory service projects	-Advisor observation	-Arrange volunteer sites and logistics -Be a resource for community connections to service projects
Obtaining a LTI	Professionalism basics	-Workshop series -Advisory volunteer experiences		-Deliver workshop series and/or provide resources to advisors for content -Arrange volunteer experiences
	Raise personal awareness to enhance abilities to work effectively with others	-Who Am I Project	-Who Am I rubric -Exhibition presentation	
	Thank you letters	-Write letters to volunteering sites	-Thank you letter assignments	-Deliver workshop series and/or provide resources to advisors for content
Understanding and Adapting to Different Cultures/Environments	Differentiate between appropriate behavior in various cultures and environments	-A series of speakers from different environments (i.e. school, church, business, auto shop, etc…) or a panel discussion	-Journal entries	Assist in arranging speakers/panel

Developing Projects	Identifying needs and brainstorming solutions	-Service learning project -Individual interest project		
	Project components and how to use project development tools	-Workshop -Individual interest project		
	Working in a team to complete a project	-Service learning project		

8th – What don't I know that I don't know?

The 8th grade year is about expanding your horizons. Often people are not aware of what they do not know. This year will focus on providing you, as a student with opportunities to experience things that you might not have considered as an interest to expand your learning opportunities.

Through-line	Know and Be able to do	Activities/Experiences	Assessment	LTIC/SLC Role
Know/Discover Your Interest	Reflect upon different interest areas and professional pathways	-Series of speakers	-Journal entries	-Arrange speakers to share interest/career pathway
	Identifying current interest areas	-Interest assessments -1 on 1 with advisor -Conversations with family and friends -Show and tell	-Student describes three interests and process of discovery at exhibition	
	Complete an individual project tied to an interest area	-Dependent on individual project	-Individualized rubric for each project	
Understanding Businesses and Organizations	Explain how an organization that you volunteer at assists the community/people and how your volunteering impacted the organization	-Individual long-term volunteering	-Presentation at exhibition	-Provide database of volunteer opportunities and assist in connecting students
	Observe and describe different cultural elements of an organization	-Company tour	-Tour observation notes or journal entry	-Arrange company tours, transportation, and all logistics
Working Effectively with Adults	Following single step directions when on independent volunteer experience	-Individual long-term volunteering	-Volunteer coordinator/supervisor evaluation	-Provide database of volunteer opportunities and assist in connecting students
	Asking questions for clarification and deeper understanding when on independent volunteer experience	-Individual long-term volunteering	-Volunteer coordinator/supervisor evaluation	-Provide database of volunteer opportunities and assist in connecting students
	Ask for and receive constructive feedback from adults and respond appropriately when on independent volunteer experience	-Individual long-term volunteering	-Volunteer coordinator/supervisor evaluation	-Provide database of volunteer opportunities and assist in connecting students
Obtaining a LTI	Phone Etiquette/Scripts	-Workshop -Experiential mock phone calls	-Phone call feedback forms	-Secure adult volunteers to do mock calls
	Interview skills	-Workshop -Experiential mock interviews		-Secure adult volunteers to do mock interviews
	Anthropologies	-Company tours		-Arrange company tours

Understanding and Adapting to Different Cultures/Environments	Understand and explain your generation and how you adapted to fit in at your volunteer site	-Individual long-term volunteering	-Journal entries -Presentation at exhibition	
	Observe and describe generational differences at volunteer site	-Individual long-term volunteering	-Journal entries	
	Observe and describe different cultural elements of an organization	Company tour	-Tour observation notes or journal entry	-Arrange company tours, transportation, and all logistics
Developing Projects	Breaking projects into smaller tasks	-Individual interest project		
	Developing and following timelines	-Individual interest project		

9th – How do I tap in?

You have a world out there waiting to assist your growth and development. Now is the time to begin getting connected to it. The 9th grade year will be spent developing skills and having experiences that enable you to begin using your community to support your learning and interest exploration.

Through-line	Know and Be able to do	Activities/Experiences	Assessment	LTIC/SLC Role
Know/Discover Your Interests	Identifying current interest areas	-Interest assessments -1 on 1 with advisor -Conversations with family and friends -Show and tell -Interviews and shadow days	-Student describes interests and how she or he explored the interest	
	Complete an individual project tied to an interest area that involves utilizing an adult resource in the community	-Dependent on individual project	-Individualized rubric for each project	-Be a resource for students to connect to adults in the community
Understanding Businesses and Organizations	Effectively analyze the culture of an organization and determine personal preferences for potential internships	-Interviews -Shadow Days	-Informational Interview Forms -Shadow Day Anthropologies	-Manage call request system and community connections database -Assist students in identifying individuals to interview and shadow

Working Effectively with Adults	Showing up on time	-Interviews -Shadow days -Interest project meetings	-Journal entries -Adult feedback	
	Develop a connected professional relationship with interest project mentor (meaning: that adult is willing to be a reference for you or provide connections at the end of the project)	-Interest project	-Interest project mentor evaluation	-Review mentor evaluations -Follow up on those evaluations to more deeply involve those individuals and/or do damage control if necessary
Obtaining a LTI	Use the Real World Learning Database	-Search opportunities and send call requests		-Train students and respond to call requests
	Understand techniques for finding resources in the community	-Workshop on ways to connect to resources and techniques for researching	-Students find new opportunities and submit via call request system	
	Effectively network to find what you need	-Networking workshop -Series of networking events		-Arrange networking events
	Resume and Interest Letter writing	-Workshop	-Completed resume and interest letter	
Understanding and Adapting to Different Cultures/Environments	Identify how you would fit into a culture/environment and what adaptations you would have to make to stay for a 3 month internship	-Interviews -Shadows	-Journal entries	
Developing Projects	Identifying and effectively using resources	-Individual interest Project		
	Write Project Proposals	-Individual interest Project		

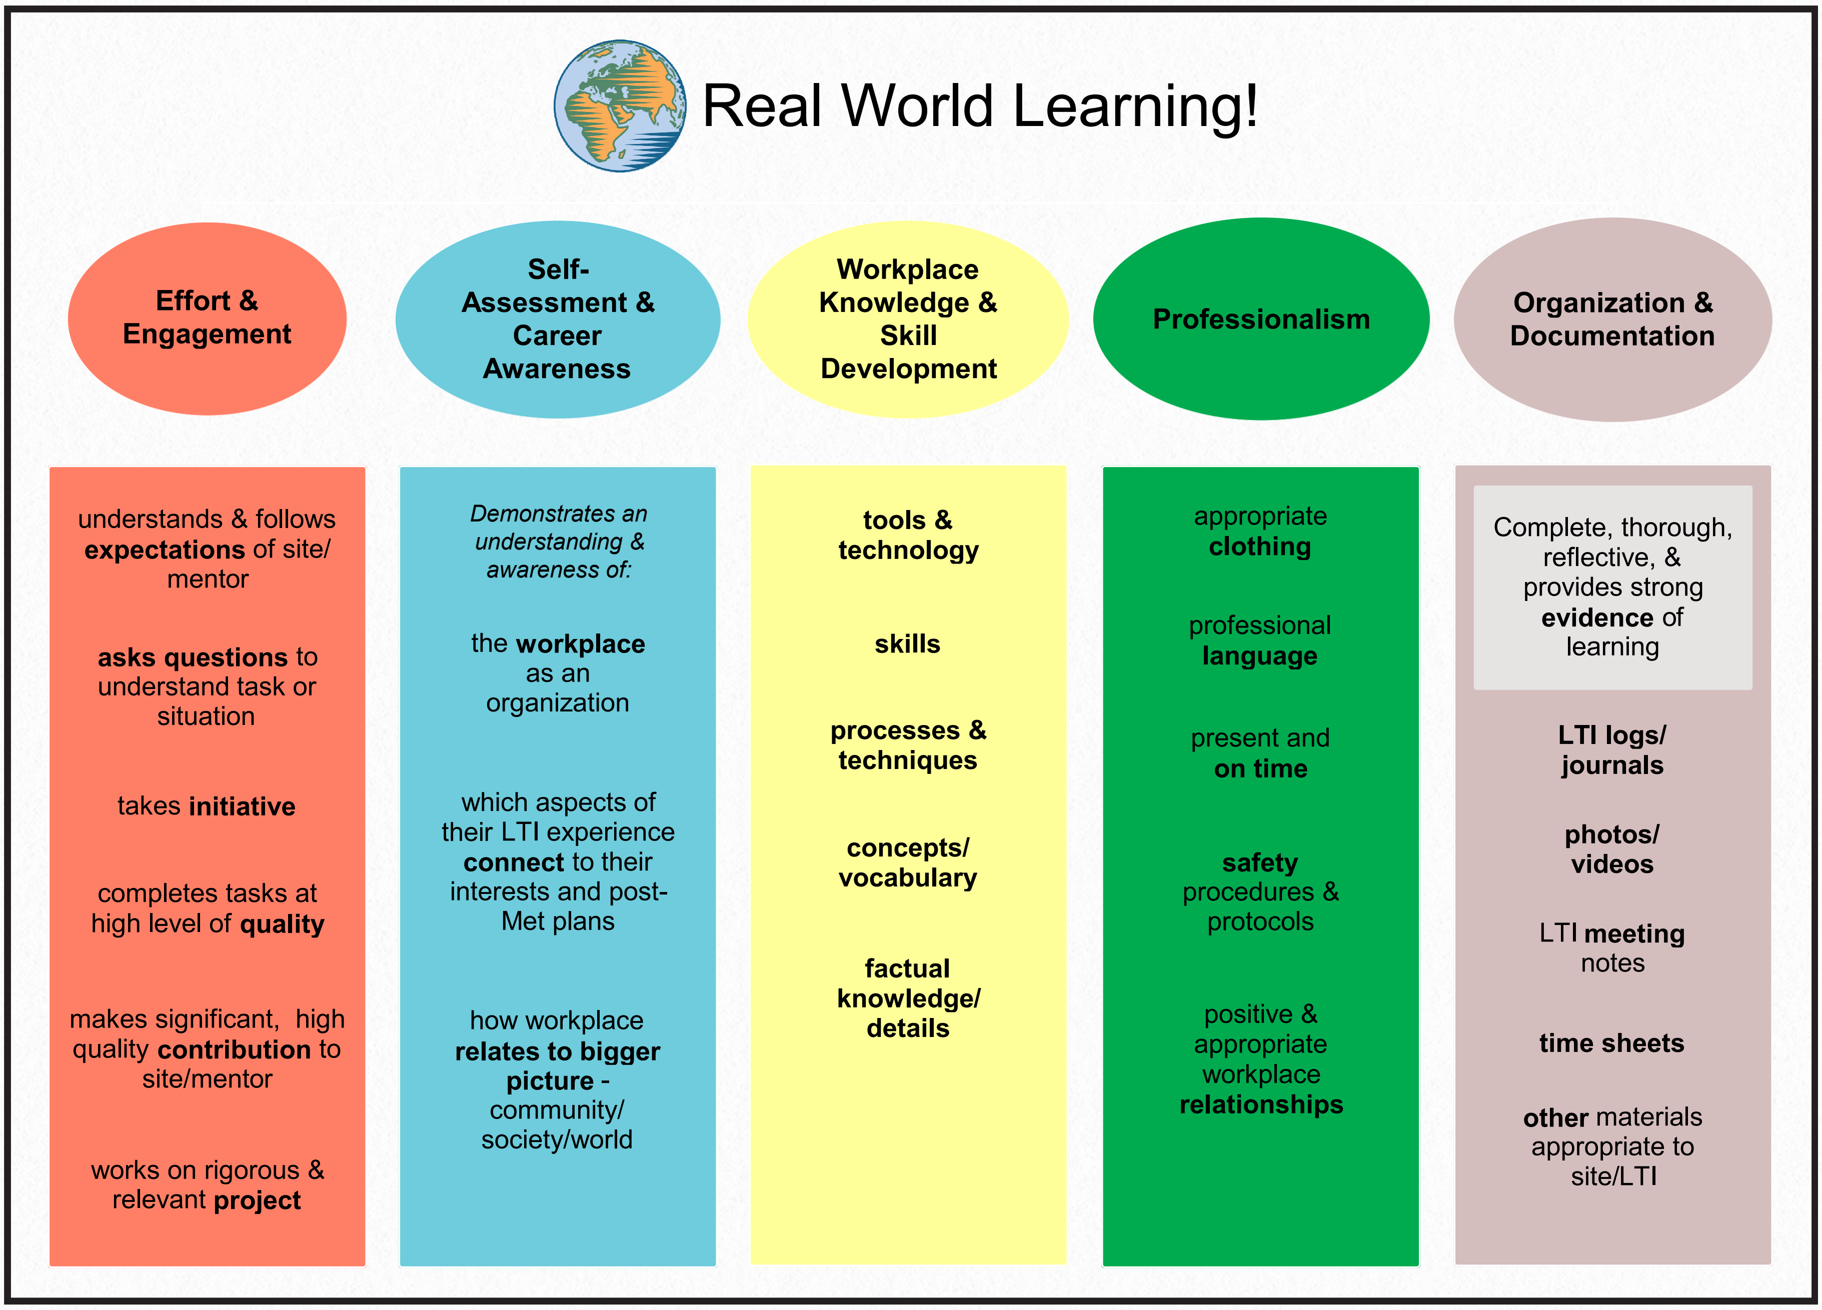
10th – How can I possibly own that?

This is the year that you step into becoming an independent learner. You get the keys to the car as you sit behind the steering wheel to truly guide your own education and take responsibility for the outcome.

Through-line	Know and Be able to do	Activities/Experiences	Assessment	LTIC/SLC Role
Know/Discover Your Interest	Identifying current interest areas	-Interest assessments -1 on 1 with advisor -Conversations with family and friends -Show and tell	-Student describes interests and how she or he is pursing it via their LTI	
	Complete a LTI project that is tied to your interest, the needs of the business/organization, and enhances your learning	-Dependent on individual project	-Individualized rubric for each project	
Understanding Businesses and Organizations	Analyze the needs of the business or organization and design a project to meet those needs	-1 on 1 meetings with LTI mentor and advisor -Completion of LTI Project Development Tool	-Mentor evaluation of analysis and project completion	Support the advisor, student, and mentor in the project creation process
Working Effectively with Adults	Enhance professional vocabulary	-Internship -Research relevant to interest area	-Completed LTI Terminology Sheet	
	Seek out and ask for resources and support needed to finish projects (PROACTIVITY)	-Internship	-Mentor evaluation	-Distribute mentor evaluation at middle and end of internship -Follow up with student, mentor, and advisor based on results
	Understand and demonstrate appropriate use of technology at the internship (cell phones, computer and internet surfing, social media, etc…)	-Read and/or ask for the technology policy at your internship site -Continually demonstrate compliance with the policy	-Mentor evaluation	-Distribute and collect mentor evaluations
	Develop strategies to communicate effectively in the internship setting (being assertive, listening, etc…)	-Internship	-Advisor observation -Mentor evaluation	-Collect advisor observations -Distribute and collect mentor evaluations
Understanding and Adapting to Different Cultures/Environments	Assist in development of younger students awareness	-Student leader/helper for generational and/or social identity workshop series		
Developing Projects	Managing project process from start to finish without much external assistance	-Senior Thesis Project		

Value of Real World Learning

This graphic was created at the Met. It delineates the different aspects of learning and skill development that RWL cultivates in students, when it's done well.



Project Setup Meeting Materials

INTRO
Sample Student LTI Questions

Student Name: ___________________________ Name of LTI: Tiny's Auto Repair

How?, What?, When?, Where?, Who?, Why? – Your LTI Questions

Beginning the very moment your Advisor says to you, "Congratulations, you have an LTI," and your brain begins swirling and whirling with ideas, plans and thoughts, write down all and every question that comes to your mind about your LTI. These questions that are yours and yours alone, these gems, will become foundations for projects and still more questions. Don't hold back and most of all, Have Fun!

- What about gasoline makes an automobile run?
- What other fuels are being used as an alternative to gasoline? What about those alter- natives makes an automobile run?
- What are the most important properties that single out a car as being better than other cars?
- How does a transmission work?
- How does an engine work?
- Who is considered the father / mother of the automobile?
- How does a muffler quiet a car?
- What parts of a car are most responsible for enabling one car to go faster than other cars?
- What has been the most important safety measures created for cars? How do we know?
- Which has had the greater influence on the other: racing cars or street cars?
- How does a starter work?
- How much electricity does a car use?
- What is involved in creating a detailed painting on a car?
- When and where did the first auto race take place?
- How do hydraulics on cars work?
- What is the history of auto shows? Who started them?
- Why do different cultures value cars differently / similarly? Or, is there any difference?

Project Setup Meeting Questions

Bronx Guild – Developing an Internship Project Mentor-Student Questioning Technique

Use this technique during an opening or middle meeting with a mentor and an intern to help develop the internship project.

Key Concepts – keep these in mind as you ask the mentor and the intern questions about the job:

- The mentors have expertise – they know all of the content and skills necessary to be successful in their profession.
- The intern has the experience – they know what their day-to-day job has been like (what they need to do and who they work with and what their days are like). They also know what there interests are and what they like to do and want to find out.
- You have the curiosity – it's your job to probe and find out what skills and content your intern needs to learn and connect those to the students' interests.

Areas of Curiosity – Probe here to help develop the project
Inquire in the following ways (ask/inquire the intern with the mentor present – allow the mentor to add his/her insights into these inquiries)

- Take me through a day at your internship. (be really detailed)
  - What time do you start?
  - What do you do first thing in the morning?
  - What do you do next?
  - What do you do next? (keep asking this question)
  - How do you do that? (ask this question for each thing that the intern does – even if it's self evident)
  - Why do you do that? (ask this question for each thing that the intern does – even if it's self evident)
  - What do you notice when you do that? (ask this question for each thing that the intern does – even if it's self evident)
- Who do you work with?
  - What do they do? (be really detailed)
  - What do you do in your down-time? (be really detailed)

- What do you like to do with your time?
    - Why do you like to do that? (be really detailed)
    - How do those things relate to this internship (your job is to delicately bridge the interests into something that they can do at the internship)

Ask the mentor the following questions (allow the intern to his/her insights into these inquiries)

- What projects are you working on now?
    - Are they big projects?
    - Are there aspects of the projects you could give your intern to do?
- Are there any projects that you always wanted to get done, but can't seem to find the time to do?
    - Can your intern get them started?
    - Can I help him/her design part of the project to get it moving?

Project Ideas

Project Ideas

Topic: Working With Children

Internship Sites:

1) Day Care
2) Children's Hospital
3) Schools – elementary and preschool
4) After school programs
5) Zoo
6) Children's Museum
7) Toy Store
8) Arts and craft centers
9) TV station (children's programming); author (children's books)
10) Children's Theater

1) Help students with reading, Math
2) Art Projects
3) Design and run a unit specific to the needs of the group (nutrition, hygiene, multiculturalism, oral history, music)
4) Beginning Internet
5) Design Bulletin Boards
6) Plan and help on a trip
7) Newsletter to parents
8) Helping with the food budget
9) Immunization Awareness Clinic
10) Organize open house for parents
11) Create guides for parents about health and nutrition, etc.
12) Marketing materials – new pamphlet, evaluation of the preschool based on parent and student feedback.
13) Lead paint awareness and testing.
14) Create a garden with the students
15) Redesigning the room (or a specific part of the room – like the nap area).

Depth of Goals in Advisory:

For project - #3 Create a Unit on a specific area

Description: Student and Mentor work together to create a unit on Cultural Diversity.

Learning Goals

Communication:

- Writing – a survey, creating a poster or billboard for the classroom unit, materials for the lesson. Writing the reflections and research.
- Speaking – running activities, speaking with parents,
- Reading – Read research materials
- Creative Expression – look into the music and art of those countries.
- Foreign Language – translate materials into the languages of the background.

Social Reasoning:

- Understanding Diverse Perspectives: understand different cultures and
- how they are viewed.
- Locate all countries of origin on a map and basic research on the countries. (could choose one country to do an in depth research on the country).
- Research on racism and stereotypes (hate crimes, biases, etc).
- Run advisory activities about these back at school, replicate this back at school.

Common Interests and Project Ideas (continued)

Empirical Reasoning:

- Developing Hypothesis to Test Ideas: Create a hypothesis around stereotype statements for the students to agree or disagree with.
- Research – research with framing questions and multiple diverse sources around stereotypes and the country backgrounds.

Quantitative Reasoning:

- Analysis of the data (from the hypothesis testing). Both pre and post lesson and analyze the results.
- Percentages and graph of what cultural backgrounds are in the room, compare to providence as a whole and the US in general.

Personal Qualities:

- Respect, responsibility, perseverance, organization, leadership, self-awareness.

Topic: Animals

Possible LTI sites:

1. Veterinary Clinic
2. Zoo
3. Farm
4. Horse stable
5. Horseback riding center
6. Aquarium
7. Environmental Organizations
8. Field Biologist (often also college professor)
9. Wildlife photographer/videographer
10. Pet store
11. Pet groomer
12. Dog trainer
13. Animal Handler/Trainer
14. Animal Control Officer
15. Parks Department – Fish and Game
16. Forest Ranger
17. Paleontologist
18. Animal Shelter
19. Kennel
20. Dog Walker
21. Bird/Wildlife Sanctuary
22. Wild Animal Rehabilitation Organization

Possible Projects for a student at an Animal Shelter (#18):

1. Work with local media to highlight one animal a week for adoption.
2. Create and print pamphlet about transitioning a new cat or dog into your home.
3. Learn to identify behavioral signs in cats and dogs. Keep a record of behaviors and use the data to give extra play time and attention to those in need.

Common Interests and Project Ideas (continued)

4. Creating behavioral enrichment toys for the animals to keep them active and healthy.
5. Writing for and designing the Shelter's newsletter.
6. Creating statistical reports about the animals for the Shelter that can be used for fundraising and grant writing.
7. Write a grant for the Shelter to upgrade or expand the facility.
8. Hold a fundraiser dinner to benefit the shelter.
9. Organize an adopt-a-pet drive in the community.
10. Create an ad for local TV aimed at encouraging people to adopt, rather than purchase, their next pet.
11. Research and recommend new products to carry in the Shelter's pet supply area.
12. Put together an educational packet for people who adopt a pet including information about spaying and neutering, rabies and other common illnesses, feeding and care of their new pet.
13. Create a professional wall display of photos of shelter animals to display in the entrance of the shelter.
14. Create a short video documentary about the life of an animal at the shelter to be shown at the local film festival.

Details of the Project - Holding a Gala dinner fundraiser to benefit the shelter (#8):

Communication:

- Create a detailed project proposal and timeline
- Read about the work of the shelter, it's history and mission.
- Network in the community to create interest in the event.
- Write/design promotional mailings and posters for the event.
- Take high quality photos of shelter animals to use in the print materials and to decorate the dining hall.
- Talk professionally with vendors for the event (caterer, dining hall, etc.)
- Write a final project paper documenting all the research and work that went into this project.

Quantitative Reasoning:

- Get prices for all aspects of the event.
- Create a budget for a 150 person Gala Dinner.
- Project profits based on number of people attending.
- Graph projected budget and creating a formula to describe the projection.
- Compile persuasive statistics about the plight of shelter animals.
- Create compelling and professional graphs depicting these statistics.

Empirical Reasoning:

- Read current research. Find out about trends in the health and number of feral domestic animals and what new strategies are being tried.

Social Reasoning:

- Create informational materials for the event that explain the life of a shelter animal and the important work done by the shelter for the community.
- Find quotes that support the humane treatment of animals to adorn the dining hall.

Common Interests and Project Ideas (continued)

- Read about other local and national organizations that work to benefit animals. Contacting these organizations to see if they'd like to support or endorse the event.
- Create materials that show how the proceeds from this event will directly help animals in need.

Personal Qualities:

- Organize all research and information.
- Be responsible for all details for the event.
- Persevere through difficult aspects of the project
- Manage time so that the event will be a success.
- Use journal to reflect on the process.

Topic: Health/Medicine

Possible LTI sites:

1. Hospital (All Departments: Doctors, Emergency Room, Social Services, Information Technology, Translation, Food Services, etc.)
2. Clinic
3. Forensics Lab
4. Pediatrician's office
5. Specialist (eye doctor, foot doctor, etc.)
6. Physical Therapist
7. Occupational Therapist
8. Nurse
9. Certified Nursing Assistant
10. Nursing home
11. Birthing center
12. Department of Health
13. Health Insurance company
14. Pharmaceutical company
15. Medical researcher (hospital, private or university affiliated)
16. Midwife
17. Sports medicine
18. Nutritionist
19. Strength and Conditioning Trainer
20. Immunization clinic
21. Non-profit health organizations (e.g. Childhood Lead Action Project, Immunization awareness group)
22. Public Health researcher
23. Health teacher/Health education program
24. Planned Parenthood
25. Health correspondent for local news or paper
26. School-based Health Center

Common Interests and Project Ideas (continued)

Possible Projects for a student interning with a nurse (#8):

1. Learn to take vitals and understand measurements (blood pressure, blood O2 level, pulse, temperature)
2. Create informational materials for patients about specific conditions and ways to prevent and treat them (e.g. high blood pressure, type II diabetes, high cholesterol, obesity)
3. Conduct research through a survey or interview for patients to find out how they view their nursing care and what would improve their experiences.
4. Compile and analyze patient statistics for the nursing department to learn about the demographics of patients, common ailments and amount of care required.
5. Create an illustrated (or photographic) dictionary for all the equipment and supplies used by nurses at the LTI site.
6. Write an introductory manual for new nurses working at the LTI site.
7. Create a photographic essay about the nursing staff to display.
8. Write an article for the local paper about the work nurses do every day in the community.
9. Research the nursing career and the current nurse shortage. Use the findings to teach local students more about this job.

Project Specifics for a student creating informational materials for patients on high blood pressure (#2):

Communication:

- Write detailed project proposal and timeline
- Read information on high blood pressure.
- Read other pamphlets for patients to figure out the appropriate reading level.
- Write out information about the disease, causes, prevention and treatment.
- Find or create visuals to use in the pamphlet
- Learn to use a layout program
- Work with mentor to create professional pamphlet – both in content and style.
- Write a project paper containing all the research and work involved in this project.

Quantitative Reasoning:

- Analyze national statistics about blood pressure. Create graphs to show standard deviation.
- Create graphs to depict the blood pressure data gathered in the study (see Empirical Reasoning section).
- Learn about the units of measurement for blood pressure.

Common Interests and Project Ideas (continued)

Empirical Reasoning:

- Make a hypothesis about blood pressure of students at school based on demographic research. Take the blood pressure of a random sample of students. Discuss how they compare to national norms and what you think impacts the blood pressure of this population.
- Learn how a blood pressure can be determined with the equipment – how the equipment works and what the physics formula is that governs pressure.

Personal Qualities:

- Reflection in journal throughout project.
- Using research to influence own nutritional and exercise choices.
- Leadership – sharing information with advisory and school.

Topic: Computers - Hardware

Internship Sites:

1) Retail Computer sales
2) Computer Repair stores
3) Information Systems or IT person at many places :
   - hospital
   - banks
   - schools and universities
   - law offices
   - museums
   - libraries
   - hotels
4) Non-profits that re-condition computers to give out.
5) Tech School Teachers

Project Ideas:

Internship site: Acme Advertising Agency

1) Test computers for performance
2) Make brochures/manuals on repair, upgrading, protocol
3) Improving Computer performance
4) Trouble – shoot networking
5) Input and test new memory (Upgrade)
6) List of FAQs (frequently asked questions) for the workers around the computers, the system, or the network.
7) Upgrade or buy new equipment – cost/benefit analysis
8) Review and analyze backup system
9) Workplace health issues and ergonomics – make materials, gather hardware, and run trainings on this.
10) Trainings about use of computers and protocols.

Common Interests and Project Ideas (continued)

Depth of Goals in Advisory:
For project - #7: Upgrade or buy new equipment – cost/benefit analysis

Description: The mentor has asked the student to present to him and his boss a plan/ suggestions to either replace or upgrade the fifteen computers in the accounts management division.

Communication:

- Writing – The plan and PowerPoint
- Speaking – Presenting to the mentor and boss – using a professional
  - Presentation outline; phone calls to contact people about the
  - Prices and specs of new computers & disposal of old computers.
- Reading – Reading research on new computers and recycling.
- Computers and Multimedia
  - Understanding of new computer hardware, process or recycling, use of Powerpoint.

Social Reasoning:

- Understanding Diverse Perspectives: Impact of computer disposal on the community; cleaning up and donating computers to the community or to organizations in other countries
  - Research the inequity of different communities and their computing capability.
- Past History: Understanding the need for computer upgrades – Moore's Law; history of computer change over the past 20 years.

Empirical Reasoning:

- Developing Hypothesis to Test Ideas: Make a hypothesis – or choose one of the options, research and test. Highlight diversity of resources, supporting ideas with evidence then presenting.
- Analyze what type of computers and features to buy for the new computers.
- Research: Finding and documenting credible/ diverse resources.

Quantitative Reasoning:

- Understanding the numbers that will effect the decision of the computers you will buy; understanding the cost of keeping the computers (repair, tech support, service contracts, depreciation); Analysis of the data (from the hypothesis testing).
- Comparison Shopping – look at different models (of computers) and different scenarios.
- Create a budget on Excel
- Figure out how to graphically present their information so that it best displays, visually, what they have been working on.

Personal Qualities:

- Responsibility
- Respect
- Organization
- Perseverance
- Cooperations

Advisor RWL Reflection

As you move forward with your RWL work, this tool can serve to guide your self-assessment of practice.

Purpose, hope, and life satisfaction in three age groups

Kendall Cotton Bronk[a]*, Patrick L. Hill[b], Daniel K. Lapsley[b],
Tasneem L. Talib[a] and Holmes Finch[a]

[a]*Ball State University;* [b]*University of Notre Dame*

(*Received 6 February 2009; final version received 21 September 2009*)

Using the Revised Youth Purpose Survey (Bundick et al., 2006), the Trait Hope Scale (Snyder et al., 1991), and the Satisfaction with Life Scale (Diener, Emmons, Larsen, & Griffin, 1985), the present study examined the relationship among purpose, hope, and life satisfaction among 153 adolescents, 237 emerging adults, and 416 adults ($N = 806$). Results of this cross-sectional study revealed that having identified a purpose in life was associated with greater life satisfaction at these three stages of life. However, searching for a purpose was only associated with increased life satisfaction during adolescence and emerging adulthood. Additionally, aspects of hope mediated the relationship between purpose and life satisfaction at all three stages of life. Implications of these results for effectively fostering purpose are discussed.

Keywords: purpose in life; life satisfaction; hope; adolescence; emerging adulthood; adulthood; meaning; subjective well-being

Introduction

Researchers in the field of positive psychology have increasingly focused on the role purpose and hope play in human thriving. A growing body of theoretical and empirical literature suggests that having a purpose in life contributes to optimal human development in a variety of ways. For example, theoretical research identifies purpose as a developmental asset (Benson, 2006) and an important component of human flourishing (Seligman, 2002). Empirical research finds that it is associated with greater levels of happiness (French & Joseph, 1999) and resiliency (Benard, 1991).

Youth with purpose are psychologically healthier than their peers (Shek, 1993), and the same appears to hold for adults (Crumbaugh & Maholick, 1967; Kish & Moddy, 1989). Measures of related concepts yield similar findings. For instance, Antonovsky (1987) found that coherence, which measures a global feeling about the comprehensibility, manageability, and meaningfulness of the world, is associated with physical and psychological health. Similarly, Debats (1998) found that higher purpose scores were significantly negatively correlated with psychological distress.

Purpose also appears to play a role in overcoming life's challenges. Victor Frankl (1959) was one of the first psychologists to propose that having a high-level belief system, such as a purpose in life, enabled people to endure life's hardships. With regards to youth, Erikson (1968) reported that purpose helps young people successfully navigate and resolve their identity 'crises'.

Moreover, a strong sense of purpose underscores prosocial moral action and civic engagement. Higher scores on the Purpose in Life test predict altruism (Noblejas de la Flor, 1997; Shek, Ma, & Cheung, 1994) and positive affect (Noblejas de la Flor, 1997), and higher scores on scales of generativity, a related construct, correlate with greater involvement in social and political activities (McAdams, 2001).

Theoretical research points to a possible positive correlation between purpose and subjective well-being. According to Seligman (2002) there are three primary paths to happiness. The first route involves experiencing as many of life's pleasures as possible and results in short-term happiness. The other two routes produce longer lasting, deeper forms of contentment. The second, also called the good life, involves becoming deeply involved in those activities in which one excels and losing oneself in the process, and the third, the meaningful life, involves pursuing a path in which a cause or an institution supplies a sense of commitment to something greater than oneself. In this way, demonstrating a concern for the world beyond the self is required for achieving the most lasting form of well-being. Pursuing a purpose involves aspects of both the good life and the meaningful life, and in this way purpose is indirectly linked to subjective well-being.

Empirical research further bolsters the claim that purpose and subjective well-being are significantly related. For example, high scores on McAdams' generativity measures (McAdams & de St. Aubin, 1992) have shown that a strong sense of generativity in midlife is associated with subjective well-being. Generativity includes, of course, a strong purpose in establishing and guiding future generations (Erikson, 1950). Similarly, Ryff has shown that high scores on her purpose in life sub-scale are associated with a subjective sense of well-being (Keyes, Shmotkin, & Ryff, 2002; Ryff & Keyes, 1995).

In each of these cases, the researchers conceive of purpose in a broader way than the present study does. Purpose, as these studies define it, includes both internally-directed as well as externally-directed sources of meaning in life. While we find this conception of purpose useful, we believe a more novel approach to the construct is warranted. Damon, Menon, and Bronk (2003) offer a new definition of purpose which conceives of the construct in a slightly different way. According to their definition, purpose is a 'stable and generalizable intention to accomplish something that is at once meaningful to the self and leads to productive engagement with some aspect of the world beyond the self' (Damon et al., 2003). This definition of purpose includes three important components. First, a purpose represents an ultimate aim toward which one can make progress. Second, a purpose is meaningful to the self. This may sound obvious, but the emphasis on self-meaning underscores the fact that the pursuit of purpose is voluntary and self-motivated. The individual, rather than peers, parents, or others, serves as the driving force behind the intention.

Finally, and perhaps most importantly, as well as being meaningful to the self, a purpose is meaningful to others as well. In other words, a purpose in life represents an intention to act in the larger world on behalf of others or in pursuit of a larger cause. Personal meaningfulness represents one important component of the construct, but purpose also includes the intention to contribute to matters larger than the self, and this desire to have an impact on the broader world serves as a significant motivational force for purposeful individuals. As such, it represents a central component of the construct. This other-focused orientation distinguishes purpose from some earlier conceptions of the term as well as from meaning. Because meaning represents one of the essential aspects of purpose, examining results from this related construct can, in some cases, be illuminating; however, it is important to keep in mind that purpose also includes a critical beyond-the-self focus which is not captured in the meaning construct. The present study makes use of the Damon et al. (2003) definition for two primary reasons. First, we believe it is valuable to distinguish purpose from meaning, which this definition does, and second, this externally-oriented conception of purpose includes an important social orientation that other definitions lack.

Similar to purpose, hope also plays a significant role in the positive psychology literature. It has been identified as a character strength (Peterson & Seligman, 2004) and as a cognitive-focused member of the positive psychology family (Snyder & Lopez, 2005). Like purpose, the hope construct represents a focus on significant future aims, and yet it has not been investigated in relation to purpose.

In the 1960s and 1970s, a number of definitions of hope were offered. One group of scholars defined hope as 'the perception that one's goals could be attained' (Cantril, 1964; Farber, 1968; Frank, 1975; Melges & Bowlby, 1969; Menninger, 1959; Schachtel, 1959). A second group of scholars put forth a two-part definition: 'Hope includes a belief that one knows how to reach one's goals (Pathways) and a belief that one has the motivation to use those pathways to reach one's goals (Agency)' (Snyder, Rand, & Sigmon, 2005). In other words, hope involves both *the will* ('Agency') to pursue certain ends and *the way* ('Pathways') to do to so effectively. We believe this latter definition captures the essence of that which is involved in hopeful, goal-directed thought, and at the same time is consonant with our everyday understanding of the term. Therefore, the present study relies on this definition of hope.

The 'will and the way' of hope shares features with Bandura's (1977, 1982, 1997) notion of self-efficacy; however, important differences between the constructs exist as well. As Snyder (2002) pointed out, both self-efficacy and hope theory perceive of goals as central, but the nature of the goals they conceive of differs. While individuals can feel efficacious about any fairly important, situation-specific goal, hoped for aims are 'enduring, cross-sectional, situational, goal-directed, or all three' (Snyder, 2002, p. 257). In self-efficacy thinking, people are posited to analyze the contingencies in a specific goal attainment situation (outcome expectancy); in hopeful thinking, the focus is on self-analysis of one's overall ability to produce workable plans required to reach one's goals. Another important difference lies in the way the individual evaluates his or her capacity to carry out an action. The efficacy expectancy reflects one's perception that he or she *can* act effectively, whereas the hope theory emphasizes one's perception that he or she *will* act effectively. Finally, empirical research confirms that hope and self-efficacy are indeed distinct concepts (Magaletta & Oliver, 1999).

This conception of hope also overlaps with optimism, though these constructs also feature important differences. Both hope and optimism are cognitive in nature and explain behavior across situations

(Scheier & Carver, 1985; Snyder, 1995). However, according to Scheier and Carver (2000), optimism posits that people perceive of themselves as being able to move toward desirable goals and away from undesirable ones. Therefore, outcome expectancies are the primary elicitors of goal-directed behaviors. With hope, however, outcome expectancies are only part of the equation. In addition to believing that an individual is capable of being successful, hopeful individuals also believe they have the means of acting successfully (Snyder, 1995). Empirical differences between hope and optimism have also been found (Magaletta & Oliver, 1999).

The former president of the Republic of Czechoslovakia, Vaclav Havel (1990), pointed out another important distinction between people's everyday use of the terms hope and optimism. In a statement about hope, he defined the construct as 'a state of mind, not of the world ... [It] is not the same as joy that things are going well or a willingness to invest in enterprises that are obviously heading for success, but rather, an ability to work for something because it is good, not just because it stands a chance to succeed. The more propitious the situation in which we demonstrate hope, the deeper the hope is' (Havel, 1990, p. 181). In other words, hope is not the same as optimism that things will work out for the best, but a belief that some things are worth working toward or fighting for because they are right, regardless of how they turn out.

The present study sought to address three primary questions around purpose, hope, and life satisfaction. First, what is the subjective experience of life satisfaction associated with purpose? Second, does hope influence the relationship between purpose and life satisfaction, and if so how? Third, does the relationship among these variables differ during adolescence, emerging adulthood, or adulthood?

Based on knowledge of the research conducted on purpose, hope, and life satisfaction as well as a broad understanding of human development, the authors of the present study formulated several hypotheses. First, we hypothesized that the present study's conception of purpose would be positively associated with life satisfaction. Since empirical research establishing a direct relationship between the present study's conception of purpose and life satisfaction has not been conducted, our hypothesis was based on findings from related constructs. For example, empirical research on internally-focused conceptions of purpose determined that the construct mediated the relationship between life satisfaction and suicide ideation (Heisel & Flett, 2004). Other research established a positive relationship between internally-oriented conceptions of purpose and life satisfaction (Keyes et al., 2002; Ryff & Keyes, 1995), and research on the related construct of meaning (Chamberlain & Zika, 1988) generated a similar conclusion.

Second, we expected to find that purpose and hope work in tandem. Both constructs are future oriented, and both reflect a goal orientation. Purpose represents an intention to pursue an ultimate concern while hope represents a belief that one knows how to and has the will to make progress toward that highest aim. Further, at least theoretically, hope seems to play a critical role in keeping purposeful individuals committed to their aims over time. Remaining committed to one's purpose over time, despite setbacks and challenges, would likely be facilitated by a sense of hope. In support of this assumption, Mascaro and Rosen (2005) found that the related construct of meaning was positively related to hope, and Bronk (2005) found that optimism, a virtue that shares features with hope, was a defining characteristic of youth with intense commitments to a purpose in life. Therefore, we expected to find that hope played an important mediating role between purpose and life satisfaction.

Finally, we hypothesized that differences would arise around the relationship among these three variables with respect to age. Unfortunately, empirical research on age related trends associated with purpose, hope, and life satisfaction individually are not particularly useful in forming a hypothesis about the way the three constructs will function together. For example, studies of age-related differences associated with purpose differ based on which measure is being administered. When the Purpose in Life test (Meier & Edwards, 1974; Sato & Tanaka, 1974) is administered, purpose appears to be more prevalent among younger individuals, but when the purpose subscale of Ryff's well-being scales (Ryff & Keyes, 1995) is administered, the prevalence of purpose appears to increase with age. Further, a study of meaning determined that searching for meaning was more common among younger adults while older adults were more likely to have identified a source of meaning for their lives (Steger, Oishi, & Kashdan, 2009). Hope (Snyder, 2000, 2003) and life satisfaction (Diener & Suh, 1998), however, appear to be more stable across the lifespan. Since these findings shed little light on the way purpose, hope, and life satisfaction together are likely to vary by age, our hypothesis is based more on a general understanding of human development and on a theoretical argument.

We expected to find that identifying a purpose for one's life would be associated with higher life satisfaction scores at all three age points, but that searching for purpose would only be associated with increased levels of life satisfaction at the adolescent and emerging adult stages of life. Searching for purpose during adulthood, we predicted, would be associated with decreased life satisfaction scores. These findings seemed probable given that the search for purpose appears to take place in conjunction with the search for identity (Erikson, 1968), and the search for identity is largely associated with the adolescent and emerging adult life stages. Also, in the United States searching for purpose is a socially accepted, even expected, activity for adolescents and emerging adults but not for adults, who are expected to have already identified a purpose for their lives. Therefore, the authors posited that searching for purpose at this life stage would be associated with decreased levels of life satisfaction.

The purpose of this study is to clarify the way the purpose construct functions in the lives of adolescents and young adults. To that end, we believe the findings shall make important scholarly as well as practical contributions to the growing field of positive youth development. The search for purpose in life and how this construct contributes to optimal human development is a topic of increasing interest to positive psychology scholars, and the results of this study shall reveal under what circumstances purpose and hope act as indicators of and contributors to human thriving. Further, the findings shall shed light on the nature of this more externally-oriented conception of purpose, a construct which has garnered increasing attention from positive youth development researchers (see Benson, 2006; Damon, 2009). In particular, the results shall help further distinguish purpose from meaning, and further distinguish purpose from hope. From a practical perspective, results shall provide information regarding how and when to effectively foster purpose. Specifically, results shall reveal much about the subjective experience of leading a life of purpose and of searching for a purpose for one's life, which shall have important implications for fostering and supporting the development of purpose in youth and adults alike.

Methods

Participants

Participants in this study included 153 adolescents (Mean age = 14.0; $SD = 1.7$), 237 emerging adults (Mean age = 21.0; $SD = 2.0$), and 416 adults[1] (Mean age = 35.5; $SD = 0.5$) ($N = 806$), all of whom completed the requisite informed consent procedures. This sample was selected because while the contours of a purposeful life may begin to form during childhood, research suggests that it does not crystallize much before adolescence, and indeed, is a project that endures across the lifespan (Damon, 2009). The sample was 47% male and included individuals who either lived or attended college in the Midwest. Representing the ethnic make-up of the Midwest data collection location, the sample was predominantly Caucasian (White/Non-Hispanic = 86%; Black/African American = 4%; Asian/Asian American = 3%; Hispanic/Latino = 3%; American Indian/Alaska Native = 1%; Other = 3%). Adolescent and emerging adult participants were recruited by invitation through their middle and high schools, whereas the adults in the study volunteered to participate in a larger study following their trajectory from college graduation. The scales for this study represented a small subset of the full battery of surveys completed by the participants.

Measures

Participants completed three surveys. The Revised Youth Purpose Survey (Bundick et al., 2006) was designed by members of the Stanford Center on Adolescence, including the first author, to assess the prevalence of purpose among adolescents, emerging adults, and adults. The items are based on various measures designed to assess purpose and related constructs, including the Meaning in Life Questionnaire (Steger, Frazier, Oishi, & Kaler, 2006), the Purpose in Life test (Crumbaugh & Maholick, 1967), and the purpose in life subscale of Ryff's Scale of Psychological Well-being (Keyes et al., 2002); items drawn from these measures were adapted to assess the present study's conception of the purpose construct. As such the scale includes questions that probe one's search for purpose, one's identification of purpose, the engagement of one's purpose, and the relative centrality of one's purpose in life. Repeated use of the survey has revealed that these four components can be collapsed into two subscales: Identified Purpose (15 items, $\alpha = 0.94$), and Searching for purpose (5 items, $\alpha = 0.94$). Participants rated the survey items on a seven-point Likert scale with higher scores indicating greater Identification or more Searching. A sample item from the Identified subscale is 'I have discovered a satisfying life purpose,' and a sample from the Searching subscale is 'I am seeking a purpose or mission for my life'.

The second survey, the Trait Hope Scale (Snyder et al., 1991), assesses participants' confidence that they know how to reach their goals and that they have the ability to do so. As such, like the Revised Youth Purpose Scale, the Trait Hope Scale also consists of two subscales, including: Agency, or one's determination towards a goal or direction (the 'will' component), and Pathways, or one's ability to find ways around obstacles confronted in life (the 'way' component). The hope scale was analyzed as a unitary construct, but also as separate Agency and Pathways subscales because these components point to different aspects of hope, which seemed likely to relate in different ways to the purpose construct. For example, it seems possible that *the will* to pursue one's purpose would differ from knowing *the way* to achieve one's ultimate aims. Participants rated the eight items on a four-point Likert scale[2] with higher scores indicating a greater sense of hope. A sample item from the Agency subscale (4 items, $\alpha = 0.87$) is 'I energetically pursue my goals'. A sample item from the Pathways subscale (4 items, $\alpha = 0.86$) is 'I can think of many ways to get the things in life that are most important to me'.

Finally, participants completed the Satisfaction with Life Scale (Diener et al., 1985). This scale is designed to measure global cognitive judgments of satisfaction with one's life. Participants rated the five items on a seven-point Likert scale with higher scores indicating greater satisfaction. A sample item from the scale (five items, $\alpha = 0.87$) is 'In most ways my life is close to ideal'.

Results

To examine the relationship among purpose, hope, and life satisfaction during adolescence and adulthood, separate statistical analyses were performed for the adolescent, emerging adult, and adult subgroups. Two primary analyses were conducted. First, correlations were run to assess the relationship among purpose and the positive psychology outcomes, including hope (Agency and Pathways) and life satisfaction. Second, multiple regressions tested whether hope mediated the relationship between purpose and life satisfaction.

Correlational analyses

Among the adolescent sample, the Identified and Searching for Purpose subscales were positively correlated. The Identified Purpose subscale was also significantly positively correlated with the Agency subscale, the Pathways subscale, and the Satisfaction with Life Scale. Searching for Purpose was also positively correlated with the Agency subscale, the Pathways subscale, and the Satisfaction with Life Scale. Descriptive statistics and a summary of the adolescent life stage correlational analyses can be found in Table 1.

Results were essentially the same for the emerging adult sample. Among this sample, the Identified and Searching for Purpose subscales were positively correlated, and the Identified Purpose subscale was also significantly positively correlated with the Agency subscale, the Pathways subscale, and Satisfaction with Life Scale. The Searching for Purpose subscale was similarly positively correlated with Agency, Pathways, and the Satisfaction with Life Scale. Descriptive statistics and the emerging adulthood correlational analyses can be found in Table 2.

Interesting differences arose, however, with the adult sample. Within this subgroup, the Identified Purpose and Searching for Purpose subscales were negatively correlated. The Identified Purpose subscale was positively correlated with the Agency subscale, the Pathways subscale, and the Satisfaction with Life Scale, while the Searching for Purpose subscale was negatively related to the Agency subscale, unrelated to the Pathways subscale, and negatively related to Satisfaction with Life. It would appear then, that while searching for purpose during adolescence and emerging adulthood is predictive of life satisfaction, doing so during the early to middle adult life stage is

Table 1. Descriptive statistics and correlational analyses for the adolescent sub-group.

	Mean	St. Dev.	Identified purpose	Searching for purpose	Hope (Agency)	Hope (Pathways)	Life satisfaction
Identified purpose	73.96	16.15	1				
Searching for purpose	23.45	6.28	0.72***	1			
Hope (Agency)	12.53	1.91	0.44***	0.36***	1		
Hope (Pathways)	12.82	1.99	0.21*	0.17*	0.4***	1	
Life satisfaction	24.25	6.27	0.46***	0.31***	0.45***	0.17*	1

Note: Adolescents completed the Hope Scale using a four-point Likert scale, which is reflected in the mean scores.
$p > 0.1$; $^{*}p < 0.05$; $^{**}p < 0.01$; $^{***}p < 0.001$.

Table 2. Descriptive statistics and correlational analyses for the emerging adult sub-group.

	Mean	St. Dev.	Identified purpose	Searching for purpose	Hope (Agency)	Hope (Pathways)	Life satisfaction
Identified purpose	81.89	12.87	1				
Searching for purpose	24.78	5.69	0.69***	1			
Hope (Agency)	12.93	1.69	0.46***	0.34***	1		
Hope (Pathways)	12.58	2.51	0.24***	0.13*	0.38***	1	
Life satisfaction	25.79	5.34	0.33***	0.29***	0.41***	0.15*	1

Note: Emerging adults completed the Hope Scale using a four-point Likert scale, which is reflected in the mean scores.
$p > 0.1$; $^{*}p < 0.05$; $^{**}p < 0.01$; $^{***}p < 0.001$.

Table 3. Descriptive statistics and correlational analyses for the early to middle adult sub-group.

	Mean	St. Dev.	Identified purpose	Searching for purpose	Hope (Agency)	Hope (Pathways)	Life satisfaction
Identified purpose	81.28	13.82	1				
Searching for purpose	21.02	8.28	−0.23***	1			
Hope (Agency)	26.6	3.59	0.67***	−0.16**	1		
Hope (Pathways)	25.61	3.86	0.42***	−0.05	0.65***	1	
Life satisfaction	26.98	5.53	0.66***	−0.23***	0.58***	0.36***	1

Note: Adults completed the Hope Scale using an eight-point Likert scale, which is reflected in the mean scores.
$p > 0.1$; *$p < 0.05$; **$p < 0.01$; *** $p < 0.001$.

not. A summary of the descriptive statistics and correlational analyses for the adult sub-group can be found in Table 3.

Mediational model tests

Regressions were performed to assess whether the two hope subscales and the unitary hope scale mediated the relationship between the Identified Purpose subscale and the Satisfaction with Life Scale. Following the guidelines of Baron and Kenny (1986), this analysis requires one to assess whether the predictor variable (Identified Purpose) predicts the outcome variable (Satisfaction with Life). Second, the predictor variable needs to predict the mediator (Agency and Pathways). Third, the mediator must predict the outcome variable. Finally, if there is a mediator effect, the regression coefficient of the predictor on the outcome should decrease when controlling for the mediator. A full mediational effect would be indicated if the coefficient is no longer significant. If the coefficient remains significant, partial mediation can be assessed using a Sobel test (1982). Therefore, in all, up to five different tests may be performed for the two mediational models; all effects were thus tested against an alpha level of 0.01, in line with a Bonferroni correction.

The Agency subscale mediated the relationship between identified purpose and life satisfaction among all three sub-groups. Among adolescents, emerging adults, and adults, a significant positive relationship emerged between the Identified Purpose subscale and the Satisfaction with Life Scale (Adolescents: $\beta = 0.42$, $t(130) = 3.71$, $p < 0.001$; Emerging Adults: $\beta = 0.27$, $t(220) = 3.03$, $p = 0.003$; Adults: $\beta = 0.65$, $t(294) = 14.75$, $p < 0.001$), the Identified Purpose subscale positively predicted the mediator Agency (Adolescents: $\beta = 0.45$, $t(129) = 3.99$, $p < 0.001$; Emerging Adults: $\beta = 0.44$, $t(220) = 5.30$, $p < 0.001$; Adults: $\beta = 0.66$, $t(277) = 14.70$, $p < 0.001$), and Agency positively predicted life satisfaction (Adolescents: $\beta = 0.33$, $t(129) = 3.96$, $p < 0.001$; Emerging Adults: $\beta = 0.30$, $t(219) = 4.44$, $p < 0.001$; Adults: $\beta = 0.27$, $t(276) = 4.49$, $p < 0.001$). At each stage, the regression coefficient for Identified Purpose on life satisfaction decreased (Adolescents: from $\beta = 0.42$ to $\beta = 0.25$, $t(125) = 2.77$, $p = 0.033$; Emerging Adults: from $\beta = 0.27$ to $\beta = 0.13$, $t(218) = 1.50$, $p = 0.14$; Adults: from $\beta = 0.65$ to $\beta = 0.47$, $t(276) = 7.86$, $p < 0.001$) when the mediator Agency was controlled, and the Sobel test of partial mediation was significant at all three age groups (Adolescents: $z = 2.78$, $p = 0.005$; Emerging Adults: $z = 1.92$, $p = 0.005$; Adults: $z = 4.29$, $p < 0.001$).

Next, the Pathways subscale as a mediator of Identified Purpose and Satisfaction with Life was tested. Among adolescents, Pathways was not significantly predicted by Identified Purpose ($\beta = 0.23$, $t(130) = 1.83$, $p = 0.069$) nor did Pathways predict life satisfaction ($\beta = 0.07$, $t(125) = 0.88$, $p = 0.383$). Within the emerging adult subgroup, the mediator Pathways was predicted by Identified Purpose ($\beta = 0.30$, $t(220) = 3.26$, $p = 0.001$), however Pathways did not predict life satisfaction ($\beta = 0.05$, $t(219) = 0.76$, $p = 0.448$). Finally, among the early to middle adult sample, the Identified Purpose positively predicted Pathways, $\beta = 0.44$, $t(278) = 8.08$, $p < 0.001$, and Pathways positively predicted life satisfaction, $\beta = 0.11$, $t(275) = 2.62$, $p < 0.05$. Controlling for Pathways, the regression coefficient for Identified Purpose only decreased slightly when predicting life satisfaction, $\beta = 0.60$ (vs. 0.65), $t(275) = 11.79$, $p < 0.001$. A Sobel test of this partial mediational effect was significant, $z = 2.16$, $p < 0.05$.

Finally, when examining hope as a unitary construct, not surprisingly, the results were roughly the average of those for the separate subcomponents. Identified Purpose predicted Hope for adolescents ($\beta = 0.41$, $t(126) = 5.04$, $p < 0.001$), emerging adults ($\beta = 0.42$, $t(222) = 6.96$, $p < 0.001$), and adults ($\beta = 0.60$, $t(275) = 12.39$, $p < 0.001$). Moreover, Hope predicted Life Satisfaction for all three groups: adolescents ($\beta = 0.25$, $t(125) = 2.91$, $p < 0.01$); emerging adults ($\beta = 0.23$, $t(221) = 3.40$, $p < 0.01$); adults ($\beta = 0.20$, $t(274) = 3.66$, $p < 0.01$). Similar to the analyses for the Pathways component, Hope as a unitary construct only served to mediate the relationship between Identified Purpose and Life Satisfaction for adults

($z = 3.52$, $p < 0.01$) and not for adolescents ($z = 0.684$, $p < 0.05$) or emerging adults ($z = 0.667$, $p > 0.05$).

Discussion

The search for purpose, and how this construct contributes to flourishing, adaptation, and a life well-lived, is a topic of increasing interest to the growing field of positive psychology. In the present paper we adopted a model of purpose developed by Damon et al. (2003). This model suggests that searching for purpose and having an identified purpose might lead to differential outcomes depending on when they are experienced during the life-course. Furthermore, we hypothesized that the relationship between purpose and various outcomes might not be a direct one. Having an identified purpose might prove unavailing if one lacked knowledge of how to enact one's purpose or if one lacked the requisite sense of Agency to pursue it. In other words, having the 'will' may be important, but knowing 'the way' may be decisive. Hence the purpose of this paper was to explore the relationship among purpose, hope, and life satisfaction in three age groups: adolescence, emergent adulthood, and adulthood.

Results from the present study point to at least two interesting and theoretically important conclusions regarding purpose at these three stages of life. First, having identified a purpose in life is associated with greater life satisfaction in adolescence, emerging adulthood, and adulthood. Searching for a purpose, however, is associated with greater life satisfaction for adolescents and emerging adults, but not for adults. Second, the Agency subcomponent of hope mediates the relationship between purpose and life satisfaction at all three stages of life, but the Pathways subcomponent and the full hope scale only mediate the relationship during adulthood. These conclusions shed light on the important role purpose plays in healthy human development, and they have significant implications for how and when to effectively foster purpose.

The first finding, that having identified a purpose in life is associated with higher ratings of life satisfaction, supported our hypothesis. Research on internally-focused conceptions of purpose came to the same conclusion, but this is the first study to empirically connect this externally-oriented conception of purpose with life satisfaction. Furthermore, the finding is robust since it appears at all three life stages.

Next, we had expected to find that searching for purpose was positively related to life satisfaction during adolescence and emerging adulthood and negatively related during adulthood. The results supported our hypothesis on each of these points, except that the relationship between searching for purpose and life satisfaction was not significant. According to Erikson (1968), the search for identity, of which purpose may serve as a central component, is the main task of the adolescent and to a lesser degree the emerging adult stage of life. As such, in this culture it is a normative experience for adolescents and emerging adults to be actively involved in searching for a life purpose. Therefore, it is not surprising to find that doing so is associated with higher levels of life satisfaction. However, we expect that by the time people reach adulthood they have resolved (at least to a some degree) this search for identity, and with it discovered a purpose for their lives. Not surprisingly, the search for purpose during adulthood then is not associated with increased levels of life satisfaction.

It is interesting to compare these first two results to those reported by Steger et al. (2006), regarding their development of the Meaning in Life Questionnaire with undergraduate samples. They report a two-factor structure similar to the Youth Purpose Scale, with two subscales that measured the 'presence of' or 'search for' Meaning in Life. Similar to our results with the Identified Purpose subscale, they found that the presence of meaning was linked to greater life satisfaction. However, searching for meaning was negatively related to life satisfaction in their emerging adult sample, whereas we evidenced a positive relationship between searching for purpose and life satisfaction in our emerging adult sample. We believe this discrepancy speaks to two related points. First, as previously stated, personal meaningfulness represents one important component of purpose, but purpose and meaning are not synonymous. Purpose also includes a significant concern for individuals or causes beyond the self. Second, further research is needed to examine the complex relationship between meaning and purpose, and moreover how these constructs differentially predict outcomes throughout the lifespan.

The next noteworthy conclusion is the consistent presence of hope among individuals with purpose. While we cannot tell from the present study which comes first, purpose or hope, it is interesting to note that at all three stages of life aspects of hope were significantly related to purpose. The present study found that the Agency component of hope mediated the relationship between identified purpose and life satisfaction, for adolescents, emerging adults, and adults. In other words, people who have identified a purpose for their lives report feeling content when they feel motivated to work toward their ultimate aim. Not only is having identified a purpose for one's life associated with greater life satisfaction, but feeling confident that one has the will to progress toward his or her ultimate aim, is also associated with greater life satisfaction.

The findings around the Pathways subscale and the full hope construct are somewhat more complex, but they point to another interesting finding with possible developmental implications. For adolescents and emerging adults, believing that one knows how to achieve his or her ultimate aim does not mediate the relationship between purpose and life satisfaction; however, for adults it partially mediates this relationship. These findings suggest that adolescents and emerging adults need only to feel they have the will to reach their ultimate aim (they do not need to believe they know how to go about doing so) in order to feel satisfied with their lives. By young adulthood, however, the relationships between purpose and life satisfaction is mediated by the belief that one has the will and knows the way to reach his or her ultimate aim.

While our results are novel and need further examination, these developmental differences warrant theoretical speculation. It is possible that during adolescence and emerging adulthood, individuals are not as concerned with having a 'means' to achieve their goals, but rather are focused more on the mere identification of these goals. Such an interpretation is supported further by our results regarding searching for a purpose, as this construct was positively related to life satisfaction during these two developmental periods. However, by adulthood, it becomes more important to not only have a will but a way for achieving one's goals in life. Again we believe such results are in line with Erikson's (1950, 1959, 1968) lifespan theory. During adolescence and emerging adulthood, individuals are focused simply on defining 'who they are'. By young and middle adulthood, though, individuals shift their focus to social and occupational productivity. Given such a shift, it is unsurprising that, for adults, life satisfaction was more closely tied to having commitments (such as an identified purpose) and having found strategies by which to achieve their goals (i.e., Pathways).

Implicit in this discussion of purpose, hope, and life satisfaction is a strong individualistic bias. An individual discovers the purpose for his or her life along with the means and motivation for achieving that aim in order to feel content. It is possible, perhaps even likely, that in less individualistic cultures the nature of the relationship among these variables would look quite different. One might expect that in a collectivistic culture, for example, an individual may feel as though the purpose for his or her life was bestowed upon him or her as a result of social roles and responsibilities, and that discovering the means and motivation for achieving that purpose might not be up to the individual, but instead up to a higher being or a social group. A study of meaning uncovered interesting differences between the search for meaning and the identification of a source of meaning in life between an individualistic and collectivistic culture (Steger, Kawabata, Shimai, & Otake, 2008). However, as previously mentioned, while meaning is an important component of purpose, it does not capture the other-oriented aspect of the purpose construct. As such, future studies should further explore potentially significant cultural and contextual differences around the relationship among purpose, hope, and life satisfaction. The results of this study also continue to underscore that purpose and hope, while related, are distinct constructs. With the possible exception of the adult sample, the correlations between these constructs were strong, but clearly not of the magnitude one would expect if they were synonymous.

As with all studies, this one features certain limitations. For example, information on participants' socio-economic background was not gathered. Given the possibility that resources available for pursuing one's goals may have an impact on hope and life satisfaction, future studies on the topic should include these data. Also, given the broad age range (from roughly 11 to 35 years of age) it is possible that a cohort effect explains at least some of the differences around the prevalence of purpose, hope, and life satisfaction at these different age points. At a minimum, the participants experienced very different social, political, and economic worlds which may have influenced their views of purpose and hope. Therefore, there are limitations of the cross-sectional nature of this study that could have been accounted for with a longitudinal design.

Differences in levels of educational attainment present another possible limitation of this study. Research has yet to be conducted which examines the role educational attainment plays in the formation of life purposes, but it seems logical that it could play an important role. The present study attempted to minimize the effects of educational differences by including participants who were college bound, in college, or college graduates; however, it is possible that differences pertaining to the adult sample can be explained at least in part by their higher level of educational attainment.

Despite shortcomings, we believe the present study offers useful guidance to researchers and practitioners interested in fostering purpose and life satisfaction. Clearly we believe that the differences around purpose, hope, and life satisfaction are significantly influenced by what the culture says is acceptable and expected at different life stages. Therefore, one route to improving adult's life satisfaction would be to alter the social and cultural norms around the expectations for identifying a purpose for one's life. Rather than expecting that by adulthood individuals should have discovered a purpose for their lives, social norms could emphasize that the pursuit of purpose is a lifelong process. Just as we consider learning to be a lifelong endeavor, our culture could conceive of purpose as an enduring aim. Or social norms could emphasize the satisfaction that comes from searching for, rather than only from identifying, a purpose for one's life. Large-scale changes in social norms do happen, but they tend to be slow to take place. Therefore, on a less sweeping but perhaps more immediate level, another route to improving life satisfaction might be to be more attentive to the timing and types of supports for purpose offered during the life-course.

Convinced of the positive role purpose plays in healthy development, researchers have increasingly begun to call for fostering purpose among young people (see Benson, 2006; Damon, 2009). Findings from the present study have important implications for the type and timing of support that is likely to be most effective. This study suggests that different types of interventions are more likely to be effective at different stages. For example, during adolescence and emerging adulthood, young people may benefit most from being encouraged to search for purpose as this will help them achieve a sense of satisfaction with their lives. Adults, however, need to have identified a purpose in order to achieve that same sense of satisfaction. Therefore, the ideal time to actively engage with individuals around the issue of purpose may be during late childhood or early adolescence. Supports designed to help young people discover inspiring life purposes and to determine how to work toward them should be offered throughout adolescence and emerging adulthood. The results of this study do not necessarily suggest that finding purpose after emerging adulthood is impossible, but they do conclude that the subjective experience of searching for purpose after this point is likely to be an uncomfortable one. Of course, many worthy pursuits in life are uncomfortable. That does not mean they are not worthwhile, however, it does suggest that fostering purpose at this stage of life may be more challenging than doing so at an earlier stage. Therefore, the best time to intervene with a program designed to foster purpose may be from late childhood through emerging adulthood.

The findings from the present study also suggest that the type of support that is most effective changes during these different stages of life. During adolescence and emerging adulthood young people need to be encouraged to engage in a broad and varied search for purpose, and they should also be encouraged to focus on how they plan to make progress toward their purposes in life. Exploring both the content of their purpose as well as the different ways in which they could effectively work in pursuit of it would increase the likelihood of maintaining their respective purposes over time. By emerging adulthood individuals need to be encouraged to begin to hone their search, and assistance narrowing down options should be offered. Again, these young people should be encouraged to consider not only what they hope to accomplish in their lives but also how they are going to go about working toward their ultimate aim. By early to middle adulthood, support should take the form of helping individuals maintain and expand or redirect their purposes in life as fostering purpose at this point is likely to be more challenging.

Acknowledgements

This research used, with permission, the Revised Youth Purpose Survey instrument from the Stanford Center on Adolescence Youth Purpose Project, funded in part by the John Templeton Foundation and the Thrive Foundation for Youth. Portions of this study were also generously supported by an internal grant from the Institute for Scholarship in the Liberal Arts at the University of Notre Dame.

Notes

1. The mean age of this group was 35 years of age. According to Erikson (1959), 'early adulthood' ends around 35 years of age and 'middle adulthood' begins at this same age. Since this group is between these two stages, we refer to them as 'adults'.
2. The adult sample completed this survey using an 8-point Likert scale.

Education *for* Change
Public Schools

MTSS Overview
2017-18 Launch
August 2, 2017

+ EFC Vision p. 2

We will provide a **superior public education** to Oakland’s most underserved children by creating a system of public schools that **relentlessly focuses on our students’ academic achievement**. We believe that **high quality instruction**, and its continuous refinement, will lead to success for our students. When our students succeed, they will be prepared to make thoughtful and informed choices

that will set them on **a path for a successful life**.

EFC Core Values

We collaborate. We are a team. We plan together, observe and analyze each other's work, collaborate with our coaches and site leaders, partner with our families, and together make decisions about our programming

We reflect, learn, adapt, and innovate. We approach our practice with an inquiry stance and a growth mindset; we analyze, innovate, and iterate every day so that we continually improve. We believe in coaching and developing people at every level of experience, at every level of the organization.

We are solutions-oriented. We approach every challenge with a problem-solving orientation. We listen to and encourage each other. We are resilient in the face of adversity.

We hold ourselves accountable to our mission. Our mission is to provide a superior public education to Oakland's most underserved children. We assume personal accountability for student growth; we analyze multiple forms of data, and that analysis drives our instruction.

+ EFC Core Values (cont.)

We hold ourselves accountable to our mission. Our mission is to provide a superior public education to Oakland's most underserved children. We assume personal accountability for student growth; we analyze multiple forms of data, and that analysis drives our instruction.

We are committed to the whole child and will personalize to meet children's needs. We form close relationships, utilize personalized learning, differentiate instruction, make learning culturally relevant, engage families, and provide individualized interventions to meet the needs of every child.

We listen. We are a small, responsive organization that values student, family, and employee voice and input.

National Performance - SPED

The student population MOST likely to be suspended - African American and Special Education…

Most revealing, students in the largest category of disabilities – those identified as having a "Specific Learning Disability" (LD) such as dyslexia – have cognitive abilities that range from low average to above average. Yet, national data show that in high school **at least one fifth of them are reading at five or more grade levels below their enrolled grade level, and close to half are three or more grades below.**

Students with disabilities drop out at about **twice the rate** of their non-disabled peers.

One-fourth of youth with disabilities live in poverty, a higher rate than in the general population

*The **vast majority** of adults in American prisons have a disability. According to the Bureau of Justice Statistics, people behind bars in state and federal prisons are **nearly three times** as likely to report having a disability as the nonincarcerated population, while those in jails are more than four times as likely.*

***Almost half** of the people who die at the hands of police have some kind of disability…*

+ What's Possible

"The ***vast majority*** *of special education students (80-85 percent)* ***can meet the same achievement standards*** *as other students if they are given specially designed instruction, appropriate access, supports and accommodations, as required by IDEA."*

To the contrary, while current school reform movements "importantly emphasize higher expectations… **this national effort fails to dismantle an enduring school culture that overlooks the capabilities of far too many children and continues to fall back on the sorting of children for different (and often inferior) educational trajectories."** This national failure results in students with disabilities, including students with relatively mild disabilities, being left out and left behind.

Our Investment in SPED

$4.5 million total expense

$1,446/student total expense

$740/student Gen Ed contribution

Mission: Student Support Services p. 2

Our mission is for students with diverse learning needs to have access to personalized supports that facilitate educational opportunity in their pursuit of becoming lifelong learners. The Department of Student Support Services at EFC has two primary foci:

1. Provide quality services to students with IEPs - services that **facilitate access** to and success with the General Education program, **accelerates growth** towards personalized goals, and meets all the **requirements of the law.**
2. Build capacity of school site leaders to develop, manage, and implement a **powerful and comprehensive Multi Tiered System Of Supports (MTSS)** that provides quality academic, socio-emotional, behavioral, health, and other personal interventions and mitigations for students not making adequate progress in the General Education program.

Beliefs: Student Support Services p. 2

- The focus of our work as educators should not be on labels or compliance but on ensuring **children get what they need to be successful in school;**
- **Special Education is a service, not a place**. All students have the right to be fully included in General Education classrooms with their typical peers for the greatest extent possible (least restrictive environment);
- A school-based support team can achieve tremendous success for students if they **collaborate to develop and implement an appropriate plan** that documents areas of need and outlines culturally relevant supports and goals to address the areas of need;
- Through thoughtful planning and collaboration, **all students can access a rigorous curriculum**; and
- Real accelerated growth in academic, social-emotional and behavioral areas requires students having **a strong sense of hope and self-efficacy**.

Theory of Action p. 3

If we develop the capacity of our Student Support Services staff to:

1. **Conduct a regular and ongoing cycle of data inquiry** - target setting, plan design and implementation, progress monitoring, plan iteration, etc;
2. Implement quality direct instruction in Reading and Mathematics using a **proven rigorous program**;
3. Utilize a **Universal Design for Learning** (UDL) approach;
4. Collaborate effectively with General Education (GE) staff to **enable student access to rigorous grade level content**; and
5. **Facilitate student agency** and engage students in their own learning plans.

Then:

1. **Student achievement will accelerate** dramatically;
2. **General Education staff will feel supported and confident** in designing and delivering instruction to a diverse range of learners; and
3. **Students will experience a love of learning** and a strong sense of personal agency around their education.

What is a continuum of support?
How does it apply to our work? p. 4

More Universal

Strategies and supports to benefit all students
- UDL
- PBIS
- MTSS

Least Restrictive Environment

More intense/Individualized

Highly Individualized strategies and support system
- Modifications and accommodations
- Behavior Intervention Plan
- Specially designed Instruction

+ EFC Approach

1. Deep belief that ALL students can achieve
    - Mission statement reflects ALL students can achieve
    - Inclusion as an organizational and school value
    - Principals communicate that all staff are responsible for all of the children in their building and students with IEPs are not “owned” by special education staff
        - School administrators schedule special education staff according to the school-wide need for student support and students’ IEPs (not on basis of disability type, program or label alone)

2. Unified System of Supports
    - MTSS
    - Strong universal instruction. Utilize UDL and collaborative teaching practices in combination with targeted small group instruction and intervention

2. Co-Teaching. Collaboration. Consultation. Push In. Pull Out. Learning Lab.
    - We do not have one model of service delivery.
    - Student needs drive goals and student goals drive services.
    - The majority of our students spend the majority of their day in the general education setting. Our education specialists and related service providers collaborate with all members of the IEP team to carry out the IEP.
    - Strategic planning & thoughtful collaboration.
    - Academic acceleration.
    - Army of support providers.

Menu of Evidence-Based Interventions	Tier One	Tier Two	Tier Three
School-Wide Positive Behavioral Interventions & Supports: *An evidence-based framework for improving student academic and behavior outcomes by ensuring that all students have access to the most effective and accurately implemented instructional and behavioral interventions possible. Used in support of students of all ages.*	X	X	X
Second Step: *An evidence-based social emotional curriculum designed to teach students self-regulation, executive functioning, empathy, communication and problem solving skills. Developmentally-based curriculum available for students in K-8th grade.*	X	X	
Olweus Bullying Prevention: *An evidence-based model that includes school-wide and classroom level interventions to address and prevent bullying, for use in elementary through high school*	X	X	
Incredible Years. *An evidence-based parenting program that provides parents the skills and understanding to address challenging behaviors. Used with parents of children aged 6 to 12.*	X	X	X
Collaborative Problem Solving: *An evidence-based model that addresses specific behavioral difficulties through a collaborative process that identifies what skills would help students successfully avoid and/or navigate their specific challenge, and ensuring that those skills are taught and practiced by the student. Used in support of students of all ages.*	X	X	X
Cognitive Behavioral Intervention for Trauma in Schools (CBITS). *An evidence-based practice that targets youth in 5th through 12th grade who have witnessed or experienced traumatic life events. Designed to reduce symptoms of post-traumatic-stress disorder (PTSD), depression, and behavioral problems, and to improve functioning, grades and attendance, peer and parent support, and coping skills.*		X	X
Aggression Replacement Training. *An evidence-based practice that teaches social skill, anger management, and moral reasoning to youth ages 11 to 17.*		X	X
Functional Behavioral Assessment (FBA): *A scientifically validated approach, the FBA process assists in determining the purposes of specific behaviors so that interventions can be designed to address the negative behavior and reinforce more appropriate alternative behaviors. Model versions of FBA such as* ***Prevent, Teach, Reinforce (PTR)*** *may be used as appropriate. Used in support of students of all ages.*			X

Joseph Star's Story

Strengths: Joseph is a bright, articulate, and persuasive 11 year old boy. He has a good sense of humor and enjoys connecting with others through performance and jokes. Joseph's parents describe him as attentive, detail oriented, "advanced for his age", helpful, "thinks fast on his feet", and someone who takes care of other people. He is creative, sensitive, and takes pride in his appearance. Joseph enjoys sports, music, and dancing. School staff report that he is a fast learner with an infectious smile who is open to trying almost any food and has built strong bonds with adults who he trusts.

History: From the time of Joseph's birth, his parents have engaged in significant conflict in their relationship with one another which has included verbal and physical altercations, both before and since their separation. Within the past year, Joseph has witnessed physical altercations between his mother and step-mother as well as verbal altercations between his parents and has been denied access to one or the other parent at different times.

Joseph's behavioral problems started when Joseph was in kindergarten. His mother attributes his emotional dysregulation to an early traumatic experience in which Joseph shot a gun and accidentally hit his grandmother in the foot. The behaviors escalated significantly in second grade, when his grandmother passed away.

Presenting Behaviors: Joseph often speaks disrespectfully to school staff and peers, has difficulty following directions, engages in classroom disruptions, refuses to complete assigned tasks, and has engaged in assaultive behaviors. He often blames others for his misbehavior and has difficulties taking responsibility for his actions. In addition, Joseph is easily annoyed/angered, has low frustration tolerance, and struggles to control his impulses. He is unresponsive to consequences, often minimizing the impact of his behavior on others or dismissing the importance of his behaviors to his own well-being. Recently, Joseph engaged in assaultive behaviors in the community which resulted in police involvement. Joseph's behaviors are significantly affecting his academic and social progress and have placed him at risk of losing his current school placement throughout his enrollment.

At the onset of intervention, the **mild** form of the behavior occurred 10 times per day and consisted of ignoring directions by saying "no," contradicting directions, arguing with caregivers, attempting to redirect or distract caregivers, singing, humming, and making distracting noises. The **moderate** form of the behavior occurred 5 times per day and consisted of Joseph banging objects on his desk in class, swearing and threatening caregivers and peers. The **severe** form of the behavior occured 2 times per week and consisted of Joseph assaulting peers and leaving the classroom without permission.

Interventions Utilized:

- Intensive individual and family therapy (provided separately for each caregiver), which consisted of:
    - Relational work to improve Joseph's understanding of himself in relationship with others, his ability to trust and rely on others for support, and his willingness to respect and set boundaries in order to preserve his safety and the safety of others.
    - Cognitive Behavioral Therapy (downward arrow, thought records, chain analysis, etc) to increase Joseph's awareness of triggers and enhance his understanding of the connection between thoughts, feelings, and behaviors.
    - Unconditional positive regard in order to build rapport and create a safe space for Joseph to talk about his emotions and needs.
    - Teaching parenting skills using the Positive Parenting Program (Triple P).
    - Structural Family Therapy.
    - Psychoeducation to caregivers and school staff to help develop awareness of how non-verbal and verbal communication impacts relationships and behaviors.
    - Collaborating with teachers, administrators, and parents to develop and consistently implement interventions across all supporting adults and environments.

Joseph Star's Story

- Therapeutic Behavioral Services, which consisted of
    - Daily one-on-one behavioral coaching.
    - Modeling to teach Joseph how to communicate effectively.
    - Teaching coping skills through games and role play.
    - Teaching anger management and frustration tolerance using STAR- Stop, Think and Replace (an intervention intended to disrupt and reduce engagement in the target behavior by allowing an opportunity to think of and use a replacement behavior).
    - Behavioral modification strategies (behavior contracts, positive reinforcement, routines and schedules, behavior charts, token economy, nonverbal cueing, predictable consequences, etc) to encourage use of pro-social replacement behaviors.
    - Using emotion identification charts to recognize, identify and verbalize emotions.
    - Teaching replacement behaviors to decrease engagement in the target behavior:
        - Relaxation strategies: deep breathing
        - Taking a time-limited walk
        - Physical exercise: tether-ball, stretching, push-ups
        - Retreating to a less stimulating area
        - Verbalizing his thoughts, feelings and needs to caregivers
        - Using communication cube to verbalize thoughts, feelings and needs to caregivers
        - Use of hand signals to communicate

Interventions by the Minute	Therapeutic Behavioral Services	Individual/Family Counseling	Additional Time (Including Resource Support and One-to-One Help
Minutes	30,582	8,707	17,440

Outcomes based on Treatment Goals:

1. Joseph has decreased his engagement in physical and/or verbal altercations from 2 times per week to 1 time per month as measured by reports from the client, the family, and school staff.

2. Joseph appropriately utilizes replacement behaviors 4 out of 5 times per week, up from 0 times in November of 2011.

3. Joseph is accessing pro-social coping strategies to manage frustration in 4 out of 5 Opportunities, an increase from a baseline of 1 out of 5 at treatment's start.

4. Joseph remains in the classroom 90% of the day as measured by school staff and teacher report.His baseline in November of 2011 was 30%.

5. Joseph graduated from TBS in January after successfully meeting his treatment goals.

EDUCATION FOR CHANGE

UNIFORM COMPLAINT POLICY AND PROCEDURES

Scope

The Education for Change (the "Charter School") policy is to comply with applicable federal and state laws and regulations. The Charter School is the local agency primarily responsible for compliance with federal and state laws and regulations governing educational programs. Pursuant to this policy, persons responsible for conducting investigations shall be knowledgeable about the laws and programs which they are assigned to investigate. This complaint procedure is adopted to provide a uniform system of complaint processing for the following types of complaints:

(1) Complaints of discrimination against any protected group including actual or perceived, including discrimination on the basis of age, sex, sexual orientation, gender, ethnic group identification, race, ancestry, national origin, religion, color, or mental or physical disability, or on the basis of a person's association with a person or group with one or more of these actual or perceived characteristics in any Charter School program or activity; and

(2) Complaints of violations of state or federal law and regulations governing the following programs including but not limited to: special education, Title II, Section 504 of the Rehabilitation Act, consolidated categorical aid, No Child Left Behind, migrant education, career technical and technical education training programs, child care and development programs, child nutrition program.

The Charter School acknowledges and respects every individual's rights to privacy. Discrimination complaints shall be investigated in a manner that protects [to the greatest extent reasonably possible] the confidentiality of the parties and the integrity of the process. While the Charter School cannot guarantee anonymity of the complainant, this includes keeping the identity of the complainant confidential, as appropriate and except to the extent necessary to carry out the investigation or proceedings, as determined by the Chief Executive Officer ("CEO") or designee on a case-by-case basis.

The Charter School prohibits any form of retaliation against any complainant in the complaint process, including but not limited to a complainant's filing of a complaint or the reporting of instances of discrimination. Such participation shall not in any way affect the status, grades or work assignments of the complainant.

Compliance Officers

The Governing Board designates the following compliance officer(s) to receive and investigate complaints and to ensure the Charter School's compliance with law:

Hae_Sin Thomas
Chief Executive Officer
Education for Change
2430 Coolidge Ave
Oakland, CA 94601
510-568-7936

The CEO or designee shall ensure that employees designated to investigate complaints are knowledgeable about the laws and programs for which they are responsible. Designated employees may have access to legal counsel as determined by the CEO or designee.

Notifications

The CEO or designee shall annually provide written notification of the Charter School's uniform complaint procedures to students, employees, parents/guardians, the Governing Board, appropriate private officials or representatives, and other interested parties.

The CEO or designee shall make available copies of the Charter School's uniform complaint procedures free of charge.

The notice shall:

1. Identify the person(s), position(s), or unit(s) responsible for receiving complaints.

2. Advise the complainant of any civil law remedies that may be available to him/her under state or federal discrimination laws, if applicable.

3. Advise the complainant of the appeal process pursuant to Education Code Section 262.3, including the complainant's right to take the complaint directly to the California Department of Education ("CDE") or to pursue remedies before civil courts or other public agencies.

4. Include statements that:

    a. The Charter School is primarily responsible for compliance with state and federal laws and regulations;

    b. The complaint review shall be completed within 60 calendar days from the date of receipt of the complaint unless the complainant agrees in writing to an extension of the timeline;

    c. An unlawful discrimination complaint must be filed not later than six months from the date the alleged discrimination occurs, or six months from the date the complainant first obtains knowledge of the facts of the alleged discrimination;

d. The complainant has a right to appeal the Charter School's decision to the CDE by filing a written appeal within 15 days of receiving the Charter School's decision; and

e. The appeal to the CDE must include a copy of the complaint filed with the Charter School and a copy of the Charter School's decision.

Procedures

The following procedures shall be used to address all complaints which allege that the Charter School has violated federal or state laws or regulations governing educational programs. Compliance officers shall maintain a record of each complaint and subsequent related actions.

All parties involved in allegations shall be notified when a complaint is filed, when a complaint meeting or hearing is scheduled, and when a decision or ruling is made.

- Step 1: Filing of Complaint

  Any individual, public agency, or organization may file a written complaint of alleged noncompliance by the Charter School.

  A complaint alleging unlawful discrimination shall be initiated no later than six months from the date when the alleged discrimination occurred, or six months from the date when the complainant first obtained knowledge of the facts of the alleged discrimination. A complaint may be filed by a person who alleges that he/she personally suffered unlawful discrimination or by a person who believes that an individual or any specific class of individuals has been subjected to unlawful discrimination.

  The complaint shall be presented to the compliance officer who shall maintain a log of complaints received, providing each with a code number and date stamp.

  If a complainant is unable to put a complaint in writing due to conditions such as a disability or illiteracy, Charter School staff shall assist him/her in the filing of the complaint.

- Step 2: Mediation

  Within three days of receiving the complaint, the compliance officer may informally discuss with the complainant the possibility of using mediation. If the complainant agrees to mediation, the compliance officer shall make arrangements for this process.

  Before initiating the mediation of a discrimination complaint, the compliance officer shall ensure that all parties agree to make the mediator a party to related confidential information.

  If the mediation process does not resolve the problem within the parameters of law, the compliance officer shall proceed with his/her investigation of the complaint.

  The use of mediation shall not extend the Charter School's timelines for investigating and resolving the complaint unless the complainant agrees in writing to such an extension of time.

- Step 3: Investigation of Complaint

  The compliance officer is encouraged to hold an investigative meeting within five days of receiving the complaint or an unsuccessful attempt to mediate the complaint. This meeting shall provide an opportunity for the complainant and/or his/her representative to repeat the complaint orally.

  The complainant and/or his/her representative shall have an opportunity to present the complaint and evidence or information leading to evidence to support the allegations in the complaint.

  A complainant's refusal to provide the Charter School's investigator with documents or other evidence related to the allegations in the complaint, or his/her failure or refusal to cooperate in the investigation or his/her engagement in any other obstruction of the investigation, may result in the dismissal of the complaint because of a lack of evidence to support the allegation.

  The Charter School's refusal to provide the investigator with access to records and/or other information related to the allegation in the complaint, or its failure or refusal to cooperate in the investigation or its engagement in any other obstruction of the investigation, may result in a finding, based on evidence collected, that a violation has occurred and may result in the imposition of a remedy in favor of the complainant.

- Step 4: Response

  OPTION 1:

  Unless extended by written agreement with the complainant, the compliance officer shall prepare and send to the complainant a written report of the Charter School's investigation and decision, as described in Step #5 below, within 60 days of the Charter School's receipt of the complaint.

  OPTION 2:

  Within 30 days of receiving the complaint, the compliance officer shall prepare and send to the complainant a written report of the Charter School's investigation and decision, as described in Step #5 below. If the complainant is dissatisfied with the compliance officer's decision, he/she may, within five days, file his/her complaint in writing with the Board.

  The Board may consider the matter at its next regular Board meeting or at a special Board meeting convened in order to meet the 60 day time limit within which the complaint must be answered. The Board may decide not to hear the complaint, in which case the compliance officer's decision shall be final.

  If the Board hears the complaint, the compliance officer shall send the Board's decision to the complainant within 60 days of the Charter School's initial receipt of the complaint or within the time period that has been specified in a written agreement with the complainant.

- Step 5: Final Written Decision

  The Charter School's decision shall be in writing and sent to the complainant. The Charter School's decision shall be written in English and in the language of the complainant whenever feasible or as required by law.

  The decision shall include:

  1. The findings of fact based on evidence gathered.

  2. The conclusion(s) of law.

  3. Disposition of the complaint.

  4. Rationale for such disposition.

  5. Corrective actions, if any are warranted.

  6. Notice of the complainant's right to appeal the Charter School's decision within fifteen (15) days to the CDE and procedures to be followed for initiating such an appeal.

  7. For discrimination complaints arising under state law, notice that the complainant must wait until 60 days have elapsed from the filing of an appeal with the CDE before pursuing civil law remedies.

  8. For discrimination complaints arising under federal law such complaint may be made at any time to the U.S. Department of Education, Office for Civil Rights.

  If an employee is disciplined as a result of the complaint, the decision shall simply state that effective action was taken and that the employee was informed of the Charter School's expectations. The report shall not give any further information as to the nature of the disciplinary action.

<u>Appeals to the California Department of Education</u>

If dissatisfied with the Charter School's decision, the complainant may appeal in writing to the CDE within fifteen (15) days of receiving the Charter School's decision. When appealing to the CDE, the complainant must specify the basis for the appeal of the decision and whether the facts are incorrect and/or the law has been misapplied. The appeal shall be accompanied by a copy of the locally filed complaint and a copy of the Charter School's decision.

Upon notification by the CDE that the complainant has appealed the Charter School's decision, the CEO or designee shall forward the following documents to the CDE:

1. A copy of the original complaint.

2. A copy of the decision.

3. A summary of the nature and extent of the investigation conducted by the Charter School, if not covered by the decision.

4. A copy of the investigation file, including but not limited to all notes, interviews, and documents submitted by all parties and gathered by the investigator.

5. A report of any action taken to resolve the complaint.

6. A copy of the Charter School's complaint procedures.

7. Other relevant information requested by the CDE.

The CDE may directly intervene in the complaint without waiting for action by the Charter School when one of the conditions listed in Title 5, California Code of Regulations, Section 4650 exists, including cases in which the Charter School has not taken action within 60 days of the date the complaint was filed with the Charter School.

Civil Law Remedies

A complainant may pursue available civil law remedies outside of the Charter School's complaint procedures. Complainants may seek assistance from mediation centers or public/private interest attorneys. Civil law remedies that may be imposed by a court include, but are not limited to, injunctions and restraining orders. For discrimination complaints arising under state law, however, a complainant must wait until 60 days have elapsed from the filing of an appeal with the CDE before pursuing civil law remedies. The moratorium does not apply to injunctive relief and is applicable only if the Charter School has appropriately, and in a timely manner, apprised the complainant of his/her right to file a complaint in accordance with 5 CCR 4622.

UNIFORM COMPLAINT PROCEDURE FORM

Last Name: ______________________________ First Name/MI: ____________________

Student Name (if applicable): ________________________ Grade: _____ Date of Birth: ________

Street Address/Apt. #: ____

City: ______________________________ State: __________ Zip Code: ____________

Home Phone: _____________ Cell Phone: ______________ Work Phone: _______________

School/Office of Alleged Violation: ____

For allegation(s) of noncompliance, please check the program or activity referred to in your complaint, if applicable:

☐ Adult Education ☐ Consolidated Categorical Programs ☐ Nutrition Services

☐ Career/Technical Education ☐ Migrant and Indian Education ☐ Special Education

☐ Child Development Programs

For allegation(s) of unlawful discrimination/harassment, please check the basis of the unlawful discrimination/harassment described in your complaint, if applicable:

☐ Age ☐ Ethnic Group Identification ☐ Religion

☐ Ancestry ☐ Gender ☐ Sex (Actual or Perceived)

☐ Color ☐ National Origin ☐ Sexual Orientation (Actual or Perceived)

☐ Disability (Mental or Physical) ☐ Race

☐ Based on association with a person or group with one or more of these actual or perceived characteristics

1. Please give facts about the complaint. Provide details such as the names of those involved, dates, whether witnesses were present, etc., that may be helpful to the complaint investigator.

____

____

____

____

____

____

____

____

____

____

____

____

____

2. Have you discussed your complaint or brought your complaint to any School personnel? If you have, to whom did you take

the complaint, and what was the result?

____

____

____

____

____

____

____

3. Please provide copies of any written documents that may be relevant or supportive of your complaint.

   I have attached supporting documents. ☐ Yes ☐ No

Signature: ____ Date: ________________

Mail complaint and any relevant documents to:

Bilingual classrooms most often have strict language arrangements about when and who should speak what language to whom. This practice responds to diglossic arrangements and models of bilingualism developed in the 20th century. However, in the 21st century, heteroglossic bilingual conceptualizations are needed in which the complex discursive practices of multilingual students, their translanguagings, are used in sense-making and in tending to the singularities in the pluralities that make up multilingual classrooms today. Examining the case of a network of U.S. secondary schools for newcomer immigrants, the International High Schools, this article looks at how students' plurilingual abilities are built through seven principles that support dynamic plurilingual practices in instruction—heterogeneity, collaboration, learner-centeredness, language and content integration, language use from students up, experiential learning, and local autonomy and responsibility. As a result, students become not only more knowledgeable and academically successful but also more confident users of academic English, better at translanguaging, and more plurilingual-proficient. The article presents translanguaging in education as the constant adaptation of linguistic resources in the service of meaning-making and in tending to the singularities in the pluralities that make up multilingual classrooms today.

THE LITERATURE ON BILINGUALISM IN education—whether the education of language majorities or language minorities—has most often treated language groups as if they were static, homogeneous, and monolithic. Thus, models and pedagogies of second-language education and bilingual education developed in the 20th century generally treat groups as if they were monolingual and acquiring an additional language in a stepwise fashion. These programs group students homogeneously by language level, using established pedagogies and instructional materials that are leveled and that use one language at a time.

However, in the 21st century, a monolithic view of ethnolinguistic groups has been increasingly questioned, with scholars pointing to differences created by class, gender, and power (see, e.g., Brubacker, 2009). Furthermore, with globalization and technological innovation, ethnolinguistic communities that had been previously isolated have started to come into contact with different people. Thus, the idea that an additional language could be taught to a monolithic group that starts out as monolingual is no longer viable (see, e.g, García, 2009a).

The Modern Language Journal, 95, iii, (2011)

We argue in this article that the multilingual/multicultural classrooms of today are characterized by an increased plurality of practices. Rather than constructing educational models for a particular type of student who uses one language or the other, we must learn to focus on teaching individuals within multilingual classrooms in which the plurality is created by paying attention to the singularity of the individual student. We speak of teaching for *singularities in pluralities*, extending arguments proposed by Makoni, Makoni, Abdelhay, and Mashiri (in press) in studying language policies in Africa. To the *pluralization of singularity* that has accompanied the “invention” of many African “languages” as different and singular units (Makoni & Pennycook, 2007), Makoni et al. offer the concept of *singularization of plurality*—that is, a focus on the individual differences in the discursive regimes that we call “languages.” The result, then, is the facilitation of communication to improve the lives of speakers of language, instead of promoting a specific language or languages.

In the same way, teaching in today’s multilingual/multicultural classrooms should focus on communicating with all students and negotiating challenging academic content with all of them by building on their different language practices, rather than simply promoting and teaching one or more standard languages. In this article, we use *singularities in pluralities* to refer to the increased plurality of practices—linguistic, educational, cultural—that characterize students in the multilingual/multicultural classrooms of today. Additionally, we use the concept of singularities in pluralities to discuss how teachers’ pedagogies and practices that facilitate learning in these complex contexts must build on students’ singular language practices as part of the classrooms’ pluralities.

This article starts out by reviewing programmatic and theoretical constructs that have been used in the past, as well as those that support our position. It then focuses on one type of education for students who are linguistically diverse—the Internationals Network for Public Schools (INPS)—a group of schools that serve newcomer adolescent immigrants in the United States. We specifically look at the dynamic structures, pedagogies, and language practices in these schools as examples of how to invert schooling structures and subvert traditional language education so as to pay attention to the singularities of students within multilingual classrooms.

FROM MONOLINGUALISM TO LINEAR BILINGUALISM TO DYNAMIC BILINGUALISM IN SCHOOLS

A First Turn: From Monolingualism to Linear Bilingualism

During the second half of the 20th century, schools started to pay more attention to developing the bilingual proficiency of monolingual children, both language majorities and language minorities. This first turn from strictly monolingual schools to more bilingualism in schools coincided with the ethnic revival that took place around the world in the 1960s (Fishman, 1985).

In Canada, Wallace Lambert and his associates showed that bilingualism resulted in positive cognitive advantages (Peal & Lambert, 1962). At the request of Anglophone parents in Québec who wanted their children to become bilingual in order to participate in a Francophone Québec that was gaining political power, Lambert and his associates developed an *early immersion bilingual education* program in St. Lambert, a suburb of Montréal, in 1965 (Lambert & Tucker, 1972).

In the United States, the era of Civil Rights turned the attention of educators to the failure in school of language minorities—in particular, of Mexican Americans, Puerto Ricans, and Native Americans. As a result, bilingual education programs were established, some funded through Congress’s authorization of the Bilingual Education Act (Title VII of the Elementary and Secondary Education Act). In the beginning, some of these programs had a philosophy of maintaining the home language of the children while developing English (*maintenance bilingual education* programs), but very soon, in the 1974 reauthorization of the Bilingual Education Act, programs were defined as transitional, with home languages used only until the children were proficient in English (*transitional bilingual education* programs).

This ethnic revival movement of the second half of the 20th century was also fueled by the independence of many African and Asian countries. As new countries were forged, decisions had to be made about how to teach a multilingual population that was to be schooled in a language that was often “foreign” to them. In many cases, and with the urging and support of the United Nations Educational, Scientific, and Cultural Organization (UNESCO), a transitional bilingual education model was often adopted.

These bilingual education programs—an improvement over the monolingual programs of

FIGURE 1
Additive Versus Subtractive Bilingualism

Additive Bilingualism	Subtractive Bilingualism
L1 + L2 = L1 + L2	L1 + L2 − L1 → L2

the past and which continue today—are shaped by the two models of bilingualism that Lambert (1974) developed—*additive bilingualism* and *subtractive bilingualism*. Additive bilingualism refers to the type of bilingualism Lambert hoped to develop as a result of immersion bilingual education programs in Québec. A child enters school with a first language (L1), a second language (L2) is added, and, as a result, the child becomes a speaker of both languages. The thinking is that the child's bilingualism needs to move toward "ultimate attainment," an endpoint in which the process is complete. Subtractive bilingualism, however, is often what language-minority students get. Students enter school with an L1, and while the L2 is added, the first language is subtracted. The child's bilingualism is moving away from the "ultimate attainment" of bilingualism. Instead, it is moving backward toward the "ultimate attainment" of monolingualism. Both models can be rendered as in Figure 1.

In these conceptualizations of bilingualism, the two languages are seen as having a linear relationship, with the L2 moving forward (additive) or the L1 moving backward (subtractive). In addition, there is a conception of two autonomous languages—an L1 and an L2—and of bilinguals as two monolinguals within one individual.

At the same time, other theories of bilingualism were being developed. No other scholar has contributed more to advancing theoretical frameworks surrounding the changing shape of bilingualism in education than Jim Cummins. Early in 1979, Cummins developed his theory of *linguistic interdependence*, positing that both languages bolster each other in the students' acquisition of language and knowledge. At the same time, Cummins proposed his theory of the *common underlying proficiency*, positing that knowledge and abilities acquired in one language are potentially available for the development of another.

A Second Turn: From Linear Bilingualism to Dynamic Bilingualism

Toward the end of the 20th century, the greater movement of people, goods, and information brought about by globalization, innovations in technology, and changes connected to corporate globalization further impacted our understandings and enactments of bilingualism in education. In some countries of Europe, maintenance bilingual education had been used to educate autochthonous minorities. However, the collapse of totalitarian regimes meant that more national minorities started to claim greater autonomy. Bilingual education became a way of educating children who, after suffering political repression and monolingual schooling, had a broad range of linguistic competence in their own home languages. Thus, bilingual education programs started to change, capturing this greater linguistic heterogeneity. *Developmental bilingual education* programs, more aware of this greater range of language abilities, started to come into being, not only in Europe but also in the United States and other places.

The Deaf, who had been exposed to oralism as a schooling practice throughout the world, with signacy not recognized as valid, started experimenting with developmental bilingual education programs. Deaf educators were mindful of the broad oracy ability ranges in the Deaf community, with some being profoundly deaf and others hard of hearing, and with cochlear implants increasing the diversity of oracy abilities. They were also aware of the broad signing ability in the Deaf community, with most children born to hearing parents and thus arriving at school with little signacy, but others arriving with developmentally appropriate signacy. The signacy and oracy heterogeneity also produced diverse literacy practices. Thus, for the Deaf community, the diversity of signacy, literacy, and oracy meant that only a developmental bilingual education program in which students' different abilities were addressed was adequate (Baker, 2010; Marschark, 2009).

In places in which Indigenous peoples continued to be mostly disempowered (e.g., Latin America), the only way of including the students' home languages was through transitional bilingual education (López, 2006, 2008). However, in countries where Indigenous peoples had gained some measure of political power, while having lost much of their home language proficiency, such as in the case of the Māoris in Aotearoa/New Zealand, *immersion revitalization bilingual education* programs were developed (Berryman, Glynn, Woller, & Reweti, 2010; May, 2004, 2010). In these programs, there was also a great range of linguistic diversity, with Māori bilingual ability being highly heterogeneous. Thus, there was recognition that the students could not be treated as monolingual English speakers, for they could all reach back to bits and pieces of their ancestral language practices in order to develop them further. There was also recognition that Māori children were not two monolinguals in one—a prevalent view of bilingualism in the past that has been challenged by many (see, e.g., Grosjean, 1982, 2010).

Meanwhile, in many countries where bilingualism was becoming the norm, parents started clamoring for bilingual education programs that would make all children bilingual to whichever extent they needed to be competent in different language practices. In the United States, *two-way bilingual education* programs—sometimes called "dual language" programs for political expediency because of the silencing of bilingualism in the United States (see García, 2009a; García & Kleifgen, 2010)—started to be implemented. Two-way bilingual education programs educate together language-majority and language-minority children in two languages, separating languages by teacher, subject, or part of the day or week. These programs grew out of the political desirability of educating language minorities together with language majorities, as well as of keeping bilingualism as a possibility to educate language minorities at a time of increased attacks against transitional bilingual education programs. In Europe and other places, *content and language integrated learning (CLIL)* bilingual education programs came into being around the same time. CLIL programs teach at least one subject to all students through the medium of an additional language. (For an excellent treatment of CLIL, see Coyle, Hood, & Marsh, 2010.)

The differences between conceptualizations of bilingualism in these programs of what we are calling the second turn and those that we considered in the previous section of what we are calling the first turn are telling. The programs of the first turn claim an L1 and an L2 for the group of children and have a linear additive or subtractive bilingualism with monolingual norms as the goal. The programs of the second turn, however, conceptualize bilingualism as dynamic (García, 2009a). This dynamic conceptualization of bilingualism goes beyond the notion of two autonomous languages, of an L1 and an L2, and of additive or subtractive bilingualism. Instead, dynamic bilingualism suggests that the language practices of all bilinguals are complex and interrelated; they do not emerge in a linear way. As García (2009a) has said, they do not result in either the balanced two wheels of a bicycle (as in additive bilingualism) or in a unicycle (as in subtractive bilingualism), but instead bilingualism is like an all-terrain vehicle with individuals using it to adapt to both the ridges and craters of communication in uneven terrains (see Figure 2; see also García & Kleifgen, 2010). Dynamic bilingualism sees the complex bilingual language practices as both the center of how language practices occur and the goal for communication in an increasingly multilingual world.

García (2009a) proposed two types of dynamic bilingualism for the 21st century—recursive dynamic and dynamic. *Recursive dynamic bilingualism* characterizes the bilingual development of those individuals who have undergone a high degree of language loss and thus need to recover bits and pieces of their ancestral language practices as they reach back to move forward. *Dynamic bilingualism* refers to the development of different language practices to varying degrees in order to interact with increasingly multilingual communities in a global world.

This second turn in which bilingualism started to be recognized as more dynamic was then characterized by moving away from conceptualizations of language as a monolithic construct made up of discrete sets of skills to a conceptualization of

FIGURE 2
Types of Bilingualism

Note. This figure is adapted from García and Kleifgen (2010). We gratefully acknowledge permission from Teachers College Press to reproduce this figure.

language as a series of social practices that are embedded in a web of social relations that maintain asymmetries of power (Pennycook, 2010; Street, 1984). Pennycook (2010) explained:

> A focus on language practices moves the focus from language as an autonomous system that preexists its use, and competence as an internal capacity that accounts for language production, towards an understanding of language as a product of the *embodied social practices* that bring it about. (p. 9, our emphasis)

In speaking about language as an activity, some scholars refer to *languaging* (Becker, 1995; Makoni & Pennycook, 2007; Maturana & Varela, 1987; Shohamy, 2006). Languaging is different from language conceived simply as a system of rules or structures; languaging is a product of social action and refers to discursive practices of people. Languaging, as Becker (1995) explained, "is shaping old texts into new contexts. It is done at the level of particularity" (p. 9).

Within a dynamic conceptualization of bilingualism, bilinguals are valued for their differing multicompetence (Cook, 2002) because their lives, minds, and actions are different from those of monolinguals. As Herdina and Jessner (2002) have pointed out, the interactions of bilinguals' interdependent language systems create new structures that are not found in monolingual systems. Learning is then not just the "taking in" of linguistic forms by learners, but as Larsen-Freeman and Cameron (2008) have said, "the constant adaptation of their linguistic resources in the service of meaning-making in response to the affordances that emerge in the communicative situation, which is, in turn, affected by learners' adaptability" (p. 135). This view is based on van Lier's (2000, 2004) concept of "affordance," which he defined as a relationship between a learner and the environment "that signals an opportunity for or inhibition of action" (2004, p. 4).

Cummins himself moved away from discussing an L1/L2 dichotomy, characterizing the way in which languages had been conceptualized in bilingual classrooms as "two solitudes" (Cummins, 2007) and calling for bilingual instructional strategies in the classroom as a way of promoting "identities of competence among language learners from socially marginalized groups, thereby enabling them to engage more confidently with literacy and other academic work in both languages" (p. 238).

García (2009a), extending Williams (cited in Baker, 2006), talks about *translanguaging* as the process by which bilingual students and teachers engage in complex discursive practices in order to "make sense" of, and communicate in, multilingual classrooms. According to García (2009a), translanguaging refers to multiple discursive practices as seen from the perspective of speakers themselves. It is the communicative norm of multilingual communities.

Translanguaging builds on the concept of languaging as social practices explained earlier. However, translanguaging also relates to the concept of *transculturación* introduced by the Cuban anthropologist Fernando Ortiz (1940/1995). For Ortiz, transculturation refers to the complex and multidirectional process in cultural transformation, as well as to the questioning of the epistemological purity of disciplines and of the knowing subject. The concept of transculturation thus involves what Mignolo (2000) called "border thinking." Mignolo saw border thinking as "knowledge conceived from the exterior borders of the modern/colonial world system"—that is, "subaltern knowledge" (p. 11). In blending transculturation and languaging, the term *translanguaging* responds to the complex and multidirectional processes in the language practices of people and challenges the view of languages as autonomous and pure, as constructed in Western thought. Translanguaging, then, is a product of border thinking, of knowledge that is autochthonous and conceived from a bilingual, not monolingual, position.

Translanguaging includes codeswitching—defined as the shift between two languages in context—and it also includes translation, but it differs from both of these simple practices in that it refers to the process in which bilingual students make sense and perform bilingually in the myriad ways of classrooms—reading, writing, taking notes, discussing, signing, and so on. However, translanguaging is not only a way to scaffold instruction and to make sense of learning and language; it is part of the discursive regimes that students in the 21st century must perform, part of a broad linguistic repertoire that includes, at times, the ability to function in the standardized academic languages required in schools. It is thus important to view translanguaging as complex discursive practices that enable bilingual students to also develop and enact standard academic ways of languaging.

SINGULAR PLURALITIES AND DYNAMIC PLURILINGUAL EDUCATION

Education for bilingualism (i.e., to teach an additional language) includes types of programs that are bilingual but also some that are monolingual. For example, in the United States, transitional bilingual education programs use two languages to develop English, whereas English-as-a-second-language programs are monolingual programs in which instruction is supposed to be in English. Both, however, are conceived as education for bilingualism because their objective is to teach an additional language. Whether educational programs are monolingual or bilingual and whether they view bilingualism linearly or dynamically, they are often structured as if groups of students need the same language "treatment," as if language and life (or the content they need to learn) were separate. Thus, schools often have language policies and practices that are organized as top–down and are applied to the group or groups as if everyone needed the same. However, all educators need to pay attention to the individual experience of students in their classrooms. John Dewey (1938), the American educational reformer, has said:

> Every experience is a moving force. Its value can be judged only on the ground of what it moves toward and into . . . It is then the business of the educator to see in what direction an experience is heading . . . Failure to take the moving force into account so as to judge and direct it on the ground of what it is moving into means disloyalty to the principle of experience itself. (p. 38)

Recently, one of us (García) was in a fifth-grade two-way bilingual classroom that, although attentive to dynamic bilingualism, demonstrated how organizing classrooms for homogeneous groups of students is often not enough in our complex world. The teacher described the class as being half Latino, half Anglo. However, of course, the individual experiences of the children were far more complex than simply those of two ethnic or linguistic groups. Among the so-called "Latinos," there were monolingual Spanish speakers, monolingual English speakers, and bilingual and trilingual speakers. Not all of the Latinos who were learning English were speakers of Spanish, for in the group there was a recently arrived Mexican indigenous child who spoke Mixteco at home as well as a Paraguayan child who was bilingual in Spanish/Guaraní. Those Latinos who were born in the United States were not necessarily the ones who were English speakers, for some had been born in the United States and had then moved back to Latin America or had moved back and forth over the course of their lifetime. Some who were born in Latin America had been in the United States for a long time and were fluent English speakers, but there were also those who had recently arrived. Latino immigrants to the United States often follow a migration pattern referred to as *step migration*, in which one family member initiates the migration, with children, spouses, and siblings left behind, until the lengthy process of obtaining permanent visas is resolved (Grasmuck & Pessar, 1991). For this reason, the child's language characteristics often have little to do with the language of the home. In this fifth-grade two-way bilingual classroom, often the mother had been in the United States for a long time and spoke English. She sometimes had a new husband and young children whose linguistic repertoires did not coincide with that of the child. There had been divorces, marriages, and recomposition of families, each bringing with them a new set of language practices. There had also been moves to different communities, also accentuating different language practices.

Among the "Latinos" there were class differences, national differences, and racial differences. Among the so-called "Anglos," there were students who spoke English at home, but there were also speakers of Italian, Portuguese, Arabic, Urdu, Gujarati, and Romanian. Although the teacher had been educated as a bilingual teacher and was well versed in theoretical frameworks and pedagogy, she was ignorant of the linguistic complexity of her classroom. In fact, on the first day, when García walked in, the children told her that the Romanian girl was a "Roman." When García inquired further, it became obvious that neither the teacher nor the children had any idea of either the country of Romania nor the Romanian language (nor, incidentally, of whether the child was a Roma from Romania). The teacher had also never heard of Guaraní and had no idea that one of her students was a Guaraní speaker. For her, the job simply was to teach the children in two languages—English and Spanish. Clearly, the individual linguistic, cultural, and schooling experiences of the children were being ignored. This school only structures a language group experience, denying the many individual variations that exist.

Schools that are truly organized to respect the singular pluralities in multilingual classrooms have to let go, then, of some principles that even bilingual education has long held dear. No longer is it possible to isolate languages or to limit instruction to two or even three languages; it is important to create a context in which educators pay close attention to how a student and his or her language practices are in motion—that is, to focus on how the students are engaged in meaningful activities. It is only then that, as Carini (2000) said, "it is possible for the teacher to gain the insights needed to *adjust* her or his own approaches to the child accordingly" (p. 9, our emphasis).

Bilingual education programs often have language allocation policies that dictate when, how, and for how long each language should be used; that is, language allocation policies most often focus on the *macroalternation* of languages. Rarely do these policies include thinking about the *microalternation* of languages, the translanguaging that allows educators to adjust language practices and content to the child. Educators must negotiate sense-making instructional decisions, moment by moment (for educators as language policy makers, see Menken & García, 2010). Bilingualism in education must emerge from the meaningful interaction of students with different linguistic backgrounds and their educators, instead of solely being handed down to educators as language policy.

This pedagogical philosophy of singular pluralities rooted in progressive education, alongside understandings of dynamic bilingualism and its complexities, is what schools must own today. However, at the same time, and especially in the education of language minorities, attention has to be paid to *social justice*. Goldfarb and Grinberg (2002) defined social justice as:

> the exercise of altering these arrangements [difference in terms of power, economic distributions, access to knowledge, and generation of knowledge] by actively engaging in reclaiming, appropriating, sustaining and advancing inherent human rights of equity, equality, and fairness in social, economic, educational, and personal dimensions, among other forms of relationships. (p. 162)

Teacher–student relationships and interactions have to be simultaneously rooted in the singularity of the child's experience and the plurality of experiences and languages that make up the bilingual or multilingual classroom. Recognizing the different language practices of students and focusing on the singularity of the individual experience and the oppression of groups of minority people would enable language minority students to become engaged in their own struggle for liberation and education (Freire, 1970), as well as to invest in the development of their additional language (Norton, 2000).

How schools organize themselves to deliver this instruction depends on the local communities and the characteristics of the students. For example, in the United States, there are schools in residentially segregated neighborhoods where more traditional bilingual education structures are still very much relevant. (See Bartlett & García, 2011 and García & Bartlett, 2007 for an example of one such program for Dominican immigrants in the United States.) But there is also space for more flexible bilingualism in education, emerging not from top–down policies, but from educators' and students' negotiation of bilingual practices (see García, Flores, & Chu, 2011). García and Kleifgen (2010) have called this type of program *dynamic plurilingual education*.

We follow the use of the Council of Europe in reserving the term "plurilingual" for the complex language practices of individuals, whereas using "multilingual" to signal the language practices of classrooms, geographic or political areas, or groups. In the Council of Europe's (2001) view, plurilingualism is:

> The ability to use languages for the purposes of communication and to take part in intercultural interaction, where *a person*, viewed as a social agent, has proficiency of varying degrees, in several languages, and experience of several cultures. This is not seen as the superposition or juxtaposition of distinct competences, but rather as the existence of a complex or even composite competence on which the user may draw. (p. 168, our emphasis)

In schools with a dynamic plurilingual approach, the locus of control for language is the students' own active use—their language/content understandings in motion and in dynamic interrelationship. Regardless of whether classrooms are monolingual (with students of one language group), or bilingual (with students of two language groups), or multilingual (with students of many language groups), instruction is plurilingual, in the sense that each students' languaging is recognized and the pedagogy is dynamically centered on the singularity of the individual experiences that make up a plurality. As such, this pedagogy enables students, as Freire (1970) has said, to learn from each other as well as from teachers, at the same time that teachers learn from the students. In addition, this pedagogy is centered in the dialogical action that promotes understanding. Said another way, in these dynamic plurilingual programs, the direction between the educator and the educated goes both ways. Both are learners and teachers. The pedagogical practices negotiate the dynamic bilingualism of students' individual experiences while actively working against existing forms of domination and exploitation of groups of people. It is then to an example of such schools and how they enact this dynamic plurilingual education that we now turn.

INTERNATIONALS HIGH SCHOOLS

The INPS is a U.S. nonprofit organization that supports the work of 13 public (government-supported) high schools for newcomer immigrant adolescents who are new to English with what is called the "Internationals approach" (Sylvan & Romero, 2002), which we will describe later. As of September 2010, 11 of these Internationals High Schools (IHSs from now on) are located in New York City and 2 in the California Bay Area. Table 1 displays a list of the IHSs in 2010.

In response to the growing immigrant community in New York City and challenges of preparing late-entry immigrant adolescents for the rigors of college study, the first IHS opened in the borough of Queens in 1985. The success of the educational model led to the opening of Manhattan and Brooklyn IHSs in 1993 and 1994 and Bronx International in 2001, as well as the establishment of an Internationals Schools Partnership among the schools to coordinate interschool collaborative projects. With grants from both a federally financed program aimed at disseminating exemplary programs for immigrant students who were new to English and the Annenberg Foundation's "Networks for School Renewal" project in New York City, the Partnership supported new schools as well as provided continuous learning and growth opportunities for all schools and their faculties. In 2004, with support from the Bill and Melinda Gates Foundation, the INPS incorporated and supported the opening of nine more IHSs—seven in New York City and two in California.

Although originally IHSs were linguistically diverse, serving newcomer immigrant adolescents of many language backgrounds who were learning English, two new IHSs have recently opened specifically to serve the large number of Latino immigrants in New York City. Thus, there are two models of IHSs. There is a *multilingual plurilingual model* serving immigrant students with many different home languages and supporting the use of students' many languages in sense-making and learning. There is also a *bilingual plurilingual model* serving immigrant students with Spanish as their home language and using English and Spanish to make instructional meaning in the two schools called Pan American International High Schools (PAIHSs). The important point, however, is that regardless of whether the classrooms are multilingual (with students who speak many languages other than English) or bilingual (with students who speak only Spanish), the pedagogy is a plurilingual one, dynamically centered on the individual students' language practices—that is, on the singularity of the plurality in the classroom (for more on pedagogy at the IHSs, see De Fazio, 1999; see also Walqui & van Lier, 2010).

The Internationals approach was developed based on the understanding that individuals are incredibly diverse and that immigrant adolescents, who are *emergent bilinguals* and arriving with limited knowledge of English, still have a large array of abilities, knowledge, and experiences—linguistic, cognitive, artistic, social, in many other spheres. In the United States, emergent bilinguals are most often referred to as English language learners or limited English proficient. We follow García (2009b) in referring to students who are new to English as emergent bilinguals, thus recognizing their complex abilities and strengths and focusing on their social, emotional, and academic development beyond that of just learning English. Building on the immigrant adolescents' existing strengths and understanding the centrality of language to human culture and individual beings, the Internationals approach focuses on preparing adolescent immigrants to succeed in college and careers in the United States and especially on supporting the development of complex language practices that include academic English language and literacy.

In addition to being newcomer immigrants who are new to English, the IHSs' student population is also poor. In 2009, 92% of students at IHSs were on free or reduced lunch—a measure of poverty—compared to 71% in all New

York City high schools. Yet, despite their poverty, their limited English, and their recent immigration, adolescents at IHSs are doing better, as we will see, than other immigrant emergent bilingual students in New York City.

Traditionally, high school study in the United States consists of 4 years. For newcomer immigrant students, it is difficult to develop the level of academic English required for high school graduation in 4 years. Yet, the graduation rate of emergent bilingual students in the IHSs is 57%. This is 13 percentage points higher than the 44% graduation rate of emergent bilingual adolescents in all high schools in New York City. It takes immigrant adolescents who are learning English sometimes longer than 4 years to pass all of the high school graduation exams. Whereas the high school graduation rate of these emergent bilinguals citywide is 49% after 5 years and 42% after 6 years, the high school completion rate of students in IHSs is 72% after 5 years and 74% after 6 years—that is, 23 percentage points higher after 5 years and 32 percentage points higher after 6 years. Clearly, the IHSs are more successful in graduating immigrant students who are learning English than many other high schools in the city. Likewise, if we compare the rate of success of IHS students in the English Language Arts and Math exams required for graduation with other emergent bilinguals in New York City, 70% of IHS students passed the English Language Arts exam compared with 47% of all emergent bilinguals in New York City high schools. Whereas 82% of IHS students passed the Math exam, 61% of emergent bilingual students in all New York City high schools passed the same exam. (Data from 2009.)

What, then, accounts for the success of these IHSs? Eight principles lie at the core of the IHS instructional design:[1]

1. heterogeneity and singularities in plurality;
2. collaboration among students;
3. collaboration among faculty;
4. learner-centered classrooms;
5. language and content integration;
6. plurilingualism from the students up;
7. experiential learning; and
8. localized autonomy and responsibility.

Before we describe each of these principles of the Internationals approach, we illustrate what classrooms in IHSs might look like.

A SNAPSHOT: IHS CLASSROOMS

The IHS classrooms are noisy, active, and interactive places. Students are generally sitting in groups of three to four, usually at hexagonal or trapezoidal tables so as to promote interaction. They are talking, arguing, trying to make their points, and collaborating on a project together. In so doing, they are using different language practices, including those they bring from home. In a multilingual–plurilingual model classroom, an observer will hear several languages at once and may see materials in many languages. In the bilingual–plurilingual model of the two PAIHSs, an observer will see students alternating between Spanish and English and using materials in both.

In a well-functioning IHS classroom, you find students talking in small groups, using bilingual dictionaries (both electronic and paper), and switching between English and home languages as needed to complete complex cognitive tasks and put together a collaborative project, often an oral presentation in English to their peers or a written product. Students are asked to do oral presentations from their earliest days in the schools and are supported in taking risks to use their new language practices publicly. The length and complexity of the presentations will vary based on students' linguistic proficiency in English.

Students walk around periodically to get materials they need to complete their project. The teacher is not in the front of the room talking or sitting at the desk, but rather sitting with the students listening, redirecting conversation at times, asking and answering questions, or just being part of the small group discussions as he or she moves from table to table.

The teacher will almost always be using English with students and asking other students to translate for him or her when a student is using a language other than English. Despite the many languages that may be involved in the process of creating a project, students use English on a daily basis because the project (with the exception of home language projects and work in Spanish in a PAIHSs model) will generally (although not always) be in English. Students will be asked to present orally often and generally in English; so, many times they are practicing their English presentations or preparing for their presentations using their home languages.

Most of the texts and documents in the classroom will be in English, although the student tables also have dictionaries in many languages and print and Internet material in languages other than English. Although students may be asking for translation from other students or having some discussion in the home language around the text or document, they go back to English to interact with peers on their project.

Students are usually working with an activity guide provided by the teacher that walks them through each step of the project. The activity guides are in English, so they require constant negotiation in English. The guides contain many graphic organizers that ask students to summarize and categorize the information and then to use it to make conclusions, ask questions, synthesize different ideas, or compare perspectives. They also include different media (written word, poetry, visuals, primary documents, etc.) that students of different levels can use to make sense of their learning. Some guides may contain almost no English text and instead have pictures and graphics so that students who are not literate or those who are completely new to English can have access to the information.

There are resources on the walls that provide students with sentence starters, key vocabulary, and phrases that they can use to add ideas or politely disagree—all in English. However, as we said earlier, tables always have dictionaries in various languages and students consult them frequently. Documents in different languages and Internet access to home language materials are often available. Multiple conversations are happening at multiple times in many languages with occasional breaks in the "chaos" for the teacher to explain a concept or practice a skill collectively that students immediately apply in the work they are doing.

There is often a student discussion leader/facilitator at each table, with every other student playing a key role or assuming responsibility for a meaningful piece of the culminating project. Groups of students pool their knowledge. Students have considerable choice in how they arrive at the final project, including the language practices with which they negotiate, and the eventual form that the project takes on, but activity guides and rubrics (often collectively designed between teachers and students) establish parameters in which students operate.

A student who knows little English will often be sitting next to a more proficient student who shares a home language so that he or she can get support and better access the information. Students depend on one another to share their experiences, knowledge, perspectives, and understandings of the text; they teach each other. The teacher is not the only "expert" in the room, and considerable control is handed over to the students. Content is made accessible because students work on figuring out the content, language, and implications together. Students are constantly asked to "re-present" the information they are reading and studying and to discuss it collectively.

Authentic experiences are woven into different parts of the class—a unit is often introduced through a field trip, movie clip, pictures, hands-on activity, or small group discussion about a familiar concept/experience that relates to the more academic concepts central to that project or unit of study. These shared oral experiences that are designed to be accessible to all students anchor the major concepts for students, provide an accessible avenue to return to when the concepts and language get to a higher level, generate key vocabulary and ideas that students can relate to the broader topic, and often provide a hook or motivation that gets students interested in the topic, understanding how it relates to their own life or the world around them. Students are constantly asked to reflect on their work—to look at where they are as learners and where they need to go. Students are also asked to think about the broader implications and the "so what?" aspect of what they are studying.

The work of the teachers at the IHSs is heavily focused on designing the activity guides (not lesson plans) to direct students through active learning of academic content. Rather than talk about "lesson plans" that describe what teachers are doing, the Internationals approach encourages teachers to plan curricula and projects to involve students in active learning, in which students and teachers rely on each other and in which students utilize English and their home languages to complete projects by building on their existing knowledge (both content and linguistic).

In short, teachers in IHS classrooms use dynamic plurilingual pedagogy and build on translanguaging in the classroom. By allowing individual students to use their home language practices to make sense of the learning moment, these IHSs go beyond traditional second-language programs (such as English as a second language [ESL], English structured immersion, or Sheltered English in the United States) or traditional bilingual education programs. Instead of the top–down traditional approach that often dictates language policy in schools and that in the United States results in classrooms being English-only or bilingual, the IHSs have designed a dynamic plurilingual system of education. At these IHSs, emergent bilingual immigrant adolescents are developing English language and literacy so that they can graduate from U.S. high schools. However, they are doing so by being empowered as individuals to use their home language practices in singular agentive ways to make meaning of their learning of rigorous content and new language practices.

Now that we have described what IHS classrooms might look like and we have identified the subtle translanguaging practices that characterize the dynamic plurilingual education of the IHSs, we turn to explaining each of the core principles of their sociolinguistic and socioeducational philosophy.

CORE PRINCIPLES

Heterogeneity and Singularities in Plurality

Optimizing heterogeneity builds on the strengths of every single individual member of the school community. The IHSs have a different approach to heterogeneity than that found in most programs or schools that work with language-minority students. Because IHSs believe that inevitably all groups are by nature heterogeneous, instructional programs are designed to leverage diversity.

The students at the IHSs are highly diverse, coming from over 90 countries, speaking about 55 languages, and ranging in prior academic experience from never having attended school to being at or above grade level in their home language. They have vastly different experiences, with some commonalities. All students are new learners of English and have been in the United States 4 years or fewer at the time of admission. About 70% of students have been separated from one or both parents in the course of immigrating to the United States. They may have seen parents and relatives killed in violent upheavals and wars, or have lived in refugee camps, or have been victims of narco-terrorists. The IHSs are designed to promote respect for different language and cultural practices and to leverage them in all aspects.

In looking at heterogeneous/homogeneous grouping models, educators at IHSs understand that even if students have the same scores on language proficiency tests, they may not have gotten the same items correct and thus their language proficiency differs. Even if, amazingly and without cheating, two students have answered all of the questions in the same way, educators at IHSs understand that the thinking that led students to choose their answers is inevitably divergent. Further, IHS teachers and administrators know that students differ on numerous other characteristics and proficiencies and that language proficiency is impacted by the content of study (e.g., studying astrophysics in any language would be beyond these authors' proficiency level). Thus, educators at IHSs recognize that every individual student's language characteristics and use differ from those of others in the class, even when supposedly the students speak the "same language"; that is, everyone at IHSs recognize the singularities of the pluralities in language practices that make up the classrooms.

Collaboration Among Students

Collaborative structures that build on the strengths of every individual member of the school community optimize learning. Because the Internationals understand the individuality of the emergent bilingual experience, students with varied levels of English proficiency as well as literacy levels and home language proficiency are in the same class by design.[2] They study complex and sophisticated topics, through working collaboratively.

Collaboration leverages the benefits of a heterogeneous class and addresses its challenges. Students are able to share their different perspectives, experiences, and talents. While building community in the classroom and in the school, different students are challenged in multiple and divergent ways through these heterogeneous classes. While supporting struggling students, collaborative grouping also challenges more advanced students who must understand the material fully in order to explain it to others. Collaboration also allows students to form friendships across cultural and linguistic lines because they have a reason to talk to one another and are not silently filling out worksheets or listening to a teacher.

Collaboration enables all students to engage in challenging and creative projects because students of different levels work together to accomplish a final product they would not be able to do on their own. This instructional approach relies on the advantages of small group collaborative learning and peer-mediated instruction while recognizing the linguistic heterogeneity of all groups of students and their singularities.

Collaboration Among Teachers

The collaborative structures in which students work and learn mirror those in which faculty work and learn, capitalizing on everyone's diverse strengths and maximizing their ability to support one another. Just as students work in groups, IHS teachers work in groups. Teachers, like students, are assumed to be diverse and have various strengths. They work in teams with teachers from different disciplines (at a minimum, an English language arts, social studies/history, science and math teacher) and share responsibility for a cluster of 75–100 students, who are subdivided into three or four classes that are, by design, heterogeneous in all respects (language proficiency, home language, literacy level, prior academic experience and/or success, etc.).

These teams are responsible for students' progress collectively and holistically—linguistic, academic, sociocultural, affective, and so on. Time is built into the day (and often added to it, with compensation) to allow teachers to meet for anywhere from 2 to 6 hours a week so that they can learn from each other. These small groups of teachers focus on the design of their curricula and their pedagogies, their challenges and successes, and their students' progress.

Teachers' collaboration prepares them to replicate for students their own learning environments. Teachers learn not from lectures in professional development sessions and faculty meetings, but from each other. The Internationals approach expects that the adult learning model and the model for student learning will mirror each other. The IHSs build on the diversity of the teachers so that the staff can then construct learning experiences based on the linguistic and cultural differences of the students with whom they work.

Learner-Centered Classrooms

Constructing learner-centered classrooms for meaningful student linguistic and content output is important. The collaborative pedagogy followed in the IHSs takes teachers away from the front of the room and enables them to help individual students or groups that are struggling as well as to leverage their home language practices in order to learn. Thus, classrooms are learner centered.

Many L2 programs and bilingual education programs around the world provide teacher-centered instruction, insisting that the language input that students hear from the teacher is the main element in language acquisition (Krashen, 1985). Yet, teacher-centered instruction limits linguistic opportunities for all students. In a traditional language classroom, the teacher lectures in what is called a "target language" and the students follow a common textbook in the same language. Bilingual education programs also tend to separate languages strictly, with teachers speaking one language or the other and students working on worksheets in one language or the other or following a textbook also written in one language or the other. In both traditional foreign and L2 classrooms and bilingual classrooms, all students are expected to be at the same proficiency level and to achieve the same result. This is not possible when you have students with English language proficiency ranging from very little knowledge in English to grade-level use of English. This is also not possible if students have different literacy levels in their home languages and diverse schooling experiences, academic and literacy traditions, and classroom scripts.

As Swain (1996, 2000) has posited, collaborative dialogue is very important in the development of an additional language. Educators at the IHSs believe that students are best served when teachers use their professional expertise, not principally as providers of knowledge but as facilitators of a process that enables students and faculty to learn while making language choices to accomplish meaningful activities.

Students' active use of language is critical to the academic program of the IHSs. No one learns to ride a bicycle by watching someone else ride it. Thus, the Internationals model is designed to have students actively use the additional language practices for as much of each class period as possible. Students use English as well as their home languages to understand the material they are studying and to prepare oral presentations and written work in English.

Language and Content Integration

Language emerges most naturally in purposeful, language-rich, interdisciplinary study. The IHS "mantra" is that "every teacher is a teacher of language and content." Language means both the additional language they are acquiring (English, as all students are emergent bilinguals who are learning English), as well as their home language (which students use to support learning of both academic content as well as English).

The Internationals approach promotes the language practices of all students, especially those that include academic English, as students simultaneously explore interdisciplinary academic content. Language does not exist apart from the content of life and the world, and language is more readily remembered when it has meaning and when it is in context. *Content-based language development* suggests that language use is an outgrowth of content; that is, by experiencing and learning new concepts, students extend their language base. Language and content integration means that "content is the driver." Teachers pay attention to the language load and provide systematic support for students who are developing an additional language, but the content is *not* driven by the aim of teaching a particular linguistic structure, nor is the language simplified and sacrificed to content. Instead, content is rigorous and expressed in authentic and rich language that is scaffolded by collaborative structures that allow for peer mediation and teacher support, as described later.

For teachers, language and content integration means that when designing a project and creating an activity guide, they promote students' progress toward key standards in all content areas. They consider, in their project design, questions of language load. They provide materials with different levels of linguistic complexity but also support students' work with complex materials through a variety of scaffolds. These scaffolds include reviewing key words, designing graphic organizers, supporting students' use of home languages, having students write double-entry journals in which teachers raise questions and they respond, annotating (or having students annotate) as students read, and analyzing common linguistic structures of a discipline or in a particular reading. From time to time, teachers might make brief explanations about the grammar of the new language, but this is for the purpose of helping students understand how to use the additional language rather than using grammar to teach the language.

Plurilingualism from the Students Up

Rather than having a structure where language practices are controlled by a rigid external language education policy, the students use diverse language practices for purposes of learning, and teachers use inclusive language practices for purposes of teaching. In the IHSs, the locus of control for language practices lies with the students. Teachers, who may or may not speak the home language(s) of any particular student or group of students, encourage individual students to use their home languages to make sense of their learning. The students' language practices are flexible and dynamic, responding to their need for sense-making in order to learn.

However, teachers also encourage groups to practice language in nonexclusionary ways and will do so themselves whenever possible. In working with one particular student or group of students with whom the teacher shares language practices, the teacher may use those practices. Sometimes, the teacher may ask students to explain using their home language. However, mindful of not excluding anyone, teachers use English when speaking to a whole class with diverse home languages. The teachers are alert to language use that is not conducive to group progress—for instance, when a group is consistently leaving out a member by using a different home language. At that point, teachers intervene in that group process, as they would in any issue of group dynamics.

Experiential Learning

Expansion of the schools beyond the four walls of the school building motivates immigrant adolescents and enhances their capacity to negotiate their new bilingualism and successfully participate in society. As we have said, the instruction of language, content, and skills is embedded in experiential projects that are carefully structured to incorporate student experience and build necessary background knowledge. For example, many projects engage students with people outside of the school (e.g., surveying community members, letter writing advocacy campaigns, service learning, building something in the community of the school). In most cases, projects begin with a shared oral experience to build background knowledge and provide students with a foundation to then access higher level content (i.e., to build schema). These experiential projects also allow for reinforcement of necessary content and skills.

Experiential learning also refers to the belief that education has to happen beyond the four walls of the school. All IHSs place a strong emphasis on field trips, inviting outside speakers, and getting students involved in projects that take them outside of the school. IHSs also send all students to an internship outside the school that lasts a minimum of 12 weeks. During these internships, usually two to four afternoons a week (during the school day), students work usually in an office, hospital, school, or community center. Projects that guide the internship experience help students gather important information and reflect on what they are learning. The resources for language development in experiential learning go beyond faculty and other students to include community members and families.

An experience-based curriculum, which enables the students to understand the concepts they are dealing with, firmly supports their English language acquisition. In the process of engaging in experiences and project development, students practice language structures that teachers and other students have modeled. In these interactions, students formulate and investigate hypotheses about how their new language functions.

Localized Autonomy and Responsibility

Linking autonomy and responsibility at every level within a learning community allows all members to contribute to their fullest potential. The underlying assumption of having students and teachers work within collaborative structures is that individuals achieve to their highest capacity when they feel ownership of, and support for, their efforts and outcomes. Thus, students are responsible for their learning, and teachers are responsible for their teaching. However, beyond this, administrators at IHSs support teachers in whatever ways they can to be successful with their students. At IHSs, team meetings are a key professional development opportunity for teachers, and these are supplemented by discipline meetings, full-staff professional development, and a wide range of Internationals Network professional development opportunities across schools that include, but are not limited to, intervisitations, network planning committees, and network conferences and workshops.

CONCLUSION

In the 21st century, as classrooms become more and more linguistically diverse, the greatest challenge will be how to educate all students equitably and meaningfully. Imposing one school standardized language without any flexibility of norms and practices will always mean that those students whose home language practices show the greatest distance from the school norm will always be disadvantaged. Clearly, monolingual education is no longer relevant in our globalized world.

However, models of bilingual or multilingual education that impose norms of language use in one or the other language without any flexibility will also privilege those whose language practices follow monolingual norms in two or more languages. This may have been appropriate in the 20th century without the speed and simultaneity of movement of people, goods, and services that technology has made possible today. However, the 21st century is characterized by the concurrent means of communication in many media and languages and, thus, conceptions of bilingualism and multilingualism must also become more flexible, more dynamic.

Schools that respond to this more dynamic model of bilingualism/multilingualism adopt a dynamic plurilingual approach with translanguaging as an important strategy so that students and teachers can make sense of learning moment by moment. Rather than languages being strictly "assigned" a space, time, place, or person in the curriculum, these dynamic plurilingual programs use the individual student's languages to act on learning. We have just begun to understand the potential (and the possible limitations) of these educational programs.

This article has focused on describing a model practiced by a group of such dynamic plurilingual programs in the United States—those of the INPS. We have described the principles that have supported their success—heterogeneity, collaboration, learner-centeredness, language and content integration, language use from students up, experiential learning, and local autonomy and responsibility. All of these principles support a dynamic plurilingual use of languages of instruction that, in turn, develop students' plurilingual and pluriliterate abilities. As a result, students become not only more knowledgeable and academically successful but also more confident users of academic English, better at translanguaging, and more plurilingual proficient. These are all important linguistic practices in the 21st century.

However, it is important to point out that in the hands of ignorant or misguided educators, dynamic plurilingual programs could have disastrous results. On the one hand, dynamic plurilingual programs could undermine all bilingual education efforts. They could have the semblance of a plurilingual education, when in fact they are simply another form of submersion education in English only. On the other hand, without teachers who truly understand how to use students' home language practices to make sense of new language practices and academic content, translanguaging could become random, not sense-making.

For dynamic plurilingual education to succeed in the 21st century, teachers would have to be educated to pay close attention to the singularities that make up our plurality—to clearly notice the individual linguistic experience that is the "moving force" in learning an additional language and all learning. In so doing, teachers would learn the value of having students use their home language practices to support learning. Rather than being told what language to use when and where, educators must practice noticing the learner as he or she is engaged in meaningful instructional activities. In this way, educators can learn to adjust their language and instructional practices to support students' linguistic and cognitive growth. The goal is for students to be aware of their own language practices as well as those of their peers as they are engaged in learning activities. Ultimately, this empowers students themselves so that they are able to adjust their own language practices to take into account their singularities in the pluralities of a multilingual classroom and society. At the same time, a dynamic plurilingual approach helps immigrant newcomer adolescents gain high levels of translanguaging competence that they can carry forth into the world of work and democratic life, increasingly impacted by global as well as local forces that are multilingual.

ACKNOWLEDGMENTS

We are grateful to the editors of this issue as well as the two anonymous reviewers for their insights and comments on an earlier draft of this article.

NOTES

[1] The Internationals Network defines its work around five core principles (heterogeneity and collaboration, experiential learning, language and content integration, localized autonomy and responsibility, and one learning model for all). For this article, we have more specifically defined the Internationals approach utilizing eight distinct principles to allow a more granular description of specific aspects and to more closely align our description with the theoretical constructs discussed.

[2] Even in "leveled" classes designed to be homogeneous, students will inevitably vary in their English proficiency and literacy levels.

A Report to Carnegie Corporation of New York

DOUBLE THE WORK

CHALLENGES AND SOLUTIONS TO ACQUIRING LANGUAGE AND ACADEMIC LITERACY FOR ADOLESCENT ENGLISH LANGUAGE LEARNERS

By Deborah J. Short & Shannon Fitzsimmons

ALLIANCE FOR
EXCELLENT EDUCATION

About Carnegie Corporation of New York

Carnegie Corporation of New York was created by Andrew Carnegie in 1911 to promote "the advancement and diffusion of knowledge and understanding." As a grant-making foundation, the Corporation seeks to carry out Carnegie's vision of philanthropy, which he said should aim "to do real and permanent good in the world." The Corporation's capital fund, originally donated at a value of about $135 million, had a market value of $2.2 billion on September 30, 2005. The Corporation awards grants totaling approximately $80 million a year in the areas of education, international peace and security, international development, and strengthening U.S. democracy. For more information, visit www.carnegie.org.

About the Alliance for Excellent Education

The Alliance for Excellent Education is a national policy and advocacy organization that works to help make every child a high school graduate—to prepare them for college, work, and to be contributing members of society. It focuses on the needs of the six million secondary school students (those in the lowest achievement quartile) who are most likely to leave school without a diploma or to graduate unprepared for a productive future.

Based in Washington, DC, the Alliance's audience includes parents, educators, the federal, state, and local policy communities, education organizations, business leaders, the media, and a concerned public. To inform the national debate about education policies and options, the Alliance produces reports and other materials, makes presentations at meetings and conferences, briefs policymakers and the press, and provides timely information to a wide audience via its biweekly newsletter and regularly updated website, www.all4ed.org.

About the Center for Applied Linguistics

The Center for Applied Linguistics (CAL) is a nonprofit organization dedicated to improving communication through better understanding of language and culture. Established in 1959, CAL is headquartered in Washington, DC. CAL has earned a national and international reputation for its research and contributions to the fields of bilingual education, English as a second language, literacy, foreign language education, dialect studies, language policy, refugee orientation, and the education of linguistically and culturally diverse adults and children. CAL provides a comprehensive range of research-based language resources, testing tools, professional services, publications, and cultural orientation information. For more information, visit www.cal.org.

The Authors

Deborah J. Short, PhD, is a senior research associate at the Center for Applied Linguistics (CAL), a nonprofit organization dedicated to language education research, policy, and practice in Washington, DC. She is a co-developer of the SIOP Model for sheltered instruction and was a lead investigator for research studies on the effects of sheltered instruction for English language learner achievement and on newcomer programs. She is currently co-principal investigator of a 5-year experimental study examining the impact of the SIOP Model on science achievement and language learning in the U.S. Department of Education Institute of Education Sciences National Research and Development Center for English Language Learners, and directs a study on secondary English language learners funded by Carnegie Corporation of New York and the Rockefeller Foundation. As a consultant, Dr. Short regularly provides professional development on sheltered instruction and academic literacy to teachers around the United States and abroad. She develops curricula and instructional materials for students and has authored or co-authored numerous publications. She taught English as a second/foreign language in New York, California, Virginia, and the Democratic Republic of Congo.

Shannon Fitzsimmons is a consultant for the Center for Applied Linguistics (CAL) and a high school ESL teacher with Sunnyside Unified School District in Tucson, AZ. She is a former research assistant at CAL. There, she coordinated the Adolescent ELL Literacy Project that was funded by Carnegie Corporation of New York; the SIOP Model professional development program; and the dissemination activities for the Center for Research on Education, Diversity & Excellence. In addition to her teaching duties, Ms. Fitzsimmons provides professional development to her Arizona colleagues in Structured English Immersion. Ms. Fitzsimmons holds an MA in applied linguistics from Georgetown University.

Acknowledgments

The authors would like to thank Andrés Henríquez, program officer at Carnegie Corporation of New York, for his vision, support, and helpful feedback in the conceptualization and reporting of this research. We also wish to express our gratitude to the members of the Adolescent ELL Literacy Advisory Panel, whose hard work and thoughtful insights helped shape the project and generate the recommendations. Their participation in advisory panel meetings and willingness to review drafts and share contacts with promising sites were invaluable.

Adolescent English Language Learners Literacy Advisory Panel

Diane August, President, August & Associates
Gina Biancarosa, Postdoctoral Fellow, School of Education, Stanford University
Margarita Calderón, Principal Research Scientist, Johns Hopkins University
Fred Carrigg, Special Assistant to the Commissioner for Literacy, New Jersey Department of Education
Nancy Cloud, Professor of Special Education, Rhode Island College
Michael Fix, Vice President and Director of Studies, Migration Policy Institute
David Francis, Professor of Psychology, University of Houston
Michael Kamil, Professor of Education, Stanford University
Delia Pompa, Vice President of Education, National Council of La Raza
Mel Riddile, Former Principal, J.E.B. Stuart High School and Current Principal, T.C. Williams High School
Cathy Roller, Director of Research & Policy, International Reading Association
Maria Santos, Deputy Chancellor for Instruction, New York City Department of Education
Aida Walqui, Director of the Teacher Professional Development Program, WestEd

We are also grateful to the authors of the commissioned report on adolescent English language learner demographics and educational achievement—Jeanne Batalova, Michael Fix, and Julie Murray of the Migration Policy Institute—for their careful research and thoughtful analyses.

Additionally, this report would not have been possible without the assistance of the school and district staff of our three promising sites. All of the teachers were welcoming and informative as they responded to our questions and opened their classrooms to our visits. In particular, we would like to thank Ruth deJong, ESL department chair at J.E.B. Stuart High School, along with Mel Riddile, the former principal, and Pam Jones, the current principal, for facilitating our visits and sharing their program with us. At Hoover High, Dr. Douglas Fisher of San Diego State University, and Mr. Douglas Williams, principal of Hoover, provided key insights into the professional development program design and implementation. At the Union City School District, Lisette Calvo, bilingual/ESL supervisor, Silvia Abbato, assistant superintendent for curriculum and instruction, and Christopher Abbato, ESL department chair at Emerson High offered their time, knowledge, and experience to describe the efforts to promote academic literacy districtwide. In addition, Linda Dold-Collins of the New Jersey Department of Education, Office of Title I, provided information on New Jersey state policies.

Our colleagues at the Center for Applied Linguistics (CAL) provided support and encouragement, as well. Researcher Sarah Young participated in the panel meetings and helped conduct the Stuart and Hoover site visits. G.R. Tucker Fellow Silvia Pessoa collaborated on the literature review. Christina Card was invaluable as the administrative assistant for the study. Thanks also to Donna Christian, president of CAL, for her leadership on ELL issues.

Finally, special recognition is given to Andrew Wilson and Gina Biancarosa who helped to conceptualize this policy report and organize the information strategically. Their work, along with that of Cindy Sadler, Rafael Heller, and other members of the Alliance for Excellent Education staff, was key to preparing this report for publication.

Shannon Fitzsimmons

CONTENTS

EXECUTIVE SUMMARY

Despite the growing societal awareness of the need for interventions and programs to increase literacy levels of adolescents, education policymakers and school reformers have mostly overlooked the needs of the large and growing English language learner (ELL) population. Though recent reports have helped to focus attention on the adolescent literacy crisis, they offer very little guidance on how best to meet the varied and challenging literacy needs of adolescent ELLs.

In virtually every part of the country, middle and high schools are now seeing expanding enrollments of students whose primary language is not English. Rising numbers of immigrants, other demographic trends, and the demands of an increasingly global economy make it clear that the nation can no longer afford to ignore the pressing needs of the ELLs in its middle and high schools who are struggling with reading, writing, and oral discourse in a new language.

Although many strategies for supporting literacy in native English speakers are applicable to adolescent ELLs, there are significant differences in the way that successful literacy interventions for the latter group should be designed and implemented. These differences have serious implications for teachers, instructional leaders, curriculum designers, administrators, and policymakers at all levels of government. Moreover, because adolescent ELLs are a diverse group of learners in terms of their educational backgrounds, native language literacy, socioeconomic status, and more, some strategies will work for certain ELLs but not for others.

It should be understood that adolescent ELLs are second language learners who are still developing their proficiency in academic English. Moreover, they are learning English at the same time they are studying core content areas through English. **Thus, English language learners must perform *double the work* of native English speakers in the country's middle and high schools.** And, at the same time, they are being held to the same accountability standards as their native English-speaking peers.

To bring the issues and challenges confronting adolescent ELLs into clearer focus, the Center for Applied Linguistics (CAL), working on behalf of Carnegie Corporation of New York, convened a panel of researchers, policymakers, and practitioners working in the field to offer their expertise (see list in Appendix A). The panel agreed to a focus on *academic literacy*, that which is most crucial for success in school, and defined the term in the following way:

- Includes reading, writing, and oral discourse for school
- Varies from subject to subject
- Requires knowledge of multiple genres of text, purposes for text use, and text media
- Is influenced by students' literacies in contexts outside of school
- Is influenced by students' personal, social, and cultural experiences

The panel identified six major challenges to improving the literacy of ELLs:

- Lack of common criteria for identifying ELLs and tracking their academic performance
- Lack of appropriate assessments
- Inadequate educator capacity for improving literacy in ELLs
- Lack of appropriate and flexible program options
- Inadequate use of research-based instructional practices
- Lack of a strong and coherent research agenda about adolescent ELL literacy

During the course of the project, CAL researchers reviewed the literature on adolescent ELL literacy and conducted site visits to three promising programs. In addition, a sub-study was commissioned from researchers at the Migration Policy Institute to collect and analyze valuable information on the demographic trends and academic achievement of ELLs.

At the conclusion of the process, the panel recommended an array of different strategies for surmounting the six challenges by making changes in day-to-day teaching practices, professional training, research, and educational policy. As a result, each "challenge" section in the body of this report is followed by an extensive "potential solutions" discussion. With the small but growing research base on the best practices for developing adolescent ELL literacy becoming more widely disseminated through increased dialogue among educators, researchers, and policymakers, the right strategies for helping these students attain their full potential are being determined. For example, policymakers should consider the following:

- Tightening the existing definition of Limited English Proficient (LEP) and former LEP students in Title III of the No Child Left Behind Act (NCLB) to ensure that states use identical criteria to designate LEP students and to determine which students are to be considered Fluent English Proficient (FEP)

- Developing new and improved assessments of the adolescent ELLs' native language abilities, English language development, and content knowledge learning

- Setting a national teacher education policy to ensure all teacher candidates learn about second language and literacy acquisition, reading across the content areas, and sheltered instruction and ESL methods

- Adjusting school accountability measures under NCLB to avoid penalizing districts and schools that allow ELL students to take more than the traditional 4 years to complete high school successfully

- Encouraging the use of proven and promising instruction for ELLs in schools
- Funding and conducting more short- and long-term research on new and existing interventions and programs, and on the academic performance of these adolescent ELLs

Although the potential solutions in this report are not exhaustive, they are meant to provide a sound starting point for better addressing the needs of ELLs in the nation's schools. Moreover, by helping ELLs learn and perform more effectively in school, America's educational system and society as a whole will be strengthened and enriched.

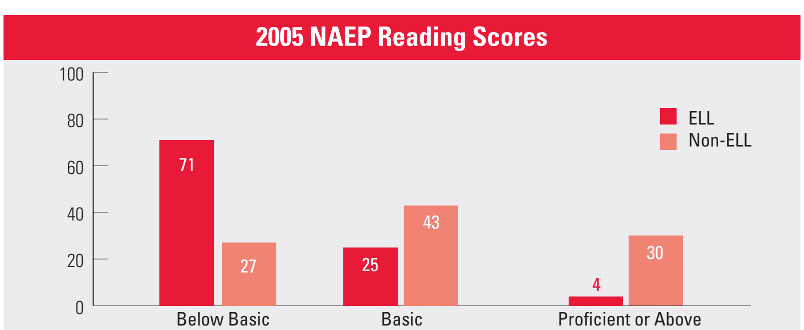
INTRODUCTION: ADOLESCENT ENGLISH LANGUAGE LEARNERS AND THE LITERACY CHALLENGE

Nationally, over 6 million American students in grades 6 through 12 are at risk of failure because they read and comprehend below—often considerably below—the basic levels needed for success in high school, postsecondary education, and the workforce. Only 30% of all secondary students read proficiently. For students of color, the situation is even worse. Eighty-nine percent of Hispanic and 86% of African-American middle and high school students read below grade level (NCES, 2005). Almost 50% of students of color do not graduate from high school with a regular diploma in 4 years of instruction (Orfield, Losen, Wald, & Swanson, 2004).

> While there are still a substantial number of unanswered questions about English language learners, there is an emerging picture of what can be done to improve the literacy of these students.
>
> Michael Kamil
> *Adolescents and Literacy*

These statistics are alarming enough, but the literacy crisis for English language learners (ELLs) is even more dramatic. For example, only 4% of eighth-grade ELLs and 20% of students classified as "formerly ELL" scored at the proficient or advanced levels on the reading portion of the 2005 National Assessment for Educational Progress (Perie, Grigg, & Donahue, 2005)—the nation's only ongoing assessment of what students know and can do in various subject areas. This means that 96% of the eighth-grade limited English proficient (LEP) students scored below the basic level (Figure 1). In addition, ELLs graduate from high school at far lower rates than do their native English-speaking peers. Only 10% of young adults who speak English at home fail to complete high school; the percentage is three times higher (31%) for ELLs. If ELLs reported speaking English with difficulty on the 2000 U.S. Census, their likelihood of completing high school dropped to 18% (NCES, 2004).

Figure 1. Eighth-Grade NAEP Reading Scores for ELL and Non-ELL Students



Notes.
ELL = English language learner
NAEP = National Assessment of Educational Progress
Source: Perie, Grigg, & Donahue, 2005

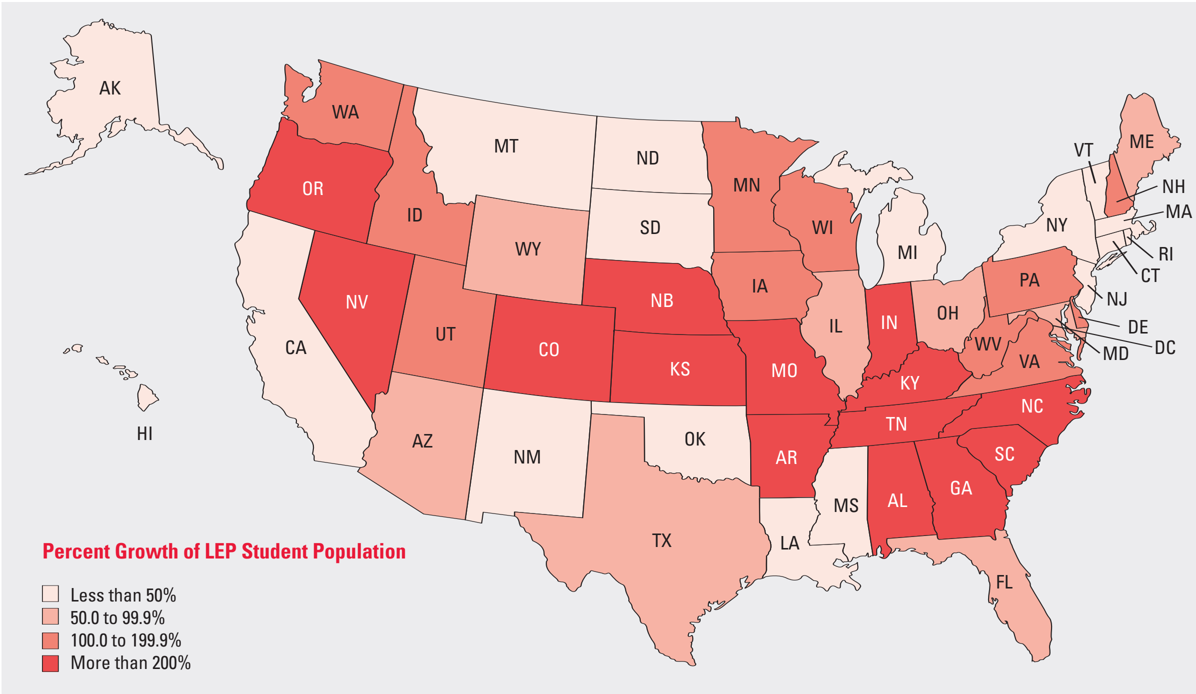
Literacy development is a particular problem for the ELLs who enter the educational system in later grades, especially in high school. Not only do these students have to master complex course content, usually with little context or understanding of the way that American schools are structured and operate, but they have fewer years to master the English language. In addition, they are enrolling at an age beyond which literacy instruction is usually provided to students, and some have below-grade-level literacy in their native language. Despite these circumstances, they are usually placed in classes with secondary teachers who are not trained to teach basic literacy skills to adolescents (Rueda & Garcia, 2001).

Adolescent ELLs with limited formal schooling and below-grade-level literacy are most at risk of educational failure. These students have weak literacy skills in their native language, lack English language skills and knowledge in specific subject areas, and often need additional time to become accustomed to school routines and expectations in the United States. They are entering the nation's schools with very weak academic skills at the same time that schools are emphasizing rigorous, standards-based curricula and high-stakes assessments for all students (Boyson & Short, 2003).

Newcomers are not the only students struggling. Some ELLs have grown up in the United States, but for various reasons (e.g., mobility, switching between different language programs), they have not developed the degree of academic literacy needed for success in middle and high school. Providing more of the same type of instruction they received in elementary school will not bring about necessary improvement.

It is important to recognize that this crisis is nationwide and changes in the geographic distribution of ELLs present new challenges to the countless districts that have not served these students in the past. Although five of the six top immigration states—California, Texas, New York, Florida, and Illinois—accounted for over 60% of all LEP students in grades 6 through 12 in 2000, the states with the fastest growing LEP adolescent student populations are not the same. For example, North Carolina experienced a 500% growth between 1993 and 2003, and Colorado, Nevada, Nebraska, Oregon, Georgia, and Indiana each had more than 200% increases in that time period, as shown in Figure 2 (Batalova, Fix, & Murray, 2005).

Figure 2. LEP Student Population Growth from 1993 to 2003 by State



Note. LEP = limited English proficient
Source: National Clearinghouse for English Language Acquisition & Language Instruction Educational Programs; State Data

Although the absolute numbers of ELLs in states such as North Carolina, Colorado, Oregon, Nevada, and Indiana are small compared with those in more traditional immigration states, such as California, Texas, Florida, and Illinois, the growth has been quite rapid. Fast growth raises important concerns about whether states have resources (e.g., trained teachers, language support programs, curricula, and materials) and infrastructures to accommodate these students and the ability to ensure that the children have appropriate and effective academic and language instruction.

The need for effective instruction is particularly critical in light of current educational reform policies. The No Child Left Behind (NCLB) Act, for example, mandates high standards and regular testing of students in Title I schools and requires the schools to report results according to student population subgroups, of which the ELL category is one. Therefore the academic performance of English language learners is front and center in terms of school, district, and state accountability, and educators are seeking ways to improve ELL achievement.

Another reform practice gaining ground is the use of a high school exit exam as a criterion for a high school diploma. Twenty-two states require passing scores on such exit exams, and three more states are scheduled to implement this requirement by 2012 (CEP, 2006). However, the Center for Education Policy (2006) reports significant gaps between the pass rates of ELLs and overall pass rate. Because adolescent ELLs fare poorly on standard measures of academic performance such as these exams, schools are compelled to serve them better.

ACADEMIC LITERACY FOR ADOLESCENTS

Developing academic literacy is a complex endeavor that involves reading, writing, listening, and speaking for multiple school-related purposes using a variety of texts and demanding a variety of products. Recognizing this complexity, the Center for Applied Linguistics (CAL), on behalf of Carnegie Corporation of New York, convened a panel of distinguished researchers, policymakers, and practitioners (see Appendix A) to consider the adolescent ELL literacy crisis, review the lessons of research and practice, and develop recommendations. Additionally, CAL researchers conducted a review of the literature on adolescent ELL literacy and conducted site visits to three promising programs (see profiles in Appendix C).

The Adolescent English Language Learners Literacy Advisory Panel developed the following definition of academic literacy:

- Includes reading, writing, and oral discourse for school
- Varies from subject to subject
- Requires knowledge of multiple genres of text, purposes for text use, and text media
- Is influenced by students' literacies in contexts outside of school
- Is influenced by students' personal, social, and cultural experiences

By considering the differences between adolescent ELLs and native English-speaking struggling readers, an understanding of why the academic literacy crisis is more pronounced in the ELL population than among native English learners is gained. Although the identified characteristics in Figure 3 may not describe all native English-speaking students or all ELLs, they are generally applicable and provide a starting point for exploring the challenges faced by ELLs.

The chart in Figure 3 suggests that the same literacy interventions will not necessarily work for native English speakers and ELLs. For example, adolescent ELLs generally need much more time focused on developing vocabulary and background schema than native English speakers do. Although there is a growing research base for interventions with native English-speaking, struggling readers, solutions for adolescent ELLs have remained elusive because of the variation of language acquisition and literacy levels across this population.

Figure 3. Academic Literacy Development for Adolescents: Native English-Speaking Struggling Readers and ELLs

Indicator	Adolescent Native English-Speaking Struggling Readers	Adolescent English Language Learners
Position on the path to literacy	• School career of intermittent failure • Unsuccessful in learning to read or in reading to learn • Usually labeled as slow readers or lower track students by secondary school	• Some make steady progress toward academic literacy; second language acquisition process limits how fast they move forward in learning to read, write, and speak in English • Others manifest the same type of struggle with reading and writing as do the native English speakers • Some have had no opportunity for literacy development yet (i.e., were never taught to read or write)
Motivation	• Tend to have weak intrinsic motivation	• May have strong intrinsic and extrinsic motivation
Oral English proficiency	• Usually have proficient command of the spoken language, at least of conversational English • Have a wide vocabulary range • Often know meaning of words sounded out by decoding • More likely to comprehend orally presented lesson previews, vocabulary definitions, task directions, and classroom assignments	• Many have weak or no oral English skills • Decoding a word is not sufficient to access its meaning • Providing an oral preview of a text or assignment may not unlock its meaning unless it is accompanied by sheltered instruction techniques • Oral language and literacy development can occur simultaneously
Background knowledge (For this indicator, second- and third-generation ELLs are more similar to native English speakers.)	• Likely to understand many U.S. cultural and historical references • Have been exposed to and may recall material covered in prior courses • With teacher guidance, can tap into prior knowledge to aid comprehension or interpretation of new text	• Have some background knowledge, but it may be for other topics or hard to articulate in English • Need skilled teachers to make connections between content topics and ELLs' personal experiences and background knowledge • Often teachers must build the background; they can't just activate prior knowledge
Vocabulary terms with multiple meanings	• More likely to recognize multiple meanings but may still need to be taught appropriate academic terminology • Often have conceptual knowledge of term or concept, if not the technical/academic label	• May know one meaning of a word (*power* means strength; *Cherokee* is a large car) but not other meanings, including the one needed for a particular subject (political power; Cherokee tribe) • May apply knowledge of cognates to understand new academic terms
Context in which literacy is developed	• May not have any specialized courses or teachers trained in literacy development • Placed in lower tracks or relegated to remedial classes that specialize in "drill and kill" exercises, not meaningful, motivating activities • Computer-based products designed to aid literacy development are becoming more available • Literacy skills are not regularly assessed after eighth grade • English language arts standards in upper grades don't focus on learning to read	• Most have specialized classes to teach them to speak, read, and write in English, usually with a qualified ESL teacher (although years of eligibility vary across the states) • Content of ESL courses is governed by state English language development standards • Tested annually under NCLB on English language development progress • May not have content teachers who understand linguistic needs; and do not know how to develop subject-specific vocabulary and literacy skills

Notes. ELL = English language learner; ESL = English as a second language; NCLB = No Child Left Behind

DIVERSITY AND ADOLESCENT ELL LITERACY

In order to develop the best programs for adolescent ELLs, their diverse backgrounds must be understood. They bring a wide variety of educational and cultural experiences to their U.S. classrooms, as well as considerable linguistic differences, and these characteristics have implications for instruction, assessment, and program design.

- Adolescent ELLs enter schools with differing levels of language proficiency, both in English and in their native languages. Some have literacy levels that are well below grade level in their native language. Others have strong native language and literacy skills. In general, they have strong oral language skills in their native language, but some may speak a mixture of English and their native language.

- Adolescent ELLs vary considerably in their knowledge of academic subject matter when they enter middle or high school. First-generation immigrants have had varying educational opportunities in their home or transit countries. Older students are sometimes placed in lower grades than are others of their age because of lack of academic credits or demonstrable proof of prior coursework (e.g., families unable to bring or send for transcripts, districts unable to translate transcripts that have been brought).

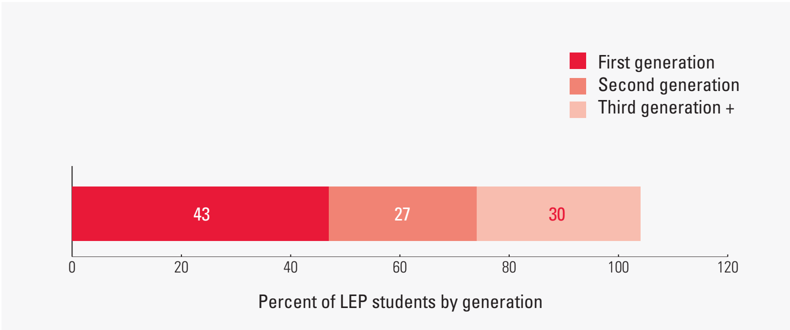
- Fifty-seven percent of adolescent ELLs were born in the United States, that is, they are second- or third-generation immigrants, as shown in Figure 4 (Batalova, Fix, & Murray, 2005). The large numbers of second- and third-generation LEP adolescents who continue to lack proficiency in English in secondary school suggest that many LEP children are not learning the language well even after many years in U.S. schools.

- Of the 43% of adolescent ELLs who are foreign-born, those who enter U.S. schools in the later grades are more challenged than their younger peers because of fewer resources at the secondary level and the shorter time that schools have to ensure that they learn English and master academic content areas (Capps et al., 2005).

- Although some adolescent ELLs live in middle- and upper-income families, immigrant youth are more likely to be poor than are non-immigrants. According to the 2000 U.S. Census, nationwide, 59% of the adolescent LEP students live in families with incomes 185% below the poverty line compared with 28% of adolescents speaking English only (Batalova, Fix, & Murray, 2005). Some immigrant adolescent ELLs are undocumented as well, a factor that impacts both socioeconomic status and, in some states, postsecondary educational options.

- Adolescent ELLs also differ in their expectations of the school experience, age of arrival in the United States, parents' educational levels and proficiency in English, family situation, and other personal experiences. Each of these factors has been shown to have an effect on literacy development.

Figure 4. Percent of Adolescent LEP Students by Generation



Note. LEP = limited English proficient
Source: Migration Policy Institute, 2006

These diverse factors indicate that adolescent ELLs are at different points on the path to academic literacy. At one end of the path are those who are well-educated and academically literate in their own language; at the other end are those who arrive in the United States with weak native literacy skills and limited formal schooling. This diversity of background can be illustrated by the following portraits of five students, all classified as ELLs.

- **Joaquin** was born in Mexico; he came to the Texas at the age of 4. He spoke Spanish at home. He was enrolled in a 2-year, early-exit transitional bilingual education program and his kindergarten and first-grade classes were taught primarily through Spanish. In second grade, he studied in an English-medium classroom. His family moved and for third grade, he was in a Spanish-medium classroom. His family moved again and he went to fourth and fifth grades in English classrooms. In sixth grade now, he speaks a mixture of Spanish and English, but isn't making academic progress.

- **Aziza** attended school in Somalia for 1 year when she was 8. After that, she stayed home to help with housework and care for her younger siblings. When she was 14, her family went to a refugee camp, where she learned some basic English in a class for children two mornings a week. At 16, she moved with her family to the United States and enrolled in high school in Minnesota. She has been there for 3 months and is struggling with her adjustment to school, English, and the different academic subjects.

- **Daniela** works with her parents on farms in California and Oregon. They often move to three or four different towns every year. Sometimes they pick lettuce and tomatoes near Salinas, CA sometimes grapes near Fresno, CA and sometimes peaches north of Sacramento, CA. In the fall, they move to Oregon and pick apples. Daniela likes it when they return to Salinas, the town where she and her mother were born, because she spends at least 4 months in school there and has gotten to know some of the teachers. Although she is 17 now, she doesn't read or write Spanish or English very well. She likes to listen to songs by Shakira and Enrique Iglesias, in both English and Spanish. She speaks mostly Spanish with her family and coworkers.

- **William** was born in Puerto Rico and went to elementary school there. His classes were in Spanish most of the day and he learned some English starting in third grade. When he was about to enter middle school, he and his father moved to Newark, NJ. He was enrolled in a bilingual education program and enjoyed his studies, but he traveled back and forth to the island several times a year to see his mother and three siblings. Sometimes he missed school for 2 weeks at a time and he found that he was failing his social studies and science classes. When he entered high school, the rest of his family joined them and they all moved to Philadelphia, PA. Still in English as a second language (ESL) for 1 period a day, but in regular classes the rest of the time, William is improving his academic English. He wants to play on the soccer team so he needs to maintain a C average and he is studying hard.

- **Krystyna** left Poland when she was 12. She had been a good student at school and studied Russian as a foreign language. She entered seventh grade in New Jersey and was placed in a program with sheltered content courses and content-based ESL classes. After 2 years, she exited the ESL program. She was a top student in both her earth science and geometry classes by ninth grade (having studied algebra in Poland) and developed a website for the high school student council. In 10th grade, she took French as one of her elective courses.

As these portraits suggest, there is no simple, one-size-fits-all solution to the literacy challenges that confront adolescent ELLs. These students are experiencing different levels of success and motivation to learn academic literacy skills in English. Those with a strong foundation in their native language are making better progress than are those without it. Those with a consistent language program model and regular schooling have a better chance for success than do those who go to school intermittently or switch between bilingual and ESL programs. It is critical to consider where these students are on the path to academic English literacy in order to select the best services for them. The implication is that instruction and other interventions should take these factors into account but recognize that second language literacy development is a complex matter in which combinations of these factors play a role.

KEEPING ADOLESCENT LEARNING IN MIND

As possible interventions are considered, certain realities about adolescent learners must be kept clearly in mind. For instance, adolescents in general have both in- and out-of-school literacies. Their interests outside the classroom (e.g., music, hobbies, email, computer games, and internet use) may provide an entrée to in-school literacy with appropriate instruction. They are often attracted to technology and multimedia, so instructional practices that make use of these media can be beneficial. Also, adolescents increasingly assume adult responsibilities that require literacy. For instance, in immigrant households with parents who don't speak, read, or write in English, adolescent ELLs often take on responsibilities for household literacy activities such as reading bills, interacting with doctors, and so forth. Some of the older teens have part-time jobs and engage in work-related reading and writing as well.

Identity, engagement, and motivation are important factors in improving adolescent literacy for native and nonnative English-speaking teens alike. Adolescents tend to engage more with text that they have self-selected, and they will read material above their reading level if it is of interest. They usually view peer interaction and collaborative literacy positively. Perceptions of themselves as, for instance, good versus slow readers, influence their motivation. Personal goals are also strong motivators for developing academic literacy. Physical and cognitive development, such as brain growth, sleep patterns, and the ability to perform abstract reasoning, also affect all teens' acquisition and use of literacy skills.

IDENTIFYING THE MAJOR CHALLENGES TO IMPROVING LITERACY IN ADOLESCENT ELLS

As a result of the advisory panel meetings and the literature review, six major institutional challenges to the goal of improving adolescent ELL literacy nationwide were identified.

Six Major Challenges to Improving Adolescent ELL Literacy

1. Lack of common criteria for identifying ELLs and tracking their academic performance
2. Lack of appropriate assessments
3. Inadequate educator capacity for improving literacy in ELLs
4. Lack of appropriate and flexible program options
5. Inadequate use of research-based instructional practices
6. Lack of a strong and coherent research agenda about adolescent ELL literacy

In the following pages, each of the six major challenges is discussed and possible solutions are offered for consideration by schools, districts, colleges and universities, state departments of education, policy-makers, and the research community as they seek to promote effective changes in practice and policy. Some of these steps can be implemented at once; others will require a long-term approach.

Challenge 1: Lack of Common Criteria for Identifying ELLs and Tracking Their Academic Performance

The Challenge

What Constitutes an ELL?

At present, there is no uniform national definition of what constitutes an ELL, making it very difficult to determine precisely who these students are, how well they are doing academically, and what kinds of services they need. Furthermore, assessments used to identify and monitor these students fail to elicit much important information. The outcome is that it is virtually impossible to collect and analyze relevant, comparable data about these students at the national or even state level.

Competing Definitions

According to the U.S. Department of Education (2005), LEP students (the term used by the federal government for ELLs) are defined as students between the ages of 3 and 21 "enrolled in elementary or secondary education, often born outside the United States or speaking a language other than English in their homes, and not having sufficient mastery of English to meet state standards and excel in an English-language classroom." However, individual states vary widely in their definitions. They may use the terms ELL or English learner to refer to this body of students. Some define these students as those who are eligible for language instruction services (e.g., ESL classes), whereas others define them as those who are actually receiving such services. Furthermore, states differ in how they determine whether students have exited from language instruction programs, becoming former LEPs or ELLs (sometimes known as fluent English proficient, or FEP, students) (Batalova, Fix, & Murray, 2005). The impermanence of the designation and the inconsistencies between states make it exceedingly difficult to measure the relative success of schools and programs in helping students to develop academic literacy.

HOW STATES DETERMINE WHICH STUDENTS ARE "LIMITED ENGLISH PROFICIENT" —A SAMPLING OF METHODS

California—The *California English Language Development Test* recognizes five proficiency levels and is used to identify limited English proficient (LEP) students, determine their English proficiency, and evaluate their progress in learning English. Students who score below "early advanced" or whose overall scores are at least early advanced but who have scored below intermediate in one or more skill areas are designated as LEP.

Colorado—By the 2005–06 school year, all districts must have adopted the *Colorado English Language Assessment* and must identify their students as non-English proficient (NEP), limited English proficient (LEP), or fluent English proficient (FEP) based on that assessment.

Illinois—All districts will have to begin using the *ACCESS Placement Test (W-APT)* beginning in Fall 2006 to identify their English language learner (ELL) population. Developed by the 15-state WIDA Consortium (see page 17), the W-APT focuses on academic language proficiency along with general social English, and will be used to assign students to one of five levels of proficiency.

North Carolina—The state uses the *IDEA Proficiency Test (IPT)* to both initially assess ELL students and to monitor their progress in learning English. The IPT has six proficiency levels. Students are designated as LEP if they can be defined as "any student whose native or home language is a language other than English who scores below Superior in at least one domain of the IPT."

Flawed Measures for Identifying Adolescent ELLs

Three measures tend to be used most often to identify students as ELLs: (a) self-reported information on the U.S. Census, (b) surrogate indicators (e.g., parents' replies to questions about their children on district- or state-developed Home Language Surveys), and (c) direct measures (e.g., language proficiency tests) (Wiley, 1994). Of the three, direct measures of language proficiency offer the most consistent and reliable way to assign ELL status to students; however, these tests vary from state to state (Wiley, 1994). In practice, school systems and researchers tend to rely heavily on surrogate indicators instead (school systems on the home language surveys, researchers on Census data). Thus, estimates of the size of the ELL student population tend to differ even within a given state or district.

The U.S. Census offers the only nationwide dataset with information on age, school enrollment, place of birth, parent and child English language proficiency, family incomes, and other key demographic factors. These data allow comparability across national- and state-level data and comparisons over time and across places. However, these advantages may be outweighed by the shortcomings of the data, which rely on just a single measure of self-reported English-speaking proficiency. The Census defines individuals as LEP if they report speaking a language other than English at home and speaking English "not at all," "not well," or "well" (see http://www.ncela.gwu.edu/policy/states/ellcensus90s.pdf). Thus, the U.S. Census does not inquire about reading and writing ability, critical skills for academic literacy.

As a result, the Census undoubtedly underestimates the size of the population with language-related literacy needs. In fact, a recent Urban Institute study found a 12% disparity between state-reported estimates of ELL students and Census-based estimates (Capps et al., 2005).

Insufficient Information Elicited through Identification

Current identification measures do not often provide the requisite information for accurate student placement. As discussed, issues such as age of enrollment in U.S. schools, educational background, and mobility all affect literacy development, but are seldom elicited by home language surveys or language proficiency tests. Language proficiency tests have some limitations as well. Not only are they one-shot measures, but most districts do not include assessments in a student's home language. Yet, measures of native language oral and literacy proficiency are strong indicators of English literacy development (August & Shanahan, 2006; Genesee et al., 2006).

Difficulty Tracking ELLs' Progress

Most states and districts do not collect and analyze achievement data specifically for FEP students—those who have exited language support programs and have been redesignated. Yet the true measure of a program or system's success is how well students are doing in mainstream content classes. One state that does disaggregate the data on such students is New Jersey. FEPs are tracked at the state level for up to 2 years after they exit language support programs in terms of their performance on state achievement tests. Recent data show that FEPs exceeded the state Adequate Yearly Progress (AYP) benchmark on reading and mathematics tests of grades three and four and were closing the gap for grade eight reading and mathematics (State of New Jersey, Department of Education, Office of Title I, 2006).

Schools can make progress in helping students achieve at higher levels only if their interventions are appropriate and targeted to the individual needs of those students. Through proper identification, expectations become more realistic (for instance, a student who speaks no English when entering a U.S. school in 12th grade should not be expected to reach academic proficiency and graduate within only 1 year). Proper identification procedures can also reduce inappropriate placements such as into special education.

Potential Solutions

Obviously, more consistent and reliable methods of categorizing these students are needed. Common definitions of what constitutes both an ELL and a former ELL are necessary, as are better definitions of proficiency-level benchmarks within the ELL categorization (e.g., beginner, intermediate). Developing common definitions is both a long- and short-term undertaking.

In the short term, ELLs will benefit from clear standards in each state for defining LEP students (or ELLs) and FEP students. Those standards, for example, should explain which benchmarks on tests are used to define the students. In the long term, there is a need for common definitions on the national level to allow cross-state comparisons to be made with confidence in the results. The World-Class Instructional Design and Assessment (WIDA) Consortium is an example of a group of states developing common definitions that could serve as a model for the nation. Fifteen states in this consortium use the same English language proficiency (ELP) standards, the same five levels of proficiency, and the same ELP assessments.

WIDA—A 15-STATE CONSORTIUM

The World-Class Instructional Design and Assessment (WIDA) Consortium is dedicated to the design and implementation of high standards and equitable educational opportunities for English language learners (ELLs).

To this end, WIDA has developed English language proficiency standards and an English language test (ACCESS for ELLs™) to measure annual gains in English language proficiency. The Consortium is also planning a system of alternate academic assessments for beginning ELLs (ONPAR™) whose English language level is too low to participate meaningfully in regular state assessments. These assessments could be used to help states determine Adequate Yearly Progress for this group of ELLs. In addition, WIDA has developed Spanish language arts standards.

Originally established through a federal grant, the WIDA Consortium consists of 15 partner states and jurisdictions: Alabama, Delaware, the District of Columbia, Georgia, Illinois, Kentucky, Maine, New Hampshire, New Jersey, North Dakota, Oklahoma, Pennsylvania, Rhode Island, Vermont, and Wisconsin. These states and the District of Columbia account for nearly 400,000 English learners in kindergarten through grade 12 in approximately 2,800 school districts.

Source: WIDA, 2006

The acknowledged diversity of ELLs requires schools to know exactly who English language learners are. Home language surveys are one important resource for schools. An ongoing effort is needed to revise and redesign home language surveys to provide more relevant information about the students, particularly regarding their native language skills, immigration generation, age of arrival in the U.S. school system, mobility history, and levels of educational attainment and achievement. Such information, coupled with direct assessments, will improve identification and placement of these students.

Policy changes to consider include

- Tightening the existing definition of LEP and former LEP students in Title III of NCLB to ensure that states use identical criteria to designate LEP students and to determine which students are to be considered FEP (i.e., students who have made the transition out of specialized ELL programs and into the regular course of study).
- Creating a voluntary compact (perhaps modeled on the graduation rates compact coordinated by the National Governors Association and launched in 2005) to establish common definitions.
- Establishing consistent data collection processes and disaggregated reporting across states by the following categories: grade level, LEP status, FEP status, interrupted schooling, gifted and talented, special education, and participation in Title I and Title III.

- Adding more information to home language surveys to learn more about students' native language skills, previous language programs, and family mobility.
- Monitoring the assignment of students to ELL, special education, and accelerated programs.

Challenge 2: Lack of Appropriate Assessments

The Challenge

Under NCLB, schools, districts, and states are required to demonstrate that ELLs are making progress not only in meeting academic standards but also in becoming fully proficient in English. Both types of progress depend on effective literacy instruction. However, assessing this progress is a very challenging task.

Standardized tests that aim to measure academic knowledge (e.g., math, science, literacy) are not sensitive to second language literacy development. What is perceived as lack of mastery of the content is often instead the normal pace of the second language acquisition process (Abedi & Lord, 2001; Echevarria & Graves, 2003; Solano-Flores & Trumbull, 2003). Tests are confounded by aspects of adolescent ELLs' diversity (e.g., native language literacy, family background, educational history, mobility patterns). In addition, tests often refer to cultural experiences or historical background to which many adolescent ELLs have not yet been exposed. The ambiguity of this situation means that the test is not measuring what it is intending to measure. Thus, the scores do not tell teachers or policymakers what they need to know about students' content knowledge and, in fact, may be misinterpreted.

The executive summary (August 2006) for the recent National Literacy Panel on Language-Minority Children and Youth report noted that adequate assessments are essential for gauging the individual strengths and weaknesses of language-minority students, making placement decisions, and tailoring instruction to meet student needs. Unfortunately, existing assessments are inadequate to the need in most respects. For example, most measures do not predict how well language-minority students will perform over time on reading or content-area assessments in English.

Without effective assessments, even experienced teachers can be hard pressed to disentangle students' difficulties in learning English from issues related to their educational background and native language literacy skills. Moreover, it is hard to distinguish normal English acquisition from academic delay and/or learning disabilities without culturally and linguistically sensitive assessments (Miramontes, 1987). It is, therefore, perhaps not surprising that a number of districts exhibit patterns of either over-representation or underrepresentation of ELLs in special education programs (Artiles, 1998; Artiles & Ortiz, 2002).

Potential Solutions

So that ELL students are on track to meet both sets of goals—academic content and English proficiency—and receive appropriate instruction and support, educators should assess them when they enter a program and then at regular intervals. Both diagnostic assessments prior to instruction to determine a student's strengths, weaknesses, knowledge, and skills, and formative assessments to provide ongoing information concerning the student's progress should be used.

Diagnostic Assessments in Both Languages

All ELLs cannot be expected to require the same kind of reading and writing instruction, nor can they be haphazardly assigned to one program or another. Instead, the students' specific educational needs should be determined through diagnostic assessments. Such assessments could measure the students' native language reading and writing skills, knowledge of academic terms in English, strengths and weaknesses in components of reading in English, content knowledge for grade-level work, and so forth.

This type of information will help educators find out whether a student requires an intensive phonics program, explicit instruction in academic vocabulary or reading comprehension strategies, or some other kind of support. The aim of the resulting assessment plan should be to guide course placement and design an educational path to facilitate literacy development and progress through the educational system.

DIAGNOSTIC ASSESSMENT IN NEW JERSEY'S ABBOTT DISTRICTS

In New Jersey's Abbott districts (a legal designation for the poorest districts in the state that receive supplementary state education funds), all students in grades K through 8 are assessed in reading and math upon entry to a bilingual program. Spanish speakers are assessed in their native language for content knowledge. Most districts use the Spanish version of the TerraNova for this purpose.

Large-Scale Assessments in the Native Language

ELLs are required to take many high-stakes, large-scale, standardized assessments. For example, NCLB requires all schools to test the English language development (ELD) progress of ELLs annually. Title I schools must test the students in reading, math, and science (as of 2006–07) in grades three through eight and once in high school. Although the English learners' scores do not need to be reported if the students have been in U.S. schools for less than 1 year, the scores of those who have been in school for a year or longer do need to be reported—even if their English language proficiency is still low as shown by the ELD assessment. In addition to NCLB tests, almost half the states have high school exit exams that ELLs must take, as well.

Because these assessments are in place to ascertain whether or not students have requisite content knowledge, ELLs should have the opportunity to take such assessments in their dominant language to demonstrate their full grasp of the subject matter. If the purpose of a given exam is to measure a student's mastery of algebra, for instance, then it could be more informative if the student takes that test in Spanish, Vietnamese, or another native language (if English is not the dominant language). The student would likely have a greater comprehension of the test questions and be able to respond more completely. Given that 70% of the adolescent ELL population is Spanish-speaking, Spanish language content assessments are very viable. An extra effort also should be made to create assessments for low-incidence languages such Mandarin, Russian, Polish, Vietnamese, and Korean, particularly for immigrant students who have strong educational backgrounds in their native language.

Testing in the native language is permissible under NCLB provided the tests are aligned to the state content standards. Moreover, some states have encouraged content assessments in the native language for many years. For example, the New York State Regents exams are available in five languages, and for students who speak other languages, an interpreter is allowed to read the test to the students and translate the student response from the native language into English. It is important that native language tests be designed in that language, not translated from the final English version, in order to meet validity requirements (Solano-Flores, 2003). Also, if a student has taken the content course being tested in English, it might be advisable to give the test in English, as relevant vocabulary would be known in English.

Language Threshold Measure

Should assessments in the native language not be available, a threshold measure should be considered before requiring students to take content tests in their new language. Once ELLs reach a predetermined threshold, or benchmark score, on their ELD test, educators would know their English language ability had reached a level appropriate for meaningful participation in regular state assessments.

Testing Accommodations for ELLs

Another recommendation is that ELLs tested in English be offered specific accommodations that have been shown to have a significant positive effect on ELL scores (Abedi & Lord, 2001; Sireci et al., 2003). Such accommodations include additional or unlimited time on the test and simplified language in the test items (e.g., adjusting verb tense, sentence structure, vocabulary) to align the readability of those items at or below the students' level of English proficiency. One caution is that schools should not inadvertently disadvantage students by placing them in an unfamiliar test-taking situation, with unfamiliar accommodations, on the day of the high-stakes test. If accommodations are to be given, students should be familiar with them ahead of time.

Multiple Measures to Determine ELLs' Literacy Development

Because most assessments currently in use to measure literacy in adolescent ELLs (e.g., National Assessment of Educational Progress and state standardized tests) do not reveal information about development of specific literacy skills or content knowledge and place ELLs on the same scale with native English speakers, it is important to employ and examine the results from multiple assessments when drawing conclusions about the development of English literacy within this population. Multiple measures might assess native language content knowledge and literacy skills, as well as English vocabulary and content knowledge. The formats might include portfolios and formative classroom assessments.

ASSESSMENT AT J.E.B. STUART HIGH

J.E.B. Stuart High School in Fairfax County, Virginia, considers assessment a critical component of all students' educational plans, particularly in the area of literacy. All eighth graders who will attend Stuart are assessed with the Gates-MacGinitie reading exam, and new students are assessed in the first months of entering the school. English language learners (ELLs) take additional assessments during the year as well, to comply with No Child Left Behind (NCLB).

Each year that they are in the English for speakers of other languages (ESOL) program, students are required by NCLB to take an English language assessment; at Stuart, it is the Degrees of Reading Power (DRP). Stuart has raised the score that ELLs must achieve to exit the ESOL program above what is required by the district (from a score of 60 to one of 65) because too many students who exited at the lower score did not make expected progress in mainstream classes.

Before exiting the ESOL program, students also must again take the Gates-MacGinitie test as an additional check of their literacy skills. If students score above 65 on the DRP but below 40% on the Gates, they will exit ESOL, but are required to take a literacy intervention class (with native English speakers who also score low on the Gates) the following year.

During the school year, student language and content progress is monitored quarterly. If a student is ready to move up an ESOL level, the ESL department head works with the guidance counselor to facilitate an appropriate schedule change which is put into place immediately.

For more information on Stuart's program, see Appendix C.

Data Systems that Supply ELL Information

In addition to ensuring that adolescent ELLs receive appropriate diagnostic and formative assessments, and that those students are given a fair chance to demonstrate content mastery on high-stakes tests, states should invest in data collection, record keeping, and reporting systems that will permit them to make full use of the data those assessments generate. States should develop the capacity to determine whether a given ELL population is making progress in literacy or not, what funding or services a particular school might require, and if a program or course of study for adolescent ELLs needs improvement. States might invest in improved home language surveys, systems for data analysis and timely reporting, systems for tracking highly mobile populations, and better documentation of existing in-school practices. In those states that are experiencing surging enrollments of adolescent ELLs, many data tools and systems are lacking, so their development is highly desirable.

In order to help schools and districts build their capacity to perform such assessments, the following should be considered:

- Mandate the assessment of the literacy skills of incoming students in both English and their native languages.
- Increase funding for the Enhanced Assessment Grants program under Title VI of NCLB, with a portion of those funds dedicated to developing tools that appropriately assess the literacy skills of adolescent ELLs, such as native language content-area assessments.

- Allow states to use a threshold English language proficiency test (that includes a reportable reading measure) before testing content areas in English for up to 3 years while adolescent ELLs are receiving language services, under NCLB's reauthorization.

- Implement consistent accommodations for ELLs during high-stakes testing.

- Use multiple measures to get the full picture of students' language skills and content knowledge.

- Invest in data management systems that record and analyze disaggregated data on adolescent ELLs' performance and report results in a timely manner to schools and teachers to inform instruction.

- Survey districts and schools to determine how adolescent ELLs' literacy needs are currently being assessed and to identify the specific strengths and weaknesses of those assessments with the aim of replicating promising approaches and tools.

Challenge 3: Inadequate Educator Capacity for Improving Literacy in ELLs

The Challenge

Many of the educators working in secondary schools have had little professional development for teaching literacy to adolescents; fewer still have had training to teach second language literacy to adolescent ELLs. This lack of adequate teacher development conflicts with the fact that the relationship between literacy proficiency and academic achievement grows stronger as grade levels rise—regardless of individual student characteristics (Biancarosa & Snow, 2004; Kamil, 2003). Therefore, adolescent ELLs need skillful teachers so they can develop literacy skills for each content area *in* their second language as they simultaneously learn, comprehend, and apply content-area concepts *through* that second language (Garcia & Godina, 2004; Genesee et al., 2006).

As the number of adolescent ELLs grows in districts throughout the United States, it is increasingly apparent that middle and high school educators must learn the basic principles of effective second language literacy instruction and understand the second language acquisition process. All teachers and administrators do not require the same levels of training in working with ELLs, but schools of education and ongoing professional development opportunities must be calibrated not to current reality, but to the changing demographics of the coming years. Certainly, in schools and districts with moderate to large ELL enrollments, intensive professional development opportunities for teachers, coaches, and administrators are needed. Furthermore, all teachers must assume some responsibility for helping their students learn academic English within the context of their subject-area disciplines.

Potential Solutions

Building educator capacity to develop literacy skills in adolescent ELLs should happen schoolwide. Suggested topics for professional development for teacher, literacy coaches, and administrators are outlined below.

Teachers

Teachers need professional development to teach content effectively to students who are learning academic English at the same time they are trying to meet content standards. Although it should be a national goal for teacher education, only three states (Arizona, California, and Florida) have enacted policies to ensure teacher candidates have some preservice courses that will help them work successfully with ELLs (see sidebar for details). The following knowledge bases are recommended to be part of the teacher development programs for all teachers (Crandall, 2000; Crawford, 2003; Echevarria, Vogt, & Short, 2004; Grant & Wong, 2003; Short & Echevarria, 2004; Wong, Fillmore, & Snow, 2002):

- First and second language acquisition theory—knowledge of how children learn their first language and how learning a second language differs, and which first language literacy skills transfer to the second language and how
- Subject-area content—a basic understanding of the subjects ELLs take in secondary schools for ESL teachers, a deep understanding for content-area teachers

HIGHLY QUALIFIED TEACHERS?

No Child Left Behind (NCLB) requires that secondary school teachers be "highly qualified," and states ensure that teachers of "core academic subjects"—English, reading or language arts, mathematics, science, foreign languages, civics and government, economics, arts, history, and geography—meet stringent qualifications that include full understanding of the content area (generally demonstrated by holding a degree in the content-area specialty).

NCLB does not emphasize the need for high school teachers to be able to teach reading or writing, nor does it require that teachers have any training in working with adolescent English language learners (ELLs). Despite the growing numbers of these students, only three states have policies that require all teachers, at least in principle, to have an understanding of how to teach ELLs effectively.

- Arizona adopted a new certification policy in 2005 that requires every certified educator (e.g., administrators, teachers, psychologists) to complete 15 hours of sheltered English immersion training by August 2006, and an additional 45 hours by August 2009 to renew their certification.
- Florida requires that English as a Second Language (ESL), English, and language arts teachers take 300 in-service training hours or 15 semester hours of coursework on Methods of Teaching ESL, ESL Curriculum and Materials Development, Cross-cultural Communication and Understanding, Applied Linguistics, and Testing and Evaluation of ESOL. Teachers of other subjects also take coursework in most of these topics but for fewer hours.
- California has a two-part credentialing system that includes teacher preparation and induction, with a focus on program standards. Those standards call for programs to prepare teachers to instruct and assess ELLs, but no specific coursework for ELL preparation is articulated.

- ESL and sheltered instruction methodologies—knowledge of how to integrate language development activities and explanations with content-area instruction

- Content-area pedagogy—knowledge of specific methods for different content areas

- Content-area language and discourse—an understanding of how language is used in a specific subject area or discipline and of subject-specific text genres and structures

- Linguistic and cross-cultural contexts—an understanding of language policies, sociocultural factors that influence language use and classroom behavior, and similarities and differences between English and student native languages

- Curriculum development—knowledge of how to design content-based ESL and sheltered subject curricula that integrate language development with content topics

- Assessment—knowledge of how to minimize the English language demands of assessments to allow ELLs to demonstrate content knowledge and how to employ and interpret multiple measures of assessment to get a fuller picture of student knowledge and ability

Motivating teachers to change the way they have traditionally taught, and to include literacy instruction for ELLs into their lesson designs, is a slow process that takes a great deal of support. It is generally agreed that teachers need sustained professional development and job-embedded practice if they are to implement new interventions or substantially change their instructional approach (Gonzalez & Darling-Hammond, 1997; National Commission on Teaching and America's Future, 1996). Collaboration between content-area teachers and teachers of English as a second language can be helpful in this process (Grant & Wong, 2003), as can be activities that involve teachers in the community and allow them to develop a deeper understanding of their students' linguistic and cultural resources (Gonzalez et al., 1993).

Literacy Coaches

There is also an important role for literacy coaches who act as schoolwide resources. For coaches or literacy specialists, the issue of first language literacy development is generally well-covered in their pre-service or in-service training; less so is second language literacy. Therefore, in setting standards, the International Reading Association (IRA) has called for coaches to receive training in specific subject areas and on ESL issues in order to provide appropriate guidance to content teachers. The *Standards for Middle and High School Literacy Coaches* (IRA, 2006) also recommends that coaches

- Share a positive vision for students' learning with teachers, including understanding and educating teachers about the second language acquisition process.

- Encourage ESL teachers to serve as resources for content-area teachers and help them understand how ELLs learn language.

- Serve as the experts for their schools on research and practice for adolescent ELL language development, and share new findings with colleagues.

- Help teachers design instruction that helps improve ELLs' ability to read and understand content-area information, and identify teaching strategies that take into account ELLs' different proficiency levels while moving them toward grade-level literacy.

Administrators

Administrators also play a critical part in ensuring that teachers receive the support they need to improve content-area literacy instruction for adolescent ELLs (Duff, 2005). This support should include scheduling time and opportunities for ESL and content teachers to collaborate and compare teaching strategies, to review the progress of ELLs in the school, and to choose appropriate interventions and classroom resources (Crandall, Bernache, & Prager, 1998; Harklau, 1999). Administrators should fully understand the principles of second language acquisition, and be given training on job-related issues such as evaluation of literacy programs and classroom-based instruction for adolescent ELLs. As instructional leaders, they should look for and recognize effective instructional techniques for working with ELLs when they observe in classrooms, such as use of appropriate speech, with few idioms and clear enunciation; use of visuals and demonstrations; scaffolded instruction; targeted vocabulary development; connections to student experiences; student-to-student interaction; and use of supplementary materials.

HOOVER HIGH SCHOOL STAFF DEVELOPMENT

In the late 1990s, Hoover was ranked the lowest performing school in San Diego by California's accountability measures. In response, Hoover staff and partners designed and implemented staff development and student assessment practices to guide and increase academic literacy among their adolescent ELLs. Since 1999, Hoover High has followed a sustained, mandatory, and consistent professional development program—the Literacy Staff Development Plan—as a member of the San Diego State University/City Heights Education Collaborative Partnership. Today, the high school is exceeding its state growth benchmarks.

The Literacy Staff Development Plan focuses on teachers' use of seven key strategies for developing students' academic literacy: *anticipatory activities, shared reading or read-aloud activities, structured note-taking, graphic organizers, vocabulary instruction, writing to learn prompts,* and *reciprocal teaching* in addition to questioning techniques. The program includes (a) monthly mandatory meetings for teachers during planning blocks; (b) weekly course-alike meetings for teachers in each department to discuss and troubleshoot curricula and pacing guides, student progress, selection of course materials, instructional strategies, content standards, and assessment; (c) collegial coaching; (d) dissemination of information about state standardized tests; (e) department chair meetings on the professional development program; and (f) new and future teacher support including peer coaching, reflective journaling, and participation in collegial coaching training. As part of the partnership, professors of education at San Diego State University connect daily with Hoover's principal and faculty. The principal attends and participates in every monthly meeting for each planning block. Teacher observation forms used by administrators focus on the seven key strategies.

What is particularly striking about the Hoover site has been its long-term commitment to this educational intervention. Far too often schools chase the flavor of the month when it comes to professional development topics or instructional techniques. Teachers are exposed to new ways of organizing instruction but before they have a chance to learn the intervention well, let alone master it, the school moves on to the next "magic bullet." Hoover's resolve to stick with this approach and to deepen the teachers' knowledge of literacy instruction is commendable.

For more information on Hoover's program, see Appendix C.

Outlined below are a number of policy strategies for building educator capacity:

- Set national teacher education policy to ensure all teacher candidates learn about second language and literacy acquisition, reading across the content areas, and sheltered instruction and ESL methods. The policy might propose a continuum of teacher development from pre-service to induction and mentoring to ongoing development for new and experienced teachers.

- Update state teacher certification requirements so all credentialed teachers are capable of working effectively with ELLs.

- Require districts that serve ELLs to provide meaningful, ongoing, on-the-job training for administrators, coaches, and teachers within content area, literacy, and ESL instruction. At present, over 50% of the adolescent ELL population is located in just 10% of the secondary schools (Batalova, Fix, & Murray, 2005), so these districts should engage in more staff development.

- Provide teachers with release time and financial support to enable them to participate in professional development in ELL literacy instruction and/or to earn endorsements or advanced certification in that area.

- Offer similar incentives for ESL and bilingual educators to become more knowledgeable about adolescent literacy instruction, so they can effectively integrate teaching strategies in their lessons and collaborate with regular content-area teachers.

- Modify the highly qualified teacher definitions in the reauthorization of NCLB and in state criteria for demonstrating competency, so that content-area teachers in schools with high percentages of ELLs demonstrate competence in working with them.

Challenge 4: Lack of Appropriate and Flexible Program Options

The Challenge

One of the most significant challenges for programs that serve adolescent ELLs is helping them become proficient in English and meet high school graduation requirements in the time available. Implementing the best program to do so is a difficult proposition given the diversity among the learners in terms of their backgrounds and aspirations and the policies in place that conflict with what is known about the second language acquisition process.

It is a myth that adolescent ELLs can learn the academic English they need for schooling in 1 or 2 years of specialized instruction, unless they are the exceptional case, like Krystyna (described earlier in the Diversity and Adolescent ELL Literacy section), who was well educated, entered her U.S. school on grade level, and was learning English as her third language. Most ELLs require 4 to 7 years of instruction to reach the average academic performance of native English speakers (Collier, 1987) so time is of the essence for those who enter high school as beginners. The academic vocabulary challenge alone is overwhelming. Consider that high school students are expected to have a vocabulary of approximately 50,000 words to be able to master the increasingly complex coursework of high school (Graves, 2006; Nagy & Anderson, 1984) and the average student learns 3,000 new words each year. In 4 years, then, the average beginning ELL might learn 12,000 to15,000 words without targeted interventions, falling far short of the 50,000-word goal. When they have to perform double the work, learning academic English while learning content of multiple subjects, they are at a decided disadvantage in the country's schools.

Many secondary school programs are not designed around individual student needs, ELL research findings, or data on ELL performance. The United States' educational system continues to favor the traditional 4-year high school model for all, even though adolescent ELLs as well as some native English-speaking students might be more successful with a 5- or 6-year option (AFT, 2006; Callahan, 2005). The system allocates course credits based on seat time, and in some cases end-of-course test scores, rather than other means for demonstrating competence in a subject. Receiving a diploma in many states requires passing a standardized exit exam. And increasingly, high schools are designed to prepare all students for college, yet college is not the goal of all high schoolers. Instead of offering flexible pathways for students who might want to pursue a vocational education, for example, courses of study and tests focus on college preparation.

Furthermore, NCLB defines high school graduation rates in a particular way: Only students who receive a regular, standards-based diploma, on time with their class, are to be counted as high school graduates. States have challenged aspects of this federal definition—such as seeking to count students who receive GEDs or certificates of attendance, or those who take longer than 4 years to finish high school as graduates—but, to date, the states have not prevailed. Many adolescent ELLs enter ninth grade with no English skills and interrupted educational backgrounds and therefore need additional time to graduate; thus this NCLB accountability measure is a significant challenge to students and schools.

Potential Solutions

Adolescents are under far greater time pressures to become sufficiently fluent in English and develop the literacy skills necessary for success in content-area classes and assessments than are younger ELLs and native English speakers. Finding an appropriate program that will accelerate their English language development and let them make progress in content-area coursework is the ultimate goal. In light of the diversity of the adolescent ELL population, no single or rigid approach to literacy instruction is likely to work for every learner. Therefore programs have to be flexible, strategic in their use of time and resources, open to options for the language of instruction and for attaining course credit, and considerate of individual student goals.

As the nation seeks to implement programs for adolescent ELLs who are struggling with academic literacy, it should begin with certain goals in mind. The choice of language development program, literacy intervention, and pathway to graduation should depend on the students' aspirations as well as educational policies. The ideal programs for adolescent ELLs will be age-appropriate, motivating, designed with realistic second language and literacy development expectations, and supported with adequate resources and staff. Special populations, such as newcomer students, may need a specialized program to accelerate their learning of English, their acculturation to U.S. schooling practices, and basic content information.

Language Development Program

Selecting a language development program is the first order of business. On the basis of the growing knowledge from research studies and program evaluations, a sheltered instruction or bilingual education program is recommended, coupled with content-based ESL classes. These program options will use the limited time more effectively. If necessary, these program models may be augmented with additional literacy interventions that have proven track records for second language learners. It is also worth noting that a district can implement more than one model in order to better meet the diverse needs of its student population and, in fact, many do. The most successful programs provide flexible pathways through the program and into the regular curriculum. The key is to make sure that the program articulates smoothly with the mainstream program to maximize its effectiveness and ease the students' transition when they exit the language support program.

Content-based ESL classes are taught by language educators whose main goal for students is English language development but who collaborate with different subject area departments to prepare the students for the mainstream classroom by integrating content topics. Teachers develop the students' English language proficiency by building background knowledge and vocabulary from subject areas that students are likely to study or from courses the students may have missed if they are new to the school system. They use special instructional strategies and carefully selected materials. Content-based instruction is often accomplished through thematic or interdisciplinary units, such as a rain forest ecology unit, and lessons could include objectives drawn from life sciences, history, or mathematics—as well as ESL. Throughout the course syllabus, different content areas and topics are usually covered, although in some instances, the class follows the entire curriculum of a particular subject.

Sheltered instruction is a term with two related meanings. It can refer to an instructional approach for content-area teachers to teach academic subjects using English as the language of instruction. The teachers highlight key language features and incorporate ESL techniques that make the content comprehensible to students while at the same time promoting their English language development. In the research-based Sheltered Instruction Observation Protocol Model, teachers include language objectives in every content lesson, develop background knowledge for the lesson's topic, focus on content-related vocabulary, promote oral interaction, and emphasize academic literacy practice (Echevarria, Vogt, & Short, 2004). Sheltered instruction can also refer to the program model, in which ELLs generally have a schedule consisting of a set of sheltered courses (e.g., sheltered algebra, sheltered

U.S. history) in addition to content-based ESL classes. Each sheltered course should have a specially developed curriculum that identifies the language goals of the subject area as well as strategies and techniques to help students develop appropriate academic literacy skills while covering state standards of learning. Sheltered programs are often implemented when the ELL population includes multiple native languages.

If adolescent ELLs are literate in their native language and on grade level, a bilingual program might be the best option. While students are learning academic English, they can augment their content knowledge. Research has shown that academic literacy in the native language facilitates the development of academic literacy in English (August & Shanahan, 2006; Genesee et al., 2006). Transitional bilingual education (TBE) is one bilingual model that provides initial instruction in academic content in the ELLs' native languages, along with content-based ESL instruction. This model helps ELLs make progress in academic subjects at the same pace as native English speakers, and content knowledge gained through use of the native language will transfer to English too. Students typically spend 2 to 3 years in a TBE program, but the transition from instruction in the first language to

UNION CITY (NEW JERSEY) SCHOOL DISTRICT'S BILINGUAL PROGRAM DESIGN

Union City's program is based on research that native language literacy and content knowledge transfer to the second language and on practical experience that newly arrived high school students will not have much time to learn English and academic subjects taught through English in 4 years. So, Union City middle and high schools offer bilingual content classes to their mostly Spanish-speaking students while they learn English. In this way, the students can study grade-level courses and receive core credit necessary for graduation. Biliteracy and multicultural understanding along with academic achievement are goals of the program.

The high school program offers more than 20 bilingual content courses, such as bilingual earth science, biology, physics, algebra, geometry, High School Proficiency Assessment math skills (preparation courses for the high school exit exam), U.S. history, world history, health, and driver's education. The middle schools also offer a bilingual program with self-contained ESL and content-area classes for bilingual students, and English as a second language (ESL) and sheltered classes for advanced bilingual students. For students with weak math skills, paired periods may be built into their schedule, one being the regular grade-level math and the other a math support class.

In addition, the district incorporates five levels of ESL for middle and high school students: ESL reading and writing for new entrants, beginner, intermediate, advanced, and ESL C (which prepares students for the transition to mainstream language arts classes). In New Jersey, English language learners (ELLs) can receive up to four core credits for language arts for ESL courses at high school because the state ESL language and literacy standards are aligned to the state language arts standards. This policy helps ELLs meet graduation requirements.

Secondary ELLs are designated as bilingual or advanced bilingual based on their initial assessment and subsequent yearly assessments. Bilingual students take grade-level bilingual content classes and have 2 periods of intensive ESL each day. Those at the beginning level of English proficiency also have 1 period of Spanish. For intermediate-level students, the ESL instruction is content-based. Advanced bilingual students continue to take ESL if needed as well as sheltered content or mainstream classes.

For more information on Union City's program, see Appendix C.

English should be gradual, phasing in subjects one at a time; students should interact socially with native English speakers from the start.

Dual language and two-way bilingual programs are the most successful programs for developing bilingual students who perform at grade level or above academically (Lindholm-Leary, 2006; Thomas & Collier, 2002). These programs educate ELLs using both English and their first language for academic instruction, promoting full proficiency in all aspects of the two languages, usually separating language by content subject taught. However, these program types are rarely implemented for adolescent students. Nonetheless, if a district has a dual language or Two Way Immersion program at the elementary level, it is valuable to continue it in some capacity through middle school and beyond.

A final program model to consider is the newcomer program. Often implemented at the secondary level, a newcomer program is specifically designed to educate recent immigrant students—particularly those with no or very limited English language proficiency and limited formal education—in a special academic environment for a limited time. Common features among newcomer programs include (a) distinct, intensive courses to integrate students into American life and fill gaps in their educational backgrounds; (b) specialized instructional strategies to

INTERNATIONAL ACADEMY– LEAP: OFFERING FLEXIBLE OPTIONS FOR NEWCOMER ENGLISH LANGUAGE LEARNERS

The International Academy–LEAP, in the St. Paul (Minnesota) school district, was established in 1994 as a 4-year, ungraded high school program to serve a large number of older, limited English proficient immigrant and refugee students who entered school after age 15 (Dufresne & Hall, 1997). Many of these students failed to meet graduation requirements and dropped out or became too old to remain in school.

The International Academy–LEAP is available to older students (ages 16–26) who have been in the United States. for 2 years or less and who are unlikely to graduate from a traditional high school. The majority of LEAP's students have been 18 to 20 years old. The program serves more than 200 students who usually come from 15 or more different countries and who speak 15 to 19 different languages.

The program aims to help the students acquire a high school diploma; prepare for vocational training, college, or work; and improve English language proficiency. It is an English as a second language (ESL) program with native language support that offers the courses necessary for a diploma. The curriculum provides different levels of ESL and sheltered content classes with bilingual tutoring and support in Somali, Hmong, Russian, Spanish, Arabic, Lao, and Vietnamese. Teachers devote considerable instructional time to developing students' academic vocabulary skills and background knowledge in the content areas. The program also includes cultural orientation activities and prepares students for work by developing their computer and vocational skills and providing career exploration.

The International Academy–LEAP provides a flexible schedule. Mature, highly able students may earn more credits over a shorter period than they could in ordinary high schools because of independent study options, extended scheduling, and cooperative arrangements with adult programs, the St. Paul Technical College, and nearby community colleges. These students are usually college bound and need to accelerate their English proficiency. Many students remain at the school for their high school career and graduate, receiving their high school diploma when they pass the Minnesota basic standards test. Some of the younger students make a transition to a traditional high school and some older students may make a transition directly to a vocational program.

address literacy because many students become literate for the first time in these programs; (c) a length of enrollment determined by individual students' needs, usually one to three semesters; and (d) hand-picked staff who have ESL endorsements or long-term experience in working with adolescent ELLs (Boyson & Short, 2003).

Flexible Student Pathways

After a language development program model has been chosen, districts and schools must look for flexible pathways so students can progress through high school and graduate. One significant way for schools to provide flexibility is to allot extra instructional time by adopting an extended school year, year-round schooling, or a longer daily schedule (Crandall, Bernache, & Prager, 1998; Short, Boyson, & Coltrane, 2003). Adding time in any form is advisable from a second language acquisition perspective. However, merely increasing the hours in a school day or days in a year may not be an option for some students, particularly those who are employed after school or over the summer. Thus, another option is for schools to build additional time into the schedule by permitting ELLs to stay in high school for more than the usual 4 years (Garcia, 1999) or to design flexible school-day schedules that might include the availability of evening classes, weekend classes, and distance learning opportunities. Some schools are experimenting with paid internships for half of the school day.

The Union City (New Jersey) School District, for example, has recognized the importance of extending learning time for students who are struggling in school or who are recent arrivals. The district offers before- and after-school sessions at the high schools, and after-school programs at the elementary and middle schools. One middle school has a lunchtime intervention program for students with low test scores. There are Saturday programs for all grade levels and summer programs as well. For example, if ELLs have not passed the High School Proficiency Assessment (HSPA) in the spring of 11th grade, they participate in an intensive summer program to prepare them for the following fall administration. These summer classes are customized to their needs based on data derived from scores on the test. Specialized tutoring opportunities are available for students at the high school as well, such as HSPA and ESL tutoring every Tuesday and Thursday.

At J.E.B. Stuart High School in Virginia, the staff work with students to develop a variety of pathways to graduation, including 5- and 6-year individualized graduation plans. Usually these plans include summer sessions in addition to the usual school year, but not always. The school uses a block scheduling design that helps provide time for required coursework or extra literacy intervention classes. Stuart also offers an after-school tutoring program 3 days per week. It is mandatory for students who receive Ds and Fs (in a core subject or foreign language) to attend at least 1 day per week. Other students are welcome to attend any session and many ELLs take advantage of this opportunity.

Stuart also supports a program called The Academy. Designed for students who are unlikely to complete high school at Stuart, this 2-year program incorporates vocational education, allowing students to choose among close to 20 different courses. Students spend half the day in regular school classes and half the day in Academy courses. Approximately 50% of the students in this program are ELLs, who must be at the intermediate level of proficiency or above. The staff encourage the older ELLs to enter the program, especially those who lack the prior education to realistically meet their high school graduation requirements. While they are learning skills for the world of work (e.g., as an electrician, carpenter, or hair stylist), they engage in authentic interactions and practice their English.

Academic Credits

As programs explore ways to help ELLs meet graduation requirements, they may want to consider ways that students attain core credits. New Jersey and other states award some language arts credits for certain levels of ESL instruction. In addition, some states and districts also permit immigrant students who enter at 10th grade or higher to demonstrate the content knowledge they gained from schooling in their home country by taking tests based on state content standards and receiving credit if they pass. (These tests are likely to be in English, however, so students would have to first reach a level of proficiency that allows them to understand the language of the test.) Moreover, a number of districts make significant efforts to translate transcripts that immigrant students bring with them (sometimes working through the embassies) in order to provide appropriate credit for equivalent coursework taken in the home country.

Exit Exams

In addition to turning their schools into more flexible organizations, states may want to reconsider the type of high school exit exam they require. For those that mandate a high school exit exam, only a handful offer alternative options to the paper-and-pencil test. Washington State has options available for students who do not pass one or more subjects on the Washington Assessment of Student Learning (WASL) exit exam after two attempts. The state-approved measures include (a) a comparison of a student's grades in applicable courses with the grades of other students who took those courses and passed the WASL; (b) the examination of a collection of work samples (developed in class under teacher supervision) that shows a student has met state standards; or (c) a consideration of a student's score on the math portion of the PSAT, SAT, or ACT exams (for the math WASL only).

Nonetheless, in order for the extended-time and other flexible programming solutions to work, NCLB graduation accountability measures for high school graduation rates need to be reconsidered. Schools and districts are understandably hesitant to try new options if they will be negatively affected.

Policymakers could help to solve these problems by

- Requiring that program design decisions be based on appropriate and effective language development practices, as determined by rigorous surveys of student data.
- Adjusting or developing sheltered curriculum frameworks for high school content courses and establishing core credit for these courses.

- Allowing schools greater flexibility in the use of learning time and encouraging them to provide ELLs with extended or extra opportunities for literacy instruction beyond the classroom (and coordinate with any out-of-school tutoring or mentoring opportunities).

- Encouraging the development of plans for a 5-year high school path for beginning level ELLs who enter in ninth grade that include rigorous preparation for students with either college or vocational goals.

- Adjusting school accountability measures under NCLB to avoid penalizing districts and schools that allow ELL students to take more than the traditional 4 years to complete high school successfully.

- Securing appropriate funding for these endeavors.

Challenge 5: Limited Use of Research-Based Instructional Practices

The Challenge

There is not a large body of research on effective instruction for adolescent ELL literacy development, but it is possible to make a number of recommendations based on currently available evidence and promising practices. The instructional methods that secondary school teachers have typically used do *not* facilitate learning or literacy instruction for ELLs (Tharp, Estrada, Dalton, & Yamauchi, 2000). Lectures and worksheets, for example, do not provide effective learning scaffolds for these students. Textbook features intended to aid student understanding may have the opposite result for students who do not know how to use bolded words, headings, sidebars, and graphs. Many ELLs with weak literacy skills have difficulty tracking the flow of information on cluttered text pages.

No matter what program design is selected or what educational plan is developed for an adolescent ELL, the instruction in the courses should account for the students' second language development needs as well as their content-knowledge requirements. As discussed under Challenge 3, many content-area teachers are not well prepared to integrate language instruction in their content lessons. They also lack sheltered curricula and materials that could supplement the regular textbook. Furthermore, although there are some research-based literacy interventions for native English-speaking struggling readers, few of them have been evaluated as to their efficacy for adolescent ELLs.

Finally, adolescent ELLs often employ literacy knowledge outside of school that is often not readily apparent in school practices nor indicated by school assessments. For instance, students use the internet, send emails and text messages, listen to music, and read magazines. Students also engage in sophisticated literacy skills such as paraphrasing, interpreting, and translating when asked to read English texts for family members (Moje et al., 2004; Orellana, 2004). These out-of-school literacy practices are therefore among the linguistic and cultural resources students bring to school, but so far little research has been done to examine the effects of these practices on literacy development and teachers have not received adequate support in finding ways to tap these resources in class.

Potential Solutions

The review of the research and of the model programs has found a number of instructional practices potentially effective for developing literacy in adolescent ELLs. Many of them are directly supported by the current theory of second literacy development and what is known about the relevant characteristics of these learners. This discussion highlights nine promising practices.

1. Integrate All Four Language Skills into Instruction from the Start

ELLs benefit from the integration of explicit instruction in reading, writing, listening, and speaking across the curriculum, regardless of student proficiency level (Genesee et al., 2006). Research strongly suggests that reading and writing are mutually reinforcing skill domains, and that this holds true for ELLs just as it does for native English speakers (August, 2002; Echevarria, Short, & Powers, 2006). Oral language development is also important because it facilitates English literacy development (August & Shanahan, 2006). To be academically literate, students must be able to engage in the oral discourse of the classroom as well as the reading and writing activities in the lessons. Therefore, teachers should integrate all four language skills in their lessons, and oral language practice should not be sacrificed for more time on reading and writing.

2. Teach the Components and Processes of Reading and Writing

For adolescent ELL students who do not read or write in any language, it is important to teach them the components of reading: beginning with phonemic awareness and phonics (the sounds of a language and how to put sounds together to form words) and adding vocabulary, text comprehension, and fluency (August & Shanahan, 2006). This instruction can occur in the native language or in English. If taught in the native language, knowledge and usage of these components will transfer to English. However, it is then useful to pay attention to differences between that language and English. For example, English has some phonemes (the smallest units of spoken language that have meaning) that do not exist in other languages, such as the phoneme "sh," which does not occur in Spanish. So students may benefit from targeted work in those phonemes. Instruction in these components of reading must, however, be appropriate for teens. Materials for primary grades are not suitable.

After adolescent ELLs acquire the basic skills, they need to become active readers and writers who use reading and writing processes, such as previewing, making predictions, paraphrasing, and inferring (for reading) and brainstorming, drafting, editing, and publishing (for writing). Skilled readers and writers engage in these processes in academic settings and in "real life," and researchers have found that adolescent ELL literacy is enhanced when teens are taught using a process-based approach (Garcia & Godina, 2004; Valdés, 1999; Villasenor, 2003). Using these processes, learners can examine a text, make conclusions about it, articulate and incorporate those conclusions, and then evaluate the effectiveness of the incorporation. The process creates awareness about the functions of language, and the reflection inherent in the process helps students practice the kinds of highly abstract thinking that is essential to succeeding in high school and beyond into college or the world of work.

3. Teach Reading Comprehension Strategies

Besides learning the basics of reading, ELLs need to receive explicit instruction about reading comprehension strategies (Bernhardt, 2005; Denti & Guerin, 2004; Garcia & Godina, 2004). If the students already apply these strategies when reading in their native language, then the strategies may transfer to English (August, 2002; Riches & Genesee, 2006). Some students, however, need explicit instruction in strategy use in order to make the transfer. For adolescent ELLs who lack reading strategies in their native language, second language strategies instruction can provide them with skills they can apply to all texts.

4. Focus on Vocabulary Development

To be academically literate, students need a strong and constantly growing vocabulary base. Knowledge of words, word parts, and word relationships is critical if students are to understand topics in a content area and develop strong reading comprehension and test-taking skills (Graves, 1986, 2006). Students can learn new words through a variety of methods. Visuals, graphic organizers, demonstrations, and other instructional aids and devices can help students better understand and remember words and their meanings. Also helpful are word attack techniques, such as identifying words in English that are similar and related to those in the student's native language (e.g., *tradition/tradición; university/universidad*) and developing clues to meaning of a word based on context clues and structural analysis (August, 2003; Echevarria, Vogt, & Short, 2004). Teachers must teach multiple meanings of words and help students incorporate words into their expressive vocabularies. For ELLs, teachers may also need to distinguish between content-specific words (e.g., *hypotenuse, equilateral*), process words (e.g., *scan, draft, clarify*), and words related to English structure (e.g., prefix, *photo*-; suffix, -*ly*) (Echevarria, Vogt, & Short, 2004; Graves, 2006).

5. Build and Activate Background Knowledge

Many adolescent ELLs lack background knowledge of the topics taught in middle and high school content classes or have gaps in information learned. Teachers must activate what prior knowledge exists and apply it to the lessons or explicitly build background schema. Students who have been in U.S. schools since the early grades generally have some of the background knowledge that is expected by teachers, textbooks, and curricula in the secondary grades if they understood the lessons, but students who are new to the United States may not. Although they often have a great deal of background knowledge, not all of it applies to the academic context of their courses.

This background knowledge—what students know from schooling, personal experience, or insights gained from study in another country or from oral history—is important because background schema is a major factor in reading comprehension (Bernhardt, 2005). Connecting instruction to what the learners know and then explicitly discussing how that knowledge applies to the topic at hand is a technique teachers should use with ELLs. For example, immigrant students may not have studied the U.S. Civil War, but they may have lived through a military conflict at home and that experience could give them special insight into U.S. history. Other ways to build background involve introducing students to new academic topics through short video clips, demonstrations, or field experiences.

A number of researchers argue that when teachers make an effort to learn about students' existing "funds of knowledge," and when they encourage students to relate that knowledge to the subjects studied in class, students tend to become more engaged in the lesson and their reading comprehension improves (Gonzalez et al., 1993; Moje et al., 2004).

6. Teach Language through Content and Themes

In the majority of cases, both the language and the content taught in school are new to ELLs. Therefore, when language instruction is linked closely to real-life experiences, including the content or themes being taught in other classes, students have more success integrating the two (Garcia & Godina, 2004; Short, 1999). With teacher facilitation, students can access their content knowledge to bolster their academic language development and similarly use their language skills to gain more content knowledge.

Adolescents thrive in situations in which they recognize the relevance of what they are learning. By helping them understand how the acquisition of language and academic literacy skills will allow them to achieve at higher levels in other classes, they may become more motivated. In a learning environment that incorporates language development with content or themes, students can see for themselves the importance of literacy skills in understanding the way material is presented and how texts are organized. The literacy skills needed to "do" science, for example, can be made clear and explicitly taught while students are engaged in "doing" science for a real purpose (Moje et al., 2004). Thus, providing content- or theme-based instruction gives ELLs an important framework for assimilating new information and applying language skills learned across the curriculum (Echevarria, Short, & Powers, 2006; Garcia & Godina, 2004; Schleppegrell, Achugar, & Orteíza, 2004; Short, 1999).

7. Use Native Language Strategically

One useful strategy for helping students understand difficult academic and content-specific concepts is to explain the ideas in their native language. In this way, students can develop a deep understanding of the concepts while they are still learning the English words and expressions that define or exemplify them. If students share the same language background, they may also be able to explain concepts

LITERACY STRATEGIES AT HOOVER HIGH SCHOOL

Four of the seven teaching strategies that comprise the Literacy Development Plan at Hoover High School in San Diego, California, are recommended by the research discussed above. *Anticipatory activities* build students' background knowledge, *structured notetaking* and use of *graphic organizers* teach students how to use reading strategies to improve comprehension, and explicit *vocabulary instruction* across the curriculum gives students access to academic literacy not available in the typical English as a second language class. The use of these strategies across the content areas gives students a common framework with which to learn on their own, no matter the context.

and terms to each other (Gumperz, Cook-Gumperz, & Szymanski, 1999). Other options for clarifying or explaining information in the native language include the use of bilingual dictionaries, glossaries, or websites. Several research studies have also found that secondary language minority students in bilingual programs (receiving instruction in their native language and in English) outperformed students in English-medium programs (receiving instruction only in English) on measures of English reading proficiency (Lindholm-Leary, 2006; August & Shanahan, 2006).

8. Pair Technology with Existing Interventions

Technology and second language literacy development generally relate in two ways—through the teaching of technology-based literacy skills and through technology supports for literacy development. The incorporation of technology into instruction for ELLs is seen as promising, as the practical relevance and often two-way nature of the work are thought to positively impact student motivation (Kim & Kamil, 2004). However, research on the effects of technology interventions on reading and writing development for adolescents conducted thus far is still inconclusive and the number of studies that have focused on ELLs is small.

One study found that technology use paired with other interventions, such as project-based instruction, heterogeneous student grouping, and interdisciplinary teacher teaming, related positively to adolescent ELL literacy development (Warschauer, Grant, Del Real, & Rosseau, 2004). Projects requiring students to undertake field work, prepare a product, and present the project and its findings to a real audience by means of multiple technologies (internet research; information exchange through email, chat rooms, and bulletin boards; and production of DVDs and CD-ROMs) led to improved standardized test scores. They also provide opportunities for background reading, editing, language building, and vocabulary development.

The use of audio books can also support students' literacy development, especially if students follow along with a written text; the recordings provide students with models for pronunciation and read-aloud fluency. For students whose spoken English is better than their reading skills, hearing the words read aloud can aid in vocabulary comprehension. In general, computer-based literacy instruction can promote reading and writing development for adolescent ELLs but that instruction should be highly scaffolded. Murray (2005) suggested that teachers choose or develop the websites they ask students to work with. Kim and Kamil (2004) recommended that instruction for ELLs include strategies for reading in a "multimedia environment."

9. Motivate ELLs through Choice

Most students tend to be more motivated and more successful in reading when they have meaningful opportunities to exercise choice, whether that means choice of text (deciding what to read), choice of task (what sort of reading or writing project to do with the text), or choice of partner (picking a partner with whom to do a project).

Adolescent ELLs will benefit from access to diverse texts that present a wide range of topics at a variety of reading levels. High-interest, low-difficulty texts play a significant role in a successful adolescent ELL literacy program and are critical to the fostering of reading skills of struggling readers and to engaging all students. Appropriate grade-level textbooks are important tools, but are more difficult for ELLs to read (Hornberger, 2003), so they must be supplemented by a selection of more accessible texts to reach multiple proficiency levels and connect to students' background experiences.

Policymakers could help improve ELL literacy instruction by

- Encouraging the use of proven and promising instruction for ELLs in schools, such as
  - integrating listening, speaking, reading, and writing skills into instruction from the start;
  - teaching the components and processes of reading and writing;
  - teaching reading comprehension strategies;
  - focusing on vocabulary development;
  - building and activating background knowledge;
  - teaching language through content and themes;
  - using native language strategically;
  - pairing technology with existing interventions; and
  - motivating adolescent ELLs through choice.
- Requiring states, districts, and schools developing literacy plans to incorporate appropriate instruction for adolescent ELLs.
- Designating a state or district adolescent ELL literacy coordinator to ensure instruction rigorously supports adolescent ELLs through the use of proven and promising practices.
- Reviewing the state English language development standards for grades 6 to 12 to make sure they incorporate language learning strategy development and use of literacy processes.
- Amending the Improving Literacy through School Libraries program to allow and encourage schools to procure reading materials and classroom resources in English and students' native languages that are appropriate for use with adolescent ELLs to support the use of proven and promising instructional practices.
- Clarifying regulations to ensure that ELLs receiving Supplementary Educational Services are provided with services that incorporate proven and promising practices specific to adolescent ELLs.
- Requiring surveys of staff knowledge of research-based instructional practices for second language literacy for use in planning staff development.
- Promoting consideration of appropriate instruction for adolescent ELLs during the design phase of any high school redesign efforts.
- Securing appropriate funding for these endeavors through NCLB and other state and local sources.

Challenge 6: Lack of a Strong and Coherent Research Agenda for Adolescent ELL Literacy

The Challenge

Over the past several years, two national panels were formed to conduct reviews of research on areas of literacy relevant to adolescent ELLs. Of the 450 studies reviewed by the National Reading Panel, only 17 studies addressed instruction for ELLs, with even fewer focusing on secondary school students (Snow, Burns, & Griffin, 1998). The National Literacy Panel reviewed 309 studies of language minority students aged 3 to 18 acquiring literacy in a societal language (including studies not conducted in U.S. schools and not for acquisition of English literacy) but less than 10% of the studies that focused on classroom instruction targeted students in grades 6 to 12. On the whole, the research for adolescent ELLs is spotty. The current knowledge base is much more extensive at the elementary level than it is at the middle and high school levels. Likewise, the research tells us far more about the teaching of native Spanish speakers than it does about the teaching of speakers from all other language backgrounds combined (August & Shanahan, 2006; Genesee et al., 2006).

Far too few programs serving large numbers of adolescent ELLs graduate these students with adequate levels of literacy achievement in English. Because of the paucity of research demonstrating outcomes for these students, programs wishing to make research-based reforms have little published or definitive work to guide them. Therefore, there is a need to conduct more research on and disseminate findings about promising practices that have been identified in schools and districts around the nation as having positive impact. Such evaluation studies could both strengthen the interventions and determine when and in what circumstances replication and scaling up are most likely to be successful.

Potential Solutions

Studies of New ELL Literacy Interventions

A mix of targeted qualitative and quantitative studies should be used to generate and test new literacy interventions for adolescent ELLs (research and development studies) and to explore the effectiveness of existing interventions for this group (rigorous evaluations). Such interventions could be instructional, curriculum-based, or programmatic. For example, it would be helpful to examine the ways in which native language literacy transfers to second language literacy for a particular age group, to find out whether adding a specialized academic literacy course to a high school ELL student's daily schedule yields a difference in performance, and to identify best strategies for literacy coaches working with the ELL population. In light of the diversity among ELLs, it is important to learn whether some interventions work better for students of certain language or educational backgrounds or at specific stages along the proficiency continuum. Further, it would be useful to know if certain interventions in combination are more effective than one intervention alone.

Studies on Out-of-School Literacy Practices

The field would also benefit from more research into the out-of-school literacy practices of adolescent ELLs. Such knowledge, if identified by research (particularly ethnographic and multiyear studies), might be used to better engage students in the classroom and bolster the literacy development of adolescent ELLs.

Studies of Adolescent ELLs' Achievement

There is an urgent need for more research on adolescent ELLs' current performance in school. Researchers can begin to mine forthcoming NCLB data for information about this group. Although the data will not be comparable across states until common definitions are used, longitudinal, within-state studies can be conducted. This type of research can help determine expected gains for different types of adolescent ELLs (e.g., newcomers who are several grade levels behind, students without literacy in their native language, second- and third-generation ESL students, immigrants with strong educational backgrounds, migrants, special education students).

Longitudinal Studies of ELL Literacy Development

In addition, the field would benefit from longitudinal studies of ELLs' literacy development, particularly studies that follow students after they reach FEP status. The true measure of a program for ELLs is not the results of an assessment while they are classified as LEP, because by definition they are not at a proficient level, but rather their results after they have reached the FEP level. If a program has been effective for them, FEP students will demonstrate proficiency on measures of English literacy and on content-area assessments (State of New Jersey, Department of Education, in press; New York City Department of Education, 2004). Such longitudinal studies would not only provide valuable insight on what school programs are doing well and where they fall short in teaching literacy to ELLs, but would help determine what can be expected in terms of gains in literacy skills and English proficiency over time for different kinds of ELLs in different types of programs.

Longitudinal, evaluative studies of different program models would also prove valuable to state and local districts in designing better programs for ELLs. For example, schools report that most students who enter ninth grade with the lowest proficiency levels in English and significant educational gaps do not have enough time to acquire English and obtain all the core content credits required for graduation in 4 years. Newcomer programs serve some of these students—that is, recent immigrants with low or no literacy skills (Boyson & Short, 2003). If newcomer programs can successfully accelerate the adolescent ELLs' language and content learning, then researchers need to evaluate how they do so and disseminate that information.

Research on ELL Graduation Rates

Researchers might also begin collecting and analyzing data on ELL high school graduation rates (using consistent data collection procedures across the states) and exit exam passing rates. When students drop out of school, they could be tracked to see if they seek employment or switch to adult education programs. Researchers could find out why they make a particular choice and use that information in a program review. High school graduation rates of ELLs in states with alternative exit exam options would be interesting to compare with those in states without such options.

Studies on Assessing ELL Literacy

Finally, to more accurately measure student progress on subject area tests, additional research on appropriate assessments (e.g., those written in simplified English or in the native language) and comparative studies of available assessment tools and the use of accommodations in high-stakes testing is needed. In light of NCLB accountability requirements, such research will provide practitioners and policymakers with critical information and confirmation about what is—or is not—working for ELLs.

Policymakers could help build the research base on ELL adolescent literacy by

- Funding short-term research and development on literacy interventions for adolescent ELLs targeting students from diverse language and educational backgrounds.
- Funding longitudinal studies on adolescent ELLs and former ELLs (FEPs) to evaluate promising programs and investigate the effects of teacher development pertaining to this student population.
- Funding research to identify and evaluate a set of model programs for secondary ELLs, such as newcomer programs and early college programs with an ELL focus, and disseminate information about their effective practices.
- Calling for an analysis of forthcoming NCLB data for information about adolescent ELLs that would target longitudinal, within-state studies. (But such studies should take care to distinguish between ELLs and former ELLs to avoid confusion.)
- Encouraging the collection and analysis of data on ELL high school graduation rates (using consistent data collection procedures across the states) and exit exam passing rates, and tracking which students drop out and which switch to adult education programs.

CONCLUSION

The nation's ultimate goal must be the education of all students, including those struggling with academic literacy in their adolescent years. Without highly developed literacy skills, adolescent students will find that pathways for success in school and in a profession are blocked. The consequences of dropping out of school are dire. More and more jobs (and the better paying ones) need employees with high levels of literacy, advanced technological knowledge, and problem-solving skills (Barton, 2000). Educated adults are less likely to be unemployed. They have better health care, participate more in civic life, and gain higher incomes. Therefore, appropriate educational opportunities for all of the nation's students must be ensured.

Adolescent ELLs are a diverse group of students whose needs, overall, have not been well served by the country's educational system. Yet with programs targeted to their language development needs, they can be successful in learning English and the content of their secondary school courses. For example, former ELLs in New York and California pass exit exams and graduate at a higher percentage than do all students as a whole (Center for Education Policy, 2005). Most adolescent ELLs are moving along the path to academic literacy, but some move more slowly than do others because of certain factors, such as their native language literacy skills and educational backgrounds.

As the research base on adolescent ELL literacy grows and as the best literacy practices become more widely disseminated through increased dialogue among educators, researchers, and policymakers, the right strategies for helping these students attain their full potential are being determined. The following responses would strengthen the efforts to date:

- Set common criteria for identifying these learners and tracking their performance.
- Develop new and improved assessments of their native language abilities, English language development, and content-knowledge learning.
- Build capacity among pre-service and current educators to instruct these learners effectively.
- Design appropriate and flexible secondary school programs that offer time and coursework that account for the second language development process.
- Use research-based instructional practices more widely and consistently.
- Fund and conduct more short- and long-term research on new and existing interventions and programs, and on the academic performance of these adolescent ELLs.

By helping ELLs learn and perform more effectively in the nation's schools, America's educational system and society as a whole will be strengthened and enriched.

APPENDIX B: PROJECT METHODOLOGY

In April 2005, Carnegie Corporation of New York contracted with the Center for Applied Linguistics (CAL) to examine the research and promising practices of adolescent English language learner (ELL) literacy. Because the number of kindergarten through 12th-grade students from non-English-speaking backgrounds has risen dramatically and represents the fastest growing subgroup of the student population, stakeholders determined that interventions that successfully address the adolescent literacy problem for ELLs needed to be identified and disseminated. Educators, program designers, and policy-makers have some limited research to draw from in this area, but need more focused attention on short-term and long-term recommendations for the problem.

Scope of Work

CAL conducted this work by: a) convening a panel of experts for advice and feedback; b) conducting a selected literature review; and c) visiting sites with successful track records of working with adolescent ELLs. In addition, CAL asked the Migration Policy Institute (MPI) to look specifically at the demographic trends and academic achievement of ELLs at a national and state level. The project goal was to produce a policy-oriented document that would address the following questions:

<u>Context:</u> Who are the adolescent ELLs and what does research tell us about their literacy development and academic achievement?

<u>Success:</u> What are some promising practices and policies at the district and program levels?

<u>Action:</u> What steps might be taken at the national, state, district, and school levels to address this issue?

To begin, a definition of academic literacy was set, with the following characteristics:

- Includes reading, writing, and oral discourse for school
- Varies from subject to subject
- Requires knowledge of multiple genres of text, purposes for text use, and text media
- Is influenced by students' literacies in contexts outside of school
- Is influenced by students' personal, social, and cultural experiences

Advisory Panel

The advisory panel included well-known researchers in the areas of literacy and ELLs; state, district, and school administrators with firsthand experience of promising programs; and policy advisors with significant knowledge of federal and state education legislation and its impact on this student group. A list of panelists is found in Appendix A.

The panel met in June 2005 to provide direction for the research and final document topics and suggest literature to review and promising programs to examine. The panel reconvened in September

2005 after the literature review had taken place and programs had been contacted in order to generate policy recommendations and to review and comment on a draft document. In March 2006, the panelists reviewed the full report. In addition, several conference calls took place with subgroups of the full panel during the first year.

Literature Review

The selective review of the available literature on adolescent ELLs was undertaken in the summer of 2005. CAL staff began with a search of several key databases: databases of the National Literacy Panel on Language-Minority Children and Youth, the ERIC Clearinghouse, PsycINFO, Linguistics & Language Behavior Abstracts (LLBA), and Sociological abstracts. Combinations of search terms for the *students* and *programs* were used, such as adolescent, English as a second language, limited English proficient, non-English-speaking, bilingual, linguistic minorities, and immigrants; for *topics*, such as literacy, reading, writing; and for *educational settings*, such as grade 6, grade 7, grade 8, grade 9, grade 10, grade 11, and grade 12; high school; middle school; and junior high. Most of the documents were published in the past 15 years, although some earlier, seminal works were also examined. Peer-reviewed journal articles, book chapters, dissertations, and technical reports were also reviewed.

Articles were selected for review according to the following criteria: a) the student subjects were adolescents in grades 6 through 12 (grades 4 and 5 were accepted if students in higher grades were involved in the study as well), and b) the study provided outcomes related to literacy development. At the first advisory panel meeting, the advisors set categories for examining the literature: a) instructional practices; b) technology; c) program design; d) teacher, coach, and administrator professional development; e) intake, formative, and summative assessment; f) middle and high school transitions; g) fiscal issues; h) policy issues; i) community issues; j) second language literacy development, process, or theory; and k) student characteristics and diversity within adolescent ELL populations. The articles were abstracted and additional articles were located if they were pertinent and relevant to the identified literature. For some of the topics, particularly for middle and high school transitions and for fiscal issues, the available literature was thin.

Demographic and Achievement Data on Adolescent ELLs

As part of the background research, the Migration Policy Institute prepared an adolescent ELL demographic and achievement report in response to the following questions:

- Who are these adolescent ELLs and where are they from?
- What is the background (e.g., social, economic, linguistic) of their families?
- What are the education levels of their parents?
- How well do they do in school now and what is their progress over time?

- To what extent do these students meet state and national literacy standards (in English language and general content)?
- What can the schools do to improve the performance and literacy levels of such students?

MPI staff used several sources to respond to the questions. They examined the 2000 U.S. Census data to capture a national picture of the adolescent ELLs and their families, and then analyzed data from 2003 eighth-grade National Assessment of Educational Progress (NAEP) Reading and Mathematics exams, the most recent data then available, to determine adolescent ELL achievement. Finally, they identified two traditional immigration states with large numbers of ELLs (California and Illinois) and two new destination states that have experienced rapid ELL student growth in the past decade (Colorado and North Carolina) to determine student achievement using results from state exams as reported on state websites and in No Child Left Behind (NCLB) data submitted to the U.S. Department of Education.

Site Visits to Promising Programs

Three sites of promising practices were suggested by the panelists and visited by project staff in fall 2005 and winter 2006: J.E.B. Stuart High School in Fairfax County, VA; Union City Public Schools in NJ; and Hoover High School in San Diego, CA. In determining sites, the following characteristics were sought: ELLs comprised 20% or more of the student population; the school or district had targeted interventions for adolescent ELL literacy development; staff development was job-embedded and sustained; and adolescent ELL student achievement was documented. Staff visited the sites for 2 or more days, observed in classrooms, interviewed central office and school-based staff, and collected documentation. Descriptions of these sites' promising practices for adolescent ELLs are detailed in Appendix C.

Challenges and Recommendations

The final task of the project staff and advisors was to identify the major challenges facing policymakers and educators of adolescent ELLs and then develop a series of strategies and possible policy solutions. These form the basis of this report.

APPENDIX C: HIGH SCHOOL AND DISTRICT PROFILES

The profiles presented here reflect three programs that have implemented research-based approaches and other promising practices. All three sites—two high schools and one school district—from different locations in the United States have a strong commitment to adolescent English language learner (ELL) literacy. The profiles below highlight their efforts and call attention to their strategies for facing the challenges discussed earlier in this policy document. The site visits took place during the 2005–06 school year.

J.E.B. Stuart High School
Fairfax County, Virginia

Background

J.E.B. Stuart High School is a mid-size, urban high school in the metropolitan Washington, DC, area. The attendance area of the school includes primarily middle class and working class neighborhoods in Fairfax County. Many immigrants to the DC area have settled nearby. Approximately 1,450 students attended Stuart in the 2005–06 school year. Two-thirds of the students at Stuart are ELLs from more than 70 countries and 51% of them are eligible for free and reduced-price lunch. Stuart meets requirements to be eligible for Title I funds, but Fairfax County Public Schools has decided not to provide any Title I monies to its high schools. Close to 400 students are enrolled in the English for Speakers of Other Languages (ESOL) program and more than 100 other students are still monitored as ELLs—students who have exited the ESOL program.[1] Stuart is culturally and ethnically diverse: 22% of the students are Asian/Pacific Islander, 10% are Black, 40% are Hispanic, 26% are White, and 2% are in the "Other" category. The mobility rate in the 2004–05 school year was 22%, although teachers reported the ELL student mobility rate was closer to 30%. Stuart is fully accredited and made Annual Yearly Progress (AYP) the past 2 years in all categories. In 2004–05, the attendance rate was 94% and the graduation rate was 74%.

The picture was different in 1997 when the principal, Mel Riddile, arrived at the school. The attendance rate was much lower than the county average (students missed more than 20 days per year on average) and reading scores on state tests were low as well. (In 1997–98, only 64% of students passed the state reading and literature test and only 73% passed the writing test.) The academic program focused more on meeting minimum competencies than high standards. The school staff decided to raise academic expectations and focus on literacy. All students were assessed with the Gates-MacGinitie reading test, which has been normed on ELLs and students of poverty. At that time, 76% of students were 1 year below grade level and 25% were more than 3 years below level.

[1] The district program is called English for Speakers of Other Languages (ESOL), but the instruction is referred to as ESL (English as a second language).

Policy Decisions

A number of policy decisions have been enacted over the past 8 years that have supported all the students at Stuart, including the adolescent ELLs. Some of these policies were school-based and others developed by or with the district and state education agency's collaboration.

Literacy Intervention Program

Because student performance was so poor in 1997, the school decided to hire a literacy coach, who has been with the school since then. Her job is to work with all staff to enhance literacy across the curriculum, monitor the students, set curriculum for the literacy intervention class that has been offered each year, and analyze reading assessment data for incoming ninth graders. Many ninth graders take a required literacy class to prepare them for reading in the content areas. (ELLs have different classes depending on their proficiency levels as described below.) Additional intervention classes are offered in 10th and 11th grades for the students who are struggling with critical literacy needs, based on reading assessments and teacher recommendation. The school set up a literacy computer lab, with individualized reading development computer programs for literacy and ESL classes to use (especially the advanced students). The teachers report it provides good practice for the state language arts exams.

Attendance

The staff at Stuart recognized that if students were not in school, they were unlikely to be successful in their classes. As a result, the staff undertook several initiatives that improved the attendance rate. One is close monitoring of absentees. Students check-in each morning via an identification card scanning process. The teachers know by first period which students arrived at school on any given day. If the students are absent for one or more classes during the day, a call-out (from an automated phone system) goes home. In addition, letters are sent to parents every Friday if their child missed any class any day that week. A second initiative was the wake-up option within the automatized phone system. Students can request a wake-up call for each day or specific days, to their home or cell phone, so they can get to school on time. ESOL teachers reported that beginning-level ESOL students, new to the school system, usually have excellent attendance, but more advanced students who have been in school for several years have more absences and so benefited from the changes. By 2003, the average number of days missed was only 7 per year, a vast improvement over the number in 1997–98.

School Calendar

In order to support student success on state exams, Stuart received permission from the state to follow a modified school calendar. The modified school year starts 2 weeks earlier than most of the county schools, enabling the students to complete their coursework in the material they will be tested on before the state exams in May. This provides an instructional time benefit to all struggling students, including the adolescent ELLs.

Stuart students may also attend two separate summer sessions (held some years at Stuart, other years at another high school) where they can complete a year-long course each session. This summer program is particularly useful for ESOL students who need additional credits in core classes for graduation. Many of the ESL classes carry only elective credit. The core credit courses are usually offered in the second summer term, closest to the August administration of the end-of-course state tests. Other students attend the summer program to retake classes they failed or to advance in their coursework.

The modified calendar plus summer program allows Stuart students to obtain 5.5 years of instruction in 4 calendar years. This option is useful for ESOL students at lower levels of English proficiency who do not obtain many core credits while they are learning English and need the summer sessions to catch up if they wish to graduate with their peers or soon thereafter. The school also follows a block schedule, which offers some flexibility in course selection.

ASAP (After-School Academic Program)

Stuart offers an after-school tutoring program for 40 minutes, 3 days per week. It is mandatory for students who receive Ds and Fs (in a core subject or foreign language) on their interim reports or quarterly report cards to attend at least 1 day per week. Other students are welcome to attend any session and many ELLs take advantage of this opportunity.

The Academy

This 2-year program incorporates vocational education, allowing students to choose among almost 20 different courses. Students spend half the day in regular school classes and half the day in Academy courses. Approximately 50% of the students in this program are ESOL students, who must be at the intermediate level of proficiency or above. The ESOL staff encourages many students to enter the program and view it as an opportunity to add time to the school careers of these students. While they are learning skills for the world of work (e.g., as an electrician, carpenter, hair stylist), they engage in authentic interactions and practice their English.

Advanced Studies

Over time, the school added programs to promote advanced studies. The International Baccalaureate (IB) program started in 1994, but it was opened up to all students who expressed interest after 1997. The Advancement Via Individual Determination (AVID) program began in 2004–05. AVID is designed specifically for students "in the middle" who do average work but need additional support to succeed in advanced courses and apply for college.

ESOL Program Design

Stuart High School has created and implemented a sophisticated program for ESOL students that is designed to meet both their language proficiency and academic needs. The school offers five levels of ESL, including three A levels at the traditional "beginner proficiency level" because so many of the students enroll in Stuart with no or low literacy in their own language and gaps in their educational backgrounds. The five levels, in order of advancing proficiency, are designated A1, A2, A3, B1, and B2; and even within A1, there is a group of designated LA level students, those with the lowest literacy levels of all. Furthermore, students who have exited the ESOL program are designated B3 students for monitoring and tracking purposes. These students, who may still be acquiring proficiency in academic English, are counted as Limited English Proficient (LEP) for the No Child Left Behind Act (NCLB) accountability targets for 2 years after exit. The ESOL staff and the literacy coach monitor these students. If some continue to struggle with literacy in their coursework, they are placed into the literacy intervention class that is offered to native English speakers.

ESOL Program Courses

The ESOL program has a strong commitment to academic language and content development and has developed a series of courses for each proficiency level that includes language- and content-focused ESL classes. The ESL language courses focus on vocabulary development, early reading through academic reading skills, writing, grammar, and oral language development tied to school language demands. A1 students have three ESL language classes that help them learn basic vocabulary, study skills, and initial reading and writing skills. In addition, they have two one-semester classes, one for sheltered Life Science[2] and the other for sheltered geography, both taught by ESOL teachers. A2 and A3 students have two language-focused ESL classes, plus an ESL content reading class linked to history topics, and two one-semester classes as well in sheltered Life Science/Introduction to Biology and sheltered U.S. history, both taught by ESOL teachers. B1 students have one ESL language class focused on language arts standards-based curriculum and an ESL content reading class linked to history and science topics in the ESOL program. They also have sheltered World Studies I and sheltered biology classes taught by history and science teachers. B2 students have a double-block of ESL language and English 9 as part of their ESOL program. They are typically in mainstream classes for other core subjects by this level. In addition, all students (A1–B2) have a math class according to their ability level, taught by math teachers. The course offerings range from arithmetic and pre-algebra (offered as specially designed sheltered courses known as FAST Math[3]) through calculus.

In terms of academic literacy development, the ESOL program aims to develop students' reading skills to a first- to second-grade level by the end of A1, a second- to third-grade level by the end of A2,

[2] The sheltered content courses taught by the ESOL staff are known as Concepts courses; this class is listed in a students' schedule as Concepts Science.

[3] Focus on Achieving Standards in Teaching (FAST) Math was developed by Fairfax County educators. At Stuart, the course is named Individualized Math. The students with the lowest levels of math skill may take 2 years of Individualized Math to cover typical mathematics topics from kindergarten to grade six.

third- to fourth-grade level by the end of A3, a fourth- to fifth-grade level by the end of B1, and approaching eighth- to ninth-grade level by the end of B2, in which the students study the regular ninth grade English curriculum and state standards. An introduction and/or review of phonemic awareness and phonics occurs throughout the A levels. Guided reading is utilized to develop the A-level students' comprehension skills. More independent reading occurs in B1 and B2. Vocabulary is an important component of all the language courses with specific attention to academic terms. Beginning at the A3 level, teachers use specific materials for word attack skills and SAT preparation. Vocabulary development is also an important part of the regular English language arts classes at Stuart.

ENGLISH FOR SPEAKERS OF OTHER LANGUAGES (ESOL) LEVEL SCHEDULING

The following are typical course schedules for the ESOL students at the five levels of proficiency. The courses in bold are part of the ESOL department. The other courses are part of the specific subject department.

A1 student: **2 periods of ESL with same teacher, 1 period of ESL focusing on survival vocabulary and basic content vocabulary, 1 period of Concepts Science and Concepts Geography (1 semester each),** 1 period of math (usually FAST Math elementary level for A1 students), 1 period of physical education (PE), and 1 elective

A2 student: **2 periods of ESL with same teacher, 1 period of ESL content reading related to U.S. history, 1 period of Concepts Life Science and Concepts U.S. History to the Civil War (1 semester each),** 1 period of math, 1 period of PE, and 1 elective

A3 student: **2 periods of ESL with same teacher, 1 period of ESL content reading related to World history, 1 period of Concepts Biology and Concepts U.S. History from the Civil War to present (1 semester each),** 1 period of math, 1 period of PE, and 1 elective

B1 student: **1 period of ESL focusing on English language arts, 1 period of ESL content reading related to World history and biology**, 1 period of sheltered World Studies I, 1 period of sheltered biology, 1 period of math (usually algebra or higher), 1 period of PE or elective, and 1 elective

B2 student: **Double-block (2 periods) of ESL and English 9 with the same teacher**, World Studies II or U.S./Virginia history, chemistry or Active Physics, 1 period of math (usually geometry or higher), and 2 periods of electives

Cross-Department Collaboration

To accomplish this complex but thoughtful program of studies for English language learners, the ESOL department works closely with other departments in scheduling students and designing classes. In-house staff development is offered to the subject area teachers of sheltered courses and ESOL staff are asked for input into decisions about textbooks for sheltered content classes. Alignments are made where possible between the content reading ESL courses and the sheltered courses students take in the subject area departments. These content reading courses help build some of the background knowledge the students lack in the core subjects and develop their academic vocabulary and comprehension skills. The ESL curriculum has been aligned to the Virginia language arts curriculum as well, so students in the ESL courses are making progress in reaching those standards. The double English block offers B2 students a programmatic strategy for successfully meeting the high-level literacy demands of an English 9 class (e.g., extended literature selections, academic writing, and research).

One example of the cross-department collaboration and scheduling flexibility that Stuart staff have established is represented in the Algebra I course options. Because Algebra I is a gatekeeper course and required for high school graduation, the staff created several pathways for students to take and pass the course (including the end-of-course exam). These options are particularly important for the adolescent ELLs who arrived with limited formal education and weak math skills. One option is for students to take two semesters of FAST Math during their first year at Stuart and then take a double-block of algebra for both semesters of their second year. (Students use an elective period to accommodate this double-block.) Another option for students who may have slightly more math background and at least the A3 proficiency level is to take one semester of FAST Math in the first year and then take Algebra I, Part 1 the second semester. If the student is successful, s/he will take Algebra I, Part 2 (1 period) both semesters of the second year. If the student struggles with Algebra I, Part 1, a third option is to take a double-block of Algebra I both semesters the following year. Students who take FAST Math and algebra or Algebra I, Parts 1 and 2 can receive two core math credits if they pass the state algebra exam. The staff at Stuart are considering moving the FAST Math courses into the ESOL program in the 2006–07 school year.

The plan for student success in biology shows a similar collaboration. The program teaches biology through a 2-year design. In the first year, the A3 students have the Concepts Biology with an emphasis on vocabulary and reading taught by an ESOL teacher, for which they receive elective credit. In the second year, B1 students have a sheltered biology class taught by a science teacher, which covers many of the same topics but in more depth. The ELL students take the state biology exam at the end of that year and have a 90% pass rate. They receive a core science credit for the second course.

Class Size

Another strategic decision made at Stuart benefits the adolescent ELLs who are struggling with literacy development. Stuart allocates its fiscal resources carefully in order to maintain a class size lower than the district's recommendations. This allows the teachers to provide more individualized instruction and offers the teens more interaction time to practice their English. Teachers are also able to make closer connections to the students, many of whom are at risk for dropping out of school. Research has shown that these types of connections with teachers can encourage students to stay in school. The following shows the class size guidelines at Stuart:

LA students in A1 level have a 12 student cap.
A2 classes have 15–16 students.
A3 classes have 15–18 students.
B1 classes have 16–18 students.
B2 classes have 18–20 students.

Of course, as more students enroll throughout the year, the class sizes may increase. In the first semester of 2005–06, the ESOL program had three sections of A1 and A2 students and two sections of A3, B1, and B2 students.

Credits for Graduation

It is very difficult for a beginning-level ELL student who enters a U.S. school for the first time in ninth grade to take all the core courses and learn enough academic English to pass all the required courses and exams for graduation in 4 school years. In fact, ESOL staff at Stuart have found that most students who enter at the A1 level do not remain until graduation, especially the older learners who come to Stuart at age 16 or higher. In a number of cases, it is not the desire of the students to obtain a high school diploma or pursue post-secondary education. Those students are more interested in developing their English and academic skills sufficiently for better job opportunities. In other cases, students are discouraged by the number of years they need to remain at Stuart to complete all the requirements. Research has proven that adolescents need 4 to 7 years of English instruction before they reach the average performance level of native English speakers, and adolescents who arrive without native language literacy skills need even longer. Therefore, the 4-year high school need not be the standard for this student population.

Nonetheless, the staff at Stuart work with the students to show them potential pathways to graduation, including 5- and 6-year high school plans. In either the 9th or 10th grade, students who desire a diploma meet with ESOL staff and counselors to develop their individualized plan. Usually these plans include summer sessions in addition to the regular school years. Virginia state law allows students to stay in high school until they are 22 years old.

The courses taught by ESOL staff generally carry elective credit. Those taught by subject area teachers carry core credit. The exceptions are the B2 language block and the FAST Math courses discussed below. The state of Virginia has approved some credit options for the ELLs in Fairfax County high schools that help them reach graduation requirements.

These flexible pathways for earning credits are important for adolescent ELLs who are doing double the work—learning English and content—because they first need to learn enough English in order to succeed in the core content classes, yet the ESOL classes do not carry core credit for graduation.

<u>Credit for courses taken in native country</u>. Students who have documentation (e.g., transcript) that they have taken a core class in their native country may sit the state exam without taking the course at Stuart; and if they pass, they receive the credit for that course. The Virginia tests are in English, however, so students need to reach a level of proficiency whereby they can understand the language of the test. Stuart staff screen the students with a pre-test made of released test items. If a student scores at or above the top cut-off level, they take the exam at the next administration (usually in January). If they score below the bottom cut-off level, they are advised not to take the test. For students who score in the mid-range of the two cut-offs, the staff analyzes the test results item by item to determine the students' areas of difficulty. If there is a likelihood of success with some remediation, Stuart offers special classes to help prepare the students for the test vocabulary and subject-specific discourse patterns.

English credit. If B2 level students who have a double language block exit the ESOL program the first time they are in this double block option and pass the English 9 state exam, they receive two English credits for the year. If they do not pass the first time, they do not receive any core credit that year. If they pass the following year or next administration of the test, they receive one English credit.

Algebra credit. Students who take FAST Math and then Algebra I, or Algebra I, Parts 1 and 2, and pass the state exam may receive two mathematics credits (essentially for pre-algebra and algebra).

Foreign Language credit. Stuart offers four levels of Spanish for Fluent Speakers (SFS). ESOL students at all levels can take a SFS class and receive a foreign language credit. Also, students who have proficiency in a language other than English can take an oral and written assessment in that language. If they pass, they receive two foreign language credits and do not have to take the course. This opportunity is available for 19 languages, including ones for which no course is offered.

Assessment

Assessment is an important component of the Stuart educational plan for all students, particularly in the area of literacy. All eighth graders who will attend Stuart are assessed with the Gates-MacGinitie reading exam and new students are assessed in the first months of their first year at Stuart. In Virginia, students must pass end-of-course exams in six key areas to graduate and receive credit for the course. English language learners sit through additional assessments as well to comply with NCLB. Stuart hired a test coordinator for the school in 2004–05, in large part to manage NCLB reporting requirements.

Intake and Placement

When secondary school students enroll in Fairfax County Public Schools, they or their parents complete a home language survey. If they indicate a language other than English is used at home, the students' language proficiency is assessed at an intake/registration center. There, bilingual staff examine the students' transcripts and administer oral and writing assessments (scored with a 6 point rubric), reading (Degrees of Reading Power [DRP] test), and math tests in English. If a student's dominant academic language is not English, writing and math assessments are also given in the other language to ascertain the student's academic literacy. The intake process helps determine appropriate placement for students in the programs.

Stuart English for Speakers of Other Languages' **Level Placement Chart**

Level	DRP Score	Writing Score	Oral Score
A1	-15 to 15	1, 2	1, 2
A2	16 to 29	2, 3	1, 2
A3	30 to 39	3, 4	3
B1	40 to 55	4	4
B2	55 to 65	4, 5	5
B3 (exited English language learners)	66+	5, 6	5, 6

Student Progress

Each year in the ESOL program, the ELLs also take an English language assessment as required under NCLB. At Stuart, they take DRP tests and their scores determine their level placement and promotion. Fairfax County sets 60 as the score for exiting the ESOL program, but Stuart raised the score to 65 in recent years because they found too many students who exited at the lower score did not make expected progress in the mainstream classes. Before the B2 students exit, they also take the Gates-MacGinitie test in the spring. This is an additional check on their literacy skills. Students who get above 65 on the DRP, and above 40% on the Gates, exit and are placed in the mainstream program. Students who get above 65 on the DRP, but below 40% on the Gates, exit ESOL but take a literacy intervention class (with native English speakers) the following year. If B2s do not reach a 65 score on the DRP, they do not exit. They repeat the B2 ESL language class and take English 10 but the classes are not scheduled as a double-block. Approximately one-third of the B2 students do not exit each year.

During the school year, student language and content progress is monitored by the quarter. If students are ready to move up an ESL level, the ESL department head develops a new schedule of classes appropriate to the new ESOL level and works with the guidance counselors to change schedules—they do not need to wait until the end of semester.

Challenges

Adolescent ELLs are making progress at J.E.B. Stuart and the staff has built flexible pathways to success into the programmatic options. There are some challenges still being addressed. One area of need is staff development on sheltered instruction techniques for all teachers. Although there have been occasional workshops, Stuart has not yet undertaken a sustained program of staff development, so many teachers who receive ELLs or former ELLs do not have a solid foundation of the best instructional practices for continuing to develop these students' academic language skills while teaching them the key concepts of their subjects.

Another challenge concerns the LA and A1 level students who enter ninth grade with low literacy skills in their first language and limited formal schooling. For these students, a traditional 4-year high school path is an unlikely scenario. These students are the most likely to drop out and need special attention to make the notion of following a 5- or 6-year high school career path appealing. It is possible that a partnership with the adult

HONORS

- Identified as one of the 10 best high schools in the nation serving underserved students as part of a study commissioned by the National Association of Secondary School Principals (NASSP) and the Bill and Melinda Gates Foundation.
- Named an NASSP Breakthrough High School in 2003 and was named one of 30 model schools in the country by the International Center for Leadership in Education (ICLE) in 2004.
- Received the International Baccalaureate (IB) North America Inspiration Award in 2004 for opening its IB program to all students.

basic education program in Fairfax or the local community college might be designed. It is also important to accept that for some of these students, especially the older learners over age 16, a high school diploma is not the goal. Therefore, a different type of program might be designed for them.

A related issue is the retention of 11th graders. NCLB penalizes high schools with large numbers of retained 11th graders; however, low-level ELLs may need the extra years. This is a federal policy issue that Stuart staff cannot resolve; nonetheless, it has an impact at Stuart and in schools across the country on whether students are subtly discouraged from staying in school or even enrolling in the first place.

Hoover High School
San Diego, California

Background

The atmosphere at Hoover High School is sunny, which is not altogether unexpected given its setting in the balmy Southern California climate. But 7 years ago, the story was different. Hoover High School, located in one of the poorest sections of San Diego, CA, had safety problems due in large part to the presence of gangs. "Faculty went to the bathroom in pairs," said Douglas Fisher of San Diego State University's (SDSU) Department of Education, which has formed a university partnership with the school. "It was a scary place." In this environment, academics suffered. In the late 1990s, Hoover was ranked the lowest performing school in the city by the state's accountability measures. Today, the high school that serves a population of 71% English language learners or reclassified ELLs is peaceful, focused on school success, and exceeding its state growth benchmarks. The Hoover community has accomplished this through a sustained, mandatory, and consistent professional development program focusing on seven strategies for literacy development and a strong support system in place for the students. Hoover staff and partners designed and implemented the staff development and student assessment practices to guide and increase academic literacy among their adolescent ELLs.

The student body at Hoover High School is very diverse. In the 2003–2004 school year, 40.9% of the student body were categorized as ELLs, 85% of whom were Spanish-speaking. Just over 34% of the student body were former ELLs. Of the 2,160 students enrolled at Hoover, the ethnic breakdown was as follows: Hispanic, 65%; African-American, 14.5%; Indochinese, 13%; White, 4.8%; Asian, 1.1%; Filipino, 0.8%; Pacific Islander, 0.6%; and Native American, 0.2%. The attendance rate was 94.3%. Hoover is a Title I school with 99% of its students eligible for free and reduced lunch. One hundred six teachers (47.9% of whom hold Masters degrees) support these students.

Prior to the school reforms that began in the late 1990s, ELLs at Hoover had limited academic support and expectations for their success. ELLs were placed in "developmental" English classes that were not linked to the state English language arts content standards. These classes did little to prepare them for the rigorous academic work and the advanced literacy skills required for high school graduation. Instruction was focused on decontextualized vocabulary activities and discrete point tasks and lacked the academic focus that would allow students to "read and write to learn."

The revitalized program for ELLs at Hoover now consists of academic literacy-focused English as a Second Language (ESL) and sheltered content classes. Hoover operates on a quarter/block system so that each student takes four classes a quarter: sixteen classes a year. There are six levels of ESL classes offered at Hoover that can be completed over 3 years of attendance (ESL 1-2, 3-4, 5-6). Students progress through beginning ESL 1-2 reading, writing, and social studies courses, plus math, to advanced ESL 5-6 language arts, literature, and sheltered science and history courses. Four quarters of ESL social studies are offered along with the first four levels of language development (ESL Social Studies 1-4). Sheltered history and science are offered when students are in the last two levels of ESL (5-6). All of the classes are aligned to California's English Language Arts and English Language Development standards. There are four classes offered for each level: one reading class, one writing class, one ESL class, and one literature class. Two classes for each of the three ESL levels are offered per quarter. Thus, students may take at least two of their four class periods each day in ESL programming. The course schedules are designed so that ELLs at the same level have at least two out of the four courses with the same students per day. This practice provides a support system for these students and helps teachers get to know and monitor the students better.

English as a Second Language (ESL) Schedule of Classes, 2005–2006

Quarter 1	Quarter 2	Quarter 3	Quarter 4

University & Community Partnerships

Hoover High School is not an educational island unto itself, nor simply a cog in an educational machine. Its academic turnaround did not happen in a vacuum. Since 1999, the school has been implementing its Literacy Staff Development Plan as a member of SDSU/City Heights Education Collaborative Partnership. A major aspect of this partnership is that professors of education at San Diego State University (Douglas Fisher, Nancy Frey, and others) work closely with Hoover's principal, Douglas Williams, and faculty on a daily basis to oversee and advise on all aspects of professional development, instruction and assessment, student support, policy decisions, parent communications, and guidance. Hoover hosts a complete teacher induction program. The university places student teachers at Hoover, and Mr. Fisher, Ms. Frey, and others teach credentialing classes to them on site. Mr. Fisher serves on the school's professional development committee—along with several teachers and one full time staff developer—and even teaches one class to Hoover students for one quarter each year.

Mr. Fisher has written proposals for and administered hundreds of thousands of dollars of private and public grants for the school since 1999. Such grants include those that fund SDSU staff time at Hoover, book purchases for Sustained Silent Reading time, after-school tutoring and extracurricular activities, student trips, and an on-site parent center that offers classes in parenting, life skills, adult basic education, and ESL. This partnership between the university and Hoover brings both financial and professional support to Hoover's day-to-day functioning. It has also allowed the school to operate somewhat independently of other schools in the district—at this point following its own improvement plan in the midst of districtwide reforms.

Professional Development

Hoover prides itself on the fact that school professional development and classroom instruction are driven by student assessment data. Before the school undertook serious reform, assessment data showed that many ELL and non-ELL students alike lacked basic reading and writing skills and were not making the necessary academic progress to succeed in and graduate from high school. A change in the school administration and teaching staff led to a renewed vision for Hoover that consists of "an ever-growing repertoire for teaching and assessing diverse learners; a passion for engaging all students in the learning process; and the use of data to make and assess instructional decisions." Along with changes in school policies and structures, the Literacy Staff Development Plan was designed and implemented to combat the discouraging assessment data and low graduation rates.

SEVEN LITERACY STRATEGIES

- Anticipatory Guides
- Read-Alouds and Shared Readings
- Notetaking and Note Making
- Graphic Organizers
- Vocabulary Instruction
- Writing to Learn
- Reciprocal Teaching

Source: Fisher & Frey, 2004

The Literacy Staff Development Plan is grounded in seven key strategies for academic literacy. Teachers across the curriculum use ***anticipatory guides,*** such as K-W-L (know, want to know, learn) charts to help students record their own background knowledge, questions, and learning related to a given instructional topic. For the second strategy, students are read to for approximately 5 minutes during a class period. If they are doing ***shared reading,*** the students follow along with a copy of the text; if it is a ***read-aloud,*** they just listen. Teachers also work with students to build ***structured notetaking*** skills (usually through the form of Cornell notes [Pauk, 2000]) into their lessons so that students identify main ideas and key vocabulary, as well as summarize their learning. ***Graphic organizers*** help students to see relationships among ideas in the text. Teachers use them before, during, or after reading to help students organize new information. Explicit ***vocabulary instruction*** across the curriculum includes attention to general, specific, and technical academic vocabulary. The ***writing to learn*** strategy teaches students to reflect on their learning through writing, often using open-ended prompts such as "What three things do you remember?" or "Which historical figure from this unit is most like you and why?" Through ***reciprocal teaching,*** students work in small groups to discuss reading for comprehension. They predict, clarify, question, and summarize (Palinscar & Brown, 1984) in order to monitor their progress and check their understanding of the text. Finally, as the program has developed, teachers have incorporated the strategy of ***questioning*** into their repertoire. Teachers learn a variety of techniques to ask quality questions that tap higher order thinking among the students, scaffold the instruction, and provoke students to elaborate their ideas. They also teach students to ask thoughtful questions.

Summary:	

The same seven literacy strategies have been the focus of the professional development program since 1999—making it a spiraling curriculum. They are covered in a new way, one-by-one over the course of each school year. Because many newly hired teachers do their credential work at Hoover, they already have familiarity with the techniques before the school year begins.

Initially, many teachers were resistant to the strategies, believing that they were another educational fad that would fade away. Many of the teachers believed that the strategies were not working. Looking back now, these same teachers realize that when they first began implementing the strategies, a key piece of the puzzle was missing: personal reflection and collegial collaboration. One teacher explained that his initial disillusionment with the strategies was not helped by the fact that he was not thinking critically and reflecting on *why* the strategies weren't working. He did not enlist the help of a teaching colleague to think collaboratively about the problem. Now, personal reflection and collegial collaboration are essential parts of all teachers' professional development and pride.

Nothing is accidental about Hoover's professional development program. Hoover's block scheduling gives staff the opportunity to attend monthly meetings and weekly course-alike meetings during school hours. The hub of the program is Room 408—a spacious, bright room that is dedicated to professional development. In Room 408, the staff development committee plans the schoolwide program. The program includes the following components:

1) **Monthly meetings for teachers.** Since 1999, these meetings have occurred during planning blocks that have focused on deepening teachers' understanding of the seven literacy strategies, as well as other best practices. The meetings are mandatory and attended by the principal. They include presentations, discussion, demonstration lessons, reflective journaling, and coaching corners. Coaching corners are small group activities during the meetings that focus on a particular strategy, best practice, or activity that teachers want to share with colleagues. Teachers sign up both to lead and to participate in the groups. After the teacher-coach presents the strategy, each participant discusses how it can be implemented in his/her class and then practices on the spot. When a participant is ready to implement the strategy in class, the teacher-coach observes and then meets with the participant to debrief and strategize for future lessons. Teachers take pride in initiating their participation in presenting and attending these sessions.

2) **Weekly course-alike meetings.** Teachers in each department meet weekly to discuss and troubleshoot course curricula and pacing guides, student progress, selection of course materials, instructional strategies, content standards, and assessment. These meetings also provide time throughout the year to develop and later score common course assessments that are clearly aligned with California's content standards. After scoring the common assessments, the teacher team conducts item analyses of the results to determine where students are struggling with particular concepts and skills and how teachers can address these problems by adjusting their instructional techniques and foci.

3) **Collegial coaching.** Approximately 70% of Hoover staff volunteer to be partnered with another colleague to participate in collegial coaching. These pairs work together for a year to conduct three cycles of pre-conferences, observation, and reflection. The observations focus on some aspect of instruction for literacy development. The coaching program is facilitated by the professional development committee.

4) **State test preparation.** This component consists mainly of disseminating information about standardized testing, infused test readiness techniques, school test results, and test administration procedures to the school staff. As a complement to this component, every student meets with either the school principal, vice principal, or head librarian prior to the spring state testing cycle to talk about test performance and academic goals based on their previous standardized test scores.

5) **Department chair support.** Department chairs meet jointly at the start of the year for a full day of training on the professional development program. They attend monthly planning sessions as well as leadership trainings so that they may facilitate department meetings and consensus scoring.

6) **New and future teacher support.** New teachers receive peer coaching, engage in reflective journaling, participate in a book club focusing on classroom management, and receive

> collegial coaching training. Outside of their credentialing classes at Hoover, future teachers have a staff mentor, attend an orientation, and participate in all professional development opportunities. Teacher turnover has decreased from approximately 50% in the late 1990s to an incredible 8% during the 2004–2005 school year; almost all new teachers hired at Hoover come from the on-site teacher induction program, through which they have received much of the same professional development that full-time staff participate in. The pre-hiring interview at Hoover asks potential teachers to agree to commit to the values and mission of the school, which includes the rigorous literacy and professional development programs.

The staff development curriculum—from the monthly teacher development meetings to the coaching corners—is planned at least 1 year in advance. All staff are required to participate in most components of the program and attendance is enforced. This helps to deliver the message to Hoover staff that the professional development work is integrated throughout the school year and is purposeful. Principal Williams, who has overseen the program since its inception, attends and participates in every monthly meeting for every planning block. Teacher observation forms used by administrators focus on the strategies presented in the professional development programs.

The program maintains the feel of a bottom-up, teacher-supported effort, but the administration also supports it in a number of important ways. A non-staff psychologist was hired to train department chairs, full-time teachers, student teachers, course-alike team leaders, and other school staff in effective communication and interpersonal skills in order to improve peer coaching and professional development experiences. These trainings have led to more collaboration and effective communication among teachers and administration. Each teacher becomes his or her own "literacy coach," as he or she becomes more aware of the personal and professional strengths among school staff and can seek help from the appropriate colleague.

Because of block scheduling, teachers have enough time during the day to prepare for class work, reflect on their instruction, collaborate with colleagues, handle administrative paperwork, and meet with students individually. Block scheduling also gives teachers a smaller student load (three classes instead of four or more), which allows them to better get to know their students' strengths and needs.

All of this development and instruction has had an impact on teacher morale and commitment to the school. The extremely low turnover rate at Hoover is due to its newly earned reputation as a model school. In the not-too-distant past, no teachers ever bid to work at the school; there is now a waiting list of teachers requesting assignment to Hoover. The consistent administrative dedication to the seven strategies at the outset was, in part, a response to initial faculty resistance to the program. But "success feels good," according to Principal Williams, and now the teachers, by and large, buy into the program because it is working. They enjoy and avail themselves of opportunities to present what is working in their classrooms during the coaching corners at the monthly meetings. They appreciate the constancy of the professional development, refer to the environment as a "teaching hospital," and note that although they work harder to meet their students' needs and their own professional development needs, they work smarter. Despite the progress and senses of accomplishment, however, the weight of being a "failing" school in terms of absolute scores on state exams is heavy.

Instruction

Hoover uses the California English Language Development Test (CELDT) assessment, along with information about prior schooling, grade level, and age to determine student placement upon enrollment. Effects of the professional development program are evident across instructional contexts. In addition to posters featuring the seven literacy strategies in every classroom, both teachers and students speak fluently about the strategies and other aspects of schoolwide programs, such as Sustained Silent Reading (SSR). SSR is a schoolwide, daily program at Hoover that requires everyone on campus to read for approximately 20 minutes between Periods 2 and 3. This includes staff, students, administrators, visitors, and even external contractors. Over 2 years, teachers were allocated $1,300 each to purchase SSR books and magazines for their class libraries. The teacher-run SSR committee works with administrators, students, and staff to monitor implementation and results of the daily SSR program, choose texts, and support teachers. Hoover staff use the "Eight Factors of SSR Success" (Pilgreen, 2000) and data gathered from classroom observations and the Gates-MacGinitie test to direct their program. The students who serve on the SSR committee choose one book each semester that the entire school will read (fiction in the fall, nonfiction in the spring), create public service announcements about the importance of reading, and earn a varsity letter in reading.

The effects of the literacy strategies and SSR program on instruction are seen throughout the school. In one ESL Reading 6 class, after just 20 minutes of SSR, a student easily described how he chose his book for pleasure reading. "First, I decide if I want to read it from the cover. You know, fiction, nonfiction. Then, I read the back. Then, I open up to the middle to see if it will be OK." In the same class, a student described how learning to write reading comprehension questions was useful: "You learn what a question is asking you…higher level or lower level. You can use it to write questions about reading in other classes…to study." This student understood how *writing* questions helped her to *comprehend* reading more deeply. In a sheltered physics class, the teacher uses a reading comprehension and questioning technique called *ReQuest*: "Students read a passage from the physics textbook, which can be quite challenging, with a partner. Each student practices writing questions about the text, then poses the questions about the text to her partner. Our literacy strategies training demonstrates that successful readers constantly ask questions when they are reading, and they know where to go back in the text when they don't understand something. *ReQuest* encourages students to self-assess their reading comprehension." Students proudly showed their foldables—three-dimensional *graphic organizers*—of notes in a cooking class. In a sheltered geometry class, students were *writing to learn* vocabulary by creating their own geometry textbooks, including glossaries. Throughout the school, students refer to information they have recorded in class: "It's in our Cornell notes," they say to refer each other to previously practiced material.

The school has also adopted a "Words of the Week" program to focus on academic vocabulary and serve as another test readiness tool. Five words that are related in some way (e.g., they share a root, prefix, or suffix) are highlighted each week at Hoover. They are taught in language arts classes the first day of each week, and all teachers are expected to integrate them into their classes. Incentives for learning the words include small prizes for passing pop quizzes that administrators might pose to students in the halls. Community members get involved, too, as the words are posted on the marquee (usually reserved for sports events in many schools) outside the school for passersby to note.

Literacy Development in Action

The following vignettes illustrate the literacy development strategies in classrooms with adolescent ELLs.

ESL 1-2 Reading Vignette

The ESL 1-2 Reading class is many students' first exposure to academic vocabulary, reading, and literacy. Most of the 20 students in this small class are ninth-grade-aged, new to the United States, and require considerable guidance and scaffolding from their teacher, Mr. Rudolph. On the walls of the classroom, there are simple posters featuring vocabulary related to fiction (e.g., character, setting, plot) and "big" and "small" genres of fiction. The day's class agenda is written on the board and details the lesson activities and numeric links to specific California English Language Academy (ELA) standards. Students finish up the vocabulary and reading lesson and begin the daily cloze activity that focuses on the most common sight words in the English language. Today's words are *might, close, something, seem,* and *next* and the students have to correctly complete five sentences with them. When the students finish their cloze activity and it has been corrected, they choose two nonfiction trade books from the classroom collection to read. Students record the titles in their reading logs, report the titles in a brief one-on-one conversation with Mr. Rudolph, and state which book they preferred and why.

Each student keeps a "Personal Stories" notebook that scaffolds their reading and writing processes. In the beginning of the year, students start by copying simple sentences with personal information into their notebooks from the board. Each sentence is followed by columns stating "Right/Wrong" or "Correct/Incorrect." They circle the appropriate response according to their own personal situation.

As their literacy skills progress, students are gradually guided to writing paragraphs about themselves, using the model sentences as a basis.

I am a boy.	Correct	Incorrect
I am a girl.	Correct	Incorrect
I live near the school.	Correct	Incorrect
I live far from the school.	Correct	Incorrect

ESL 5-6 Reading Vignette

In a focused reading lesson for advanced ESL students, Ms. Sevenbergen helps to build students' fluency by modeling one literacy strategy: *reading aloud*. The class has been reading and responding to the short story, *What My Father Wore,* which recounts the memories and feelings that a Mexican immigrant to the United States has about his father. This story is featured in a popular book titled, *Chicken Soup for the Teenage Soul on Tough Stuff* (Canfield, Hansen & Kirberger, 2001), and shares some topical similarities to another story that these students are reading in the ESL 5-6 Writing class they attend together. During the read-aloud, which follows previous individual and shared readings of the story, both teacher and students contribute to *vocabulary development* by stopping to paraphrase or define difficult words, such as "prestigious." After the read-aloud, the class pauses to have a quick discussion on corporal punishment, which is mentioned in the story.

The class then continues with a reading and writing activity that guides them through two of the schoolwide literacy strategies: *questioning* and *writing to learn*. These students' peers in the other section of ESL 5-6 Reading have written 14 reading comprehension questions for their response. Ms. Sevenbergen's students use their knowledge of low-level and high-level question-answer relationships to accomplish the responding task. They use handy, laminated notecards with four types of questions and related examples to identify the types of questions their peers have posed and where they can find the answers to the questions. They also must justify how they identified a particular question as a low- or high-level question. The teacher extensively models this reading, thinking, and writing process on an overhead, then asks students to work on their own or in pairs to complete the activity.

Lower-level questions	"Right there" questions: The answer is 100% in the text. The answer is usually easy to find. The answer usually comes from one sentence of the text.
	"Think and search" questions: The answer is in the text. The answer usually comes from different parts of the text. It may be in a different sentence, a different paragraph, or even a different page. You have to put together information you find in order to answer the question.
Higher-level questions	"Author and me" questions: The answer comes from thinking about what you already know, thinking about what the author said, and thinking about how those two go together.
	"On my own" questions: Everyone who reads the text may have a different answer. Your answer comes from the opinion you have formed after reading the text; it is your own judgment. The answer is <u>not</u> in the text.

The SSR period directly follows this ESL 5-6 Reading class. A different group of students files in and immediately picks up their chosen reading material for the day. This initial rush of activity and subsequent settling down is reflected throughout every classroom and public area of the school for the next 20 minutes. Students are observed intently reading teen magazines, novels, comic books, graphic novels, short stories, newspapers, and internet publications on classroom computers. For many of the students, this is the only time in their entire day where they will have the opportunity to read self-selected material in a quiet and supportive environment.

Sheltered Biology

Students walk into Mr. Bonine's sheltered biology class and start off with a vocabulary activity. Although it is a designated sheltered class, many of the 32 students are not in the language support program—but they get the benefits of extra attention towards language and literacy development. Mr. Bonine passes out "Ecology Vocab Tic-Tac-Toe"—a game card with one vocabulary word boldfaced in each of the nine squares that comprise the familiar playing surface. Next to the chart is a text box featuring nine numbered definitions. The front and back of the sheet are identical and the students proceed to play the game—strategically matching definitions to words—two times. When the activity is completed, students file the sheet away in their notebooks.

Next, Mr. Bonine takes 3 minutes to remind students of requirements for a group research project on biomes, when it is due, and where they can find resources they will need. "And come to the back if you'd like to check out a laptop," he concludes. Students then begin—moving into their groups, taking books off of shelves, lining up to borrow laptops, or gathering materials to create a poster.

The project directions are concisely listed as steps 1 to 12 on the front of one sheet of paper. Each group chooses to research a biome that interests them. Students use resources available (laptops with wireless connections, textbooks, supplementary texts) to answer eight questions, draw a food chain, and draw a trophic pyramid in their science notebooks. Once the students have recorded this information individually, they create a joint poster that they will present to the class. The posters are to include not only the information researched for individual accountability, but also a food web that synthesizes the group members' individual webs. As students work, Mr. Bonine circulates to check on progress and answer questions.

This lesson features a number of instructional strategies for literacy development. It began with student choice, in terms of group members, research topic, and medium of text (while many students preferred to work with the laptops, others preferred the textbooks). The lesson allowed students to work with technology—helping students to develop their computer-related literacy skills. The laptop use and choice options seemed to promote motivation as more than 90% of the students were highly engaged in the lesson. Also, throughout the project, Mr. Bonine incorporated ways for students to read and write vocabulary in context. In a sense, the food chains and food webs that students were creating were graphic organizers—ways of showing visually how the information they were reading is related. Finally, and perhaps most important, students spent the majority of the period reading and negotiating the meaning of text in relation to content standards with other students.

Assessment

Although these qualitative observations reveal promising practices, the faculty, administration, and partners at Hoover are more deliberate about how they measure the effects of their training and instruction. Student assessment is an important part of the work at the school. As mentioned before, departments write common course assessments based on state content standards and subsequently conduct item analyses of student results to understand how instruction should be adjusted. This cycle occurs at least twice a year. Thus, the annual staff development meeting at the beginning of each school year that is devoted to an analysis of state standardized test results from the previous year rarely contains surprises for the staff.

Although the school is still far behind the state and district averages in percentage of students passing the standards-based English Language Arts test, it has exceeded its growth targets consistently and has demonstrated the most growth (+136 points on the state Academic Performance Index of Growth [API]) of all San Diego City High Schools since 1999 (Fisher, 2006). The API is California's accountability measure. It includes information such as graduation rate and scores from the state standardized tests. In addition, the Gates-MacGinitie test of vocabulary and comprehension is given two times per year to all students. Reported results for this test include an increase of the schoolwide average from a 5.9-grade reading level in 1999 to an 8.2 level in 2002 (Fisher, Frey, & Williams, 2002).

Recognizing the need for multiple measures to assess the content knowledge of students who are still learning English and building their academic skills, Hoover requires senior portfolios as another form of student assessment. The portfolios consist of student-chosen course projects that highlight the students' careers at Hoover. Teachers explicitly remind students to store their best work throughout their time at Hoover and students participate in a portfolio seminar course in the semester prior to the senior exhibition in order to compile and present their best possible work. Students present the portfolios to community members and faculty in a formal event during the spring of their senior year. The portfolios are evaluated at the event and participation in the showcase is a graduation requirement. Seniors preparing for this important event take pride in the presentation of their cumulative work and look forward to sharing their academic accomplishments with faculty and community members.

Student Support

Hoover has established strong systems of communication about students among teachers, other faculty, administration, parents, and community members. All teachers are asked to take 10 students "under their wing" and mentor, monitor, and follow up with them as they progress through the school year. For many ELLs, this mentorship is vital to their acclimation to school and life in the United States. Teachers are strongly encouraged to communicate with parents as much as possible, to the point of scheduling random "check-in" phone calls to discuss students' successes. The home/school connection is also in effect when students are struggling in school: those with three Fs on a quarterly report card have a mandatory meeting with the principal and their parents, and must sign a contract promising to improve. Hoover is working with the elementary and middle school feeder schools to improve communication and better prepare students and parents for the expectations of high school academic life.

English language learners value the knowledge that Hoover teachers have about the students' backgrounds and needs and appreciate the teachers' belief in students' abilities and potential. These students relate to the stories about the immigration experience that many teachers use in their classes. Students learn from teachers and then use independently various academic tools, such as Cornell notes, graphic organizers, and reciprocal teaching. In classes that use rubrics to assess learning, students practice peer coaching and scoring using the class rubric on their draft submissions of projects. They rely on the many opportunities for individual conferencing with teachers, peer tutors, and administrators that take place during and after school. The grant-funded Synergy after-school program pays teachers and community members to stay until 6:00 p.m. and give students tutoring and practice in a variety of academic topics, arts and music, and sports.

Hoover is exploring the development and implementation of small learning communities, which create cohorts of students who take three or more courses together and thus share the same teachers. The first phase of this development is a ninth-grade cohort of students taking Foundations of Democracy (a sheltered class with both mainstream and ESL students), Physics (Hoover's required ninth-grade science class), and English. This design will slowly spread to include additional classes, eventually resulting in a model whereby groups of teachers all have the same students. Hoover staff believe that this level of collaboration is essential for creating the types of learning environments in which teachers support each other and students do not slip through the cracks.

The presence and partnership of faculty members from the San Diego State University (SDSU) cannot be underestimated. SDSU faculty contribute to the annual professional development plan, demonstrate model lessons, teach high school courses, observe teachers, find funding, and disseminate information to the field about the successes of the school's instructional practices and professional development structures. Students observe the clear proximity and relationship between their high school and SDSU and are continually reminded of what their culminating goals are, whether high school graduation or even university education. Field trips to local universities, guest speakers, mentoring from university faculty, and a special admissions program with SDSU help students set and meet academic and career goals that many of their peers in neighboring schools would never dream of.

Challenges

As students, faculty, and administrators at Hoover continue to work for success, they face some challenges. Many of the interventions reported here depend in some part on funding from outside sources. Such funding is usually not guaranteed over the long term, so the pursuit of this significant funding will remain a challenge. In addition, although Hoover's growth scores are positive, the absolute scores on the state standardized tests fall short of district averages, resulting in a stigma that Hoover community members will continue to fight.

In addition, faculty must struggle with challenges that most urban, impoverished school districts face. Student mobility is an issue, as is trying to meet the needs of students who do not know what their futures will be. Faculty members try to help students avoid teenage pregnancy, stay healthy, and take responsibility for themselves by getting to know the students well, personalizing their classes, and incorporating what they know about their students' backgrounds into their lessons.

What is particularly striking about the Hoover site has been its long-term commitment to this educational intervention. Far too often schools chase the flavor of the month or year when it comes to professional development topics or instructional techniques. Teachers are exposed to new ways of organizing instruction but before they have a chance to learn the intervention well, let alone master it, the school moves on to the next "magic bullet." Hoover's resolve to stick with this approach and to deepen the teachers' knowledge of literacy instruction is exceptional. All in all, students, faculty, and administrators at Hoover have reason to be proud of the work they are doing and their ability to demonstrate success across the student body in a variety of ways.

Union City School District
Union City, New Jersey

Context

Union City school district is located across the Hudson River from New York City. Much of the area is on a bluff with views of the Manhattan skyline. The area is a traditional immigration site with a large, working class population. Most of the residents are Spanish-speaking immigrants from the Caribbean and Central America. U.S. Census data reported about 70,000 residents living in the 1.4 square miles of Union City in 2000. School officials estimate the number is now closer to 100,000.

In the 2004–05 school year, this urban district served more than 12,000 students in prekindergarten through 12th-grade programs. Approximately 92% of the students were Latino and 75% of them did not speak English at home. Forty-two percent of them were English language learners and about 40% were enrolled in the district's transitional bilingual/ESL program. Fifteen percent of the students were new immigrants. Close to 90% of the ELLs were native Spanish speakers. Other native languages included Gujarati, Russian, Arabic, Italian, and Mandarin.

Union City is an area of high poverty. More than 90% of all the district's students were eligible for free or reduced-price lunch in 2004–05. Statewide, the average was 25%. This is significant because, as discussed below, New Jersey provides additional funding to low-income districts. It was also a federal Title I district. Besides serving large numbers of students of poverty and limited English proficiency, the district also had significant student mobility with rates of movement in or out of the schools close to 20%.

This profile focuses on the Union City school district, which has made a commitment to academic literacy development for all its students. As a district profile, the impact of state and local policy decisions is very informative. The district perspective offers a view of vertical articulation as well, with an examination of a prekindergarten through 12th-grade plan to move students up through the grades with eased transitions and monitoring of low achievers across school levels.

State Policies

New Jersey has an array of fiscal and educational policies that affect the programming in Union City schools. Besides local property tax and state per-pupil monies, one major revenue source for Union City is the funding that is allocated as a result of the Abbott v. Burke court decision. This decision requires the state to reallocate educational funds according to the poverty levels of the districts and student performance in the schools. Union City is one of the poorest districts in the state and thus receives more state Abbott funds than many other districts. New Jersey, like other states, also has categorical aid money for districts serving ELLs. New Jersey provided approximately $1,150 per ELL pupil in 2005 without stipulating a particular educational program model.

The flexibility that New Jersey allows for educational programming plays an important role when serving ELLs. School districts in New Jersey have the option of offering a bilingual program, an ESL program, or both for these students. Many New Jersey districts offer bilingual elementary school programs and some extend the bilingual program into middle school. Few, however, have a bilingual program at the high school level. Union City is one of these few. Its transitional bilingual/ESL program is available to students through grade 12. The bilingual program option allows adolescent ELLs to receive core credits for high school bilingual courses that apply to graduation requirements. Moreover, in New Jersey, students may receive up to four core language arts literacy credits for ESL courses. This policy was put in place because the state ESL standards are aligned to the state language arts literacy standards.

The state Department of Education in New Jersey encourages districts to assess students' English and native language literacy levels and content knowledge when they enroll in school. In 2006, New Jersey began using the Assessing Comprehension and Communication in English State to State for English Language Learners (ACCESS for ELLs) test (WIDA, 2004) for measuring English language development. This test focuses on both social and academic English skills and is used by 14 other states as well. The placement test for ACCESS for ELLs can help districts determine student facility with the language of mathematics, science, and social studies, for example. For adolescent ELLs, this information should prove particularly beneficial given the more sophisticated language demands of their content classes than those in the primary grades. In Abbott districts, Spanish-speaking ELLs are assessed in reading and math in Spanish for enrollment and placement in the bilingual program in grades kindergarten through eighth grade. One commonly used assessment for this process is the Spanish Terra Nova. New Jersey also requires districts to give a home language survey to all new entrants.

Another state policy concerns second language learning. The world language requirement obliges districts to provide 90 minutes per week of world language instruction to students. It can be used to offer literacy development in native language for non-native English-speaking students. Native language literacy classes are most often taught in Spanish, but across the state, classes in Arabic, Polish, and other languages also occur.

New Jersey has a high school graduation policy that allows ELLs to remain in school for 6 years. Students may stay in school until they are 21, or for special populations, until they are 23. This policy is very helpful for new adolescent entrants with no or low English proficiency who need additional time to meet all high school requirements and acquire academic English. (Unfortunately, however, NCLB accountability measures criticize schools that have students who take longer than 4 years to graduate.)

New Jersey has a high school exit exam all students should pass before graduation, known as the HSPA (High School Proficiency Assessment). It assesses reading and mathematics, and students take it in the spring of their 11th-grade year. If they fail one or both subjects, they may take the failed portion(s) again the following fall. The State Department of New Jersey has recognized, however, that some students are less able to demonstrate their knowledge on a standardized assessment such as the HSPA. Therefore, New Jersey has had an alternate assessment option, the Special Review Assessment, that some students may participate in after failing the HSPA twice.

Local District Policies

Over the past 15 years, the Union City school district has strengthened its educational program for all students, including ELLs. In 1989, the district was under a state mandate to reform its educational services within 5 years due to repeated poor performance on state assessments. Drawing from best practices and state flexibility, a reform committee composed of 11 teachers and three administrators set forth a plan to promote academic literacy for all students. Two beliefs were articulated: "Every student is college-bound" and "No student is unteachable." This plan involved five key areas of reform—professional development, curriculum, technology, leadership, and community. From 1990 to 1995, the plan was implemented incrementally, first in grades kindergarten through three, then grades four through six, middle school, and finally high school. These reform efforts paid off and by the late 1990s Union City was one of the top-performing urban districts in New Jersey.

Professional development for teachers and administrators focused on literacy training and effective instructional and assessment strategies for linguistically and culturally diverse students. The district paid for the teaching staff to obtain ESL or bilingual certification and by the end of this intensive reform period, 100% of the teachers had done so or were in the process of completing such certification. With grants from Bell Atlantic and the National Science Foundation, the district integrated technology in the classrooms with teacher training, curriculum development, and new equipment. Each classroom was wired. In 1997, the district implemented the Road to College program to promote student aspiration for college, provide awareness of the college application process, visit college campuses, and prepare students for career choices. Many of the students in Union City schools came from households where parents had not gone to college.

The district has maintained many of the reforms set in place in the early 1990s and has added additional practices to serve the student population. Many of the current local policies have a positive impact on the adolescent ELLs. These include policies in the following areas:

- Educational programs for adolescent ELLs
- Extended time for learning and student supports
- Transitions
- Teacher certification
- Professional development
- Targeted funding
- Data analysis

Educational Programs for Adolescent ELLs

Union City's philosophy is based on research that first language literacy and content knowledge transfer to second language literacy and content knowledge, and on practical experience that newly-arrived high school students will not have much time to learn English and the academic subjects taught through English in 4 years. So, Union City middle and high schools offer bilingual content classes to the students while they are learning English. In this way, the students do not lose time and can study the courses and receive core credit necessary for graduation. Biliteracy and multicultural understanding are goals of the program along with academic achievement.

Union City has an articulated program of services for ELLs. Student achievement data (discussed later) reveal that investments in the early grades are paying off when students reach middle and high school. However, as is the case everywhere, beginning level ESL students can enter school at any grade, so not all of the ELLs in Union City have had schooling in the district's elementary or middle schools.

In the elementary program, students are designated as bilingual or advanced bilingual students based on their enrollment assessment and subsequent yearly assessments. Bilingual students have self-contained, grade-level bilingual classes. Advanced bilingual students are in the regular grade-level classes but co-teaching occurs during the 3-period communications block that all kindergarten through eighth-grade schools incorporate to develop literacy. An ESL or bilingual certified teacher joins the classroom teacher to support the students. (Union City also has a kindergarten through eighth-grade dual-language program in one of its schools.)

The secondary program offers five levels of ESL for middle and high school students: ESL reading and writing for new entrants, beginners, intermediate, advanced, and ESL C, which prepares students for the transition to mainstream language arts classes. As noted, in New Jersey, the ESL courses at high school can receive up to four core credits for language arts because the state ESL language and literacy standards are aligned to the state language arts standards. Over 20 bilingual content courses are in the program of studies at the high school, such as bilingual earth science, biology, chemistry, and physics; bilingual algebra, geometry, and HSPA math skills 1, 2, and 3; U.S. History 1 and 2 and world history, and bilingual health and driver's education. The middle schools also offer the bilingual program with self-contained ESL and content-area classes for bilingual students and ESL and sheltered classes for advanced bilingual students. For some students with weak math skills, paired periods may be built into their schedules, one being the regular grade-level math and the other, a math support class.

As with the younger learners, secondary ELLs are designated as bilingual or advanced bilingual students based on their initial assessment upon enrollment and subsequent yearly assessments. Bilingual students take the bilingual content classes appropriate to their grade level and have 2 periods of intensive ESL each day. Those at the beginning level of English proficiency also have 1 period of Spanish. For intermediate level students, the ESL instruction is content-based. Advanced bilingual students continue to take ESL if needed and take sheltered content or mainstream classes.

Several specialized programs are also offered to adolescent ELLs who are at risk of educational failure. The Alternative Education program for older, at-risk ELLs is a unique program at José Martí Middle School, for example. Students who are older than the average eighth grader may be enrolled in this accelerated academic program, which has a seventh- through eighth-grade focus. Most are able to go on to high school after 1 year. As part of this program, students have work study within the building. For 1 period, they work with mentors (non-teachers) doing tasks such as helping in the library or main office. Most of the students in this program have moved up from the elementary schools in the district and enrolled in summer school beforehand. Once a week, these students meet with a social worker, and once a month their parents do too.

A Port-of-Entry (POE) program is available for new entrants who have gaps in their schooling, low literacy in their native language and in English, and are overage (16- or 17-year-old ninth graders). In the 2005–06 school year, there were 40 to 45 students in the ninth grade POE. The half-day program is designed for ninth graders and classes take place at the Career Academy, an off-site satellite of Emerson High School. Students take 2 periods of intensive ESL, 1 period of bilingual mathematics (algebra), and 1 period of career exploration. These older learners are motivated by the career classes, which include fashion design, computer repair, retail sales, hospitality, criminal justice, and computer networking. When they return to Emerson High for the afternoon session, they take a bilingual world history class, Spanish for native speakers, and physical education. Students are assessed every 6 to 8 weeks to ensure they are meeting curricular objectives. Class size is kept under 20 students. Most students remain in POE for 1 year.

Newly enrolled 10th graders who score low on the basic skills placement tests (English language, native-language literacy, mathematics as tested in native language) are placed in a New Entrant ESL class (a double period each day) with the same ESL curriculum as the ninth-grade POE students. However, these 10th graders have the content-area bilingual classes with support given during their lunch or free periods or in the after-school extended day program.

Extended Time for Learning and Other Student Supports

Each school in Union City has a school improvement coordinator and a Support Services Task Force. It is their job to monitor the students' academic and social development in the schools, examine student performance data, recommend options such as tutoring or special test preparation classes to students at risk of failure, and work with guidance counselors on course scheduling.

Union City has recognized the importance of extending time for learning for students who are struggling with literacy or, in the case of recent ELL arrivals, need more time to learn English and the content subjects. It accomplishes this extra time in a variety of ways. There are before- and after-school sessions at the high schools, after-school programs at the elementary and middle schools, Saturday programs for all grade levels, and summer programs. The following describe a sample of the programs that adolescent ELLs can participate in.

- The district received a 5-year 21st-Century Community Learning Centers grant for upper elementary and middle school Saturday programs that target mathematics and language arts. Several elementary schools and José Martí Middle School participate in this. José Martí also has extended day reading and writing classes for the students and the school has established a lunchtime intervention program as well. Students with low test scores and teacher recommendations attend the program twice a week to focus on reading and writing. For eighth graders, the focus is on GEPA preparation (the New Jersey standardized Grade Eight Performance Assessment in mathematics, language arts, and science) and the course is taught by the school improvement coordinator.

- Specialized tutoring opportunities are available for students at the high school. For example, each day a resource room is open for tutoring and students may stop in during free periods. In addition, students are recommended for tutoring according to the data from assessments that are given every 6 weeks. After school, there are HSPA and ESL tutoring every Tuesday and Thursday. The high school also offers extended day programs before school begins. These programs focus on mathematics and language arts.

- If bilingual students have not passed the HSPA in the spring of 11th grade, they participate in an intensive summer program to prepare them for the following fall administration. These summer classes are customized to their needs based on data derived from scores on the HSPA. Until the students pass the HSPA or go through the SRA process, they are retained as 11th graders.

Transitions

The Union City school system has put structures in place to help students make transitions out of the bilingual program, across school levels, and beyond secondary school. The following are some examples of these practices.

- At the elementary level for grades two through five, struggling readers have a targeted intervention known as Essentials of Literacy in which they work on phonics, fluency, comprehension, guided reading, and vocabulary. Students are pulled from their regular classrooms each day (except during reading) but at varied times, so they do not consistently miss the same subject. Support teachers also work with the curricula in the classrooms with struggling students in small groups or one-on-one.

- The district makes a concerted effort to manage the transition of eighth graders into high school. For bilingual and monolingual students with low GEPA scores, counselors schedule paired classes of key subjects. For example, a student may have an English language arts class and an English for Today class or algebra and math skills. These support classes help students develop the skills for the paired core class.

- When students make the transition out of the ninth-grade POE program, they are monitored by the ESL department in Emerson High School as well as the school improvement coordinator. There is a support service task force that considers options for students who are struggling. Support teachers are available to help out in classrooms and students are encouraged to attend extended day programs for tutoring.

- Transitions to careers after high school take place in several programs as well. There is a Career to Business program at the high schools in which advanced bilingual students may participate. This offers on-the-job training. Cingular Wireless is one company involved. It trains students in the summer and they work for the company after school during the year. The Career Academy also promotes postsecondary skills. Students in the full program (not the POE students who take only one course) complete a course of study in a particular career and have access to postsecondary training through agreements that the Union City Board of Education has established with certain businesses.

- The Road to College program is one support for students interested in schooling beyond high school. Another program is the New Jersey Institute of Technology Early College program. This is an intensive summer program to prepare Union City students for mathematics, science, technology, and engineering careers. Union City pays for scholarships and provides transportation. Advanced bilingual students are eligible to participate and do so.

Teacher Certification

Almost all of the teachers in Union City schools are highly qualified according to state definitions in accordance with NCLB regulations. In 2004–05, only 1% of teachers were on emergency or conditional certificates in the district; none were at Emerson High, which has the highest percentage of high school ELLs. All bilingual content-area instructors are dual certified in their content area and in bilingual education. Union City's policy is for all high school math, science, and language arts teachers to obtain ESL or bilingual certification within 3 years of employment. Certification requirements for kindergarten through eighth-grade teachers depend on the need at the school and the teaching assignment. The district pays 100% of the costs for the certification coursework at New Jersey City University or 80% of the costs for a masters degree. The district is concerned, however, with retaining teachers after they have received certification so the students benefit from the district's investment.

Professional Development

Professional development continues to be an important tool for promoting academic literacy in Union City schools. In New Jersey, all teachers must participate in at least 100 hours of professional development (through their school district and/or on their own with approved programs) to maintain their teaching license. Union City encourages staff development that focuses on literacy and has held specific sessions on literacy for ELLs. ESL and POE teachers have 5 half-days of professional development each year. The topic for each year's series is determined the summer prior to the start of the year. Recent topics included content-area instruction, learning strategies, and assessment. Additionally, the district runs "Super Saturday" professional development institutes for the teachers.

Professional development takes place at the school level as well. Schools design collaborative planning periods for the teachers by grade level at the elementary schools or by content area in middle and high schools. In-class coaching takes place occasionally to help content teachers work successfully with bilingual and special education students. Moreover, Union City has a Professor in Residence from nearby New Jersey City University. This ESL/bilingual education professor comes to the district twice per week and does model teaching in classrooms and plans lessons with teachers. The school improvement coordinator also mentors new staff and provides some model teaching in their classes, and new teachers can observe master teachers on an informal basis.

Targeted Fiscal Resources

Much of the innovative programming and creation of student support systems have been made possible through strategic use of funding. The district uses its Abbott funds across the prekindergarten through 12th-grade spectrum for extra staff, materials, and technology. The district combines some of their federal Title I and Title III funds to maintain the transitional bilingual/ESL program. Union City has also been successful in obtaining additional grants from federal, state, and private philanthropic sources. They have Reading First monies in the elementary schools, a 21st Century Learning Centers grant for upper elementary and middle school Saturday programs that target mathematics and language arts, and a Family Friendly extended-day program. The district had a Title VII dual-language grant for 5 years; and after it ended, the Board of Education continued to support the program. The district currently has a Bill & Melinda Gates Foundation grant to implement small learning communities in the middle and high schools.

The district also uses some of its funds to control class size in order to promote better learning environments. Class size is lower for the ESL classes. In the ninth-grade POE class, the average is 15 students per class. In ESL classes, the range is 15 to 20 students. Content-area classes for bilingual students have 25 to 30 students. In the kindergarten through eighth-grade self-contained bilingual and sheltered classes, the range is 15 to 22 students.

The district has hired a parent liaison and social workers for each school. These staff members help parents understand school policies and access social services in the community.

Data Analysis and Tracking

Since the major reform effort that began in 1989, Union City has collected, analyzed, and tracked student data in order to make informed decisions about programs, resources, and staffing. The reform efforts have led to student achievement over time.

From the 1998–99 school year until 2002–03, the number of fourth graders who met state standards on the New Jersey state language arts literacy test rose from 45% to 86%. Ninety percent of the district's eighth graders reached the proficient or advanced proficient level on the state language art literacy test in 2002–03. Progress was being sustained as students moved from elementary school into middle school. However, as is occurring elsewhere in the country, less success has occurred in high school. Eleventh graders did not perform as well as the younger students. For example, less than half of them scored at or above the proficient level on the 2002–03 HSPA mathematics exam.

The district's website reports more progress in 2004. "Students met or exceeded virtually every state requirement, fourth graders placing in top three urban districts for state, eighth graders exceeding all statewide averages, and 11th graders increasing test scores by 20 percentage points over previous year."

When compared to similar districts in New Jersey, Union City adolescent ELLs are performing better. The following data from José Martí Middle School and Emerson High School show the percentage of students at or above the proficient level on the GEPA or HSPA in four categories: the schoolwide percentage, the school's LEP student percentage, the state LEP percentage, and the average percentage of LEP students in districts with similar socioeconomic status.

José Martí Grade Eight Performance Assessment Results for 2004–05				
	School	Limited English Proficient (LEP)	State LEP	DFG*LEP
Language Arts Literacy	63%	28%	20%	11%
Mathematics	61%	28%	24%	14%
Science	71%	46%	27%	18%

* DFG is the measure of poverty used in New Jersey. The percentage in this column refers to districts with similar levels of poverty.

Although the LEP students in José Martí did not perform as well as the student body overall in the three GEPA subjects, they did perform better than LEP students across the state and much better than LEP students in districts at matching levels of poverty.

The story was similar at Emerson High School.

Emerson High School Proficiency Assessment Results for 2004–05				
	School	Limited English Proficient (LEP)	State LEP	DFG*LEP
Language Arts Literacy	68%	33%	23%	16%
Mathematics	54%	27%	35%	25%

* As noted earlier, DFG is the measure of poverty used in New Jersey. The percentage in this column refers to districts with similar levels of poverty.

Emerson High had 68% of its total student population reach proficient or advanced status on the HSPA language arts literacy assessment in 2004–05; but only 33% of the LEP students did so. For mathematics, the results were 54% and 27%, respectively. However, Emerson's results in both HSPA subjects were better than the statewide LEP average and the average among LEP students in districts with similar socioeconomic status.

In terms of attendance, Union City schools are doing well. The statewide average attendance rate in 2004–05 was 94% and this included the rural, suburban, and urban schools. The average attendance rate for the district was 95% in 2004–05; for José Martí, it was 96%; and for Emerson High, 94%. District staff reported that bilingual students tend to have better overall attendance records at the high schools than the monolingual students.

To help make more informed decisions and track student progress, Union City makes sure that the POE students as well as the bilingual and ESL students are specifically identified in the district's accountability system so their progress after exiting the programs can be monitored. Teachers have access to online data about the students. In this way all teachers are aware of the students' backgrounds, LEP/ESL/bilingual status, participation in special programs (e.g., POE), and grades and attendance records.

The district reports that on average ELLs who enter the transitional bilingual/ESL program in early elementary grades exit the program in 3 to 4 years. Students who enter at fourth grade or later need about 5 years to exit. Multiple measures are used to determine whether the students are ready to exit: scores on the English language development test, scores on the Terra Nova or New Jersey standardized tests, teacher recommendation, and whether or not students are reading on grade level. Students are monitored for 2 years after they have exited the program.

The POE students are the most challenging group. As is the case in many schools and districts around the United States, newly arrived ninth graders with interrupted schooling backgrounds, weak literacy skills in the native language and English, and limited content-area knowledge have a very high risk of dropping out. Four years is not long enough for most students to learn academic literacy in English and pass the content courses and high school exit exam. New Jersey's policy that supports ELLs staying in high school for up to 6 years is one promising practice, but not all of the students want to stay that long. Union City staff reported that for the past 2 years 46% to 49% of its POE students graduated from high school in Union City in 4 years. (This number does not include students who may have left the district and enrolled in another high school.) Some of the POE students remain for a fifth high school year in Union City but the number is small. The graduation rate for all of Emerson High school students is lower than the state average: 80% compared to 91%.

Conclusion

This profile opens a window on the promising efforts of Union City schools to serve adolescent ELLs and promote their academic literacy development. The district has seen some significant growth in overall student performance and continues to improve services for ELLs. Two schools with high numbers of ELLs have been honored in recent years. José Martí Middle School was a Governor's School of Excellence awardee and Hudson Elementary School was a Title I Distinguished Scholar's School.

Language Demands and Opportunities in Relation to Next Generation Science Standards for English Language Learners: What Teachers Need to Know

Helen Quinn, *Stanford University*
Okhee Lee, *New York University*
Guadalupe Valdés, *Stanford University*

This paper discusses challenges and opportunities expected as English language learners (ELLs) engage with Next Generation Science Standards (NGSS). We subscribe to a view of language learning and proficiency that is most concerned with students' ability to use language to function in the context of their lives both in and out of school. We have discussed this view of second language acquisition and its implications for the science classroom in greater detail in a separate paper. Here, we concern ourselves with learning opportunities for ELLs in an English-speaking science classroom in which NGSS have been implemented based on the National Research Council (NRC, 2011) document "*A framework for K-12 science education: Practices, crosscutting concepts, and core ideas*" (hereafter called "the Framework").

The Framework (NRC, 2011) refines and deepens the meaning of the term "inquiry-based science" by identifying a set of science and engineering practices. These practices are both a representation of what scientists do as they engage in scientific inquiry and a necessary part of what students must do to learn science and understand the nature of science. There is a parallel between the Framework's assertion that learning science requires students to engage in these practices, and our claim that meaningful "language for use" learning occurs in contexts where students are required to communicate (speak, listen, read and write) about science. A practice-oriented science classroom can be a rich language-learning as well as science-learning environment, provided teachers ensure that ELLs are supported to participate. Indeed it is a language learning environment for all students, as the discipline itself brings patterns of discourse and terminology that are unfamiliar to most of them. In this context, teacher knowledge about language and language learning support strategies can improve the overall science learning experience of all students, especially of ELLs. We do not suggest that science teachers should function as language teachers, but rather as supporters of the language learning that occurs in a content-rich and discourse-rich classroom environment.

Next Generation Science Standards: Focus on Science and Engineering Practices

The Framework defines science learning as having three dimensions: (1) science and engineering practices, (2) crosscutting concepts, and (3) core ideas in each science discipline. The central content of the Framework document is a detailed explanation of what is intended in each dimension, how the three dimensions should be integrated in curriculum and instruction, and how these dimensions progress in sophistication across K-12.

The framework defines eight science and engineering practices:

1) Asking questions (for science) and defining problems (for engineering);
2) Developing and using models;
3) Planning and carrying out investigations;
4) Analyzing and interpreting data;
5) Using mathematics and computational thinking;
6) Constructing explanations (for science) and developing designs (for engineering);
7) Engaging in argument from evidence; and
8) Obtaining, evaluating and communicating information.

Engagement in any of the practices involves both scientific sense-making and language use. The practices intertwine with one another in the sense-making process. This sense-making is a key endeavor for students as it helps them transition from their naïve conceptions of the world to more scientifically-based conceptions. In particular, we focus here on four of the eight practices, namely 2, 6, 7 and 8. These four practices are selected for the following reasons.

First, these practices represent a major shift. Even where science has been taught in an activity rich "inquiry-based" classroom, the practices related to investigation have often been stressed without an equivalent stress on the four sense-making practices highlighted here. Particularly in the lower grades the activity often ends at the stage of recording observations, with minimal attention paid to interpreting them and almost no attention to constructing models or explanations and refining them through argumentation from evidence.

Second, these practices are deeply interrelated because each is used to support effective engagement in the others. Argumentation from evidence requires students to apply both mental and diagrammed models that clarify their thinking and to develop model-based explanations using evidence (data and observations), logic, and information obtained from outside sources or prior experience. To develop an explanation and examine its success or failure in explaining all the evidence about a phenomenon or system requires argumentation. Clearly students must obtain, evaluate and communicate information as they engage in the process of building and critiquing explanations.

Third, engagement in these practices requires classroom science discourse, which demands both receptive and productive language skills. Students read, write, and visually represent as they develop their models and explanations. They speak and listen as they present their ideas and engage in reasoned argumentation with others to refine them and reach shared conclusions. This offers rich opportunities and demands for language learning at the same time that it supports science learning. Hence these practices merit special attention in science classrooms that include ELLs.

Finally, teachers implementing these practices need an understanding both of the practices and of strategies to engage all students in them regardless of students' English proficiency. The classroom culture of argumentation must be developed and supported to ensure that all voices are respected and included, even as the process reveals flaws in a student's model or explanation or limitations of their language proficiency.

Intersections between Science Practices and Language Learning

The learning of school subjects takes place through the use of language in oral and written forms. This section addresses two issues: (1) language skills involved as students engage in science and engineering practices and (2) features of science text and science talk.

Language Intensive Tasks to Engage in Science and Engineering Practices

Students develop facility with all of the eight science practices by using them in a concerted way to support sense-making about a phenomenon or system. Through an iterative cycle of engaging in these practices students develop understanding of science. Language is essential to successfully engage in any of these practices and all of the practices provide language learning opportunities, particularly the four that we discuss below. Engagement in these practices in the classroom both *demands* and *affords* rich student discourse. The discourse of the science classroom, and of science textbooks as well, differs from the everyday discourse of students and from that of a mathematics or language arts classroom or textbook. It is also distinct from the professional discourse and writing of scientists though it mirrors the conventions of that discourse more closely as the students advance across the grades.

The teacher must define and facilitate a classroom culture of discourse. This culture should be inclusive, accepting contributions for their meaning and their value in the discourse however flawed or informal the language of the speaker. It should support students to maintain a spirit of shared sense-making and discovery while they question others, ask for further explanation, and provide arguments that refute an idea expressed. Most importantly for ELLs, it allows students to hear many examples of the discourse that they are expected to produce.

Below we elaborate on the four highlighted practices, stressing the language learning opportunities that they provide as well as their roles in science learning.

Developing and Using Models. Each phenomenon or system under investigation demands description via a model. In developing a model, students operate with language and diagrams as well as with observations of the system in question. The model may include reference to a graph of some data or an equation describing a relationship between quantities. Precise observation demands both precise descriptive language – of which many examples must be provided – and carefully constructed diagrammatic representation. Diagrams can display both the seen (e.g., objects) and the inferred (e.g., force arrows, energy flow across an imagined system boundary) aspects of the system. Diagrams and graphs require labels to help students communicate all that has been observed and inferred about the system.

At all grades students can produce, describe and apply models of a system under study. What progresses across the grades are the sophistication and abstraction of the models that they work with and of the language and diagrams or other representations contained within their description of their model. This progress is aided when the teacher leads students to discuss examples of models, as well as ways to describe them that incorporate higher-level features. The interplay between diagrammatic representations of models, or three-dimensional models, of a system and the language used to describe these representations both builds students' conceptual understanding of the system in question and refines their ability to talk about it. Teaching strategy and repeated practice develops students' ability to make explicit a mental model of a system or process, expose contradictions between observations and the current mental model, and modify the mental model toward a more scientifically-supported one.

The practice of developing and using models provides an initially nonverbal way to express a thought or an understanding. Using models to explain and describe systems provides students an impetus to name aspects or parts of their own model and to speak about how it explains observations. In doing so, students refine their understanding of needed scientific terminology. With a model in hand students can say "this piece here . . . ." and then have a reason to want to know that the piece is called a *cog* or a *flagellum*. This helps students to learn appropriate language in context as they express their ideas and grow in their understanding of the system under study.

Models are useful as more than a record of observation – they support the development of explanations for phenomena. As students support their explanations with reference to their models, their thinking is made more visible and explicit, both to themselves and to others. Language is the essential tool for them to engage in explanations and arguments with their peers around the model at hand. Students' ability to use language precisely is supported by the visual representation of their model. For ELLs the progression from observation of a system to modeling a system, to using language about the system, provides a rich language-learning experience where the learning is driven by the classroom discourse around the objects and ideas being considered and represented.

Developing Explanations (for Science) and Designing Solutions (for Engineering). The process of science is to make ever more precise and explicit explanations of phenomena, while engineering likewise requires precision and explicit features in a design solution. The level of explicit detail of observation and explanation required by science and engineering is not common in everyday experience; it demands a comparable level of precision in language use. Models are an important step in the development of an explanation of how something happens or of an idea for a design solution. When students are provided examples of diagrams and descriptions of models and then diagram and describe the model that underlies their proffered explanation or design, they become more explicit about their ideas. This move toward explicit detail occurs even when students do not yet have the language to be explicit if simply asked for a verbal explanation or design proposal. Thus like the process of developing models, the process of developing explanations and designs involves language development, mediated by diagrams, lists, charts and other elements of models and observations and examples of the types of verbal explanations that are the end goal of student learning.

As students are asked to explain their ideas or designs and critique those of others, including written examples, they learn from the experience of encountering multiple examples of the level of precision and detail that scientific thinking requires. Likewise students' ability to use technical terminology develops because they need the precision that it offers. This process needs teacher support but it is not helpful to insist on distinctions in terminology for which the student does not yet have access to distinctions in concept. This is particularly true for words such as *energy* that have an everyday usage broader and less defined than their scientific meaning. The development of correct scientific language usage comes from the development of scientific concepts through experience and application; it cannot be achieved by learning definitions. In this sense all students are language learners.

Engaging in Argument from Evidence. Argument is a discourse practice, whether practiced in writing or verbally. Across all disciplines an argument can be deconstructed as a claim and the logic and evidence used to support or refute that claim. What counts as evidence is discipline-specific. In science what counts as evidence is data and observations. Hence argumentation in science is not a purely verbal exercise. It is an exercise in the coordination of language and experience and thus another rich language learning opportunity.

As students analyze written examples of arguments they learn the characteristics of a strong scientific justification of a claim and they learn to identify weak support. As they engage in argument with others to arrive at a shared "best" explanation or model, they are motivated to clarify both their language and their thinking by the atmosphere of shared interest and goals.

Obtaining, Evaluating and Communicating Information. This practice, more than any other, points to reading and writing as well as to listening and speaking. It is here that the student meets the difficulties of reading and interpreting scientific writing, though typically not at the level of scientific papers. The writing in question is that of textbooks, science-related trade books, websites and popular articles about science. Each of these genres has different language conventions.

Particular challenges for ELLs arise when they are asked to read textbooks or other written materials about a science topic. Challenges can be of two types. First, ELLs may not have developed strong reading skills if their previous ESL instruction primarily focused on grammatical structures. They will therefore need support in the development of reading comprehension proficiencies. Second, the language style and complexity of texts written for science learners is different from those of other written genres encountered in other school subjects and from spoken language, as we discuss below. Thus all students need support and strategies for reading these materials.

Students need multiple opportunities to write after they have been guided in examining examples of the type of writing that is required. For example, if students are to be asked to regularly use journals to develop and express their own understanding and to engage in metacognition about it, they need to see examples of such writing. Similarly, before they are expected to give oral presentations and written reports that demonstrate what they have understood or to describe an investigation or design project, they should be given examples of such presentations and reports. The point of this work is science understanding and science communication; these exercises should not become tests of accuracy and fluency of language production. Opportunities to revise and correct are appropriate for formal reports; however, for journal writing the emphasis should be on rethinking rather than on rewriting. Nevertheless students must understand what writing that reflects thinking looks like as well as what it includes and does not include.

Features of Science Language

It is helpful for science teachers to understand that not only technical terms, but also other features of science text and science talk, may make them difficult for students to understand. All students encounter these difficulties, but problems may be magnified for ELLs who have not had access to good instruction. We here briefly review these features.

Science vocabulary. As they engage with science students need to code-switch from everyday uses of language to the language of science (Brown & Ryoo, 2008; Moje, Collazo, Carillo, & Marx, 2001). Within science vocabulary there are different types of challenges for students. First, some everyday words have science-specific meanings that are different from or more narrowly-defined than their everyday meanings (e.g., *force*, *energy*, *work*, *cell*, *space*, *fault*). Second, general academic vocabulary that is used across disciplines (e.g., *compare*, *infer*, *analyze*, *evaluate*; tier II words according to Beck, McKeown, & Kucan, 2002) present challenges. Third, discipline specific words invented and defined for science use (e.g., *gene*, *biome*, *proton*; tier III words according to Beck et al., 2002) are new to most students, even those with fluency in everyday English. Finally, even everyday words can make subtle shifts in meaning as they are used in science. For example, in everyday English, "Why did that happen?" may be asking about the motivations of those that made it happen, whereas in the natural sciences it is asking students to restrict their attention to the mechanisms and conditions that caused the effect.

Science Discourse. Each area of science has different disciplinary discourse conventions, adapted to what has proven effective and efficient for communication among experts. Learning the register of discourse of a discipline is a form of socialization into how members of the discipline talk, write, and participate in the knowledge construction. These differences are reflected in science textbooks and classroom talk, which have registers specific to a discipline and grade level. Students must absorb these differences in register as they work to construct meaning appropriate to the topic at hand.

Science discourse at any level requires students to attend to and argue about precise meanings. This demand for attention to precision and attention to detail goes beyond the meaning of technical vocabulary, to the evidence and logic of connecting cause and effect, and the validity of claims or warrants. Students must develop an understanding of the forms of this discourse as well those used in written science text.

Multiple Modes of Representation. Science information is conveyed not just through oral or textual forms but also through visual and mathematical representations, including pictures, diagrams, graphs, charts, tables, maps, and equations. Students need to master these non-linguistic modes of representation to gain an understanding of science. In addition they need to coordinate information presented through the various modes into a single coherent understanding of the material being presented or a coherent presentation of their own ideas. For ELLs the coordination of these multiple representations provides an additional path to language learning, as well as to science learning.

Science Texts. Discipline-specific texts written for learners typically have particular features that over time have been thought to provide the most effective way for the content of that discipline to be expressed. It is helpful for students to examine these features and discuss why they are used. Recent analyses of the written language of secondary science texts carried out from the perspective of Systemic Functional Linguistics have found that these text structures are complex and include lexical, syntactic, and discourse structures that are not typically present in everyday language (Fang & Schleppegrell, 2008; Halliday & Martin, 1993; Halliday & Matthiessen, 2004; Schleppegrell, 2004). Key features include:

- Authoritativeness to "suppress" human agents behind events, concepts, and discoveries and to render the scientific discourse more objective or timeless through simple present tense, passive voice, generalized or virtual participants ('scientists,' 'research team members'), and hidden evaluations ('claimed,' 'confirmed').

- Nominalization of verbs or adjectives into nouns to economically summarize sentences into one abstract noun phrase

- Long and complex noun phrases and clauses to effectively pack complex content within shorter sentences

- Technical vocabulary to use terms with specialized meanings in science lexical density to “pack” texts with more information

Supporting Science and Language Learning for ELLs

We note five areas where teachers can support science and language for ELLs: (1) literacy strategies with all students, (2) language support strategies with ELLs, (3) discourse strategies with ELLs, (4) home language support, and (5) home culture connections.

Literacy Strategies. In science classrooms, effective teachers incorporate reading and writing strategies in their instruction to promote both science learning and literacy development for all students (Douglas, Klentschy, Worth, & Binder, 2006). These strategies include activating prior knowledge, having explicit discussion of reading strategies for scientific texts, prompting students to use academic language functions (e.g., *describe*, *explain*, *predict*, *infer*, *conclude*) in science practices, requiring and exemplifying scientific genres of writing (e.g., keeping a science journal, investigation or design reports, conference posters), teaching the uses of graphic organizers (e.g., concept map, word wall, Venn diagram), encouraging reading trade books or literature with scientific themes, and providing journal writing prompts (e.g., *I observed…*, *I noticed…, I wondered…*, *I inferred…*) as part of an investigation protocol.

It is not a service to language learners to “protect” them from the demands of subject area reading. If they are to reach grade level understanding of a topic, they will need strategies for reading the relevant text and interpreting its complex sentences, as well as for linking these to diagrams, data charts and equations that appear in the same section. In supporting students to read and understand scientific texts, it is more important to provide them with strategies for sense making and ways to “decode” complex sentences and to coordinate text and diagrams than to provide vocabulary lists and glossaries. Word definitions are indeed sometimes needed but they are better learned by use in context than by memorizing a vocabulary list. Dictionary use is likewise a helpful but limited strategy. (However, ELLs should be encouraged to use an English to English dictionary to interpret unfamiliar words before resorting to a translation dictionary.)

Students are expected to learn how to describe, explain, and predict phenomena in science-specific genres of writing (Hand, Wallace, & Yang, 2004; Palincsar & Magnusson, 2001). They need to report science investigations and design projects in multiple-mode formats (e.g., those that include written description plus graphs of data, diagrams of equipment or observations). Additionally, students need to code-switch from everyday uses of language (e.g., telling or writing stories) to the language of science (Brown & Ryoo, 2008; Brown & Spang, 2008). To perform the kinds of writing tasks described here, all students, but particularly ELLs, benefit from multiple examples of the desired product, annotated and discussed by the whole class or in small groups to examine the organizational structure and particular features. For example, without teaching the passive voice as such, teachers can certainly call students’ attention to the fact that all the actions in a particular paragraph have no specified agent (e.g., data are examined, conclusions are reached) and that this is a common feature of scientific writing.

ELLs’ needs with respect to written materials used in science class require ongoing attention from teachers. The joint goals of science and language learning must both be considered as strategies that are chosen to assist any student in mastering a difficult reading assignment. The appropriate strategy for a student depends on the student's language level, reading level, and science comprehension level. The more the teacher is aware of all three through their observation (formative assessment) of the student, the better s/he can match the student's needs.

Language Support Strategies

To support ELLs in learning science and developing English proficiency simultaneously, teachers engage students in purposeful activities, ensure that students experience multiple examples of language in use, and call students' attention to the ways in which language is used to communicate meaning in science. They encourage students to communicate and reflect about ideas and to engage with others in sense-making talk and activity. They encourage non-linguistic modes of representation (e.g., graphs, charts, tables, diagrams, pictures), as well as language production. They guide students to comprehend, through use in context, key science vocabulary – both general academic terms (tier II words) and discipline specific terms (tier III words) (Beck et al., 2002). All these strategies for science teaching support ELLs, provided teachers ensure that these students are full members of the classroom science discourse community.

Student journals of their science activity and thinking are a major tool used in many science classrooms and they can also provide support for language learning. Students are encouraged to use their journals to record observations, develop explicit representations of their models, and analyze their experiences and understandings of what they are learning in science. This is not formal science writing; it is writing to make thinking explicit. Journals become an effective tool only if they are used regularly and if in-class time is provided for reflective writing about what has just occurred in an activity or a discussion. Early stage ELLs may gain science understanding by doing this writing initially in their first language *if they have been instructed in this language,* but should be encouraged to then restate (rather than to translate) this thinking in English. As language proficiency in English develops, the student should be encouraged to transition to thinking and writing in English.

Discourse Strategies. Discourse strategies can be used to enhance ELLs' understanding of academic content (i.e., adjust the level and mode of communication). Discourse strategies focus specifically on the teacher's role in facilitating ELLs' participation in classroom discourse (Gibbons, 2006). A major challenge for teachers is in how to structure activities so as to reduce the language barrier for participation while maintaining the rigor of science content and processes.

The implementation of science and engineering practices demands that students work and talk with one another, sometimes in small groups, sometimes as a whole class. Classroom management strategies for students to engage in such work begin with the establishment of a classroom culture as to what is acceptable behavior. The mode of argument from evidence must be established, with norms that ensure civil discourse and respect for all speakers. Inclusion of ELLs in the discourse must be established (by example) as a part of this culture.

Further, one of the discourse conventions should be that any participant should feel free to say, "I did not understand what you said" and ask for repetition or clarification. Whether the lack of understanding is at its root linguistic or whether it depends on the conceptual clarity of what has been said, the respectful back and forth of questioning and responses will lead to the further development of understanding of science concepts and of the language needed to discuss them.

Teachers need to recognize ELLs' varying levels of developing language proficiency and adjust norms of interaction with a student accordingly, for example, by using clearer enunciation or longer periods of wait time. They provide students with multiple redundancies of the same concepts, for example, using synonyms or paraphrases of difficult language, repeating and rephrasing main ideas, or recasting and elaborating on students' responses (Gibbons, 2006). If they have beginners in their classes, they determine which students can and cannot understand whole class explanations and they provide alternatives for those who need such alternatives. They use multiple modes of representation (gestural, oral, pictorial, graphic, and textual) to communicate meanings. They amplify rather than simplify their presentations, expressing concepts in multiple ways (van Lier & Walqui, 2010).

A student with an idea to share will want to express that idea. Often the language used to do so will not be "correct" either in the sense that the words used are not the correct technical terms, or that the grammar of the sentences is non-canonical. If these normal characteristics of emerging English are corrected, the discourse becomes stilted and the student's urge to speak is suppressed. A teacher needs to mediate such discussions to ensure that poorly-expressed ideas are being heard and considered by others, not to ensure that the students speak correctly. Asking questions to elicit amplification or clarification of an expressed idea is an effective strategy. Asking students to restate in their own words an idea just expressed by another provides chances to speak, to clarify an idea, and for the teacher to check whether other students have followed what was said. This exercise can begin with a good idea that was well expressed, or one that was poorly expressed. Either way, the repetition and ensuing discussion reinforce the idea and the language needed to talk about it. Both precision and correctness in language use develop from repeated experiences, and from models offered by the teacher in summarizing or interpreting a student's statement.

Home Language Support. It is important to draw a distinction between home language instruction (i.e., bilingual education) and home language support (Goldenberg, 2008). Even in the absence of bilingual education programs or fully-trained bilingual teachers, ELLs' home language can be used as instructional support for their learning of academic content and processes in English.

In the science classroom teachers can build upon and make use of students' home language to support science learning in English. If teachers share the same home language as their students they can use the home language to communicate and reinforce key science vocabulary and concepts (Hudicourt-Barnes, 2003). They can also allow students to communicate using combinations of their first language and English, referred to by Garcia (2009) as "translanguaging." If teachers do not speak students' home language, the home language can still be supported through a number of strategies. In the beginning of a lesson, teachers may introduce key science terminology in both the home language and English. Teachers may highlight cognates as well as false cognates between English and the home language. For example, Spanish and other Romance lexicon are often derived from Latin, the primary language of science. Bravo, Hiebert, and Pearson (2007) found that approximately 88% of key science words selected for instruction were cognates in Spanish and about half of them were high-frequency words in Spanish. Such cognates are likely to be known by Spanish speakers, even those with limited schooling in their first language.

In a bridge period for students entering with very limited English, teachers may encourage bilingual students to assist them in their home language as well as in English, allow ELLs to write about science ideas or investigations in their home language, and invite family and community members to participate as local experts in classroom literacy events. When students are asked to engage with other students in their common home language, a small group discussion is preferable to a single student "translation," which may transmit the conceptual errors of the speaker. The small group should also be asked to communicate their conclusions to others in English.

Home Culture Connections. While making connections to ELLs' home language is quite concrete, the notion of making connections to their cultural experiences in relation to academic content can be more abstract and subtle. Since science has traditionally been regarded as "culture-free," incorporation of home culture into science instruction is often ignored. Most science educators need a better understanding of how to articulate connections between home culture and school science (Lee, 2002; Warren, Ballenger, Ogonowski, Rosebery, & Hudicourt-Barnes, 2001).

The literature on cultural congruence indicates that students participate in classroom interactions in ways that reflect culturally-based communication and interaction patterns from their home and community (Gay, 2002; Villegas & Lucas, 2002). Teachers need to know how different students might be more or less familiar with the participation norms that are expected in science classrooms, what interactional patterns are common among different groups of students, and how these patterns might foster or constrain students' participation in science classrooms. Teachers must balance considerations of culturally-based patterns of communication and interaction with the risks of applying stereotypes or over-generalization based on students' cultural backgrounds. Teachers make the norms and expectations for classroom discourse explicit and look for opportunities to honor the full range of student discourse patterns when appropriate. For example, cross-talk (talking simultaneously with other speakers to add to what they are saying) is completely acceptable in some cultures, while it is considered rude and disruptive in other cultures including the cultural norms in most U.S. schools (Lee & Fradd, 1996).

The literature on funds of knowledge indicates that the lived experiences of students at home and in the community can serve as intellectual resources for academic learning (González, Moll, & Amanti, 2005; Moll, 1992). In science classrooms teachers ask questions that elicit students' funds of knowledge related to science topics (Solano-Flores & Nelson-Barber, 2001). They use cultural artifacts and community resources in ways that are academically meaningful and culturally relevant. These cultural connections can be of great assistance as ELLs strive to integrate prior experiences with new academic expectations. For example, Rodriguez and Berryman (2002) worked with high school students in predominantly Latino and impoverished school settings in a U.S.-Mexican border city. Using a curriculum unit on investigating water quality in their community, the students engaged in authentic science as they explored how this topic was socially relevant and connected to their everyday lives. Having come to see science as relevant to their lives, students saw scientific investigations as worthwhile for themselves and for students in other schools in the region.

Mathematics, the Common Core, and Language: Recommendations for Mathematics Instruction for ELs Aligned with the Common Core

Judit Moschkovich, *University of California, Santa Cruz*

1. Introduction

This paper outlines recommendations for meeting the challenges in developing mathematics instruction for English Learners (ELs) that is aligned with the Common Core Standards. The recommendations are motivated by a commitment to improving mathematics learning *through language* for all students and especially for students who are learning English. These recommendations are not intended as recipes or quick fixes, but rather as principles to help to guide teachers, curriculum developers, and teacher educators in developing their own approaches to supporting mathematical reasoning and sense making for students who are learning English.

These recommendations for teaching practices are based on research that often runs counter to commonsense notions of language. The first issue is the term *language*. There are multiple uses of the term *language*: to refer to the language used in classrooms, in the home and community, by mathematicians, in textbooks, and in test items. It is crucial to clarify how we use the term, what set of phenomena we are referring to, and which aspects of these phenomena we are focusing on. Many commentaries on the role of academic language in mathematics teaching practice reduce the meaning of the term to single words and the proper use of grammar (for example, see Cavanagh, 2005). In contrast, work on the language of specific disciplines provides a more complex view of mathematical language (e.g., Pimm, 1987) as not only specialized vocabulary (new words and new meanings for familiar words) but also as extended discourse that includes syntax and organization (Crowhurst, 1994), the mathematics register (Halliday, 1978), and discourse practices (Moschkovich, 2007c). Theoretical positions in the research literature in mathematics education range from asserting that mathematics is a universal language, to claiming that mathematics is itself a language, to describing how mathematical language is a problem. Rather than joining in these arguments, I use a sociolinguistic framework to frame this essay. From this theoretical perspective, language is a socio-cultural-historical activity, not a thing that can either be mathematical or not, universal or not. I use the phrase “the language of mathematics” not to mean a list of vocabulary or technical words with precise meanings but the communicative competence necessary and sufficient for competent participation in mathematical discourse practices[i].

It is difficult to make generalizations about the instructional needs of all students who are learning English. Specific information about students’ previous instructional experiences in mathematics is crucial for understanding how bilingual learners communicate in mathematics classrooms. Classroom instruction should be informed by knowledge of students' experiences with mathematics instruction, their language history, and their educational background. In addition to knowing the details of students' experiences, research suggests that high-quality instruction for ELs that supports student achievement has two general characteristics: a view of language as a resource, rather than a deficiency; and an emphasis on academic achievement, not only on learning English (Gándara and Contreras, 2009).

Research provides general guidelines for instruction for this student population. Since students who are labeled as ELs, who are learning English, or who are bilingual are from non-dominant communities, they need access to curricula, instruction, and teachers proven to be effective in supporting academic success for this student population. The general characteristics of such environments are that curricula provide "abundant and diverse opportunities for speaking, listening, reading, and writing" and that instruction "encourage students to take risks, construct meaning, and seek reinterpretations of knowledge within compatible social contexts" (Garcia & Gonzalez, 1995, p. 424). Teachers with documented success with students from non-dominant communities share some characteristics: a) a high commitment to students' academic success and to student-home communication, b) high expectations for all students, c) the autonomy to change curriculum and instruction to meet the specific needs of students, and d) a rejection of models of their students as intellectually disadvantaged[ii].

Research on language that is specific to mathematics instruction for this student population provides several guidelines for instructional practices for teaching ELs mathematics. Mathematics instruction for ELs should: 1) treat language as a resource, not a deficit (Gándara and Contreras, 2009; Moschkovich, 2000); 2) address much more than vocabulary and support ELs' participation in mathematical discussions as they learn English (Moschkovich, 1999, 2002, 2007a, 2007b, 2007d); and 3) draw on multiple resources available in classrooms – such as objects, drawings, graphs, and gestures – as well as home languages and experiences outside of school. This research shows that ELs, even as they are learning English, can participate in discussions where they grapple with important mathematical content[iii]. Instruction for this population should not emphasize low-level language skills over opportunities to actively communicate about mathematical ideas. One of the goals of mathematics instruction for ELs should be to support all students, regardless of their proficiency in English, in participating in discussions that focus on important mathematical concepts and reasoning, rather than on pronunciation, vocabulary, or low-level linguistic skills. By learning to recognize how ELs express their mathematical ideas as they are learning English, teachers can maintain a focus on mathematical reasoning as well as on language development.

Research also describes how mathematical communication is more than vocabulary. While vocabulary is necessary, it is not sufficient. Learning to communicate mathematically is not merely or primarily a matter of learning vocabulary. During discussions in mathematics classrooms, students are also learning to describe patterns, make generalizations, and use representations to support their claims. The question is not whether students who are ELs should learn vocabulary but rather how instruction can best support students as they learn both vocabulary and mathematics. Vocabulary drill and practice is not the most effective instructional practice for learning either vocabulary or mathematics. Instead, vocabulary and second-language-acquisition experts describe vocabulary acquisition in a first or second language as occurring most successfully in instructional contexts that are language-rich, actively involve students in using language, require both receptive and expressive understanding, and require students to use words in multiple ways over extended periods of time (Blachowicz and Fisher, 2000; Pressley, 2000). In order to develop written and oral communication skills students need to participate in negotiating meaning (Savignon, 1991) and in tasks that require output from students (Swain, 2001). In sum, instruction should provide opportunities for students to actively use mathematical language to communicate about and negotiate meaning for mathematical situations.

The recommendations provided in this paper focus on teaching practices that are simultaneously: a) aligned with the Common Core Standards for mathematics, b) support students in learning English, and c) support students in learning important mathematical content. Overall, the recommendations address the following questions: How can instruction provide opportunities for mathematical reasoning and sense making for students who are learning English? What instructional strategies support ELs' mathematical reasoning and sense making skills? How can instruction help EL students communicate their reasoning effectively in multiple ways?

2. Alignment with Common Core State Standards

The Common Core State Standards (CC) provide guidelines for how to teach mathematics for understanding by focusing on students' mathematical reasoning and sense making. Here I will only summarize four emphases provided by the CC to describe how mathematics instruction for ELs needs to begin by following CC guidelines and taking these four areas of emphasis seriously.

Emphasis #1 Balancing conceptual understanding and procedural fluency
Instruction should a) balance student activities that address both important conceptual and procedural knowledge related to a mathematical topic and b) connect the two types of knowledge.

Emphasis #2 Maintaining high cognitive demand
Instruction should a) use high-cognitive-demand math tasks and b) maintain the rigor of mathematical tasks throughout lessons and units.

Emphasis #3 Developing beliefs
Instruction should support students in developing beliefs that mathematics is sensible, worthwhile, and doable.

Emphasis #4 Engaging students in mathematical practices
Instruction should provide opportunities for students to engage in eight different mathematical practices: 1) Make sense of problems and persevere in solving them, 2) reason abstractly and quantitatively, 3) construct viable arguments and critique the reasoning of others, 4) model with

mathematics, 5) use appropriate tools strategically, 6) attend to precision, 7) look for and make use of structure, and 8) look for and express regularity in repeated reasoning.

We can see from these areas of emphasis that students should be focusing on making connections, understanding multiple representations of mathematical concepts, communicating their thought processes, and justifying their reasoning. Several of the mathematical practices involve language and discourse (in the sense of talking, listening, reading, and writing), in particular practices #3 and #8. In order to engage students in these mathematical practices, instruction needs to include time and support for mathematical discussions and use a variety of participation structures (teacher-led, small group, pairs, student presentations, etc.) that support students in learning to participate in such discussions.

According to a review of the research (Hiebert & Grouws, 2007), mathematics teaching that makes a difference in student achievement and promotes conceptual development in mathematics has two central features: one is that teachers and students attend explicitly to concepts, and the other is that teachers give students the time to wrestle with important mathematics. Mathematics instruction for ELs should follow these general recommendations for high-quality mathematics instruction to focus on mathematical concepts and the connections among those concepts and to use and maintain high-cognitive-demand mathematical tasks, for example, by encouraging students to explain their problem-solving and reasoning (AERA, 2006; Stein, Grover, and Henningsen, 1996).

One word of caution: concepts can often be interpreted to mean definitions. However, paying explicit attention to concepts does not mean that teachers should focus on providing definitions or stating general principles. Instead the CC and the National Council of Teachers of Mathematics (NCTM) Standards provide multiple examples of how instruction can focus on important mathematical concepts (e.g. equivalent fractions or the meaning of fraction multiplication, etc.). Similarly, the CC and NCTM also provide examples of how students can show their understanding of concepts (conceptual understanding) not by giving a definition or describing a procedure, but by using multiple representations. For example, students can show conceptual understanding by using a picture of a rectangle as an area model to *show* that two fractions are equivalent or how multiplication by a positive fraction smaller than one makes the result smaller, and pictures can be accompanied by oral or written explanations.

The preceding examples point to several challenges that students face in mathematics classrooms focused on conceptual understanding. Since conceptual understanding is most often made visible by showing a solution, describing reasoning, or explaining "why," instead of simply providing an answer, the CC shifts expectation for students from carrying out procedures to communicating their reasoning. Students are expected to a) communicate their reasoning through multiple representations (including objects, pictures, words, symbols, tables, graphs, etc.), b) engage in productive pictorial, symbolic, oral, and written group work with peers, c) engage in effective pictorial, symbolic, oral, and written interactions with teachers, d) explain and demonstrate their knowledge using emerging language, and e) extract meaning from written mathematical texts. The main challenges for teachers teaching mathematics are to teach for understanding, support students to use multiple representations, and support students in using emerging and imperfect language to communicate about mathematical concepts. Since the CC documents already provide descriptions of how to teach mathematics for understanding and use multiple representations, the recommendations outlined below will focus on how to connect mathematical content to language, in particular through "engaging students in mathematical practices" (Emphasis #4).

3. Recommendations for Connecting Mathematical Content to Language

Recommendation #1: Focus on students' mathematical reasoning, not accuracy in using language.
Instruction should focus on uncovering, hearing, and supporting students' mathematical reasoning, not on accuracy in using language (either English or a student's first language). When the goal is to engage students in mathematical practices, student contributions are likely to first appear in imperfect language. Teachers should not be sidetracked by expressions of mathematical ideas or practices expressed in imperfect language. Instead, teachers should first focus on promoting and privileging meaning, no matter the type of language students may use. Eventually, after students have has ample time to engage in mathematical practices both orally and in writing, instruction can then carefully consider how to move students toward accuracy.

As a teacher, it can be difficult to understand the mathematical ideas in students' talk in the moment. However, it is possible to take time after a discussion to reflect on the mathematical content of student contributions and design subsequent lessons to address these mathematical concepts. But, it is only possible to uncover the mathematical ideas in what students say if students have the opportunity to participate in a discussion and if this discussion is focused on mathematics. Understanding and re-phrasing student contributions can be a challenge, perhaps especially when working with students who are learning English. It may not be easy (or even possible) to sort out what aspects of what a student says are due to the student's conceptual understanding or the student's English language proficiency. However, <u>if the goal is to support student participation in a mathematical discussion and in mathematical practices, determining the origin of an error is not as important as listening to the students and uncovering the mathematical content in what they are saying.</u>

Recommendation #2: Shift to a focus on mathematical discourse practices, move away from simplified views of language.
In keeping with the CC focus on *mathematical practices* (Emphasis #4) and research in mathematics education, the focus of classroom activity should be on student participation in mathematical discourse practices (explaining, conjecturing, justifying, etc.). Instruction should move away from simplified views of language as words, phrases, vocabulary, or a list of definitions. In particular, teaching practices need to move away from oversimplified views of language as vocabulary and leave behind an overemphasis on correct vocabulary and formal language, which limits the linguistic resources teachers and students can use in the classroom to learn mathematics with understanding. Work on the language of disciplines provides a

complex view of mathematical language as not only specialized vocabulary – new words and new meanings for familiar words – but also as extended discourse that includes syntax, organization, the mathematics register, and discourse practices. Instruction needs to move beyond interpretations of the mathematics register as merely a set of words and phrases that are particular to mathematics. The mathematics register includes styles of meaning, modes of argument, and mathematical practices and has several dimensions such as the concepts involved, how mathematical discourse positions students, and how mathematics texts are organized.

Another simplified view of language is the belief that precision lies primarily in individual word meaning. For example, we could imagine that *attending to precision* (mathematical practice #6) means using two different words for the set of symbols "x+3" and the set of symbols "x+3 =10." If we are being precise at the level of individual word meaning, the first is an "expression" while the second is an "equation." However, attending to precision is not so much about using the perfect word; a more significant mathematical practice is making claims *about precise situations*. We can contrast the claim "Multiplication makes bigger," which is not precise, with the question and claim "When does multiplication make the result bigger? Multiplication makes the result bigger when you multiply by a number greater than 1." Notice that when contrasting these two claims, precision does not lie in the individual words nor are the words used in the more precise claim fancy math words. Rather, the precision lies in the *mathematical practice* of specifying when the claim is true. <u>In sum, instruction should move away from interpreting precision to mean using the precise word, and instead focus on how precisions works in mathematical practices.</u>

One of the eight mathematical practices, "Attend to precision" (Number 6), is open to such multiple interpretations of the term "precision." It is important to consider what we mean by *precision* for all students learning mathematics, since all students are likely to need time and support for moving from expressing their reasoning and arguments in imperfect form. However, it is essential for teachers of ELs to consider when and how to focus on precision for ELs. Although students' use of imperfect language is likely to interact with teachers' own multiple interpretations of precision, we should not confuse the two. In particular, we should remember that precise claims can be expressed in imperfect language and that attending to precision at the individual word meaning level will get in the way of students' expressing their emerging mathematical ideas. More work is needed to clarify how to guide practitioners in helping students become more precise in their language over time.

Recommendation #3: Recognize and support students to engage with the complexity of language in math classrooms.
Language in mathematics classrooms is complex and involves a) multiple modes (oral, written, receptive, expressive, etc.), b) multiple representations (including objects, pictures, words, symbols, tables, graphs, etc.), c) different types of written texts (textbooks, word problems, student explanations, teacher explanations, etc.), d) different types of talk (exploratory and expository), and e) different audiences (presentations to the teacher, to peers, by the teacher, by peers, etc.). "Language" needs to expand beyond talk to consider the interaction of the three

semiotic systems involved in mathematical discourse – natural language, mathematics symbol systems, and visual displays. Instruction should recognize and strategically support EL students' opportunity to engage with this linguistic complexity.

Instruction needs to distinguish among multiple modalities (written and oral) as well as between receptive and productive skills. Other important distinctions are between listening and oral comprehension, comprehending and producing oral contributions, and comprehending and producing written text. There are also distinctions among different mathematical domains, genres of mathematical texts (for example word problems and textbooks). Instruction should support movement between and among different types of texts, spoken and written, such as homework, blackboard diagrams, textbooks, interactions between teacher and students, and interactions among students[iv]. Instruction should: a) recognize the multimodal and multi-semiotic nature of mathematical communication, b) move from viewing language as autonomous and instead recognize language as a complex meaning-making system, and c) embrace the nature of mathematical activity as multimodal and multi-semiotic (Gutierrez et al., 2010; O'Halloran, 2005; Schleppegrell, 2010).

Recommendation #4: Treat everyday language and experiences as resources, not as obstacles.

Everyday language and experiences are not necessarily obstacles to developing academic ways of communicating in mathematics. It is not useful to dichotomize everyday and academic language. Instead, instruction needs to consider how to support students in connecting the two ways of communicating, building on everyday communication, and contrasting the two when necessary. In looking for mathematical practices, we need to consider the spectrum of mathematical activity as a continuum rather than reifying the separation between practices in out-of-school settings and the practices in school. Rather than debating whether an utterance, lesson, or discussion is or is not mathematical discourse, teachers should instead explore what practices, inscriptions, and talk mean to the participants and how they use these to accomplish their goals. Instruction needs to a) shift from monolithic views of mathematical discourse and dichotomized views of discourse practices and b) consider everyday and scientific discourses as interdependent, dialectical, and related rather than assume they are mutually exclusive.

The ambiguity and multiplicity of meanings in everyday language should be recognized and treated not as a failure to be mathematically precise but as fundamental to making sense of mathematical meanings and to learning mathematics with understanding. Mathematical language may not be as precise as mathematicians or mathematics instructors imagine it to be. Although many of us may be deeply attached to the precision we imagine mathematics provides, ambiguity and vagueness have been reported as common in mathematical conversations and have been documented as resources in teaching and learning mathematics (e.g., Barwell, 2005; Barwell, Leung, Morgan, & Street, 2005; O'Halloran, 2000; Rowland, 1999). Even definitions are not a monolithic mathematical practice, since they are presented differently in lower-level textbooks – as static and absolute facts to be accepted – while in journal articles they are presented as dynamic, evolving, and open to revisions by the mathematician. Neither should textbooks be seen as homogeneous. Higher-level textbooks are more like journal articles in allowing for more uncertainty and evolving meaning than lower-level textbooks (Morgan, 2004), evidence that there are multiple approaches to the issue of precision, even in mathematical texts.

Recommendation #5: Uncover the mathematics in what students say and do.
Teachers need to learn how to recognize the emerging mathematical reasoning learners construct in, through, and with emerging language. In order to focus on the mathematical meanings learners construct rather than the mistakes they make or the obstacles they face, curriculum materials and professional development will need to support teachers in learning to recognize the emerging mathematical reasoning that learners are constructing in, through, and with emerging language (and as they learn to use multiple representations). Materials and professional development should support teachers so that they are better prepared to deal with the tensions around language and mathematical content, in particular a) how to uncover the mathematics in student contributions, b) when to move from everyday to more mathematical ways of communicating, and c) when and how to approach and develop "mathematical precision." Mathematical precision seems particularly important to consider because it is one of the mathematical practices in the Common Core that can be interpreted in multiple ways (see Recommendations #2 and #4 for examples).

In sum, materials and professional development should raise teachers' awareness about language, provide teachers with ways to talk explicitly about language, and model ways to respond to students. Teachers need support in developing the following competencies (Schleppegrell, 2010): using talk to effectively build on students' everyday language as well as developing their academic mathematical language; providing interaction, scaffolding, and other supports for learning academic mathematical language; making judgments about defining terms and allowing students to use informal language in mathematics classrooms, and deciding when imprecise or ambiguous language might be pedagogically preferable and when not.

4. Closing Comments

Three issues are not addressed in the preceding recommendations: assessment, reading, and effective vocabulary instruction. Assessment is crucial to consider for ELs, because there is a history of inadequate assessment of this student population. LaCelle-Peterson and Rivera (1994, 2) write that ELs "historically have suffered from disproportionate assignment to lower curriculum tracks on the basis of inappropriate assessment and as a result, from over referral to special education (Cummins 1984; Durán 1989)." Previous work in assessment has described practices that can improve the accuracy of assessment in mathematics classrooms for this population. Assessment activities in mathematics should match the language of assessment with language of instruction, and include measures of content knowledge assessed through the medium of the language or languages in which the material was taught (LaCelle-Peterson and Rivera, 1994). Assessments should be flexible in terms of modes (oral and written) and length of time for completing tasks. Assessments should track content learning through oral reports and other presentations rather than relying only on written or one-time assessments. When students are first learning a second language, they are able to display content knowledge more easily by showing and telling, rather than through reading text or choosing from verbal options on a multiple-choice test. Therefore, discussions with a student or observations of hands-on work will provide more accurate assessment data than written assessments. Evaluation should be clear as to the degree to which "fluency of expression, as distinct from substantive content" is being evaluated. This last recommendation raises an important challenge for assessing ELs' mathematical proficiency: Classroom assessments based on mathematical discussions need to evaluate *content* knowledge as distinct from fluency of expression in English[v].

Learning to read mathematical texts is a topic that needs further research. Studies need to examine how ELs learn to read different mathematical texts (textbooks, word problems, etc.). In designing this research it is important to *differentiate between reading textbooks and reading word problems, two different genres in mathematical written discourse.* When working with children learning to read in English, it will be important to distinguish between children who are competent readers in a first language and children who are not. Lastly, since "language" seems to be so closely associated with "vocabulary," we should develop principled and research-based best practices for supporting students in learning to use vocabulary in mathematics classrooms. Research should explicitly consider more and less successful ways for ELs to learn vocabulary in mathematics. This work will need to start by establishing what vocabulary assessment instruments are relevant to ELs learning mathematics.

[i] I sometimes use the term “language(s)” as a reminder that there is no pure unadulterated language and that all language is hybrid.

[ii] Curriculum policies for ELs in mathematics should follow the guidelines for traditionally underserved students (AERA, 2006), such as instituting systems that broaden course-taking options and avoiding systems of tracking students that limit their opportunities to learn and delay their exposure to college-preparatory mathematics coursework.

[iii] For examples of lessons where ELs participate in mathematical discussions, see Moschkovich, 1999 and Khisty, 1995.

[iv] Topics for further research include defining linguistic complexity for mathematical texts and providing examples of linguistic complexity that go beyond readability (such as the syntactic structure of sentences, underlying semantic structures, or frequency of technical vocabulary, verb phrases, conditional clauses, relative clauses, and so on).

[v] For examples of how assessment and instruction can focus on mathematical content and reasoning see Appendix A, Moschkovich (1999) and Moschkovich (2007a).

Judit Moschkovich, University of California, Santa Cruz

Appendix A: A Classroom Vignette

This vignette is presented to ground the subsequent descriptions of the recommendations and to show how these recommendations play out in classroom interactions. The lesson excerpt presented below (Moschkovich,1999) comes from a third-grade bilingual classroom in an urban California school[i]. In this classroom, there were thirty-three students identified as Limited English Proficient. In general, this teacher introduced students to topics in Spanish and then later conducted lessons in English. The students had been working on a unit on two-dimensional geometric figures. For several weeks, instruction had included vocabulary such as "radius," "diameter," "congruent," "hypotenuse," and the names of different quadrilaterals in both Spanish and English. Students had been talking about shapes and the teacher had asked them to point, touch, and identify different shapes. The teacher identified this lesson as an English as a Second Language mathematics lesson, one where students would be using English in the context of folding and cutting to make Tangram pieces (see Figure 1).

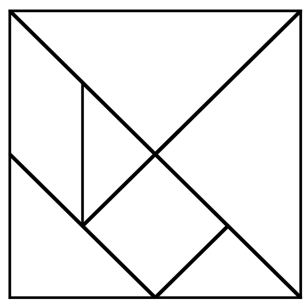

Figure 1: A tangram puzzle

Vignette

1.	Teacher:	Today we are going to have a very special lesson in which you really gonna have to listen. You're going to put on your best, best listening ears because I'm only going to speak in English. Nothing else. Only English. Let's see how much we remembered from Monday. Hold up your rectangles . . . high as you can. (Students hold up rectangles) Good, now. Who can describe a rectangle? Eric, can you describe it [a rectangle]? Can you tell me about it?
2.	Eric:	A rectangle has . . . two . . . short sides, and two . . . long sides.
3.	Teacher:	Two short sides and two long sides. Can somebody tell me something else about this rectangle, if somebody didn't know what it looked like, what, what . . . how would you say it.
4.	Julian:	Paralela [holding up a rectangle, voice trails off].
5.	Teacher:	It's parallel. Very interesting word. Parallel. Wow! Pretty interesting word, isn't it? Parallel. Can you describe what that is?

6.	Julian:	Never get together. They never get together [runs his finger over the top side of the rectangle].
7.	Teacher:	What never gets together?
8.	Julian:	The parallela . . . they . . . when they go, they go higher [runs two fingers parallel to each other first along the top and base of the rectangle and then continues along those lines], they never get together.
9.	Antonio:	Yeah!
10.	Teacher:	Very interesting. The rectangle then has sides that will never meet. Those sides will be parallel. Good work. Excellent work.

The vignette serves to show that English language learners can and do participate in discussions where they grapple with important mathematical content. Students were grappling not only with the definitions for quadrilaterals but also with the concept of parallelism. Student were engaged in mathematical communication because they were making claims, generalizing, imagining, hypothesizing, and predicting what will happen to two lines segments if they are extended indefinitely. To communicate about these mathematical ideas students used words, objects, gestures, and other students' utterances as resources. This vignette also illustrates several instructional strategies that can be useful in supporting student participation in mathematical discussions. Some of these strategies are: asking for clarification, re-phrasing student statements, accepting and building on what students say, and probing what students mean. It is important to notice that this teacher did *not* focus directly on vocabulary development but instead on mathematical ideas and arguments as he interpreted, clarified, and rephrased what students were saying. This teacher provided opportunities for discussion by moving past student grammatical or vocabulary errors, listening to students, and trying to understand the mathematics in what students said. He kept the discussion mathematical by focusing on the mathematical content of what students said and did.

Recommendation #1: Focus on Students' Mathematical Reasoning, Not Accuracy in Using Language.

In the vignette: Uncovering the mathematical content in Julian's contributions is certainly a complex endeavor. Julian's utterances in turns 4, 6, and 8 are difficult both to hear and interpret. He uttered the word "parallela" in a halting manner, sounding unsure of the choice of word or of its pronunciation. His voice trailed off, so it is difficult to tell whether he said "parallelo" or "parallela." His pronunciation could be interpreted as a mixture of English and Spanish; the "ll" sound being pronounced in English and the addition of the "o" or "a" being pronounced in Spanish. The grammatical structure of the utterance in line 8 is intriguing. The apparently singular "parallela" is preceded by the word "the" which can be either plural or singular and then followed with a plural "when they go higher." In any case, what is clear is that Julian made several attempts to communicate a mathematical idea in his second language. If we only focus only on his English proficiency, we would miss his mathematical reasoning. Julian is, in fact, accurately describing a property of parallel lines.

This teacher moved past Julian's unclear utterance and use of the term "parallela." He focused on the mathematical content of what students said, not the mistakes they made. He attempted to uncover the mathematical content in what Julian had said. He did not correct Julian's English, but instead asked questions to probe what the student meant.

Recommendation #2: Shift to a Focus on Mathematical Discourse Practices, Move Away from Simplified Views of Language.

In the vignette: What competencies in mathematical practices did Julian display? Julian was participating in three central mathematical practices: abstracting, generalizing, and imagining. He was describing an *abstract* property of parallel lines and making a generalization saying that parallel lines will *never* meet. He was also imagining what happens when the parallel sides of a rectangle are extended. If we only focused on vocabulary, we would miss Julian's use of these important mathematical practices.

Recommendation #3: Recognize and Support Students to Engage with the Complexity of Language in Mathematics Classrooms.

In the vignette: What modes of expression did Julian and the teacher use? Julian used gestures and objects in his description, running his fingers along the parallel sides of a paper rectangle. The teacher also used gestures and visual displays of geometric figures on the blackboard. This example shows some of the complexity of language in the mathematics classroom.

Recommendation #4: Treat Everyday Language and Experiences as Resources, Not as Obstacles.

In the vignette: What language resources did Julian use to communicate his mathematical ideas? He used colloquial expressions such as "go higher" and "get together" rather than the formal terms "extended" or "meet." These everyday expressions were not obstacles but resources[ii].

Recommendation #5: Uncover the Mathematics in What Students Say and Do.

In the vignette: How did the teacher respond to Julian's contributions? The teacher moved past Julian's confusing uses of the word "parallela" to focus on the mathematical content of Julian's contribution. He did not correct Julian's English, but instead asked questions to probe what the student meant. This response is significant in that it represents a stance towards student contributions during mathematical discussion: listen to students and try to figure out what they are saying. When teaching English learners, this means moving beyond vocabulary, pronunciation, or grammatical errors to listen for the mathematical content in student contributions. (For a discussion of the tensions between these two, see Adler, 2001.)

In the vignette: What instructional strategies did the teacher use? The teacher used gestures and objects, such as the cardboard geometric shapes, to clarify what he meant. For example, he pointed to vertices and sides when speaking about these parts of a figure. Although using objects to clarify meanings is an important ESL instructional strategy, it is crucial to understand that these objects do not have meaning that is *separate* from language. Objects acquire meaning as students talk about them and these meanings are negotiated through talk. Although the teacher and the students had the geometric figures in front of them, and it seemed helpful to use the objects and gestures for clarification, students still needed to sort out what 'parallelogram' and 'parallel' meant by using language and negotiating common meanings for these words.

In the vignette: The teacher did not focus on vocabulary instruction but instead supported students' participation in mathematical arguments by using three instructional strategies that focus more on mathematical discourse: 1) **Building on student responses**: The teacher accepted and built on student responses. For example in turns 4-5, the teacher accepted Julian's response and probed what he meant by "parallel." 2) **Asking for clarification:** The teacher prompted the students for clarification. For example, in turn 7 the teacher asked Julian to clarify what he meant by "they."
3) **Re-phrasing**: The teacher re-phrased (or re-voiced) student statements, by interpreting and rephrasing what students said. For example, in turn 10 the teacher rephrased what Julian had said in turn 8. Julian's "the parallela, they" became the teacher's "sides" and Julian's "they never get together" became "will never meet". The teacher thus built on Julian's everyday language as he re-voiced Julian's contributions using more academic language.

[ii] The question of whether mathematical ideas are as clear when expressed in colloquial terms as when expressed in more formal language is highly contested and not yet, by any means, settled. For a discussion of this issue, see Tim Rowland's book *The Pragmatics of Mathematics Education: Vagueness in Mathematical Discourse*.

Realizing Opportunities for English Learners in the Common Core English Language Arts and Disciplinary Literacy Standards

George C. Bunch, *University of California, Santa Cruz*
Amanda Kibler, *University of Virginia*
Susan Pimentel, *StandardsWork®*

> *Students who meet the Standards readily undertake the close, attentive reading that is at the heart of understanding and enjoying complex works of literature. They habitually perform the critical reading necessary to pick carefully through the staggering amount of information available today in print and digitally. They actively seek the wide, deep, and thoughtful engagement with high-quality literary and informational texts that builds knowledge, enlarges experience, and broadens worldviews. They reflexively demonstrate the cogent reasoning and use of evidence that is essential to both private deliberation and responsible citizenship in a democratic republic. In short, [they] develop the skills in reading, writing, speaking, and listening that are the foundation for any creative and purposeful expression in language.* (Standards, p. 3).

This brief paper is intended to contribute to a larger—and longer—conversation about what those collectively responsible for the education of English Learners (ELs) must consider in order to maximize the affordances presented by the Common Core State Standards for English Language Arts and Literacy in History/Social Studies, Science, and Technical Subjects (hereafter referred to as the "the Standards").[1] In order to address how opportunities presented by the Standards can be *realized* for ELs—both *understood* and *actualized*—we focus on four particular areas emphasized by the Standards as necessary for career and college readiness and for becoming "a literate person in the twenty-first century": engaging with complex texts; using evidence in writing and research; speaking and listening in order to work collaboratively and present ideas; and developing the language to do all of the above effectively. Each of these areas represents a shift from how language and literacy instruction has often been approached, both in mainstream English language arts (ELA) and in separate courses for ELs, such as English language development (ELD).[2]

The selected areas also highlight the fact that literacy instruction is a shared responsibility among teachers in *all* disciplines. In grades K–5, the standards articulate expectations for students in the areas of reading, writing, speaking and listening that apply to all subjects; in grades 6-12, the standards are divided into two sections—those specifically for ELA and those for history/social studies, science, and technical subjects. This interdisciplinary approach reflects the crucial role ELA teachers play in developing students' literacy skills while at the same time acknowledging the impact other subject matter teachers have in students' literacy development. The Standards acknowledge that college and career readiness requires reading with "an appreciation of the norms and conventions of each discipline" and writing with consideration of different kinds of tasks, purposes, and audiences.[3] This focus on disciplinary literacy presents new challenges for both content-area teachers and English and ESL instructors.

For each of the domains included in the Standards (reading, writing, listening and speaking, and language), we first outline what the Standards call upon students to do, emphasizing the simultaneous challenges and opportunities for ELs. We then offer insights, derived from both research and theory, for addressing the challenges and realizing the opportunities. Before turning to each of the areas, however, it is important to emphasize the following overarching considerations:

- Any discussion about potential affordances for ELs must consider variation among ELs, including age, grade level, native languages, language proficiency levels, literacy background both in English and other languages, and quality of previous schooling.[4]

- Instruction for ELs must include both “macro-scaffolding,” in which teachers attend to the integration of language and content within and across lessons and units, as well as “micro-scaffolding” during the “moment-to-moment work of teaching.”[5]

- Because language and literacy practices vary from discipline to discipline, realizing opportunities for ELs must involve collaborative efforts across a number of different instructional settings, including ELA, ELD, and other content-area classrooms.[6]

- Practices called for by the Standards, such as *argument* and *critique*, are grounded in particular socially and culturally specific values and practices that may or may not align with those of students from different backgrounds; students from non-dominant linguistic and cultural groups may position themselves in various ways vis-a-vis mainstream expectations.[7]

- Socialization into new academic discourse communities involves not only the acquisition of new language and literacy skills, but also potential “internal and interpersonal struggles” and “emotional investment and power dynamics.”[8]

Our comments in this paper can best be understood in the context of insights about language, literacy, and learning outlined in several other papers prepared for this project[9]:

- All learning builds on students’ prior knowledge and experiences; instruction for ELs must consider *and expand* what ELs bring to the classroom.

- Instruction should provide apprenticeship for ELs in communities of practice with teachers and peers in order to develop students’ independence.

- Language development and cognitive development are interrelated and mutually dependent; ELs learn language as they learn content.

- Language can best be understood as action, rather than “form” or “function” alone; students learn to do things with language when they are engaged in meaningful activities that engage and challenge them.

- Literacy involves social practices as well as cognitive processes; reading and writing, as well as other forms of meaning-making, always represent *activity* (whether intended or not by teachers) in which participants have different purposes and take on different roles and identities.

- In order to develop the ability to read complex texts and engage in academic conversations, ELs need access to such texts and conversations, along with support in engaging with them.

- Learning languages involves expanding *linguistic repertoires* in order to engage in a wide variety of situations, with a wide variety of audiences, for a wide variety of purposes.

- With support, ELs can build such repertoires and engage productively in the kinds of language and literacy practices called for by the Standards for both ELA and other disciplines, even though their developing language will be marked by "non-native" or imperfect features of English.

1. Reading: Engaging with Complex Texts to Build Knowledge Across the Curriculum

The Standards require students to read and comprehend both literary and informational texts that represent steadily increasing complexity as they progress through school. Text complexity, according to the Standards, involves not only the grammatical features of a text and its vocabulary demands, but also elements such as the multiple levels of meaning embedded in a text, the explicitness with which the author's purpose is stated, the typicality of genre conventions, and the extent to which the text employs figurative language.[10] The Standards require that 50% of the complex texts read by students at the elementary level be informational in character—shifting to 75% in high school—reflecting the role of texts in building students' knowledge across K-12 disciplines and after high school.

Accessing and comprehending texts featuring complexity of the kinds outlined above present challenges for all students as they grapple with new and cognitively complex ideas and concepts, particularly for those who have had limited access to such texts either at home or at school. Those reading in a second language face additional challenges, as they are called upon to process "intricate, complicated, and, often, obscure linguistic and cultural features accurately while trying to comprehend content and while remaining distant from it in order to assess the content's value and accuracy."[11] To meet this challenge, second language readers draw on a variety of potential resources, including knowledge of the (second) language they are reading in, literacy skills in their first language, reading comprehension strategies, background knowledge related to the target reading, and interest and motivation.[12]

Beginning-level ELs in the younger grades learning to read for the first time face particular challenges, as they are attempting to learn to decode written text in a language they are at the very early stages of acquiring. The use and development of oral language is particularly important at this stage, as it serves as one foundation that students use to build early reading skills. The standards themselves emphasize the importance in the early grades of students' participating in discussions, asking questions, sharing their findings, and building on others' ideas. It is important to note that research has shown that ELs can develop literacy in English even as their oral proficiency in English develops. Meanwhile, ELs' early literacy experiences, including those in students' first languages, support subsequent literacy development, and "time spent on literacy activity in the native language—whether it takes place at home or at school—is not time lost with respect to English reading acquisition."[13]

Throughout the grades, learning about ELs' language and literacy backgrounds, interests, and motivations provides teachers with clues as to what supports might help students to compensate for the linguistic and textual challenges presented by different kinds of texts.

Understanding students' knowledge and interests does not mean that only texts that already fit within ELs' "comfort zones" should be assigned—indeed, one of the opportunities afforded by the Standards is the promise of access to a wide variety of texts that can expand those comfort zones. Leveraging students' existing background knowledge, and building new knowledge, can be accomplished in a number of ways before and during a lesson or unit of study—without preempting the text, translating its contents for students, telling students what they are going to learn in advance of reading a particular text, or "simplifying" the text itself.[14] Possibilities include pre-reading activities and conversations that access and build on students' background knowledge and set up excitement and purpose for reading in a unit; text annotations that gloss crucial vocabulary or provide necessary contextual information without paraphrasing the text for students; and activities during and after reading that allow students to engage in knowledge-building with their classmates and teachers.[15] Crucial to all of the above is teachers' understanding that texts are approached differently for different purposes, and that students need opportunities to approach texts with these varied purposes in mind.[16]

A consideration of students' second language proficiency, literacy backgrounds, and background knowledge can also inform instructional efforts to enhance the strategic moves students can apply to engage successfully in independent reading across the curriculum—especially when called upon to read texts beyond their English language proficiency levels. Such instruction can do the following:[17]

- Induce readers to consider (or even research) the topic at hand using more accessible texts (including those in a students' L1 for ELs who read in their first languages) in preparation for reading more difficult texts as part of the same lesson or unit.

- Assist readers in deciding which words in a given text are critical for particular uses of the text and which can be skipped.

- Focus readers' attention on meaning-critical grammatical structures (and how those might compare with how grammar is used to make similar meaning in students' first languages).

- Build on and expand readers' knowledge about how different kinds of texts are structured.

- Focus readers' attention on specific features of text complexity by choosing authentic and original texts that emphasize one or two features at a time (such as a linguistically more accessible text that features multiple meanings, a lexically dense piece with a simpler grammatical structure, or a text in the students' native language that includes the challenging text structures of an unfamiliar genre).

- Integrate a focus on vocabulary-building with meaningful activities centered around texts.[18]

When envisioning how to support ELs' reading of the kinds of complex texts called for by the Standards, and how to recognize students' developing ability to do so, it is also important to consider how "comprehension" is defined and measured. As is the case with struggling readers in the general student population, ELs' developing ability to "make decisions about a text and to subsequently evaluate and revise those decisions"—arguably the kind of reading valued by the Standards—may be masked, and even stifled, by instruction that only values "correct" interpretations of what a text "really" means on one hand, or the use of a pre-ordained set of "reading comprehension" strategies on the other. In other words, especially for ELs who may be called upon to read texts with increasingly unfamiliar content matter expressed in language that is beyond their English proficiency levels, what is important to foster and recognize is ELs' use of texts and textual evidence for sense-making, even if their inferences and processes do not initially match those of the more experienced readers or native speakers of English. This is not to say that a focus on "correct answers" is never justified. Especially in content area classrooms, such clarification may be crucial. But in terms of fostering—and recognizing—students' ability to make sense of complex text, both literary and informational, ELs may be well served by opportunities to explore—and justify—their own "textual hypotheses," even if their initial interpretations diverge from those of the teacher.[19]

2. Writing: Using Evidence to Inform, Argue, and Analyze

The Standards call upon students, by the time they graduate, to be adept at sharing information accurately to help readers better grasp a topic or concept, presenting arguments logically to defend interpretations or judgments, and crafting written language skillfully to achieve their purposes. The Standards draw on studies showing that a nexus of skills—using evidence, analyzing information in writing, and conducting research—is essential for success in the argument-based culture of universities as well as today's diverse, information-rich professional environments.[20] As students progress through the grades, the Standards ask them to demonstrate their growing ability to cite specific evidence in defense of the claims they make as well as consider the strength of the evidence others provide when making arguments.[21] The standards also incorporate and integrate a focus on research skills in order to prepare students to ask questions and solve problems independently. The goal is to ready students for college and careers so that they are able to conduct investigations, analyze information, and create products that reflect the increasing emphasis research receives in an information-based economy. In relation to research-based writing specifically, ELs not only face the common obstacles all students experience in attempting to gather, manage, and organize the flow of information; they also must analyze and evaluate what they read while negotiating a second language. This research process requires students to read complex texts and use evidence in writing (and/or orally) while navigating conventions of textual ownership and citations, an area that offers challenges for all students in an electronic age but that can be particularly challenging for EL students who have learned these culturally defined practices outside of U.S. academic settings.[22]

Just as teachers can carefully scaffold the reading of complex texts, they can also assist ELs to develop the ability to write for the wide variety of audiences and purposes emphasized by the Standards. Like first language writing, second language writing develops gradually over time, with considerable variation in individual learners' progress through different stages of development.[23] However, second language writing development is also distinct. Although second language writers are still acquiring oral language proficiency in English, they already possess age-appropriate oral language proficiency in their home language(s). Depending on their age and background, some may also have home-language literacy skills from which they can draw.[24] EL writers, however, are a diverse group. Some young children are exposed to writing for the first time in English-medium ELD or ELA classes. Others learn to write in more than one language in bilingual classrooms, at home, or in the community. At the secondary level, some ELs bring first-language literacy skills to the task of writing in English, but many write only in English, not having acquired home language literacy in the school or home. For individuals with prior literacy background, writing skills can transfer across languages, although questions remain regarding how these processes occur.[25] ELs' opportunities for classroom writing also vary according to teacher expectations, course placement, and content area, and for students with limited exposure to English outside of school, writing development may occur very slowly.[26]

Just as print exposure improves students' long-term writing development in their first language, the features of texts read by ELs influence the writing they subsequently produce.[27]

Several instructional strategies hold promise for ELs in meeting the Writing Standards. Overall, such strategies focus on developing what is called for by the Standards (e.g. writing different text types for different audiences and purposes and presenting knowledge gained through research) rather than ELs' production of mechanically and grammatically "flawless" writing.[28] Accordingly, writing instruction can do the following:

- Maximize the use of ELs' existing linguistic and cultural resources by ensuring that students have meaningful ideas to write about, allowing them to use their home languages or varieties of language during the writing process, employing technology that students already use, and drawing upon their background knowledge, practices, and experiences.[29]

- Provide ELs with meaningful exposure to the types of texts they will be writing, guiding students through the linguistic and rhetorical patterns found in different genres.[30]

- Ensure that writing instruction creates meaningful opportunities to communicate rather than mechanical exercises for text production.[31] These opportunities include interactions with peers and teachers about ELs' writing and sensitive yet substantive feedback about the content of their writing at multiple points throughout the writing process.

In relation to research skills specifically, instruction can:

- Encourage students with L1 literacy backgrounds to draw upon this resource to help them locate, evaluate, and analyze information.

- Assist students in selecting reading and drafting strategies appropriate for varied research tasks.

- Provide explicit guidance on the conventions of textual ownership and citations in U.S. academic settings, alongside clear yet critical explanations of the purposes these conventions serve.

- Create opportunities that allow ELs to learn research processes by participating in teacher-guided and collaborative endeavors before attempting research independently.

Teachers can use such approaches to aid students in learning how to conduct investigations, analyze information, and create final products that meet the expectations of the Standards while strengthening and deepening the understanding students have of L2.

3. Speaking and Listening: Working Collaboratively, Understanding Multiple Perspectives, and Presenting Ideas

The Speaking and Listening Standards call upon students to listen critically and participate actively in cooperative tasks. They require students to build upon others' ideas, articulate their own ideas, and confirm their understandings through informal, collaborative group interactions as well as formal presentations that integrate information from oral, visual, quantitative, and media sources for different audiences, tasks, purposes, and disciplines. The Standards also expect students to interpret information; explain how it contributes to target topics, texts, and issues; and “present claims and findings by sequencing ideas logically and using pertinent descriptions, facts, and details to accentuate main ideas or themes.”[32]

As with reading, the comprehension of oral language requires a number of interrelated knowledge sources.[33] Effective listening comprehension also requires the use of strategies, such as focusing on relevant parts of a message, making predictions, and monitoring one’s own comprehension.[34] At the same time, speaking and listening in the classroom involve more than individuals acting alone. Students use *interactional competence* to participate in the social context of the classroom, negotiating, constructing, and sometimes resisting norms of interaction governing various typical classroom participation structures.[35] Classrooms feature a number of different speech events, each of which is “directly governed by the rules or norms of the use of speech.”[36] Even within a single speech event, norms can be quite complex.[37]

For ELs to realize opportunities presented by the Listening and Speaking Standards, teachers across the curriculum can support students by offering a wide variety of classroom discourse structures. Many of the interactive structures conducive to building knowledge and discussing ideas also hold promise for language development.[38] Teachers can do the following:

- Engage students in individual, small group, and whole-class discussions that move beyond traditional initiation-response-evaluation structures to “bridging discourses” that encourage ELs to produce extended oral discourse and engage with academic registers.[39]

- Develop collaborative tasks that require effective and linguistically rich discussions.[40]

- Allow ELs to collaborate in their home languages as they work on tasks to be completed in English.[41]

- Teach ELs strategies for using their still-developing English language proficiency to engage in different communicative modes.[42] For example, listening comprehension activities can help ELs to “arrive successfully at a reasonable interpretation of extended discourse,” rather than to process every word literally, which is impossible even for native English speakers to do.[43]

4. Language: Using and Developing Linguistic Resources to Do All of the Above.

The Standards maintain that in order to be college and career ready, students need a “firm control over the conventions of standard English,” but also that “they must come to appreciate that language is at least as much a matter of craft as of rules.”[44] According to the Standards, students must be able to “choose words, syntax, and punctuation to express themselves to achieve particular functions and rhetorical effects.” It is important to understand that ELs, by definition, will use “imperfect” (i.e. non-native-like) English as they engage in these functions and achieve these effects. By focusing on language as it relates to communicative and academic endeavors, rather than merely as the acquisition of “good” English, teachers can help students develop and use grammatical structures, vocabulary, and written and oral conventions as resources for making meaning, for learning, and for communicating with an increasing number of audiences for an increasing number of purposes.

In the context of the expectations for all students articulated by the Standards, “language instruction” for ELs can no longer be envisioned as isolated from the context of meaningful and engaging academic work. Although the decontextualized teaching of discrete elements of a second language (e.g. verb tenses, grammatical structures, vocabulary) may be effective for inducing the use of those elements on restricted tasks and tests that highlight them, it is unclear whether such instruction is effective for fostering the use of those elements in wider communication.[45] This is not to say that an explicit focus on language is not called for, but rather that such a focus must occur in conjunction with, and in the service of, meaningful academic work across the curriculum.[46]

In supporting the development of ELs' language, it is also important to keep in mind that all school-age children (barring either extreme impairment or severe early childhood abuse and isolation) already have the linguistic resources in at least one language to engage in a wide range of communicative settings.[47] All students, therefore, have first-hand knowledge of the conventions and the rhetorical craft of language as used in their own communities of practice.[48] In fact, children who are in the process of developing more than one language may have a heightened awareness of such functions and effects because they use two or more languages.

At the same time, students' linguistic backgrounds will be more or less closely aligned with the varieties of language privileged in school, and it is undoubtedly in the interest of ELs to expand their linguistic repertoires to include those varieties. In supporting students to do so, a couple of final points are important to keep in mind:

- ELs' incomplete acquisition of standard varieties of English should not be interpreted as students' inability or unwillingness to participate in a wide range of learning, language, and literacy practices across the disciplines, including those called for by the Standards.

- With appropriate supports, ELs' participation in the key practices called for by the Standards—especially those highlighted in this paper— can promote the development of both language and literacy.

Conclusion

We conclude by pointing out that "shared responsibility" for preparing ELs for the language and literacy called for by the Standards rests not only with teachers across the disciplines, but also with curriculum developers, textbook writers, assessment specialists, teacher educators, administrators, researchers, policymakers, and others. Our hope is that the brief comments in this paper can serve as a starting point for envisioning what role each of us—individually and collectively—might play in realizing the opportunities potentially afforded to English Learners by the Standards.

Acknowledgments

We wish to thank Guadalupe Valdés, Judit Moschkovich, Kenji Hakuta, Martha Castellón, Aída Walqui, Lydia Stack, David Pook, Laura Alvarez, Lucinda Pease-Alvarez, and David Pearson for helpful conversations that contributed to the formulation and articulation of ideas for this paper.

Notes

[1] Our intention is not to render a judgment regarding the content of the standards, the assumptions about literacy upon which they are based, or the appropriateness of the standards for ELs. Nor is it to provide a systematic review of the empirical literature available on the language and literacy development of ELs (for such reviews, see American Educational Research Association, 2004; Genesee, Lindholm-Leary, Saunders, & Christian, 2006; Goldenberg & Coleman, 2010; Saunders & Goldenberg, 2010).
[2] Other terms to refer to these classrooms include English for Speakers of Other Languages (ESOL) and English as a Second Language (ESL).
[3] Standards, p. 60 and p. 63.
[4] Helpful discussions of the range of characteristics necessary to consider can be found in Walqui (2005), Olsen (2010), Valdés, Bunch, Snow, & Lee (2005), and Enright (2011).
[5] Schleppegrell & O'Hallaron (2011, p. 7); see also Walqui (2006) and Walqui & van Lier (2010).
[6] Lee & Spratley (2010); Olsen (2010); Schleppegrell (2004); Shanahan & Shanahan (2008); Valdés et al. (2005); Wineburg, Martin, & Monte-Sano (2011).

[8] Duff (2010, p. 170).
[9] See especially VanLier & Walqui (2012); Hull (2012); Wong Fillmore & Fillmore (2012); Walqui & Heritage (2012)
[10] See Appendix A of the ELA and disciplinary literacy standards for further information about how text complexity can be defined and determined.
[11] Bernhardt (2011, p. 19).
[12] While research on second language readers has only begun to study the ways in which these various factors interrelate, it is likely that second language readers use the resources they have in some areas to compensate for those they are lacking in others (Bernhardt, 2011).
[13] Riches & Genesee (2006); see also Goldenberg & Coleman (2010).
[14] Available research on second language reading indicates that text simplification is ineffective for promoting comprehension and may even be counterproductive (see Bernhardt, 2011, pp. 59-60).
[15] See Walqui & vanLier (2010) for helpful suggestions for creating such activities.
[16] Also important to understand is that readers play multiple roles when approaching any text. Gibbons (2002) draws on Luke and Freebody (1990) to point out that readers are simultaneously *code breakers*, *text participants*, *text users*, and *text analysts*; see also Schleppegrell & Colombi (2002).
[17] Many of these strategies are elaborated upon in Bernhardt (2011).
[18] For examples, see Kelley, Lesaux, Kieffer, & Faller (2010) and Scott, Skobel, & Wells (2008).
[19] This paragraph draws heavily from Aukerman (2008), and the quotations are from that source.
[20] See Graff (2003); Postman (1997); Williams & McEnerney (n.d.).
[21] Using evidence is particularly emphasized in Reading Standard 1 and Writing Standard 9.
[22] See Pecorari (2003) and Flowerdew (2007) for recent perspectives on textual borrowing and second language writers.
[23] R. Ellis's (1994) contention that acquisition of an L2 grammar occurs in stages is echoed in findings for first language writing (Loban, 1976; Henderson, 1981; Graves, 1983). See Fu (2009) and Valdés (2001) for differing descriptions of stages observed in L2 writing development.
[24] See Harklau (2002).
[25] See Grabe and Kaplan (1996) and Grabe (2003).
[26] See Fu (1995), Harklau (1999), Hartman & Tarone (1999), Valdés (2001), and Valdés & Sanders (2006).
[27] For the effects of exposure to print in the L1, see Wagner and Stanovich (1996); for the impact of texts read on L2 writing, see Samway and Taylor (1993).
[28] See Truscott's (1996) review claiming no evidence supporting grammar correction in writing instruction and Ferris' (1999) rebuttal and subsequent publications (2002, 2003).
[29] See the recent collection edited by Manchón (2011) regarding the use of writing in the learning process. For uses of the first language while writing, see Fu (2009), Kibler (2010), National Council of Teachers of English (2012), and Souryasack & Lee (2007). Black (2005) and Smythe & Neufeld (2010) suggest the use of various technologies to

facilitate writing. See Langer (1997), McGinnis (2007), and Trueba, Moll, Diaz, & Diaz (1984) regarding use of students' background knowledge, practices, and experiences.
[30] Such instruction can focus explicitly on the role of grammatical and lexical features in making meaning for different audiences and purposes (e.g. Achugar, Schleppegrell, & Oteíza, 2007; Aguirre-Muñoz, Park, Amabisca, & Boscardin, 2008; Gebhard**,** Harman, and Seger, 2007; Gebhard & Willett, 2008; Schleppegrell, 2004).
[31] For an example, see Bunch, Lotan, Valdés, & Cohen (2005); see also Valdés (2001) and Valdés & Sanders (2006).
[32] Standards, p. 49.
[33] Sources of information required for listening comprehension include schematic knowledge (factual, sociocultural, and discourse-related background information), contextual knowledge (physical settings, participants, and what has been/will be said), and systemic knowledge (semantics, syntax, and phonology) (Anderson & Lynch, 1988).
[34] See Anderson & Lynch (1988) and Goh (2005). It is also important to understand that because comprehension rests on such a broad base of knowledge and strategies relevant to a given situation, the fact that ELs and their interlocutors encounter difficulties in spoken interaction is not surprising: second language listening research has documented a range of lexical, grammatical, and conceptual causes of misunderstandings for non-native speakers in spoken interactions (Rost, 2002).
[35] Cazden (1986, 2001); Mehan (1979); Philips (1972, 1983).
[36] Hymes (1972, p. 56).
[37] In classroom presentations, for example, students are often asked to manage the floor, either as individuals or as a group, while also being ready to respond to the teachers' unpredictable interjections and directives at moment's notice, as well as often engage with the student audience's questions and comments after the delivery of information (Bunch, 2009). Meanwhile, during the entire presentation, students are called upon to address different audiences simultaneously. In almost every presentation, students are asked to address their fellow classmates while knowing that the teacher is the audience who will ultimately be evaluating them. Some presentations additionally call for students to imagine that their audience knows nothing about the topic they are presenting on (even if this is not the case), or to engage in a roleplay in a contemporary or historical context. Engaging in whole-class discussions or group work involve different, but similarly complicated, rules of interaction and audience engagement.
[38] See Gutiérrez (1995); Hawkins (2004); McGroarty (1993); McGroarty & Calderón (2005).
[39] See Mehan (1979) and Sinclair & Coulthard (1975) for an overview of the three-part classroom discourse structure; the term "bridging discourses" comes from Gibbons (2006); see also Wells (1999) and Valdés (2004).
[40] See Bunch (2006, 2009); Bunch, Abram, Lotan, & Valdés, (2001); Bunch et al. (2005).
[41] See Anton & DeCamilla (1998); Brooks & Donato (1994); DeGuerrero & Villamil (2000); Kibler (2010); Swain & Lapkin (2000).
[42] These include the *interpersonal mode*, which requires moment-by-moment, unplanned interaction but affords the opportunity for immediate clarification of meaning; the *presentational modes*, which allows for planning but requires anticipating audiences' needs; and *interpretive mode*, which does not require production but does not generally allow for clarification of understanding (National Standards in Foreign Language Education Project, 1996).
[43] See Brown & Yule (1983, p. 57). A number of helpful instructional activities for focusing on listening comprehension in the context of K-12 academic content instruction are available in Gibbons (2002) and Zwiers (2008).
[44] Standards, p. 51.
[45] See Valdés, Capitelli, & Alvarez (2011) for a review of the literature on this topic.
[46] For examples of integrating a focus on discrete language features with meaningful academic work, see Gebhard, Harman, & Seger (2007); Schleppegrell (2004), Kelley, Lesaux, Kieffer, & Faller (2010); and Scott, Skobel, & Wells (2008).
[47] All students, regardless of their language or cultural background, speak one or more variety of a home language, and that variety is associated with students' geographical background, racial and ethnic community, and identity affiliations; there are no speakers of any language without an "accent," and, from a linguistic standpoint, there are no varieties of English (or any other language) that are superior to any other variety (see MacSwan, 2000; MacSwan, Rolstad, & Glass, 2002; Valdés et al., 2005).

Academic Language Chart

Academic thinking runs on academic language—and vice versa. Teachers need to develop activities that scaffold students' use of language to organize and express their thinking. This chart offers examples of vocabulary, expressions, and functions of English that drive (and show us) a student's academic thinking.

Thinking Type	Language that expresses academic thinking	Other responses	Level
Observe & inquire, ask questions* & give answers	● Why…, How…, Would…, Should…, Could… ● I wonder…, I found the information in the (resource)… ● One answer might be… ● What do you think about…, What is your opinion of…		
Solve problems & hypothesize	● We need to define the problem, The main problem is…The conflict is mainly between… ● There are different ways to solve it, The best solution is…because… ● I think that the answer is…because…		
Infer & Predict*	● I predict that…,I think that…, I think we could infer that…, I bet that…because, I hypothesize that…, Based on…I guess that…, The picture (or other graphic) means…		
Determine importance & main idea*	● The part where…is important because…, The gist of it is…, The main idea is…, The key details that support the main idea are… ● The purpose of this text is…, The author wanted to tell us…, It's about a … that…		
Identify causes & effects	● I think ….was caused by…, The main cause was probably…,I hypothesize that…caused…, The most likely cause was…, The … led to ….which led to…,The effects of… were… ● That wasn't cause by…because…, Just because it happened after …, doesn't mean it was caused by…		
Compare & contrast objects, ideas, or processes	● They are similar because...,The two differ because one…, while the other…, If we look closely at…, we will see that …. is different from… ● This is much like when…Notice how the two compare. On the other hand, …		
Classify & categorize objects, ideas, or processes	● It is important because…, It is not that important because…, It belongs in the category of…We should put this in the --- group, I would call this a type of …, It fits in this (column, file, genre, etc.), ● I don't think it fits anywhere, It needs a new category		
Analyze – separate whole into parts and describe	● When we break it down into these areas, we can see that…,The parts are related in the following ways:…		

relationships & patterns among the parts	● Let's see how the pieces fit together to make…Each component plays a key role. First…; We can describe it as…, It's important traits are…		
Persuade & justify – use evidence to support a position or opinion	● That is a good point, but I think the evidence shows that…, What it seems to come down to is … versus…, Even though both sides have merits, the greater good will come from..., ● It is a difficult issue, but I feel that the (positives) of… outweigh the (negatives) of…, If we look closely at…, we will see that it is better to… In my opinion, we should… because…		
Synthesize – integrate multiple ideas into a new whole	● In a nutshell, it means that…, Other sources also argue that…, It all boils down to…, Even though it seems that the text is about…, I think that …, The author is essentially saying...If we think about all the issues, we come up with…		
Interpret – understand figurative language, analogies, metaphors, etc.	● This part meant that…For us today, it could mean that… ● The --- is a metaphor for …, The --- is like a --- because…, The author used that analogy because…, In the same way that people…, the … ● It's a figurative way to describe how…, It's not literal—that's the author's way to describe how…		
Empathize – understand the thoughts and feelings of others in various situations and time periods	● That is a great point, I feel the same way. I would like to add…, If I were in (person)'s shoes, I would…I think (person) felt… because…, ● Let's remember the time in which (person) lived and what he/she went through. First…, I bet (person) was thinking… ● How would you feel if you were her/him? I would…		
Apply ideas and concepts across different disciplines & time periods	● It's not all that different today. Think about…, This is similar to solving problems in science, because…We also learned about … in…I can use and apply ideas about… to… ● This relates a lot to the stuff about…in our English class. The reading strategy of … works for this text too. This applies to my life because…		
Figure out and use appropriate **vocabulary** and expressions*	● I guess the word means something like --- because of the words around it, The word part (prefix, suffix, root) --- means…, I think it means…, I think a better word to use in this case is…, --- is an important word because…		
Evaluate – assess worth of an idea, object, or process by using clear criteria with	● The idea is important because…The best solution is… because…, In looking at the criteria for …., the best idea is… ● It is not as valuable because it doesn't meet the criteria of… ● That was not a good idea because…That was good advice since…

TABLE OF CONTENTS

FOREWORD

The fundamental principles underlying the *No Child Left Behind (NCLB) Act of 2001* focus on high standards of learning and instruction with the goal of increasing academic achievement—reading and math in particular—within all identified subgroups in the K-12 population. One of these subgroups is the growing population of English Language Learners (ELLs). NCLB has increased awareness of the academic needs and achievement of ELLs as schools, districts, and states are held accountable for teaching English and content knowledge to this special and heterogeneous group of learners. However, ELLs present a unique set of challenges to educators because of the central role played by academic language proficiency in the acquisition and assessment of content-area knowledge. Educators have raised multiple questions about effective practices and programs to support the academic achievement of all ELLs, including questions about classroom instruction and targeted interventions in reading and math, the special needs of adolescent newcomers, and the inclusion of ELLs in large-scale assessments. While ELLs vary in their academic outcomes and many thrive in U.S. schools, there is indeed a significant proportion—whether or not formally designated Limited English Proficient (LEP) or English Language Learner (ELL) and thus receiving support services for language development—who struggle considerably in developing English proficiency and academic skills, as well as meeting grade-level standards. This document was written primarily with this latter group in mind, and, in particular, the group of ELLs who are adolescent newcomers. This group of ELLs has a relatively short period of time in which to simultaneously develop academic language skills and master grade-level content. This document provides evidence-based recommendations for policymakers, administrators, and teachers in middle and high schools who seek to make informed decisions about effectively serving adolescent newcomers.

OVERVIEW

Who Are English Language Learners?

The U.S. Department of Education defines ELLs as national-origin-minority students who are limited-English-proficient. The ELL term is often preferred over Limited-English-Proficient (LEP) as it highlights accomplishments rather than deficits. As a group, ELLs represent one of the fastest-growing groups among the school-aged population in this nation. Estimates place the ELL population at over 9.9 million students, with roughly 5.5 million students classified as Limited English Proficient by virtue of their participation in Title III assessments of English language proficiency. The ELL school-aged population has grown by more than 169 percent from 1979 to 2003[1], and speaks over 400 different languages, with Spanish being the most common (i.e., spoken by 70 percent of ELLs).

Within this diverse and growing population there are many ELLs who thrive academically; however, there is also a significant proportion that struggles to reach grade level[2]. For example, on a national assessment of reading comprehension in 2005, only 7 percent of fourth grade ELLs with a formal designation scored at or above the proficient level compared with 32 percent of native English speakers[3]. Only 4 percent of eighth grade ELLs scored at or above the proficient level. Similarly, on a national assessment of mathematics, while only 36 percent of all fourth graders scored at or above the proficient level, within the ELL population designated limited English proficient, only 11 percent scored at or above the proficient level[4]. Thus, the great majority of the nation's ELLs are scoring at or below basic levels of academic proficiency despite an increase in the demand for numeracy and literacy skills in order to fully participate in society.

Statistics on the performance of ELLs are generally based on the performance of students designated as Limited English Proficient (LEP) within state accountability systems. This designation is unlike others, such as gender or ethnicity, insofar as students' membership in the group of LEP students is dynamic and meant to be temporary in nature. Generally, students are counted within the LEP group only as long as they are considered to lack enough proficiency in English to participate in mainstream classrooms. When ELLs have gained the proficiency in the English language needed to participate in grade-level classes, they lose their LEP designation, are required to participate in the mainstream classroom without specialized support, and are no longer included in percent proficient calculations for the LEP subpopulation of a school. Because language proficiency plays a significant role in student achievement, this reporting practice will tend to underestimate the achievement performance of ELLs insofar as those students with the highest language proficiency are removed from the LEP group as they become proficient in English.

Under NCLB, students can be counted within the LEP category for up to two years after becoming proficient in English, thus allowing more proficient students to contribute to the percent proficient for accountability purposes. This reporting practice mitigates the problem of underestimation somewhat. However, states' results are generally not reported separately for current and former LEP students. Rather, the former LEP students are simply included in the LEP category for up to two years. Failure to distinguish between former and current LEP students when disaggregating accountability data makes it difficult to accurately evaluate the performance of schools in educating ELLs. Recent efforts to examine the performance of former LEP students have shown that some ELLs do quite well in public schools[5]. On the other hand, many ELLs who are no longer formally designated (ELL, LEP) continue to struggle with academic text and language; these learners are a growing concern for students, parents, educators, administrators, and policymakers.

Who Are Adolescent Newcomers?

Given the growing number of ELLs in U.S. schools, understanding and serving this population effectively is essential. A particular group of ELLs with unique needs includes the many immigrants who first enroll in U.S. schools at the middle or high school level, often with limited English proficiency and sometimes with limited formal schooling. We use the term "adolescent newcomers" to refer to this subset of ELLs who are currently enrolled in grades 6 though 12 who have attended an English-speaking school for fewer than two years. The proportion of ELLs who are adolescent newcomers varies from school to school, but estimates suggest that it is a relatively small population within the overall ELL population. For example, data from the 2000 census indicate that over half of secondary school ELLs were born in the U.S.[6]; and that, of the 44% of ELLs who are immigrants, many entered U.S. schools at some point before or during the elementary years. Although adolescent newcomers are a particularly vulnerable and often highly visible group of learners, it is important to note that they are but part of a much larger population of foreign- and U.S.-born ELLs that must be served.

Although there is considerable variation within the ELL population, adolescent newcomers are an especially diverse group of learners. They differ on key factors related to academic achievement, including amount and degree of formal schooling, level of literacy in their native language, and age of arrival in U.S. schools. Therefore, meeting the needs of adolescent newcomers requires a concerted and thoughtful effort on the part of educators who serve them. While simultaneously developing conversational ability and basic reading skills, these learners must quickly begin to develop oral and written academic language skills for the development of academic knowledge and success in content-area classrooms. These students must develop these skills in a much shorter window of time than that of other ELLs and especially their native English-speaking peers.

Academic Language as Key to Academic Success

Mastery of academic language is arguably the single most important determinant of academic success for individual students. While other factors—such as motivation, persistence, and quantitative skills—play important roles in the learning process, it is not possible to overstate the role that language plays in determining students' success with academic content. Unfortunately, ELLs often lack the academic language necessary for success in school. This lack of proficiency in academic language affects ELLs' ability to comprehend and analyze complex texts, limits their ability to write and express themselves effectively, and can hinder their acquisition of content in all academic areas, including mathematics. Many ELLs have well-developed conversational skills yet lack the specialized language of academic discourse central to school success. An example of the distinction between conversational and academic language may help to explicate this point:

> *When a student walks up to a newspaper stand and purchases a newspaper, he utilizes his conversational language skills to converse with the clerk and make the purchase. In contrast, other skills altogether are used to read and understand the front-page article, as well as to discuss the pros and cons of the proposed policy change*

that the article describes. The student might use still other skills to compare the writer's opinion to his own, and to the opinion of the store clerk. The oral and written language required to be able to engage in the latter "conversation" will involve more advanced and specialized vocabulary, more complex sentence structures, and more complex discourse structures than that required for the former.

Many skills and factors are wrapped up in the notion of academic language. Vocabulary knowledge (including the multiple meanings of many English words), the ability to handle increasing word complexity and length over time, and understanding complex sentence structures and the corresponding syntax of the English language are all aspects of academic language. Other aspects relate to text itself, including the organization of expository paragraphs, the function of transitions such as *therefore* and *in contrast*, and a wide range of vocabulary that appears far more often in text than in oral conversation.

A particular aspect of academic language and source of ELLs' difficulties focused on in this report is academic vocabulary—the words necessary to read and talk about—and learn—content-area knowledge. Academic vocabulary is central to text and plays an especially prominent role in the upper elementary, middle, and high school years as students read to learn about concepts, ideas, and facts in content-area classrooms such as math, science, and social studies. In doing so, ELLs encounter many words that are not part of everyday classroom conversation. Words such as *analyze*, *therefore*, and *sustain* are more likely to be encountered while reading than in conversation, and they are often key to comprehension and learning[7].

The need for well-developed academic language skills runs well beyond high school graduation. Many learners—especially learners from minority backgrounds—who graduate from high school and enroll in post-secondary education often need additional support and remediation to succeed in their post-secondary classrooms[8]. This highlights the importance of academic English as it relates to oral language, reading skills, and writing. Supporting the development of academic English skills requires a systematic and concerted effort on the part of educators who serve adolescent newcomers. In this light, this document provides evidence-based recommendations for policymakers, administrators, and teachers in middle and high schools who seek to make informed decisions about effectively serving adolescent newcomers.

Methods

As a starting point to identify the relevant research for this report, we drew on the findings from two reports. The first, *Developing Literacy in Second-Language Learners: Report of the National Literacy Panel on Language-Minority Children and Youth* (NLP)[9], is a seminal review that systematically and rigorously synthesized the research on acquiring literacy in a second language. The second, *Educating English Language Learners: A Synthesis of Research Evidence*[10], is a narrative review of relevant research in this area. Since these reviews incorporate studies published before 2002, we also systematically searched for empirical[a] research published after that time. *Creating Access: Language and Academic Programs for Secondary School Newcomers* (Short & Boyson, 2004) is a third document that we consulted and that we recommend for those who are involved with program development. It addresses many issues of program implementation, offers practical advice for educators, and describes select newcomer programs across the United States.

There are many gaps in the direct evidence available from research on adolescent newcomers. Some of these gaps are addressed in research conducted with the overall population of ELLs, and some are addressed or informed by the research conducted with native English speakers. Therefore, when necessary and appropriate, we examined the relevant empirical research on adolescent literacy and reading instruction conducted with ELLs who are not newcomers, as well as research conducted with native English speakers where generalization to the population of adolescent newcomer ELLs was warranted. For example, although there have been few, if any, empirical evaluations of comprehensive newcomer programs, there is a great deal of evidence from research conducted with both native English speakers and ELLs that can and should come to bear on instructional decisions.

Organization

This document serves as a practical guide for policymakers, administrators, and teachers who seek to make informed decisions about educating adolescent newcomers. The guide addresses instructional elements to effectively meet learners' needs, as well as organizational elements of programs designed to support teaching and learning. This document will be particularly helpful to those administrators and teachers endeavoring to create or improve programs that serve newcomers. The document is organized into two sections: the first

---

[a] Many articles on newcomer programs that were attained are not reflected—or cited—in this report because they were thought pieces, discussions without data, whether qualitative or quantitative in nature, or not relevant to the questions at hand. Electronic databases searched included *PsycINFO, Academic Search Premier, ERIC,* and *Education Abstracts.*

addresses elements of effective instruction for adolescent newcomers and the second addresses organizational elements that support instruction in schools serving these learners. Within each section, we describe the conceptual framework as well as the sources we consulted and present in-depth recommendations for educators seeking to better serve their adolescent newcomer students.

ELEMENTS OF EFFECTIVE INSTRUCTION FOR ADOLESCENT NEWCOMERS

Conceptual Framework

The conceptual framework for this section uses a developmental perspective that assumes that there are many skills involved in literacy learning and many factors that influence this learning. This is especially the case for this diverse group of adolescent newcomers. Although there are many factors that influence adolescent newcomers' success in middle and high schools, the recommendations that follow focus on the cognitive and language skills that are required for academic success in all classrooms, especially content-area classrooms. The key outcomes on which these recommendations are based include *reading comprehension*, especially comprehension of content-area texts, and *expository writing*. The recommendations reflect an understanding that adolescent newcomers are likely to struggle with academic English. The recommendations also reflect an understanding of how adolescent newcomers' skills can be resources—how they can use their developed cognitive skills and content knowledge to their advantage in the U.S. classroom. For example, newcomers who arrive with a strong basis in math concepts can quickly and simply map new English words (i.e., labels) onto these pre-existing concepts.

Evidence-based Recommendations for Instructional Elements

Effective programs for adolescent newcomers demonstrate six elements of effective instruction. Of course, there are many more elements of effective instruction that are generally applicable to all learners—for instance, effective teachers must establish high standards for their students, engage and motivate their students, and create supportive environments that reaffirm their students' cultural backgrounds. However, the six elements highlighted here have particular importance for adolescent newcomers and complement these more general instructional principles. Furthermore, these six elements stand outside the question of language of instruction; they are essential regardless of the language in which students are taught. Thus, once states and districts have made decisions regarding the use of English and/or native language in instruction, they must attend to each of these elements to insure that newcomers receive effective instruction.

For each element, we provide the rationale for its importance, explain its defining features, and provide examples of how it might be used in classroom practice. The minimal research that has evaluated these instructional approaches requires that teachers and administrators monitor and evaluate their effectiveness for their students. For some of these recommendations, their effectiveness will also depend on the degree to which they match students' strengths and weaknesses.

1. All middle and secondary school classrooms must address the language and literacy skills adolescent newcomers need for content area learning.

Why?

To meet the increasing literacy demands of the workplace, all students must leave high school with the ability to speak and understand academic English, read complex texts for understanding, and write expository texts proficiently. These are not simple goals, particularly for students who enter middle and high school with limited English proficiency. Such students must acquire the content knowledge, academic vocabulary, command of language structures, and strategic thinking skills necessary to meet these goals, in a relatively short period of time. For adolescent newcomers, the challenges of content-area texts can be even greater than for other students and these students' learning must be accelerated toward these grade-level content standards very quickly.

The growing consensus among educators and researchers is that preparing all students for academic reading and writing tasks requires an understanding that content-area reading (e.g., mathematics, social studies) provides unique challenges to students with respect to sophisticated language and text structures. Therefore, content-area instruction must incorporate support for the language and literacy demands of the material[11]. This is especially true for those students entering high school less equipped with academic language, including ELLs and many of their native English-speaking classmates. No longer can educators assume that English Language Arts teachers alone will carry the burden of teaching students to read to learn. Instead, a content-based literacy approach that incorporates explicit instruction in language and literacy addresses the needs of all adolescent learners, but in particular has the potential to draw on the cognitive skills and knowledge of many newcomers.

How?

The goal of a content-based literacy approach is the successful comprehension of content-area texts (e.g., a social studies textbook, a science article, a math conceptual word problem) and successful writing of expository texts in the content areas (e.g., an historical analysis essay, a lab report, an explanation of how a problem is solved in math). Similarly, this approach involves the identification of potential sources of students' comprehension difficulties, and targets instruction to address them. As part of this approach, teachers provide explicit instruction in language and literacy skills (e.g., vocabulary instruction) within the context of meaningful purposes for reading and writing (e.g., to learn about the human circulatory system or to write a persuasive essay taking a position on U.S. foreign policy). This content-based approach anchors instruction in the literacy demands facing students encountering middle and high school texts, rather than in the remediation of "basic" reading skills.

Content-based Language & Literacy Instruction in Action

The International High School at La Guardia Community College in New York serves newcomers with fewer than four years of residence in the U.S. at the time of application, and sends more than 90 percent of its graduates on to college[14]. The curriculum revolves around a content-based literacy approach. Unlike traditional ESL instruction, the students learn academic English skills in heterogeneous classrooms focused on content-area learning. The curriculum is organized around interdisciplinary themes, such as "Origins," "Inquiry and Action," or "World of Money." Each theme is developed by a team of teachers and integrates challenging material with intensive study of academic English.

In a content-based approach, teachers evaluate their students' needs relative to content knowledge and to content-specific language and literacy demands. Teachers begin their planning aware of the content knowledge and concepts that students need to learn based on grade-level content standards[12]. Then they identify the particular challenges that newcomers are likely to encounter with respect to literacy (e.g., students may lack strategies to effectively scan a chapter for key terms) and language (e.g., they may lack the vocabulary for the key concepts or lack an understanding of particular sentence structures to explain a process). Based on this information, teachers identify two objectives for each lesson: one for content learning and another for language and literacy learning. In teaching toward those dual objectives, teachers address content through language as well as language through content.

For example, a science teacher focused on a cell biology text can improve reading comprehension and increase content area learning by building background knowledge before reading or by teaching relevant conceptual vocabulary. Alternatively, a history teacher can teach historical thinking by having students write an essay on the causes of the Civil War. This is also an opportunity to teach her students about cause and effect sentence structures in writing. This process is modeled within *Sheltered Instruction Observational Protocol (SIOP),* a lesson-planning approach designed to meet the needs of ELLs in content-area classes[13].

2. All adolescent newcomers need instruction in academic language—the language they need for text comprehension and school success.

Why?

All students require proficiency in academic language. Whether the task is comprehending a challenging text, composing an essay for a state writing assessment, or participating in an academic discussion, command of academic English is essential. Language proficiency includes various aspects of vocabulary knowledge, grammar, and listening comprehension skills. For native English speakers[15] and ELLs[16], there is a strong relationship between language skills—especially vocabulary—and reading comprehension. The relationship is a reciprocal one: Knowing more words supports successful comprehension, while successful comprehension and more reading lead to more opportunities to learn words. Although few would disagree with the importance of vocabulary instruction for adolescent newcomers, current practices are not necessarily sufficient to support the development of vocabulary knowledge, which is a sophisticated, complex undertaking[17].

There are two important distinctions to be made about vocabulary: The first is the distinction between *breadth* of vocabulary knowledge (the number of words one knows) and *depth* of vocabulary knowledge (how well one knows the meaning(s) of a word). *Depth* includes knowing a word's multiple meanings, its relationship to other words, its connotations in different contexts, and the various ways that it can be changed into other forms (e.g., noun to adjective) or other words (e.g., into antonyms)[18]. ELLs, including newcomers, are likely to be limited in breadth and depth of vocabulary. The second distinction is between teaching words that are new *labels* for existing *concepts* and words that are new concepts. This distinction is particularly important for adolescent newcomers. Some may arrive at school with a large number of well-developed academic concepts but need the English words and proficiency to describe them, whereas other adolescent newcomers may need in-depth instruction in new academic concepts and the corresponding vocabulary.

How?

Effective vocabulary instruction for adolescent newcomers is *explicit*, *systematic*, *extensive*, and *intensive*. To be explicit, it must include not only direct teaching of the meanings of specific key words but also include direct instruction in effective word-learning strategies, such as breaking words down into parts, using contextual clues, and using glossaries and dictionaries as references. To be *systematic*, teachers must thoughtfully choose the words that they teach, identify the most useful general academic words that are not specific to any one particular text, and create multiple opportunities for meaningful exposure to the words and their meanings. To be *extensive*, vocabulary instruction should be incorporated into virtually every lesson, every day, and across the curriculum. Vocabulary instruction across the curriculum is arguably the most important instructional leverage point for adolescent newcomers[b]. Finally, to be *intensive*, vocabulary instruction should teach for depth of knowledge, giving students an understanding of multiple meanings of words, relations with other words, and different forms of words. Teaching for depth of vocabulary requires a significant investment of time, but is crucial if students are to develop academic language to be used independently for learning.

Effective vocabulary instruction for newcomers, as for other ELLs, begins with careful selection of words to teach. Researchers agree that teachers should identify and invest the majority of time in teaching general-purpose academic words—such as *analyze*, *frequent*, and *abstract*[19]—that are sophisticated in meaning but also appear in a variety of academic texts. The selection should start with the specific academic texts used in the classroom. Unfortunately, textbooks are not always helpful in the selection of vocabulary words; most often the words highlighted in them are simply rare and interesting words, such as *dandelion* or *burrowed*. These words appear so

---

[b] In fact, such systematic, intensive vocabulary instruction is fundamental to the educational attainment of many subgroups of learners, including racial and ethnic minorities and children from low income households. The benefits of a curriculum-wide focus on the development of students' academic language would be felt across the population of learners at a school.

rarely in other texts that they are unimportant compared to *analyze* or *abstract,* which appear across texts[20]. And focusing on simply rare or interesting words that are not key to comprehension can actually distract a reader from the main idea in the text[21]. These considerations are doubly important for teachers of newcomers who have to select the words to teach from a very large number of words that are unfamiliar for their students.

Complexities of Academic Language: What Makes Texts Difficult for Newcomers

If we examine these three sentences that adolescent newcomers might encounter in a text, we notice several potential sources of language difficulty:

1. *When father heard that Lisa had ripped up the letter from Steve, father commended her for it.*
2. *The mother made him get out and he ran off.*
3. *Directions. Make and record three observations.*

The first example illustrates how context can often be unreliable; based solely on the context of the word, a student might suspect that "commended" has a negative connotation. The second example illustrates how the multiple meanings of words can cause difficulties for students with shallow vocabulary knowledge; a newcomer may know the meaning of "make" as "to build" and thus not comprehend the sentence. The third example illustrates the important role that academic language can play in a content-area text (even one as simple as a sentence providing directions); without a solid understanding of the scientific concept of an observation, it will be difficult for a student to complete the task.

In addition to the selection of which words to teach, the other key decision for educators designing vocabulary instruction centers on striking a balance between *direct teaching of word meanings in meaningful contexts* and *teaching word-learning strategies.* Although good readers learn many words just by encountering them while reading, struggling readers can find it difficult to discern the meaning of novel words from context. Thus, direct instruction in the meanings of specific words is crucial. Such instruction should engage students in using the words while speaking and writing. Moving beyond the common, yet insufficient, techniques of copying definitions or writing sentences with the words, students should engage in using words in multiple, meaningful ways. For instance, students should talk with peers to connect words to their

Complexities of Academic Language: A Math Example

Just before the bell rang at the end of class, Faith measured the following two dimensions of a right rectangular prism.

Length: 9 centimeters   Width: 6 centimeters

She did not have time to measure the height of the prism, but she knew that the volume of the prism was 162 cubic centimeters.

a. Based on Faith's information about the prism, what is the height, in centimeters, of the prism? Show or explain how you got your answer.

b. What is the total surface area, in square centimeters, of the prism? Show or explain how you got your answer.

c. If the length, the width, and the height of the original prism are all doubled, the resulting prism has a total surface area that is m *times greater than the total surface area of the original prism. What is the value of* m*? Show or explain how you got your answer.*

d. If the length and the width of the original prism are both doubled, the resulting prism has a volume that is n *times greater than the volume of the original prism. What is the value of* n*? Show or explain how you got your answer.*

This example, drawn from a state math standards text[14], illustrates some of the complexities of language involved in solving a math problem. First, students need to have a deep understanding of key math concept vocabulary, such as "dimensions," "volume," *and* "surface area." *Second, students need to know the math-specific meaning of the multiple-meaning word* right, *as in a* right rectangular prism. *Third, students need to be able to understand that* "If" *in c. and d. signal that a new hypothetical situation is being described and that* "resulting prism" *refers to the prism in this situation. Students must also be able to establish which information is essential to solving the problem and which is not.*

personal experiences, to other words learned, and to different versions of the word. Similarly, teachers should hold students accountable for using words taught when writing for academic purposes.

Given the enormity of this task of learning words, no teacher or curriculum can possibly expose newcomers to, and directly teach, knowledge of the many thousands of words that are needed for academic success. Therefore, in addition to providing direct instruction of particular words, teachers must also provide students instruction that equips them with strategies to more effectively learn words independently while reading and engaging in conversation. Effective word-learning strategies for ELLs include breaking a word down into parts and/or using surrounding words to determine the meaning of a word and using dictionaries or glossaries[22]. Additionally, depending on their native language oral and reading proficiency, some ELLs may benefit from instruction in recognizing cognates, words that have similar structure and meaning in the two languages (e.g., "information" in English and "información" in Spanish)[23]. Estimates indicate that over 30 percent of English words share common roots with words in Spanish and many of these are academic words.

3. Adolescent newcomers need direct, explicit instruction to support their comprehension of challenging texts.

Why?

Consistent with findings for native English speakers, research indicates that adolescent newcomers benefit from direct, explicit instruction in reading comprehension[25]. Many students in middle and high school—ELLs and native English speakers alike—can accurately and automatically read words aloud but struggle to comprehend what they read[26]. These "automatic word-callers" often struggle when asked to approach texts strategically, monitor their understanding, and learn new information from texts. Effective comprehension instruction focuses on these skills and strategies, which are especially important for adolescent newcomers.

How?

Effective comprehension instruction is explicit and purposeful, engages students actively, and promotes students' own understanding of the process of reading comprehension. To be explicit, teachers must define, explain, discuss, and reinforce good comprehension practices in multiple contexts and across different types (i.e., genres) of text. Educators should connect strategies to the specific purposes of reading certain texts (e.g., to learn about the Civil War or to solve an algebra problem) and should present these strategies as part of the active process of comprehension. To be engaging, instruction should be planned in such a way that students understand that they need to focus on the language and the thinking behind the strategies. This approach to strategy instruction stands in direct contrast to approaches that teach strategies as procedures to be memorized. To promote student thinking and reflection on the reading comprehension process, the goal of instruction should be for readers to be able to independently monitor their own understanding, identify when comprehension breaks down, and use appropriate strategies to address their difficulties.

Reading Comprehension Instruction in Action: Reciprocal Teaching

Reciprocal teaching is a scaffolded *approach to teaching* comprehension strategies*. Although designed for native English speakers who struggle with reading comprehension, it is an instructional practice that has been found effective for ELLs as well*[28]*. Aimed at teaching students, who work together in small groups, to actively process text, it involves teacher modeling of four critical strategies (i.e., questioning, clarifying, predicting, and summarizing) and gradual transfer of responsibility for implementing these strategies to students. Through extended discussions and modeling, students learn to apply the strategies independently and with different texts. For ELLs, the approach provides explicit instruction in comprehension strategies, teacher support for understanding language, and extensive opportunities for students to use academic language with peers. The following excerpt from a reciprocal teaching conversation illustrates how the teacher can scaffold the language demands for a struggling 7th grade student learning to ask questions*[29]*.*

> TEXT: Spinner's mate is much smaller than she, and his body is dull brown. He spends most of his time sitting at one side of her web.

Student: *(No question)*
Teacher: *What's this paragraph about?*

S: *Spinner's mate. How do spinner's mate…*

T: *That's good. Keep going.*

S: *How do spinner's mate is smaller than… How am I going to say that?*

T: *Take your time with it. You want to ask a question about spinner's mate and what he does, beginning with the word "how."*

S: *How do they spend most of his time sitting?*

T: *You're very close. The question would be, "How does spinner's mate spend most of his time?" Now, you ask it.*

S: *How does spinner's mate spend most of his time?*

As outlined in the recent *Reading Next* report, there are at least five approaches that have been shown to be effective in improving students' reading comprehension and that are promising approaches for use with adolescent newcomers[27]. These approaches are important elements of literacy instruction which should be used in connection with vocabulary instruction. They include:

1) *comprehension strategies instruction,* in which strategies of various types are explicitly provided to students to use with a wide variety of texts,

2) *comprehension monitoring and meta-cognitive instruction,* in which students are taught to consciously monitor their own understanding, reflect on the processes by which they make sense of text, and identify when and where their understanding breaks down,

3) *teacher modeling,* in which teachers think aloud to make their use of strategies apparent to students,

4) *scaffolded instruction,* in which teachers provide high levels of support for students practicing new skills and then incrementally decrease support as students become increasingly independent in their use, and

5) *apprenticeship models,* in which teachers act as content-area experts and apprentice students in the ways of reading and writing within their subject area.

Although many good readers employ these approaches to reading comprehension automatically and unconsciously, others, particularly ELLs, require direct and explicit attention to use them successfully.

4. Adolescent newcomers must receive intensive instruction in writing for academic purposes.

Why?

Reading and writing are closely related and therefore adolescent newcomers are likely to struggle with academic writing for many of the reasons previously discussed, including limited oral proficiency in English, limited exposure to English texts, and possible gaps in background knowledge for the topic at hand. It is important to note that given the interrelatedness of reading and writing, intensive and effective instruction in writing can improve reading comprehension as well as writing skills[30].

How?

Effective writing instruction, like effective reading instruction, must be guided by an understanding of the specific sources of students' difficulties and/or targeted skills for improvement. Writing instruction for newcomers must be integrated with instruction in academic language and reading comprehension in order to provide the kind of repetition that all ELLs—but especially adolescent newcomers—require to develop proficiency in all aspects of literacy. By providing a variety of opportunities for students to write for meaningful, academic purposes, and by building in opportunities for feedback (e.g., student conferences) students can engage in language learning in different ways. Further, writing provides a unique opportunity for students to produce academic language without the time pressure involved in speaking, and if done correctly can also be a non-threatening way in which to try out the use of different, new words.

Research conducted with native English-speaking adolescents has demonstrated that teaching writing strategies, having students summarize information in a written format, providing models and support for writing, and using approaches that teach the steps in the writing process (e.g., pre-writing, drafting, revising) are effective ways to improve students' writing[31]. However, traditional explicit grammar instruction that is taught in isolation, outside of meaningful contexts—a fairly common practice in English-as-a-Second-Language classrooms—has not been shown to be effective and can actually detract from writing proficiency. Instead, approaches that encourage students to think purposefully about language while writing to communicate meaning, and to reflect on this process, are more promising. For instance, a sentence-combining approach to grammar instruction, in which students are taught to use more complex and sophisticated sentence structure through activities in which they combine two or more basic sentences to build a meaningful composite sentence, can be effective in improving students' writing. Research with adolescent ELLs is scarce, but there is some evidence that writing about content, opportunities for independent reading, and teaching students to revise may improve these learners' writing[32].

5. Effective classroom instruction begins with systematic assessment of students' strengths and needs as well as ongoing monitoring of students' progress.

Why?

Although all newcomers may qualify for a program on the basis of recent arrival to the U.S. and beginning English proficiency, these two commonalities mask very striking and important differences within this population—differences that have a significant impact on academic achievement. Adolescent newcomers vary with respect to native language skills and content knowledge as well as their proficiency in English. In any given classroom of newcomers, variation in students' mathematical computation skills, knowledge of the scientific process, experience with Social Studies concepts, and general academic competencies are likely to vary more than in almost any other single classroom. Some students may arrive with grade-level reading skills in their native language and having studied advanced mathematics, whereas others may have never attended school in their home country or learned to read or do basic calculations. Because of these differences, adolescent newcomers progress at very different rates and instruction must be calibrated accordingly. And because of these differences in abilities, rates of learning, and English language development, ongoing assessment of students' language, literacy, and content skills must be a guiding force of instructional planning for newcomers.

How?

An effective assessment system focuses on multiple skills and includes different sources of information, each serving a distinct purpose. Together, sources of student data should serve to identify students' difficulties as well as strengths, monitor students' progress, and measure outcomes. Within the classroom, teachers may need to use multiple measures and instruments to serve these purposes[33]. High-quality classroom assessment requires multiple measures of students' skills with the aim of targeting instruction towards the sources of students' difficulties and capitalizing on their strengths. However, it's important to strike a balance between getting enough information to make sound and informed instructional decisions and not "over-testing" students.

An effective approach to assessment acknowledges that there are several dimensions to any one academic domain (e.g., language, literacy, social studies, science, math). Effective literacy assessments, for example, disentangle students' word-level decoding skills from their reading comprehension ability and identify the aspects of academic language (e.g., vocabulary, syntax, etc.)

Classroom Assessment in Action

Liberty High School in New York is a one-year program that prepares ninth grade newcomers—many of whom have had interrupted schooling and approximately a quarter of whom are not literate in their first language—to enter mainstream high schools. Based on initial assessment of their English language proficiency and native language literacy, students are placed in one of eight different levels in an English-as-a-Second-Language course. The staff has generated assessments to be used for placement and progress monitoring purposes at each level, as well as authentic performance assessments based in the curriculum. Teachers work collaboratively to design their curriculum based on the information from the annual placement assessment, ongoing progress monitoring assessments conducted six to eight times a year, and informal daily assessments embedded in the curriculum[35].

that may prove challenging while reading. Similarly, assessments of newcomers' math abilities would shed light not only on students' computational skill, but also on their knowledge of math vocabulary and mathematical problem solving.

As with assessments for all students, classroom assessments of newcomers should be ongoing and integrated into instruction such that they provide quality feedback about students' progress toward rigorous standards[34]. These assessments should cover a far broader range of students' skills and provide more detailed information than traditional standardized assessments. They also should provide insight into the processes involved in learning, rather than simply the products of learning. Reading comprehension assessments, for instance, should shed light on the process of comprehension as students read texts rather than simply classify students into reading levels. Effective teachers of newcomers have a systematic approach for monitoring the progress of students individually, compiling the data, and planning targeted class-wide and individualized instruction on the basis of the learner's needs.

6. Students with word-reading difficulties need targeted and explicit instruction to promote their reading skills.

Why?

The ability to decode words is a necessary condition for effective comprehension among all students, yet not all students will develop these skills without explicit instruction. As with other dimensions of academic achievement, adolescent newcomers are likely to vary considerably in their preparation for and progress in acquiring word-reading skills. Although newcomers with well-developed literacy skills in their native language are likely to make faster progress in reading than those students with limited or interrupted formal schooling, any newcomer who lacks the ability to decode words requires targeted, systematic intervention in phonics in order to benefit from higher-level reading comprehension instruction. The proportion of newcomers who need explicit instruction in decoding will depend largely on the characteristics of the specific population served. Therefore, careful identification of the source of students' word reading difficulty is crucial before providing any intervention. Further, for all students, comprehension and vocabulary instruction should begin immediately and should by no means be postponed until students have mastered the code; delaying the onset of comprehension and vocabulary instruction would only place these students at a further disadvantage.

How?

Effective interventions for adolescents who struggle to decode words are similar to those found to be effective with younger children in that they provide systematic and explicit instruction in the code of English reading. This instruction will most often need to be conducted in small-group or one-on-one settings in order to be intensive, as well as to avoid using whole-class time on instruction that is not necessary for many adolescent newcomers. These interventions are characterized by explicit instruction in letter-sound correspondences in English, including phonics instruction, and instruction to build fluency. More comprehensive interventions also include attention to the development of comprehension and vocabulary skills. Optimal intervention is carefully planned and coordinated so that it relates to and builds on classroom instruction. It is important to point out that many code-based interventions for struggling readers will begin with explicit phonemic and phonological awareness instruction—instruction in the sounds of the language. This phase of intervention can be omitted for students who are literate in another alphabetic language[36] and instead instruction should focus on the sound-symbol correspondences in English, and in turn word reading.

ORGANIZATIONAL ELEMENTS OF EFFECTIVE NEWCOMER PROGRAMS

Conceptual Framework

This section of the report focuses on factors that influence the effectiveness of instructional practices, in particular those factors that can be controlled by school and district administrators to create conditions that foster effective teaching and rapid learning for adolescent newcomers. Given the variation within the population of newcomers, the differences in the capacity of the teaching forces who serve them, and the local nature of constraints and requirements with respect to educational programming and administration, it is not possible to specify a single prototype for a "model" newcomer program. To date, there are no studies that evaluate the effectiveness of newcomer programs. However, based on case studies of exemplary programs and research conducted with native English speakers that provides guidance for theoretically sound decisions, certain elements have been identified as key ingredients for programs that serve newcomers. Although it would be desirable to have rigorous tests of the effectiveness of recommendations, both individually and collectively, such evidence is not available at this time.

These recommendations are based on a two-step process of research and review. First, potentially effective practices were identified based on a review of case studies of exemplary programs. A review of these case studies generated several practices that were potential sources of the programs' reported successes. In the second step, the theoretical and empirical bases for those practices were examined to determine if there is reason to believe that these practices would be effective for newcomers. Thus, while there was no direct evidence of the effectiveness of individual elements on student outcomes, there was empirical support for the theoretical principles behind the elements of effective programs reflected in the five recommendations that follow.

Evidence-based Recommendations for Organizational Elements

There are five specific organizational elements that are important to consider in the context of delivering effective instruction for adolescent newcomers. Although these elements do not, in and of themselves, promote language or content learning, they are likely to contribute to establishing positive environments in which students' opportunities to learn are maximized. Of course, there are other general organizational elements that are essential to any effective school. For instance, strong leadership by principals, ongoing professional development of teachers, and internal accountability are necessary components of effective schools. However, each of the five elements described below have particular importance for newcomer programs and merit special attention by educators creating such programs[C].

1. Systematic Support for Assessment and Placement of Students

Effective newcomer programs are often supported by district and schools with formal student assessment systems. As previously described, formal assessment systems provide information to guide placement, identify students' strengths and weaknesses, monitor progress, and measure outcomes. Instructional leaders at the district level should provide support to ensure that teachers are equipped with multiple reliable and valid measures that are used consistently across schools, and that instruction is driven by the information provided by these assessments. These district and school leaders can also help bridge the gap between ongoing classroom assessments and the large-scale evaluative assessments of accountability systems by ensuring that the assessments within the system are aligned. Among newcomer programs recognized to be effective, there is often a clear understanding between district leaders and school staff about the role of student assessment in program placement, in decisions to exit students from the program, and in meeting the academic goals of the program. Assessment and placement in appropriate programs and/or classrooms is particularly important to the special case of adolescent newcomers.

In one promising model, all ELLs who enter the district spend a day or more at a central location where they are administered an extensive battery of assessments of language and content knowledge, in English and in their native language when possible and appropriate, given the individual newcomer's educational history in their native language. Based on the newcomers' language proficiency assessment results, students are then placed in specialized newcomer programs, programs with some language support (i.e., more general ESL or bilingual classes), or mainstream classrooms according to uniform criteria set at the district or state level.

This type of centralized assessment facility allows districts to pool their resources in one location, particularly in staff members fluent in a variety of

[C] Just as the preceding recommendations on instructional practice stand outside of the question of the language of instruction, these five organizational elements are essential whether the program follows a bilingual model, a structured English immersion model, or some combination of the two.

languages, and allows greater consistency in student placement. For instance, at the Toronto District Reception Centre, newly arrived immigrants aged 13–18 undergo a day-long assessment process which involves an extensive background interview, review of academic records, and assessments in oral language, reading, math, and writing. All interviews and assessments are conducted by multilingual, certified teachers with experience teaching ELLs. Staff members then place students into the appropriate newcomer, ESL, or mainstream setting and send a detailed written report on the student to the receiving school[37]. What is an appropriate setting for a given student depends to a large extent on both the student's language proficiency and the programs in place for supporting students' language and literacy needs. Investing time and resources into student assessment and placement is the first step towards ensuring that newcomers receive appropriate instruction upon school entry. Having relatively extensive information on students' profiles and abilities is not only important for accurate placement, but it also provides valuable information for teachers. The initial report from an assessment center can serve as the starting point for a teacher's planning and the first step in an ongoing process of measuring and monitoring student learning, as described in the previous section.

2. Heterogeneous Grouping

Effective programs recognize that students often learn language among their peers with different levels of oral language proficiency; these programs provide structured opportunities for newcomers to work collaboratively with more advanced ELLs and native English speakers. Much research suggests that that structured opportunities for interaction with peers is an important aspect of second language learning[38]. Such opportunities include working collaboratively on a common project, discussing an academic topic, or asking one another questions about personal experiences. We acknowledge that the benefits of learning from more advanced peers can be in conflict with teachers' needs to target instruction for students at particular levels of proficiency; programs that serve newcomers address this tension in different ways. At International High School in New York—the successful newcomer program previously described above—ELLs of different proficiency levels and language backgrounds are grouped together throughout the day[39]. At César Chávez Multicultural Academic Center—another successful program for newcomers, housed in a comprehensive middle school in Chicago—students are grouped by English proficiency level in ESL classes but grouped heterogeneously for content-area classes[40]. Such school-within-a-school programs have the added advantage that newcomers can spend part of the day learning alongside native English-speaking classmates. Although they take many different forms, effective programs share a concerted and purposeful effort to provide flexible grouping in which students can not only receive instruction targeted to their skill levels, but also have many opportunities to learn from their peers who are more proficient in English than they are.

3. Extended Instructional Time

Effective programs recognize that newcomers may not necessarily develop high levels of proficiency in English literacy and content knowledge if they are only provided with the traditional academic year of 180 six-hour days. Instead, adolescent newcomers must be immersed in language-rich environments, engaged with challenging content in English, and provided with effective instruction for more time than are their native English-speaking counterparts. For example, at the César Chávez Multicultural Academic Center, students are required to attend school year-round, with special intervention and enrichment courses offered during intersession periods. Other programs provide targeted summer school or after-school programs that are meant to supplement the instruction students receive during the regular school year.

A strong research base supports the notion that, provided instruction is deemed effective, greater time on task is essential to the success of students performing below grade level, ELLs in particular[41]. To be most successful, supplemental programs should be designed to meet individual students' specific academic needs and be well-coordinated with the overall instructional program. In addition to increasing the overall instruction time, effective newcomer programs increase the amount of instructional time focused on language and literacy development, whether through two- to four-hour ESL blocks daily, extended time for content-based literacy instruction designed with particular language and literacy objectives in mind, or, preferably, a combination of both.

4. Coordinated Efforts: Newcomer Programs, Programs for Advanced ELLs, and Mainstream Classes

Effective newcomer programs recognize that they provide temporary, short-term supports, in some cases for only part of the school day, for students' first entry into U.S. schools. A guiding principle is that following their placement in a newcomer program these students will continue to require additional support to meet high academic standards in mainstream classrooms. Most newcomer programs are characterized as a first step in a long-term process within which the students transition into increasingly integrated settings with decreasing levels of support.

For this model to be successful, teachers must coordinate curriculum and instruction across newcomer programs, ESL/bilingual programs, and mainstream classes. For instance, at International Newcomer Academy in Fort Worth, Texas, recent immigrants in grades 6 through 12 attend the academy for a semester or year. Although operated at a separate site, the program organization reflects the goals of all ELL centers, operated in 16 of the district's schools. Teachers in the newcomer program base their courses on the state's standards, an emphasis that yields substantial effects for student achievement according to district records—the program has one of the highest success rates for the district's end-of-course algebra test. Entry and exit procedures (e.g., collection of assessment data, teacher evaluation of students' placement) are carefully monitored by the district, as is students' academic progress toward state standards after leaving the program. Program counselors assist students in making the transition to mainstream middle and high schools by providing students with individual planning meetings, academic orientation to their home school, and connections to other newcomers who have successfully transitioned into a mainstream setting.

5. Targeted Resources for Language and Literacy Instruction

Effective programs—usually led by educators focused on students' core instructional needs in terms of language and content learning—target resources to those areas most likely to have an impact on student achievement. Rather than spreading resources across infrastructure, staff, or materials only tangentially related to instruction, educators leading these programs make instructional improvement a first priority, either by creating contexts that maximize students' opportunities to learn, or by supporting teachers in ways that are directly relevant to students' needs.

For instance, effective newcomer programs often have smaller class sizes in order to maximize interactions between students and to allow teachers to provide more individualized instruction. Smaller classes are particularly beneficial for those students most in need of opportunities to speak and interact with one another[42]. Similarly, effective newcomer programs provide professional development to teachers that focuses on developing teachers' knowledge of second language development, literacy instruction, and content-based literacy instruction.

CONCLUSIONS

Meeting the complex and diverse needs of adolescent newcomers is far from simple. There are several instructional and organizational elements that must be in place to serve these learners effectively. To meet the challenges posed by texts in middle and high school, newcomers require:

- content-based literacy instruction
- an instructional emphasis on developing academic language
- explicit comprehension instruction
- instruction in writing for academic purposes

There are many ways in which these instructional elements can be combined in the service of adolescent newcomers. However, to maximize their potential as instructional approaches, these elements must be combined with:

- high-quality ongoing classroom assessment
- appropriate intervention for newcomers with word-reading difficulties

To support the implementation of these six instructional approaches, we have provided five organizational elements that must simultaneously be in place:

- systems for assessment and placement
- heterogeneous student grouping
- extended time for learning
- coordinated efforts
- targeted resources

Each of these organizational and instructional elements can enhance the opportunities to learn that schools provide to newcomers. We have provided an overview of the evidence behind each element and an explanation of how it might be implemented. However, we strongly urge readers to pursue a deeper understanding of each element by pursuing the resources referenced throughout. We also support the need for more direct empirical research on the effectiveness of newcomer programs, both in terms of their individual instructional and organizational elements, and as collective packages or whole programs. In addition, more rigorous evaluations of existing programs and of modifications to programs would significantly enhance our understanding of programs and their potential impacts on student achievement. Enabling our nation's newcomers to reach the highest standards of achievement demands the concerted and best efforts of our educators and educational researchers.

4 NCES (2005a).

5 Texas reported performance on the 2002 state accountability assessment in English Reading for ELLs as a function of their scores on the Reading Proficiency Test in English (RPTE). The RPTE is designed to assess proficiency in English and is used to indicate when students are ready to take the state accountability test in English. The study found that 15.8% of students passed the English reading test if they scored at the Beginning level on the RPTE in 2002. This percent passing compared to 30.4% for Intermediates, 76.4% for students who scored Advanced in 2002, and 89.6% for students who scored Advanced in 2000. Similar results were found at each grade from 3 through 10, although some differences are noted between the early and later grades. Results can be found at http://www.tea.state.tx.us/student.assessment/reporting/results/rpteanalysis/2002/reading/statewide.html. In a study of students who first entered Grade 9 in 1996, the New York State Education Agency found that 32.6% of current ELLs graduated high school in four years, while 60.1% of former ELLs graduated high school in four years, as compared to 54.5% of students who had never been ELLs. These percentages increased to 49.5%, 76.5%, and 70.5% at seven years. Thus, while former ELLs are completing high school at rates comparable to non-ELLs, it's clear that many ELLs are still not successful. For the complete report see: http://www.regents.nysed.gov/2005Meetings/March2005/0305emscvesidd4.html. Both reports were last accessed by the authors on September 28, 2006 in preparing this report.

ARTICLE II

A. This corporation is a nonprofit public benefit corporation and is not organized for the private gain of any person. It is organized under the California Nonprofit Public Benefit Corporation Law for charitable purposes.

B. The specific and primary purpose of this corporation is to engage in charitable and educational activities within the meaning of Section 501(c)(3) of the Internal Revenue Code of 1986, as amended, or the corresponding provisions of any future United States internal revenue law (the "Code").

ARTICLE III

The name and address in this state of this corporation's initial agent for the service of process is Desten Broach, 485 Boulevard Way, Oakland, CA 94610.

ARTICLE IV

A. This corporation is organized and operated exclusively for exempt purposes within the meaning of Section 501(c)(3) of the Code. Notwithstanding any other provision of these Articles, this corporation shall not carry on any activities not permitted to be carried on (1) by a corporation exempt from federal income tax under Section 501(c)(3) of the Code, or (2) by a corporation, contributions to which are deductible under Sections 170(c)(2), 2055(a)(2), 2106(a)(2)(A)(ii), 2522(a)(2), or 2522(b)(2) of the Code.

B. Except as permitted by law, no substantial part of the activities of this corporation shall consist of the carrying on of propaganda or otherwise attempting to influence legislation, nor shall this corporation participate in, or intervene in (including the publication or distribution of statements), any political campaign on behalf of or in opposition to any candidate for public office.

ARTICLE V

The property of this corporation is irrevocably dedicated to charitable purposes, and no part of the net income or assets of this corporation shall ever inure to the benefit of any director, officer, or member, if any, of this corporation, or any other private person. Upon the winding up and dissolution of this corporation and after paying or adequately providing for the debts and obligations of this corporation, the remaining assets shall be distributed to a nonprofit fund, foundation, or corporation which is organized and operated exclusively for charitable purposes and that has established its tax-exempt status under Section 501(c)(3) of the Code.

TABLE OF CONTENTS

BYLAWS
of
EDUCATION FOR CHANGE

ARTICLE I
PRINCIPAL OFFICE

The principal office of this corporation shall be located in the county of Alameda, California.

ARTICLE II
MEMBERSHIP

This corporation shall have no voting members, but the Board of Directors may, by resolution, establish one or more classes of nonvoting members and provide for eligibility requirements for membership and rights and duties of members, including the obligation to pay dues.

ARTICLE III
BOARD OF DIRECTORS

Section 1. Powers. This corporation shall have powers to the full extent allowed by law. All powers and activities of this corporation shall be exercised and managed by the Board of Directors of this corporation directly or, if delegated, under the ultimate direction of the Board.

Section 2. Number and Qualification of Directors. The number of directors shall be not less than five nor more than eleven, with the exact authorized number of directors to be fixed from time to time by resolution of the Board of Directors. Two of the seats on the Board will be reserved for representatives from the EFCPS Family Leadership Council. The Family Leadership Council membership will elect two representatives to be recommended to the Board of Directors.

Section 3. Limitations on Interested Persons. At all times, not more than 49% of the directors of this corporation may be interested persons. An interested person means either:

(a) any person currently being compensated by this corporation for services rendered to it within the previous twelve months, whether as a full-time or part-time employee, independent contractor, or otherwise, excluding any reasonable compensation paid to a director in his or her capacity as director; or

(b) any brother, sister, ancestor, descendant, spouse, brother-in-law, sister-in-law, son-in-law, daughter-in-law, mother-in-law, or father-in-law of any such person.

Section 4. Selection and Term of Office of Directors. The directors then in office shall elect successors to the directors. Except for the initial directors appointed by the incorporator, and as provided below, each elected director shall be elected for a term of three years and shall hold office until a successor has been elected. Directors who are representatives from the Family Leadership Council will serve a one-year term.

(a) Staggered Terms. One-third of the total authorized number of directors shall be elected in each year, at the annual meeting or as soon as practical thereafter. Whenever a new director position is authorized as provided in Article III, Section 2, the Board may elect the initial incumbent to an initial term of one or two years in lieu of the standard term of three years, so that approximately one-third of all directors' terms shall expire each year. If the total authorized number of directors at any time shall not be evenly divisible by three so that a different number of directors must be elected one year out of every three, this different number shall be elected in every third year after 2005.

Section 5. Vacancies. A vacancy shall be deemed to exist on the Board in the event that the actual number of directors is less than the authorized number for any reason. Vacancies may be filled by the remaining directors for the unexpired portion of the term.

Section 6. Resignation and Removal. Resignations shall be effective upon receipt in writing by the President (if any), the Secretary, or the Board of Directors of this corporation, unless a later effective date is specified in the resignation. A majority of the directors then in office may remove any director at any time, with or without cause.

Section 7. Annual Meetings. A meeting of the Board of Directors shall be held at least once a year. Annual meetings shall be called by the President (if any), or any two directors, and noticed in accordance with Section 9.

Section 8. Special Meetings. Special meetings of the Board of Directors may be called by the President (if any), or any two directors, and noticed in accordance with Section 9.

Section 9. Notice. Notice of the annual meeting and any special meetings of the Board of Directors shall state the date, place, and time of the meeting and shall be given to each director at least four days before any such meeting if given by first-class mail or forty-eight hours before any such meeting if given personally or by telephone, including a voice messaging system, or by other electronic transmission such as e-mail, in compliance with Article VIII, Section 5 of these Bylaws.

Section 10. Waiver of Notice. The transactions of any meeting of the Board of Directors, however called and noticed and wherever held, shall be valid as though taken at a meeting duly held after proper call and notice, if a quorum is present, and if, either before or after the meeting, each of the directors not present provides a waiver of notice, a consent to holding the meeting, or an approval of the minutes in writing. The waiver of notice or consent need not specify the purpose of the meeting. All waivers, consents and approvals shall be filed with the corporate records or made a part of the minutes of the meeting. Notice of a meeting shall also be deemed given to any director who attends the meeting without protesting the lack of adequate notice before the meeting or at its commencement.

Section 11. Quorum. A majority of the total number of directors then in office shall constitute a quorum, provided that in no event shall the required quorum be less than one-fifth of the authorized number of directors or two directors, whichever is larger. The act of a majority of the directors present at a meeting at which a quorum is present shall be the act of the Board of Directors, except as otherwise provided in Article III, Sections 5 (filling board vacancies), 6 (removing directors) and 12 (taking action without a meeting); Article IV, Section 1 (appointing Board Committees); Article VI, Section 3 (approving self-dealing transactions); Article VII, Section 2 (approving indemnification); and Article VIII, Section 6 (amending Bylaws), of these Bylaws or in the California Nonprofit Public Benefit Corporation Law. A meeting at which a quorum is initially present may continue to transact business notwithstanding the withdrawal of directors, if any action taken is approved by at least a majority of the required quorum for such meeting.

Section 12. Action Without a Meeting. Any action required or permitted to be taken by the Board may be taken without a meeting if all members of the Board shall individually or collectively consent to such action in writing. Such written consents shall be filed with the minutes of the proceedings of the Board, and shall have the same force and effect as the unanimous vote of such directors.

Section 13. Telephone and Electronic Meetings. Directors may participate in a meeting through use of conference telephone, electronic video screen communication, or other electronic transmission in compliance with Article VIII, Section 5 of these Bylaws so long as all of the following apply:

(a) each director participating in the meeting can communicate with all of the other directors concurrently, and

(b) each director is provided with the means of participating in all matters before the Board, including the capacity to propose, or to interpose an objection to, a specific action to be taken by the corporation.

Members shall state their name upon joining the meeting. Upon establishing a quorum, the chair will announce the names of all of the members in attendance. Each member should seek recognition from the chair before beginning to speak. Members shall state their name upon joining the meeting. Each member should identify himself or herself prior to speaking. Motions will be voted on by voice vote. If the chair has a problem determining the vote, he or she may call for a roll call vote.

Section 14. Standard of Care.

A. General. A director shall perform the duties of a director, including duties as a member of any Board Committee on which the director may serve, in good faith, in a manner such director believes to be in the best interest of this corporation and with such care, including reasonable inquiry, as an ordinarily prudent person in a like situation would use under similar circumstances.

In performing the duties of a director, a director shall be entitled to rely on information, opinions, reports, or statements, including financial statements and other financial data, in each case prepared or presented by:

(i) one or more officers or employees of this corporation whom the director believes to be reliable and competent as to the matters presented;

(ii) counsel, independent accountants, or other persons as to matters which the director believes to be within such person's professional or expert competence; or

(iii) a Board Committee upon which the director does not serve, as to matters within its designated authority, provided that the director believes such Committee merits confidence;

so long as in any such case, the director acts in good faith after reasonable inquiry when the need therefor is indicated by the circumstances and without knowledge that would cause such reliance to be unwarranted.

Except as provided in Article VI below, a person who performs the duties of a director in accordance with this Section shall have no liability based upon any failure or alleged failure to discharge that person's obligations as a director, including, without limiting the generality of the foregoing, any actions or omissions which exceed or defeat a public or charitable purpose to which a corporation, or assets held by it, are dedicated.

B. Investments. Except with respect to assets held for use or used directly in carrying out this corporation's public or charitable activities, in investing, reinvesting, purchasing or acquiring, exchanging, selling, and managing this corporation's investments, the Board shall avoid speculation, looking instead to the permanent disposition of the funds, considering the probable income as well as the probable safety of this corporation's capital. No investment violates this section where it conforms to provisions authorizing such investment contained in an instrument or agreement pursuant to which the assets were contributed to this corporation.

Section 15. Inspection. Every director shall have the absolute right at any reasonable time to inspect and copy all books, records, and documents, and to inspect the physical properties of this corporation.

Section 16. Director Compensation. The Board may authorize the advance or reimbursement to a director of actual reasonable expenses incurred in carrying out his or her duties as a director, such as for attending meetings of the Board and Board Committees.

Section 17. Executive Compensation Review. The Board of Directors (or a Board Committee) shall review any compensation packages (including all benefits) of the President or the chief executive officer and the Treasurer or chief financial officer, regardless of job title, and such other officers as may be required by law or which shall be so designated by resolution of the Board of Directors from time to time, and shall approve such compensation only after determining that the compensation is just and reasonable. This review and approval shall occur when such officer is hired, when the term of employment of such officer is renewed or extended, and when the compensation of such officer is modified, unless the modification applies to substantially all of the employees of this corporation.

ARTICLE IV
COMMITTEES

Section 1. Board Committees. The Board of Directors may, by resolution adopted by a majority of the directors then in office, create any number of Board Committees, each consisting of at least one director, and no more than two members of the Staff Leadership Council and the Family Leadership Council, to serve at the pleasure of the Board. Appointments to any Board Committee shall be by a majority vote of the directors then in office. Board Committees may be given all the authority of the Board, except for the powers to:

(a) set the number of directors within a range specified in these Bylaws;

(b) elect directors or remove directors without cause;

(c) fill vacancies on the Board of Directors or on any Board Committee;

(d) fix compensation of directors for serving on the Board or any Board Committee;

(e) amend or repeal these Bylaws or adopt new Bylaws;

(f) adopt amendments to the Articles of Incorporation of this corporation;

(g) amend or repeal any resolution of the Board of Directors which by its express terms is not so amendable or repealable;

(h) create any other Board Committees or appoint the members of any Board Committees; or

(i) approve any merger, reorganization, voluntary dissolution, or disposition of substantially all of the assets of this corporation.

Section 2. Advisory Committees. The Board of Directors may establish one or more Advisory Committees to the Board. The members of any Advisory Committee may consist of directors or non-directors and may be appointed as the Board determines. Advisory committees may not exercise the authority of the Board to make decisions on behalf of this corporation, but shall be restricted to making recommendations to the Board or Board Committees, and implementing Board or Board Committee decisions and policies under the supervision and control of the Board or Board Committee.

Education for Change Public Schools will operate a Family Leadership Council and a Staff Leadership Council which will meet regularly with the President to advise on EFCPS and send delegates to Board meetings to advise the Board as needed.

Section 3. Audit Committee. For any tax year in which this corporation has gross revenues of $2 million or more, this corporation shall have an Audit Committee whose members shall be appointed by the Board of Directors, and who may include both directors and non-directors, subject to the following limitations: (a) a majority of the members of the Audit Committee may not consist of members of the Finance Committee, if any; (b) the chair of the Audit Committee may not be a member of the Finance Committee, if any; (c) the Audit Committee may not include any member of the staff or the President or Treasurer; (d) the Audit Committee may not include any person who has a material financial interest in any entity doing business with this corporation; and (e) Audit Committee members who are not directors may not receive compensation greater than the compensation paid to directors for their Board service.

If the Audit Committee is composed and appointed as required by Section 1 above (concerning Board Committees), it shall be deemed a Board Committee on which the other directors are entitled to rely as provided in Article III, Section 14 of these Bylaws; otherwise, the Board of Directors shall remain responsible for oversight and supervision of the Audit Committee as an Advisory Committee.

The Audit Committee shall: (1) recommend to the Board of Directors the retention and, when appropriate, the termination of an independent certified public accountant to serve as auditor, (2) negotiate the compensation of the auditor on behalf of the Board, (3) confer with the auditor to satisfy the Audit Committee members that the financial affairs of this corporation are in order, (4) review and determine whether to accept the audit, and (5) approve performance of any non-audit services provided to this corporation by the auditor's firm.

Section 4. Meetings.

A. Of Board Committees. Meetings and actions of Board Committees shall be governed by and held and taken in accordance with the provisions of Article III of these Bylaws concerning meetings and actions of the Board of Directors, with such changes in the content of those Bylaws as are necessary to substitute the Board Committee and its members for the Board of Directors and its members. Minutes shall be kept of each meeting of any Board Committee and shall be filed with the corporate records.

B. Of Advisory Committees. Subject to the authority of the Board of Directors, Advisory Committees may determine their own meeting rules and whether minutes shall be kept.

The Board of Directors may adopt rules for the governance of any Board or Advisory Committee not inconsistent with the provisions of these Bylaws.

ARTICLE V
OFFICERS

Section 1. Officers. The officers of this corporation shall be a President, a Vice President, a Secretary, and a Treasurer. The corporation may also have, at the discretion of the directors, such other officers as may be appointed by the Board of Directors. Any number of offices may be held by the same person, except that neither the Secretary nor the Treasurer may serve concurrently as the President of the Board, if any. The President shall be elected from among the directors of the corporation and must remain a director to be eligible to continue to serve as President.

Section 2. Election. Except for the initial officers appointed by the incorporator, the officers of this corporation shall be elected annually by the Board of Directors, and each shall serve at the pleasure of the Board, subject to the rights, if any, of an officer under any contract of employment.

Section 3. Removal. Subject to the rights, if any, of an officer under any contract of employment, any officer may be removed, with or without cause, by the Board of Directors or by an officer on whom such power of removal may be conferred by the Board of Directors.

Section 4. Resignation. Any officer may resign at any time by giving written notice to this corporation. Any resignation shall take effect on receipt of that notice by any other officer than the person resigning or at any later time specified by that notice and, unless otherwise specified in that notice, the acceptance of the resignation shall not be necessary to make it effective. Any resignation is without prejudice to the rights, if any, of this corporation under any contract to which the officer is a party.

Section 5. Vacancies. A vacancy in any office for any reason shall be filled in the same manner as these Bylaws provide for election to that office.

Section 6. President. The President shall preside at all meetings of the Board of Directors and shall have such other powers and duties as may be prescribed by the Board or these Bylaws.

Section 7. Vice President. The Vice President shall, in the absence of the President, carry out the duties of the President and shall have such other powers and duties as may be prescribed by the Board or these Bylaws.

Section 8. Secretary. The Secretary shall supervise the keeping of a full and complete record of the proceedings of the Board of Directors and its committees, shall supervise the giving of such notices as may be proper or necessary, shall supervise the keeping of the minute books of this corporation, and shall have such other powers and duties as may be prescribed by the Board or these Bylaws.

Section 9. Treasurer. The Treasurer shall be the chief financial officer of this corporation and shall supervise the charge and custody of all funds of this corporation, the deposit of such funds in the manner prescribed by the Board of Directors, and the keeping and maintaining of adequate and correct accounts of this corporation's properties and business transactions, shall render reports and accountings as required, and shall have such other powers and duties as may be prescribed by the Board or these Bylaws.

ARTICLE VI
CERTAIN TRANSACTIONS

Section 1. Loans. Except as permitted by Section 5236 of the California Nonprofit Public Benefit Corporation Law, this corporation shall not make any loan of money or property to, or guarantee the obligation of, any director or officer; provided, however, that this corporation may advance money to a director or officer of this corporation or any subsidiary for expenses reasonably anticipated to be incurred in performance of the duties of such director or officer so long as such individual would be entitled to be reimbursed for such expenses absent that advance.

Section 2. Self-Dealing Transactions. Except as provided in Section 3 below, the Board of Directors shall not approve, or permit the corporation to engage in, any self-dealing transaction. A self-dealing transaction is a transaction to which this corporation is a party and in which one or more of its directors has a material financial interest, unless the transaction comes within California Corporations Code Section 5233(b).

Section 3. Approval. This corporation may engage in a self-dealing transaction if the transaction is approved by a court or by the Attorney General. This corporation may also engage in a self-dealing transaction if the Board determines, before the transaction, that (a) this corporation is entering into the transaction for its own benefit; (b) the transaction is fair and reasonable to this corporation at the time; and (c) after reasonable investigation, the Board determines that it could not have obtained a more advantageous arrangement with reasonable effort under the circumstances. Such determinations must be made by the Board in good faith, with knowledge of the material facts concerning the transaction and the director's interest in the transaction, and by a vote of a majority of the directors then in office, without counting the vote of the interested director or directors.

Where it is not reasonably practicable to obtain approval of the Board before entering into a self-dealing transaction, a Board Committee may approve such transaction in a manner consistent with the requirements above; provided that, at its next meeting, the full Board determines in good faith that the Board Committee's approval of the transaction was consistent with the requirements above and that it was not reasonably practical to obtain advance approval by the full Board, and ratifies the transaction by a majority of the directors then in office without the vote of any interested director.

ARTICLE VII
INDEMNIFICATION AND INSURANCE

Section 1. Right of Indemnity. To the fullest extent allowed by Section 5238 of the California Nonprofit Public Benefit Corporation Law, this corporation may indemnify its agents, in connection with any proceeding, and in accordance with Section 5238. For purposes of this Article, "agent" shall have the same meaning as in Section 5238(a), including directors, officers, employees, other agents, and persons formerly occupying such positions; "proceeding" shall have the same meaning as in Section 5238(a), including any threatened action or investigation under Section 5233 or brought by the Attorney General; and "expenses" shall have the same meaning as in Section 5238(a), including reasonable attorneys' fees.

Section 2. Approval of Indemnity. On written request to the Board of Directors in each specific case by any agent seeking indemnification, to the extent that the agent has been successful on the merits, the Board shall promptly authorize indemnification in accordance with Section 5238(d). Otherwise, the Board shall promptly determine, by a majority vote of a quorum consisting of directors who are not parties to the proceeding, whether, in the specific case, the agent has met the applicable standard of conduct stated in Section 5238(b) or Section 5238(c), and, if so, may authorize indemnification to the extent permitted thereby.

Section 3. Advancing Expenses. The Board of Directors may authorize the advance of expenses incurred by or on behalf of an agent of this corporation in defending any proceeding prior to final disposition, if the Board finds that:

(a) the requested advances are reasonable in amount under the circumstances; and

(b) before any advance is made, the agent will submit a written undertaking satisfactory to the Board to repay the advance unless it is ultimately determined that the agent is entitled to indemnification for the expenses under this Article.

The Board shall determine whether the undertaking must be secured, and whether interest shall accrue on the obligation created thereby.

Section 4. Insurance. The Board of Directors may adopt a resolution authorizing the purchase of insurance on behalf of any agent against any liability asserted against or incurred by the agent in such capacity or arising out of the agent's status as such, and such insurance may provide for coverage against liabilities beyond this corporation's power to indemnify the agent under law.

ARTICLE VIII
MISCELLANEOUS

Section 1. Fiscal Year. The fiscal year of this corporation shall end each year on June 30.

Section 2. Contracts, Notes, and Checks. All contracts entered into on behalf of this corporation must be authorized by the Board of Directors or the person or persons on whom such power may be conferred by the Board from time to time, and, except as otherwise provided by law, every check, draft, promissory note, money order, or other evidence of indebtedness of this corporation shall be signed by the person or persons on whom such power may be conferred by the Board from time to time.

Section 3. Annual Reports to Directors. Within 120 days after the end of this corporation's fiscal year, the President shall furnish a written report to all directors of this corporation containing the following information:

(a) the assets and liabilities, including the trust funds of this corporation, as of the end of the fiscal year;

(b) the principal changes in assets and liabilities, including trust funds, during the fiscal year;

(c) the revenue or receipts of this corporation, both unrestricted and restricted to particular purposes, for the fiscal year;

(d) the expenses or disbursements of this corporation, for both general and restricted purposes, for the fiscal year; and

(e) any transaction during the previous fiscal year involving more than $50,000 between this corporation (or its parent or subsidiaries, if any) and any of its directors or officers (or the directors or officers of its parent or subsidiaries, if any) or any holder of more than ten percent of the voting power of this corporation or its parent or subsidiaries, if any, or any of a number of such transactions in which the same person had a direct or indirect material financial interest, and which transactions in the aggregate involved more than $50,000, as well as the amount and circumstances of any indemnifications or advances aggregating more than $10,000 paid during the fiscal year to any director or officer of this corporation. For each transaction, the report must disclose the names of the interested persons involved in such transaction, stating such person's relationship to this corporation, the nature of such person's interest in the transaction and, where practicable, the value of such interest.

The foregoing report shall be accompanied by any report thereon of independent accountants or, if there is no such report, the certificate of an authorized officer of this corporation that such statements were prepared without an audit from the books and records of this corporation. The report and any accompanying material may be sent by electronic transmission in compliance with Article VIII, Section 5 of these Bylaws.

Section 4. Required Financial Audits. This corporation shall obtain a financial audit for any tax year in which it receives or accrues gross revenue of $2 million or more, excluding grant or contract income from any governmental entity for which the governmental entity requires an accounting. Whether or not they are required by law, any audited financial statements obtained by this corporation shall be made available for inspection by the Attorney General and the general public within nine months after the close of the fiscal year to which the statements relate, and shall remain available for three years (1) by making them available at this corporation's principal, regional, and district offices during regular business hours and (2) either by mailing a copy to any person who so requests in person or in writing or by posting them on this corporation's website.

Section 5. Electronic Transmissions. Unless otherwise provided in these Bylaws, and subject to any guidelines and procedures that the Board of Directors may adopt from time to time, the terms "written" and "in writing" as used in these Bylaws include any form of recorded message in the English language capable of comprehension by ordinary visual means, and may include electronic transmissions, such as facsimile or email, provided (i) for electronic transmissions *from* the corporation, the corporation has obtained an unrevoked written consent from the recipient to the use of such means of communication; (ii) for electronic transmissions *to* the corporation, the corporation has in effect reasonable measures to verify that the sender is the individual purporting to have sent such transmission; and (iii) the transmission creates a record that can be retained, retrieved, reviewed, and rendered into clearly legible tangible form.

Section 6. Amendments. Proposed amendments to these Bylaws shall be submitted in writing to the directors at least one week in advance of any Board meeting at which they will be considered for adoption. The vote of a majority of the directors then in office or the unanimous written consent of the directors shall be required to adopt a bylaw amendment.

Section 7. Governing Law. In all matters not specified in these Bylaws, or in the event these Bylaws shall not comply with applicable law, the California Nonprofit Public Benefit Corporation Law as then in effect shall apply.

CERTIFICATE OF SECRETARY

I certify that I am presently the duly elected and acting Secretary of Education for Change, a California nonprofit public benefit corporation, and that the above Bylaws, consisting of eleven thirteen pages, are the Bylaws of this corporation as adopted by the board of directors on April 19th, 2005 and amended on October 15, 2011.

DATED: October 15, 2011

___________________, Secretary

Brian Rogers currently serves as the Chief Executive Officer of the Rogers Family Foundation located in Oakland, California. Having served as Executive Director of the Rogers Family Foundation from 2003 to 2014, Brian was promoted to the role of Chief Executive Officer in 2014. During his tenure at the foundation, Brian has helped to create and grow Oakland education organizations such as Great Oakland Public Schools Leadership Center, the Oakland Education Fund, the Oakland Charter Collaborative and the Oakland Literacy Coalition. Brian currently serves on the Board of Directors of the Lighthouse Community Charter Schools and Education for Change Public Schools. Before joining the Rogers Family Foundation, Brian was the manager of the Lair of the Bear, a family summer camp run by the University of California, Berkeley, Alumni Association. Prior to that, Brian was an English teacher and Varsity Tennis Coach at his alma mater, Bishop O'Dowd High School in Oakland. Brian graduated from UC Berkeley's Haas Business School as an undergraduate in 1995 and received his California single subject teaching credential from St. Mary's College in 2000. Brian currently lives in Orinda with his wife Katie and their three children.

Dirk Tillotson is the Founder and Director of Great School Choices, a nonprofit developed to seed and grow strong and sustainable community-based charter schools dedicated to educating underserved student populations in New York, where he helped launch 17 schools. Prior to his work there, he served as COO and interim CEO for the New York City Center for Charter School Excellence, and consulted for the National Alliance for Public Charter Schools post-Katrina in New Orleans, as the first national charter school boots on the ground, post storm. He also led the school based aspects of RAND education's largest project; reform of the education system of the Middle Eastern nation of Qatar, and the implementation of charter-like "independent schools" there. His charter school work began in Oakland, California, where he led or developed several high achieving schools and founded a charter support organization under the aegis of ARC Associates, Oakland Charters Together.

Eva Camp also serves on the Board of Full Circle Fund. A mother of three children, she dedicates her time to improving education. She currently leads the Parents Association with over 600 volunteers and serves on the Board of Trustees at Head-Royce, her children's school. She also serves on the Board of National Equity Project (formerly BAYCES), which coaches people to become the leaders who deliver on the promise of a quality education for every child in America. Eva worked for more than 10 years at Microsoft, marketing some of the company's most successful products, including Word, Office and consumer titles. Her last role there was Director of Market Planning and Analysis for Microsoft's line of home products. Other highlights at Microsoft include helping lead the turnaround in the company's Japanese application software business during a 3 year stint in Microsoft's Far East region and leading the first worldwide launch of Microsoft Office in over 25 languages. Prior to Microsoft, she worked in product management at Proctor & Gamble. Eva has a BA from Harvard University.

Mike Barr is the CFO of Reading Partners, an Oakland-based national non-profit focused on improving childhood literacy. After working in the tech sector for a number of years, Mike joined Aspire Public Schools as their CFO in 2004. Over the next 7 years, he oversaw Aspire's growth from 10 schools serving 3,000 children to 30 schools serving 10,000 children. Since leaving Aspire in 2011, Mike has served as Interim CFO for a variety of educational non-profits at various stages of their life cycle, including StudentsFirst, Oakland Schools Foundation (now the Oakland Public Education Fund), Envision Education, and College Track. Mike has also done consulting for a number of other education-related organizations over the past few years. Mike lives in Oakland with his wife and two daughters, both of whom proudly attend public schools in Oakland. He also serves on the board of Oakland School for the Arts.

Nick Driver works to support new school growth and strategic development for Charter School Management Corporation, a California social venture that supports the public charter school movement as well as district public schools. Nick joined CSMC in 2011 after diverse experiences in education advocacy and advice, research, and business. From 2004 until 2011, he supported hundreds of public schools through his work at the California Charter Schools Association, the country's largest charter school support organization. At both CSMC and CCSA, he has served on school design teams, trained school leaders and board members, advocated for quality schools at school board meetings, and provided technical, political and operational advice for charter and district public schools.

Over the past 12 years, in Oakland, San Francisco and across the state, Nick has helped design and campaigned for a range of successful public school funding measures and policies passed by voters, policies that support a public school sector that has since 2004 grown by 800 schools and 400,000 students.

A parent of two students in San Francisco, Nick has also served as an active parent organizer, as a board member, staff member and volunteer. In the San Francisco Unified School District, he served on the Alvarado Elementary School Site Council for six years, was selected to the SFUSD Citizens' Bond Oversight Committee, and served as member and chair of the district's Parent Advisory Council.

At Education for Change, in addition to chairing the board, Nick serves on the executive and academic accountability committees. He takes an active role in the strategic direction of the organization as it seeks to make a difference for its 3,000+ Oakland students, as well as the overall direction of public education in Oakland.

Paul Byrd Jr. serves the role of not only a Parent Board Member but also a Parent Leader at Achieve Academy. Paul Byrd Jr. is committed to helping the development, enrichment and expansion of EFC (Education for Change) and its commitment, to education and the community that it serves. He believes that change begins with a thought and with that thought comes action. Our future resides in knowing we did everything to give every child the life they deserve, and it's starts with their education and safety. Paul Byrd Jr. is committed to EFC for these great reasons.

Roy Benford is the founder and CEO of Benford & Associates LLC, a real estate consulting company located in Oakland, California. He has worked as a fulltime real estate professional since 1990. Roy has two sons and 4 grandsons. They motivate him to rise and shine each and every day to help others reach their goals and objectives.

His enthusiasm for his work as a real estate professional and his civic activities have made him well known in his East Bay community. Roy is widely known and respected by his colleagues and clients alike for his calm demeanor, his win-win negotiating and keen problem solving skills.

Sudhir Aggarwal is an accomplished CEO, financier, private investor and business advisor. Currently, he is “Advisor to the CEO” for multiple companies, including a publishing company, a 401k plan administrator, a saas model database company, an internet retailer, and a digital marketing company. Sudhir has invested in private companies, taken board roles, and overseen and guided management teams through periods of growth and transition. At present, he is Chairman of Zuca, a specialty consumer products company, and a Director of Skyline, a general contractor, and Earth Mama Angel Baby, an organic baby products firm. Sudhir completed his undergraduate work at Dartmouth College and holds a MBA from Stanford. Throughout his career, he has supported reform efforts in public education.

Community Experience

Full Circle Fund, Board Member 2003 – Present

Full Circle Fund is an alliance of emerging business leaders who address public problems in the Bay Area through engaged philanthropy and public policy advocacy.

Head-Royce School, Parents Association President, Board Member, Auction Chair 2010-2012

National Equity Project, Board Member 2008-2011

Work Experience

Microsoft Corporation 1991 - 2001

Director of Market Planning and Analysis, Home Products Division **Oct '99- Oct '01**

Identified, assessed and prioritized market and customer information needs for Microsoft's line of consumer products. Developed a research plan and managed a team to execute it.

Contributed to strategic planning and analysis for Microsoft's Home Products Division. Worked with different functions across the division, including finance, product management, sales and corporate communications.

Director of Channel Marketing **Jan '98 – Sept '99**

Created and managed Microsoft's retail channel marketing organization. Responsible for developing channel promotions, the group played a critical role in balancing conflicting priorities between the sales organization and product marketing organization.

Group Marketing Manager, Far East Headquarters (based in Tokyo) **Jan '95 – Dec '97**

Responsible for strategic planning and marketing consulting for Microsoft's consumer businesses in Japan, Korea, Hong Kong, Taiwan and China subsidiaries, reporting to the regional Vice President.

In particular, drove regional efforts to win the word processing market against entrenched local competitors. Helped persuade subsidiary management to focus on Microsoft Word when they thought it was futile. Facilitated extra funding to support aggressive marketing, established measurements in each country to identify areas of strength and weaknesses as well as to provide benchmarks for measuring progress. These efforts resulted in Microsoft Word becoming the #1 word processor in the company's biggest market, Japan.

Group Product Manager, Microsoft Office **June '94 - Dec '94**

Managed team of product managers to develop and execute competitive response strategies, demand-generating marketing activities such as channel promotions, manufacturing, sales tools and events.

International Product Manager, Microsoft Office **Aug '92 - May '94**

Led first worldwide launch of Office in over 25 languages. Established worldwide sales and marketing training and SKU naming strategy. Pioneered communication infrastructure to work more closely with subsidiaries and incorporated their requirements, many of which are used today.

Analyzed worldwide business and established rational localization strategy for Microsoft Office.

Product Manager, Microsoft Word **Apr '91 - July '92**

Managed Word's end-user marketing activities including end-user satisfaction programs, switcher seminar efforts and customer-focused market research plan.

Procter & Gamble

Assistant Brand Manager, Paper Division **Oct ’90 - Mar ‘91**

Defined market opportunity and developed positioning and marketing plans for a new toilet tissue product, including advertising, pricing, packaging and promotions — for test market and national expansion.

Repositioned a premium niche product for mass market.

Brand Assistant, Paper Division **Sept ’89 - Sept ‘90**

Contributed to 20% growth in market share by developing and implementing successful promotion plan involving coupons, direct mail, samples and pricing controls such as pre-priced packages.

Initiated Brand entrance into warehouse clubs, the fastest growing segment of the supermarket industry. Negotiated pricing strategy and designed product format.

Led multi-functional teams to rapidly execute package changes that saved the brand over $3 million.

Education

Harvard University Sept ’85 – June ‘89

Bachelor of Arts degree with Honors in History of Science, June 1989. Specialization in Computer Science and Asian history. Elected President of Asian American Association, a 500-member group. Awarded 4-year Grumman Science and Engineering Scholarship (which covered 25% of college tuition) based on academic achievement and leadership qualities.

Other Interests

Travel, cooking, my three children.

Other Skills
I have some web experience with Adobe Dreamweaver and Adobe Flash Banner creations. DVD Authorizing done with DVD Studio Pro. Some 3d with Cinema 4d for 3D Logo Design and modeling.

EXPERIENCE

D.P.W Cleaner greener campaign, D.P.W Pick it up campaign
06/ 14/01 to 07/10/01 and 03/ 06/02 to 04/12/02

The objective to both of these projects were to create print ads that show a cleaner city thru character design mixed with images of schools and landmarks located in San Francisco. The main goal for the designs were to create fun looking but eco conscious characters that will pull junior highand high school students into a program to help keep the streets of San Francisco clean. This project comprised of various print work from bookmarks, Book covers, D.P.W card, posters, banners, bus ads and billboard layouts. My role in this project was to create concepts for characters also handle all print aspects such as design layout and typography. Methods used for both projects were a combination of hand illustration, Adobe Photoshop, Adobe Illustrator and Adobe Indesign.

Def Con 3 Energy Drink
06/ 04/02 to 11/01/02

Def Con 3 is an energy drink created by Russell Simmons Beverages; the project consisted of design and print work. The first part was to create labels for the packaging of the beverage Logo was created with Adobe Illustrator and packaging design was done in Adobe Photoshop and Adobe Indesign. For the project I had to make Ads that went into magazines,
Different Print materials and in store displays.

Def Jam and the Hip Hop Summit
02/ 11/03 to 03/11/03

Main responsibility was to create and design concepts for logo and do print work for the hip-hop summit. The programs used were Adobe Illustrator and Adobe Photoshop.

San Francisco All About The Arts Campaign
09/ 07/03 to 09/14/03

The main objectives for this project was to take images provided by the team and graphically enhance them with effects and color correction for ad spaces and television spots.

P.H.A.T Promoting Healthy Activities together Campaign for CANFit Organization.
02/ 01/04 to 03/10/04

Main goal was to create characters to identify with demographics in area to promote healthy eating. I had to create character concepts and then once approved do poster, mailers, cards and package design for video.

Team X
03/ 12/04 to 05/12/04
Responsibilities for Team X were to come up with a logo and do print material for the project. The logo was done in freehand Illustration and then traced and cleaned up in Adobe Illustrator. Once done in Illustrator I
took it into Cinema 4d to make it into 3d.

U.S.G Clothing
05/ 20/04 to Present
My goals were to first design the logos for the clothing brand and then come up with concept designs that would be used for merchandise. My other task consisted of doing all print and web work from flyers, web
banners to in store ads.

Pursuit of Equality
06/ 12/04 to 10/20/06

My many responsibilities for this project included logo concept and design, print material such as banners, posters, mailers, business cards and all media packets and so on.

Youth Uprising
07/ 06/06 to Present
My responsibilities for this project included logo design, character design and such as banners, posters, mailers, flyers.

MAMAS BOY Clothing
02/ 01/ 09 to Present
My role in this clothing line is to create various designs for shirts, hoodies, jackets etc. Besides that I am responsible for all print and web materials.

Dolby
Design the Future FY14 Worldwide Sales and Marketing Conference
Creating Graphics, Motion Graphics and Video Edit for video highlight of event.

Experience includes leadership roles in companies ranging from multi-national to start-ups in both the private and public sectors. Executed key transactions including IPO, secondary offering, mergers & acquisitions, debt restructuring and public bond issuance.

PROFESSIONAL EXPERIENCE

Reading Partners, Oakland, CA April 2014 - Present

Chief Financial Officer

Nation-wide non-profit focused on addressing childhood literacy by engaging community volunteers to provide one-on-one tutoring to elementary school students.

- *Reported to*: CEO; *Revenue*: $23m; *Managing Team of*: 10.
- Oversaw completion of FY15 budget.
- Oversaw completion of FY14 tax returns.
- Negotiating lines of credit to support expansion.
- Overseeing FY14 year-end close and working with external auditors to address previous year audit issues.

Independent Consultant July 2011 – May 2014

Providing executive-level Finance consulting to early-stage and high-growth clients, with a focus on planning for successful and predictable growth. Selected engagements include:

College Track, Oakland, CA (Interim CFO) April 2013 – May 2014

- Upon departure of former CFO, overseeing a seamless transition to a new organizational structure that consists of a COO and a Director of Finance
- Completely revamped monthly reporting tools to increase the value of the data while dramatically decreasing the effort required to prepare
- Completely revamped monthly cash flow tool to better project future balances
- Oversaw complete overhaul of organization’s benefits plans, yielding $150k in annual savings
- Overseeing implementation of online timesheet tool that will dramatically improve accuracy while dramatically decreasing the level of effort required

Envision Education, Oakland, CA (Interim CFO) April 2013 – December 2013

- Upon departure of former CFO, oversaw a seamless transition to a new organizational structure that consists of a COO and a Controller
- Revised monthly forecasting tool to better meet needs of schools and departments
- Created monthly cash flow tool to better project borrowing needs
- Re-negotiated line of credit to ensure access to cash for organizational needs
- Oversaw successful completion of annual audit

Great Oakland Public Schools, Oakland, CA February 2013 - Present

- Worked with the Executive Director and Managing Director to implement a new financial structure
- Providing high-level strategic financial guidance, including board communications
- Revamped monthly forecast tool to meet needs of organization
- Currently covering for Director of Finance & Operations who is on maternity leave
- Identifying process improvements within the finance, accounting, and operations areas

Oakland Schools Foundation, Oakland, CA (Interim VP of Finance & Ops) June 2012 – March 2013

- Brought in by Board of Directors to serve in a turnaround role as Vice President of Finance and Operations and Co-Executive Director overseeing all finance, administrative and operations functions
- Identified and implemented multiple efficiency in tools and processes, including:
    - Revised budget reports to clients to provide accurate and timely information
    - Redesigned internal documents and processes to ensure sufficient controls are in place for all transactions
    - Revamped HR processes and employee handbook to ensure compliance with regulations
    - Converted from outdated, inefficient email solution to a true corporate email solution
- Oversaw annual audit and tax return for 2011-12 fiscal year

Learning Matters Educational Group, Glendale, AZ April 2012 – August 2013

- Provided deep financial analysis of affiliated school in San Bernardino for client's founder
- Negotiated settlement of disputed contractual amounts with affiliated school in San Bernardino, generating over $500k of upside to client
- Created budgets for charter petitions for two new affiliated schools in California
- Providing ongoing updates on charter funding in California

Fortune Schools, Sacramento, CA January 2012 – March 2012

- Designed and conducted 2-day retreat of Cabinet-level staff retreat to plan for future growth.
- Provided insight into a road map for the organization's growth plans as they expand from 2 schools to 10 or more over the next few years.
- Working with staff to prepare a 3-year organizational budget that will serve as a model for affordability of home office staffing costs.

StudentsFirst, Sacramento, CA (Interim CFO) September 2011 – March 2012

- Served as organization's first CFO on an interim capacity during length of project
- Established policies and practices to meet the organization's complex 501c3 and 501c4 reporting requirements.
- Implemented fully automated solutions for Payroll and Time & Attendance (using ADP)
- Implemented fully automated, paperless expense reporting solution using Concur
- Selected and developed implementation plan for financial and accounting system.
- Oversaw completion of organization's first audit and first tax returns.

Harlem Village Academies, New York, NY August 2011 – February 2012

- Established matrix of responsibilities and job definitions for HVA's Finance team to support organization's two current schools and expansion to four schools.
- Assisted with interviewing of senior-level Finance position.
- Provide guidance to senior staff about best practices for a growing charter organization.
- Assisted with long-term financial modeling.

Aspire Public Schools, Oakland, CA March 2004 – June 2011

Chief Financial Officer / Treasurer

Aspire is a non-profit that is widely recognized as one of the leading Charter Management Organizations in the country, providing educational choice to underserved communities. Responsible for all Finance, Accounting, Payroll and Treasury and Legal functions.

- *Reported to*: CEO; *Revenue Growth*: $22m to $90m; *Managed Team of*: 7 to 15
- Oversaw growth from 10 schools serving 3,000 students to 30 schools serving over 9,800 students.

- In April 2010, led a $93m tax-exempt bond issuance to finance permanent homes for 10 Aspire schools. This deal is the largest charter school bond issuance to date in the U.S. and was rated investment grade.
- Worked closely with banks and other lenders on loans and lines of credit to navigate through significant cash deferrals implemented by the state of California. In August 2010, Aspire became the first statewide charter operator in California to issue Revenue Anticipation Notes, commercial paper with the flexibility of a revolving loan.
- Conservative approach to budgeting at the school site level helped avoid staff layoffs during the state financial crisis which led to a 17% reduction in per-student funding over 3 years.
- In conjunction with Aspire's Facilities staff, oversaw the on-time and on-budget construction of 10 schools.
- In 2005, refinanced tax-exempt bonds, resulting in lowered interest rate from 7.25% to 4.64%.
- Led implementation of MIP Fund Accounting (G/L Software) and Payroll.
- Led efforts to revamp and improve forecasting, budgeting and reporting tools.
- Board Activity (service was in conjunction with my role at Aspire)
  - Served as member of the Board of the **California Charters Schools Association's Insurance Joint Powers Authority** from January 2007 to June 2011; served as Board Chairman from November 2007 June 2011.
  - Served on the board of **St. HOPE Public Schools** in Sacramento from December 2006 to September 2009

***NightFire Software*,** Oakland, CA Jan 2001–Oct 2003

Vice President, Finance and Administration / Controller / Treasurer

Responsible for all Finance, Accounting, Treasury, Legal, Administration and Human Resources functions for a venture-backed telecommunications software company.

- *Reported to*: CFO, then President/CEO; *Revenue Growth*: $6m to $20m; *Managed Team of*: 4 to 6
- Supported revenue growth of 68% in 2001 and 158% in 2002; profitability was reached temporarily in early 2002 and on a sustained basis in 2003.
- Completed sale of NightFire's assets to NeuStar, Inc., in August 2003.
- Simultaneously closed a restructuring of a long-term loan facility ($3.6m), senior credit arrangement ($5.0m), and Series D funding ($11.7m).
- Implemented a cash management system that provided an early-warning system that led to pro-active cost reductions.
- Reduced close process from 25 days to 7 days and audit process from 9 months in 2001 to 4 months in 2003.
- Moved the HR function beyond start up mode by revamping internal performance review process, providing NightFire's first management training classes, and publishing first employee handbook.
- Structured deal pricing in to align with corporate objectives and ensure compliance with Revenue Recognition guidelines (SOP 97-2).

***Scient Corporation*,** San Francisco, CA

Apr 1998 – Dec 2000

Global Systems Controller / Controller

As first member of finance team, established: all Finance and Accounting policies and procedures; Banking, Insurance, and Audit relationships; internal budgeting, reporting, and analysis procedures; and vendor selection for Payroll, Relocation, Stock Transfer, and Travel.

Reported to: CFO, then SVP-Finance; *Revenue Growth*: $0 to $400m run-rate; *Managed Team of*: 8

Built and led an F&A team to support Scient's growth from 40 to 1,900 employees.

Led the hands-on work to complete Scient's IPO (May 1999) and secondary offering (December 1999), including SEC documentation and reporting, S-1 preparation, and interface with auditor and bankers.

Managed ongoing SEC reporting, including 10-Q and 10-K filings, financial press releases, and preparation for analyst calls.

Implemented Leadership Team Dashboard, which was used by executive management to manage the business on a daily basis and was used as an early-warning reporting system.

Led implementation of PeopleSoft financials and two subsequent upgrades to the software, including the integration of new Scient entities in UK, Singapore, France, Hong Kong, and Japan.

***Electronic Data Systems*, Inc.** Pleasanton, CA and Dallas, TX — Sep 1985 – Feb 1998

Business Unit Controller, Pleasanton, CA — Aug 1991 – Feb 1998

Helped launch the Hi Tech Business Unit, which became one of the fastest growing and highest margin units within EDS.

- *Reported to*: Business Unit President (dotted line) & Group Controller (direct line); *Revenue Growth*: $40m to $440m; *Managed Team of*: 13
- Worked closely with Sales, Business Development, Marketing and Operations managers to ensure Business Unit goals were set, measured, and achieved.
- Managed team of New Business Analysts who were responsible for building detailed 5- to 10-year cost projections. Closed business with total contract value over $2.5b; 95% of deals performed at or above cost model projections.
- Managed team of Financial Analysts who were responsible for all budgeting, monthly close, invoicing, collections, and reporting functions for the accounts they supported.
- Managed team that was responsible for all FP&A functions for the Business Unit and ensured integration with up-stream consolidations.

Financial Manager/Financial Supervisor/Financial Analyst, Dallas, TX — Sep 1985 – Jul 1991

Held a series of increasingly responsible positions, moving up the management chain within EDS's financial organization.

Provided financial support for two subsidiaries and two joint ventures in the telecom business unit; led team of five Financial Analysts.

Led due diligence and financial integration of two acquisitions.

Provided competitive analysis within EDS's International, Commercial, and Consumer Services Group, leading a team of two Financial Analysts.

Served as group lead during implementation and integration of new corporate-wide budgeting system, and led corporate-wide budgeting process for two years.

Other major projects included FP&A, Account Support, Stock Tracking, and development of automated invoicing procedure.

Background

Summary

Living and working in the San Francisco Bay Area since 1970 has provided Roy with a broad perspective on lifestyles and demographics of the most desirable communities in which to buy and sell real estate. His enthusiasm for his work as a real estate professional and his civic activities have made him a favorite son in his East Bay community. Roy is widely known and respected by his colleagues and clients alike for his calm demeanor, his win-win negotiating and keen problem solving skills.

Roy's involvement in community issues affecting his community is well known. He is often seen at city council meetings, or conversing with joggers walking around Lake Merritt. His quality of character and cooperative energy gives his clients assurance that their transaction will close successfully.

Roy knows real estate! He has sold properties from San Leandro in the East Bay to San Anselmo in Marin County, and just about every city in between. Whether it's a hard-to-sell listing, or a hard-to-find jewel of a dream home, let Roy be your first choice for knowledgeable representation.©2013 Benford & Associates, LLC

He is founder and CEO of Benford & Associates LLC, a real estate consulting company located in Oakland, California. He has worked as a full-time real estate professional since 1990. He ranked in the top 10 percent of the 11,000 RE/MAX Sales Associates in the California/Hawaii Region in 2004, 2005 and 2006. He was the top listing agent in September 2006 in an office of 110 agents at RE/MAX In Motion, Castro Valley California. Roy has two sons and 4 grandsons. They motivate him to rise and shine each and every day to help others reach their goals and objectives.

Experience

Realtor/CEO
Benford & Associates LLC
August 2007 – Present (9 years 5 months) I 2070 Mountain Blvd, Oakland CA

Duties and responsibilities include actively listening to buyers and sellers to determine their goals and objectives for purchasing, selling or managing residential and commercial property, pre-qualifying buyers to help them determine their affordable price range. Answering questions and finding solutions to real estate problems. Generate Comparative Market Analysis to determine a property's value. Show homes that are currently for sale to prospective buyers. Negotiate purchase prices, and Listing Agreements. Prepare disclosures and net sheets.

Confer with title and escrow companies, lenders, attorneys, home inspectors, contractors, other agents, and pest control companies. Establish and maintain good communications between all parties to a transaction. Coordinate escrow closings. Keep in contact with past clients. Prospect for new buyers and sellers. Preview homes that are newly listed for sale by other agents to see if any of them meet my clients' needs and wants. Participate in office meetings, workshops and coaching sessions.

Education *for* Change

CONFLICT OF INTEREST CODE

I. ADOPTION

In compliance with the Political Reform Act of 1974, California Government Code Section 87100, et seq., the Education for Change Public Schools hereby adopts this Conflict of Interest Code ("Code"), which shall apply to all governing board members, candidates for member of the governing board, and all other designated employees of Education for Change Public Schools ("Charter Management Organization"), as specifically required by California Government Code Section 87300.

II. DEFINITION OF TERMS

As applicable to a California public charter school, the definitions contained in the Political Reform Act of 1974, the regulations of the Fair Political Practices Commission, specifically California Code of Regulations Section 18730, and any amendments or modifications to the Act and regulations are incorporated by reference to this Code.

III. DESIGNATED EMPLOYEES

Employees of this Charter Management Organization, including governing board members and candidates for election and/or appointment to the governing board, who hold positions that involve the making or participation in the making, of decisions that may foreseeably have a material effect on any financial interest, shall be "designated employees." The designated positions are listed in "Exhibit A" attached to this policy and incorporated by reference herein.

IV. STATEMENT OF ECONOMIC INTERESTS: FILING

Each designated employee, including governing board members and candidates for election and/or appointment to the governing board, shall file a Statement of Economic Interest ("Statement") at the time and manner prescribed by California Code of Regulations, title 2, section 18730, disclosing reportable investments, interests in real property, business positions, and income required to be reported under the category or categories to which the employee's position is assigned in "Exhibit A."

An investment, interest in real property or income shall be reportable, if the business entity in which the investment is held, the interest in real property, the business position, or source of income may foreseeably be affected materially by a decision made or participated in by the designated employee by virtue of his or her position. The specific disclosure responsibilities assigned to each position are set forth in "Exhibit B."

Statements Filed With the Charter Management Organization: All Statements shall be supplied by the Charter Management Organization. All Statements shall be filed with the Charter Management Organization. The Charter Management Organization's filing officer shall make and retain a copy of the Statement and forward the original to the County Board of Supervisors.

V. DISQUALIFICATION

No designated employee shall make, participate in making, or try to use his/her official position to influence any Charter Management Organization decision which he/she knows or has reason to know will have a reasonably foreseeable material financial effect, distinguishable from its effect on the public generally, on the official or a member of his or her immediate family.

VI. MANNER OF DISQUALIFICATION

A. Non-Governing Board Member Designated Employees

When a non-Governing Board member designated employee determines that he/she should not make a decision because of a disqualifying interest, he/she should submit a written disclosure of the disqualifying interest to his/her immediate supervisor. The supervisor shall immediately reassign the matter to another employee and shall forward the disclosure notice to the Charter Management Organization Chief Executive Officer, who shall record the employee's disqualification. In the case of a designated employee who is head of an agency, this determination and disclosure shall be made in writing to his/her appointing authority.

B. Governing Board Member Designated Employees

Governing Board members shall disclose a disqualifying interest at the meeting during which consideration of the decision takes place. This disclosure shall be made part of the Board's official record. The Board member shall refrain from participating in the decision in any way (i.e., the Board member with the disqualifying interest shall refrain from voting on the matter and shall leave the room during Board discussion and when the final vote is taken) and comply with any applicable provisions of the Charter Management Organization bylaws.

EXHIBIT A

Designated Positions

I. Persons occupying the following positions are designated employees and must disclose financial interests in all categories defined in "Exhibit B" (i.e., categories 1, 2, and 3).

A. Members of the Governing Board and their alternates (if applicable)
B. Candidates for Member of the Governing Board
C. Corporate Officers (e.g., CEO/President, CFO/Treasurer, Secretary, etc.)
D. Chief Executive Officer of Charter Management Organization
E. Principal of Charter School
F. Assistant Principals
G. Chief Business Officer
H. Director Personnel Services
I. Assistant Director of Personnel Services
J. Consultants[1]

II. Persons occupying the following positions are designated employees and must disclose financial interests defined in Category 1 of "Exhibit B."

A. Purchasing Manager
B. Assistant Business Officer

III. Persons occupying the following positions are designated employees and must disclose financial interests defined in Categories 2 and 3 of "Exhibit B."

A. Information Systems Technician
B. Contractor

EXHIBIT B

---

[1] The Charter Management Organization Chief Executive Officer may determine, in writing, that a particular consultant, although a "designated position," is hired to perform a range of duties that is limited in scope and thus not required to fully comply with the disclosure requirements in this section. Such written determination shall include a description of the consultant's duties and, based upon that description, a statement of the extent of disclosure requirements. The Charter Management Organization Chief Executive Officer's determination is a public record and shall be retained for public inspection in the same manner and location of interest code.

Disclosure Categories

Category 1 Reporting:

A. Interest in real property which is located in whole or in part either (1) within the boundaries of the District, or (2) within two miles of the boundaries of the District, including any leasehold, beneficial or ownership interests or option to acquire such interest in real property.

(Interests in real property of an individual include a business entity's share of interest in real property of any business entity or trust in which the designated employee or his or her spouse owns, directly, indirectly, or beneficially, a 10% interest or greater.)

B. Investments in or income from persons or business entities which are contractors or sub-contractors which are or have been within the previous two-year period engaged in the performance of building construction or design within the District.

C. Investments in or income from persons or business entities engaged in the acquisition or disposal of real property within the jurisdiction.

(Investment includes any financial interest in or security issued by a business entity, including but not limited to common stock, preferred stock, rights, warrants, options, debt instruments and any partnership interest or other ownership interests.)

(Investments of any individual include a pro rata share of investments of any business entity or trust in which the designated employee or his or her spouse owns, directly, indirectly or beneficially, a ten percent interest or greater.)

(Investment does not include a time or demand deposit in a financial institution, shares in a credit union, any insurance policy, or any bond or other debt instrument issued by any government or government agency.)

Category 2 Reporting:

A. Investments in or income from business entities which manufacture or sell supplies, books, machinery or equipment of the type utilized by the department for which the designated employee is Manager or Charter Management Organization Chief Executive Officer. Investments include interests described in Category 1.

Category 3 Reporting:

A. Investments in or income from business entities which are contractors or sub-contractors engaged in the performance of work or services of the type utilized by the department for which the designated employee is Manager or Charter Management Organization Chief Executive Officer. Investments include the interests described in Category 1.

Education for Change

Guidebook for EFC Family Leadership Councils

Table of Contents

Background and Purpose

Research shows that strong home-school partnerships are important for student academic achievement[1], and for teacher retention[2]. There is a perception, however, that low-income parents of color are too busy, too overwhelmed or too apathetic to get involved in their children's school. More than a dozen years of community organizing in Oakland schools has proven this perception to be false.[3] The purpose of the EFC Family leadership council Guidebook is to provide a helpful structure that encourages close relationships between parents and educators, promotes shared decision-making within schools, and leverages the strengths and resources of the community in service of the students.

Necessary Conditions

All parents can play a critical role in their children's education if the right conditions exist:

1) The entire school staff—principal, teachers, office manager, security guard and lunch lady—value parents as partners

2) Teachers, administrators and classified staff adopt behaviors that are welcoming to families, and reach out when things are going well, as well as when there is a problem

3) The school creates structures to support Family leadership development

4) The school allocates resources for parental involvement, such as funding for a parent coordinator position; routine translation of written communications; translation for parent meetings; childcare for meetings; and scheduling meetings/events at times when parents are able to come

5) The school intentionally connects families to resources and services designed to support and promote healthy families and communities

Core Beliefs

Parents in affluent neighborhoods are involved in every aspect of their child's school experience, and low-income families can be as well. Two core beliefs underlying EFC's approach:

---

[1] Henderson and Mapp, A New Wave of Evidence

[2] Futernick/West Ed Study

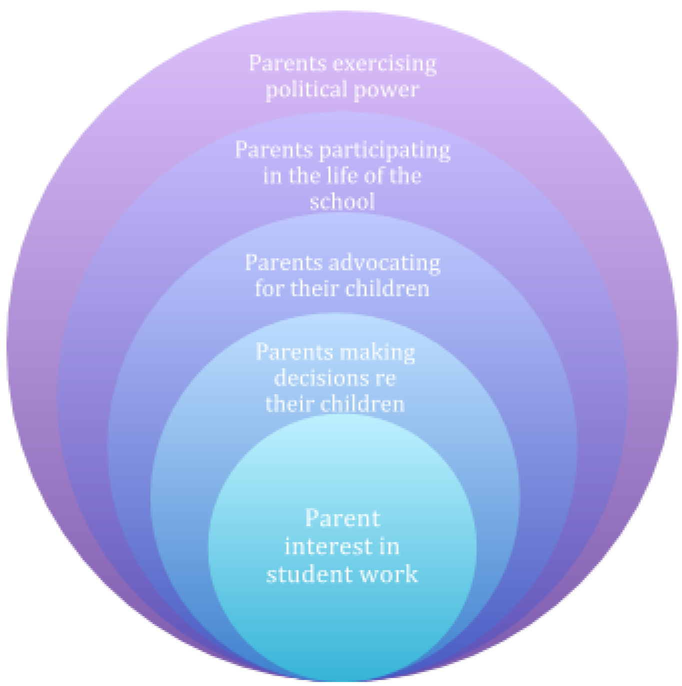
[3] Annenberg study

- **All parents have hopes and dreams for their children**
- **All families have the capacity to support their student's learning**

We also believe that it is important to support a variety of parent partnership practices, and to link parent activities to student learning[4]. We expect parents to show interest in their student's work; to make decisions about their children's education; to advocate on behalf of their children; to share in the day to day life of the school as volunteers and decision makers; and to build political will in the larger community to protect and advance the interests of our students and the school.

The Bulls Eye of High Leverage Parental Activities

Affluent parents move with agility among diverse spheres of activities, and our goal is for *all* parents to feel confident and competent in doing the same. The family leadership council structure is designed to support parents to act as full partners in their child's education. Below is a graphic representing parent activities associated directly or indirectly with student academic growth.[5] The strongest association is for "Parent Interest in Student Work."



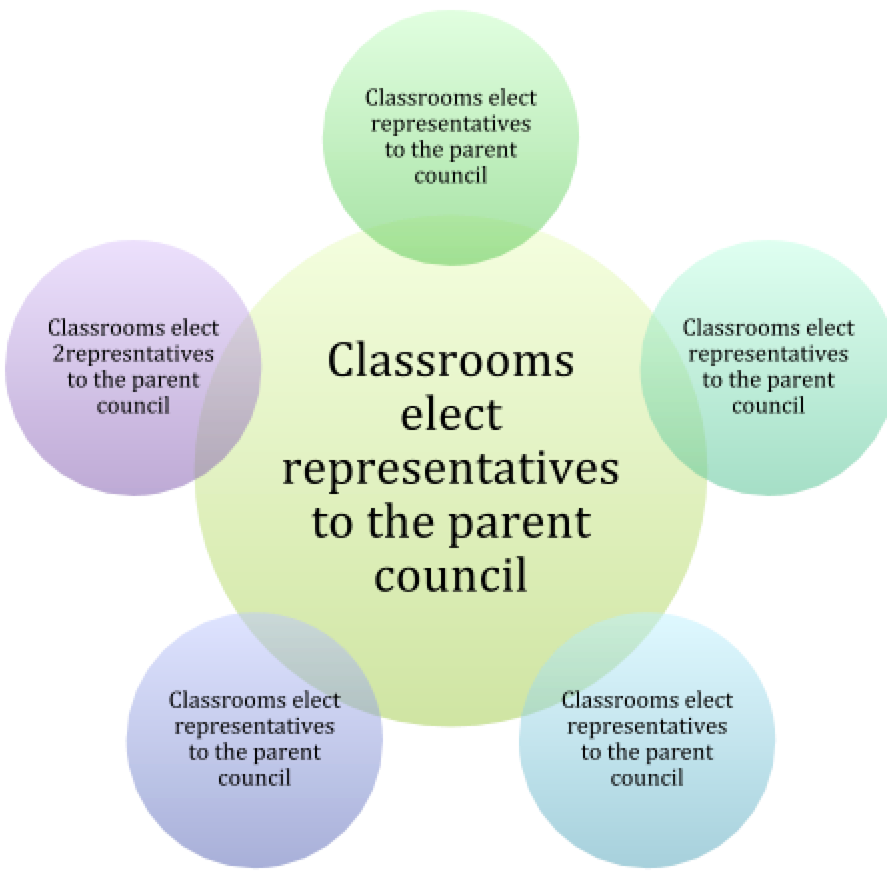
[4] Beyond the Bake Sale
[5]

Basic Structure of the EFC Family leadership councils

Purpose and Function:

The family leadership council is a group of Family leaders representing every classroom in the school that meets monthly with the principal. The family leadership council helps set the direction of the school, becoming familiar with school achievement data, and participating in programmatic decisions. The Family leaders provide a dynamic link between the classroom and the home, working closely with the teacher and with other parents from their child's class. Family leadership council representatives help the classroom teacher to conduct meetings and events with parents during the school year. Family leadership council leaders also fundraise for the school.

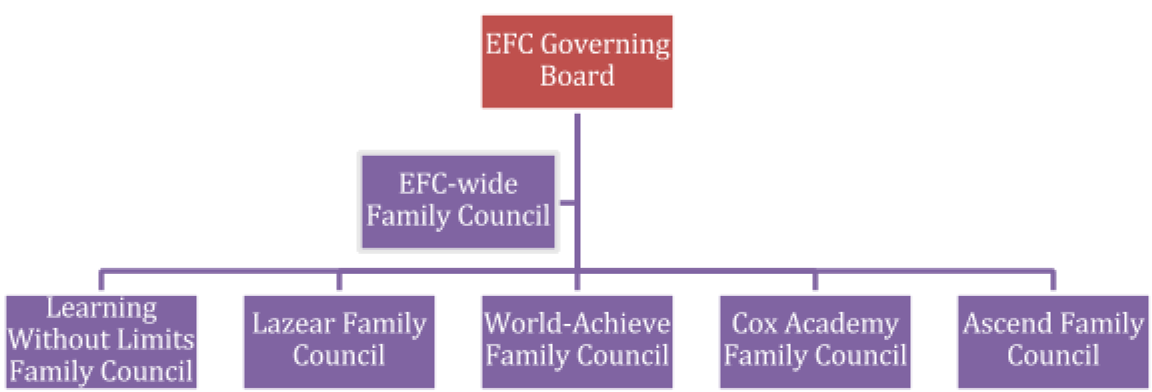
When necessary, the family leadership council takes on outside issues that impact the families in the school, such as public safety, and other neighborhood concerns. The family leadership council might also take on issues that arise with the Alameda County Department of Education, the Oakland Unified School District, as necessary, acting as advocates for the school.



Organization:
The family leadership council consists of one to four elected representatives for every classroom in the school. The family leadership council members are elected by each classroom's parents on back to school night. If a class fails to elect a family leadership council representative on back to school night, then the teacher will recommend a parent to represent his/her class. The family leadership council meets once a month with the principal. There are no elected officers for the family leadership council, rather agenda preparation and facilitation of the meetings rotates between grade levels, so that many parents gain leadership experience and feel confident in creating agendas and running meetings.

Family Leaders Build a Classroom Constituency
Family leaders are charged with representing the families from their classroom, so they must develop the practice of listening to other parents. They bring information, concerns and discussions from the classroom to the council, and from the council to the classroom. Family leaders are trained in the practice of "1-1" visits as a way to build and maintain strong relationships with other parents. See page __ for more information about "1-1's." Periodically, Family leaders hold classroom meetings, which are co-planned with the teacher.

Connection to the EFC Regional Council and Governing Board
The family leadership council from each EFC affiliated school elects two representatives to the EFC-wide family leadership council, which meets with the CEO of EFC on a regular basis. The EFC-wide family leadership council elects a parent representative to the EFC Governing Board. Below is a chart of the structure:



Invitation

Role of the School, Role of the Family

In the book *Beyond the Bake Sale*, Karen Mapp and Anne Henderson argue that the primary responsibility for building a partnership between home and school lies with the school staff, especially school leaders.[6] This is because there are "lopsided" power dynamics between teachers and principals, who are education professionals, and parents, who are not. The power difference becomes magnified when educators come from a different racial, cultural or economic background than the parents. Mapp and Henderson observe that "reaching out" is easier for educators than "reaching in" is for parents.[7]

Parents are more likely to participate in their children's education if they feel invited by school staff, and by their child; if they believe their involvement will help; and if the culture of the school and of the community expects parents to be involved. This cultural expectation can be thought of almost as a "job description" for parents. Interestingly, teachers also need to feel invited by their peers in order to be comfortable reaching out to families.[8]

The most effective invitation to parents is always personal. Sending home a letter is rarely enough for parents to feel genuinely welcomed and needed. Teacher phone calls, and/or a personalized student note, are good ways to follow-up a on a letter. Below is text for a one-page family leadership council flyer, which can be given to families prior to back to school night. It is based on a document used by ASCEND.

BE A FAMILY LEADER AT (Name of school)!

- **Who is on the Family Leadership Council?**
  - Elementary: 2 or more parents from each classroom
  - Middle School: 4 or more parents from each grade level
  - Family Leaders are selected by their peers in each classroom during Back to School Night

- **What does the Family Leadership Council do?**
  - Family Leaders are a "bridge" between teachers and other parents – they support both parties to communicate with each other (through one-on-one meetings, phone calls, and co-facilitation of grade level parent meetings)
  - Family Leaders participate in analysis and discussion of school data and our instructional program in order to set budget priorities. Their

[6] Anne T. Henderson and Karen L. Mapp, *Beyond the Bake Sale*

[7] Anne T. Henderson and Karen L. Mapp, *Beyond the Bake Sale*

[8] IBID

recommendations, along with those of the staff, are forwarded to the EFC Regional Family leadership council, and the EFC Governing Board during budget planning. The Family leaders are also consulted for input on any major issue facing the school (safety, academic program, etc.)
  - Family leaders choose 1-2 community issues to focus on for the year. For example, leaders might choose to work with city officials to improve traffic safety around the school.
  - Some Family leaders also participate in meetings, leadership training sessions, and community actions with partner organizations, such as OCO.
  - Family leaders help to organize and/or volunteer at events such as the Exposition of Student Learning, student registration, and school festivals.
  - The Family Leaders Fundraising Committee raises money for fieldtrips. This group raises money through food sales at events such as the Exposition of Student Learning and through sales of various items throughout the year. The fundraising committee fundraises for every grade, not just for the grades represented by its members.

- **How often do the Family leaders meet?**
  - The entire family leadership council meets once a month, with additional meetings scheduled as needed in order to organize major events.

- **Who sets the agenda for and facilitates Family Leadership Council meetings?**
  - The meetings are co-planned and co-facilitated by a team consisting of the principal and 3-4 Family leaders. They meet one week prior to the family leadership council meeting to set the agenda and designate meeting roles and responsibilities.

- **What are our goals for the future?**
  - A greater emphasis on formal training in leadership, with a particular focus on meeting facilitation.

If for some reason, not enough Family leaders are selected during back to school night for every grade level, then teachers can nominate parents to represent their classrooms on the family leadership council. Here is a sample letter that ASCEND uses for this purpose:

September 16, 2011

Dear ________________________________,

I am writing you because you have been recommended by your child's teacher to represent ____________________'s class as a parent leader. Our Family leaders group meets one Thursday a month from 6 p.m. to 7:15 p.m. to work on issues that will improve ASCEND School and make it a great place for our kids to learn. At these meetings, we work together to fund raise for specific grades as well as the whole school, identify ways that we can get more parents involved in classroom and school-wide activities, learn more about how ASCEND students are doing academically, and work on issues that affect all students (like traffic safety, or school cleanliness).

The responsibilities of being a classroom representative are:

- Attending our once a month meetings
- Helping 3-4 times per year to call about 10 parents in your child's classroom to invite them to participate in class or school events
- Communicating with your child's teacher regularly to see if there are any issues to address in your child's grade level

Our first meeting is on Thursday, September 22, from 6:00 to 7:15 p.m. in Room 202. We will have childcare; we all bring food to share so that we can snack during the meeting (potluck-style). This will be an important meeting where Family leaders will discuss and decide on the direction of ASCEND in the future.

Please indicate below if you would do us the honor of serving as your child's classroom representative this year, and return the bottom part of this letter to the office. We hope that you will join us!

Sincerely,

Larissa Adam, Principal

✂---✂

Parent Name: ___________________________ Child's name: ______________________

❑ Yes, I will represent __________________'s class as a parent leader this year.

❑ No, I will not be able to represent __________________'s class as a parent leader this year.

Election of Family leaders

Back to school night should start with a whole school meeting where the principal welcomes families, introduces teachers, briefly talks about the goals for the year, and describes the family leadership council.

During the classroom portion of back to school night, set aside ten minutes for the election of parent representatives. Make a warm invitation, clearly describing the duties of Family leaders (attend monthly meeting, make phone calls) and offer to support the people who take on this role.

Write the names of the people willing to participate on a whiteboard or chart paper. There should be at least one person, but as many as four are welcome, if you have an enthusiastic group. Ask parents to vote "Yes" or "No" on slips of paper, indicating if they agree for the parents who have volunteered to be their representatives. If there are more than four parents who want to be on the council, ask everyone to vote by writing four names on the paper. Count the ballots immediately and announce the outcome. If someone volunteered but was not elected, talk to that person afterward, and offer to help them find another way to participate with the class or school.

Monthly Family Leadership Council Meetings

The family leadership council meetings are co-planned and co-facilitated by the principal and Family leaders. The Family leaders rotate each month by grade level, so everyone gets the experience of planning and running a meeting. The principal can select the grade level to start with, and then a schedule is created for the rest of the year. The agenda should be planned a few days before the meeting, to give parents time to get comfortable with their roles, and to do reminder calls to other Family leaders.

Agenda template:

1. Welcome and ice breaker/introductions (5-10 minutes)
2. Purpose/outcomes (2 minutes)
3. Review norms (2 minutes)
4. Brief reports on tasks from the previous meeting (5 minutes)
5. Presentation/discussion of main topic, with a training component (30 min.)
6. One to one reports: parents share concerns they are hearing (10 minutes)
7. Next Steps (5 minutes)

Length of meeting

The family leadership council meetings should last no longer than 1 hour and 15 minutes. Parents will return next month if they know that their time will be respected. Time keeping is an essential role. The principal or a parent leader can offer to meet offline with people who need more time to discuss a particular item.

Evaluation

After the meeting, gather the small group of Family leaders who prepared the agenda and facilitated the meeting into a circle, and do a 5 minute evaluation with them. Ask how they feel, what went well, what could have gone better, and what they learned. Recognize people for what they did well. It is important to do the evaluation immediately and to keep it brief. At a later time, you can follow-up with more thoughtful conversations to explore what each parent learned from leading the meeting.

Food and Childcare

Ask people to come early if there will be food at the meeting, or if they need to take their children to childcare, so that the meeting can start within 5 minutes of the start time on the agenda. It is essential to always start on time, even if not every parent has arrived. This will establish discipline in the group and encourage regular attendance at the meetings.

Time line of topics

There is a reciprocal nature to the family leadership council. The principal generates topics that are related to the school program and follow a predictable timeline that can be scheduled in advance. Parents will also generate topics, and these are not as predictable, although the basic practice of listening to others before and after meetings creates a predictable pattern for parent activity and learning.

Here are some ideas for topics that will position Family leaders to be able to make recommendations at the appropriate times in the budget cycle for EFC Schools, to fundraise, and to address community issues that directly impact the school. Care should be taken to allow parents to choose topics and shape the agendas, finding a balance between the necessary timeline for program and budget decisions, and the interests and passion of parents. Teachers will plan some events, such as data nights or science nights, with parents playing a supportive role.

September:

1. Discuss school wide achievement data (CSTs and other local assessments)
2. Establish a calendar of fundraising activities and parent nights

October:

1. Study subgroup achievement data, with a focus on those who are behind
2. Plan the first fundraiser; provide phone support for a parent night

November:

1. Research effective programs or teaching practices for subgroups
2. Plan a second fundraiser as part of the winter holiday celebration

December:

1. Continue research on effective interventions or programs for subgroups
2. Evaluation of first fundraisers and parent nights

January:

1. Study mid-year bench mark data
2. Phone support for student led conferences

February:

1. Discuss program and budget recommendations for next year
2. Begin to organizing around larger community concerns

March:

1. Discuss program and budget recommendations for next year
2. Continue organizing around larger community concerns

April:

1. Finalize program and budget recommendations
2. Conduct a community action

May:

1. Plan spring fundraiser
2. Phone support for student led conferences

June:

1. Reflect on what was learned
2. Celebration and recognition of Family leaders

Classroom Support

The Family leaders and the classroom teacher will form a team that works closely together over the year. At the beginning of the year, the teacher and parents should get to know each other through one to one conversations and/or small group meetings. The goal is to build trust and a level of comfort that makes it easy to work together. Family leaders support the teacher with classroom projects that require parent participation by activating a parent phone tree. Such projects could include field trips, class parties, fundraisers, parent nights and student led conferences. Family leaders are trained to listen to other parents, engaging them in intentional "one to one" conversations, and can play a mediating role with an angry parent if needed. The goal of the parent leader and the teacher is to build trust and unity by being responsive and respectful to families.

Building a Relational Culture in the School

Unfortunately, most schools function as small bureaucracies nested inside a larger bureaucracy. As a result, almost everyone involved—parents, teachers, students and even the principal—feel powerless to some extent. But schools don't have to be so bureaucratic. We can choose to create a relational school culture.

Bureaucratic Culture	**vs.**	**Relational Culture**
Unilateral		Reciprocal
Subject to Object		Subject to Subject
Communication=transmission of info		Art of Conversation=exchange of ideas
Fixed activities endlessly repeat		Flexible, dynamic activities
Decisions are made “top-down”		Decisions are made together
Power “over”=the ability to act		Power “with”=the ability to act and to be acted upon

The hazards of a bureaucratic school culture:

- The same people do the same things in an unexamined way
- New talent and energy is not discovered or engaged
- Group meetings get certain tasks done, but only use the skills of folks which apply to the set agenda
- Leaders and followers grow fatigued over time and ask: why do the same people do everything around here?

The benefits of building a relational school culture:

- Leaders come to know each other beyond a task-oriented agenda, begin to trust one another, and find room to try new things in new ways
- New people can be engaged around their own interests, rather than finding a way to fit into an existing plan
- The school grows a network of people who know and trust each other, and over time are able to take action in a variety of ways
- There is a stronger, more dynamic, more creative school life.

The practice of “one to one” visits can transform school culture

Doing individual “one to one” meetings is the essential strategy for creating a relational school culture over time. Parent and teacher leaders learn how to use the art of conversation. “One to ones” are not interviews, nor are they focused on a specific task. These conversations represent an exchange of views, judgments, and commitments. They are about uncovering issues, developing relationships and cultivating leaders.[9]

A “one to one” visit is

- A 30-45 minute face-to-face conversation with another person
- Getting to know another person and being known by that person
- An inquiry into what matters deeply to a person and why
- An opportunity to know the private motivations each person has for doing public action
- A search for leaders with the talent and desire to change a situation
- A way to identify issues the community cares about

[9] Annenberg Study

Community Organizing

Oakland has a rich history of community organizing and a diverse group of "base-building" community groups involved with public schools. A recent study by the Annenberg Institute for School Reform documents the contributions of community organizing to improve public education in low-performing schools and districts. These contributions include new or upgraded facilities, whole school reform programs, new resources for teaching and curriculum, and new funding for afterschool programs and family support.[9] In addition, community organizing addresses outside issues that directly or indirectly impact schools, such as traffic, violence prevention, affordable housing, jobs, immigration, and health care. Good administrators see community organizers as allies, and make time to meet with them.

Care should be taken to understand the community the school serves, and to thoughtfully select the community organizing group with whom the school will partner. Base building groups are somewhat territorial, and unaware administrators can unintentionally set up competition. For example, Oakland Community Organizations agreed not to organize on the ACORN Woodland Elementary School Campus, nor in the East Bay Asian Youth Center Schools, so as not to create competition with ACORN or EBAYC, who had their own parent organizing efforts. OCO took on the role of ally instead. Sometimes two base-building groups can peacefully co-exist in one school, if the roles and relationships are intentionally worked out ahead of time, or in the case of large high schools with multiple student organizing groups. GO Public Schools and OCO have been able to work in the same schools because their roles are slightly different, and their goals are closely aligned. The value that organizing adds to the school community makes it well worth the effort to figure these things out.

Celebration/Recognition for Family Leaders

Family leaders put in long hours over the course of the year in their efforts to support the school. They are internally motivated to do so, out of love for the children, and a sense of responsibility to the community and to the next generation. While Family leaders are not externally motivated, they should be thanked and recognized for their efforts none-the-less. Simple acts of gratitude, a comment, phone call or note after a big event; and planned group activites such as a party or dinner mid-way through the year, or a picnic at the end of the year are important ways of celebrating the accomplishments of the Family leaders, and signaling that their efforts are noticed and valued by teachers and the principal.

Education for Change, Latitude High

Multi-Year Budget Assumptions Narrative

The following assumptions are unaudited statements based on the current financial position of Education for Change, Inc. and an estimate of Revenues and expenditures based on known charter rates and Latitude High's current and future program as an Education for Change school. They are accurate to the best of the current information available as of August 4, 2017.

1. Latitude High is projected to begin enrolling students in 12th Grade in Fiscal Year 2018-19. The projected enrollment target for year 1 is 50 students. The average daily attendance number is budgeted at 95.00% based on attendance rates at other Education for Change Sites. Please see the chart below as a reference for the enrollment targets to full enrollment by FY 2023-24.

	Planning Year	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
	2017-2018	2018-2019	2019-2020	2020-2021	2021-2022	2022-2023	2023-2024
Enrollment Target	0	50	100	190	280	320	360
ADA	0	47.5	95	180.5	266	304	342

2. Latitude High expects to serve the student population in the Fruitvale neighborhood which is approximately 85% Free and Reduced Lunch students, 60% English Language Learners and 7% Special Education students. This is based on other Education for Change School's in the area.

3. Local Control Funding Formula rates are based on the FCMAT (Fiscal Crisis & Management Assistance Team) version 18-2a calculator rate of $11,305.33 per ADA (Average Daily Attendance Rate) in FY18-19 and follows the chart below. This rate is made up of State Aid Revenue, In Lieu Property Tax and EPA revenue (Education Protection Account also known as Prop 30).

	2017-18	2018-19	2019-20	2020-21
Funded ADA	-	47.50	95.00	180.50
Estimated LCFF Sources per ADA	$ -	$11,305.33	$11,834.82	$12,433.38

4. Federal revenues include Title I assumed at approximately $350 per ADA, Title II assumed at approximately $5 per ADA, Title III Limited English Proficiency assumed at approximately $53 per ADA, Title III Immigrant Education assumed at approximately $7 per ADA and IDEA Special Education Revenue assumed at approximately $125 per ADA (beginning in FY19-20 based on

prior year ADA) . These revenues on a per ADA basis, are conservatively assumed to remain flat. The increase is based only on the increased enrollment.

5. The Public Charter School Grant Program is assumed at $375k in FY17-18 (Planning Year) and $200k in FY18-19.

6. Latitude High is budgeted for approximately $485 per ADA for AB 602 Revenue as a projected SELPA (Special Education Local Plan Area) member of Eldorado County. No annual increase is assumed for this revenue on a per ADA basis. Only the growth in enrollment.

7. Latitude High School is expected to qualify for the National School Lunch Program and is budgeted at $100 per student for School Lunches. The program will be managed by either the San Lorenzo School Food Authority (SFA) or Oakland Unified School District (Education for Change's current SFA partners). Lunches are assumed to be delivered to the sites by one of these partners.

8. SB 740 which is projected to mitigate facilities costs is budgeted at $1,113 per ADA based on the current FY17-18 projected budget rates.

9. Latitude is projected to receive Measure N revenue at $850 per ADA and Measure G-1 revenues at $160 per ADA.

10. Latitude High has been awarded a $200k NewSchools Venture Fund grant in FY17-18, and is projecting receipt of $250k from the Walton Foundation. Beginning FY18-19 through FY20-21 an Educate78 Foundation grant is projected at $100k per year. The Walton Foundation and Educate78 grants are based on other Education for Change School's receiving similar grants in the past, and we believe them to be very likely. However, should any of these grants not be received, it would not harm the school operations as they would be used primarily for opening one-time costs and consulting. Much of these costs can be spread out over time, as the school grows, to lessen the impact if this funding were not to be awarded.

11. Facilities Costs are budgeted at approximately $78k in FY18-19, $146k in FY19-20 and $213k in FY20-21. This is based on obtaining a Tax Exempt bond for approximately $5 MM to construct the required hub space of approximately 10K square feet on land currently owned by Education for Change. This bond can be structured to ramp up payments as the enrollment grows each year to full capacity. At full Capacity, the bond debt service would be approximately $380k per year at 5.5% interest over 30 years.

12. Certificated Salaries include the design team in the planning year consisting of a 1.0 Administrator, a 1.0 Teacher and a 1.0 Coach. In FY18-19 this will increase by a 1.0 Teacher. In FY20-21, 3.0 Teachers will be added. 5.0 Teachers will be added in FY21-22.

13. Classified Salaries beginning in FY18-19 include a 0.50 Custodian, a 1.0 Director of Recruitment/ Community Development and a 1.0 Office Manager/Receptionist. In FY19-20 a 1.0 Instructional Aid will be added. In FY20-21 a 1.0 Custodian, a 1.0 Instructional Aid and a 0.50 Office Assistant will be added.

14. Latitude High provides STRS benefits to full time certificated employees and PERS benefits for full time classified staff. The published ramp up increased rates are calculated in the assumptions.

15. Latitude High employee benefits are comprised of medical, dental and vision coverage, along with Workman's Compensation and Payroll Tax contributions. Benefits increases are calculated to follow a 2% COLA.

16. Latitude High is budgeted for Books and Supplies costs at approximately $313K, in the planning year FY17-18. This includes the purchase of curriculum and the equipment and furniture needed to begin instruction in FY18-19. In FY18-19 $130k is budgeted to continue to build the curriculum and equipment needed for that and future years. In FY 19-20 $80k is budgeted, and in FY20-21 $136k is budgeted. This should adequately meet the needs for all students.

17. Latitude High is budgeted for approximately $3,600 in travel and conferences in FY17-18. This line is projected to increase to $17k in FY18-19, $33k in FY19-20 and $62k in FY20-21 to insure all staff are receiving the needed training and professional development.

18. Dues and Memberships are budgeted at $10 per student beginning in FY18-19.

19. Insurance is budgeted at $40 per student beginning in FY18-19.

20. Utilities & Security costs are budgeted at $70k for an estimated 10,000 Square foot facility.

21. Rentals, Leases and repairs are budgeted at $108k beginning in FY18-19. This includes the facility cost as described in item 11 above plus maintenance at $15k per year and copier leases at $15k per year.

22. Professional Consultants and Operating Expenditures are budgeted at approximately $85k in FY17-18 for the Planning Year, this includes School System Design costs, Other Consultants and Other Fees. In FY18-19 the total budgeted is approximately $117k which includes School System Design costs, Other Consultants (Includes Payroll services and Audit Services), Community Partnership fees, Student Information System costs, Student Assessments, Oversight Fees and Special Education Costs. In FY19-20 this line is budgeted for approximately $153k, which includes all items listed in FY18-19. In FY20-21 this line is budgeted at approximately $303k, this includes all of the items listed in the prior year.

23. Communications are budgeted at $1,450 in FY17-18 for the planning year. $36k is budgeted in FY18-19 which includes costs related to setting up the new facility. $26k is budgeted in FY19-20 which is the internet and phone costs only as no new set up costs will be needed, then will increase in FY20-21 to $36k as the student population increases.

24. Reserves-Latitude is projected to have an operating reserve at the end of FY17-18 of approximately $158k, approximately $48k in FY18-19, approximately $49k in FY19-20 and

approximately $348k in FY20-21. This will allow Latitude High to reach an annual 3% reserve target. The reserve will be closely monitored to assure that it remains in line with projections.

25. Cash Flow-The Home Office of Education for Change will closely monitor any cash flow issues Latitude High may have. The cash flow model reflects the Home Office covering any short falls so that Latitude High will not have to add any debt services costs beyond the facilities Bond.

26. Education for Change will manage the oversight of the school. This includes appropriate training and support for all budgeting, purchasing, payroll, personnel, and day to day operations for the Latitude High team.

27. The Site Administrator is responsible for managing expenditures on a daily basis. She is supported by the Education for Change Home Office Finance Team which includes a dedicated Analyst. Budgets are reviewed together on a monthly basis to make sure they are on track with the Board approved version. If there are any significant issues or differences, they are brought to the attention of the Chief Operating Officer and Chief Executive Officer for review.

28. Education for Change's Governing Board will have operational oversight responsibilities including finance and academic progress for Latitude High as it does for all Education for Change schools. The Board is made up entirely of non-compensated individuals that represent a wide range of experience including two voting parent member seats. The Board reviews and approves financials at the quarterly Interim periods including the required annual financial audit and reviews academic data at critical times throughout the year. The Board also approves the Local Control Accountability plan and the individual site plans as required.

Education for Change

EDUCATION FOR CHANGE PUBLIC SCHOOLS
CHIEF EXECUTIVE OFFICER

Background

Founded in 2005 by experienced educators and entrepreneurs, Education for Change (EFC) is a nonprofit public benefit corporation. As a Charter School Management Organization, EFC operates public elementary schools designed to offer a high quality education at no cost to parents. EFC serves ethnically and economically diverse student bodies. EFC currently enrolls over 1200 students at three elementary schools in Oakland, California: Education for Change at Cox Elementary, World Academy and Achieve Academy.

The mission of Education for Change is straightforward: to provide a superior public education to Oakland's most underserved children by maintaining a system of public schools that relentlessly focuses on academic achievement. The high quality instruction at EFC and its continuous refinement is the key to success for their students. Since its inception, all three EFC schools have experienced substantial growth on the API. Cox gained 148 points, improving from 581 to 729; Achieve gained 117 points, improving from 672 to 789; and World gained 182 points, improving from 603 to 785.

Education for Change has several core beliefs that are at the foundation of the organization. They strive to hire individuals who share their beliefs about what makes a great school - and what it takes for all children to succeed in school and in life. EFC believes that organizations can only be successful when people are aligned around a common purpose and a shared set of goals. This applies to their schools and to Education for Change as a whole.

Through a shared set of core beliefs, EFC is building one community of adults across multiple schools that share responsibility for the EFC mission. The following is a list of EFC's core beliefs:

1. Every child has a right to a high quality, free, public education.
2. Every student can learn and succeed at high levels.
3. The most important attribute of successful schools is the ability to have consistently high quality instruction in every classroom.
4. Building a professional learning community is the key to a schools' success.
5. Every child will succeed when a school is organized around a coherent, comprehensive, rigorous, standards-based curriculum and when school leaders make decisions about how to improve instruction based on data.

6. The best measure of what we value is how we spend our time.
7. Every adult within the school community - principals, teachers, staff, parents/guardians, and administrators - is responsible for student performance.

Additional information about Education for Change can be found at www.efcps.org.

Opportunity

Education for Change is seeking a visionary Chief Executive Officer who can capitalize on the momentum of the past five years and work collaboratively with the board and dedicated staff to take the organization to the next level. EFC is well-positioned to have a significant impact on the education landscape in Oakland for a number of reasons. First, EFC has a strong academic foundation and schools continue to experience significant academic gains every year. Second, the organization is financially stable. And third, the board has recently restructured and added several new members. They are united in their commitment to create more quality educational options for traditionally underserved families, and they are engaged around finding a strong CEO who can lead this effort.

Additionally, the new CEO will be have the opportunity to galvanize the team behind a shared vision and build a dynamic organizational culture that is embraced by school level and central office staff.

Specifically, over the next two to three years, the new CEO will be expected to:

- Evaluate potential expansion models and execute on a growth strategy in order to increase the number of students served by EFC;

- Achieve aggressive academic targets by supporting the instructional team;

- Build the EFC brand in the community by engaging stakeholders at all levels;

- Create a culture of openness and trust where there is collaboration between central office and school staff, and where all employees feel supported and empowered with the tools they needs to be successful.

Responsibilities

In addition to leading the growth and replication of EFC, the CEO will be responsible for overseeing the central office team and working with them collaboratively to create sustainable, scalable systems and policies that will support the schools and enable them to maintain their focus on delivering high quality instruction.

S/he will address the strategic challenges the organization will face as it transitions into a growth mode and will consider specific strategic questions including the following: How does EFC maintain a focus on improving academic outcomes while pursuing growth? What is the ideal growth model? Where should the next school(s) be located? How will the organization secure the financial resources necessary to fund its growth in an increasingly tight economic environment? What types of human capital systems are necessary to support the growth of the organization and ensure that there are enough high quality teachers and administrators to staff new schools?

The specific responsibilities of the CEO include:

- **Strategic Planning**: In partnership with the Board of Directors, the CEO will finalize a strategic plan to set the stage for both short and long term growth;
- **Team Building**: CEO will be responsible for creating the team necessary to carry out the expansion of the organization and provide ongoing operations and instructional support to the established schools;
- **Advancement:** The CEO will further advance the mission of the organization by identifying and securing new sources of funding from foundations, corporations and individual donors, and by forming additional strategic partnerships;
- **Governance:** The CEO will work with the Board Chair to ensure that the Board of Directors fulfills its governance functions. S/he will be responsible for facilitating optimum performance of the Board, its committees, and individual members;
- **External Relations:** The CEO will serve as the chief spokesperson for the organization, ensuring proper representation of the organization to the local civic, business and political community, the greater education reform sector and other external constituents, including parents and families;
- **Financial Management:** The CEO will oversee the financial systems of the organization, including the development of the annual budget;
- **School Support:** The CEO will provide support to instructional team as needed in the areas of staff management and evaluation, hiring, HR issues, and other tasks that are necessary to ensure that the mission of EFC is fulfilled.
- **Compliance –** add description

The CEO will report directly to the EFC Board of Directors. S/he will directly manage the Chief Operating Officer and the Chief Academic Officer.

<u>Qualities & Qualifications</u>

The ideal candidate will demonstrate the following qualities:

- **Commitment to Urban Education***:* Belief that reversing the racial and socio-economic achievement gap is one of the greatest civil rights issues of our generation;
- **Philosophical Alignment***:* Belief that every single student should be held to the highest academic and behavioral expectations and that a structured environment is essential for learning;
- **Relentlessness & Composure:** Drive to do whatever it takes, regardless of circumstances, to fulfill responsibilities and to achieve results. Ability to remain calm even when faced with the relentlessness of the work and with unexpected challenges.

- **High Emotional Intelligence:** The requisite self-awareness, confidence, and maturity to work productively with a wide variety of people and personalities;
- **Natural Transparency**: An open, honest and transparent style that is effective with a wide range of audiences;
- **Collaborative Style**: A management style that is collaborative, inclusive, supportive and empowering.

The ideal candidate will have some background in education, with experience leading a successful classroom or school preferred. However, the board is open to traditional and non-traditional candidates who possess the following qualifications:

- At least 15 years of work experience including a track record of leadership, ideally in an entrepreneurial, start-up and/or high growth organization;
- Specific and substantial management experience in at least two of the following functions: human resources, information technology, general operations, strategic planning, fundraising and marketing;
- A track record of leading, motivating and developing high performance teams;
- The executive presence to inspire confidence and passion in both ***internal*** and ***external*** audiences;
- Bachelor's degree from an accredited, four-year university; advanced degree preferred (e.g. MBA, JD, MPA).

Education *for* Change

Chief Operating Officer

Job Description

The Chief Operating Officer will be a member of the senior leadership team and will report to the CEO. S/he will play a critical role in developing the systems and policies that will serve Education for Change as it pursues growth and long-term sustainability. S/he will have primary responsibility for finances, operations, human resources, information systems, and strategic planning. This is an exciting opportunity for an accomplished finance executive with significant management experience who understands and appreciates the charter school movement, even if s/he has not worked within education in the past.

Skills/Required

The Chief Operating Officer will be a seasoned manager with at least ten years of progressively responsible financial and operations management experience to create and expand systems and operations of a successful, fast-paced, start-up nonprofit organization expected to make a major impact on the education of our nation's children. The Chief Operating Officer will demonstrate maturity, leadership, intellectual acumen, and a commitment to the mission. Expertise in a wide range of management processes, including strategic planning, organizational development, and financial management. Creativity in providing first-rate operations support to a small but national non-profit will be critical. Flexibility, patience, resiliency, and tenacity along with an abundance of common sense and good judgment.

Major areas of responsibility:

1. *Financial management and oversight*
   a. Maintain and manage the budget; fiscal oversight of the sites
   b. Payroll and invoice payment
   c. Manage cash effectively
   d. Oversee fundraising and grant management
   e. Financial planning for future
   f. Manage state financial/operational reporting

2. *General operations*
   a. Oversee payroll and benefits administration
   b. Oversee general administrative support and contracts for home office
   c. Oversee non-instructional, operational support and contracts for school sites
   d. Oversee human resources administration (hiring, in-processing, integration)
   e. Oversee staffing plan
   f. Oversee information technology and student information systems
   g. Manage and support meetings of the board of directors

3. *Growth and strategy development*
   a. Coordinate petition submissions
   b. Evaluate operational impact of new school growth opportunities
   c. Financial planning and budget development for new schools

NON-DISCRIMINATION POLICY

EFC does not discriminate in any program, activity, or in employment on the basis of age, creed, sex, race, ethnic background, marital or veteran status, national origin, disability, sexual orientation or religion.

POSITION: Chief of Leadership Development

REPORTS TO: CEO

About Education for Change
Education for Change (EFC) is a charter management organization that manages a diverse portfolio of charter schools in Oakland, California, all of which were district public schools that converted to charter public schools.

The mission of Education for Change is straightforward: to provide a superior public education to Oakland's most underserved children by maintaining a system of public schools that relentlessly focuses on academic achievement. The high quality instruction at EFC and its continuous refinement is the key to success for their students. Since its inception, all three EFC schools have experienced substantial API growth.

Additional information about Education for Change can be found at www.efcps.org.

Responsibilities:

- Oversee up to 12 school sites, with bottom line responsibility for both fiscal and academic performance
- Facilitate principal and assistant principal professional development and ensure a strong principal pipeline
- Lead the site planning and budget development process for sites
- Facilitate autonomy for accountability of schools and principals
- Develop and lead Principals and Assistant Principals in their roles as instructional leaders and site managers
    - Support site leadership to ensure high quality implementation of approved instructional programs, including standards, assessments, instructional guidelines, and culture.
    - Support principals in effective and efficient budget and human resource management
- Act as liaison with Home Office staff to ensure school sites receive necessary support; work closely with Home Office staff to improve systems and processes to serve the schools
- Recruit highly qualified Principals and Assistant Principals: hire, develop and appraise staff effectively. Take corrective action as necessary on a timely basis and in accordance with company policy. Consult with Human Resources as appropriate.
- Cultivate relationships with local district officials and community leaders to further EFC and individual school goals.
- Demonstrate knowledge of, and support, the EFC mission, vision, value statements, standards, policies and procedures, operating instructions, confidentiality standards, and the code of ethical behavior.
- Performs other related duties as required and assigned.

- Monitor student performance data and effectiveness of instructional responses and interventions at an organization-level
- Work collaboratively with the Instructional Management team to support the development of instructional leadership at the administrative, coach, and teacher leader level
- Work with the CEO in the development of new school proposals

Basic Qualifications:

- Demonstrated success as an instructional leader and in the professional development of teachers and principals
- Demonstrated command of the intricacies of school operations and planning
- Exceptional management skills including planning, directing, reporting, budgeting and administrative responsibilities
- Knowledge of characteristics of successful schools and how to implement them
- Knowledge of California school finance
- Strong problem analysis and problem resolution at both a strategic and functional level
- Proven leadership skills with the ability to attract, develop and inspire a team; exceptional ability to bridge and enhance cooperative working relationships
- Entrepreneurial passion
- Masters Degree or Ph.D in education
- 5+ years teaching
- 5+ years experience as a principal

Compensation and Benefits
EFC offers a highly competitive salary and benefits package in the Bay Area.

Application Process
All interested applicants should submit a

- Cover letter of no more than one page that specifically addresses candidate's qualifications and qualities as described above
- Curriculum vita/resume and online portfolio, if available
- Contact information for three references

Please submit inquiries and the documents above to jobs@efcps.net.

Education for Change

EDUCATION FOR CHANGE PUBLIC SCHOOLS

PRINCIPAL

ORGANIZATION: Education for Change

POSITION: Elementary Charter School Principal

REPORTS TO: CEO

Instructional Leadership

Education for Change is looking for a dynamic instructional leader who will engage students, staff and parents to ensure high student achievement. The site principal, as the instructional leader, communicates and supports the mission of Education for Change, maintains the focus on high student achievement for all students, creates a collaborative, results-oriented professional learning community, analyzes and responds to data, supports teachers in their growth, evaluates and responds to the effectiveness of interventions and instructional practices. As the instructional leader, the principal creates an environment in which school attendance, learning and high achievement are valued.

Having well developed knowledge of what is required to successfully manage an urban elementary school with a high English Learner and low income population is critical. Being driven to achieve success is a basic characteristic of the ideal candidate.

Responsibilities:

Instructional Leadership

- Establish and maintain an instruction and results- oriented professional learning community
- Analyze performance and observational data to determine professional development needs, including content and pedagogical knowledge, ,grade level needs, teacher coaching and support
- Monitor student performance data and effectiveness of instructional responses and interventions
- Provide concrete and actionable feedback for teachers to drive instructional improvement
- Maintain and support the focus on high student achievement for all students through the Education for Change instructional program
- Work collaboratively with the Instructional Management team to identify professional development needs, develop and lead professional development
- Communicate a sense of urgency around student academic needs

- Utilize research-based content and pedagogical knowledge in core areas including the reading and writing process, mathematics instruction, educational theory, research and current issues in urban education

Personnel Performance Management and Interpersonal Relations:

- Attract, recruit and select high performing staff members
- Evaluate all personnel in an effective, timely manner
- Create support systems for staff improvement
- Motivate staff to excel
- Create a culture where the staff works as a dedicated professional team
- Hold staff accountable for high quality job performance
- Involve staff in decision making appropriate to the situation including school site planning, committees, etc.
- Actively commit to building a strong EFC Management Team

Site Management

- Lead school site planning and implementation processes
- Manage school budget, ensuring that expenditures are aligned to the school plan, in compliance with restricted and categorical fund restrictions, compliance with assurances
- Follow all established EFC policies and procedures
- Develop systems, timelines and milestones for completion of initiatives
- Work collaboratively with the Business Operations Manager to ensure that the school site is safe, clean and well maintained
- Develop, lead and manage systems for efficient and efficacious daily operations
- Ensure effective, regular communication system with all staff

Community Relations

- Skillfully and appropriately involve parents and the community in school activities
- Maintain good community relations and effective, regular communication with parents
- Foster and maintain positive working relationship with co-located EFC school and neighboring district schools
- Organize and facilitate Parent Leadership Council and grade level specific parent education meetings
- Develop and execute strategy to attract and retain students and families at school site, with the goal of full enrollment with a waiting list
- Function as a collaborative team member (EFC Management Team, Instructional Management Team, with co-located school)
- Effectively collaborate and assume responsibility for organizational success

The site principal performs other related duties as assigned. The site principal is responsible for the administration of the school within the regulations of the Governing Board and reports to the Chief Executive Officer

Basic Qualifications:

- Minimum of 3 years teaching experience with a minimum of 7 years teaching and/or administrative experience
- Valid Teaching and Administrative Credentials
- Knowledge of primary/elementary curriculum and administrative practices
- Successful experience working in a collaborative environment
- Experience working with diverse communities

Desired Qualifications:

- Experience as an Assistant Principal for aspiring Principals
- Spanish Bilingual
- Masters Degree
- Content Knowledge in the Reading Process, Writing Process, and Mathematics instruction
- Strong data analysis skills
- Experience working with English Language Learners
- Experience coaching, mentoring or developing teachers
- Strong community building skills
- Outstanding communication and organization skills

Education for Change has several core beliefs that are at the foundation of the organization. They strive to hire individuals who share their beliefs about what makes a great school and what it takes for all children to succeed in school and in life. EFC believes that organizations can only be successful when people are aligned around a common purpose and a shared set of goals.

Through a shared set of core beliefs, EFC is building one community of adults across multiple schools that share responsibility for the EFC mission. The following is a list of EFC's core beliefs:

1. Every child has a right to a high quality, free, public education.

2. Every student can learn and succeed at high levels.

3. The most important attribute of successful schools is the ability to have consistently high quality instruction in every classroom.

4. Building a professional learning community is the key to a school's success.

5. Every child will succeed when a school is organized around a coherent, comprehensive, rigorous, standards-based curriculum and when school leaders make decisions about how to improve instruction based on data.

6. The best measure of what we value is how we spend our time.

7. Every adult within the school community - principals, teachers, staff, parents/guardians, and administrators - is responsible for student performance.

Education *for* Change

ELEMENTARY SCHOOL TEACHER

BASIC FUNCTION:

Under the direction of the Principal, to serve as a teacher in an elementary school.

ESSENTIAL DUTIES AND RESPONSIBILITIES:

- ✓ Organize and direct a classroom program meeting the individual needs of students, implementing EFC and school instructions, goals and objectives.

JOB TITLE: **FAMILY LIAISION**

(PART-TIME)

REPORTS TO: **PRINCIPAL**

LOCATION: **EPIC CHARTER SCHOOL**

THE ORGANIZATION

Founded in 2005 by experienced educators and entrepreneurs, Education for Change (EFC) is a nonprofit public benefit corporation. As a Charter School Management Organization, EFC operates public charter schools designed to offer a high quality education at no cost to parents. EFC serves ethnically and economically diverse student bodies. EFC currently operates six schools in Oakland, California: ASCEND, Achieve Academy, Cox Academy, Lazear Academy, Learning Without Limits, and World Academy.

The mission of Education for Change is straightforward. We will provide a superior public education to Oakland's most underserved children by creating a system of public schools that relentlessly focuses on our students' academic achievement.

At Education for Change our core beliefs are the foundation for our organization. We have built strict and deliberate screens into our hiring process to ensure that we hire only individuals that share our beliefs about what makes a great school-and what it takes for all children to succeed in school and in life. We believe that organizations can only be successful when people are aligned around a common purpose and a shared set of goals. This applies to our schools, and Education for Change as a whole.

THE OPPORTUNITY

The Family Liaision will act as a liaison between parents and the school to enhance positive parent involvement with the school.

RESPONSIBILITIES

- Help the school to develop a family-friendly school climate in cooperation with the principal, teachers, guides and other staff
- Develop programs and activities designed to engage families in improving student achievement.
- Help teachers/guides and families develop strong partnerships and enhance communication between parents/families and school staff
- Develop and implement effective family involvement strategies and activities to empower students and their families

- Take part in opportunities for professional development.
- Help to recruit partners to become part of the school's family involvement program and to bring services and program to the school
- Maintain a positive and welcoming family resource center with access to resources and programs
- Build parent capacity to monitor and track student progress data through the parent portal
- Develop strong relationships with families with a particular focus on families of struggling students

REQUIREMENTS

- Understands class and cultural backgrounds of families and how to interpret culture of school to them
- Thinks and acts in ways that respect ethnic, cultural and language diversity
- Communicates successfully with teachers, families, administrators, and students
- Is computer-literate
- Strong interpersonal skills
- Shows organizational skills
- Outstanding problem solving skills
- Effective oral and written communication skills with an ability to communicate with various constituencies and to work comfortably with a variety of staff at all levels within the organization
- Proactive, independent thinker, goal oriented
- Excellent team player with a high degree of willingness to be hands-on and do whatever it takes to support the success of Education for Change
- Experience or strong interest in K-12 public education
- Spanish bilingual

TO APPLY

Applications should include a resume and a thoughtful cover letter describing your interest and qualifications.

Please also include 3 professional references. Email applications to lpovlsen@efcps.net.

JOB TITLE: INFORMATION TECHNOLOGY SUPPORT TECHNICIAN

REPORTS TO: IT MANAGER

START DATE: ASAP

LOCATION: HOME OFFICE AND SIX CAMPUSES

THE ORGANIZATION

EFC believes it is the right for every child to have access to a high-quality, 21st century education. Our mission is to provide a superior public education to Oakland's most underserved children by creating a system of schools that focuses relentlessly on our student's academic achievement. EFC is a charter management organization that manages a diverse portfolio of K-8 schools, growing to a portfolio of preK-12 schools in the Fruitvale and Elmhurst neighborhoods of Oakland, serving 2,500 children currently. Additional information about Education for Change can be found at www.efcps.org.

THE OPPORTUNITY

The IT Support Technician will support EFC's IT department in technology support and customer service on company supported technology systems, applications and platforms. It is important to EFC that the support technician will effectively and efficiently take charge and provide solutions; ensuring users can continue to be productive within the company. Additional responsibilities may include process improvement projects, in collaboration with the IT team.

RESPONSIBILITIES

- Track work orders using our ticketing system
- Provide expert technical support to all users in a timely and efficient manner
- Perform desktop support duties including troubleshooting software and hardware issues
- Image new and older systems and deploy to end users
- Partner with teammates and other departments to drive process improvement efforts
- Perform basic network troubleshooting and work with switches to activate ports
- Support Windows, Mac and Android OS platforms as well various corporate applications
- Various other technology support such as setting up for org-wide events.

- Provide feedback on technology purchasing decisions.

REQUIREMENTS

- Demonstrate strong customer service knowledge and skills, and the ability to develop those in others
- Technical knowledge of current network and operating systems, hardware, protocols, network infrastructure and standards, including WANs, LANs, virtualization, cloud computing, network and systems security, and web-based applications
- Experience configuring, managing and supporting devices and systems on various platforms
- Demonstrated ability to quickly learn new areas of knowledge, technology, and systems
- Track record of establishing effective relationships with business and technical staff.
- Excellent organization, time management and follow-up skills; high sense of urgency; demonstrated ability to successfully handle multiple projects concurrently; ability to work independently
- Ability to research complex problems and develop cost effective solutions
- Bachelor's degree in computer science, educational technology/other systems and/or or equivalent work experience demonstrated ability to document processes and improvement suggestions.
- Effective oral and written communication skills with an ability to communicate with various constituencies and to work comfortably with a variety of staff at all levels within the organization
- Proactive, independent thinker, goal oriented
- Excellent team player with a high degree of willingness to be hands-on and do whatever it takes to support the success of Education for Change
- Experience or strong interest in K-12 public education
- Familiarity with Google Apps, Microsoft Office required.
- Familiarity with Meraki access points, Cisco routers and Chromebooks preferred

Apply online at www.efcps.org/immediate-openings.

EDUCATION FOR CHANGE
ADMINISTRATOR EVALUATION

Evaluatee: ____ Evaluation period: Year: ____________________

Evaluator: ____

PERFORMANCE APPRAISAL OVERVIEW:
Performance appraisals are designed to improve performance, improve communication, give recognition for work well done, and promote an accountability model for organization's goals. Employees will be evaluated in terms of the overall performance based upon prescribed areas of responsibility (job requirements), competencies required for the job, and attainment towards school targets and professional growth goals.

In this document, the individual being evaluated is referred to as the "employee" or the "evaluatee." The individual conducting the evaluation is referred to as the "manager" or the "evaluator."

Employees will be formally evaluated once every year. The review period is July 1st through June 30th.

PERFORMANCE APPRAISAL OVERVIEW:
The administrator's evaluation is composed of five distinct components. Each component will be scored individually and weighted for an end of year summative score as follows:

- **20%** **School-wide KPI Targets -** The evaluatee, in collaboration with the Chief Academic Officer and Chief Schools Officer, will set two Key Performance Indicator (KPI) targets - one for math "on track" student achievement results, and one for ELA "on-track" student achievement results.
- **20%** **Instructional Leadership Performance Assessment (ILPA)** – This is an instrument designed by the Reach Institute to assess an instructional leader's ability around the teacher observation/assessment/feedback/coaching cycle. *The instrument is scored by Reach staff.*
- **20%** **Professional Growth Goals** –The evaluator and evaluatee will confer and agree upon three professional goals aligned with the administrator evaluation rubric. These should be identified areas of growth for the leader. *Growth in the target areas will be evaluated by the evaluator.*
- **20%** **EFC Administrator Evaluation Rubric Scores** – Using the rubric embedded in this document, all administrators will be assessed on their competency in 5 key areas: 1. Organizational vision and planning for increased student achievement; 2. Instructional program management; 3. Human resources management; 4. Financial and resource management; 5. Community engagement and communications.
- **20%** **360 Degree Feedback -** Using a survey tool provided to school staff, all administrators will be assessed on their ability to inspire and lead a shared vision, to proactively engage and lead stakeholders in creative and innovative problem-solving, to model and lead an accountable, data-driven, positive and collaborative school culture, to be responsive and productive in response to arising challenges, to meaningfully build staff capacity and leadership, and to design, refine, and implement strong systems.

TIMELINE:
By October 15
1. The evaluatee, in collaboration with the Chief Academic Officer and Chief Schools Officer, will set two KPI targets. The evaluator must sign off on the targets.
2. The evaluatee, in collaboration with the evaluator, sets 3 professional goals aligned with the administrator evaluation rubric. The evaluator must sign off on the goals.

Ongoing throughout year, as often as necessary
Home Office walkthroughs of classrooms, collecting data on walkthrough tools
Ongoing walkthroughs and meetings with the evaluator

End of October/November
Formal walkthroughs of classrooms, focused on implementation of HPIPs
Benchmark data analysis

No later than Jan. 5
Submit video and analysis for ILPA.

No later than the 4th Friday in February
Mid-year assessments are completed for administrators in their first two years at EFC, or at the discretion of the Chief of Schools. The mid-year assessment only includes the following components: ILPA (30%), Professional Growth Goals (30%), and the EFC Administrator Evaluation Rubric Scores (40%). The evaluator documents the employee evaluation on the Mid-year Evaluation Summary Form.

EDUCATION FOR CHANGE
ADMINISTRATOR EVALUATION

Evaluatee: ____ Evaluation period: Year: ____________________

Evaluator: ____

After joint review, the evaluator and evaluatee should sign the Mid-year Evaluation Summary Form. The evaluator submits the Evaluation Summary form to the Human Resources department.

February/March
Formal walkthroughs of classrooms, focused on implementation of HPIPs
Benchmark data analysis
Administration of 360 Degree Feedback Survey

No later than April 30
Submit video and analysis for ILPA.

By June 30th
This completed evaluation packet (including all required signatures on pp. 13-16) is submitted to the Human Resources department by June 30th. The evaluatee and evaluator should also keep copies of these documents.

<u>SUMMATIVE RATING SCALE (on a 100-point scale):</u>

Exemplary: 90-100 points

Strong: 75-89 points

Developing: 60-74 points

Unsatisfactory, below expectations: 0-59 points OR receives less than 60% of points for ANY component described above.

<u>FURTHER INSTRUCTIONS:</u>

Evaluation Goals and Targets Sign-off Form (page 15): The evaluatee and evaluator sign to indicate their agreement to the KPI Targets and professional growth goals.

Mid-Year and End of Year Evaluation Summary Forms (pp. 15-17): The evaluator completes the Mid-Year and End of Year Evaluation Summary forms by transferring the ratings from numerous component scores. The evaluator should then give a holistic overall summary rating for the employee.

When providing an overall rating of "unsatisfactory, below expectations" or "Developing," the evaluator must document and discuss with the employee next steps for improving performance.

The Mid-Year and End of Year Evaluation Summary forms should be sent to Human Resources for placement in the employee personnel file.

INSTRUCTIONAL PROGRAM MANAGEMENT Manages instructional programs to drive student achievement			
Exemplary	**Strong**	**Developing**	**Unsatisfactory: Below Expectations**
☐ Demonstrates consistent commitment to curricular improvement by implementing innovative, research-based instructional programs in collaboration with network and service providers.	☐ Strong commitment to curricular improvement by implementing innovative, research-based instructional programs. Demonstrated willingness to collaborate with network and service providers.	☐ Articulates, but may not consistently demonstrate commitment to the improvement of curricula and instructional programs.	☐ Demonstrates little to no enhancement or improvement in curricula and instructional programs at site.
☐ Aligns all possible resources (professional development, coaching, administrator time, interventions, outside providers, etc.) to achieve effective implementation of high priority instructional practices. Support for staff is appropriately differentiated so that all staff are growing within their zone of proximal development.	☐ Aligns professional development, coaching, and administrator time (eg. data collection and feedback) to achieve effective implementation of high priority instructional practices.	☐ Mostly aligns professional development, coaching, and administrator time (eg. data collection and feedback), or there is inconsistent implementation of high priority instructional practices.	☐ Rarely aligns professional development, coaching, and administrator time (eg. data collection and feedback); there is little evidence of implementation of high priority instructional practices.
☐ Understands and is able to articulate complexities with standards, assessment, student performance requirements. Demonstrates ability to build capacity of others in this area.	☐ Demonstrates fluency with standards, curriculum, assessments, student performance requirements for all subjects and grade levels in the school.	☐ Demonstrates familiarity with standards, curriculum, assessments, student performance requirements for most subjects and grade levels in the school.	☐ Unaware of, ignores, or disregards standards, curriculum, assessments and student performance requirements.
☐ Emphasizes and ensures that all staff develop capacity to use benchmark assessments to inform instructional priorities.	☐ Regularly and effectively uses benchmark assessments to inform instructional priorities.	☐ Frequently uses benchmark assessments to inform instructional priorities, or does so regularly but outcome is inconsistent.	☐ Benchmark assessments rarely inform instructional priorities.
☐ Institutionalizes use of standards throughout the school through a wide variety of methods, including examination/sharing of student work, backwards mapping, and ongoing discourse regarding standards mastery.	☐ Institutionalizes use of standards throughout the school using limited but effective methods.	☐ Use of standards is not consistently institutionalized throughout the school, or methods are limited in their effectiveness.	☐ Little evidence of institutionalization of use of standards.
☐ Supports systematic use of multiple intervention strategies/supports to close gaps and meet needs of all students. Continually assesses effectiveness, fosters staff sharing of knowledge and skills.	☐ Supports systematic use of multiple intervention strategies/supports to close gaps and meet needs of all students. Occasionally assesses effectiveness.	☐ Supports use of strategies to close gaps and meet needs of some students, but may not be systematic in approach or regularly assess for effectiveness.	☐ Rarely uses strategies to close gaps and meet needs of struggling students, or does not assess for effectiveness.

ADMINISTRATOR EVALUATION RUBRIC

HUMAN RESOURCES MANAGEMENT Optimal management of staff including appropriate resourcing. Uses supervision and evaluation to promote high performance by teachers and staff.			
Exemplary	**Solid**	**Developing**	**Unsatisfactory: Below Expectations**
☐ Strong systems are consistently implemented to ensure that high quality staff are recruited, selected, and retained. Relevant stakeholders are always meaningfully engaged in the process.	☐ Strong systems are consistently implemented to ensure that high quality staff are recruited, selected, and retained. Relevant stakeholders are frequently engaged in the process.	☐ There is inconsistent implementation of systems for recruitment, selection, and retention of high quality staff, or relevant stakeholders are only occasionally engaged in the process.	☐ There are weak or no systems in place for recruitment, selection, and retention of high quality staff.
☐ Routinely identifies, recruits, and develops emerging leaders from across the school.	☐ Identifies emerging leaders and recruits but has provided limited professional growth development.	☐ Relies on a few individuals to share expectations, ownership, and responsibility for the school. Focuses on a few individuals and mentors them as emerging leaders.	☐ Relies solely on self to maintain expectations and take responsibility for the school. Does not actively seek or develop emerging leaders.
☐ Has system that uses a variety of data and feedback including formal and informal observations; actively coaches staff for improvement. Consistently identifies the highest leverage next steps to move a teacher's practice, as evidence by steady growth in teacher practice.	☐ Has system that uses variety of data and feedback including formal and informal observations; actively coaches staff for improvement. Consistently identifies next steps to move a teacher's practice; these steps are frequently the highest leverage next steps and often result in changes in teacher practice.	☐ Implements some systems that use a variety of data and feedback including formal and informal observations; actively coaches most staff for improvement. Inconsistently identifies next steps to move a teacher's practice; these steps are sometimes the highest leverage next steps and at times result in changes in teacher practice.	☐ Implements few systems that use a variety of data and feedback including formal and informal observations; actively coaches an inadequate number staff for improvement. Rarely identifies next steps to move a teacher's practice; these steps are rarely the highest leverage next steps and do not often result in changes in teacher practice.
☐ Regularly documents teaching or coaching and operations staff performance in compliant, evidence-based writing, including all required evaluations. Identifies strengths and provides prescriptions for improvement; consistently aligns resources to provide appropriate support.	☐ Regularly documents teaching or coaching and operations staff performance in compliant, evidence-based writing, including all required evaluations. Identifies strengths and provides prescriptions for improvement; frequently aligns resources to provide appropriate support.	☐ Usually documents performance w/evidence-based writing; identifies strengths and areas for development.	☐ Rarely documents performance w/ evidence-based writing and/or does not consistently identify strengths and areas for development.
☐ Makes difficult decisions and deals with challenging circumstances when staff is not meeting expectations. Communicates effectively and proactively with staff when making these decisions. Follows EFC process effectively. Effectively manages staff culture during this process.	☐ Makes difficult decisions and deals with challenging circumstances when staff is not meeting expectations. Follows EFC process effectively.	☐ Sometimes makes difficult decisions and deals with challenging circumstances when staff is not meeting expectations and/or sometimes does not follow EFC process effectively.	☐ Avoids making difficult decisions and dealing with challenging circumstances related to staff performance. Does not follow EFC procedure effectively.
☐ Creates encouraging environment where staff are able to take risks in their learning. Develops reflective, mutually supportive environment in which faculty make practice public, and in which staff are improve their practice as a community and as individuals. There is a strong sense of mutual accountability among all staff.	☐ Creates encouraging environment where staff are able to take risks in their learning. Develops reflective, mutually supportive environment in which faculty make practice public, and in which staff are improve their practice as a community and as individuals.	☐ Creates opportunities for staff to take risks in their learning and collaborate, but participation and depth is uneven. Develops a school community in which members reflect individually but rarely collectively.	☐ Rarely creates opportunities for staff to take risks in their learning and collaborate. Rarely creates opportunities for reflection.
☐ Creates an environment where ethnic,	☐Creates an environment where ethnic,	☐ Works towards valuing and achieving	☐ Does not identify diversity as an

EFC Principal 360 Survey

Welcome to the EFC Principal 360 Survey! Your feedback will help your principal strengthen his/her leadership practices. We appreciate that you are taking the time to share your feedback with us.

* Required

1. **Please select your role at the site.** *

   Mark only one oval.

   - Teacher
   - Non-teaching staff (operations staff, administrators, coaches, etc.)

2. **Please indicate the number of years you have worked at this site.** *

   Mark only one oval.

   - 0-4
   - 5 or more

Relationships

3. **Please mark the degree to which you agree with each statement.** *

   Mark only one oval per row.

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
My principal seems to care about me as a person.					
My principal communicates with me in a respectful and professional manner.					
My principal makes a concerted effort to build a trusting relationship with me.					

4. **Optional: Please comment on any of your responses in the Relationships section.**

Communication

5. **Please mark the degree to which you agree with each statement.** *
Mark only one oval per row.

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
I know what my principal expects of me at work.					
My principal communicates school policies clearly.					
My principal clearly communicates the school's vision.					
My principal clearly articulates how we will make the vision a reality.					
My principal clearly articulates how decisions are made, and the rationale for those decisions.					
My principal constantly feeds the team with information, and makes it easily accessible.					

6. **Optional: Please comment on any of your responses in the Communication section.**

Responsiveness

7. **Please mark the degree to which you agree with each statement.** *
Mark only one oval per row.

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
When I need to meet with my principal, I am able to meet with him/her in a timely manner.					
When I email/text/call my principal, I receive a timely response.					

8. **Please mark the degree to which you agree with each statement.** *
Mark only one oval per row.

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree	Not Applicable
When I communicate a problem or need to my principal, s/he makes a strong effort to address the problem or need.						
In the above situation (when I communicate a problem or need), my principal follows up with communication regarding next steps and/or progress in resolving the situation.						
In the above situation (when I communicate a problem or need), my principal follows through on the identified action steps.						

9. **Please mark the degree to which you agree with each statement.** *
Mark only one oval per row.

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
I have opportunities to give input on key site decisions.					
When I give input on site decisions, my opinions seem to count.					

10. **Optional: Please comment on any of your responses in the Responsiveness section.**

Leadership

11. **Please mark the degree to which you agree with each statement.** *
Mark only one oval per row.

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
My principal actively promotes ownership, responsibility, and personal accountability in the way that s/he involves staff in key initiatives and decisions in the team.					
My principal fosters diversity of viewpoints and experience, using difference to focus and foster clarity and understanding.					
My principal encourages me to try out new, innovative ways to do my work.					
My principal and my assistant principal work effectively as a leadership team.					

Supervision

If your principal is your evaluator, you will complete the Supervision section on the next page. If your principal is NOT your evaluator, you will skip to the General Feedback section.

12. **Is your principal your evaluator?** *
Mark only one oval.

- Yes *Skip to question 13.*
- No *Skip to question 15.*

Supervision, continued

13. **On average, how frequently does your principal observe you, coach you, and/or give feedback on your performance?** *
Mark only one oval.

- At least once a week
- Every other week
- Once a month
- Less than once a month

14. **Please mark the degree to which you agree with each statement.** *
Mark only one oval per row.

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
My principal's feedback is clear and direct.					
My principal's feedback is evidence-based.					
My principal engages me in a reflective process that builds my capacity to recognize my own strengths, areas for growth, and concrete next steps to strengthen my instruction.					
The activities/conversations I have engaged in with my principal have supported my professional growth.					

General Feedback

15. **The things my principal has done that are most helpful are…**

16. **The things my principal has done that are least helpful are…**

17. **Specific suggestions I have for my principal are:**

18. **Other comments:**

Survey Complete

Thank you for completing the EFC Principal 360 Survey!

Step 3: Conferencing (30-40 minutes)

Conference Video:

The conference will be video recorded.
Please place video camera close enough that we can hear and see both participants.
Please do not edit the video.
If you need to compress the video to get it on the thumb drive, consider using Handbrake or similar solutions.

Step 4: Post Conference Reflection

Complete right hand column in table in step 2

TNTP Core Classroom Walk-Through Tool

The TNTP Core Walk-Through Tool is a companion to the full TNTP Core Teaching Rubric and is aligned to the same vital performance areas. This tool can be used alone to guide peer-to-peer feedback, personal reflection and non-evaluative coaching. Observers who have experience with the TNTP Core Teaching Rubric may also use the Walk-Through Tool as a note-taking and feedback resource for all classroom observations.

When you visit a classroom, ask yourself the four Essential Questions and record your notes and/or evidence in the box below. A solid "yes" to an Essential Question merits at least a "4" rating.

1. Ineffective (Year 1: Entering)	2. Emerging	3. Developing	4. Proficient	5. Skillful

1. Are all students engaged in the work of the lesson from start to finish?

RATING: _____

2. Are all students working with content aligned to the appropriate standards for their subject and grade?

RATING: _____

What did you see students doing, reading and working with? What work do the grade-level standards call for?

3. Are all students responsible for doing the thinking in this classroom?

RATING: _____

4. Do all students demonstrate that they are learning?

RATING: _____

Follow-up Questions

What's keeping you from answering 'yes' to all four Essential Questions above?

What specific skill or technique will you and the teacher practice and develop over the next cycle?

Employee Handbook

2016-17

Table of Contents

I. WHO WE ARE

Introduction

As an Education for Change ("EFC") employee, you are an integral member of our team. Your dedication and commitment are the primary ingredients of our success as an organization and of the success of our students. We trust that you will find your employment with EFC to be both challenging and rewarding.

EFC recognizes that our strength as an organization lies in the quality of our employees and our ability to work together as a team to achieve our shared mission. We believe that each individual makes a profound and positive difference, not only in shaping the lives of our students, but also in contributing to the effectiveness of our Leadership Team. Toward this end, we encourage you to engage in open communication with the Leadership Team about any aspect of your employment with EFC.

Education for Change's History

Education for Change Public Schools ("EFC") was born in 2005 through a strategic partnership between the Oakland Unified School District and the education reform community. It was originally designed to become a charter management organization that would focus on converting existing OUSD Program Improvement schools to charter schools to provide the flexibilities and agilities of charter law to existing district public schools.

The designers of EFCPS operated under the belief that a laser-like focus on aligning curriculum implementation and improving instruction in Mathematics and English Language Arts was the most critical lever for improving student outcomes. EFC initially started with two schools, Achieve and Cox; over seven years, that laser-like focus translated into enormous gains with Achieve and Cox achieving API gains of over 200 points on the former state assessment (California State Test).

In 2012, Lazear Charter Academy, ASCEND, and Learning Without Limits, formerly OUSD schools, converted to become neighborhood charter schools as part of Education for Change. That same year, the EFC board passed a strategic plan to transition EFC from a K-5 school turnaround charter management organization to a preK-12 neighborhood transformation CMO. In 2014, as a response to community demand for a quality middle school, EFC developed its first brand new school, Epic Middle School, a Next Generation Learning Challenge school.

EFC's schools are heavily concentrated in two target neighborhoods – the Fruitvale and Elmhurst. EFC is currently the largest K-8 public school operator in the Fruitvale and serves over 3,000 TK-8 students in six schools throughout the Fruitvale and Elmhurst neighborhoods. We are committed to, over time, transforming the neighborhood by using educational opportunity and outcomes to empower the families and their children. In the short term, we will measure our impact through student outcomes, but over time, our impact will be measured by how many children in our target neighborhoods graduate from college.

Our Governance Structure

EFC is a California Non-Profit Public Benefit Corporation, and is a tax-exempt 501(c)(3) organization. All EFC schools operate as part of this single organization and all EFC employees are employees of this single non-profit corporation. While local school boards approve our charters, neither they nor the local school districts direct EFC's internal operating policies and procedures. EFC has the freedom to establish its own policies and procedures, as long as they comply with the EFC charters and applicable state and federal law.

The leader(s) of each school are the school Principal(s) and the entire school staff reports to the Principal(s). The principal, in turn, reports to the Chief Executive Officer of Education for Change or their designee. Each principal will work with and receive guidance on local issues from the Home Office, Parent Liaison, and the Parent Leadership Council, which include parents and community members

The EFC Board of Directors is responsible for governing the organization. The Trustees each have a personal fiduciary duty to look out for the long-term well-being of EFC. The Board is responsible for dealing with the strategic policies that affect the organization, as well as approving budgets, policies, and other important decisions. The Board is composed of a broad cross-section of the school community, the community-at-large, and professionals and community leaders.

Role of the EFC Home Office

The EFC Home Office provides support and assistance to each school, and helps disseminate EFC's values, programs, norms, and high standards. The Home Office focuses on:

- Facilitating learning across the community based on best practices, site innovation and research.
- Guiding school development, negotiating school district relationships, and building community partnerships.
- Providing centralized services and support, including professional development, curriculum development, financial management, enrollment-outreach, fundraising, human resources, recruiting, payroll, facilities development, government compliance, technology planning, and purchasing.

EFC combines Home Office coordination and oversight with significant school authority. Centralized functions have economies of scale and support our educational mission by enabling principals, teachers and school staff to focus on teaching, students and learning. The goal of the Home Office is to provide services to the schools far in excess of what a stand-alone charter school would be able to afford or acquire on its own.

Charter Schools Background

Charter schools are independent public schools with rigorous curriculum programs and unique educational approaches. In exchange for operational freedom and flexibility, charter schools are subject to higher levels of accountability than traditional public schools. Charter schools, which are tuition-free and open to all students, aim to offer quality and choice in the public education system. Charter schools can design their own innovative curriculum, hire their own staff, and control their own budget. They are publicly funded like other public schools.

When lawmakers passed the Charter Schools Act of 1992, California became the second state in the country (after Minnesota) to enact charter school legislation. The intent was to allow groups of educators, community members, parents, or others to create an alternative type of public school.

A charter school is generally exempt from most laws governing school districts, except where specifically noted in the law. For example, California public charter schools are required to participate in the statewide testing program. The law also requires that a public charter school be nonsectarian in its programs, admission policies, employment practices, and all other operations, and it prohibits the conversion of a private school to a charter school. Public charter schools may not charge tuition and may not discriminate against any person on the basis of ethnicity, national origin, gender, or disability.

The "charter" establishing each such school is a contract detailing the school's mission, program, goals, students served, methods of assessment, and ways to measure success. In California, charters are granted for five years. At the end of the term, the entity granting the charter ("authorizer") may renew the school's contract. EFC has schools authorized by both the Oakland Unified School District and the Alameda County of Education. Charter schools are accountable to their authorizer, and to the students and families they serve, to produce positive academic results and adhere to the charter contract.

II. THE EDUCATION FOR CHANGE WAY

Our Mission

The mission of Education for Change is to provide a superior public education to Oakland's most underserved children by creating a system of public schools that relentlessly focuses on our students' academic achievement. We believe that high quality instruction, and its continuous refinement, will lead to success for our students. When our students succeed, they will be prepared to make thoughtful and informed choices that will set them on a path for a successful life.

Our Values

At EFC, our values are the foundation for our organization. Just as we believe every adult within a school must be aligned around a common purpose and a shared set of goals to be successful, we also believe that our organization must be similarly aligned. Through a shared set of values, we will build one community of adults across multiple schools who share a common purpose. Our values are:

We collaborate. We are a team. We plan together, observe and analyze each other's work, collaborate with our coaches, and site leaders, partner with our families, and together make decisions about our programming.

We are a learning organization. We approach our practice with an inquiry stance and a growth mindset; we analyze, innovate, and iterate every day so that we continually improve. We believe in coaching and developing people at every level of experience, at every level of the organization.

We are solution-oriented. We approach every challenge with a problem-solving orientation. We listen to and encourage each other. We are resilient in the face of adversity.

We are accountable. Our mission is to provide a superior public education to Oakland's most underserved children. We assume personal accountability for student growth we analyze multiple form data, and that analysis drives our instruction.

We are student-focused. We form close relationships, utilize personalized learning, differentiate instruction, make learning culturally relevant, engage families, and provide individualized interventions to meet the needs of every child.

We listen. We are a small, responsive organization that values students, family, and employee voice and input.

We are rooted in community. Ours is a place-based strategy that works deeply with neighborhood leaders and partners to serve our children. We understand that the cultures, values, traditions, and assets that our families bring must be leveraged and honored to reach our children.

What Makes EFC Unique

EFC is an organization filled with passionate, thoughtful and driven leaders who stand together committed to excellent educational outcomes and equitable educational opportunities for every child in Oakland. There are a few aspects of EFC that make us unique:

Diverse Portfolio of Schools

- No strict academic model
- Schools have instructional programs unique to their site but adhere to EFC non-negotiables
- Flexibility facilitates and encourages innovation across the schools

Committed to Serving ALL Children

- Comprehensive system of academic, socioemotional, and behavioral interventions leveraging a nationally-recognized partnership with Seneca
- Neighborhood schools serving neighborhood children and families
- Powerful Special Education model that serves a diverse range of disabilities

- Personalizing learning to ensure every child receives what they need and they are empowered and meta-cognitive as learners

Neighborhood Transformation

- Place-based strategy that builds powerful preK-12 neighborhood pipelines that ultimately have the ability to transform neighborhoods
- Engage and empower parents as community leaders and partners to accelerate student learning and neighborhood transformation

Our Board, our leadership, and our stakeholders have come together around a strategic plan to grow from a K-5 network of schools to a preK-12 pipeline to college by rethinking our educational approach to personalize learning and accelerate academic outcomes; offering a diverse portfolio of school options to families in the neighborhoods we serve; and ensuring every EFC school is preparing ALL children to access and succeed in college and life.

EFC Non-negotiables

The EFC non-negotiables define what all sites are required to implement and the programmatic features that ultimately define the EFC culture. These non-negotiables are a result of strategic planning work and input from all staff.

EFC Non-negotiables

Coherent Instructional Model	Strong Teacher Development	Supporting the Whole Child
● Coherent, research-based, standards-aligned instructional model ● EFC standards-aligned benchmarks ● Grade-level coherence: instructional goals, content, instructional strategies, pacing ● Structures that support high levels of student engagement ● Rigor – higher levels of Bloom's taxonomy	● Structures that enable coaching, modeling, training, feedback ● Data-based inquiry ● Grade-level collaboration ● Teacher leadership/decision- making structure ● Appropriate levels of teacher planning time built into schedule	● Family leadership council ● RTI – research-based interventions at every tier ● School-wide culture policy with clearly communicated values and expectations and an aligned curriculum ● Structures and practices to promote physically healthy kids

School-Level Site Planning

Every year, each school must engage community and staff stakeholders to develop their site plan. Each school has the opportunity to refine their instructional programming within the parameters of the EFC non-negotiables, their specific charter, and their budget. Specific areas where staff members have input are:

Instructional Framework

Each school develops an Instructional Framework that outlines the school's vision for their instructional program in each content area as well as the strategic next steps towards that vision, including a professional development plan, detailed descriptions of the phases of instruction, and assessment plan. The approved instructional framework then drives the base and strategic investments described each year in the site plan.

Staff Feedback and Organization Participation

Employees (both classified and certificated) can apply to be part of the EFC Staff Leadership Council. The employees meet with the CEO once monthly and hear about new ideas and changes for the organization. This gives the CEO an opportunity to talk with employees directly about goals and concerns. It also gives employees an opportunity to express their opinions about issues and concerns and be part of problem solving within the organization. EFC Staff Leadership Council representatives are then expected to report back to the entire site after each meeting to ensure that employees are aware of decisions being made and can give their representatives their perspective. Please contact your Principal if you are interested in being a Staff Leadership Council representative for your site and job classification. Please see job description for further details.

Dine and Delve is another means for Home Office to employee communication link. Employees are invited to explore certain topics in depth and give suggestions for solutions and hear the thinking of the Home Office Team. **Please contact the Home Office if you need more information about Dine and Delve.**

Each grade level, department or circuit has a Grade Level Chair who is responsible for leading and facilitating all grade level meetings and activities. The Grade Level Chair meets regularly with the grade level team about math, language arts, ELD, school functions and reports to the Principal. The Grade Level Chair meets at least monthly with all the Grade Level Chairs as part of the site Instructional Leadership Team. Please contact your Principal if you are interested in serving as your Grade Level Chair. Please see job description for further details.

Budget

Each school develops a school site plan that aligns resources to the goals for the school for the upcoming year. Schools use the instructional program described in the Instructional Framework and their current data analysis to set goals and strategic investments for the upcoming year.

Hiring

Schools are able to hire the qualified teachers they feel will best implement the instructional program at that specific site. EFC feels that it is important for schools to be able to attract and retain the teachers that are passionate about and skilled at implementing the school's instructional model.

Calendar and Scheduling

Schools use the base EFC calendar to create their own school-specific calendar that outlines professional development days, parent conferences, school events, etc. In terms of scheduling, each school creates their own bell schedules that best meet the needs of the families and the instructional program. Both the bell schedule and calendar must ensure compliance with the state expectations for instructional minutes. Scheduling also includes the setting of prep schedules, specials schedules, etc.

Professional Development and Data Analysis

As a cornerstone for all EFC schools, staff professional development will be developed and conducted with the intent of creating collaborative, supportive, continuous learning environments at each school. Just as we encourage our students to achieve through high expectations and by providing the best educational services possible, we look similarly at building this same culture of achievement, support, and quality for our teachers.

The professional development calendar and schedule varies by school and is outlined in the school's Instructional Framework. Each school has some form of professional learning community or inquiry groups as an anchor for teacher professional development.

During the school year, staff development will continue through professional development days, whole staff meetings, and grade level team or department meetings. Additional staff development could include structured dialogues, conferences, workshops, school visits, peer observation and coaching, videotaping in the classroom, collaboration with partner organizations, or involvement in other projects designed to enhance one's professional skill and knowledge.

Data analysis is a critical component of our professional development model. Teachers are expected to analyze their data as part of a grade level process. Together they set goals, design instructional responses to the data, implement those instructional responses, monitor students' progress and then assess whether the grade level has met their goals on the following assessment.

Preparation and Collaborative Planning

Preparation time is time for teachers to prepare for their teaching. This can include cognitively planning lessons, preparing necessary materials, planning instructional responses to data, etc. This also is a time when teachers can meet with parents, schedule pre- and post-observation conferences, meet with colleagues, give student assessments, etc. Actual prep schedules are specific to each school site.

Collaboration time is critical to teacher development. Each school structures and schedules collaboration time based on its instructional model. Teachers are expected to attend the entire grade level meeting/professional learning community meeting/inquiry group meeting and to arrive on time for it. If for any reason, a teacher cannot attend the grade level meeting they must clear it through the Principal and alert the grade level chair that they will not be available.

III. CONDITIONS OF EMPLOYMENT

General Professional Expectations

As a charter and reform-minded community of schools, EFC requires staff roles to be different from some traditional schools. EFC teachers and administrators will, at times, assume and incorporate new roles such as student mentor, activity leader, peer coach, problem solver, and team member. It is important that each staff member be accountable for their actions so that the intricate web of school functions remains intact. A breakdown in any part of this web puts great strain on all members of the school community. The school expects all staff to be professionals. The following professional expectations are the basis for staff to recognize and develop those attitudes and responsibilities necessary to function as a member of EFC. EFC staff will:

- Practice professional and respectful discourse in all communications with each other, students, parents, other community members and school partners. Staff will strive to consider others' points of view when identifying and solving problems. Whenever possible, we should seek to understand before we seek to be understood. Assume good intentions.
- Wear appropriate professional attire. Our professional reputation and atmosphere is maintained, in part, by the image that we present to the students, parents and community.
- Be on time to school, class, meetings and other scheduled events.
- Follow meeting norms, office norms and other agreed-upon norms.
- Model appropriate leadership and respectful behavior at school and all school events.
- Strive to support each other. Staff should go to the source when there is a conflict and use the appropriate and agreed-upon measures for conflict resolution.
- Maintain confidentiality for sensitive and/or confidential issues involving students and other staff.
- Be honest (e.g., in communications and on employment documents and time reports).
- Collaborate to create a positive learning environment for all that is focused on teaching and learning.
- Help maintain a safe work environment, one free of workplace injuries. This includes, among other things, not coming to work under the influence of alcohol or illegal drugs, not possessing firearms or weapons at work, not engaging in physical aggression with any person at work, and not engaging in the willful destruction of property or material.
- Model punctuality and appropriate attendance for students.

EFC takes professional expectations seriously as we want to create a positive place to work and learn.

By accepting employment with Education for Change, you are considered a disaster service worker. In the event of a natural, manmade or war-caused emergency which results in conditions of disaster or extreme peril to life, property and resources, all employees of Education for Change are subject to disaster service activities as assigned to them by their supervisors.

Employment Status

First and Second Year: During the first two years of employment with EFC, employment is on a probationary basis. During this probationary term, the employee may be released from employment without cause if the employee is provided severance in the amount of one (1) month's salary. Annual non-renewal of employment will be on an at-will basis. This means either party may terminate employment at the end of a contract year without advance notice or cause.

Third Year:

During the third complete consecutive year of employment with EFC, the employee shall be offered a fixed-term employment agreement, where formal discipline (suspension without pay or dismissal) during the term of employment may only be for cause as defined herein. Annual nonrenewal of employment will be on an at-will basis. This means either party may terminate employment at the end of a contract year without advance notice or cause.

Fourth Year and Thereafter:

Employees offered a fourth year of consecutive employment or greater shall serve on a fixed term employment agreement where formal discipline (suspension without pay or dismissal) during the term of employment may only be for cause as defined herein. Annual nonrenewal of employment may only occur if the employee's annual final performance evaluation is unsatisfactory and EFC provides notice of non-renewal by May 15 of that school year.

Procedures for a For Cause Release

General Provisions

The following independently or collectively are causes for discipline:

- Discourteous or disrespectful treatment of others, including parents or staff.
- Conduct that is vulgar, obscene, threatening, intimidating, or harassing is not acceptable.
- Dishonesty, including any falsifying of employment records, employment information, or other School records;
- Theft or deliberate or careless damage or destruction of any School property, or the property of any employee or student;
- Unauthorized use of School equipment, time, materials, or facilities;
- Possession of any firearms or any other dangerous weapons on School premises at any time;
- Possession of any intoxicant on School grounds, including alcohol or controlled substances (unless such substances are supported by a valid prescription);
- Conviction of any felony or crime of moral turpitude;
- Insubordination, including but not limited to failure or refusal to obey the orders or instructions of a supervisor or member of management;
- Absence without leave, repeated tardiness or abuse of leave privileges;
- Unprofessional conduct; treat all clients, associates, visitors, and fellow employees in a respectful manner;
- Violating any safety, health, security or School policy, rule, or procedure or engaging in any conduct which risks injury to the employee or others;
- Engaging in conduct which constitutes a material conflict of interest;
- Committing of or involvement in any act of unlawful harassment of another individual;
- Failure to maintain appropriate credential(s) required for the position;
- Failure of good conduct either during or outside duty hours tending to injury the public service;
- Abandonment of position.

For Cause Suspension or Dismissal Process

Suspension or dismissal shall be initiated in writing by the Chief Executive Officer ("CEO") of EFC by providing Notice of Recommended Discipline ("Recommendation") and serving such Recommendation upon the employee in person or by certified mail. The Recommendation shall contain a statement, in ordinary language, of the factual basis upon which the disciplinary action is based, any rule or regulation alleged to have been violated, and the proposed penalty. The employee shall also be given a copy of any documentary materials upon which such action is based and a statement of the employee's right to respond, verbally and in writing, within five (5) working days prior to the proposed discipline being imposed, unless by agreement of both the CEO and the employee, this deadline is extended. Following this period, the CEO may provide Notice of Discipline to be served upon the employee in person or by certified mail.

If the employee wishes to appeal the imposition of disciplinary action to the Board of EFC, the appeal must be filed with the office of the CEO within five (5) work days from the time the Notice of Discipline is served on the employee. The appeal must be made in writing and delivered to the office of the CEO. The employee shall be entitled to appear personally before the Board to present any evidence or testimony to contest the Notice of Discipline. This appeal to the Board is not an evidentiary hearing. If the employee chooses to be accompanied by legal counsel at such meeting, the employee shall bear any cost therein involved. The employee shall be provided a written decision setting forth the decision of the Board.

During the pendency of any disciplinary proceedings, the Board reserves the right to place the employee on paid administrative leave.

Reference to or Reliance upon the Education Code

Provisions for certificated or classified discipline (suspension without pay or dismissal) which are enumerated in the California Education Code or interpreting case law do not apply to EFC.

The CEO or the Human Resources Designee/Manager and Principal jointly are the only representatives who have the authority to promise or enter into a written salary agreement or other employment contracts. To be enforceable, any commitment must be in writing and signed by both parties.

Salary agreements are generally made on an annual basis and are renewed in approximately May or June preceding the academic year. Staff members who do not intend to return to the school the following year should inform the Principal of that decision by April 1.

Job Duties

When you begin working at EFC, your supervisor will review your job responsibilities and the performance standards expected of you. Be aware that your job responsibilities may change at any time during your employment. From time to time, you may be asked to work on special projects, or to assist with other work necessary or important to the operation of your department or the organization. EFC depends on your cooperation and assistance in performing such additional work, and reserves the right to alter or change job responsibilities, reassign or transfer job positions, or assign additional job responsibilities.

School-site staff members are expected to attend all school arranged parent-teacher conferences, and to assume supervisory responsibilities at school events/activities. In addition, teachers are expected to share responsibility for attending Back to School Nights, Open House, Data Summits, other school-wide events, and participating on school committees.

We know that at times, the administrators will need to be away from the schools. In this case, the Principal appoints a Teacher in Charge who will act as principal in the absence of the administrators. The Teacher in Charge makes decisions for the administrators, except with regard to pupil suspension.

Work Schedule

Following are work schedule expectations for all staff. There are some staff members (e.g., receptionists, custodians) whose specific job requirements demand their presence at certain times. Part-time staff may have other hours, as determined by their supervisor. Occasionally, there will be events that require attendance at non-school times of the day or week, and staff members are expected to be present.

- **School Staff Arrival Time**

  School-site staff is expected to be at school every work day at least 30 minutes before school begins in order to be ready for classes or work, or at the time directed for other school events/responsibilities. Other school-site staff may be required to be on campus earlier because of their specific job responsibilities.

- **School Staff Departure Time**

  Unless otherwise indicated or required, teachers are expected to be at school until 4:00 p.m. daily. We expect teachers will do significant instructional preparation and coursework correction at other times and locations. Meetings, committees, tutoring and other responsibilities may require additional time at school. All other management staff (including Home Office staff) and administrators are expected to be at the school (or office) until 4:30 p.m., although later hours will be needed frequently. Supervisors will determine individual schedules.

- **Home Office Arrival and Departure Time**

  Home Office staff is generally expected to be in the office from 8:30 a.m. to 5:00 p.m. unless arrangements are approved by one's supervisor. Longer hours will be required as needed.

Meal and Rest Periods

The duty-free lunch period for teachers and other certificated employees required by Education Code Section 44813, shall not be less than 30 minutes. It shall be allowed as near noon as is reasonably possible.

If the principal leaves the school premises during his/her duty-free lunch period, he/she shall leave the assistant principal or other certificated employee in charge.

As required by law, non-exempt employees who work five (5) hours/day or more are entitled to a 30 minute unpaid meal period approximately in the middle of the day. Non-exempt employees are allowed a 10-minute paid rest period for every four hours of work. Non-exempt employees will be relieved of all active responsibilities during lunch periods and will not be compensated for that time. In addition, you may *not* work during your lunch period without prior authorization.

Documentation Required Prior to Employment

All EFC employees are responsible for submitting the following forms required either by our charters, insurance carriers, local law or state law: (a) a valid teaching certificate and transcripts for teachers; (b) a TB test; (c) fingerprints clearance; (d) employee benefit forms, if applicable; (e) a W-4 form; and (f) an I-9 Form. Other required forms are specified in our new hire checklist provided to new employees. In addition, all employees must consent to a background check as a condition of employment.

Equal Opportunity Employer

Education For Change is an equal opportunity employer and makes employment decisions on the basis of merit. EFC strives to hire the best available people for each job. EFC cultivates a work environment that encourages fairness, teamwork and respect among all employees. EFC is firmly committed to maintaining a work atmosphere in which people of diverse backgrounds and lifestyles may grow personally and professionally. EFC does not discriminate against employees and/or students based on their actual or perceived sex, gender, sexual orientation, gender identity or expression, race, color, ancestry, national origin, ethnic group identification, age, religion, marital or parental status, physical or mental disability or genetic information, characteristics, family care status, or any other class protected by federal, state, or local laws.

Staff should be aware that AB1266 amended Education Code 221.5 to clarify that students must be permitted to participate in sex-segregated school programs and activities, including athletic teams and competitions, and use facilities consistent with their gender identity, regardless of the gender listed in their student records.

EFC is committed to compliance with all applicable laws providing equal employment opportunities. This commitment applies to all persons involved in the operations of EFC and prohibits unlawful discrimination by any employee of EFC.

To comply with applicable laws ensuring equal employment opportunities to qualified individuals with a disability, EFC will make reasonable accommodations for the known physical or mental limitations of an otherwise qualified individual with a disability who is an applicant or an employee unless undue hardship would result.

Policy Against Unlawful Harassment

Education for Change (the "School") is committed to providing a work and educational atmosphere that is free of unlawful harassment. The School's policy prohibits sexual harassment and harassment based upon sex (including pregnancy, childbirth, breastfeeding or related medical conditions); race/color; religion (including religious dress and grooming practices); sexual orientation; gender perception or identity; national origin/ancestry; physical or mental disability; medical condition; marital status; age; military/veteran status; or any other basis protected by federal, state, local law, ordinance or regulation. The School will not condone or tolerate harassment of any type by any employee, independent contractor or other person with which the School does business with. This policy applies to all employee actions and relationships, regardless of position or gender. The School will promptly and thoroughly investigate any complaint of harassment and take appropriate corrective action, if warranted.

Prohibited Unlawful Harassment

- Verbal conduct such as epithets, derogatory jokes or comments or slurs;
- Physical conduct including assault, unwanted touching, intentionally blocking normal movement or interfering with work because of sex, race or any other protected basis;
- Retaliation for reporting or threatening to report harassment
- Deferential or preferential treatment based on any of the protected classes above.

Prohibited Unlawful Sexual Harassment

In accordance with existing policy, discrimination on the basis of gender in education institutions is prohibited. All persons, regardless of their gender, are afforded equal rights and opportunities and freedom from unlawful discrimination in education programs or activities conducted by the School.

The School is committed to provide a workplace free of sexual harassment and considers such harassment to be a major offense, which may result in disciplinary action, up to, and including dismissal, of the offending employee.

Sexual harassment consist of sexual advances, request for sexual favors and other verbal or physical conduct of a sexual nature when: (1) submission of the conduct is either made explicitly or implicitly a term or condition of an individual's employment; (2) an employment decision is based upon an individual's acceptance or rejection of that conduct; (3) that conduct interferes with an individual's work performance or creates an intimidating, hostile or offensive working environment.

It is also unlawful to retaliate in any way against an employee who has articulated a good faith concern about sexual harassment against him or her against another individual.

All supervisors of staff will receive sexual harassment training within six (6) months of their assumption of a supervisory position and will receive further training once every two (2) years thereafter. All staff will receive sexual harassment training and/or instruction concerning sexual harassment in the workplace as required by law.

Each employee has the responsibility to maintain a workplace free from any form of sexual harassment. Consequently, should any individual, in particular those with supervisory responsibilities, become aware of any conduct that may constitute sexual harassment or other prohibited behavior, immediate action should be taken to address such conduct. Employees and students are expected to act in a positive and professional manner and to contribute to a productive School environment that is free from harassing or disruptive activity. Any employee who believes they have been harassed or has witnessed harassment is encouraged to immediately report such harassment to their supervisor or the Chief Executive Officer ("CEO"). See Attachment B for the "Harassment Complaint Form."

Sexual harassment may include, but is not limited to:

- Physical assaults of a sexual nature, such as:
    - Rape, sexual battery, molestation or attempts to commit these assaults
    - Intentional physical conduct that is sexual in nature, such as touching, pinching, patting, grabbing, brushing against another's body, or poking another's body.

- Unwanted sexual advances, propositions or other sexual comments, such as:
    - Sexually oriented gestures, notices, remarks, jokes, or comments about a person's sexuality or sexual experience.
    - Preferential treatment or promises of preferential treatment to an employee for submitting to sexual conduct, including soliciting or attempting to solicit any employee to engage in sexual activity for compensation or reward or deferential treatment for rejecting sexual conduct.
    - Subjecting or threats of subjecting an employee to unwelcome sexual attention or conduct or intentionally making performance of the employee's job more difficult because of the employee's sex.

- Sexual or discriminatory displays or publications anywhere at the workplace by employees, such as:
    - Displaying pictures, cartoons, posters, calendars, graffiti, objections, promotional materials, reading materials, or other materials that are sexually suggestive, sexually demeaning or pornographic or bringing to work or possessing any such material to read, display or view at work.
    - Reading publicly or otherwise publicizing in the work environment materials that are in any way sexually revealing, sexually suggestive, sexually demeaning or pornographic; and
    - Displaying signs or other materials purporting to segregate an employee by sex in an area of the workplace (other than restrooms or similar rooms).

The illustrations of harassment and sexual harassment above are not to be construed as an all-inclusive list of prohibited acts under this policy.

Complainants and witnesses under these policies will be protected from further harassment and will not be retaliated against in any aspect of their employment due to their participation, filing of a complaint or reporting sexual harassment.

The School will investigate complaints promptly and provide a written report of the investigation and decision as soon as practicable. The investigation will be handled in as confidential a manner as possible consistent with a full, fair, and proper investigation.

Employees may also direct their complaints to the California Department of Fair Employment and Housing ("DFEH"), which has authority to conduct investigation of the facts. The deadline for filing complaints with the DFEH is one year from the date of the alleged unlawful conduct. If the DFEH believes a complaint is valid and settlement efforts fail, the DFEH may seek an administrative hearing before the California Fair Employment and Housing Council ("FEHC") or file a lawsuit in court. Both the FEHC and the courts have authority to award monetary and non-monetary relief in meritorious cases. Employees can contact the nearest DFEH office or the FEHC by checking the State Government listings in the local telephone directory.

Whistleblower Policy

Education For Change Public Schools is committed to lawful and ethical behavior in all its activities and requires board members, executives, directors and employees to act in accordance with all applicable laws, regulations and policies and to observe high standards of business and personal ethics in the conduct of their duties and responsibilities.

The objectives of Education for Change Public School's Whistleblower Policy are to establish policies and procedures to:

- Prevent or detect and correct improper activities.
- Encourage each board member, executive, director, and employee (reporting individual) to report what he or she in good faith believes to be a material violation of law, policy or questionable accounting or auditing matters by EFCPS.
- Ensure the receipt, documentation, retention of records, and resolution of reports received under this policy, protect reporting individuals from retaliatory action.

Reporting Responsibility

Each reporting individual has an obligation to report what he or she believes is a material violation of law, policy or any questionable accounting or auditing matter by Education for Change Public Schools, its officers, directors, executives, employees, or other representatives. Reporters must also notify Education for Change Public Schools if an action needs to be taken in order for Education for Change Public Schools to be in compliance with law, policy or with generally accepted accounting practices. The types of concerns that should be reported include, for purposes of illustration and without being limited to, the following:

- Providing false or misleading information on the Education for Change Public Schools financial documents, grant reports, tax returns or other public documents.
- Providing false information to or withholding material information from the Education for Change Public Schools auditors, accountants, directors or other representatives responsible for ensuring compliance with fiscal and legal responsibilities.
- Embezzlement, private benefit, or misappropriation of funds.

- Material violation of Education for Change Public Schools policy, including among others, confidentiality, conflict of interest, whistleblower, ethics and document retention.
- Discrimination based on race, gender, sexual orientation, ethnicity, and disability, or any other unlawful biases.
- Facilitation or concealing any of the above or similar actions.

Reporting Concerns

All Education for Change Public Schools Employees:

Whenever possible, employees should seek to resolve concerns by reporting issues directly to his/her manager or the next level of management as needed until matters are satisfactorily resolved. However, if for any reason an employee is not comfortable speaking to a manager or does not believe the issue is being properly addressed, the employee may contact the HR Director or Chief Executive Officer. If an employee does not believe that these channels of communication can or should be used to express his/her concerns, an employee may contact the Board of Directors within Education for Change Public Schools.

Handling of Reporting Violations

Except otherwise required by law, or as otherwise required by court order, Education for Change Public Schools will investigate all reports filed in accordance with this policy with due care and promptness. Matters reported internally without initial resolution will be investigated by the Chief Operating Officer or any Director to determine if the allegations are true, whether the issue is material and what actions, if any, are necessary to correct the problem. Education for Change Public Schools' staff will issue a full report of all matters raised under this policy to the Board of Directors. The Board of Directors may conduct a further investigation upon receiving the report from the CEO.

For matters reported directly to the Chairman of the Board of Directors, the Board of Directors shall promptly acknowledge receipt of the complaint to the complainant if the identity of the complainant is known and conduct an investigation to determine if the allegations are true and whether the issue is material and what, if any, corrective action is necessary. Upon the conclusion of this investigation, the Board of Directors shall promptly report its findings to all pertinent parties.

Authority of Investigative Parties

The Investigative Parties (any Chief or the Board of Directors) shall have full authority to investigate concerns raised in accordance with this policy and may retain outside legal counsel, accountants, private investigators, or any other resource that is necessary to conduct a full and complete investigation of the allegations.

No Retaliation

This Whistleblower Policy is intended to encourage and enable executives, directors, and employees to raise serious concerns within the organization for investigation and appropriate action. With this goal in mind, no executive, director, or employee who, in good faith, reports a concern shall be threatened, discriminated against or otherwise subject to retaliation or, in the case of any employee, adverse employment consequences as a result of such report. Moreover, an employee who retaliates against someone who has reported a concern in good faith is subject to discipline up to and including termination of employment.

Acting in Good Faith

Anyone reporting a concern must act in good faith and have reasonable grounds for believing the matter raised is a serious violation of law, policy or a materials accounting or auditing matter. The act of making allegations that prove to be unsubstantiated, and that prove to have been made maliciously, recklessly, with gross negligence, or with the foreknowledge that the allegations are false, will be viewed as a serious disciplinary offense and may result in discipline, up to and including termination of employment. Depending on the circumstances, such conduct may also give rise to other actions, including civil or criminal lawsuits.

Confidentiality

Reports of concerns, and investigations pertaining thereto, shall be kept confidential to the extent possible. However, consistent with the need to conduct an adequate investigation, Education for Change Public Schools cannot guarantee complete confidentiality. Disclosure of information relating to an investigation under this policy by staff, directors, or others involved with the investigation of Education for Change Public Schools to individuals not involved in the investigation may be viewed as a serious disciplinary offense and, with respect to Education for Change Public Schools' employees, may (on a case by case basis) result in discipline, up to and including termination of employment. Depending on the circumstances, such conduct may also give rise to other actions, including civil or criminal lawsuits.

Volunteers/Chaperones

EFC recognizes the importance of parent and community involvement in all aspects of our educational and extracurricular school programming. Volunteers contribute to the success of our schools and allow schools to expand many programs and activities. A volunteer is defined as someone who is not employed by EFC, and who, for no compensation, wishes to be involved in school activities or programs four (4) or more times during the school year.
EFC requires that:

1. Any volunteer who will be associated with any school program in any capacity and on a frequent basis during the year, and who may have regular and/or unsupervised contact with students, will submit fingerprints to allow for a criminal background check at the expense of the school. The volunteer may also need to complete a TB test depending upon the frequency/duration of the volunteer's visits to EFC. Administrators of each school will maintain records of volunteers and their number of visits to the school.
2. All volunteers comply with all polices and regulations set forth by the school or EFC that involve the safety of students, as well as have a signed "Volunteer Commitments & Oath" form on file with EFC.
3. All volunteers must sign in with the Office Staff when on school property.
4. All volunteers must work under the direction and supervision of a school employee.
5. All volunteers wear some form of proper identification (Volunteer Badge) visible to the entire staff and outside visitors.

Implementation:

- Volunteers must check in with the Office Manager and/or main office. Office Manager will monitor volunteer hours using a "Sign-in and out binder".
- Any volunteer who will be in schools and have significant and/or possibly unsupervised contact with students must be fingerprinted.

Fingerprinting and TB Test process:

- Office Staff provides a fingerprint/TB test packet to the volunteer. Packets can be found at the Home Office.
- Volunteer completes fingerprinting at the West Oakland location for appropriate billing
- Return at least one copy of the completed form to the Office Manager
- Return the original TB test results to Office Manager
- Office Manager maintains dated records for tracking purposes. For example, this may be a spreadsheet noting volunteer name, volunteer dates, TB test, and submission of fingerprints to EFC and DOJ results.
- EFC – HR Manager informs Office Manager of results and maintains confidential records
- EFC – HR Manager informs Principal of any updated DOJ information as it is available

Child Abuse Reporting Requirements

All EFC personnel are mandated reporters of suspected abuse and/or neglect. Mandated reporters must report suspected child maltreatment *immediately* when they have "reasonable suspicion to believe that a child who is 17 years of age or younger and known to them in a professional or official capacity has been harmed or is in danger of being harmed – physically, sexually, or through neglect – and that a caregiver either committed the harm or should have taken steps to prevent the child from harm."

EFC shall provide training to all personnel regarding the obligations as mandatory reporters and the steps required to report suspected abuse. AB 1432 requires annual training for all our employees. This training is provided as an on-line course using Lawroom.

California law requires that you acknowledge your understanding of child abuse reporting requirements and that you will comply with these laws. Child abuse is defined as a physical injury which is inflicted by other than accidental means, sexual abuse, willful cruelty or unjustifiable punishment, cruel or inhuman corporal punishment or injury, and negligent treatment or maltreatment under circumstances indicating harm, or threatened harm, to the child's health or welfare. The California Penal Code section and acknowledgement are in your employment materials and must be filed with the Home Office.

Transportation of Students

Student transportation shall be allowed only with advance Administrator level approval. Any EFC employee transporting students must have and provide to Administration a valid California Driver's License as well as proof of auto insurance. A copy of the driver's license and current proof of auto insurance is to remain on file in the Human Resource Department in the employee's file at the Home Office. Staff members are to complete the EFC expense reimbursement form in order to be reimbursed for mileage relating to student transportation (use Google Maps to document the mileage). Staff members are expected to keep the student seating area free of trash and personal items and must have appropriate restraint devices required by law in order to transport students. Staff and students are required to wear required restraints at all times (ie; seatbelts). Students are not permitted to eat in the vehicle. EFC staff members are expected to obey all DMV regulations while transporting students, including obeying posted speed limits and not texting and/or using an electronic device that requires hands while driving or participating in any activity that compromises safety. Staff members transporting students are expected to keep a first aid kit in the vehicle in case of an emergency (this can be provided by the school).

Accident Policy while transporting students

1. Pull to the side of the road when it is safe to do so, putting vehicle in park and turning off the engine.

2. Check yourself, students and other staff for injury. Provide first aid where necessary. Do not move an injured person if it is likely to cause further injury unless leaving the individual in the vehicle puts them at a higher risk (ie; car fire), then move the individual to safety.

3. Call 911 if there is serious injuries.

4. Call your immediate supervisor, giving them your location, phone number, license plate number and names of any individuals in the vehicles.

5. **If a second party is involved, call the police and make a police report. Do NOT admit fault!**

6. Obtain all pertinent driver information (ie; license plate, driver's license number, make/model and color of vehicle, insurance card (take a photo if possible).

7. Notify your insurance carrier immediately.

8. Fill out EFC incident report form.

9. Notify appropriate Home Office personnel.

Student Files

Student files are kept under the supervision of the School Office Manager. All files are confidential and may not be removed from the locked file cabinet without the express consent of the Office Manager. The school makes every attempt to access the cumulative files of every student, though it is often a lengthy process to obtain the information. When a student transfers out of EFC, the school will not release copies of the files without written notification from the requesting school.

Confidentiality and Proprietary Information

The security of EFC property is of vital importance to EFC. School property includes not only tangible property, such as desks and computers, but also intangible property such as data and information. All employees share responsibility to ensure that proper security is maintained at all times. In the course of your work, you may have access to confidential information regarding EFC, its students, its suppliers, its customers, or perhaps even fellow employees. You have responsibility to prevent revealing or divulging any such information unless it is necessary for you to do so in the performance of your duties. Access to confidential information should be on a "need-to-know" basis and must be authorized by your supervisor.

Technology and Security of Passwords

EFC has developed an email system, voice mail system, access to the Internet and other technology systems to assist employees in conducting EFC business. All information, data and messages created, received, sent or stored in these systems are, at all times, the property of EFC. These systems are to be used solely for business related purposes. EFC does not allow these systems to be used in creating, receiving, sending, or storing data that may reasonably be considered to be maliciously defamatory, obscene or harassing. EFC has software and systems in place that are capable of monitoring and recoding all community traffic to and from any computer employees may use. EFC reserves the right to inspect any and all files stored in all areas of the EFC community in order to assure compliance with this and other policies.

EFC relies on Illuminate, student information system, and other software to run mission critical functions of the school, such as student attendance, grades, scheduling, and transcripts. Each employee entrusted with a network ID and password, and/or access to Illuminate, must carefully protect the assigned passwords, regularly change the passwords used, and use non-obvious passwords to avoid unauthorized access to the system. When leaving a computer unattended, always lock the workstation or shut down the machine to avoid unauthorized access by others on your account. Employees must acknowledge their acceptance of EFC Acceptable Use Policy in order to use EFC technology resources.

Electronic Communications

This policy describes EFC's guidelines with regard to the use of electronic mail, voice mail, Internet access and computer systems. This policy covers all EFC systems including all individual equipment (e.g., stand alone computers and laptops). These systems are important assets of EFC and have been installed at substantial expense to facilitate business communications.

EFC respects the individual privacy rights of its employees; however, employee privacy does not extend to the employee's work-related conduct or to the use of our equipment or supplies. EFC operates under this policy for several reasons including: (1) to ensure that these systems are only used for business purposes; (2) to follow up on departing employees' work-in-progress; (3) to ensure that the confidentiality of these trade secrets is being preserved; (4) to monitor employee performance; (5) to maintain the systems; and (6) to monitor our customer service and relations with outside business. You should be aware that the following guidelines might affect your privacy in the workplace.

Although each employee may have individual passwords to access these systems, the systems belong to EFC and the contents are to be accessible at all times by management for any business purpose. The systems may be subject to periodic unannounced inspections, and should be treated like other shared filing systems. All systems passwords must be given to EFC management and you may not use passwords that are unknown to your supervisor or Human Resources Manager. Of course, these systems are intended solely for business use. Employees should inform family members and friends not to use the systems for any confidential messages (e.g., confidential voice mail or e-mail messages).

Do not assume that messages and files are confidential. EFC has the capability to access, review, and copy or delete any messages sent, received or stored on the systems. EFC reserves the right to access, review, and copy or delete all such messages for any purpose and to disclose them to any party (inside or outside of EFC) it deems appropriate. Back-up copies of electronic mail messages, voicemail messages and computer files are maintained and referenced for business and legal reasons.

These systems may not be used in any manner that would be discriminatory, harassing or obscene, or for any other purpose which is illegal, or against EFC policy. Employees are not permitted to access the electronic communications of other employees or third parties unless directed to do so by EFC management. Accessing another employee's electronic communications is strictly forbidden. EFC reserves the right to access and review files and messages and to monitor the use of electronic communications as is necessary to ensure that there is no misuse or violation of EFC policy or any law. Employees who misuse these communication systems will be subject to discipline up to and including termination.

Employees may not install personal software in EFC computer systems without prior written approval.

All electronic information created by any employee using any means of electronic communication provided by EFC is the property of EFC and remains the property of EFC.

Use of e-mail on the Internet to copy and/or transmit any documents, software or other information protected by copyright laws is prohibited.

Employees must exercise a greater degree of caution in transmitting EFC confidential information by e-mail than they take with other means of communicating information, (e.g., written memoranda, letters or phone calls) because of the reduced human effort required to redistribute such information. EFC confidential information should never be transmitted or forwarded to outside individuals or companies not authorized to receive that information and should not even be sent or forwarded to other employees inside EFC who do not need to know the information.

Always use care in addressing e-mail messages to make sure that messages are not inadvertently sent to outsiders or the wrong person inside EFC. In particular, exercise care when using distribution lists to make sure that all addresses are appropriate recipients of the information. Lists are not always kept current and individuals using lists should take measures to ensure that the lists are current. Refrain from routinely forwarding messages containing company confidential information to multiple parties unless there is clear business need to do so.

Access to the Internet, Web sites and other types of EFC-paid computer access are to be used for EFC-related business only.

Any EFC provided laptops or portable computers are covered by this policy at all times. They are not to be used by employees for personal business activity.

Also, EFC strives to maintain a workplace that promotes a culture of respect. Therefore, EFC prohibits the use of computers, access to the Internet, and the E-mail system in ways that are malicious, disruptive, offensive to others, or harmful to morale.

For example, the display or transmission of sexually explicit images, messages, and cartoons is not allowed. Other such misuse includes, but is not limited to, ethnic slurs, racial comments, off-color jokes, or anything that may be construed as harassment or showing disrespect for others.

E-mail may not be used to solicit others for commercial ventures or purchases, religious or political causes, outside organizations, or other non-business matters or fundraising not approved by the CEO.

Remember that EFC purchases and licenses the use of various computer software for business purposes and does not own the copyright to this software or its related documentation. Unless authorized by the software developer, EFC does not have the right to reproduce such software for use on more than one computer.

Employees may only use software on local area networks or on multiple machines according to the software license agreement. EFC prohibits the illegal duplication of software and its related documentation.

Employees should notify their supervisor or Human Resources Manager upon learning of violations of this policy.

Employees who violate this policy will be subject to disciplinary action, up to and including termination of employment.

Cell Phone Policy

Cell phones (including ear pieces) of any type may not be used in the classroom during instructional time. Cell phone usage, except for in the case of an emergency, should be limited to employee's break/lunch periods. Cell phone usage during times of student supervision is prohibited. If you have a camera-phone, you may not use the camera function in any areas where other employees and students may have an expectation of privacy (eg: restrooms, locker rooms). Also, EFC has the legitimate expectation that you will respect all confidential information when using your cell phone on EFC premises. Violation of either of these expectations may result in discipline up to and including release from employment.

News Media Contacts

Employees may be approached for interviews or comments by the news media. Only individuals specifically designated by the CEO or Principal may comment on behalf of EFC to news reporters regarding matters such as EFC policy or events relevant to EFC.

Personal Property

EFC is not responsible for any loss or damage that occurs to employees' personal property which is brought onto its premises, in vehicles or in parking areas. Employees are to use their own discretion when choosing to bring personal property to the workplace and do so at their own risk. Employees should take necessary precautions to protect their personal effects from theft, loss, or damage while on EFC premises.

Parking

Employees may park their vehicles in permissible public areas in the vicinity of EFC facilities. Employees may not use loading zones or parking areas specifically designated other vehicles. EFC is not responsible for any loss or damage to employee vehicles or contents while parked during EFC sessions, nor is it responsible for employees' parking violations. However, as a courtesy, EFC may reimburse up to $200 of cost to repair vehicle damage. Original receipts must be submitted for reimbursement.

Solicitation and Distribution of Literature

In order to ensure efficient operation of EFC's business and to prevent disruption to students and employees, EFC has established control of solicitations and distribution of literature unrelated to EFC business on EFC property.

Employees may not solicit or disturb other employees for any reason whatsoever during working time and may not circulate, distribute, or post notices or other written material of any kind during working time or in working areas. "Working time" is when an employee should be performing his or her job duties. Non-working time includes rest or meal periods, before or after assigned work shifts, and other specified periods, if any, during the work day when employees are not expected to be performing their job duties.

Persons not employed by EFC may not solicit nor distribute literature for any purpose at any time without the express authorization of the Principal or CEO.

Conflicts of Interest

All employees must avoid situations involving actual or potential conflicts of interest. Personal or romantic involvement with a competitor, supplier, or subordinate employee of EFC, which impairs an employee's ability to exercise good judgment on behalf of EFC, creates an actual or potential conflict of interest. Supervisor-subordinate romantic or personal relationships also can lead to supervisory problems, possible claims of sexual harassment, and morale problems.

An employee involved in any of the types of relationships or situations described in this policy should immediately and fully disclose the relevant circumstances to his or her immediate supervisor, or Human Resources Director, for a determination about whether a potential or actual conflict exists. If an actual or potential conflict is determined, EFC may take whatever corrective action appears appropriate according to the circumstances. Failure to disclose facts shall constitute grounds for disciplinary action.

EFC has no prohibition against hiring relatives of our staff members. However, to avoid potential conflicts of interest, relatives will not be hired, promoted, or transferred into positions in which there is a direct relationship between relatives. Relatives include the employee's spouse, children, parents, siblings, all in-laws, grandparents, grandchildren, stepparents, stepchildren, domestic partner, and any relative living in the household of the employee or domestic partner.

IV. WORKPLACE SAFETY

Health and Safety

The School is committed to providing and maintaining a healthy and safe work environment for all employees.
You are required to know and comply with the School's General Safety Rules and to follow safe and healthy work practices at all times.

You are required to report immediately to your supervisor any potential health or safety hazards, and all injuries or accidents.

In compliance with Proposition 65, the School will inform employees of any known exposure to a chemical known to cause cancer or reproductive toxicity.

Security Protocols

EFC has developed guidelines to help maintain a secure workplace. Be aware of unknown persons loitering in parking areas, walkways, entrances and exits and service areas. Report any suspicious persons or activities to security personnel or your supervisor. Secure your desk or office at the end of the day. When called away from your work area for an extended length of time, do not leave valuable or personal articles around your work station that may be accessible. The security of facilities as well as the welfare of our employees depends upon the alertness and sensitivity of every individual to potential security risks. You should immediately notify your supervisor when keys are missing or if security access codes or passes have been breached.

Occupational Safety and Health

EFC will comply with applicable state and federal laws and regulations relating to Occupational Safety and Health.

Any employee(s) shall report to the Principal, any possible health or safety hazards so that EFC may resolve any such circumstances.

EFC's employees do have the right to file anonymous OSHA complaints if they see a need that is not being addressed.

EFC agrees to take no retaliatory action against any employee for his/her actions in reporting possible health or safety hazards.

Accident/Incident Reporting

It is the duty of every employee to immediately, or as soon as is practical, report any accident or injury occurring during work or on EFC premises to the sites office personnel, so that arrangements can be made for medical or first aid treatment, as well as for investigation and follow-up purposes. Every employee must complete an incident report.

Reporting Fires and Emergencies

It is the duty of every employee to know how to report fires and other emergencies quickly and accurately. Employees should report any such emergency by calling management. In addition, all employees should know the local emergency numbers such as 911.

School Facilities and Security

EFC facilities are generally located in or near urban neighborhoods with higher than average crime rates. It is critically important that staff follow security procedures established for each school, and carefully protect keys, passwords, and other security related information.

Inspection of Property

In order to help ensure the health and safety of EFC students and staff, EFC reserves the right to inspect School premises, as well as of any of the personal property of its employees on School premises during work hours. An employee's consent to such a search is required as a condition of employment. By signing the acknowledgement of receipt of this Handbook, employees understand that they do not have a reasonable expectation of privacy with regards to EFC property and personal property while on EFC premises.

Drug Free Workplace

Employees are expected to remain drug free. "Drug free" shall be understood to mean free from the use of any illegal, non-physician prescribed drugs, alcohol, or other substances. Violation of this policy will not be tolerated. Use of these substances, whether on or off the job can detract from an employee's work performance, efficiency, safety, and health, and therefore seriously impair the employee's value to EFC. In addition, the use or possession of these substances on the job constitutes a potential danger to the welfare and safety of students and of other employees and exposes EFC to the risk of property loss or damage, or injury to other persons.

Employees shall not use, purchase, sell, transfer, or possess any form of illegal drugs or any type of drug paraphernalia on EFC property at any time or during working time in a professional capacity (e.g., with students) anywhere. Likewise, employees shall not possess or consume alcoholic beverages on EFC property or during work hours, including lunch and break periods. In addition, employees shall not report for work under the influence of drugs or alcohol.

Where a violation of this policy is suspected, an employee may be asked to submit to drug and alcohol screening and/or allow a search of his or her desk, work area, personal belongings, or vehicle. As stated earlier in this Handbook, an employee's consent to such a search is required as a condition of employment. Refusal to consent to a drug or alcohol screening or to allow a search of personal property will be considered to be insubordination and a basis for discipline, including possible release from employment. . In addition, EFC will decide, based on all other available information, whether a violation of the drug or alcohol prohibition in this policy has occurred. Such a violation, if found, constitutes a separate and independent basis for discipline or termination. EFC also may bring the matter to the attention of appropriate law enforcement authorities.

An employee's conviction on a charge of illegal sale or possession of any controlled substance while in the employment of EFC property will not be tolerated because such conduct, even while off duty, reflects adversely on EFC. In addition, EFC must keep people who sell or possess controlled substances off EFC premises in order to keep the controlled substances themselves off the premises.

Any employee who is using prescription or over-the-counter drugs that may impair the employee's ability to safely perform the job, or affect the safety or well-being of others, must notify a supervisor of such use immediately before starting or resuming work.

EFC will encourage and reasonably accommodate employees with alcohol or drug dependencies to seek treatment and/or rehabilitation. Employees desiring such assistance should request a treatment or rehabilitation leave. EFC is not obligated, however, to continue to employ any person whose performance of essential job duties is impaired because of drug or alcohol use, nor is EFC obligated to re-employ any person who has participated in treatment and/or rehabilitation if that person's job performance remains impaired as a result of dependency. Additionally, employees who are given the opportunity to seek treatment and/or rehabilitation, but fail to successfully overcome their dependency or problem, will not automatically be given a second opportunity to seek treatment and/or rehabilitation. This policy on treatment and rehabilitation is not intended to affect EFC's treatment of employees who violate the regulations described previously.

Rather, rehabilitation is an option for an employee who acknowledges a chemical dependency and voluntarily seeks treatment to end that dependency.

On occasion, the EFC CEO may authorize the use of EFC premises for celebrations or gatherings wherein alcohol is served. Employees participating in these gatherings are expected to show good judgment and reasonable behavior with respect to alcohol.

Lactation Accommodation

EFC will provide a reasonable amount of break time to accommodate an employee desiring to express milk for her infant child. The break time, if possible, must run concurrently with rest and meal periods already provided to the employee. EFC will make reasonable efforts to provide a room or other respectful location for an employee to express milk in private. This location may be a private room, if applicable. EFC may not be able to provide additional break time if doing so would seriously disrupt operations. Please speak to the Human Resources Director for additional information.

Employees' Children in the Workplace

Education for Change Public Schools strives to be a family-friendly employer that promotes healthy work-life balance. We are aware that many of our employees are also caregivers and parents and respect the challenges that arise when childcare emergencies or other unavoidable situations arise. However, EFC is liable for incidents involving employees' children in the workplace. Therefore,, the presences of children in the workplace is to be avoided whenever possible. If bringing a child to work with the employee is unavoidable, the employee must contact the principal/supervisor by email as soon as possible to discuss the situation and obtain permission to have the child accompany the employee while working. Factors the leadership will consider are the age of the child, how long the child needs to be present, the work environment in the employee's area, and any possible disruption to the employee's and co-workers' work. A child brought to the workplace in unavoidable situations will be the responsibility of the employee. Because of our liability, under no circumstances will an employee's child be allowed at a school site during school hours unless they are old enough (at least 10 years of age), to volunteer or assist in the classroom under the supervision of an employee. A child who is ill cannot be brought to the workplace at any time.

Recycling, Waste Prevention, and Conservation

EFC actively recycles as many materials as possible. Please place aluminum cans, glass, white paper, and envelopes in the proper recycling bins. Recycling containers are located near computer printers, copiers, and in the staffroom. Please do your part to prevent waste, conserve resources, and recycle reusable materials.

Workplace Violence

EFC is committed to providing a safe workplace. We want to minimize the risk of personal injury to employees and damage to property. We specifically discourage you from engaging in any physical confrontation with a violent or potentially violent individual. However, we do expect and encourage you to exercise reasonable judgment in identifying potentially dangerous situations and informing your supervisor or appropriate manager.

Smoking

Pursuant to California law, no smoking will be allowed in school facilities or at school-related activities. Employees choosing to smoke must do so only during their break and/or lunch periods, and must do so away from school facilities

V. COMPENSATION AND BENEFITS

Salary Basis Employee Classifications

For salary administration purposes and to determine eligibility for certain employee benefits, EFC assigns employees to one or more of the following employment categories:

10 Month Staff

10 Month Staff members typically work a 180-196 day work-year. School-Year staff typically does not have scheduled work days between the end of June and mid-August. This category generally includes all classroom teachers and some other school-site staff.

Payroll schedule and medical benefits run from September to August or August through July, depending on date of hire.

11 Month Staff

11 Month Staff members typically work from 200-214 days per year, depending on the position. These staff members typically do not have scheduled work days in the month of July. This category generally includes Reading Coaches and some other Intervention positions.

Payroll schedule and medical benefits run from July to June.

12 Month Staff/Year-Round Staff

Year-Round staff typically works a 12 month work year. This category includes all Home Office and other support staff such as school-site custodians. Site Office Managers and employees schedule to work 222 days are considered 12 month employees.

Payroll schedule and medical benefits run from July to June.

Full-Time Staff

Staff who are regular employees who are scheduled to work 8 hours per day and five days a week.

Part-Time Staff

Staff who are regular employees who regularly work less than 8 hours per day or less than five days per week.

Temporary Staff

Temporary staff is those working for less than 90 days. Temporary staff is not eligible for certain benefits, including health insurance, or paid time off.

Non-Exempt Staff (Eligible for overtime)

Under federal and state law, employees in certain types of jobs are entitled to overtime pay for hours worked in excess of eight (8) hours per day or forty (40) hours per workweek or for working seven consecutive days during the workweek. These employees are referred to as 'non-exempt' in this handbook. This means they are not exempt from (and therefore should receive) overtime pay. Supervisors will approve any overtime hours in advance and submit appropriate documentation for payroll purposes.

Salaried Non-Exempt Employees (Eligible for overtime)

Salaried Non-Exempt employees are generally salaried, i.e., not paid on an hourly basis, and eligible for overtime for hours worked over eight (8) hours per day or 40 hours in a week. Supervisors must approve any overtime hours in advance and will submit appropriate documentation for payroll purposes.

Exempt Employees (Not eligible for overtime)

Exempt employees include professional staff, teachers, supervisors, and executives, and others whose duties and responsibilities allow them to be exempt from overtime pay provisions. Exempt employees are paid on a salary basis, and their salary already takes into account that long hours are necessary at times. Change in employment status may result from a job change, promotion, a change in working hours, or a change in a job description.

Compensation

It is important to us that our compensation levels reflect the capabilities of our employees. It is EFC's objective to attract and retain talented and dedicated employees. EFC desires to pay all regular employees' wages and salaries that are competitive with other non-profit employers and local school districts. EFC has a teacher compensation system like that of traditional public school districts.

Classified employees' annual salary will be based on work experience and qualifications, and will be based on market rate salaries for similar positions. Classified employees will be paid on a semi-monthly basis and will be paid in twenty (24) equal monthly payments, less statutory and other authorized deductions.

Certificated employees (teachers only): compensation shall be determined based on the EFC Teacher Salary Schedule. Employees' annual salary will be based on verification of work experience and education-related courses and/or content courses related to the area of the teacher's credential and teaching assignment. and will be paid in twelve (12) equal monthly payments, less statutory and other authorized deductions. The employee understands that his/her position is exempt from overtime under State and Federal law and other applicable wage and hour laws. Until Employee submits appropriate verification, employee will be paid at the equivalent of Step 1, Column 1.

- **Column and Step Movement (Teachers only)**

  Official transcripts must be submitted by October 1st for fall movement and February 1st for spring movement. EFC does not retroactively adjust salaries due to incomplete transcripts or receiving late documents. The EFC teacher salary schedule reflects compensation based on the number of semester units completed after the issuance of a Bachelor's Degree. One quarter unit is equal to 2/3 of a semester unit. Credit is given for education-related courses and/or content courses related to the area of teacher's credentialing and teaching assignment. Courses taken outside of a USA institution must state the amount of hours completed.

  Completion of a program without hours specified will not be accepted for movement.

  - Teachers hired between September and December will receive step increases during the fall.
  - Teachers hired between January and March will receive step increases in February (Spring Semester).
  - Teachers hired between March and June will not receive a step increase until one school year of teaching experience. Example: If you are hired May 15, 2007 you would not move a step until the fall of 2008.

EFC does not reimburse for college course work taken during employment. Upper division courses to graduate maybe taken for column movement

- **Automatic Payroll Deposit**

  EFC requires automatic payroll deposit for all employees, either through a bank account or on the new Aline Visa card. To begin automatic payroll deposit, you must submit a direct deposit form and a cancelled check to the Home Office during the hiring process or be issued an Aline Visa Card . The automatic deposit should begin with the second payroll following the submission of your direct deposit information. Your paycheck will be deposited on or before the last business day of each month. Semi-monthly will be deposited on or before the 15th and on or before the last business day of each month.

  EFC has implemented the use of Aline Cards. These are Visa Cards that will be used in lieu of a checking accounts for direct deposit. Payroll deposits will be uploaded to the cards for the employees use. These Aline Cards are also available to any employee who is interested in using one. The card can be used in addition to your direct deposit. A designated amount would need to be indicated to be uploaded to the card. For more information, contact LaRayne Povlsen, in the HR/Payroll Dept lpovlsen@efcps.net.

- **Payroll Advance**

  A payroll advance may be granted to any regular employee when circumstances defined as unforeseen, unplanned and unavoidable require a staff member to secure funds on short notice and the employee has exhausted all other reasonable sources of financial relief. An employee may request 1 pay advance in a rolling 12 month period. Any additional pay advance requests must have CEO approval. Repayments must be made through payroll deductions.

Payroll Information

Paydays for certificated staff are generally scheduled on the last business day of each month. Your paycheck or pay statement will include an itemization of the various deductions required by law or authorized in writing by you. You should keep these statements for your personal records. Paychecks will be presented only to the named employee. Requests for special handling of your check in certain cases must be arranged in writing in advance with the Office Manager at the Site or the Home Office.

For non-exempt, hourly, temporary, or part-time employees on a semi-monthly pay schedule(including substitute teachers), as well as full-time employees performing approved extra duties, timesheets should be kept from the 1st of the month through the 15th of the month, then from the 16th day of the month through the last working day of the following month. Timesheets should be submitted to your supervisor for approval no later than the 15th, or last day of the month. Your supervisor will forward your approved timesheet to the Home Office for processing. Employees using time and attendance online, must clock in when they start their work schedule and clock out when they leave. If the employee is eligible for 30 minute unpaid lunch (working 5 or more hours), they must clock out for lunch and clock back in when they return from their lunch break.
If the 15th or the last day of the month falls on a weekend or holiday, timesheets should be submitted on the school day closest to the 15th and the last day of the month. You are responsible for accurately recording your time on your timesheet. Falsification of any time records is cause for disciplinary action, up to and including termination.

If you believe there is a mistake on your paycheck, notify the Payroll Analyst or Director of Human Resources/Payroll.

Reimbursement/Purchasing Policy

EFC will pay reasonable expenses incurred in the course of an employee's work. Employees must obtain approval prior to incurring expenses on behalf of EFC to ensure the expenses are within budgetary guidelines. In order to receive reimbursement, all costs should be itemized on an expense report, signed by your supervisor and accompanied by original receipts affixed to a full sheet of paper and submitted to the Home Office. Purchases made on behalf of EFC must be separated from personal items on the store receipt. All reimbursement reports must be completed in one calendar month of purchase.

EFC will reimburse employees for reasonable and necessary travel, accommodations, and other actual expenses incurred during the course of business travel. Use of an employee's personal automobile for company business will be reimbursed at the IRS-approved mileage reimbursement amount per mile after 'basic' miles are deducted. Basic miles are the number of round trip miles from home to your regular workplace.

Our EFC Operating Guidelines will contain more detailed information on our reimbursement and travel policies. If you have any questions about EFC's expense reimbursement policy, please contact your Principal, who is your liaison to the Home Office.

Employees requesting additional classroom supplies and/or instructional material must obtain approval prior to incurring expenses on behalf of EFC, to ensure the expenses are within budgetary guidelines.

Group Benefits

Education for Change is committed to providing competitive benefits. The following benefits are currently offered to those employees meeting eligibility requirements (e.g., those employees classified as Full-Time and/or Part-time who are working in excess of 30 hours per week). Education for Change does not provide for double coverage of health benefits for its employees. If spouses/domestic partners/or any dependent are both employed by Education for Change they have the option of either: 1) Individual separate coverage, or 2) being covered by spouse/domestic partner's plan. You are responsible for completing the necessary paperwork in a timely matter to ensure activation of your benefits. Also, please refer to the separate EFC benefits summary for more information. If there is any conflict between this handbook and the official Summary Plan Descriptions ("SPD"s) or plan documents, the official SPDs and/or plan documents will govern. As with all policies in this handbook, health care coverage may change at any time.

Health coverage runs consistently with your work term dates.

10 Month Employees: September – August or August –July, depending on date of hire.
11 Month Employees: July – June
12 Month Employees: July – June

- **Medical Insurance**

  Beginning October 1, 2015, HealthNet is no longer one of EFC's medical providers.

  Kaiser Permanente is our current medical provider. There are 3 different plan options within our Kaiser offering. EFC is continuing to offer our traditional HMO and HRA plan through Kaiser. The new plan with Kaiser is an HSA "Health Savings Account". Specific plan details are in the Benefits Guide booklet. The employees' cost share is 10% of the monthly premium. You will be given more information about the specific plans upon enrollment.

- **Dental Insurance**

  Dental benefits are provided by Delta Dental. The employees' cost share is 10% of the monthly premium. Specific details on this account are in the Benefits Guide booklet.

- **Vision Insurance**

  Vision benefits are provided by Vision Service Plan (VSP). The employees' cost share is 10% of the monthly premium. You will be given more information about the specific plans upon enrollment. VSP has added an additional benefit, TruHearing. All VSP members and their dependents have free access to ValueAdd Program, which offers an average 25% discount on hearing aids. Specific details on these accounts are in the Benefits Guide booklet.

- **Employee Assistance Program (EAP)**

  Employee Assistance benefits are provided by Concern-EAP. EFC currently covers the entire cost of the EAP plan for employees and their dependents. Specific details on this account are in the Benefits Guide booklet.

- **Flexible Spending Accounts (FSA)**

  Education for Change offers Flexible Spending Accounts to all employees. The plan year for Flexible Spending Accounts begins in July and runs through June. The different Flexible Spending Accounts are: Health Flexible Spending Account, Dependent Care Flexible Spending Account, and Commuter Benefits. Specific details on these accounts are in the Benefits Guide booklet.

- **Disability Insurance**

  All employees participate in California State Disability Insurance. The state designated amount is deducted from your paycheck.

- **Life Insurance**

  Life Insurance from Hartford is payable up to $30,000 in the event of your death, in accordance with the policy. You can indicate your beneficiary or beneficiaries by submitting the appropriate documents to Human Resources. You can change beneficiaries by submitting the change in writing.

- **COBRA**

  The federal Consolidated Omnibus Budget Reconciliation Act ("COBRA") gives you and your qualified beneficiaries the opportunity to continue health insurance coverage under our health plan when a "qualifying event" would normally result in the loss of eligibility. Some common qualifying events are: resignation, termination of employment, or death of an employee; a reduction in your hours or a leave of absence; your divorce or legal separation; and a dependent child no longer meeting eligibility requirements.

  Under COBRA, you or your beneficiary pays the full cost of coverage at our group rates, plus an administration fee.

You will be provided with a written notice describing your rights granted under COBRA when you become eligible for coverage under our health insurance plan. The notice contains important information about your rights and obligations.

Health Insurance Portability

Under the Health Insurance Portability and Accountability Act, you and your qualified beneficiaries are entitled to Certificates of Coverage from EFC when any of three circumstances are present. These Certificates allow you and your dependents to transfer from one employer health plan to another without starting a new pre-existing condition waiting period. The three conditions are:

- When you are no longer covered under the health plan, or you begin COBRA coverage (as in the case of extended leaves of absence or termination);
- At the time your COBRA coverage ends; and
- When a request is made within 24 months of termination of coverage.

The term "portability" does not mean you may take your specific health insurance policy from one job to another. It means that once you obtain health coverage, you will be able to use evidence of that insurance to reduce or eliminate any pre-existing medical condition exclusion period that might otherwise have been imposed on you when you move to another group health plan. Portability is designed to help people maintain coverage by giving them credit for having been covered previously.

You will be advised in writing of any pre-existing condition clause in your health insurance plan when you are hired. You may then request Certificate(s) from your previous employer (if applicable) to apply to your current plan. You may also request Certificate(s) from us under the conditions mentioned above when applicable.

Domestic Partners Coverage

EFC offers domestic partners insurance coverage. This policy gives you the opportunity to cover a long-term, significant non-spouse partner under our medical and dental plans. A domestic partnership will be recognized when it meets the provisions of Family Code Section 297 and when the couple has registered with the California Secretary of State.

Unemployment Compensation

Depending upon the circumstances, employees may be eligible for unemployment compensation upon termination of employment with EFC. Eligibility for unemployment compensation is determined by the State Employment Development Department and not by EFC.

Retirement

EFC currently offers one of two mandatory retirement programs (depending on your job description and status), and an additional voluntary retirement program available to all employees.

- **Which Retirement Plan?**

  Mandatory participation: Full time non-teaching staff is automatically enrolled in the Public Employee Retirement System ("PERS"). Teachers working greater than 50% of full time are automatically enrolled in the California State Teachers Retirement System ("CalSTRS" or "STRS"). Special regulations dictate the participation of foreign teachers. In addition, any teacher or substitute already enrolled in STRS through a previous job must participate in STRS while working at EFC.

Elective participation: Teachers working less than 50% of full time, who are not already members of STRS, can elect to participate in STRS. However, membership in STRS becomes mandatory if a teacher works more than 60 hours in any month. Similarly, substitute teachers who are not already members of STRS can elect to participate in STRS. Membership in STRS becomes mandatory for substitutes once they have served 100 days in any school year.

- **Public Employee Retirement System**

For eligible staff, EFC offers PERS, a "defined benefit" retirement plan which covers most California classified employees. Employees contribute based on their PERS designation (Classic 7%. Pepra 6%) of their salary, and EFC contributes 12.600% of the staff member's salary (these rates may change over time). PERS has a five year vesting period; once vested, members are eligible for retirement benefits based on a formula including the member's years of service and salary. Complete information on PERS is available at www.calpers.com.

Accrued sick time from previous employers maybe carried over to EFC within 90 days of initial employment. It is the responsibility of the employee to contact a previous employer to obtain official documentation that lists the sick balances of previous work years. If a previous employer needs authorization from EFC please contact the Human Resources Manager.

- **California State Teachers Retirement System**

For eligible staff, EFC offers STRS, a "defined benefit" retirement plan which covers most California public school teachers. Employees contribute based on their STRS designation (Classic 10.25%, Pepra 9.20%) of their salary, and EFC contributes 12.58% of the teacher's salary (these rates may change over time). STRS has a five year vesting period; once vested, members are eligible for retirement benefits based on a formula including the member's years of service and salary. Complete information on STRS is available at www.calstrs.com.

Accrued sick time from previous employers may be carried over to EFC. It is the responsibility of the employee to contact a previous employer to obtain official documentation that lists the sick balances of previous work years. If a previous employer needs authorization from EFC please contact the Home Office.

- **Voluntary Supplemental Retirement Plans – 403(b)**

EFC allows additional voluntary retirement plans for employees who wish to save additional money for retirement on a pre-tax basis. Participation is voluntary, and all employees are eligible to participate. Employees can specify a percentage of salary or a flat amount to be withheld from each paycheck (the IRS currently caps contributions at $18,000 for 2016). EFC does not contribute any matching funds to 403(b) accounts.

A limited list of 403B carriers is available for viewing. Specific details are in the Benefits Guide booklet.

- **Social Security**

EFC does not participate in federal Social Security for certificated staff members.

VI. EVALUATION AND RECORD KEEPING

Support, Evaluation and Intervention

The support, evaluation, and intervention process for EFC faculty and staff is constantly being improved. More than an evaluation process, it is a philosophy. This process considers all aspects of the person at work: from the teacher in the classroom to the colleague in the faculty meeting or the staff person at a school or in the Home Office. Home Office Staff will also use the same process adapted for administrative functions. The evaluation process will typically occur annually.

The philosophy is that all staff can improve and that the evaluator is a support provider as well as an evaluator. Asking for help is valued because it helps others help you, the employee.

Ongoing Support

EFC believes that being an educator is a professional role that can be enhanced through continued scholarship, collegial interaction, evaluation, goal setting, self-assessment, and involvement in educational work beyond the school.

EFC is committed to use faculty and staff development time to:

- Reflect on our own practice for improvement;
- Educate ourselves on current research and best practices; and
- Build collegiality through a structured system of collaborations, peer observations ("peer coaching") and other protocols.

Formal Certificated Evaluations

Formal evaluations for certificated staff occur once or twice each year, depending on the employee's job classification, years of experience, and previous year's evaluation ratings.

We purposely set the performance standard high as we believe that highly effective teachers are critical to the success of our students. We firmly believe that the most important resource that we can provide for each and every one of our students is a highly skilled teacher. EFC is an appropriate organization for teachers who recognize the depth and breadth of content and pedagogical knowledge necessary to perform at proficient and advanced levels and who are committed to their own continuous growth as professionals.

Formal Classified Evaluations

Formal evaluations for classified staff occur twice each year (once in the fall and once in the spring). The evaluation process is used to recognize high levels of performance and to help all employees continue to grow as professionals.

Evaluation Periods

Fall Window: August 24 – January 15 - Evaluations are due to the Home Office by January 13.

Spring Window: January 20 – May 20 – Evaluations are due to the Home Office by May 26.

Personnel Files

EFC maintains a personnel file on each employee. The personnel file includes such information as your job application, resume, records of training, documentation of performance appraisals and salary increases, and other employment records.

Personnel files are the property of EFC and are kept in a locked file. Access to the information they contain is restricted. Generally, only management personnel who have a legitimate reason to review information in a file are allowed access.

You may review your personnel records and your payroll records if you wish. If you would like to review these records, you should contact the Human Resources Manager. With reasonable advance notice, you may review your own personnel file in the School's offices and in the presence of the Human Resources Manager.

Any records containing medical information are kept in a separate file and they will not influence employment decisions about you without your permission.

EFC's records about you will not be disclosed in individually identifiable form to people or organizations outside EFC without your written approval unless disclosure is compelled for legal reasons. The only other exception will be to confirm you are or were an employee, the dates of your employment and your title or position. This information may be disclosed without your authorization in response to a request identifying you by name.

Changes in Status

All employees are required to notify the Administration office of any status changes including

a) Name
b) Address
c) Marital status
d) Number of dependents
e) Telephone number (home, work, cell)
f) Person to be notified in case of emergency
g) Loss of driver's license, or restriction(s) in driving privileges
h) Felony arrest or pending charges or convictions

The following changes can be made directly by the employee in their ADP self-serve account.

a) Name
b) Address
c) Telephone number
d) Person to be notified in case of emergency
e) Change to your direct deposit information-new account or additional account
f) Changes to federal exemption number (W-4)
g) In an effort to reduce paper usage this is where you will find your pay statements. You can print out your pay statements, W-2, when you need them.

General Policies Regarding Paid Time Off, Sick Days, and Personal Days

It is EFC's expectation that all employees make every effort to schedule appointments outside of regular work hours. In the event that is not possible to schedule a necessary appointment outside of regular hours, employees may use sick leave for medical appointments and request personal leave for other important appointments (i.e. court date or a residential emergency). Leave time is usually requested and used in half-day increments. Should you have a need for minimal amount of leave time during regular work hours your supervisor should be consulted to determine the best way to address the specific circumstances.

Staff must arrive at school, to class, and to meetings on time every day. We ask staff make every effort to avoid absences on days preceding or following school vacations or long weekends. We strongly discourage the families of EFC students from taking such days off, and it is important that we model the behavior we request. Similarly, since students are not allowed to attend an after-school activity on a day during which they have been absent, staff should avoid absences on days when their attendance is required after school.

Planned absences for medical and dental appointments are expected to be arranged, as much as possible, during non-school hours and must be taken on either half-day or full-day blocks.

The school staff has an obligation to make sure their responsibilities are covered, including arranging substitutes.

Observed Holidays

EFC observes the following 12 holidays for all staff:

New Year's Day
Martin Luther King Jr.'s Birthday
President's Day
Cesar Chavez Day
Memorial Day
Independence Day
Labor Day
Veteran's Day
Thanksgiving Day
Friday after Thanksgiving Day
Christmas Eve
Christmas Day

When a holiday falls on a Saturday or Sunday it is usually observed on the preceding Friday or the following Monday. Specific holiday observance will be announced in advance. Holidays are not counted as part of the work year.

Personal Necessity Days

All full-time employees are entitled to up to five paid personal days off per year. Teachers hired mid-year are eligible for pro-rated personal leave. Employees must notify their supervisors as early as possible of their intention to use a personal day. Supervisors must report employees' use of personal days to the Home Office. It should be clear to all employees that personal days are to be used only in cases of necessity.

Staff must request personal days (paid or unpaid) at least 48 hours in advance. Personal days must be approved by the employee's supervisor. Approval is subject to school/organizational needs (i.e., substitute availability, number of staff out, etc.) Approval is limited to two requests for a particular day at each school site, and then may be approved only after all other classes are covered and if the requesting teacher secures coverage of her/his classes, and submits the plan for coverage along with her/his substitute plans.

Paid personal days will not be approved for the day before or after vacations (including the day before or after a three day weekend) nor on Staff Development Days. In addition, it is recommended that personal days may not be used consecutively when school is in session. Exceptions may be granted with principal/supervisor's recommendation and final approval of the CEO.

If a faculty or staff member wants to take a personal day on the day before or after a vacation, he/she may request an unpaid personal day. A request for an unpaid personal day will be considered on a case by case basis. Any unused personal leave days shall be converted to accumulated sick leave at the end of each school year for returning staff and will be part of that year's carry-over calculation.

Sick Leave

To help prevent loss of earnings that may be caused by accident or illness,, or by other emergencies, EFC offers paid sick leave to its employees. Sick leave may be taken to receive preventive care (including annual physical or flu shots) or to diagnose, treat, or care for an health condition. Employees may also use sick leave to assist a family member (i.e., children, parents, spouse/domestic partners, grandparents, grandchildren, or siblings) who must receive preventative care or a diagnosis, treatment, or care for an existing health condition. Employees may also take sick leave to receive medical care or other assistance to address instances of domestic violence, sexual assault, or stalking. Such family-related sick leave usage is subject to all of the same conditions and restrictions which apply to each employee's use of earned sick leave for his or her own personal illness.

If an employee has no spouse or registered domestic partner, the employee may designate one (1) person that the employee may use paid sick leave to aid or care for that person in lieu of a spouse or registered domestic partner. On an annual basis, the employee shall make or change such designation.

All full-time employees who work a ten (10) month work calendar are entitled to ten (10) days paid sick leave per year, eleven (11) month employees who work an eleven (11) month calendar are entitled to eleven (11) days paid sick leave per year, and twelve (12) month employees who work a twelve (12) month calendar are entitled to twelve (12) days paid sick leave per year, granted at the beginning of the employment year. Employees classified as 10 month, 11 month, or 12 month employees ("Staff") working more than half-time are eligible for pro-rated sick leave. Staff hired mig-year are eligible for pro-rated sick leave. Accrued sick leave may carry over from year to year.

Non-exempt employees classified as "hourly" (hereafter "Hourly") shall accrue one (1) hour of sick leave for every thirty (30) hours of work. Hourly employees may accrue up to thirty-two (32) hours of sick leave per year. Accrued sick leave may carry over from year to year but shall not exceed seventy-two (72) hours.

All other employees classified as "substitutes" shall be credited with twenty-four (24) hours of sick leave at the beginning of the of each work year. Accrued sick leave may carry over from year to year and shall not exceed seventy-two (72) hours.

Paid sick leave is available to all school employees who work at least thirty (30) days within the span of a single calendar year from the commencement of employment. Employees cannot use paid sick leave until the ninetieth (90th) calendar day following the employee's start date. Sick leave must be taken by eligible employees in increments of two (2) hours.

Eligible employees will receive pay at their normal base rate for any sick leave taken. However, no employee will receive pay in lieu of sick leave for any granted but unused sick leave at the close of any calendar year or at the time of termination.

Once an employee has exhausted sick leave, the employee may continue on an unpaid medical leave depending upon the facts and circumstances of the employee's basis for leave beyond accrued sick leave Employee requests for unpaid medical leave must be approved in advance by the School.

Employees must notify their immediate supervisors of their need to take sick leave as soon as practicable and, in no event, no later than 30 minutes after their scheduled starting time.

If you are absent longer than three (3) days due to illness, medical evidence of your illness and/or medical certification of your fitness to return to work satisfactory to the EFCl will be required before the EFC honors any sick pay requests. EFC will not tolerate abuse or misuse of your sick leave privilege. If EFC suspects abuse of sick leave, EFC may require a medical certification from an employee verifying the employee's absence.

For members of STRS or PERS unused sick leave counts toward service credit for retirement purposes. Accrued sick time from previous employers may be carried over to EFC. It is the responsibility of the employee to contact a previous employer to obtain official documentation that lists the sick balances of previous work years. If a previous employer needs authorization from EFC, please contact the Home Office.

It is EFC's expectation that all employees make every effort to schedule appointments outside of regular work hours. In the event that is not possible to schedule a necessary appointment outside of regular hours, employees may use sick leave for medical appointments. Should you have a need for minimal amount of leave during regular work hours your supervisor should be consulted to determine the best way to address the specific circumstances.

Workers' Compensation/Industrial Illness Leave

EFC maintains a workers' compensation insurance policy for the benefit of all EFC employees with AmTrust North America. This policy provides compensation for lost wages and medical expenses resulting from an on-the-job injury or illness. It covers work-related injuries and illnesses only. The earnings benefit is provided only in those instances where the employee cannot immediately return to work as a result of his/her injury. Medical expenses are covered for any on-the-job injury that requires medical attention.

Any employee injured while performing work for EFC should report the incident immediately to his/her supervisor. The supervisor will complete an incident report and submit to the Home Office immediately. You are required to go to the EFC designated medical clinic to receive medical attention.

Workers' compensation coverage may be effective–upon the occurrence of a work-related injury; sick leave may be used during the waiting period.

It is important that all employees use caution on a daily basis while working. For example not using furniture for anything other than the purpose for what it was designed i.e. sitting on a table or standing on a chair.

Personal Unpaid Medical Leave

Any regular full-time employee who is temporarily disabled and unable to work due to a medical condition, will, upon request, be granted a leave of absence without pay for the period of his or her disability, provided such period shall not exceed 6 weeks, except where other laws require a greater leave entitlement. The term "medical condition" as used in this policy encompasses all temporary medical disabilities including, but not limited to, pregnancy, childbirth, and related medical conditions.

As soon as you become aware of a need for a medical leave of absence, you should request a leave from your supervisor in writing. A physician's statement must be provided verifying the beginning and expected ending dates of your leave of absence. Any changes in this information should be promptly reported to your supervisor.

Except where other laws require a greater leave entitlement, eligible employees are normally granted leave for the period of the disability, up to a maximum of 6 weeks. You must take any available paid sick leave or paid time off as part of the approved period of leave. If paid time off or sick leave is used, the paid and unpaid portions of the leave will be added together to total 6 weeks. You may also be eligible for State Disability Insurance ("SDI"). You may not apply for Paid Family Leave benefits for your own disability.

Subject to the terms, conditions, and limitations of the applicable plans, health insurance benefits will be provided until the first day of the month following the first full month of disability. After that time, you will become responsible for the full costs of these benefits if you wish coverage to continue. When you return from medical leave, benefits will again be provided by EFC according to the applicable plans. If you sustain a work-related injury or illness, you are eligible for a medical leave of absence for the period of disability in accordance with all applicable laws covering occupational disabilities.

Holiday benefits will be suspended and sick leave benefits will not continue to accrue during the approved medical leave period.

Please notify EFC at least two weeks before the date you will be able to return to your job. Prior to returning to your position, you must provide a written release from your doctor on or before your return date.

When a medical leave ends, every reasonable effort will be made to return you to the same position, if it is available, or to a similar position for which you are qualified. However, EFC cannot guarantee reinstatement in all cases.

If you fail to timely report to work at the end of the medical leave, we will assume that you have terminated your employment in accordance with the policies herein.

Family Care and Medical Leave

EFC complies with the federal Family and Medical Leave Act ("FMLA") and the California Family Rights Act ("CFRA"), and all applicable state and local laws regarding staff leave. FMLA/CFRA authorizes an eligible employee to take up to a total of twelve(12) workweeks of paid or unpaid job-protected leave during a "rolling" twelve(12) month period for specified family and medical reasons. For purposes of this policy, all leave taken under FMLA or CFRA will be referred to as "FMLA leave."

To be eligible for FMLA/CFRA leave, the employee must have been employed by EFC for at least 12 months and must have at least 1,250 hours of service preceding commencement of the FMLA leave.

Events That May Entitle An Employee To FMLA Leave

- To care for the employee's newborn child or a child placed with the employee for adoption or foster care.
  Leaves for this purpose must conclude 12 months after the birth, adoption, or placement. If both parents are employed by EFC, they will be entitled to a combined total of 12 weeks of leave for this purpose.

- Because of the employee's own serious health condition (including a serious health condition resulting from an on-the-job illness or injury) that makes the employee unable to perform any one or more of the essential functions of his or her job (other than a disability caused by pregnancy, childbirth, or related medical conditions, which is covered by EFC's separate pregnancy disability policy).

- To care for a spouse, domestic partner, child, or parent with a serious health condition.

  A "serious health condition" is an illness, injury, impairment, or physical or mental condition that involves: (1) inpatient care (i.e., an overnight stay) in a hospital, hospice, or residential medical care facility, including any period of incapacity or any subsequent treatment in connection with such inpatient care; or (2) continuing treatment by a health care provider.

- Leave due to the "active duty of a family member," which is leave due to a "qualifying exigency" arising out of the fact that the employee's spouse, domestic partner, child or parent is on active duty or has been notified of an impending call or order to active duty in the Armed Forces in support of a contingency operation;

- For service member family leave, which is leave taken by an employee to care for an injured “covered service member” when the employee is the spouse, domestic partner, child, parent or next of kin of that service member.

Pay During FMLA Leave

Family care and medical leave is unpaid; except to the extent that paid sick leave is substituted for family care or medical leave. An employee on FMLA leave because of his or her own serious health condition must use all accrued paid sick leave and may use any or all accrued paid personal time at the beginning of any otherwise unpaid FMLA leave period. An employee on FMLA leave for child care or to care for a spouse, domestic partner, parent, or child with a serious health condition may use any or all accrued sick leave/personal leave at the beginning of any otherwise unpaid FMLA leave.

All other FMLA leaves are unpaid leaves

The receipt of sick leave pay, or State Disability Insurance, or worker compensation benefits will not extend the length of the FMLA leave. Sick pay accrues during any period of unpaid FMLA leave only until the end of the month in which unpaid leave began.

Health Benefits

The provisions of EFC’s various employee benefit plans govern continuing eligibility during FMLA leave, and these provisions may change from time to time. The health benefits of employees on FMLA leave will be paid by EFC during the leave at the same level and under the same conditions as coverage would have been provided if the employee had been continuously employed during the leave period. When a request for FMLA leave is granted, EFC will give the employee written confirmation of the arrangements made for the payment of insurance premiums during the leave period.

Seniority

An employee on FMLA leave remains an employee and the leave will not constitute a break in service. An employee who returns from FMLA leave will return with the same seniority he or she had when the leave commence.

Medical Certifications

1. An employee requesting FMLA leave because of his or her own or a relative’s serious health condition must provide medical certification from the appropriate health care provider [on a form supplied by EFC]. Failure to provide the required certification in a timely manner (within 15 days of the leave request) may result in denial of the leave request until such certification is provided.

2. If EFC has reason to doubt the medical certification supporting a leave because of the employee’s own serious health condition, EFC may request a second opinion by a health care provider of its choice (paid for by EFC). If the second opinion differs from the first one, EFC will pay for a third, mutually agreeable, health care provider to provide a final and binding opinion.

3. Recertifications are required if leave is sought after expiration of the time estimated by the health care provider. Failure to submit required recertifications can result in termination of the leave.

Procedures for Requesting and Scheduling FMLA Leave

1. An employee should request FMLA leave by completing a Request for Leave form and submitting it to the HR Manager. An employee asking for a Request for Leave form will be given a copy of EFC's then-current FMLA leave policy.

2. Employees should provide not less than 30 days' notice or such shorter notice as is practicable, for foreseeable childbirth, placement, or any planned medical treatment for the employee or his/her spouse domestic partner, child, or parent. Failure to provide such notice is grounds for denial of a leave request, except if the need for FMLA leave was an emergency or was otherwise unforeseeable.

3. Where possible, employees must make a reasonable effort to schedule foreseeable planned medical treatments so as not to unduly disrupt EFC's operations.

4. If FMLA leave is taken because of the employee's own serious health condition or the serious health condition of the employee's spouse, domestic partner, parent or child, the leave may be taken intermittently or on a reduced leave schedule when medically necessary, as determined by the health care provider of the person with the serious health condition.

5. If FMLA leave is taken because of the birth of the employee's child or the placement of a child with the employee for adoption or foster care, the minimum duration of leave is two weeks, except that EFC will grant a request for FMLA leave for this purpose of at least one day but less than two weeks' duration on any two occasions.

6. If an employee needs intermittent leave or leave on a reduced leave schedule that is foreseeable based on planned medical treatment for the employee or a family member, the employee may be transferred temporarily to an available alternative position for which he or she is qualified that has equivalent pay and benefits and that better accommodates recurring periods of leave than the employee's regular position.

7. In most cases, EFC will respond to a FMLA leave request within two days of acquiring knowledge that the leave is being taken for an FMLA-qualifying reason and, in any event, within 10 days of receiving the request. If an FMLA leave request is granted, EFC will notify the employee in writing that the leave will be counted against the employee's FMLA leave entitlement. This notice will explain the employee's obligations and the consequences of failing to satisfy them.

Return to Work

1. Upon timely return at the expiration of the FMLA leave period, an employee (other than a "key" employee whose reinstatement would cause serious and grievous injury to EFC's operations) is entitled to the same or a comparable position with the same or similar duties and virtually identical pay, benefits, and other terms and conditions of employment unless the same position and any comparable position(s) have ceased to exist because of legitimate business reasons unrelated to the employee's FMLA leave.

2. When a request for FMLA leave is granted to an employee (other than a "key" employee), EFC will give the employee a written guarantee of reinstatement at the termination of the leave (with the limitations explained above).

3. Before an employee will be permitted to return from FMLA leave taken because of his or her own serious health condition, the employee must obtain a certification from his or her health care provider that he or she is able to resume work.

4. If an employee can return to work with limitations, EFC will evaluate those limitations and, if possible, will accommodate the employee as required by law. If accommodation cannot be made, the employee will be medically separated from EFC.

Limitations on Reinstatement

1. EFC may refuse to reinstate a “key” employee if the refusal is necessary to prevent substantial and grievous injury to EFC’s operations. A “key” employee is an exempt salaried employee who is among the highest paid 10% of EFC’s employees within 75 miles of the employee’s worksite.

2. A “key” employee will be advised in writing at the time of a request for, or if earlier, at the time of commencement of, FMLA leave, that he/she qualifies as a “key” employee and the potential consequences with respect to reinstatement and maintenance of health benefits if EFC determines that substantial and grievous injury to EFC’s operations will result if the employee is reinstated from FMLA leave. At the time it determines that refusal is necessary, EFC will notify the “key” employee in writing (by certified mail) of its intent to refuse reinstatement and will explain the basis for finding that the employee’s reinstatement would cause EFC to suffer substantial and grievous injury. If EFC realizes after the leave has commenced that refusal of reinstatement is necessary, it will give the employee at least ten (10) days to return to work following the notice of its intent to refuse reinstatement.

Employment During Leave

An employee on FMLA leave may not accept employment with any other employer without EFC’s written permission. An employee who accepts such employment will be deemed to have resigned from employment at EFC.

Pregnancy Disability Leave

This policy explains how EFC complies with the California Pregnancy Disability Act, which requires EFC to give each female employee an unpaid leave of absence of up to four (4) months, as needed, for the period(s) of time a woman is actually disabled by pregnancy, childbirth, or related medical conditions.

Employee Eligibility Criteria

To be eligible for pregnancy disability leave, the employee must be disabled by pregnancy, childbirth, or a related medical condition and must provide appropriate medical certification concerning the disability.

Events That May Entitle An Employee to Pregnancy Disability Leave

The four-month pregnancy disability leave allowance includes any time taken (with or without pay) for any of the following reasons:

1. The employee is unable to work at all or is unable to perform any one or more of the essential functions of her job without undue risk to herself, the successful completion of her pregnancy, or to other persons because of pregnancy or childbirth, or because of any medically recognized physical or mental condition that is related to pregnancy or childbirth (including severe morning sickness); or

2. The employee needs to take time off for prenatal care.

Duration Of Pregnancy Disability Leave

Pregnancy disability leave may be taken in one or more periods, but not to exceed four months total. “Four months” means the number of days the employee would normally work within four months. For a full-time employee who works five eight hour days per week, four months means 88 working and/or paid eight hour days of leave entitlement based on an average of 22 working days per month for four months.

Pregnancy disability leave does count against the FMLA leave, does not count against CRFA leave which may be available.

Pay During Pregnancy Disability Leave

1. An employee on pregnancy disability leave must use all accrued paid sick leave and may use any or all accrued personal time at the beginning of any otherwise unpaid leave period.
2. The receipt of sick leave pay, or state disability insurance benefits will not extend the length of pregnancy disability leave.
3. Sick pay accrues during any period of unpaid pregnancy disability leave only until the end of the month in which the unpaid leave began.

Health Benefits

The provisions of EFC's various employee benefit plans govern continued eligibility during pregnancy disability leave and these provisions may change from time to time. When a request for pregnancy disability leave is granted, EFC will give the employee written confirmation of the arrangements made for the payment of insurance premiums during the leave period.

Seniority

An employee on pregnancy disability leave remains an employee of EFC and a leave will not constitute a break in service. When an employee returns from pregnancy disability leave, he or she will return with the same seniority he or she had when the leave commenced.

Medical Certifications

1. An employee requesting a pregnancy disability leave must provide medical certification from her healthcare provider on a form supplied by EFC. Failure to provide the required certification in a timely manner (within fifteen (15) days of the leave request) may result in a denial of the leave request until such certification is provided.

2. Recertifications are required if leave is sought after expiration of the time estimated by the healthcare provider. Failure to submit required recertifications can result in termination of the leave.

Requesting And Scheduling Pregnancy Disability Leave

1. An employee should request pregnancy disability leave by completing a Request for Leave form and submitting it to her supervisor. An employee asking for a Request for Leave form will be referred to EFC's current pregnancy disability leave policy.
2. Employee should provide not less than thirty (30) days or as much notice as is practicable, if the need for the leave is foreseeable. Failure to provide such notice is grounds for denial of the leave request, except if the need for pregnancy disability leave was an emergency and was otherwise unforeseeable.
3. Where possible, employees must make a reasonable effort to schedule foreseeable planned medical treatments so as not to unduly disrupt EFC's operations.
4. Pregnancy disability leave may be taken intermittently or on a reduced leave schedule when medically advisable, as determined by the employee's healthcare provider.
5. If an employee needs intermittent leave or leave on a reduced leave schedule that is foreseeable based on planned medical treatment, the employee may be transferred temporarily to an available alternative position for which he or she is qualified that has equivalent pay and benefits that better accommodates recurring periods of leave than the employee's regular position.
6. In most cases, EFC will respond to a pregnancy disability leave request within two (2) days of acquiring knowledge that the leave qualifies as pregnancy disability and, in any event, within ten (10) days of receiving the request. If a pregnancy disability leave request is granted, EFC will notify the employee in writing and leave will be counted against the employee's pregnancy disability leave entitlement. This notice will explain the employee's obligations and the consequences of failing to satisfy them.

Return To Work

1. Upon timely return at the expiration of the pregnancy disability leave period, an employee is entitled to the same position unless the employee would not otherwise have been employed in the same position (at the time reinstatement is requested). If the employee is not reinstated to the same position, she must be reinstated to a comparable position unless there is no comparable position available, but filling that position with the returning employee would substantially undermine EFC's ability to operate the business safely and efficiently. A "comparable" position is a position that involves the same or similar duties and responsibilities and is virtually identical to the employee's original position in terms of pay, benefits, and working conditions.
2. When a request for pregnancy disability leave is granted to an employee, EFC will give the employee a written guarantee of reinstatement at the end of the leave (with the limitations explained above).
3. Before an employee will be permitted to return from a pregnancy disability leave of three days or more, the employee must obtain a certification from her healthcare provider that she is able to resume work.
4. If the employee can return to work with limitations, EFC will evaluate those limitations and, if possible, will accommodate the employee as required by law. If accommodation cannot be made, the employee will be medically separated from EFC.

Employment During Leave

An employee on pregnancy disability leave may not accept employment with any other employer without EFC's written permission. An employee who accepts such employment will be deemed to have resigned from employment with EFC.

Paid Family Leave (Wage Replacement Benefits)

Paid Family Leave ("PFL") does not create the right to a leave of absence but is part of the State Disability Insurance program which provides wage replacement benefits for eligible employees. California employees may file a claim for up to six (6) weeks of PFL benefits with the Employment Development Department ("EDD") within a 12 month period to take time off work to care for a child, spouse, parent or domestic partner or the child of a domestic partner with a serious health condition, or to bond with a newborn or a child under eighteen (18) who has been placed in their home by adoption or foster care. The plan will provide benefits of approximately 55% of lost wages after a 7-day waiting period. This leave is sponsored within the State Disability Insurance ("SDI") program and funded through employee contributions.

If you are eligible for either federal Family Medical Leave Act ("FMLA") and/or California Family Rights Act ("CFRA") leave, both of these leaves will overlap with your receipt of PFL benefits and you will be reinstated to the same position, or to a similar available position for which you are qualified. If you are not eligible for FMLA or CFRA, then reinstatement is not guaranteed.

PFL does not apply to your own illness or injury nor can benefits be applied to time off under medical leave, workers' compensation leave or pregnancy disability leave. Before collecting paid time off under Paid Family Leave, you must serve a seven (7)-day unpaid waiting period. If you have accrued unused personal leave, you may apply one (1) week to the otherwise unpaid waiting period. You may apply accrued but unused sick leave but are not required to do so.

Bereavement Leave

Bereavement leave of up to three (3) days with pay will be granted to regular employees, upon request and approval by the Human Resources Manager, in the event of a death of the employee's spouse, child, parent, parent-in-law, grandparent, grandparent-in-law, granddaughter, grandson, daughter-in-law, son-in-law, stepparent, domestic partner, brother, sister, brother-in-law, sister-in-law, stepchild, or domestic partner's child, and any relative living in the household of the employee or domestic partner. Upon request and approval, up to (5) days may be granted if travel of 200 miles or more are required. Personal days or non-scheduled days may be used in the event of a death of others not listed.

Time Off for School Children

Employees are encouraged to participate in the school activities of their child(ren). Parents, guardians, or grandparents having custody of schoolchildren are provided unpaid time off to participate in school or day care activities. EFC may require proof of your participation in these activities. You may use accrued personal leave or unpaid time off for this purpose. Please provide reasonable notice to your supervisor before taking time off for schoolchildren.

Military Leave of Absence

Any employee who is in any branch of the uniformed services or a similar government military operation may take military service leave for military duty for up to five (5) years. Advance notice is required to maintain such a leave status. Available time off may be used for the absence as military service leave is unpaid. For teaching staff a request must first be made to serve the time when school is not in session. Sick time and holiday benefits will not accrue during a military service leave.

Domestic Violence Crime Victims Leave

Victims of domestic violence and sexual assault may take time off work to obtain help from a court, seek medical attention, obtain services from a shelter, program, or crisis center, obtain counseling, or participate in safety planning. You may also assist a member of your immediate family who has been a victim. EFC may require proof of your participation in these activities. You may use accrued personal leave or granted sick leave or time without pay. When possible, give your supervisor reasonable notice.

Bone Marrow and Organ Donation Leave

Organ donation: A leave not exceeding 30 days to an employee who is an organ donor in any one-year period, for the purpose of donating his/her organ to another person.

Bone marrow donation: A leave not exceeding 5 days to an employee who is a bone marrow donor in any one-year period, for the purpose of donating his/her bone marrow to another person.

Jury and Witness Duty

Staff should notify their supervisor and the Home Office upon receipt of a jury summons. In order to maximize student education and school efficiency, staff must, whenever possible, request and use options such as on-call status or postponement to school vacation times such as summer. Staff is also expected to report to work as soon as the court releases them each day if there are any work hours left in the school day. EFC permits you to take the necessary time off and wishes to help you avoid any financial loss because of such service. Except as otherwise required by law, EFC will continue your salary or pay during jury service for a maximum of five business days. Beyond five days, non-exempt employees will serve jury duty on an unpaid basis and exempt employees will be paid for any week in which they do any work.

Staff required by law to appear in court as a witness may take personal days or unpaid days for such purpose. EFC requests that advance arrangements be made with their supervisor and the Home Office, and any necessary substitute plans are taken care of. Please submit a copy of your jury service verification to Home Office.

Leave for Volunteer Firefighters and Emergency Personnel

If you are a volunteer firefighter, reserve peace officer or other type of emergency rescue personnel, you are entitled to take up to fourteen (14) days off per calendar year to perform your duties, or to engage in fire or law enforcement training. Leave is unpaid but you may apply any accrued paid time off to your absence.

If you receive notice that you must report for duty prior to coming to work, or leave work after you have come to work, you must inform your immediate supervisor as soon as possible, stating the amount of time you expect to be gone, if possible. You are expected to come back to work as soon as you are able to do so.

Voting Time Off

You are encouraged to fulfill your civic responsibilities by participating in elections. Generally, employees are able to find time to vote either before or after their regular work schedule. If you are unable to vote in an election during your non-working hours due to your work schedule, we will grant you up to two (2) hours of paid time off to vote.

You should request time off to vote from your supervisor at least two (2) working days prior to the Election Day. Time off will be scheduled at the beginning or end of the workday, whichever provides the least disruption to the normal work schedule.

You must submit a voter's receipt to your supervisor on the first working day following the election to qualify for paid time off.

VIII. DISCIPLINE AND TERMINATION

Discipline and Rules of Conduct

Rules of Conduct

The following conduct is prohibited and will not be tolerated by EFC. This list of prohibited conduct is illustrative only and applies to all employees of EFC; other types of conduct that threaten security, personal safety, employee welfare and EFC operations also may be prohibited. If an employee is working under a contract with the School which grants procedural rights prior to termination, the procedural terms in the contract shall apply.

1. Insubordination - refusing to perform a task or duty assigned or act in accordance with instructions provided by an employee's manager or proper authority.
2. Inefficiency - including deliberate restriction of output, carelessness or unnecessary wastes of time or material, neglect of job, duties or responsibilities.
3. Unauthorized soliciting, collecting of contributions, distribution of literature, written or printed matter is strictly prohibited on EFC property by non-employees and by employees. This rule does not cover periods of time when employees are off their jobs, such as lunch periods and break times. However, employees properly off their jobs are prohibited from such activity with other employees who are performing their work tasks.
4. Damaging, defacing, unauthorized removal, destruction or theft of another employee's property or of EFC property.
5. Fighting or instigating a fight on EFC premises.
6. Violations of the drug and alcohol policy.
7. Using or possessing firearms, weapons or explosives of any kind on EFC premises.
8. Gambling on EFC premises.
9. Tampering with or falsifying any report or record including, but not limited to, personnel, absentee, sickness or production reports or records, specifically including applications for employment and time cards.
10. Recording the clock card, when applicable, of another employee or permitting or arranging for another employee to record your clock card.
11. Use of profane, abusive or threatening language in conversations with other employees and/or intimidating or interfering with other employees.
12. Conducting personal business during business hours and/or unauthorized use of telephone lines for personal calls.
13. Excessive absenteeism or tardiness excused or unexcused.
14. Posting any notices on EFC premises without prior written approval of management, unless posting is on an EFC bulletin board designated for employee postings.
15. Immoral or indecent conduct.
16. Conviction of a criminal act.
17. Engaging in sabotage or espionage (industrial or otherwise)
18. Violations of the sexual harassment policy.
19. Failure to report a job-related accident to the employee's manager or failure to take or follow prescribed tests, procedures or treatment.
20. Sleeping during work hours.
21. Release of confidential information without authorization.
22. Any other conduct detrimental to other employees or EFC's interests or its efficient operations.
23. Refusal to speak to supervisors or other employees.
24. Intentional dishonesty.

- **Staff Resignation Process**

  EFC may also consider that an employee has voluntarily terminated his or her employment if: (a) the employee fails to return from an approved vacation or leave on the date agreed upon; or (b) the employee fails to report for work without notice for three (3) consecutive days.

All EFC-owned property, including vehicles, computers, instructional materials, equipment, supplies, keys, security system fobs, uniforms, identification badges, and credit cards, must be returned immediately upon termination of employment.

IX. COMPLAINTS AGAINST PERSONNEL

Specific complaints of unlawful harassment are addressed under the School's "Policy Against Unlawful Harassment."

INTERNAL COMPLAINTS

(Complaints by Employees Against Employees)

This section of the policy is for use when a Charter School employee raises a complaint or concern about a co-worker.

If reasonably possible, internal complaints should be resolved at the lowest possible level, including attempts to discuss/resolve concerns with the immediate supervisor. However, in the event an informal resolution may not be achieved or is not appropriate, the following steps will be followed by the Chief Executive Officer ("CEO") or designee:

1. The complainant will bring the matter to the attention of the CEO as soon as possible after attempts to resolve the complaint with the immediate supervisor have failed or if not appropriate; and

2. The complainant will reduce his or her complaint to writing, indicating all known and relevant facts. The CEO or designee will then investigate the facts and provide a solution or explanation;

3. If the complaint is about the CEO, the complainant may file his or her complaint in a signed writing to the Chair of the Board of Directors of the School, who will then confer with the Board and may conduct a fact-finding or authorize a third party investigator on behalf of the Board. The Chair or investigator will report his or her findings to the Board for review and action, if necessary.

This policy cannot guarantee that every problem will be resolved to the employee's satisfaction. However, the School values each employee's ability to express concerns and the need for resolution without fear of adverse consequence to employment.

POLICY FOR COMPLAINTS AGAINST EMPLOYEES

(Complaints by Third Parties Against Employees)

This section of the policy is for use when a non-employee raises a complaint or concern about a Charter School employee.

If complaints cannot be resolved informally, complainants may file a written complaint with the office of the CEO or Board President (if the complaint concerns the CEO) as soon as possible after the events that give rise to the employee's work-related concerns. The written complaint should set forth in detail the factual basis for the employee's complaint.

In processing the complaint, CEO (or designee) shall abide by the following process:

1. The CEO or designee shall use his or her best efforts to talk with the parties identified in the complaint and to ascertain the facts relating to the complaint.

2. In the event that the CEO (or designee) finds that a complaint against an employee is valid, the CEO (or designee) may take appropriate disciplinary action against the employee. As appropriate, the CEO (or designee) may also simply counsel/reprimand employees as to their conduct without initiating formal disciplinary measures.

3. The CEO's (or designee's) decision relating to the complaint shall be final unless it is appealed to the Board of Directors of the Charter School. The decision of the Board of Directors shall be final.

GENERAL REQUIREMENTS

1. Confidentiality: All complainants will be notified that information obtained from the complainants and thereafter gathered will be maintained in a manner as confidential as possible, but in some circumstances absolute confidentiality cannot be assured.

2. Non-Retaliation: All complainants will be advised that they will be protected against retaliation as a result of the filing of any complaints or participation in any complaint process.

3. Resolution: The Board (if a complaint is about the CEO) or the CEO or designee will investigate complaints appropriately under the circumstances and pursuant to the applicable procedures, and if necessary, take appropriate remedial measures to ensure effective resolution of any complaint.

Open Door Policy

Suggestions for improving EFC are always welcome. At some time, you may have a complaint, suggestion, or question about your job, your working conditions, or the treatment you are receiving. We want to hear your good-faith complaints, questions, and suggestions. If you wish to raise an issue, please take the following steps:

- Bring the situation to the attention of your immediate supervisor, who will then investigate and provide a response or explanation.
- If the issue persists, you may describe it in writing and present it to the Human Resources Manager, who will investigate and provide a response or explanation. We encourage you to bring the matter to the Human Resources Manager as soon as possible after you believe that your immediate supervisor has failed to resolve it.
- If the issue is not resolved, you may present it in writing to the CEO, who will attempt to reach a final resolution.

This procedure, which we believe is important for both you and EFC, cannot guarantee that every problem will be resolved to your satisfaction. However, EFC values your observations and you should feel free to raise issues of concern, in good faith, without the fear of retaliation.

X. Uniform Complaint Policy

Scope

The Education for Change (the "Charter School") policy is to comply with applicable federal and state laws and regulations. The Charter School is the local agency primarily responsible for compliance with federal and state laws and regulations governing educational programs. Pursuant to this policy, persons responsible for conducting investigations shall be knowledgeable about the laws and programs which they are assigned to investigate. This complaint procedure is adopted to provide a uniform system of complaint processing for the following types of complaints:

(1) Complaints of discrimination against any protected group including actual or perceived, including discrimination on the basis of age, sex, sexual orientation, gender, ethnic group identification, race, ancestry, national origin, religion, color, or mental or physical disability, or on the basis of a person's association with a person or group with one or more of these actual or perceived characteristics in any Charter School program or activity; and

(2) Complaints of violations of state or federal law and regulations governing the following programs including but not limited to: special education, Title II, Section 504 of the Rehabilitation Act, consolidated categorical aid, No Child Left Behind, migrant education, career technical and technical education training programs, child care and development programs, child nutrition program.

The Charter School acknowledges and respects every individual's rights to privacy. Discrimination complaints shall be investigated in a manner that protects [to the greatest extent reasonably possible] the confidentiality of the parties and the integrity of the process. While the Charter School cannot guarantee anonymity of the complainant, this includes keeping the identity of the complainant confidential, as appropriate and except to the extent necessary to carry out the investigation or proceedings, as determined by the Chief Executive Officer ("CEO") or designee on a case-by-case basis.

The Charter School prohibits any form of retaliation against any complainant in the complaint process, including but not limited to a complainant's filing of a complaint or the reporting of instances of discrimination. Such participation shall not in any way affect the status, grades or work assignments of the complainant.

Compliance Officers

The Governing Board designates the following compliance officer(s) to receive and investigate complaints and to ensure the Charter School's compliance with law:

Hae-Sin Thomas
Chief Executive Officer
Education for Change
3265 Logan Street
Oakland, CA 94601
510-568-7936

The CEO or designee shall ensure that employees designated to investigate complaints are knowledgeable about the laws and programs for which they are responsible. Designated employees may have access to legal counsel as determined by the CEO or designee.

Notifications

The CEO or designee shall annually provide written notification of the Charter School's uniform complaint procedures to students, employees, parents/guardians, the Governing Board, appropriate private officials or representatives, and other interested parties.

The CEO or designee shall make available copies of the Charter School's uniform complaint procedures free of charge.

The notice shall:

1. Identify the person(s), position(s), or unit(s) responsible for receiving complaints.

2. Advise the complainant of any civil law remedies that may be available to him/her under state or federal discrimination laws, if applicable.

3. Advise the complainant of the appeal process pursuant to Education Code Section 262.3, including the complainant's right to take the complaint directly to the California Department of Education ("CDE") or to pursue remedies before civil courts or other public agencies.

4. Include statements that:

    a. The Charter School is primarily responsible for compliance with state and federal laws and regulations;

    b. The complaint review shall be completed within 60 calendar days from the date of receipt of the complaint unless the complainant agrees in writing to an extension of the timeline;

    c. An unlawful discrimination complaint must be filed not later than six months from the date the alleged discrimination occurs, or six months from the date the complainant first obtains knowledge of the facts of the alleged discrimination;

    d. The complainant has a right to appeal the Charter School's decision to the CDE by filing a written appeal within 15 days of receiving the Charter School's decision; and

    e. The appeal to the CDE must include a copy of the complaint filed with the Charter School and a copy of the Charter School's decision.

Procedures

The following procedures shall be used to address all complaints which allege that the Charter School has violated federal or state laws or regulations governing educational programs. Compliance officers shall maintain a record of each complaint and subsequent related actions.

All parties involved in allegations shall be notified when a complaint is filed, when a complaint meeting or hearing is scheduled, and when a decision or ruling is made.

- **Step 1: Filing of Complaint**

  Any individual, public agency, or organization may file a written complaint of alleged noncompliance by the Charter School.

  A complaint alleging unlawful discrimination shall be initiated no later than six months from the date when the alleged discrimination occurred, or six months from the date when the complainant first obtained knowledge of the facts of the alleged discrimination. A complaint may be filed by a person who alleges that he/she personally suffered unlawful discrimination or by a person who believes that an individual or any specific class of individuals has been subjected to unlawful discrimination.

  The complaint shall be presented to the compliance officer who shall maintain a log of complaints received, providing each with a code number and date stamp.

  If a complainant is unable to put a complaint in writing due to conditions such as a disability or illiteracy, Charter School staff shall assist him/her in the filing of the complaint.

- **Step 2: Mediation**

  Within three days of receiving the complaint, the compliance officer may informally discuss with the complainant the possibility of using mediation. If the complainant agrees to mediation, the compliance officer shall make arrangements for this process.

  Before initiating the mediation of a discrimination complaint, the compliance officer shall ensure that all parties agree to make the mediator a party to related confidential information.

  If the mediation process does not resolve the problem within the parameters of law, the compliance officer shall proceed with his/her investigation of the complaint.

  The use of mediation shall not extend the Charter School's timelines for investigating and resolving the complaint unless the complainant agrees in writing to such an extension of time.

- **Step 3: Investigation of Complaint**

  The compliance officer is encouraged to hold an investigative meeting within five days of receiving the complaint or an unsuccessful attempt to mediate the complaint. This meeting shall provide an opportunity for the complainant and/or his/her representative to repeat the complaint orally.

  The complainant and/or his/her representative shall have an opportunity to present the complaint and evidence or information leading to evidence to support the allegations in the complaint.

  A complainant's refusal to provide the Charter School's investigator with documents or other evidence related to the allegations in the complaint, or his/her failure or refusal to cooperate in the investigation or his/her engagement in any other obstruction of the investigation, may result in the dismissal of the complaint because of a lack of evidence to support the allegation.

  The Charter School's refusal to provide the investigator with access to records and/or other information related to the allegation in the complaint, or its failure or refusal to cooperate in the investigation or its engagement in any other obstruction of the investigation, may result in a finding, based on evidence collected, that a violation has occurred and may result in the imposition of a remedy in favor of the complainant.

- **<u>Step 4: Response</u>**

OPTION 1:

Unless extended by written agreement with the complainant, the compliance officer shall prepare and send to the complainant a written report of the Charter School's investigation and decision, as described in Step #5 below, within 60 days of the Charter School's receipt of the complaint.

OPTION 2:

Within 30 days of receiving the complaint, the compliance officer shall prepare and send to the complainant a written report of the Charter School's investigation and decision, as described in Step #5 below. If the complainant is dissatisfied with the compliance officer's decision, he/she may, within five days, file his/her complaint in writing with the Board.

The Board may consider the matter at its next regular Board meeting or at a special Board meeting convened in order to meet the 60 day time limit within which the complaint must be answered. The Board may decide not to hear the complaint, in which case the compliance officer's decision shall be final.

If the Board hears the complaint, the compliance officer shall send the Board's decision to the complainant within 60 days of the Charter School's initial receipt of the complaint or within the time period that has been specified in a written agreement with the complainant.

- **<u>Step 5: Final Written Decision</u>**

The Charter School's decision shall be in writing and sent to the complainant. The Charter School's decision shall be written in English and in the language of the complainant whenever feasible or as required by law.

The decision shall include:

1. The findings of fact based on evidence gathered.
2. The conclusion(s) of law.
3. Disposition of the complaint.
4. Rationale for such disposition.
5. Corrective actions, if any are warranted.
6. Notice of the complainant's right to appeal the Charter School's decision within fifteen (15) days to the CDE and procedures to be followed for initiating such an appeal.
7. For discrimination complaints arising under state law, notice that the complainant must wait until 60 days have elapsed from the filing of an appeal with the CDE before pursuing civil law remedies.
8. For discrimination complaints arising under federal law such complaint may be made at any time to the U.S. Department of Education, Office for Civil Rights.

If an employee is disciplined as a result of the complaint, the decision shall simply state that effective action was taken and that the employee was informed of the Charter School's expectations. The report shall not give any further information as to the nature of the disciplinary action.

Appeals to the California Department of Education

If dissatisfied with the Charter School's decision, the complainant may appeal in writing to the CDE within fifteen (15) days of receiving the Charter School's decision. When appealing to the CDE, the complainant must specify the basis for the appeal of the decision and whether the facts are incorrect and/or the law has been misapplied. The appeal shall be accompanied by a copy of the locally filed complaint and a copy of the Charter School's decision.

Upon notification by the CDE that the complainant has appealed the Charter School's decision, the CEO or designee shall forward the following documents to the CDE:

1. A copy of the original complaint.
2. A copy of the decision.
3. A summary of the nature and extent of the investigation conducted by the Charter School, if not covered by the decision.
4. A copy of the investigation file, including but not limited to all notes, interviews, and documents submitted by all parties and gathered by the investigator.
5. A report of any action taken to resolve the complaint.
6. A copy of the Charter School's complaint procedures.
7. Other relevant information requested by the CDE.

The CDE may directly intervene in the complaint without waiting for action by the Charter School when one of the conditions listed in Title 5, California Code of Regulations, Section 4650 exists, including cases in which the Charter School has not taken action within 60 days of the date the complaint was filed with the Charter School.

Civil Law Remedies

A complainant may pursue available civil law remedies outside of the Charter School's complaint procedures. Complainants may seek assistance from mediation centers or public/private interest attorneys. Civil law remedies that may be imposed by a court include, but are not limited to, injunctions and restraining orders. For discrimination complaints arising under state law, however, a complainant must wait until 60 days have elapsed from the filing of an appeal with the CDE before pursuing civil law remedies. The moratorium does not apply to injunctive relief and is applicable only if the Charter School has appropriately, and in a timely manner, apprised the complainant of his/her right to file a complaint in accordance with 5 CCR 4622.

School/Office of Alleged Violation: ____

For allegation(s) of noncompliance, please check the program or activity referred to in your complaint, if applicable:

☐ Adult Education ☐ Consolidated Categorical Programs ☐ Nutrition Services

☐ Career/Technical Education ☐ Migrant and Indian Education ☐ Special Education

☐ Child Development Programs

For allegation(s) of unlawful discrimination/harassment, please check the basis of the unlawful discrimination/harassment described in your complaint, if applicable:

☐ Age ☐ Ethnic Group Identification ☐ Religion

☐ Ancestry ☐ Gender ☐ Sex (Actual or Perceived)

☐ Color ☐ National Origin ☐ Sexual Orientation (Actual or Perceived)

☐ Disability (Mental or Physical) ☐ Race

☐ Based on association with a person or group with one or more of these actual or perceived characteristics

1. Please give facts about the complaint. Provide details such as the names of those involved, dates, whether witnesses were present, etc., that may be helpful to the complaint investigator.

XI. EMPLOYEE ACKNOWLEDGEMENT

PLEASE READ THE EDUCATION FOR CHANGE EMPLOYEE HANDBOOK AND FILL OUT AND RETURN THIS PORTION TO YOUR PRINCIPAL OR OFFICE MANAGER WITHIN ONE WEEK OF RECEIVING THE HANDBOOK. This Acknowledgement will be placed in the employee's personnel file.

I acknowledge that I have received and read a copy of the Education for Change Employee Handbook which outlines the policies, benefits and expectations of Education for Change, including my responsibilities as an employee.

I agree to abide by the rules, policies, expectations and standards set forth in the handbook. I also agree to the following Education for Change policies regarding: anti-harassment, discrimination policy, child abuse reporting, alcohol and drug abuse, and technology use.

I understand that this handbook is a general guide and does not constitute an employment agreement or a guarantee to continued employment. I also understand that the employer can make changes to this handbook at any time without notice.

SEXUAL HARASSMENT COMPLAINT FORM

It is the policy of EFC that all of its employees be free from sexual harassment. This form is provided for you to report what you believe to be sexual harassment, so that EFC may investigate and take appropriate disciplinary or other action when the facts show that there has been sexual harassment.

If you are an employee of EFC, you may file this form with the Director or Board President.

Please review EFC's policies concerning sexual harassment for a definition of sexual harassment and a description of the types of conduct that are considered to be sexual harassment.

EFC will undertake every effort to handle the investigation of your complaint in a confidential manner. In that regard, EFC will disclose the contents of your complaint only to those persons having a need to know. For example, to conduct its investigation, EFC will need to disclose portions of your factual allegations to potential witnesses, including anyone you have identified as having knowledge of the facts on which you are basing your complaint, as well as the alleged harasser.

In signing this form below, you authorize EFC to disclose to others the information you have provided herein, and information you may provide in the future. Please note that the more detailed information you provide, the more likely it is that EFC will be able to address your complaint to your satisfaction.

Charges of sexual harassment are taken very seriously by EFC both because of the harm caused to the person harassed, and because of the potential sanctions that may be taken against the harasser. It is therefore very important that you report the facts as accurately and completely as possible and that you cooperate fully with the person or persons designated to investigate your complaint.

Your Name: ____ Date: ___________________________
Date of Alleged Incident(s): ____
Name of Person(s) you believe sexually harassed you or someone else: ____________________
____
List any witnesses that were present: ____
____
Where did the incident(s) occur? ____

Please describe the events or conduct that are the basis of your complaint by providing as much factual detail as possible (i.e. specific statements; what, if any, physical contact was involved; any verbal statements; what did you do to avoid the situation, etc.) (Attach additional pages, if needed):

AUTHORITIES AND REFERENCES

Introduction

Purpose of the Plan

The purpose of the **Education For Change** (District) and **Learning Without Limits** (School) Emergency Operations Plan (EOP) is to identify those threats, vulnerabilities and hazards that pose a risk to the health and safety of students, employees and visitors; to District/ School property; as well as to the safe and orderly operation of the District/School. The EOP outlines responses to the identified risks that, along with the exercise of professional judgment, empowers employees and students to act quickly and appropriately in response to an incident. The plan is both a reference and educational tool in that it provides emergency response guidance and is the basis for training stakeholders in their roles and responsibilities before, during and after and emergency incident.

The guidelines and procedures for dealing with incidents, contained in the basic plan, functional annexes and incident specific annexes, provide an organized systematic method to prevent, mitigate, respond and recover from various types of incidents. Not every imaginable degree of risk can be covered in the plan, however the plan provides the basics which when coupled with the professional judgment of staff provides a basis for knowledgeable decision making in a wide variety of incidents. Employees and students should receive annual training in in the plan relative to their respective obligations and responsibilities for plan implementation.

Developing, maintaining and exercising the EOP is another way the District/School is meeting its moral, ethical and legal obligations to the school community. Districts and schools without established incident management plans have been held legally liable for damages resulting from the lack of a plan and/or training. While no plans or policies can totally eliminate the potential for legal liabilities, establishing procedures and guidelines on the best professional practices provides a margin of protection against legal liability.

This plan has been developed to further the primary goals of protecting the health and welfare of students, staff and visitors, protecting District/School property against damage and continuing the mission of educating our children.

Scope of the Plan

The District and School EOP outlines the expectations of staff/faculty; roles and responsibilities; direction and control systems; internal and external communications plans; training and sustainability plans; authority and references as defined by local and Federal government mandates; common and specialized procedures; and prevention/mitigation, preparation response and recovery associated with specific identified risks.

Definitions

Definitions of terms may vary owing to the context within which the term is used. In some emergency management publications certain terms may have more than one meaning or use. For the purposes of the EOP the following definitions will apply.

Threat:
A natural or human caused event, which could have a negative impact on the health and welfare of persons or result in the damage or destruction of property. Examples would include: Tornados; hurricanes; earthquakes; fires; transportation accidents; and, hazardous materials releases.

Hazard:
A naturally occurring or human caused condition that may be static or evolving which has the potential to have a negative impact on the health and welfare of persons or result in the damage or destruction of property. Examples would include: Broken sidewalks; overloaded electrical systems; a sinkhole; a beachside cliff; an untrained equipment operator.

Vulnerability:
Refers to weaknesses in, or lack of, systems, infrastructure, training, response capability or any other protective system or condition subject to exploitation by threats or hazards that might result in harm. Examples would include: Geographic location; flaws in information technology protection systems; inability to secure a premises; lack of training in the emergency operations plan; weakened infrastructure systems.

Risk:
Is a combination of the probability that an event or incident will occur; the possibility that it will impact assets (human, capital, material); and, the consequence of that impact. For example: California (geographical vulnerability)

has a high probability of earthquakes (threat) which could be strong (impacting assets) resulting in injury, death and property damage (consequence).

Incident:

An incident is an occurrence (natural, technological, or human-caused) that requires a response to protect life or property. The superintendent/principal/building administrator shall have the authority to determine when an incident has occurred and to implement the procedures within this Emergency Response Plan.

Board of Directors Policy Statement

It is the responsibility of District and School officials to use their best efforts to protect students and staff during an emergency situation. The plan takes an all-hazard approach based upon the four phases of emergency management: prevention – mitigation; preparedness; response; and recovery. In compliance with Homeland Security Presidential Directive 5, District and School utilizes the National Incident Management System (NIMS) and the Incident Command System (ICS) when responding to and managing emergencies.

There is no guarantee, either explicit or implied, that District and/or School will provide a sufficient response system. As personnel and resources may be overwhelmed, District and School can only endeavor to make every reasonable effort to respond to the situation.

Situation Overview / Hazard Analysis Summary

District Overview

Education For Change Public Schools (District) is a Charter Management Organization (CMO) that evolved through a strategic partnership between the State Administrator of the Oakland Unified School District and the Education Reform community. The District was originally designed to become a charter management organization that would focus on converting existing OUSD Program Improvement schools to charter schools to provide the flexibilities and agilities of charter law to existing district public schools. As of the writing of this EOP, the District oversees six (6) charter schools in the Oakland / Bay Area, including **Learning Without Limits** (School).

School Overview

The School's current enrollment is **419** students in grades **K** through **5**. The campus consists of **one main building plus an adjacent portable structure (pod) currently sharing the campus with an Oakland Unified School District school (Global Families) commonly known in the community as the "Jefferson Campus".** Employees on site consist of:

- **2** administrators
- **8** professional staff (nurse, psychologist, etc.)
- **4** office support staff
- **23** certificated teachers
- **6** instructional assistants
- **3** maintenance and custodial staff
- **3** cafeteria staff
- **0** staff from support organizations (not district employees)
- **8** regular volunteers (Reading Partners, Parent Volunteers)
- **1** student support staff (consultant, Positive Climate Coach)
- **7** after-school program staff (consultant, Oakland Leaf until 6 p.m.) See Appendix E for After-School Program Emergency Plan

Should we add Global Families Staff as additional information and contact numbers?

The master schedule, along with daily attendance, the student and visitors' sign in and out logs are maintained in the main office. Each classroom teacher maintains a daily attendance log for his/her class.

Special Needs Population

The District and School are committed to serving the needs of our students and staff with functional and access needs. The School's current population of students and staff with special needs is **23 students** with IEP's (Individual Educational Plan) **and 0 staff Unconfirmed**. This number could increase should students or staff members suffer a temporary disabling condition.

This population includes students and staff with:

- Limited English proficiency (Spanish)
- Visual disabilities
- Cognitive or emotional disabilities
- Hearing disabilities
- Speech disabilities
-
- Mobility/physical disabilities (permanent or temporary)
- Medically fragile health (including asthma and severe allergies)

- **Mariah Iniguez, Insulin Dependent**

Per mom, Mariah carries enough insulin with her at all times to get through 48 hours.

First check: 10:15am (if low or high recheck in 15min.) report number to mom and follow her instructions.

Lunch check: 12:20pm find out planned lunch carb intake, supervise while MI enters numbers. Pump dispenses insulin accordingly. Stay in communication with mom throughout the check. Make sure MI does not consume any other food.
Afternoon check on MTTh prior to dismissal.

Primary: Lee Butler
Backup 1: Sierra Thai-Binh
Backup 2: Katie Ruffman
Also trained to support checks:
Manuel Herrera and Samantha Aubry

- **Amari Aubry, severe food allergies, Epipen required**
- **Abel Maldonado, severe food allergies, Epipen required**
- **Chayanne Hugly, severe food allergies, Epipen required**
- **Kimari Hodges,severe food allergies, Epipen required**

There is one Epipen in the office and each teacher has an additional Epipen for Amari, Abel and Chayanne. Parents will supply with a food kit for each student to be placed in the container.

Building Information

The School is located on a **4.3 acre** lot and includes **two schools with a total building footprint of 72,000 sq ft. 41 classrooms, 1 room used as classroom, 1 library room, 2 multi-purpose rooms (cafeterias), 21 admin/office/conference room.**

Site maps showing evacuation routes, assembly areas, command post location (primary and alternate), emergency supplies storage, utility shut offs, access gates for fire apparatus, mass casualty triage area constitute **Appendix A.**

Threat, Vulnerability and Hazard Summary

The District and School are exposed to many hazards, all of which have the potential for disrupting the school community, causing casualties, and/or damaging or destroying personal and school property.

District and School staff members and members of the school community engage in a structured process to identify and prioritize the risk posed by those threats, vulnerabilities and hazards which are likely to impact the District and/or School.

This process includes an assessment of the buildings' (interior and exterior) and grounds of the site to identify hazardous conditions.

The following table identifies threats, vulnerabilities and hazards that may affect the District and/or School.

Identified Threats, Vulnerabilities and Hazards

Earthquake	An earthquake is the most likely disaster to occur in the greater Bay Area. Alameda County and the City of Oakland are at high risk for significant earthquake related damage.
Incident of Targeted Mass Violence	In today's world, no organization amassing tens if not hundreds of employees and pupils in a single or multiple locations can ignore the possibility of an attacked mounted against the organization or members thereof.
Fire	Annually, more than 5,000 fires occur in schools across the United States with the majority occurring during the school day. Proper prevention and mitigation measures combined with effective response protocols has resulted in not a single death in a school fire since 1958. Maintaining these efforts is imperative to school safety.

Intruder	An intruder is any person who comes upon the school grounds with the intent to or after entry engages in any conduct that threatens the health and safety of any person/s or disrupts the safe and orderly operation of the school. This includes persons who enter school grounds during non school hours and misuse, vandalize or steal school property. At the very least, intruders cause an emotional disruption to the good order of the school.
Hazardous Materials Incident	Hazardous materials incidents may range from accidental spillage of cleaning solutions and lab chemicals to incidents involving hazardous material pipelines and transportation accidents.
Terrorism	Once thought a foreign problem, terrorism is now a domestic threat. It is not out of the question for a terrorist (individual or organization) to make a political or religious statement by attacking a defenseless school. More likely would be an attack on a public venue hosting school children or an attack in the school's neighborhood in which the school suffers collateral damage.

This is where the District/School uses the Risk Index, Threat and Vulnerability Assessment identification rating forms and the site assessment to identify threats, vulnerabilities and hazards and rank the risk. From this list the table is completed.

Prevention, Mitigation and Preparedness Overview

Prevention includes actions to avoid an incident or to intervene to stop an incident from occurring. District/School is committed to taking proactive prevention measures whenever possible to protect the safety and security of students and staff and prevent lose or damage to property.

Mitigation includes activities to reduce the loss of life and property from natural and/or human-caused disasters by avoiding or lessening the impact of a disaster and providing value to the public by creating safer communities.

Preparedness is achieved and maintained through a continuous cycle of planning, organizing, training, equipping, exercising, evaluating, and taking corrective action. Ongoing preparedness efforts require coordination among all those involved in emergency management and incident response activities. District/School fosters preparedness at all levels including students, parents, teachers, and staff. Examples of preparedness actions include maintaining this plan, conducting training, planning and implementing drills and exercises, etc.

Planning Assumptions and Limitations

Planning Assumptions

Stating the planning assumptions allows the District and School to deviate from the plan if certain assumptions prove not to be true during operations. The EOP assumes:

- The District/School community will continue to be exposed and subject to hazards and incidents described in the Threat, Vulnerability and Hazard Summary, as well as lesser hazards and others that may develop in the future.

- A major disaster could occur at any time, and at any place. In some cases, dissemination of warning to the public and implementation of increased readiness measures may be possible; however, many emergency situations occur with little or no warning.

- A single site incident (e.g., fire, gas main breakage) could occur at any time without warning and the employees of the school affected cannot, and should not, wait for direction from local response agencies. Action is required immediately to save lives and protect school property.

- Following a major or catastrophic incident, the district/school may have to rely on its own resources to be self-sustaining for up to 72 hours.

- There may be a number of injuries of varying degrees of seriousness to faculty, staff, and/or students. Rapid and appropriate response will reduce the number and severity of injuries.

- Outside assistance from local fire, law enforcement, and emergency managers will be available in most serious incidents. Because it takes time to request and dispatch external assistance, it is essential for the school to be prepared to carry out the initial incident response until responders arrive at the incident scene.

- Proper prevention, mitigation and preparedness actions, such as creating a positive school environment and conducting fire inspections, will prevent or reduce incident-related losses.

- Maintaining the District and School EOP and providing frequent opportunities for stakeholders (staff, students, parents, first responders, etc.) to exercise the plan can improve the school's readiness to respond to incidents.

- A spirit of volunteerism among students and families will result in their providing assistance and support to incident management efforts.

- District/School recognizes that during an incident or disaster the District/School will maintain responsibility for its employees and pupils regardless of the agency that has assumed command of the situation.

- Per Government Code § 3100 – 3109: All government employees are disaster workers and subject to "such disaster service activities as may be assigned to them by their superiors or by law."

- The District/School recognizes that some employees are responsible for the care and safety of infirm or disabled family members who, in an emergency, will be unable to provide for their own welfare and/or safety. The District/School may identify these employees and, after considering the totality of the circumstances, release them for a period of time from their statutory duties as a disaster worker.

Limitations

It is the policy of District and School that no guarantee is implied by this plan of a perfect incident management system. As personnel and resources may be overwhelmed, the District and/or School can only endeavor to make every reasonable effort to manage the situation with the resources and information available at the time.

CONCEPT OF OPERATIONS

This Plan is based upon the concept that the incident management functions that must be performed by the School generally parallel some of their routine day-to-day functions. To the extent possible, the same personnel and material resources used for day-to-day activities will be employed during incidents. Because personnel and equipment resources are limited, some routine functions that do not contribute directly to the incident may be suspended. The personnel, equipment, and supplies that would typically be required for those routine functions will be redirected to accomplish assigned incident management tasks.

National Incident Management System (NIMS)

The National Incident Management System (NIMS) is a set of principles that provides a systematic, proactive approach guiding government agencies at all levels, nongovernmental organizations, and the private sector to work seamlessly to prevent, mitigate, protect against, respond to and recover from and the effects of incidents, regardless of cause, size, location, or complexity, in order to reduce the loss of life or property and harm to the environment. This system ensures that those involved in incident response/recovery understand what their roles are and have the tools they need to be effective.

According to Homeland Security Presidential Directive 5 and the U.S. Department of Education, school districts are among local agencies that must adopt NIMS if they receive Federal grant funds. As part of its NIMS implementation, District and School participates in the local government's NIMS preparedness program and believes it is essential to ensure that response/recovery services are delivered to schools in a timely and effective manner.

District and School recognizes that District/School employees will be first responders during an incident. Adopting NIMS enables staff to respond more effectively to an incident and enhances cooperation, coordination, and communication among school officials, first responders, and emergency managers.

District and School works with local government agencies to remain NIMS compliant. NIMS compliance for school districts includes completing the following:

- Adopt the National Incident Management System (NIMS)
- Identify key district/school personnel who will complete IS-700.a National Incident Management System An Introduction.
- Adopt the use of the Incident Command System (ICS).
- All staff who assume roles described in this system will receive ICS-100 training. ICS-100 SCa Introduction to ICS for Schools.
- District/School key personnel should also, as time permits, complete IS 200.b ICS For Single Resources and Initial Action Incidents and IS 800.b National Response Framework An Introduction.
- The above courses are web based free of charge from the Federal Emergency Management Agency (FEMA) Emergency Management Institute. https://training.fema.gov/is/nims.aspx

- Participate in local government's NIMS preparedness program and align the District and School Plan with the EOP's of the local government agencies serving the District/School.

- Train and exercise the Plan on a regular and consistent basis.

- All staff and students are expected to participate in training and exercising the plan's procedures and hazard-specific incident plans. The District/School is charged with ensuring that the training and equipment necessary for an appropriate response/recovery operation are in place.

Implementation of the Incident Command System (ICS)

The Incident Command System (ICS) will be used to manage all incidents and major planned events. [Note: The ICS system can be used in all phases of incident management, including pre-incident activities, response, and recovery.]

The Incident Commander at the District and/or School level will be delegated the authority to direct all incident activities within the District's/School's jurisdiction. The Incident Commander will establish an incident command post (ICP) and provide an assessment of the situation to the principal or other officials, identify incident management resources required, and direct the on-scene incident management activities from the ICP. If no Incident Commander is present at the onset of the incident, the most qualified individual will assume command until relieved by a qualified Incident Commander.

Initial Response

School personnel are usually first on the scene of an incident in a school setting. Staff and faculty are expected to take charge and manage the incident until it is resolved or command is transferred to someone more qualified and/or to an emergency responder agency with legal authority to assume responsibility. In cases of transfer of incident command or joint command the District/School retains the primary responsibility for the custody and care of students and the direction of staff.

The principal or his/her designee is responsible for activating the School EOP, including common and specialized procedures as well as incident specific plans. The principal or designee will assign an Incident Commander based who is most qualified to direct the response. Staff will seek guidance and direction from local officials and seek technical assistance from State and Federal agencies and industry where appropriate.

ORGANIZATION AND ASSIGNMENT OF RESPONSIBILITIES

This section establishes the operational organization that will be relied on to manage the incident and includes:

- A list of the kinds of tasks to be performed by position and organization.
- An overview of individual responsibilities.

The principal and assistant principals are not able to manage all the aspects associated with an incident without assistance. The school relies on other key school personnel to perform tasks that will ensure the safety of students and staff during a crisis or critical incident. The Incident Command System (ICS) uses a team approach to manage incidents. It is difficult to form a team while a crisis or critical incident is unfolding. Roles must be pre-assigned based on training and qualifications. Each staff member and volunteer must be familiar with his or her role and responsibilities before an incident occurs.

District and/or School staff may be required to remain at school to assist in an incident. (Government Code § 3100 – 3109) In the event that the District/School EOP is activated, staff will be assigned to serve within the Incident Command System based on their expertise, ~~and~~ training and the needs of the incident.

District Administrator/Principal/Building Administrator

The District superintendent or the principal may serve as the Incident Commander or can delegate that authority to a qualified individual. At all times, the superintendent or the principal still retains the overall responsibility for the overall safety of students and staff. However, delegating the authority to manage the incident allows the superintendent/principal to focus on policy-level activities and interfacing with other agencies and parents. The principal shall coordinate between the superintendent's office and the Incident Commander.

Incident Commander

The Incident Commander responsibilities include:

- Must be bilingual

- Assume overall direction of all incident management procedures based on actions and procedures outlined in this EOP.

- Take steps deemed necessary to ensure the safety of students, staff, other individuals within the District's/School's jurisdiction and to ensure the preservation of district property and resources.

- Determine whether to implement incident response functions (Evacuation, Reverse Evacuation, Shelter in Place, Lockdown, etc.), as described more fully in the functional annexes in this document.

- Arrange for relocation of students, staff, and other individuals when safety is threatened by an incident.

- Work with emergency services personnel, including utility companies and public transportation agencies. Depending on the incident, community agencies such as law enforcement or fire department may have jurisdiction for investigations, evacuation, rescue procedures, etc.

- Keep the superintendent and/or principal and other officials informed of the situation.

Teachers

Teachers shall be responsible for the supervision of students and shall remain with students until directed otherwise.

Responsibilities include:

- Supervise students under their charge.

- Take steps to ensure the safety of students, staff, and other individuals in the implementation of incident management protocols.

- Direct students in their charge to inside or outside assembly areas, in accordance with signals, warning, written notification, or intercom orders according to established incident management procedures.

- Give appropriate action command during an incident.

- Take attendance when class relocates to an outside or inside assembly area or evacuates to another location.

- Report missing students to the Incident Commander or designee.

- Execute assignments as directed by the Incident Commander or ICS supervisor.

- Obtain first aid services for injured students from the school nurse or person trained in first aid. Arrange for first aid for those unable to be moved.

- Render first aid if necessary. School staff will be trained and certified in first aid and CPR.

Instructional Assistants

Responsibilities include:

- Administer first aid or emergency treatment as needed.

- Supervise administration of first aid by those trained to provide it.

- Organize first aid and medical supplies.

Counselors, Social Workers, and Psychologists

Counselors, social workers, and psychologists provide assistance with the overall direction of the incident management procedures at the site.

Responsibilities may include:

- Take steps to ensure the safety of students, staff, and other individuals in the implementation of incident management protocols.

- Direct students in their charge according to established incident management protocols.

- Render first aid if necessary.

- Assist in the relocation of students, staff, and other individuals when their safety is threatened by an incident.

- Execute assignments as directed by the Incident Commander or ICS supervisor

Custodians/Maintenance Personnel

Responsibilities include:

- Survey and report building damage to the Incident Commander or Operations Section Chief.

- Control main shutoff valves for gas, water, and electricity and ensure that no hazard results from broken or downed lines.

- Provide damage control as needed.

- Assist in the conservation, use, and disbursement of supplies and equipment.

- Keep Incident Commander or designee informed of condition of school.

District / School Secretary / Office Staff

Responsibilities include:

- Answer phones and assist in receiving and providing consistent information to callers.

- Provide for the safety of essential school records and documents.

- Execute assignments as directed by the District/School Incident Commander or ICS.

- Provide assistance to the principal and Policy/Coordination Group.

- Monitor radio emergency broadcasts.

- Assist with health incidents as needed, acting as messengers, etc.

- Other duties as assigned by the superintendent/principal/Incident Commander.

Food Service/Cafeteria Workers

Responsibilities include:

- Use, prepare, and serve food and water on a rationed basis whenever the feeding of students and staff becomes necessary during an incident.

- Execute assignments as directed by the Incident Commander or ICS supervisor.

Transportation Employees **(Study Tours)**

Responsibilities include:

- Supervise the care of students if disaster occurs while students are in the bus.
- Transfer students to new location when directed.
- Execute assignments as directed by the Incident Commander or ICS supervisor.
- Transport individuals in need of medical attention.

Issues

- Does EFC have an MOU for transportation services from another district?No
- If not, should EFC attempt to secure such services from another district?Not sure
- Would such services be available in an area wide catastrophe?Not sure
- Does the law allow transportation of public school children on private buses with drivers without CHP school bus driver certification?No

Other Staff (Itinerant Staff, Substitute Teachers)

Responsibilities include:

- Substitute teachers will remain with their class unless relieved of that duty by the Incident Commander or designee.
- Reporting to the Incident Commander or ICS supervisor if requested or activated.

Students

Responsibilities include:

- Cooperate during emergency drills and exercises, and during an incident.
- Learn to be responsible for themselves and others in an incident.

- Understand the importance of not being a bystander by reporting situations of concern.

- Develop an awareness of natural, technological, and human-caused hazards and associated prevention, preparedness, and mitigation measures, as age appropriate.

- Take an active part in school incident response/recovery activities, as age appropriate.

Parents/Guardians

The District and School recognizes that parents and guardians are a crucial part of our school community and are a major influence on their child's academic and social success. The District and School wants parents and guardians to be involved in and informed of our efforts to ensure their child's safety and welfare while at school or school functions. Parents and guardians are welcome to participate in School's emergency planning by becoming a participating member in the school safety or site committee.

Responsibilities include:

- Ensure current telephone numbers and home address are on file at the School by updating immediately when changes are made.

- When notified of an emergency at the School - adhering to instructions including not to come to the school until requested.

- Encourage and support School safety, violence prevention, and incident preparedness programs within the School.

- Participate in volunteer service projects for promoting School incident preparedness.

- Provide the School with requested information concerning the incident, early and late dismissals, and other related release information.

- Practice incident management preparedness in the home to reinforce School training and ensure family safety.

- Understanding their roles during a School emergency.

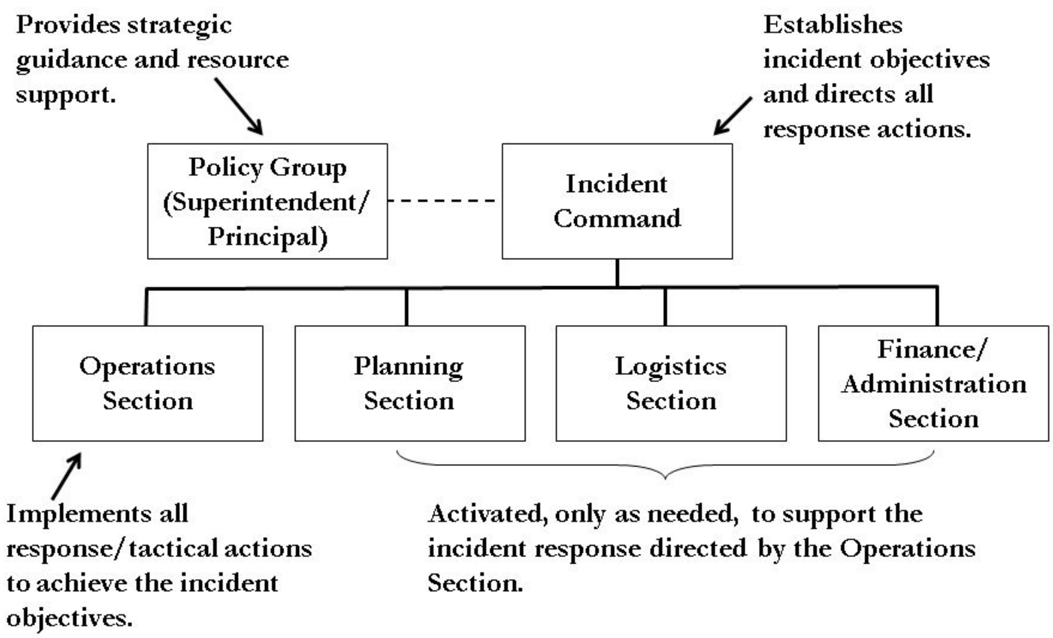
DIRECTION, CONTROL, AND COORDINATION

District/School Incident Command System (ICS)

To provide for the effective direction, control, and coordination of an incident, either single site or multi-incidents, the District and/or School EOP will be activated including the implementation of the Incident Command System (ICS).

The Incident Commander is delegated the authority to direct tactical on-scene operations until a coordinated incident management framework can be established with local authorities. The Policy Group is responsible for providing the Incident Commander with strategic guidance, information analysis, and needed resources.

Figure 1. Incident Management Team



The ICS is organized into the following functional areas:
(For a complete guide to the duties of each ICS position refer to FEMA ICS Resource Center http://training.fema.gov/emiweb/is/icsresource/index.htm)

Incident Command:

Directs the incident management activities using strategic guidance provided by the Policy Group.

School-related responsibilities and duties include:

- Establish and manage the Command Post, establish the incident organization, and determine strategies to implement protocols and adapt as needed.
- Monitor incident safety conditions and develop measures for ensuring the safety of building occupants (including students, staff, volunteers, and responders).
- Coordinate media relations and information dissemination with the principal.
- Develop working knowledge of local/regional agencies, serve as the primary on-scene contact for outside agencies assigned to an incident, and assist in accessing services when the need arises.
- Document all activities.

Operations Section:

Directs all tactical operations of an incident including implementation of response/recovery activities according to established incident management procedures and protocols, care of students, first aid, crisis intervention, search and rescue, site security, damage assessment, evacuations, and the release of students to parents.

Specific responsibilities include:

- Implement the incident action plan.

- Monitor site utilities (i.e., electric, gas, water, heat/ventilation/air conditioning) and shut off only if danger exists or directed by Incident Commander, and assist in securing facility.

- Establish medical triage with staff trained in first aid and CPR, provide and oversee care given to injured persons, distribute supplies, and request additional supplies from the Logistics Section.

- Provide and access psychological first aid services for those in need, and access local/regional providers for ongoing crisis counseling for students, staff, and parents.

- Coordinate the rationed distribution of food and water, establish secondary toilet facilities in the event of water or plumbing failure, and request needed supplies from the Logistics Section.

- Activate the Parent Student Reunification Plan.

- Document all activities.

As needed, the types of Strike Teams described in the following table may be established within the Operations Section.

<u>Table 2. Operations Section Teams</u>

<u>Strike Team</u>	**<u>Potential Responsibilities</u>**
Search & Rescue Team	Search & Rescue Teams search the entire school facility, entering only after they have checked the outside for signs of structural damage and determined that it is safe to enter. Search & Rescue Teams are responsible for ensuring that all students and staff evacuate the building (or, if it is unsafe to move the persons, that their locations are documented so that professional responders can locate them easily and extricate them). Search and Rescue Teams are also responsible for: ▪ Identifying and marking unsafe areas. ▪ Conducting initial damage assessment. ▪ Obtaining injury and missing student reports from teachers. ▪ **ICS Safety Officer may halt any search and rescue operation he/she deems unsafe to conduct.** ▪
First Aid Team	First Aid Teams provide triage and first aid services. First Aid Teams are responsible for: ▪ Setting up first aid area(s) for students. ▪ Assessing and treating injuries. ▪ Completing master injury report. Note: The Logistics Section provides care to responders (if needed). The Operations Section First Aid Team is dedicated to students and other disaster victims.

Strike Team	Potential Responsibilities
Evacuation/Shelter/ Care Team	Evacuation, shelter, and student care in an incident are among the most important tasks faced by schools. These tasks include student accounting, protection from weather, providing for sanitation needs, and providing for food and water. The Evacuation/Shelter/Care Team is responsible for: ▪ Accounting for the whereabouts of all students, staff, and volunteers. ▪ Setting up a secure assembly area. ▪ Managing sheltering and sanitation operations. ▪ Managing student feeding and hydration. ▪ Coordinating with the Student Release Team. ▪ Coordinating with the Logistics Section to secure the needed space and supplies.
Facility & Security Response Team	The Facility & Security Response Team is responsible for: ▪ Locating all utilities and turning them off, if necessary. ▪ Securing and isolating Fire/HazMat. ▪ Assessing and notifying officials of Fire/HazMat. ▪ Conducting perimeter control.
Crisis Intervention Team	The Crisis Intervention Team is responsible for: ▪ Assessing need for onsite mental health support. ▪ Determining need for outside agency assistance. ▪ Providing onsite intervention/counseling. ▪ Monitoring well-being of school Incident Management Team, staff, and students, and reporting all findings to the Operations Section Chief.

Student Release Team	Reunification refers to reuniting students with their parents or guardians in an efficient and orderly manner. Reunification can be an enormous challenge and takes a lot of planning. The Student Release Team is responsible for: ▪ Setting up a secure reunion area. ▪ Checking student emergency cards for authorized releases. ▪ Completing release logs. ▪ Coordinating with the Public Information Officer on external messages.

Planning Section:

Collects, evaluates, and disseminates information needed to measure the size, scope, and seriousness of an incident and to plan appropriate incident management activities.

Duties may include:

- Assist Incident Commander in the collection and evaluation of information about an incident as it develops (including site map and area map of related events), assist with ongoing planning efforts, and maintain incident time log.

- Document all activities.

Logistics Section:

Supports incident management operations by securing and providing needed personnel, equipment, facilities, resources, and services required for incident resolution; coordinating personnel; assembling and deploying volunteer teams; and facilitating communication among incident responders. This function may involve a major role in an extended incident.

Additional responsibilities include:

- Establish and oversee communications center and activities during an incident (two-way radio, battery-powered radio, written updates, etc.), and develop telephone tree for after-hours communication.

- Establish and maintain school and classroom preparedness kits, coordinate access to and distribution of supplies during an incident, and monitor inventory of supplies and equipment.

- Document all activities.

Finance/Administration Section:

Oversees all financial activities including purchasing necessary materials, tracking incident costs, arranging contracts for services, timekeeping for emergency responders, submitting documentation for reimbursement, and recovering school records following an incident.

Additional duties may include:

- Assume responsibility for overall documentation and recordkeeping activities; when possible, photograph or videotape damage to property.

- Develop a system to monitor and track expenses and financial losses, and secure all records.

This section may not be established onsite at the incident. Rather, the District management offices may assume responsibility for these functions.

Coordination with Policy/Coordination Group

In complex incidents, a Policy/Coordination Group will be convened at the school district operations center. The role of the Policy/Coordination Group is to:

- Support the on-scene Incident Commander.
- Provide policy and strategic guidance.
- Help ensure that adequate resources are available.
- Identify and resolve issues common to all organizations.
- Keep elected officials and other executives informed of the situation and decisions.
- Provide factual information, both internally and externally through the Joint Information Center.

The school principal and Incident Commander will keep the Policy/Coordination Group informed.

Community Emergency Operations Plan (EOP)

Education For Change (District) maintains a district Emergency Operations Plan (EOP) to address hazards and incidents. The School EOP has been developed to fit into the larger district EOP in the case of a large-scale incident.

Does EFC fall under OUSD 's EOP? Need to check.

Coordination with First Responders

An important component of the District and School EOP is a set of interagency agreements with various county agencies to aid in timely communication and delivery of services. These agreements help coordinate services between the agencies, District and School.

Various agencies and services include county governmental agencies such as mental health, law enforcement, and fire departments. The agreements specify the type of communication and services provided by one agency to another. The agreements also make school personnel available beyond the school setting in an incident or traumatic event that is taking place in the community.

If a School incident is within the authorities of the first-responder community, command will be transferred upon the arrival of qualified first responders. A transfer of command briefing shall occur. The School Incident Commander may be integrated into the Incident Command structure or assume a role within a Unified Command structure.

The District/School maintains responsibility for the control, safety and welfare of its students and staff.

Source and Use of Resources

District and School will use its own resources and equipment to respond to incidents until incident response personnel arrive. Parent volunteers and community members have been trained to assist if called upon and available after an incident occurs.

The following organizations or agencies have agreed to be responsible for providing additional resources or assistance:

- First aid kit and sanitation supplies will be provided by: **EFC**
- Cots and bedding supplies will be provided by: **EFC**
- Food/water supplies will be provided by: **EFC**
- Security will be provided by: **school site**
- Counseling services will be provided by: **EFC**

COMMUNICATIONS

Communication is a critical part of incident management. This section outlines the District and School communications plan and supports its mission to provide clear, effective internal and external communication between the school, staff, students, parents, responders, and media.

Internal Communications

Communication Between Staff/Faculty Members

Faculty and staff will be notified when an incident occurs and kept informed as additional information becomes available and as plans for management of the situation evolve. The following practices will be utilized to disseminate information internally when appropriate:

- Telephone Tree/Robocall: A telephone tree is a simple, widely used system for notifying staff of an incident when they are not at school. The tree originates with the principal, who contacts the members of the Incident Management Team. Team members then in turn will contact groups of staff (teachers, administrators, and support staff).

- Morning Faculty Meeting: As appropriate, updated information about an incident will be presented at the morning faculty meeting. Any new procedures for the day will also be reviewed at this time.

- End-of-Day Faculty Meeting: As appropriate, updated information and a review of the day's events will be presented at the end-of-day meeting. Staff will also have the opportunity to address any misinformation or rumors.

Communication with the School District Office

The Incident Commander will use the School Emergency Radio Network to notify the principal of School status and needs. The principal will notify the District office. The District office will notify the chartering agency/ authorizer and/or the County Office of Education of the status of all district schools. He/she will designate staff member(s) to monitor all communications.

External Communications

Communication with First Responders

The Incident Commander will maintain communication with first responders during an incident. Transfer of command will occur when first responders arrive on the scene to assume management of the incident under their jurisdiction. The District and School frequently exercises the School EOP with first responders to practice effective coordination and transfer of command.

Communicating with the larger school community begins before an incident occurs. In the event of an incident, parents, media, and first responders will require clear and concise messages from District/School about the incident, what is being done about it, and the safety of the children and staff.

Communication With Parents

Before an incident occurs, the District and School will:

- Develop a relationship with parents so that they trust and know how to access alerts and incident information.
- Inform parents about the school's Emergency Operations Plan, its purpose, and its objectives. Information will be included in the school newsletter and a presentation delivered at Back–to-School Night.
- Identify parents who are willing to volunteer in case of an incident, include them in preparation efforts, and include them in training.
- Be prepared with translation services for non-English-speaking families and students with limited English proficiency.

In the event of an incident, the District and School will:

- Disseminate information via text messages, radio announcements, and emails to inform parents about exactly what is known to have happened.
- Implement the plan to manage phone calls and parents who arrive at school.
- Describe how the school and school district are handling the situation.
- Provide information regarding possible reactions of their children and ways to talk with them.
- Provide a phone number, website address, or recorded hotline where parents can receive updated incident information.
- Inform parents and students when and where school will resume.

After an incident, District and School administrators may schedule and attend an open question-and-answer meeting for parents as soon as possible.

Communication With The Media

In the event of an incident, the Incident Commander will:

- Designate a Public Information Officer (Principal).
- Establish an off-campus briefing area for media representatives.
- Determine the need to establish or participate in a Joint Information Center.
- Coordinate messages with the principal and Policy Group.

All District/School employees are to refer all requests for information and questions to the designated spokesperson or Joint Information Center (if established). Templates for statements/press releases to the media, including standard procedures and protocols, have been developed and are included in **Appendix B.**

Media contacts at the major television, internet, and radio stations are maintained by the principal. In the case of an incident, these media contacts will broadcast District and/or School's external communications plans, including the information hotline for parents and guardians.

Handling Rumors

In addressing rumors the most effective strategy is to provide facts as soon as possible. To combat rumors, the District and/or School will:

- Provide appropriate information to internal groups including administrators, teachers, students, custodians, secretaries, instructional assistants, and cafeteria workers,. These people are primary sources of information and are likely to be contacted in their neighborhoods, at grocery stores, etc.

- Hold a faculty/staff meeting before staff members are allowed to go home so that what is (and is not) known can be clearly communicated.

- Designate and brief personnel answering calls to help control misinformation.

- Conduct briefings for community representatives directly associated with the school.

- Enlist the help of the media to provide frequent updates to the public, particularly providing accurate information where rumors need to be dispelled.

After the immediate incident response period, the District and School will conduct public meetings as needed. These meeting are designed to provide the opportunity for people to ask questions and receive accurate information.

Communication After an Incident (Recovery Process)

After the safety and status of staff and students have been assured, and emergency conditions have abated following an incident, staff/faculty will assemble to support the restoration of School's educational programs. Defining mission-critical operations and staffing will be a starting point for the recovery process. Collecting and disseminating information will facilitate the recovery process.

The staff/faculty teams will:

- Conduct a comprehensive assessment of the physical and operational recovery needs.
- Assess physical security, data access, and all other critical services (e.g., plumbing, electrical).
- Examine critical information technology assets and personnel resources, and determine the impact on the school operations for each asset and resource that is unavailable or damaged.
- Document damaged facilities, lost equipment and resources, and special personnel expenses that will be required for insurance claims and requests for state and federal assistance.
- Provide detailed facilities data to the school district office so that it can estimate temporary space reallocation needs and strategies.
- Arrange for ongoing status reports during the recovery activities to: estimate when the educational program can be fully operational; and identify special facility, equipment, and personnel issues or resources that will facilitate the resumption of classes.
- Educate school personnel, students, and parents on available crisis counseling services.
- Apprise the Oakland Unified School District, the county office of education and any other public agency or entity have a legitimate need to know of recovery status.

The District will:

- Identify recordkeeping requirements and sources of financial aid for state and federal disaster assistance.

- Establish absentee policies for teachers/students after an incident.

- Establish an agreement with mental health organizations to provide counseling to students and their families after an incident.

- Develop alternative teaching methods for students unable to return immediately to classes: correspondence classes, video conferencing, telegroup tutoring, etc.

- Create a plan for conducting classes when facilities are damaged (e.g., alternative sites, half-day sessions, portable classrooms).

- Get stakeholder input on prevention and mitigation measures that can be incorporated into short-term and long-term recovery plans.

Communication Tools

Some common internal and external communication tools that the District and School may use include the following:

- Standard Telephone: The District and School may designate a school telephone number as a recorded "hotline" for parents to call for information during incidents. The goal is to keep other telephone lines free for communication with first responders and others.

- Cellular Telephones: These phones may be the only tool working when electric service is out. They are useful to faculty/staff en route to or from a site.

- Intercom Systems: The intercom system includes teacher-initiated communication with the office using a handset rather than a wall-mounted speaker.

- Bullhorns and Megaphones: A battery-powered bullhorn should be part of the School's emergency to-go kit to address students and staff who are assembling outside the School. Procedures governing storage and use will help ensure readiness for use.

- Two-Way Radio: Two-way radios provide a reliable method of communication between rooms and buildings at a single site. All staff will be trained to understand how to operate the two-way radio.

- Computers: A wireless laptop computer may be used for communication both within the School and to other sites and District. Email may be a useful tool for updating information for staff, other schools in an affected area, and the district superintendent. An assigned staff member(s) will post information such as School evacuation, closure, or relocation on the home page of the school and district website.

- Fax Machines: Possible uses include off-campus accidents where lists of students and staff members involved, their locations, and needed telephone numbers can be quickly and accurately communicated. Medical information, release forms, and authorizations include the designated fax number.

- Alarm Systems: Bells or buzzers are in place and sound in different ways to signal different types of incidents – for example, fire, lockdown, or special alert (with instructions to follow). All staff/faculty, support staff, students, and volunteers will be trained on what the sounds mean and how to respond to them.

- Whistles: Whistles should be included in crisis kits in order to signal a need for immediate attention or assistance

- ____

- ____

ADMINISTRATION, FINANCE, AND LOGISTICS

Agreements and Contracts

If school resources prove to be inadequate during an incident, the District and/or School will request assistance from local emergency services, other agencies, and industry in accordance with existing mutual aid agreements and contracts (see Direction, Control, and Coordination, for specific details). Such assistance includes equipment, supplies, and/or personnel. All agreements are entered into by authorized school officials and are in writing. Agreements and contracts identify the school district officials authorized to request assistance pursuant to those documents.

When normal operations are disrupted during an incident, the District Board or Policy Group must approve all donations that are intended to support the District and/or School during the emergency. Noncommercial food items may or may not be accepted by the District and/or School.

Recordkeeping

Administrative Controls

District/School is responsible for establishing the administrative controls necessary to manage the expenditure of funds and to provide reasonable accountability and justification for expenditures made to support incident management operations. These administrative controls will be done in accordance with the established local fiscal policies and standard cost accounting procedures.

Activity Logs

The ICS Section Chiefs will maintain accurate logs recording key incident management activities, including:

- Activation or deactivation of incident facilities.
- Significant changes in the incident situation.
- Major commitments of resources or requests for additional resources from external sources.
- Issuance of protective action recommendations to the staff and students.
- Evacuations.
- Casualties.
- Containment or termination of the incident.

Incident Costs

Annual Incident Management Costs

The ICS Finance and Administration Section is responsible for maintaining records summarizing the use of personnel, equipment, and supplies to obtain an estimate of annual incident response costs that can be used in preparing future school budgets.

Incident Costs

The ICS Finance and Administration Section Chief will maintain detailed records of costs for incident management and operations to include:

- Personnel costs, especially overtime costs.
- Equipment operations costs.
- Costs for leased or rented equipment.
- Costs for contract services to support incident management operations.
- Costs of specialized supplies expended for incident management operations.

These records may be used to recover costs from the responsible party or insurers or as a basis for requesting financial assistance for certain allowable response and recovery costs from the state and/or federal government.

Preservation of Records

In order to continue normal school operations following an incident, vital records must be protected. These include legal documents and student files as well as property and tax records. The principal causes of damage to records are fire and water; therefore, essential records should be protected accordingly. Details are outlined in the

Continuity of Operations (COOP) Procedures, a functional annex of this Plan.

PLAN DEVELOPMENT, MAINTENANCE, AND DISTRIBUTION

Education for Change (Operations Team) is responsible for the overall maintenance and revision of the District/ School EOP. The **Site Administrators are** responsible for coordinating, training and exercising the School EOP. Both teams are expected to work closely together to make recommendations for revising and enhancing the plan.

The District/School Board of Directors and the superintendent are responsible for approving and promulgating this plan. Community fire, law enforcement, and emergency manager approval and suggestions will also be requested.

Approval and Dissemination of the Plan

The District/School Board of Directors, together with the principal and superintendent, will approve and disseminate the plan and its annexes following these steps:

- Review & Validate the Plan
- Present The Plan (For Comment or Suggestion)
- Obtain Plan Approval (District/School Board of Directors)
- Distribute The Plan

Record of Changes

Each update or change to the Plan will be tracked. The record of changes will include: the change number, the date of the change, and the name of the person who made the change. The record of changes will be in table format and maintained by the District/School Emergency Operations Planning Team.

Record of Distribution

Copies of plans and annexes will be distributed to those tasked in this document. The record of distribution will be kept as proof that tasked individuals and organizations have acknowledged their receipt, review, and acceptance of the Plan. The District and School Emergency Operations Planning Team will indicate the title and name of the person receiving the plan, the agency to which the receiver belongs, the date of delivery, and the number of copies delivered. Copies of the plan may be made available to the public and media without the sensitive information at the discretion of the District/School Board of Directors.

Plan Review and Updates

The basic Plan and its annexes will be reviewed annually by the District and School Emergency Operations Planning Team, emergency management agencies, and others deemed appropriate by school administration. Annual review will be completed and signed off by the reviewing committee members prior to the first day of August.

The District/School EOP will be updated as needed based upon deficiencies identified during incident management activities and exercises and when changes in threat hazards, resources and capabilities, or school structure occur.
(Updating may be done at any time without waiting for annual review.)

Training and Exercising the Plan

The District and School understand the importance of training, drills, and exercises in maintaining and planning for an incident. To ensure that District and School personnel and community first responders are aware of their duties and responsibilities under the District/School Plan and the most current procedures, the following training, drill, and exercise actions will occur. The Exercise Planning Team will coordinate training and exercising efforts in accordance with the Homeland Security Exercise and Evaluation Program.

Basic training and refresher training sessions will be conducted during the first in-service day of the school year for all school personnel in coordination with local fire, law enforcement, and emergency managers.

Mandatory School EOP training will include:

- Hazard and incident awareness training for all staff.
- Orientation to the District/School EOP.
- First aid and CPR for all staff.
- Team training to address specific incident response or recovery activities, such as Parent/Student Reunification, Special Needs, and Relocation.
- Key personnel will complete the FEMA courses listed under Concept of Operations on Page11 of this Plan.

Additional training will include drills, tabletop and functional exercises. Drills will be conducted at least one (1) time per semester. Exercises will occur at least one (1) time per school year. The details of training are outlined in the Multi-Year Training and Exercise Plan **(see Appendix C).** Records of the training provided including date(s), type of training, and participant roster will be maintained.

Approved parent volunteers and community members will also be incorporated into larger training efforts.

All District and School staff members are expected to develop personal and family emergency plans. Each family should anticipate that a staff member may be required to remain at school following a catastrophic event. Knowing that the family is prepared and can handle the situation will enable school staff to do their jobs more effectively. A resource guide for family planning is included as **Appendix D.**

AUTHORITIES AND REFERENCES

The following are federal and state mandates, statutes, cases and authorities upon which the District and School EOP is based. These authorities and references provide a legal basis for incident management, operations and activities.

California Constitution Article 1, Sec. 28, Paragraph 7:

The right to public safety extends to public and private . . . campuses where "students and staff have the right to be safe and secure in their persons"

Homeland Security Presidential Directive 5:

Mandating adoption of NIMS by local government agencies (including school districts) as a condition for federal preparedness assistance, grants, etc.

California Education Code:

§ 47610: Exempting charter schools from laws governing school.

§32280 – 32289: Requirements for comprehensive safety schools plan (charter schools exempt; however, it is a useful guidance tool).

§ 47605(b)(F): The charter school application must contain "The procedures that the school will follow to ensure the health and safety of pupils and staff".

§ 46392(a): Recovery of ADA under declared state of emergency.

California Labor Code:

§ 6400(a): “Every employer shall furnish employment and a place of employment that is safe and healthful for the employee therein”.

California Government Code:

§ 3100 – 3101: School district employees are “disaster service workers” who may be assigned to such disaster service activities as deemed necessary by their superiors or by law.

Relevant Case Law Decisions:

Canton v. Harris U.S.Sct. (1989): Liability for failure to train, which deprives plaintiff of a constitutional right.

Monell v. City of New York U.S. SCt. (1978): Local agencies can be considered persons and held civilly liable and in some cases criminally responsible for injuries or damages arising out of failure to train. (could be applied to “Disaster workers”)

City of Oklahoma v. Tuttle U.S. SCt. (1985): Failure to train in the practical area at issue in the litigation.

Jane Doe v. Forest Hills School Dist. USDC WDMI (Mich.) No. 1:13-cv-428: Failure to train deliberate indifference in light of foreseeable consequence.

LATITUDE FALL 2017 - SPRING 2018

STUDENT ENGAGEMENT/RECRUITMENT PLAN

To engage and recruit a diversity of students from across Oakland for our founding class, we are focused on five key strands of work:

- **Listening Campaign:** In September, we have planned a multiple-stop listening campaign with parents and 8th grade teachers in deep East Oakland and deep West Oakland to understand transportation issues and other challenges to sending their students to a Fruitvale-located school. Our learnings from this listening campaign will enable us to be proactive in co-designing solutions to these challenges early in our planning year in collaboration with families from these communities.
- **Latitude Student Design Team:** We will convene, once a month, a group of 8th graders representing the diversity of middle schools across Oakland, to serve as our Latitude Student Design Team. These full-day experiences will include opportunities for students to test out Latitude projects and field work, as well as opportunities for student dialogue and feedback on the ongoing design of our school program. These meetings will take place on Saturdays once a month. In September, we will be doing one-to-ones with middle school principals across Oakland to connect us with students from their sites who may be willing to serve on the Latitude Student Design Team, which will launch the first week of October.
- **Mid-Week Latitude Student Engagements at Middle School Campuses:** To reach 8th grade students who may have challenges coming to an event on a Saturday, we will also hold mid-week student engagement events during the after-school/extended care program at middle schools that are willing to open their doors to us. In our September one-to-ones with middle school principals across Oakland, we will gauge willingness and set dates for these engagements on their campuses.
- **On-Campus Presentations for 8th Grade Families and Students:** We will hold Latitude High School presentations for families and students at any middle school that will allow us to hold a presentation on their site. All interested families will be invited to join our monthly Design Team meetings, held on Wednesday evenings.
- **High School Fairs, Community Based Organizations, and Pop-Up Events:** We will, of course, have a table at any high school fairs scheduled throughout the fall. In addition, we have and will continue to connect with Community Based Organizations, including churches, local health clinics, and youth centers, to collaborate on outreach with families and students. We will work with these community partners to plan and facilitate Latitude pop-up events, where students and families can get a taste of the Latitude experience and learn about the school in greater depth.

CALENDAR

August 2017	Summer pilot with rising 8th graders to launch Latitude Student Design Team Continued one-to-ones with community based organizations across Oakland to discuss opportunities for collaboration and student/family recruitment Re-connect with Alameda homeschooling communities via Hickman Charter School and Alameda Oakland Home Learners group to plan fall presentations with 8th grade students
September 2017	Listening Campaign with parents and teachers in deep East Oakland and deep West Oakland to understand transportation issues and other challenges to sending students to a Fruitvale located school

	One-to-ones with middle school principals across Oakland to schedule (if willing): ● Recruitment of 8th grade students for Latitude Student Design Team (ideally 1-2 from every middle school in Oakland) ● Mid-week 8th grade student engagements during middle schools' after school/extended care programs ● Fall on-campus presentations for 8th grade families and students at middle schools across Oakland Continued one-to-ones with community based organizations across Oakland to discuss opportunities for collaboration and student/family recruitment
October 2017	Saturday, October 7: Launch of Student Design Team Wednesday, October 11: Regular Design Team Meeting (all families welcome) Saturday, October 18 (*tentative*): Latitude Community Pop-Up Event in collaboration with community partners THROUGHOUT OCTOBER: Mid-week 8th grade student engagements during middle schools' after school/extended care programs Fall on-campus presentations for 8th grade families and students at middle schools across Oakland Possible Latitude table at farmers' markets, swap meet, cultural events, including October 22 Mini Makerfaire and October 29 Dia de los Muertos Festival
November 2017	Saturday, November 4: Student Design Team Convening Wednesday, November 8: Regular Design Team Meeting (all families welcome) Saturday, November 11 (*tentative*): Latitude Community Pop-Up Event in collaboration with community partners THROUGHOUT NOVEMBER: Mid-week 8th grade student engagements during middle schools' after school/extended care programs Fall on-campus presentations for 8th grade families and students at middle schools across Oakland Possible Latitude table at farmers' markets, swap meet, cultural events
December 2017	Saturday, December 2: Student Design Team Convening

	Wednesday, December 13: Regular Design Team Meeting (all families welcome) Saturdays, December 9 and December 16: Oakland Public Schools Fair Sunday, December 17 (*tentative*): Latitude Family Picnic and Recruitment Event THROUGHOUT DECEMBER: Mid-week 8th grade student engagements during middle schools’ after school/extended care programs Fall on-campus presentations for 8th grade families and students at middle schools across Oakland Possible Latitude table at farmers’ markets, swap meet, cultural events
January 2018	Wednesday, January 10: Regular Design Team Meeting (all families welcome) Saturday, January 13: Student Design Team Convening Saturday, January 20: Latitude Community Pop-Up Event in collaboration with community partners THROUGHOUT JANUARY: Mid-week 8th grade student engagements during middle schools’ after school/extended care programs On-campus presentations for 8th grade families and students at middle schools across Oakland Possible Latitude table at farmers’ markets, swap meet, cultural events
February 2018	Saturday, February 3: Student Design Team Convening Wednesday, February 14: Regular Design Team Meeting (all families welcome) Saturday, February 17: Latitude Community Pop-Up Event in collaboration with community partners THROUGHOUT FEBRUARY: Mid-week 8th grade student engagements during middle schools’ after school/extended care programs Possible Latitude table at farmers’ markets, swap meet, cultural events, including Allen Temple Black History Family Festival, Oakland Asian Cultural Center Lunar New Year celebration, and Cambodian New Year Festival
March 2018	Open House on Latitude’s campus for all admitted students

	Spring Picnic for future Latitude families
April 2018	Open House on Latitude’s campus Campus Beautification/Gardening Day for future Latitude families
May 2018	Open House on Latitude’s campus Campus Beautification/Gardening Day for future Latitude families
June 2018	Summerbridge Program for rising 9th grade students Campus Beautification/Gardening Day for future Latitude families

Where families discover and enro in Oakland's charter public school

The Enroll Oakland Charters mission is to empower Oakland families to make informed choices about their public school options and make the process of selecting and enrolling in a charter public school easy, efficient and equitable.

Oakland School Finder

This tool can be used to explore and compare your public school options in Oakland.

TABLE OF CONTENTS

INTRODUCTION

The policies and procedures described in this Student Parent Handbook ("Handbook") are applicable to all High Tech High ("High Tech High" or "HTH") schools unless specifically directed to one school or village in particular. Throughout this Handbook, the reference to HTH shall mean and include all HTH schools. The policies contained in this Handbook are not exhaustive. HTH has the discretion to supplement and modify policies noted here from time to time. For updates see the Handbook posted on the High Tech High website at: hightechhigh.org/handbook/

ATTENDANCE POLICIES AND PROCEDURES

Attendance Hours

The following are the school hours for each of the HTH schools. Students must be on time and present for all of their classes. Students must remain on campus during these hours unless on an approved field trip or participating in a school-sponsored internship or externship program.

High Tech High 8:40 a.m. – 3:40 p.m.
High Tech High International 8:25 a.m. – 3:25 p.m.
High Tech High Media Arts 8:30 a.m. – 3:30 p.m.
High Tech High Chula Vista 8:30 a.m. – 3:30 p.m.
High Tech High North County 8:30 a.m. – 3:30 p.m.
High Tech Middle 9:05 a.m. – 3:30 p.m.
High Tech Middle Media Arts 9:00 a.m. – 3:30 p.m.
High Tech Middle Chula Vista 8:45 a.m. – 3:00 p.m.
High Tech Middle North County 8:50 a.m. – 3:15 p.m.
High Tech Elementary Explorer 9:05 a.m. - 3:40 p.m.
High Tech Elementary 9:05 a.m. – 3:40 p.m.
High Tech Elementary Chula Vista 8:00 a.m. – 2:30 p.m.
High Tech Elementary North County 8:15 a.m. - 2:45 p.m.

Absences

The project-based nature of the HTH program makes daily attendance extremely important. Significant absences, repeated absences or tardiness could lead to academic and disciplinary consequences.

Appointments and other activities should be scheduled during non-school hours whenever possible. Likewise, HTH requests that families schedule vacations or special programs so as not to conflict with school. In particular, the final two (2) weeks of any semester are critical, as they culminate in the student exhibitions and presentations upon which faculty base their assessments.

In the event of a necessary absence, please call your school's main office to advise the school that your child will be absent. While this alone will not excuse the absence under this policy, the call allows the school the opportunity to track your student's attendance. Student absences will be verified.

Absences may be considered excused for the following reasons: illness, family emergency, funeral, legal matter, and religious holiday. If a student will be out of school for three (3) or more days due to illness, the student must provide a note from a doctor or nurse specifying the amount of time excused.

If a student is absent from school for ten (10) consecutive school days or more, and the student's parents or guardians have not contacted the school with an explanation for the absences, or otherwise expressing their intent to have their student attend the school, the student will be deemed to have voluntarily dropped from school enrollment. Such students may be referred back to the student's home district in accordance with district and county guidelines.

Tardies

If your student will be late for school, an advance call from a parent/guardian is preferred.

Students who arrive late to school or are returning from an appointment must:

- Check in with the school's front desk
- Provide a note from their parent/guardian or health care provider regarding their tardy
- Receive a tardy slip/pass prior to proceeding to their classroom

Students who are deemed chronically tardy or chronically absent may not be permitted to receive credit for the course(s) in which they have been chronically tardy or absent, or may jeopardize their position and privileges associated with attending any High Tech High school. Students and their parents will have an opportunity to meet with school administration to discuss potential consequences to address chronic tardiness and/or absenteeism.

Early Dismissal

While we encourage families to schedule appointments before or after school, we understand that sometimes missing school cannot be helped**. However, students cannot leave campus during the school day without consent from their parents or guardians. This includes students 18 years of age and older.**

An early dismissal slip is required for students to leave school before the end of the day. If your student needs to be excused early, please provide the attendance office with advance notice before the appointment, either by a call or a note. Your student will be given an early dismissal slip to be excused from class. In addition, we ask that parents please provide us with a doctor's note supporting the early dismissal, which can be brought in the following school day.

Contracts for Independent Study

High Tech High does not offer a "full time" or regular independent study program as part of its curriculum. Rather, independent study is conducted primarily for the educational benefit of the students attending High Tech High as a means to encourage daily engagement in academic work during certain times of extended absence, and for the school to track attendance according to applicable guidelines.

Any student who is absent five (5) days or more for a reason other than illness may request a Contract for Independent Study ("CIS"). Parents and guardians may contact the school office to learn about CIS and whether a CIS might be appropriate in any given situation. The school administration in its sole discretion will determine if the request meets the applicable guidelines for independent study. Independent Study Contracts may only be obtained on a limited, short-term basis.

School Calendars and Activities

Academic year calendars, daily class schedules, significant school events, and extended services information (if applicable) for each HTH school may be found on school webpages directed from the HTH website located at: www.hightechhigh.org.

CAMPUS POLICIES

Closed Campuses

Despite the open feeling in the schools, HTH campuses are closed campuses in order to provide safe and secure schools. Students must remain within the immediate vicinity of their respective schools during all school hours with the following general exceptions:

Point Loma

- ***Liberty Station:*** In general, Liberty Station may be considered to be on campus when students are accompanied by faculty and staff during class hours for a specific school purpose.
- ***Liberty Station Retail Area and Lunch Breaks***:
    - **High School Students:** High school students may walk over to a defined section of the Liberty Station Retail Area, located within the quadrangle defined by the following streets: Womble, Historic Decatur, Roosevelt and Truxtun Roads. High School students are permitted to patronize the Liberty Station stores located within the Liberty Station Retail Area before school, during lunch and after school. Students are not permitted to be in the Liberty Station Retail Area during class time. Moreover, students may not travel to any other off campus sites during school hours without the supervision of a teacher. Additionally, students who are absent or tardy to class, or who otherwise violate school policies, may have their privileges to visit the Liberty Station Retail Area revoked. By the receipt of the policies and procedures in this handbook, parents expressly acknowledge and agree that their high school students may go to the Liberty Station Retail Area as identified above.
    - **Middle and Elementary School Students*:*** Due to the age range of our middle and elementary school students, middle and elementary school students must stay within the immediate vicinities of their schools. Middle and elementary school students are not permitted to walk to or from the Liberty Station Retail Area or any other stores during school hours unless in the company of a teacher during the course of a school activity. Middle and elementary school students are not permitted to buy lunch from these stores and must stay in the current designated lunch areas near their schools. Students enrolled in the before and after school program also are not permitted to go to these stores during the 6 to 6 program hours.

Chula Vista

- Students at all Chula Vista schools may walk within a one-mile radius from campus when accompanied by faculty and staff, during school hours for specific school purposes. Examples of such walking excursions include a trip to Exploration Falls Park, an exercise walk in the neighborhood, or a walk to the neighboring canyon for project-related “field work.” Other than faculty and staff chaperoned excursions, students must remain on campus during school hours.

School Dances

School dances are held throughout the year. High school students may bring one (1) guest to most high school dances provided that:

- The guest is enrolled in a high school or is still under the age of 21;
- A completed guest form is submitted to the Dean of Students at least three (3) school days prior to the dance and approved by the Dean of Students;
- The HTH student must stay with his/her guest throughout the event and accept responsibility for the actions of their guests; and
- HTH policies, procedures and rules are observed by both the guest and the student.

Student Visitors

In general, HTH does not permit students to have visitors on campus. However, HTH recognizes that there are certain events, such as dances, where HTH students may want to invite non-HTH students as guests. In such cases, non-students or students from other schools must complete a guest form and submit it to the Dean of Students for prior approval. Visitors permitted in these circumstances will be expected to abide by HTH policies and guidelines.

Student Drivers and Parking

Driving to school is considered a privilege. Students who drive their own vehicles to and from school must comply with the following rules. Failure to follow these rules may result in an immediate disciplinary meeting and/or action.

<u>Student Driver Information</u>

Students who drive to and from school will be asked to provide the following information to their school's front desk:

- Name of student and signature
- Student's Driver's License number
- Parent and/or Guardian name and signature
- Car make and model ad license plate number of each vehicle the student may be driving
- Automobile Insurance Policy Number and expiration date

<u>High Tech High Point Loma Village Parking</u>

HTH has an allocation of parking spaces at the Point Loma Village parking lot and students must obtain permission to use one of those spaces. Forms, parking permits, and ID tags for student drivers may be obtained from the school's Dean of Students. Students will be issued parking permits for High Tech High Village parking spaces based on space availability and must display the parking permit prominently in the vehicle. Students who drive to school and park elsewhere must obtain an HTH identification tag that must be displayed in the vehicle when parking at Liberty Station or in off campus areas for other High Tech High students. HTH Point Loma

Village seniors are given priority registration for available spaces and all students may apply for parking permits beginning on the first day of the school year.

Due to the high demand for parking at the High Tech High Point Loma Village, parking on campus is considered to be a privilege. Failure to obey traffic laws and regulations while at Liberty Station, as well as failure to adhere to High Tech High rules and expectations noted in this Student Handbook, may result in a parking permit being revoked. Students are expected to drive and park safely and courteously.

High Tech High Chula Vista Village Parking

HTH Chula Vista ("HTHCV") has a limited allocation of parking spaces and permits for student drivers. To become eligible for an on-campus parking permit at HTHCV, a student must follow the HTHCV parking space application process, and attend a required HTHCV safety training. Students interested in a parking permit should see the HTHCV Dean of Students. Students will be issued parking permits for HTHCV parking spaces based on space availability and must display the parking permit prominently in the vehicle. HTHCV seniors are given priority registration for available spaces. Students without permits are not permitted to park on campus, and will need to park off-site.

Due to the high demand for parking at HTHCV, parking on campus is considered to be a privilege. Failure to obey traffic laws and regulations while on HTHCV property or easements, as well as failure to adhere to HTHCV rules and expectations noted in this Student Handbook, may result in a parking permit being revoked. Students are expected to drive and park safely and courteously.

High Tech High North County Village Parking

HTH North County ("HTHNC") has an allocation of parking spaces, and students must obtain permission to use one of those spaces. Forms and parking permits for student drivers can be obtained from the Dean of Students. Students will be issued parking permits for HTHNC parking spaces based on space availability and must display the parking permit prominently in the vehicle. HTHNC seniors are given priority registration for available spaces, and all students may apply for parking permits beginning on the first day of the school year. Students without permits are not permitted to park on campus, and will need to park off-site. Adjacent streets with unrestricted street parking are: Pacific Street and Discovery Street.

Due to the high demand for parking at HTHNC, parking on campus is considered to be a privilege. Failure to obey traffic laws and regulations while on HTHNC property or easements, as well as failure to adhere to HTHNC rules and expectations noted in this Student Handbook, may result in a parking permit being revoked. Students are expected to drive and park safely and courteously.

Student Passengers

Students who drive to and from school may not drive other HTH students in their vehicle during the school day unless:

- In accordance with applicable law, students are eligible to drive other students, **and**,

- In advance, parents and guardians have submitted a written and signed parental/guardian permission form (available at the school front desk), signed by the parents/guardians of the driver student and all students who may be passengers, **and**,
- Students conduct themselves in accordance with the law and HTH policies.

Automobiles and Other Vehicles

The following additional rules apply to cars and vehicles that are driven by students to school or on campus:

- Students may not sit in vehicles or gather in the parking areas before school, during school hours, or after school.
- When students enter and start their vehicles at the end of the school day, they must depart immediately. Students may not drive around the campus vicinity.
- Students must observe all traffic rules and speed limits. There are many people who walk around campus. Traveling at greater speeds than allowed may endanger others.
- While driving on campus, students may not play music in their cars at high volume.

Skateboards and Bicycles

The following rules apply to bicycles and skateboards while on campus:

- Skateboards:
    - **Point Loma Campus (Liberty Station):**
        - The HTH schools in Point Loma are situated in the midst of Liberty Station, adjacent to a public business district with several public thoroughfares between school buildings.
        - There are legal restrictions to the use of skateboards in such public spaces.
        - Based on these facts, and our experience with the common, shared public spaces surrounding our schools, we have concluded that in order to maintain a safe environment, skateboards will not be allowed on the Point Loma campus.
        - Students may not bring skateboards in any area within 500 feet of any HTH school building, any HTH parking lot, or HTH common area at any time.
        - If a student brings a skateboard onto campus, the skateboard may be confiscated by the school administration, and students may be subject to disciplinary action.
    - **Chula Vista Campus:**
        - In order to maintain a safe environment, students may not ride skateboards onto or on campus.
        - If a student brings a skateboard onto campus, he/she must carry it and store it properly as directed by faculty and staff members.
        - If a student violates these skateboard rules, the student's skateboard may be confiscated by the school administration, and students may be subject to disciplinary action.
    - **North County Campus:**
        - In order to maintain a safe environment, students may not ride skateboards onto or on campus with the exception of a designated skateboarding elective class, and in the case of such an elective, only in keeping with the parameters set forth below.

- Commuters:
  - If a student brings a skateboard onto campus, he/she must carry it onto campus as students may not ride onto campus.
  - All skateboards must be stored properly as directed by faculty and staff members.
- Elective – Skateboards: HTHNC and HTMNC only
  - In past years, HTHNC and HTMNC have offered skateboarding electives. To the extent this elective is offered, the following guidelines apply:
    - Parents and guardians must expressly agree to the terms of the elective, and agree to the terms of the release and waiver of liability associated with this elective.
    - Students must wear appropriate gear, including helmets, to participate.
    - Students may only ride their skateboards in the designated areas at designated times.
    - Students must adhere to all other guidelines established by North County School Directors and administration.
- If a student violates these skateboard rules, the student's skateboard may be confiscated by the school administration, and students may be subject to disciplinary action.

- Bicycles:
  - Students commuting to schools by bicycle should take precautions to park their bicycles in appropriate designated places.
  - Students are responsible for securing their bicycles with their own locks.

STUDENT HEALTH AND WELLNESS POLICIES

Administration of Medication at School (Prescribed or Over-the-Counter)

HTH does not have a nurse on staff at each school site. Each school's main office staff members will have first aid kits and will be your health center point of contact.

The primary responsibility for the administration of medication rests with the parent/guardian, student and medical professional. Medication will be administered during school hours only if determined by a physician to be necessary. Designated school personnel will keep records of medication administered at the school with the assistance of school personnel per the instructions of physicians, as applicable. All medication will be kept in a secure and appropriate storage location and administered per physician's instructions by designated staff.

Designated school personnel will return all personal, surplus medication to the parent/guardian upon completion of the regimen or prior to summer holidays.

In order for a student to be assisted by designated school personnel in taking prescription medication, including insulin shots, parents/guardians must provide HTH with: (1) a written and signed statement from a physician detailing the name of the medication, method, amount, and time schedule by which the medication is to be taken **and** (2) a written statement from the parent, foster parent, or guardian of the student indicating the desire that school assist the pupil with the administration of the medicine. These statements must be updated at least annually. Designated staff members will establish emergency procedures for specific medical conditions that require an immediate response (i.e. allergies, asthma, and diabetes), consistent with instructions from the parents/guardians/physicians.

Certain medications may be carried by students as noted below:

- **Students in grades 6-12:** Students in grades 6-12 may keep inhalers for asthma conditions, so long as prescribed by a doctor, and certain over-the-counter medicines (i.e. Tylenol, Motrin, and supplements like glucose tablets) in their possession. Students are prohibited from sharing any medications, whether prescribed or over-the-counter, with any other students. HTH will not be responsible for any adverse reactions to medications self-administered by students without the knowledge of HTH staff, faculty or administration.

- **Students in grades K-5:** Unless otherwise prescribed by a doctor, students in grades K- 5, must keep their medications, including inhalers, locked at the front office with our Site Manager. Medication will only be administered according to the physician's instructions, as described below.

In order for a student to carry and self-administer prescription auto-injectable epinephrine ("EpiPen"), parents/guardians must provide HTH with: (1) a written and signed statement from a physician detailing the name of the medication, method, amount, circumstances during which the medication should be administered, a confirmation that the pupil is able to self-administer auto-injectable epinephrine, **and** (2) a written statement from the parent/guardian consenting to the self-administration, providing a release for designated school personnel to consult with the health care provider of the student regarding any questions that may arise with regard to the medication, and releasing HTH and school personnel from civil liability if the self-administering student suffers an adverse reaction as a result of self-administering medication. These statements must be updated at least annually.

Additionally, the designated school personnel who have volunteered may use EpiPens to provide emergency medical aid to persons suffering, or reasonably believed to be suffering from, an anaphylactic reaction. HTH will ensure it has the appropriate type of EpiPens on site (i.e., regular or junior) to meet the needs of its pupils. HTH will ensure staff properly store, maintain, and restock the EpiPens as needed. HTH will ensure any school personnel who volunteer are appropriately trained regarding the storage and emergency use of EpiPens based on the standards developed by the Superintendent of Public Instruction. HTH will distribute an annual notice to all staff describing the request for volunteers who will be trained to administer an EpiPen to a person if that person is suffering, or reasonably believed to be suffering from, anaphylaxis. The annual notice shall also describe the training the volunteer will receive.

Control of Communicable Diseases

HTH works to cooperate with the County of San Diego Health and Human Services Agency to prevent and control communicable diseases in school-age children. When there is good reason to believe a student has a contagious or infectious disease, the parent/guardian will be contacted and the student sent home. The student may return to school when well and/or released by a physician. If there is reason to believe a student is suffering from a recognized contagious or infectious disease, the student will be excluded from school until school officials are satisfied that the student no longer has the contagious or infectious disease.

Health Screening

HTH contracts with nurses from Rady Children's Hospital San Diego to provide hearing and visionscreenings as require by state law. You may contact the school at the time of the health screening if you would prefer that your child be excluded. Screenings are offered in grades K, 1, 2, 3, 5, 6, 8 and 10.

Immunization Requirements

State law requires that all students, kindergarten through grade 12, be immunized against certain diseases. At the time of the first day of attendance, the school is required to have proof that your child has received all currently due immunizations.

Personal Belief Exemptions (PBEs) will no longer be recognized for new incoming students. Pre-existing PBEsfiled at a California K-12 school before January 1, 2016 may remain valid until the student enrolls in the next grade span, typically at kindergarten or 7th grade(middle school entry) only where the student:

(1) Had a physician-issued, written exemption on file prior to January 1, 2016;
(2) At a California K-12 school (child care and preschool are not recognized for this purpose, however, qualified Transitional Kindergarten programs may be recognized for this purpose);
(3) In which the student was then-enrolled (Exempt Student).

PBEs may be transferred between California schools both within and across school districts. If a student's PBE is not successfully transferred, the student will have to demonstrate proof of age-appropriate immunizations in accordance with the law prior to registration.

However, even Exempt Students:

(1) Must receive any immunizations that become required of California students after January 1, 2016 when they transition to the next grade span.
(2) Are subject to rules requiring proof of immunization at kindergarten and seventh grade transitions. At the kindergarten and seventh grade registration points, Exempt Students must demonstrate proof that all required immunizations for the relevant grade level have been administered unless the student has a medical exemption that meets all legal requirements.

Wellness and Food

HTH has adopted a Wellness Policy in keeping with its participation in the National School Lunch Program (NSLP) that discusses food service, sales and distribution on HTH campuses. The following guidelines based on the Wellness Policy apply to school-based activities:

(1) To the extent food sales are conducted, school-based groups including parent associations, other parent groups, booster clubs, associated student body, student groups, clubs and teams, and teaching teams should abide by HTH health and wellness policies.
(2) Fundraising events involving food must be done after regular school hours. This means that food sales should not take place while any neighboring HTH village school may be in session. Please note that several HTH schools offer breakfast to students. Accordingly, any fundraising events involving food may not be conducted before school.
(3) Parents/guardians, volunteers, staff members and students should consider nutritional quality when selecting snacks for school events, sales, and parties.

ACADEMIC POLICIES

HTH Academic Program

HTH schools offer a unique, project-based academic program. The mission of all HTH schools, whether at the elementary, middle or high school level, is to provide students with rigorous and relevant academic and workplace skills, preparing its graduates for postsecondary success and productive citizenship. High Tech High schools all embody the design principles of personalization, adult world connection, common intellectual mission, and teacher as designer. For more information about your school's particular program visit your school website at: www.hightechhigh.org

High Schools: HTH Curriculum and Transferability of Credits

All HTH high school level core courses are approved or are in the process of being approved by the University of California ("UC"). We have seen that courses offered at HTH are as transferable as those of a traditional district high school to other schools, and are recognized as such by colleges and universities.

HTH does not offer the same courses or the same sequence of courses, as do many other schools. In some instances, this has caused 11th and 12th grade students transferring to other schools to need to make-up courses that were not offered in the traditional sequence, or at all, at HTH. We do not offer a high school credit for Physical Education (P.E.).

Students and parents/guardians are advised to take High Tech High's unique academic program into account when making decisions to enroll at HTH and to transfer to other schools.

HTH requires that students receive a C- or higher in all core academic courses. Consistent with University of California entrance requirements, students must earn a grade of C- or higher to receive credit for a course.

Code of Academic Integrity

HTH students, united in a spirit of mutual trust and fellowship, mindful of the values of a true education and the challenges posed by the world, agree to accept the responsibilities for honorable behavior in all academic activities, to assist one another in maintaining and promoting personal integrity, and to follow the principles and procedures in this Code of Academic Integrity.[1]

Violations of the Code of Academic Integrity may take several forms. Plagiarism and cheating are two examples of violations of the Code of Academic Integrity. Plagiarism is typically described as duplication of another's work without full acknowledgement of the debt to the original source, however, it also includes any of the following:[2]

- Direct duplication by copying (or allowing to be copied) another's work, whether from a book, article, Web site, another student's assignment, etc.;
- Duplication in any manner of another's work during an exam;
- Paraphrasing of another's work closely, with minor changes but with the essential meaning, form and/or progression of ideas maintained;
- Piecing together sections of the work of others into a new whole;
- Submitting one's own work which has already been submitted for assessment purposes in another subject; and/or,
- Producing assignments in conjunction with other people (e.g. another student, tutor), which should be your own independent work.

Cheating results in a loss of integrity on the part of the individual committing the act and on the educational process that is undermined by the act of cheating. It is a violation of the Code of Academic Integrity for any student to attempt to gain or gain an unfair advantage over another student by unfair or dishonest means. If you are unclear about an assignment, the methodology for the same or the permissible bounds of assistance for completing your work please speak to your teacher(s) and ask for clarification.

This following web page provides some examples of acceptable and unacceptable uses of sources in writing – www.oregonstate.edu/admin/stucon/plag.htm. In addition, a brief guide from the Paul Robeson Library provides an excellent overview. This may be found at - www.libraries.rutgers.edu/rul/libs/robeson_lib/flash_presents/text_plag.html. Consequences for not following the academic code of conduct may include receiving a zero on the assignment, failing the course, disciplinary action including the possibility of suspension and/or expulsion from school.

Intellectual Property Statement

Students have the rights to intellectual property they have created, unless the property is also owned by others in the school, or if that creation arose out of, or in the course of, class-work, and/or if it was developed with funds and facilities administered by High Tech High.

SAFETY POLICIES

Emergency Procedures

HTH staff receives training in order to provide for the safety of students, staff and visitors during times of emergency. Emergency preparedness includes fire and earthquake drills which happen at regular times during the school year.

All alarms are treated as real at HTH. In the event of an emergency drill, all staff, students and visitors are required to complete an orderly and safe evacuation of the classrooms and building. Staff and students will meet in pre-assigned areas, and will remain there until all students are accounted for and instructed to return to the building or move to a safer area.

Failure to follow emergency procedures or the willful attempt to compromise emergency preparedness at HTH is grounds for severe consequences, including possible suspension and expulsion.

In the case of a major emergency (such as a significant earthquake or fire), parents/guardians and families should contact the main phone number for your student's school. Please refer to the first page of this handbook for a school directory. You may also visit www.hightechhigh.org for more information. During such an emergency, HTH staff will be focused on ensuring that all students are safe and accounted for. Students and parents/guardians are asked to do their part by not having a student leave the premises without signing proper releases.

Internet Safety Policy

Introduction

It is the policy of High Tech High to: (a) prevent user access over its computer network to, or transmission of, inappropriate material via Internet, electronic mail, or other forms of direct electronic communications; (b) prevent unauthorized access and other unlawful online activity; (c) prevent unauthorized online disclosure, use, or dissemination of personal identification information of minors; and (d) comply with the Children's Internet Protection Act ("CIPA") [Pub. L. No. 106-554 and 47 USC 254(h)].

Definitions

Key terms are as defined in the CIPA[3].

Access to Inappropriate Material

To the extent practical, technology protection measures (or "Internet filters") shall be used to block or filter Internet, or other forms of electronic communications, access to inappropriate information.

Specifically, as required by the CIPA, blocking shall be applied to visual depictions of material deemed obscene or child pornography, or to any material deemed harmful to minors.

Subject to staff supervision, technology protection measures may be disabled for adults or, in the case of minors, minimized only for bona fide research or other lawful purposes.

Inappropriate Network Usage

To the extent practical, steps shall be taken to promote the safety and security of users of the High Tech High online computer network when using electronic mail, chat rooms, instant messaging, and other forms of direct electronic communications.

---

[3]**CIPA definitions of terms:**

MINOR. The term "minor" means any individual who has not attained the age of 17 years.

TECHNOLOGY PROTECTION MEASURE. The term "technology protection measure" means a specific technology that blocks or filters Internet access to visual depictions that are:

1. **OBSCENE**, as that term is defined in section 1460 of title 18, United States Code;
2. **CHILD PORNOGRAPHY**, as that term is defined in section 2256 of title 18, United States Code; or
3. Harmful to minors.

HARMFUL TO MINORS. The term ``harmful to minors'' means any picture, image, graphic image file,or other visual depiction that:

1. Taken as a whole and with respect to minors, appeals to a prurient interest in nudity, sex, or excretion;
2. Depicts, describes, or represents, in a patently offensive way with respect to what is suitable for minors, an actual or simulated sexual act or sexual contact, actual or simulated normal or perverted sexual acts, or a lewd exhibition of the genitals; and
3. Taken as a whole, lacks serious literary, artistic, political, or scientific value as to minors.

SEXUAL ACT and SEXUAL CONTACT. The terms "sexual act" and "sexual contact" have the meaningsgiven such terms in section 2246 of title 18, United States Code.

Specifically, as required by the CIPA, prevention of inappropriate network usage includes: (a) unauthorized access, including so-called 'hacking,' and other unlawful activities; and (b) unauthorized disclosure, use, and dissemination of personal identification information regarding minors.

Education, Supervision and Monitoring

It shall be the responsibility of all members of the High Tech High staff to educate, supervise and monitor appropriate usage of the online computer network and access to the Internet in accordance with this policy, the CIPA, the Neighborhood Children's Internet Protection Act, and the Protecting Children in the 21st Century Act.

Procedures for the disabling or otherwise modifying any technology protection measures shall be the responsibility of High Tech High IT Administrators or designated representatives.

The High Tech High IT Administrators or designated representatives will provide age-appropriate training for students who use the High Tech High Internet facilities. The training provided will be designed to promote the High Tech High commitment to:

a. The standards and acceptable use of Internet services as set forth in theHigh Tech High Internet Safety Policy;

b. Student safety with regard to:

   i. safety on the Internet;
   ii. appropriate behavior while on online, on social networking Web sites, and in chat rooms; and
   iii. cyberbullying awareness and response.

c. Compliance with the E-rate requirements of the CIPA.

COMMUNITY STANDARDS AND CONDUCT POLICIES

Dress Code

The purpose of the HTH dress code is to foster a professional, safe and respectful environment at school. The dress code is in effect from the time students arrive to school until they leave. Note that students must be in dress code before school begins if they enter the building before the official start of school. The dress code applies to field trips, site visits, academic internships, and other school-related activities, unless the supervising adult informs the students otherwise. The dress code applies equally to students and staff.

Guidelines for All Schools

- Tops
  - Students must either wear a short or long-sleeve blouse, shirt with a collar, or sweater.
  - Shirts must be buttoned.
  - Shoulders must be covered and exposed mid-sections are not acceptable.
  - T-shirts may not be worn over collared shirts.
  - Printed t-shirts are not allowed.
  - Sweaters and jackets of an appropriate size and length may be worn over, but not in place of, an appropriate shirt.
  - Hooded sweatshirts are not allowed to substitute for an appropriate shirt.

- <u>Bottoms</u>
  - Appropriate school attire includes long pants, shorts or skirts worn with the waistband at the waist.
  - Excessively baggy pantsathletic wear, and sweatpantsare not acceptable
  - Jeans in good repair are acceptable.
  - Skirts and shorts must be of acceptable length (2 inches above the knee).

- <u>Other clothing guidelines</u>
  - Text that promotes violence, alcohol, tobacco or drugs is prohibited.
  - Flips flops and slippers are not allowed
  - Exposed midsections are not allowed
  - Hats, hoods and bandanas are not allowed. Head coverings worn for religious reasons will be allowed.
  - Earrings are fine, but no other visible piercing. Small, clear studs are allowed in place of nose rings during the school day.
  - Appropriate attire for academic internships varies by workplace. Students must remain in dress code while at school.

<u>Elementary School Guidelines</u>

- Elementary school students should wear clothes that allow them to run, play and get dirty.
- Tops must cover the student's midsection and may only include child-appropriate graphics and text.
- Hats, hoods and bandanas may not be worn inside. Head coverings worn for religious reasons will be allowed.
- Students must wear shoes with a backstrap. Flip flops are not allowed.

<u>Consequences for Dress Code Violations</u>

One potential consequence for failure to adhere to the dress code is that the student may be asked to come to school wearing a school uniform, which is a collared, white shirt and long, khaki pants. This consequence will apply to both girls and boys. Students who do not wish to wear a uniform should ensure that the student is following the dress code at all times. Following the dress code is one way that students show that they wish to be a part of the HTH community.

Computer, Electronic Mail, And Internet Usage Policy

We are pleased to offer High Tech High students access to certain elements of school computer equipment, computer network and systems, electronic mail service and user accounts, the Intranet and the Internet (collectively "HTH IT"). HTH IT is provided for students to conduct research and communicate with others.

Access to HTH IT is given to students who agree to act in a considerate and responsible manner. Access is a privilege – not a right. Access entails responsibility. Students are expected to adhere to the following guidelines and policies applicable to the use of HTH IT. Students who violate these policies may be subject to disciplinary action.

HTH IT

HTH IT is shared and available to the HTH community. These resources may not be used in any way that disrupts or interferes with use by others.

Students must respect all copyrights and licenses to software and other on-line information, and may not upload, download, or copy software or other material through HTH IT.

The following are some of the actions that are not permitted, and violations may result in a loss of access as well as other disciplinary or legal action, including expulsion:

- Damage, vandalism or theft of equipment, systems or networks
- Use of the computer equipment, networks and systems for unlawful purposes, commercial purposes or personal gain
- Violations of copyright law
- Plagiarism
- Theft, piracy, improper downloading or modification of software
- Transmitting computer viruses
- Sending or retrieving information that violates school policies and/or applicable laws (e.g., sending and/or retrieving information that is pornographic, vulgar, racist, sexist, abusive, harassing, offensive or attacking)
- Any attempt to guess passwords, use another's password, break in to other accounts, or gain unauthorized access to administrator accounts
- Trespassing in another's portfolio, folders, work or files
- Concealing or misrepresenting one's identity while using the system
- Intentionally wasting limited resources
- Any use which is unlawful under applicable State or Federal law
- Any use which HTH determines is objectionable in its sole discretion

Communication using HTH IT

Students are responsible for their own behavior on HTH IT just as they are everywhere in the school environment. Communications on HTH IT are often public in nature. General school rules for behavior and communications apply.

It is presumed that users will comply with school standards. Aside from the clarification of such standards, HTH is not responsible for restricting, monitoring, or controlling the communications of individuals utilizing the network.

HTH and Access/No Expectation of Privacy

HTH IT and all user accounts are the property of HTH. As such, HTH reserves the right to monitor and access information on the system and in users' accounts. Network storage areas may be accessed by HTH to review files and communications, maintain system integrity, to ensure that users are using the system responsibly and to ensure there are no violations of school policies.

There is no right to privacy nor should any user of HTH IT have any expectation of personal privacy in any matters stored in, created, received, or sent over HTH IT. These are subject to review by the schools at any time, with or without notice, with or without cause and without the permission of any student or parent/guardian. HTH reserves the right to monitor access, retrieve, download, copy, listen to, or delete anything stored in, created, received or sent over school computer networks, computers, e-mail system or any other HTH IT, without notice and without the permission of any user.

Moreover, to protect the integrity of the HTH IT and the users thereof against unauthorized or improper use of these systems, HTH reserves the right, without notice, to limit or restrict any individual's use, and to inspect, copy, remove, or delete any unauthorized use of this technology upon authorization of the School Director or his/her designee.

Internet

Access to e-mail and the Internet will enable students to explore thousands of libraries, databases, and bulletin boards while exchanging messages with Internet users throughout the world. Families are reminded, however, that HTH does not control the content of the Internet. Accordingly, HTH does not have control over the type of information accessible to students or the quality of the same, though HTHdoes use internet filters, as described in the Internet Safety Policy. HTH cannot completely limit access to materials that a parent/guardian or family might consider inappropriate. While our intent is to make Internet access available to further educational goals and objectives, students may find ways to access other materials as well.

High Tech High believes that the benefits to students from access to the Internet, in the form of information resources and opportunities for collaboration, exceed any disadvantages. But ultimately, parents and guardians of minors are responsible for setting and conveying the standards that their children should follow when using media and information resources. To that end, HTH supports and respects each family's right to decide if their child should not have Internet access, and relies on the family to inform us of that choice. Ultimately, appropriate use of this resource is the responsibility of the user.

Community Code Of Conduct - Respect For Self And Others

HTH students, parents/guardians and staff are expected to treat one another with respect, support teaching and learning, and to respect our environment and surroundings. This expectation extends how we respect ourselves, how we talk and interact with one another, and how we treat each other's property and personal space. In keeping with this code of conduct, certain norms should be observed including, but not limited to those found in this Community Behavioral Policies and Commitments section:

- **Drugs, alcohol, and tobacco:** Drugs, alcohol, and smoking materials (including, but not limited to, all forms of e-cigarettes, vaporizer pens, vaporizers, e-hookahs, etc.) are prohibited in the school, on the campus, and at off-campus school functions. Likewise, students are prohibited from being under the influence of drugs, alcohol and from smoking while at school, on campus and at off-campus school functions.
- **Vandalism*:*** All students and staff are urged to treat school buildings and property with care and respect. No one is to injure, destroy, deface or trespass on school property. A clean environment is important to all; vandalism will be dealt with severely. Parents/guardians will be responsible for paying

for any damage done to school property by their child. People with any information about damage done to the building or its contents should report it to the Dean of Students or School Director.

- **Personal electronics:** Cell phones, mp3 players, and all similar electronic devices must be off, stored away, out of sight, and not in use during school hours, unless under the direct supervision of a HTH faculty member. If it has an on or off switch, it should be turned off for the duration of the school day. Headphones may be used only when provided by and under the supervision of an HTH faculty member.
- **Computer games:**HTH provides technology and internet access for the educational benefit of members of the community. Playing computer games or video games on campus during school hours is allowed only under the direct supervision of a teacher.
- **Free Speech on Campus:** The Supreme Court has referred to public schools as a "marketplace of ideas" where the protections of the First Amendment are particularly important. "The vigilant protection of constitutional freedoms is nowhere more vital than in the community of American schools." *Shelton v. Tucker*, 364 U.S. 479, 487 (1960).

At the same time, the law is clear that a student's right of free speech is not unfettered and that the free speech/press protection does not prevent a school from imposing certain restrictions and/or imparting discipline for certain forms of speech that may be considered disruptive to the community, in violation of school policies and/or considered unlawful harassment, discrimination, bullying, threats and/or intimidation. In short, HTH reserves the right to place reasonable time, place and manner restrictions on speech where the faculty and/or administration determine that such a restriction is appropriate.

Examples of student speech that may be restricted include:

- Speech which creates or threatens danger, and/or unlawful acts
- Speech which threatens or presents a violation of HTH rules and standards of conduct
- Speech which creates or threatens a substantial disruption of the orderly operation of the school
- Speech which impinges on the rights of others
- Vulgar, lewd, obscene, and plainly offensive speech or conduct

Search of Student Possessions

HTH reserves the right to examine and/or search all student possessions when, in the judgment of HTH administrators and officials, there is reasonable suspicion that the student may be in possession of alcohol, drugs, weapons, stolen goods, or any other materials that may be harmful or disruptive to the school community or in violation of any school policy, rule or law.

Student Non-Discrimination And Sexual Harassment Policies

Student Non-Discrimination Policy

HTH maintains that it is critical that all members of the HTH community respect each other's rights, individuality, and differences. Courtesy, tolerance and mutual respect provide the platform for sharing, learning, innovation and personal development. HTH is committed to equal opportunity for all individuals in education. HTH's programs and activities shall be free from harassment, or discrimination or bullying on the basis of actual or perceived sex, sexual orientation, gender, gender expression, gender identity, ethnic group identification, race, ancestry, national origin, religion, color and mental or physical disability or any other characteristic that is contained in the definition of hate crimes in the California Penal Code. HTH shall promote programs which ensure that discriminatory practices are eliminated in all school activities.

The School adheres to all provisions of federal law related to students with disabilities including, but not limited to, Section 504 of the Rehabilitation Act of 1973, Title II of the Americans with Disabilities Act of 1990 and the Individuals with Disabilities in Education Improvement Act of 2004.

Any student who engages in prohibited harassment, discrimination or bullying of another student or anyone from HTH may be subject to disciplinary action up to and including expulsion. Any employee who permits or engages in unlawful harassment, discrimination, bullying or intimidation of a student may be subject to disciplinary action up to and including dismissal. Any student or parent/guardian who feels that unlawful harassment, discrimination, bullying, or intimidation has occurred should immediately contact the School Director or Dean of Students.

Student Sexual Harassment Policy

HTH is committed to making the school free from sexual harassment. This means that HTH prohibits sexual harassment by someone from or in the educational setting. HTH prohibits sexual harassment and harassment based upon pregnancy, childbirth or related medical conditions, race, religion, creed, color, gender, gender identity, gender expression, national origin or ancestry, physical or mental disability, medical condition, marital status, age, sexual orientation, or any other basis protected by federal, state, local law, ordinance or regulation.

Sexual harassment refers to behavior that, among other things, is not welcome, is personally offensive, or undermines or weakens morale. Sexual harassment can include such actions as:

- Unwelcome sexual advances, or
- Requests for sexual favors, or
- Verbal, electronic, visual, or physical conduct of a sexual nature made by someone from or in the educational setting.

HTH prohibits conduct that has the purpose or effect of having a negative impact on the recipient’s educational progress, academic performance, or personal security, or of creating or contributing to an intimidating, hostile, or offensive educational environment. HTH further prohibits sexual harassment in which a student's grades, benefits, services, honors, program or activities are dependent on submission to such conduct.

HTH will not condone or tolerate harassment of any type, including bullying, discrimination, or intimidation, by any employee, independent contractor or other person with which HTH does business, or any other individual, student, or volunteer. This policy applies to all employees, students, or volunteers and relationships, regardless of position or gender.

Students should report any sexual harassment to the School Director and/or Dean of Students. Students who violate this policy shall be subject to discipline including the possibility of suspension or possible expulsion. Any employee who permits or engages in sexual harassment of a student may be subject to disciplinary action up to and including dismissal. HTH prohibits retaliation against any participant in the complaint process. Each complaint shall be investigated promptly and in a way that respects the privacy of all parties concerned and insofar as is possible. HTH will take appropriate corrective action, if warranted.

Disciplinary Actions

Overview of Disciplinary Actions

The purpose of disciplinary action at HTH is to ensure that individual students, their parents/guardians and the HTH community stay focused on growth and learning. Prompt resolution of the problem or issues is expected.

Discipline may include any one, a combination and/or all of the following depending on the circumstances, and at the school administration's sole discretion.

- Verbal and/or written warning to the student
- Loss of privileges or removal from extra-curricular activities
- Parent/guardian notification
- A written commitment by the student to improve his/her behavior and/or performance and/or to take certain affirmative actions to improve
- A meeting with the Dean of Students, Director or some other school administrator or faculty member
- Academic Consequences
- Suspension
- Expulsion
- Denial of Re-admission
- Other forms of discipline that the school may determine appropriate

Suspension and Expulsion as Disciplinary Actions

HTH will regard suspension and expulsion as a last resort. Criteria for suspension and expulsion of students will be consistent with all applicable federal and state statutes and constitutional provisions. Students will be afforded due process, including a hearing and right of appeal, as described below. A student identified as an individual with disabilities or for whom there is a basis of knowledge of a suspected disability pursuant to the Individuals with Disabilities Act ("IDEA") or who is qualified for services under Section 504 of the Rehabilitation Act of 1973 ("Section 504") is subject to the same grounds for suspension and expulsion and is accorded the same due process procedures applicable to regular education students except when federal law or special education local plan area ("SELPA") policies require additional or different procedures.

The grounds for mandatory and discretionary suspension and expulsion are as follows:

1. Mandatory Suspension. A student shall be suspended with a mandatory recommendation for expulsion where he/she is found to have:
    a. Possessed, sold, or otherwise furnished any firearm, explosive, or other dangerous object.
2. Discretionary Suspension. A student may be suspended for any of the following offenses:
    a. Possession, use, offering, arranging and/or negotiating to sell or provide of a knife, imitation firearm, other weapon, or item that could be construed and/or used as a weapon.

b. Possession, use, being under the influence of, offering, arranging and/or negotiating to sell tobacco, alcohol, drugs, other controlled substances, or intoxicants of any kind, including, but not limited to over-the-counter medication and/or prescription drugs.
c. Theft of property including, but not limited to attempting to steal and/or receive stolen property and/or aiding or abetting in the same.
d. Physical assault including, but not limited to aiding or abetting in the same.
e. Damage to school or private property including, but not limited to attempted or caused damage.
f. Sexual harassment.
g. Threatening, harassing, bullying, and/or attempting to intimidate other members of the community including, but not limited to acts of "cyber-bullying."
h. Obscenity/Profanity/Vulgarity, including the commission of an obscene act and/or engagement in habitual profanity/vulgarity.
i. Disruption and/or defiance, including, but not limited to disruption of school activities and/or willful defiance of the authority of school personnel.
j. Violations of HTH academic policies, including, but not limited to plagiarism and/or cheating.
k. Violations of HTH Information Technology policies, including, but not limited to transmitting computer viruses, using or attempting to use other's accounts, trespassing in another's portfolio, folders or files, concealing or misrepresenting one's identity while using the IT system.
l. Violations of HTH conduct policies as articulated throughout the HTH Student-Parent Handbook.

3. <u>Mandatory Expulsion</u>. A student shall be expelled when it is determined that the student:
    a. Possessed, sold, or otherwise furnished any firearm, explosive, or other dangerous object.
4. <u>Discretionary Expulsion</u>. A student may be expelled for any of the following offenses:
    a. Possession, use, offering, arranging and/or negotiating to sell or provide a knife, imitation firearm, other weapon, or item that could be construed and/or used as a weapon.
    b. Possession, use, being under the influence of, offering, arranging and/or negotiating to sell tobacco, alcohol, drugs, other controlled substances, or intoxicants of any kind, including, but not limited to over-the-counter medication and/or prescription drugs.
    c. Theft of property including, but not limited to attempting to steal and/or receive stolen property and/or aiding or abetting in the same.
    d. Physical assault including, but not limited to aiding or abetting in the same.
    e. Damage to school or private property including, but not limited to attempted or caused damage.
    f. Sexual harassment.
    g. Threatening, harassing, bullying, and/or attempting to intimidate other members of the community including, but not limited to acts of "cyber-bullying."
    h. Obscenity/Profanity/Vulgarity, including the commission of an obscene act and/or engagement in habitual profanity/vulgarity.
    i. Disruption and/or defiance, including, but not limited to disruption of school activities and/or willful defiance of the authority of school personnel.
    j. Violations of HTH academic policies, including, but not limited to plagiarism and/or cheating.
    k. Violations of HTH Information Technology policies, including, but not limited to transmitting computer viruses, using or attempting to use other's accounts, trespassing in another's portfolio, folders or files, concealing or misrepresenting one's identity while using the IT system.
    l. Violations of High Tech High conduct policies as articulated throughout the HTH Parent/Student Handbook.

A student may receive consequences for those acts listed above as committed at any time, including, but not limited to, (a) while on school grounds; (b) while going to or from school; (c) during lunch period, on or off campus; (d) during, or while going to or from, a school sponsored activity; and, (e) during non-school time and while off campus if the school determines that there is a nexus between the action taken and the school community sufficient to warrant action by the school. If a student is arrested off campus, s/he may be suspended at that time or upon return to campus.

<u>Authority to Impose Discipline</u>

The School Director (or his/her designee) may conduct an investigation of the facts and circumstances presented in case of a disciplinary offense or infraction. The investigation may include search(es), a review of evidence, consulting the student and interviewing affected parties, and potential witnesses as well as the involvement authorities.

The School Director (or his/her designee) may consider the various disciplinary options available in any given set of circumstances, including whether alternatives to suspension or expulsion may be appropriate.

The School Director (or his/her designee) has the authority to determine whether or not to impose a suspension under this policy. Suspensions may be imposed: (1) Pending an investigation to determine whether further discipline, including the possibility of an expulsion hearing is warranted; or, (2) Companion to setting an expulsion hearing. School Directors (or their designees) have the discretion to determine which form of suspension may be imposed.

If a student matter proceeds to an expulsion hearing, the School Director (or his/her designee) shall have the authority to hear the matter and to determine whether or not to impose an expulsion. The decision of whether or not to expel a student remains at the sole discretion of the School Director (or his/her designee).

<u>Suspensions</u>

- **Suspension Pending Investigation**
  The School Director (or his/her designee) has the discretion to and may impose a suspension directly if s/he determines it is appropriate. If the School Director (or his/her designee) determines that a student is to be suspended, the School Director (or his/her designee) shall provide written notice to the student's parents and/or guardians of the suspension in writing, including reasons for the suspension and the time period for the suspension ("Suspension Notice"). Academic make-up work is required during suspension. Return to school may be contingent upon submission of a written essay addressing the issue at hand and stating how the student intends to move forward or some other form of restorative process as the School may determine in its sole discretion.

- **Suspension Pending Expulsion Hearing**
  If the School Director (or his/her designee) determines at the outset that an expulsion hearing is warranted, the School Director (or his/her designee) may impose a suspension pending an expulsion hearing. The School Director (or his/her designee) shall provide written notice to the student's parents and/or guardians of the suspension, the reasons for the suspension and the expulsion hearing, give notice of the expulsion hearing and provide information regarding HTH's expulsion procedures ("Suspension Pending Expulsion Hearing Notice").

- **Discipline Review Meeting**
  If a student is placed on a suspension of any form, the school may call for a Discipline Review Meeting with the parents and/or guardians. During the course of the Discipline Review Meeting, the School Director (or his/her designee) will discuss with the parents and/or guardians the: (1) nature of the offense; (2) the information and evidence gathered to date; and, (3) next steps.

  If the School Director (or his/her designee) determines that the school will move forward to an expulsion hearing, and the school has not yet given formal notice of an expulsion hearing, the School Director (or his/her designee) will provide the parents and/or guardians with a Suspension Pending Expulsion Hearing Notice.

<u>Expulsions</u>

- **Expulsion Hearings**
  If the School Director (or his/her designee) determines that consideration of expulsion is warranted, the School Director will hold an expulsion hearing where the School Director shall serve as the hearing officer. The student shall have the right to representation and the right to present evidence at the expulsion hearing. The School Director will consider evidence and/or testimony as appropriate and will render a decision that shall be in the best interests of the student and HTH.

  If a School Director determines that a student is to be expelled, the School Director shall inform the student's parents and/or guardians of his/her determination in writing including the reasons for expulsion ("Expulsion Determination Letter"). The School Director's written notification to the parents/guardians shall also include information about the appeal and due process rights in regard to the School Director's determination.

- **Right to Appeal School Director's Determination**
  The parents and/or guardians (or, if at least 18 years of age, the student) shall have ten (10) days from the School Director's Expulsion Determination Letter to submit a written request of appeal to the Chief Executive Officer ("CEO") of High Tech High ("Written Appeal Request").

  In response to the Written Appeal Request, the CEO of High Tech High shall convene a committee consisting of one member of the High Tech High Board of Directors, a school director or a school dean from another one of the HTH schools, and the CEO of HTH or his/her designee. The committee members appointed will be knowledgeable about HTH's bases for expulsion and the procedures regarding expulsion. The committee shall have the right to rescind or modify the expulsion.

  The committee shall convene a hearing on the appeal within ten (10) days of receipt of a timely written request for an appeal.

  At the hearing on the appeal, the student shall have the right to counsel and the right to present evidence. The committee will consider evidence and/or testimony as appropriate and will render a written decision that shall be in the best interests of the student and HTH. That decision shall be final.

STUDENT INFORMATION POLICIES

Family Education Rights And Privacy Act

The Family Educational Rights and Privacy Act ("FERPA") affords parents/guardians and students over 18 years of age ("Eligible Students") certain rights with respect to the student's education records. These rights are:

1. The right to inspect and review the student's education records within 45 days after HTH has received a request for access. Parents/guardians or eligible students should submit to the School Director a written request that identifies the record(s) they wish to inspect. The HTH official will make arrangements for access and notify the parent or eligible student of the time and place where the records may be inspected.

   When a student moves to a new school/ school district, records will be forwarded upon request of the new district within 10 school days.

   In the case of divorce or separation, a school district must provide access to both natural parents, custodial and non-custodial, unless there is a legally binding document that specifically removes that parent's FERPA rights. In this context, a legally binding document is a court order or other legal paper that prohibits access to education record, or removes the parent's rights to have knowledge about his or her child's education.

   Pupil educational records maintained by HTH consist of any item of information directly related to an identifiable pupil, including but not limited to subjects taken, grades received, standardized test results, attendance record, and health record. Pupil records are maintained at each school where the pupil is attending. The School Director or designee is responsible for maintaining each type of pupil record and the information contained therein. Additional records, such as psychological and special education reports, are maintained at those respective offices. *General notices, lunch menus, Parent Association information, announcement of teacher conferences, school pictures, and other similar information, are not "education records" as defined by FERPA. Therefore, schools are not legally required to provide them.*

2. The right to request the amendment of the student's education records that the parent or eligible student believes are inaccurate or misleading or otherwise in violation of the student's privacy rights under FERPA. Parents or eligible students may ask HTH to amend a record that they believe is inaccurate or misleading. They should write the School Director and clearly identify the part of the record they want changed, and specify why it is inaccurate or misleading. If HTH decides not to amend the record as requested by the parent or eligible student, HTH will notify the parent or eligible student of the decision and advise them of their right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the parent or eligible student when notified of the right to a hearing.

3. The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent FERPA authorizes disclosure without consent. One exception, which permits disclosure without consent, is disclosure to school officials with legitimate educational interests. A school official is a person employed by HTH as an administrator, supervisor, instructor, or

support staff member (including health or medical staff and law enforcement unit personnel); a person serving on the School Board; a person or company with whom the School has contracted to perform a special task (such as an attorney, auditor, medical consultant, or therapist); or a parent or student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks. A HTH official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibility. Upon request, the HTH discloses education records without consent to officials of another school district in which a student seeks or intends to enroll.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failure by HTH to comply with the requirements of FERPA. The name and address of the office that administers FERPA are:

   Family Policy Compliance Office
   U.S. Department of Education
   400 Maryland Avenue, SW
   Washington, DC 20202-4605

With certain exceptions, FERPA requires HTH to obtain a parent/guardian written consent prior to the disclosure of personally identifiable information from his or her child's education records. However, HTH may disclose appropriately designated "directory information" without written consent, unless a parent/guardian has advised HTH to the contrary in accordance with this policy. "Directory information" is information that is generally not considered harmful or an invasion of privacy if released. Directory information can be disclosed to outside organizations without a parent's prior written consent. Outside organizations include, but are not limited to, companies that manufacture class rings or publish yearbooks. HTH has designated the following information as directory information:

- Student's name
- Student's address
- Parent's/Legal Guardian's address
- Telephone listing
- Student's electronic mail address
- Parent's/Legal Guardian's electronic mail address
- Photograph
- Date and place of birth
- Dates of attendance
- Grade level
- Participation in officially recognized activities and sports
- Weight and height of members of athletic teams
- Degrees, honors, and awards received
- The most recent educational agency or institution attended
- Student ID number, user ID, or other unique personal identifier used to communicate in electronic systems that cannot be used to access education records without a PIN, password, etc. (A student's SSN, in whole or in part, cannot be used for this purpose.)

<u>If you do not want HTH to disclose directory information from your child's education records without your prior written consent, you must notify HTH in writing at the time of enrollment or re-enrollment.</u> Please notify the School Director for your student's school. Please refer to the first page of this handbook for a school directory. You may also visit www.hightechhigh.org for more information.

Custody Matters

Schools are not the forum to mediate custody disputes and other personal family matters. Custody matters and other family law disputes must be handled by the courts.The schools do not have an independent legal basis to refuse a biological parent access to his or her child and the child's school records unless a valid, effective, and signed court order specifically setting forth limitations is on file at the school office.

Media Release

HTH reserves the right to make, produce, reproduce, exhibit, distribute, publish, and transmit by means of live broadcast, videotape, photograph and print student's name, grade, voice, picture, likeness and actions as an individual in connection with school activities. Your child's image or likeness may appear in occasional candid photos without any type of name identification and the use of these candid photos of your child is permissible. HTH is frequently approached with requests for interviews and pictures by print and broadcast media outlets. For individual student interviews with outside organizations, parent or guardian permission will be obtained prior to publication.

Parents/Guardians who prefer that their child not be photographed or video recorded for publication by the school (i.e. school website, newsletter or other school publication), need to indicate their preference annually during registration. Schools make every effort to ensure the wishes of the parent/guardian. Please be aware that photographing and video recording by devices such as mobile phones may take place without the knowledge of the teacher or school officials.

Returning Students

HTH retains the option, at its sole discretion, to re-enroll students who have previously left, consistent with HTH enrollment procedures. If you wish additional information about this, please contact your School Director.

Homeless Students

A staff person shall be designated as the School Liaison for homeless students as defined by applicable law. Homeless status is determined in cooperation with the parent or guardian. In the case of unaccompanied youth, status is determined by the School Liaison. Please contact your school office for the name and contact information for the School Liaison, and for further information about HTH's policy regarding homeless children and youth, and supports available for homeless HTH students.

VOLUNTEER POLICIES

Parents and guardians wishing to volunteer at HTH schools will be asked to fill out volunteer forms, agree to a background check, and possibly submit to a TB assessment in accordance with applicable law.

In addition, parents/guardians volunteering to drive for school field trips will be asked to fill out additional volunteer forms and provide additional information including:

- Parent/guardian name
- Address
- Telephone number
- Driver's License number
- Make of vehicle, model and number of seatbelts in the car
- Insurance Company, Policy Number and Expiration date

We must point out that while the vehicle is being used to transport students, the policy associated with the vehicle is the primary insurance for all costs associated with an accident.

By law the number of people in the vehicle may not exceed the number of seats and seatbelts with a maximum of ten (10) passengers, including the driver. Every passenger in the vehicle must use a seatbelt. No exceptions.

RESOLUTION PROCEDURES

HTH encourages parents/guardians, community members, faculty, staff, and administration to work cooperatively to resolve issues. Parents/guardians, or community members with general concerns or complaints must notify the School Director for the school. Please refer to the first page of this Handbook for a school directory. You may also visit www.hightechhigh.org for more information.

1. If the complaint is with a teacher or staff member, contact that teacher of staff member directly to set up a mutually agreeable time to discuss the complaint. Remember that such meetings should not interrupt a teacher's instructional time. Complaints handled at this level do not need to proceed further in the process.

2. Complaints not resolved directly with a teacher or staff member should be brought to the attention of the Director (or his/her designee). The School Director (or his/her designee) may call or meet with the complainant to discuss and address the concern(s). Complaints handled at this level do not need to proceed further in the process.

3. Complaints relating to the administration and operation of HTH may be discussed informally with the School Director (or his/her designee). Complaints handled at this level do not need to proceed further. If the complainant is dissatisfied with the School Director (or his/her designee), the complainant may contact High Tech High's CEO (or his/her designee).

4. If contacting the CEO (or his/her designee) does not resolve the complaint, the complainant may direct their complaint, in writing, to the High Tech High Board Chair.

5. The Board Chair will determine if the matter will be handled directly by him or her or by a committee of the Board. The Board Chair or committee of the board will meet with the complainant, discuss the facts and circumstances for which the complaint is based and make a determination as to how to best resolve the matter.

6. The decision of the Board Chair or committee of the Board is final.

Benefit Guide 2016-2017

Plan Guidelines and Evidence of Coverage Disclaimer

The benefit summaries listed in this benefits guide are brief summaries and plan highlights only. They do not fully describe the benefits coverage for your health and welfare plans. For details on the benefits coverage, please refer to the plan's Evidence of Coverage. The Evidence of Coverage or Plan Summaries is the binding document between the elected plan carrier and the member.

Plan coverage levels are for education purposes only. A plan physician must determine that the services and supplies are medically necessary to prevent, diagnose, or treat the members' medical condition. These services and supplies must be provided, prescribed, authorized, or directed by the plan's network physician unless the member enrolls in the Dental PPO plan where the member can use a non-network physician.

The HMO member must receive services and supplies at a health plan facility or skilled nursing facility inside the service network except where specifically noted to the contrary in the Evidence of Coverage.

For details on the benefit and claims review and adjudication procedures for each plan, please refer to the plan's Evidence of Coverage on file with your Human Resources department. If there are any discrepancies between benefits included in this summary and the Evidence of Coverage or Plan Summary description, the Evidence of Coverage or Plan Summary description will prevail.

Education For Change: Benefits Guide 2016-2017

EVERY ELIGIBLE EMPLOYEE MUST COMPLETE AN ENROLLMENT FORM OR COMPLETE A WAIVER

Introduction to 2016-2017 Benefits

We are pleased to provide you with our 2016-2017 Employee Benefits Guide.

At Education For Change, we are committed to providing you and your eligible dependents with a comprehensive benefits package that will meet your evolving needs. With respect to our employee benefits, our goal is to implement options, programs and resources which align with your personal health care, well-being and financial objectives.

We also aim to:

- Offer cost-effective coverage
- Provide meaningful programs and plan designs
- Maintain quality health care options
- Remain competitive with our benefits package

This year we are proud to offer a range of benefits to our employees. The Employee Benefits Guide can assist you in understanding your choices of coverage and resources available to you. We have included an overview of each option, along with plan summaries and cost comparisons.

We recognize that benefit selections are a personal decision and that health care costs have continued to rise on a national level. With these factors in mind, we have made every effort to design a benefits package that fits your lifestyle and rewards your contribution to our company's success. We encourage you to spend time reviewing the enclosed information in order to learn more about the benefits we are offering and appropriately select options that best suit you.

Eligibility and Enrollment

If you are a new employee or you are re-evaluating your choices, the benefits program offers a variety of coverage options that are available to you.

Who Can Enroll

Regular full-time employees working in excess of 30 hours per week are eligible to participate in the benefits program. Eligible employees may also choose to enroll eligible family members, including a legal spouse / domestic partner and/or children. Your domestic partner has to be of the same-sex, or can be opposite sex if one or both of you are age 62 or older. Also, a domestic partnership can be established when both persons file a Declaration of Domestic Partnership with the California Secretary of State. Registered partnerships must provide HR with the necessary documentation.

Children are considered eligible if they are:

- You or your spouse's / domestic partner's biological children, stepchildren, adopted children or foster child up to age 26.
- You or your spouse's / domestic partner's children of any age if they are incapable of self-support due to a physical or mental disability.

When Coverage Begins

For Newly Hired Employee's:

Your benefits will start on the 1st of the month following date of hire, as an active full time employee.

For Existing Employee's:

Your benefits plan year starts October 1st and ends September 30th.

Benefit Plans Available

- Medical
- Dental
- Vision
- Group Basic Life Insurance and AD&D
- Health Flexible Spending Account (FSA)
- Dependent Day Care Flexible Spending Account
- Pet Insurance
- Employee Assistance Program (EAP)
- 403(b) Retirement Plan
- Commuter Benefits Program

Please note: If you miss the enrollment period, you may not enroll in the benefits program unless you have a qualified change in status during the plan year.

Employees have an active open enrollment period, meaning you are required to take action and re-enroll in your benefits in order to continue coverage. If you miss the enrollment period, you may not enroll in the benefits program unless you have a qualified change in status during the plan year.

Eligibility and Enrollment (Continued...)

Changes During the Year

You are permitted to make changes to your benefits outside of the Open Enrollment period if you have a qualified change in status as defined by the IRS.

Generally, depending on the type of event, you may add or remove dependents from your benefits, as well as add, drop or change coverage if you submit your request for change within 30 days of the event.

Examples include:

- Marriage, divorce or legal separation
- Birth or adoption of a child
- Death of a dependent
- You or your spouse's / domestic partner's loss or gain of coverage through our organization or another employer
- Change in residence affecting eligibility or access

If your change during the year is a result of the loss of eligibility or enrollment in Medicaid, Medicare or state health insurance programs, you must submit the request for change within 30 days of the change event.

For a complete explanation of qualified status changes, please refer to the Legal Information Regarding Your Plan section of this guide.

Paying for Coverage

Education For Change strives to provide you with a valuable benefits package at a reasonable cost. Based on your benefit selections and coverage level, you may be required to pay for a portion of the cost. The Cost of Coverage section in this guide outlines the rates and frequency of payroll deductions for each benefit.

ENROLLMENT MADE EASY

You will receive the universal enrollment form to cover medical, dental, vision, as well as a section to indicate your beneficiary for the basic life insurance provided by Education For Change.

Please turn these forms into your HR representative during Open Enrollment or if you are a new hire, please submit prior to your effective date.

Medical Coverage

Using Prescription Drug Coverage

Many FDA-approved prescription medications are covered through the benefits program. Regardless of the plan you have, you will save money by filling prescription requests at participating pharmacies. Additional important information regarding your prescription drug coverage is outlined below:

- Drug formularies, or lists of prescription drugs including both generic and brand-name medications, with an applicable co-pay for each are available. If you obtain a medication that is not part of the formulary list, you will pay the highest co-pay.
- Generic drugs are required by the FDA to contain the same active ingredients as their brand-name counterparts
- A brand-name medication is protected by a patent and can only be produced by one specified manufacturer
- Although you may be prescribed non-formulary prescriptions, these types of drugs are not on the insurance company's preferred formulary list
- Specialty medications most often treat chronic or complex conditions and may require special storage or close monitoring

For a current version of the prescription drugs lists, visit the applicable carrier's website. A directory is included at the end of this benefit guide. The summary charts listed on the following pages contain plan coverage information.

Selecting a Plan that's Right for You

As you evaluate your health plan options and insurance needs, consider the following:

- **CHOICE:** If you prefer to obtain services from specific physicians, specialists or facilities, check to see if the medical plan option will cover services from those providers. While some health plans restrict your provider selection, others provide greater flexibility and choice.

- **COVERAGE:** Whether routine, surgical, prescription or another type of coverage, determine if the plan covers the services and medical treatments you value most. Plan exclusions, restrictions and limitations may also guide your selection process which are listed in the plan highlights.

- **COST:** Cost may be a large determining factor in your selection and each plan may contain a variety of cost components. Consider the amount of your payroll deduction, as well as other plan expenses such as deductibles, co-payments or coinsurance.

Do you have questions regarding a plan that are not covered in this guide? As this guide is not a complete overview of every plan detail, you can contact your local HR representative and they can refer to the complete Summary Plan Descriptions (SPD). You can also contact the carriers directly by referring to the Directory & Resources section for contact information.

PRESCRIPTION TIPS

You and your doctor can search for a drug, find out if it's covered and see what tier it falls under. You can also see if there are alternatives that cost less. Make sure your doctor knows that you pay more for tier 2 drugs. He or she can consider this before writing a prescription.

Please refer to plan highlights on mail order service for lower co-pays on all prescriptions.

DISCOUNT PROGRAMS

Kaiser offers multiple programs to help keep you stay fit and save money:

- For additional information, log in to your secure member profile at www.kp.org once you are a member.

Medical Coverage

Whether you have a common cold or will be undergoing surgery, medical benefits cover a range of services and can provide peace of mind to help you offset health care costs.

Your Medical Plan Options

The medical options available through Education For Change are provided by:

- Kaiser Permanente HMO
- Kaiser Permanente HRA

To help guide your plan selection, the following pages include details concerning how the plans will operate, as well as plan highlights and features. For your reference, an illustration of rates is listed in The Cost of Coverage section of the guide.

Using an HMO Plan

A Health Maintenance Organization (HMO) plan requires you and enrolled dependents to select a Primary Care Physician (PCP) who will direct the majority of your health care needs. Generally, an HMO operates as follows:

- With the exception of an OB/GYN specialist who is affiliated with your selected medical group, you must receive a referral from your PCP before receiving services from a specialist
- You and your enrolled dependent(s) are not required to see the same PCP, and you may change your PCP at any time
- Services may require a co-pay up front
- You do not have to submit claim forms to your insurance company
- Any services rendered out-of-network without the proper referral from your PCP will not be covered
- With an HMO you must select a PCP from within network.

USING AN HRA PLAN

An HRA is an account that gives you money to pay for care. Once you've enrolled in your HRA plan, Education for Change sets up the account and puts money into it. Because the money isn't counted as part of your wages, you won't be taxed on it.

Education for Change is sponsoring your HRA Deductible Account and pledging $1,500 individual/$3,000 for dependent coverage per plan year (10/01/2015-9/30/2016) toward deductible eligible expenses on your Kaiser HRA deductible plan.

These Kaiser eligible deductible expenses include:

- Office Visits
- Inpatient Hospitalization
- Outpatient Surgery
- Emergency Room Visits

The Kaiser website puts all of your plan information and cost-saving tools in one place.

www.kp.org

Find a doctor

- Find pharmacies and hopitals
- Get an ID card
- Print a temporary card or order a new card

Look up a claim to track your cost

- Plan ahead and review estimates for services
- Pay your Bills on line

Check your coverage

- Check who is on your plan and check what your plan covers
- Review your medical records and test results

Keep track of health care costs

- Check what a procedure may cost
- See how much you've paid so far and how much you have left to pay

Want health info on the go? Download the Kaiser Permanente mobile app on your smart phone. Lookf for it in your "App Store".

Education *for* Change Public Schools

601026 EDUCATION FOR CHANGE

Principal Benefits for
Kaiser Permanente Traditional Plan (10/1/16—9/30/17)

Accumulation Period

The Accumulation Period for this plan is 1/1/16 through 12/31/16 (calendar year).

Out-of-Pocket Maximum(s) and Deductible(s)

For Services that apply to the Plan Out-of-Pocket Maximum, you will not pay any more Cost Share for the rest of the Accumulation Period once you have reached the amounts listed below.

All Services related to covered infertility treatment	50% Coinsurance
Hospice care	No charge

This is a summary of the most frequently asked-about benefits. This chart does not explain benefits, Cost Share, out-of-pocket maximums, exclusions, or limitations, nor does it list all benefits and Cost Share amounts. For a complete explanation, please refer to the *EOC*. Please note that we provide all benefits required by law (for example, diabetes testing supplies).

YOUR KAISER PERMANENTE COMBINED CHIROPRACTIC AND ACUPUNCTURE BENEFIT

Services	Cost Sharing and Office Visit Maximums
Chiropractic Services are covered when provided by a Participating Provider and Medically Necessary to treat or diagnose Neuromusculoskeletal Disorders. Acupuncture Services are covered when a Participating Provider finds that the Services are Medically Necessary to treat or diagnose Neuromusculoskeletal Disorders, nausea, or pain. You can obtain Services from any ASH Plans Participating Providers without a referral from a Kaiser Permanente Plan Physician.	**Office visit cost share:** $10 copay per visit **Office visit limit:** Up to a combined total of 20 medically necessary Chiropractic and Acupuncture visits per year **Chiropractic appliance benefit:** If the amount of the appliance in the ASH Plans fee schedule exceeds $50, you will pay the amount in excess of $50, and that payment will not apply toward the Plan Deductible or Plan Out-of-Pocket Maximum. Covered chiropractic appliances are limited to: elbow supports, back supports, cervical collars, cervical pillows, heel lifts, hot or cold packs, lumbar braces and supports, lumbar cushions, orthotics, wrist supports, rib belts, home traction units, ankles braces, knee braces, rib supports, and wrist braces.

Office visits: Covered Services are limited to Medically Necessary Chiropractic and Acupuncture Services authorized and provided by ASH Plans Participating Providers except for the initial examination, emergency and urgent Chiropractic and Acupuncture Services, and Services that are not available from Participating Providers or other licensed providers with which ASH contracts to provide covered care. Each office visit counts toward any visit limit, if applicable, even if acupuncture or a chiropractic adjustment is not provided during the visit.

X-rays and laboratory tests: Medically Necessary X-rays and laboratory tests are covered at no charge when prescribed as part of covered chiropractic care and a Participating Provider provides the Services or refers you to another licensed provider with which ASH contracts for the Services.

Participating Providers

ASH Plans contracts with Participating Providers and other licensed providers to provide covered Chiropractic Services (including laboratory tests, X-rays, and chiropractic appliances). ASH Plans contracts with Participating Providers to provide acupuncture care (including adjunctive therapies, such as acupressure, moxibustion, or breathing techniques, when provided during the same course of treatment and in conjunction with acupuncture). You must receive covered Services from a Participating Provider or another licensed provider with which ASH contracts, except for Emergency Chiropractic Services, Emergency Acupuncture Services, Urgent Chiropractic Services, and Urgent Acupuncture Services, and Services that are not available from Participating Providers or other licensed providers with which ASH contracts to provide covered Services that are authorized in advance by ASH Plans. The list of Participating Providers is available on the ASH Plans website at ashlink.com/ash/kp or from the ASH Plans Customer Service Department at **1-800-678-9133.** The list of Participating Providers is subject to change at any time without notice.

How to Obtain Covered Services

To obtain covered Services, call a Participating Provider to schedule an initial examination. If additional Services are required, verification that the Services are Medically Necessary may be required. Your Participating Provider will request any medical necessity determinations. An ASH Plan's clinician in the same or similar specialty as the provider of Services under review will decide whether Services are or were Medically Necessary. ASH Plans will disclose to you, upon request, the written criteria it uses to make the decision to authorize, modify, delay, or deny a request for authorization. If you have questions or concerns, please contact the ASH Plans Customer Service Department.

Second Opinions

You may request a second opinion in regard to covered Services by contacting another Participating Provider. A Participating Provider may also request a second opinion in regard to covered Services by referring you to another Participating Provider in the same or similar specialty.

Your Costs

When you receive covered Services, you must pay your Cost Share as described in the *Combined Chiropractic and Acupuncture Services Amendment* of your Health Plan *Evidence of Coverage*. The Cost Share does not apply toward the Plan Out-of-Pocket Maximum described in the Health Plan *Evidence of Coverage* (unless you have a plan with an HSA option).

Emergency and Urgent Chiropractic and Acupuncture Services

We cover Emergency Chiropractic Services, Emergency Acupuncture Services, Urgent Chiropractic Services, and Urgent Acupuncture Services provided by both Participating Providers and Non–Participating Providers. We do not cover follow-up or continuing care from a Non–Participating Provider unless ASH Plans has authorized the services in advance. Also, we do not cover services from a Non–Participating Provider that ASH Plans determines are not Emergency Chiropractic Services, Emergency Acupuncture Services, Urgent Chiropractic Services, or Urgent Acupuncture Services.

Getting Assistance

If you have questions about the Services you can get from an ASH Plans Participating Provider or another licensed provider with which ASH contracts, you may call ASH Plans Customer Service Department at **1-800-678-9133** (TTY users call **711**), weekdays from 5 a.m. to 6 p.m. Pacific time.

Grievances

You can file a grievance with Kaiser Permanente regarding any issue. Your grievance must explain your issue, such as the reasons why you believe a decision was in error or why you are dissatisfied with Services you received. You may submit your grievance orally or in writing to Kaiser Permanente as described in your Health Plan *Evidence of Coverage.*

Exclusions and Limitations

- Acupuncture Services for conditions other than Neuromusculoskeletal Disorders, nausea, and pain
- Services for asthma or addiction, such as nicotine addiction
- Hypnotherapy, behavior training, sleep therapy, and weight programs
- Thermography
- Experimental or investigational Services
- CT scans, MRIs, PET scans, bone scans, nuclear medicine, and any other types of diagnostic imaging or radiology other than X-rays covered under the "Covered Services" section of your *Combined Chiropractic and Acupuncture Services Amendment*
- Ambulance and other transportation
- Education programs, nonmedical self-care or self-help, any self-help physical exercise training, and any related diagnostic testing
- Services for pre-employment physicals or vocational rehabilitation
- Acupuncture performed with reusable needles
- Air conditioners, air purifiers, therapeutic mattresses, chiropractic appliances, durable medical equipment, supplies, devices, appliances, and any other item except those listed as covered in your *Combined Chiropractic and Acupuncture Services Amendment*
- Drugs and medicines, including non-legend or proprietary drugs and medicines
- Services you receive outside the state of California, except for Emergency Chiropractic Services, Emergency Acupuncture Services, Urgent Chiropractic Services, or Urgent Acupuncture Services
- Hospital services, anesthesia, manipulation under anesthesia, and related services
- For Chiropractic Services, adjunctive therapy not associated with spinal, muscle, or joint manipulations
- For Acupuncture Services, adjunctive therapies unless provided during the same course of treatment and in conjunction with acupuncture
- Dietary and nutritional supplements, such as vitamins, minerals, herbs, herbal products, injectable supplements, and similar products
- Massage therapy
- Services provided by a chiropractor that are not within the scope of licensure for a chiropractor licensed in California
- Services provided by an acupuncturist that are not within the scope of licensure for an acupuncturist licensed in California
- Maintenance care (services provided to Members whose treatment records indicate that they have reached maximum therapeutic benefit)

Definitions

Acupuncture Services: The stimulation of certain points on or near the surface of the body by the insertion of needles to prevent or modify the perception of pain or to normalize physiological functions (including adjunctive therapies, such as acupressure, cupping, moxibustion, or breathing techniques, when provided during the same course of treatment and in conjunction with acupuncture) when provided by an acupuncturist for the treatment of your Neuromusculoskeletal Disorder, nausea (such as nausea related to chemotherapy, postsurgical pain, or pregnancy), or pain (such as lower back pain, shoulder pain, joint pain, or headaches).

ASH Plans: American Specialty Health Plans of California, Inc., a California corporation.

Chiropractic Services: Services provided or prescribed by a chiropractor (including laboratory tests, X-rays, and chiropractic appliances) for the treatment of your Neuromusculoskeletal Disorder.

Emergency Acupuncture Services: Covered Acupuncture Services provided for the treatment of a Neuromusculoskeletal Disorder, nausea, or pain, which manifests itself by acute symptoms of sufficient severity (including severe pain) such that a reasonable person could expect the absence of immediate Acupuncture Services to result in serious jeopardy to your health or body functions or organs.

Emergency Chiropractic Services: Covered Chiropractic Services provided for the treatment of a Neuromusculoskeletal Disorder which manifests itself by acute symptoms of sufficient severity (including severe pain) such that a reasonable person could expect the absence of immediate Chiropractic Services to result in serious jeopardy to your health or body functions or organs.

Neuromusculoskeletal Disorders: Conditions with associated signs and symptoms related to the nervous, muscular, or skeletal systems. Neuromusculoskeletal Disorders are conditions typically categorized as structural, degenerative, or inflammatory disorders, or biomechanical dysfunction of the joints of the body or related components of the motor unit (muscles, tendons, fascia, nerves, ligaments/capsules, discs, and synovial structures), and related neurological manifestations or conditions.

Participating Provider: An acupuncturist who is licensed to provide acupuncture services in California and who has a contract with ASH Plans to provide Medically Necessary Acupuncture Services to you, or a chiropractor who is licensed to provide chiropractic services in California and who has a contract with ASH Plans to provide Medically Necessary Chiropractic Services to you.

Definitions *(continued)*

Urgent Acupuncture Services: Acupuncture Services that meet all of the following requirements:

- They are necessary to prevent serious deterioration of your health resulting from an unforeseen illness, injury, or complication of an existing condition, including pregnancy.
- They cannot be delayed until you return to the Service Area.

Urgent Chiropractic Services: Chiropractic Services that meet all of the following requirements:

- They are necessary to prevent serious deterioration of your health, resulting from an unforeseen illness, injury, or complication of an existing condition, including pregnancy.
- They cannot be delayed until you return to the Service Area.

This is a summary and is intended to highlight only the most frequently asked questions about the chiropractic and acupuncture benefit, including cost shares. Please refer to the *Combined Chiropractic and Acupuncture Services Amendment of the Kaiser Foundation Health Plan, Inc., Evidence of Coverage* for a detailed description of the chiropractic and acupuncture benefits, including exclusions and limitations, Emergency Chiropractic Services, Emergency Acupuncture Services, Urgent Chiropractic Services, or Urgent Acupuncture Services.

Kaiser Foundation Health Plan, Inc. (Health Plan) contracts with American Specialty Health Plans of California, Inc. (ASH Plans) to make the ASH Plans network of Participating Providers available to you. You can obtain covered Services from any Participating Provider without a referral from a Plan Physician. Your Cost Share is due when you receive covered Services. Please see the definitions section of your *Combined Chiropractic and Acupuncture Services Amendment of the Kaiser Foundation Health Plan, Inc., Evidence of Coverage* for terms you should know.

601026 EDUCATION FOR CHANGE

Principal Benefits for
Kaiser Permanente Deductible HMO Plan with HRA (10/1/16—9/30/17)

"Kaiser Permanente Deductible HMO Plan with HRA" is a health benefit plan that is designed for Members with an employer-sponsored HRA (Health Reimbursement Arrangement). You may use the funds in your HRA to pay deductibles (if applicable), Copayments, and Coinsurance. Your Group will give you information about your HRA, including the amount of your HRA funds and how to access your funds.

Accumulation Period

The Accumulation Period for this plan is 1/1/16 through 12/31/16 (calendar year).

Out-of-Pocket Maximum(s) and Deductible(s)

For Services that apply to the Plan Out-of-Pocket Maximum, you will not pay any more Cost Share for the rest of the Accumulation Period once you have reached the amounts listed below.

For Services that are subject to the Plan Deductible or the Drug Deductible, you must pay Charges for covered Services you receive during the Accumulation Period until you reach the deductible amounts listed below. All payments you make toward your deductible(s) apply to the Plan Out-of-Pocket Maximum amounts listed below.

Amounts Per Accumulation Period	**Self-Only Coverage** (Family of one Member)	**Family Coverage** Each Member in a Family of two or more Members	**Family Coverage** Entire Family of two or more Members
Plan Out-of-Pocket Maximum	$3,000	$3,000	$6,000

Prosthetic and orthotic devices	No charge (Plan Deductible doesn't apply)
All Services related to covered infertility treatment	50% Coinsurance (Plan Deductible doesn't apply)
Hospice care	No charge (Plan Deductible doesn't apply)

This is a summary of the most frequently asked-about benefits. This chart does not explain benefits, Cost Share, out-of-pocket maximums, exclusions, or limitations, nor does it list all benefits and Cost Share amounts. For a complete explanation, please refer to the *EOC*. Please note that we provide all benefits required by law (for example, diabetes testing supplies).

Dental Coverage

Dental benefits are another important element of your overall health. With proper care, your teeth can and should last a lifetime.

Your Dental Plan Options

This year, you and your eligible dependents have the opportunity to enroll in the Delta Dental Premier Preferred Provider Organization (PPO) plan offered by Delta Dental. You can visit www.deltadentalins.com and create your secure account.

Using the Dental PPO Plan

The Dental PPO plan is designed to give you the freedom to receive dental care from any licensed dentist of your choice. Keep in mind, you'll receive the highest level of benefit from the plan if you select an in-network PPO dentist versus an out-of-network dentist who has not agreed to provide services at the negotiated rate. Additionally, no claim forms are required when using in-network PPO dentists.

ID Cards

No ID cards are issues and ID cards are not necessary. Just provide your dental office with your name, birth date, and enrollee ID or social security number. Register for online services to print an generic ID card, if you wish, or pull it up on your smartphone at the dentist's office.

TIPS FOR A HEALTHY MOUTH

- Use a soft-bristled toothbrush
- Choose toothpaste with fluoride
- Brush for at least two minutes twice a day
- Floss daily
- Watch for signs of periodontal disease such as red, swollen, or tender gums
- Visit a dentist regularly for exams and cleanings

Plan Benefit Highlights for: Education for Change
(Home Office, Cox Academy, World Academy, Achieve Academy, Ascend, Learning without Limits, Lazear Charter Academy & Epic Charter School)

Group No: 07046 - 00104, 00105, 00106, 00107, 00108, 00109, 00110 & 00116

Eligibility	Primary enrollee, spouse (includes domestic partner) and eligible dependent children to the end of the month dependent turns age 26			
Maximums	$1,500 per person each calendar year			
Waiting Period(s)	Basic Benefits None	Major Benefits None	Prosthodontics None	Orthodontics None

Benefits and Covered Services*	**Delta Dental Premier dentists****	**Non-Delta Dental dentists****
Diagnostic & Preventive Services (D & P) Exams, (2) cleanings and x-rays	100 %	100 %
Basic Services Fillings and sealants	90 %	90 %

Exam	up to $50	Lined Bifocal Lenses	up to $75	Progressive Lenses	up to $75
Frame	up to $70	Lined Trifocal Lenses	up to $100	Contacts	up to $105
Single Vision Lenses	up to $50				

VSP guarantees coverage from VSP network providers only. Coverage information is subject to change. In the event of a conflict between this information and your organization's contract with VSP, the terms of the contract will prevail. Based on applicable laws, benefits may vary by location.

TruHearing® Hearing Aid Discount Program

VSP® Vision Care members can save up to $2,400 on a pair of digital hearing aids. Dependents and even extended family members are eligible for exclusive savings, too.

Hearing loss is growing in the workplace.

Like vision loss, hearing loss can have a huge impact on productivity and overall quality of life. Unfortunately, of the 30 million people who need hearing aids, only one in five has them. Cost is often a major factor.

*96% of customers surveyed would recommend TruHearing to their friends and family.**

More Than Just Great Pricing

TruHearing also provides members with:

- 3 provider visits for fitting, adjustments, and cleanings
- A 45-day money back guarantee
- 3-year manufacturer's warranty for repairs and one-time loss and damage
- 48 free batteries per hearing aid

Plus, members get:

- Access to a national network of more than 4,500 licensed hearing aid professionals
- Straight-forward, nationally fixed pricing on more than 90 digital hearing aids in 400 styles from five of the seven industry-leading brands
- Deep discounts on replacement batteries shipped directly to their door

Best of all, if your organization already offers a hearing aid benefit, members can combine it with this program to maximize the benefit and reduce their out-of-pocket expense.

Learn more about this VSP Exclusive Member Extra at vsp.truhearing.com. Or, call 877.396.7194 with questions.

Here's how it works:

1. **Members call TruHearing.**
   Members and their family call 877.396.7194 and mention VSP.
2. **Schedule exam.**
   TruHearing will answer questions and schedule a hearing exam with a local provider.
3. **Attend appointment.**
   The provider will make a recommendation, order the hearing aids through TruHearing and fit them for the member.

Group Basic Life / AD&D Coverage

In the event of your death, Life Insurance will provide your family members or other beneficiaries with financial protection and security.

Company Paid Life and AD&D Insurance

Education For Change provides employees with a $30,000 Basic Life and Accidental Death and Dismemberment (AD&D) insurance policy with The Hartford, fully paid for by the company. Be sure to keep your beneficiary updated at all times in the event of your death. Benefits will reduce by 35% at age 65 then by 50% at age 70, benefits will end at retirement.

Select Your Beneficiary

- Beneficiaries are individuals or entities that you select to receive benefits from your policy.
- You can change your beneficiary designation at any time.
- You may designate a sole beneficiary or multiple beneficiaries to receive payment in the amount you specify. (Primary and Contingent)
- Minor children: If the named beneficiary is a minor, the benefit is put 'On Hold' for Age of Majority (legal adult age is 18) or until Guardianship/Conservatorship Paperwork is received. For the state of CA, benefits may be paid if the benefit is under $10,000.

State Disability Insurance

California employees are covered under the California State Disability Insurance (SDI) program. If you become disabled due to an accident or illness you may be entitled to receive benefits under the SDI program. The benefits are approximately 55% of your earnings with a maximum weekly benefit up to $1,129 for 2016. Benefits under this program may continue up to 52 weeks. For more information please visit: www.edd.ca.gov/Disability/ or call 1-800-480-3287.

Health Flexible Spending Account (FSA)

Who Can Participate

All eligible employees can participate in a Health FSA, even if you do not have medical coverage through your employer. As an FSA participant you'll have access to tax-saving opportunities for you and your family.

How a Health FSA Works

A Health FSA may be used for the reimbursement of eligible medical expenses for you, your spouse or dependents (as defined by Federal tax law), up to the amount you elect to contribute to the FSA for the year (Max $2,550).

Your full annual Health FSA contribution amount is available on the first day of the plan year for your use. Deductions, however, will be made in equal amounts, per pay period, from your paycheck throughout the plan year.

Due to the "use or lose rule"; it is important for you to carefully estimate your out-of-pocket expenses for the upcoming plan year. Any amount, over $500, remaining in the account after the end of the plan year will be forfeited.

How to Get Reimbursed

Conexis provides three easy ways for you to receive your reimbursements from your FSA.

- Direct Deposit
- Debit Card
- Check by mail

How Your Card Works

The Health FSA Debit card allows you to pay at point-of-sale for approved out of-pocket expenses, such as co-pays, dental and vision expenses, and prescriptions.

The card can be used at:

- Healthcare related facilities, which include hospitals, physician's offices, dental and vision offices.
- Merchants participating in the Inventory Information Approval System (IIAS). This list can be accessed at www.sig-is.org.

Based on IRS regulations, Conexis will request documentation for ALL debit card claims, unless the transaction falls into one of the following categories:

1. **Co-Pay Amounts:** If your employer provides the necessary information for your medical carrier, the co-pay amount will be automatically approved. This is for fixed-dollar cost-sharing amounts. If you are required to pay a percentage of the total charge, additional substantiation will be required.
2. **Recurring expenses:** You will need to submit your first claim manually and state this will be a recurring claim from the same provider at the same dollar amount. It will be noted on your account that this will be a recurring expense, and additional substantiation will not be required for that plan year.
3. Items purchased at merchants participating in the IIAS.

It is important to keep ALL receipts and supporting documentation in the event Conexis requests additional substantiation or your debit card swipe does not fall into the categories listed.

FLEXIBLE SPENDING ACCOUNTS (FSA)

They are great cost savings tools to help with common medical expenses not covered by your insurance, and/or dependent care expenses. You can elect a portion of your salary to be deducted, on a pre-tax basis, from each paycheck to use for reimbursements of qualified out-of-pocket expenses throughout the plan year.

For eligible expenses please visit: www.conexis.com/myfsa or Myconexis mobile app

Education *for* Change Public Schools

Dependent Day Care Flexible Spending Account (FSA)

How A Dependent Day Care FSA Works

A Dependent Day Care FSA can be used to reimburse a participant for eligible dependent care expenses for a qualifying individual incurred while you, and your spouse if you are married, work or look for work or maintain a full-time student status. If one parent is not working or looking for work, a Dependent Day Care FSA is not available. You may allocate at least $20 per month, up to $5,000 per tax year, for reimbursement of dependent day care services ($2,500 if you are married and file a separate tax return).

Like the Health FSA, any remaining funds left in your account will be forfeited if you do not claim them by the deadline.

Types of Expenses That Are Reimbursable

Expenses for child care, elder care and care for a disabled dependent are reimbursable if the care is necessary for you to work or look for work. Below are additional details:

- Child Care - For child care expenses to qualify, your child must be a dependent under age 13 when the child care is provided. (There is no age limit if your child is disabled.) You must be able to claim an exemption for this child on your federal tax return. However, if you are divorced or separated, your expenses may qualify if you are the custodial parent (have more than 50% custody) even if you can't claim the child's exemption (see IRS publication 503 for details).

- Elder Care and Disabled Dependent Care - If the care is for a parent or other dependent who is disabled, that person must live in your home at least 8 hours a day, be unable to care for them self, and be someone you can claim an exemption for on your federal tax return.

- Household Maintenance Expenses - Services required for the maintenance of your household such as cleaning and cooking are eligible for reimbursement if the primary function of the provider of this service is to care for your dependent.

- How to get reimbursed - Have to send in reimbursement form available on Conexis website

DEPENDENT DAY CARE (FSA)

A Dependent Day Care FSA is similar to a Health FSA except it's for paying day care expenses.

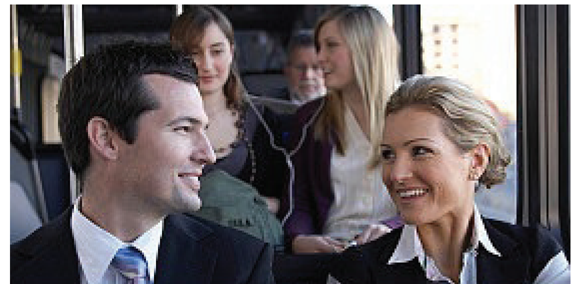
The money you contribute is not taxable, which means you'll pay less taxes than you would if this money is counted as taxable income.

That means you are saving money on dependent care expenses that you are already paying for!

For eligible expenses please visit: www.conexis.com/myfsa or Myconexis mobile app

Commuter Benefits Program

WageWorks Commuter is a pre-tax benefit account used to pay for public transit- including train, subway, bus, ferry, and eligible vanpool - as part of your daily commute to work. This is a great way to put extra money in your pocket!



Why you need it?

- Save an average of 30% on public transit as part of your daily commute to work
- Reduce your overall tax burden- funds ae moved from your paycheck to your commuter account before taxes are deducted
- No waiting- sign up any time to start saving- and no "use it or lose it" as long as you're employed by your current employer

How It Works

Simply decide how much to contribute up to the allowed monthly limit. Funds are moved from your paycheck to your account before taxes are deducted. As soon as funds are available in your account, start using them for qualified commuting expenses. Use or cancel contributions to your account at any time. There's no "use it or lose it" as long as you're employed by your current employer.

How You Use It

Use a variety of convenient payment methods associated with your account. Buy transit passes and vouchers using the WageWorks Commuter Card. Automatically load monthly transit passes directly from your account.

How You Manage It

Manage yor account via a secure website on any computer or mobile device that's connected to the Internet or via the WageWorks EZ Reciepts mobile app.

How Much You Can Contribute

Contribute up to a maximum of $255 per month for transit and eligible vanpools.

WAGEWORKS

Savings in 3 Simple Steps

1. Determine how much you want to spend each month on commuter expenses using the online savings calculator at www.conexismarketing.com
2. Log in your online account at www.wageworks.com and click "Enroll in a Commuter Benefits Plan" and then make your selection from the option listed
3. When you complete your order, all transit and/or parking passes will be mailed to your home each month.

Learn more at www.wageworks.com/mycommute

Questions? Ask us. If you have any questions, you can talk to a expert to learn more about the program. Just call 877-924-9367

* Assuming 25% federal income tax bracket, 7.35% state/local income tax, and 7.65% of employee share of FICA

Employee Assistance Program (EAP)

Education for Change understands that you and your family members might experience a variety of personal or work related challenges. Through the EAP, you have access to confidential resources, information and counseling in order to address situations affecting your work-life balance.

Your EAP Plan

Provided by CONCERN, the Employee Assistance Program (EAP) services are available to employee's and your dependents, as well as any member of your household. The purpose of the program is to provide confidential assistance at no-cost for a wide range of personal topics. Counseling visits are limited, depending on the service, to between one and five visits, per issue, per year.

Consultations are available for subjects such as:

- Parenting & Childcare Resources
  - New baby services
  - Childcare services
  - Adoption Assistance
  - Schools and Colleges
  - Special needs services
- Elder care consultations and referrals
  - Clarify and prioritize problems
  - Develop a plan
  - Find, arrange and coordinate services
  - Find support groups
- Legal Consultations
  - Bankruptcy
  - Child Custody
  - Estate Planning
  - Traffic accidents
  - Marital
- Financial Counselling
  - Buying a home
  - Tax basics
  - Investment basics

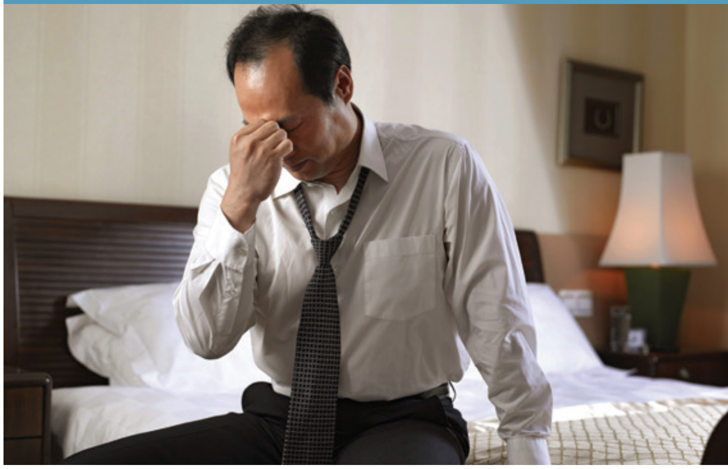
GETTING SUPPORT IS EASY

All services are accessible by one toll free phone call to CONCERN at (800) 344-4222.

You can call anytime, 24 hours a day, 7 days a week.

You can also submit a request for work/life services online at www.concern-eap.com

Create your personal user name and password, then enter our company code: EFC



Using *LifeAdvisor/Resilience Hub*

LifeAdviser is CONCERN's online member resource center, providing all plan members free, secure and centralized access to a wealth of information, education and sill building tools. Accurate, commercial-free content consists of articles, videos, self-assessments, calculators, training courses, and much more.

Pet Insurance

Pet insurance helps provide peace of mind in case the unfortunate should happen. Its purpose is to help cover the costs of unexpected accidents and illnesses that may occur in the future of your pet. Pet insurance is for those who want to provide their pet the best medical care possible with less worry about cost.

How It Works

Education for Change cares about you and your pets. We have partnered with Nationwide to provide you with a discount on the various plans and services they offer. With Nationwide Pet Insurance plans you can cover your dogs, cats, birds and exotic pets for multiple medical problems and conditions relating to accidents, illnesses and injuries. Wellness coverage and routine care is also available. All of their plans are accepted by all vets - even specialists and emergency providers.

Visit www.petsnationwide.com and enter your company's name to receive your quote and enroll. Once enrolled:

- Visit ANY vet and pay for your visit
- Submit a claim
- Receive reimbursement

Benefits to Employees

- Group discounts up 15% with multiple pet enrollment
- Plans designed by veterinarians ensure quality coverage
- Visit ANY licensed veterinarian, including specialist and emergency providers
- No additional charge for continuous coverage of chronic and recurring conditions
- Receive valuable pet health news and information throughout the year
- Exclusive discounts on pet products and services
- Nationwide Policyholder Portal

Nationwide Policyholder Portal

Once enrolled, you will have access to VPI Policyholder Portal. Here you can easily:

- Update your contact and payment information
- Check claim status and history
- Download forms (Claim forms, Benefit Schedule)
- Renew your policy
- View the Companion newsletter for pet health stories, features and policy news
- Have access to special and exclusive discounts!

PETS NATIONWIDE

"WE INVENTED PET INSURANCE"

- Did you know that Nationwide is the nation's oldest and largest provider of pet health insurance!
- More than one million pets insured since 1982!
- Products available in all 50 states!
- Toll Free Number: 877-738-7874
- www.PetsNationwide.com

403(b) Retirement Plan

A 403(b) plan, also known as a tax-sheltered annuity (TSA) plan, is a retirement plan for certain employees of public schools as well as other certain tax-exempt organizations. It gets its name from the particular section of the Internal Revenue Code (IRS) - section 403(b). Employees save for retirement by contributing to individual accounts.

What Are The Benefits

- You do not pay tax on allowable contributions in the year they are made. You do not pay tax on allowable contributions until you begin making withdrawals from the plan, usually after you retire. Allowable contributions are either excluded or deducted from your income.
- Earnings and gains on amounts in your 403(b) account are not taxed until you withdraw them.
- You may be eligible to take a tax credit for elective deferrals contributed to your 403(b) account. For more details, see chapter 10 of the Internal Revenue Service Publication 571.

If You Wish To Participate

- Check Education for Change's current list of vendors
- Locate an agent by visiting the vendors website
- Complete an application with your agent to set up your account
- Submit a salary ammendment agreement to your HR contact at Eduction for Change.

How To Get Started

Contact your personal Agent or Financial Advisor for details. Don't have one? Go online to find your own or contact any of the names below:

Medicare Part D Notice

Important Notice from About Your Prescription Drug Coverage and Medicare

Model Individual Creditable Coverage Disclosure

Please read this notice carefully and keep it where you can find it. This notice has information about your current prescription drug coverage and about your options under Medicare's prescription drug coverage. This information can help you decide whether or not you want to join a Medicare drug plan. If you are considering joining, you should compare your current coverage, including which drugs are covered at what cost, with the coverage and costs of the plans offering Medicare prescription drug coverage in your area. Information about where you can get help to make decisions about your prescription drug coverage is at the end of this notice.

There are two important things you need to know about your current coverage and Medicare's prescription drug coverage:

1. Medicare prescription drug coverage became available in 2006 to everyone with Medicare. You can get this coverage if you join a Medicare Prescription Drug Plan or join a Medicare Advantage Plan (like an HMO or PPO) that offers prescription drug coverage. All Medicare drug plans provide at least a standard level of coverage set by Medicare. Some plans may also offer more coverage for a higher monthly premium.
2. Your employer has determined that the prescription drug coverage offered is, on average for all plan participants, expected to pay out as much as standard Medicare prescription drug coverage pays and is therefore considered Creditable Coverage. Because your existing coverage is Creditable Coverage, you can keep this coverage and not pay a higher premium (a penalty) if you later decide to join a Medicare drug plan.

When Can You Join A Medicare Drug Plan?

You can join a Medicare drug plan when you first become eligible for Medicare and each year from October 15th to December 7th.

However, if you lose your current creditable prescription drug coverage, through no fault of your own, you will also be eligible for a two (2) month Special Enrollment Period (SEP) to join a Medicare drug plan.

What Happens To Your Current Coverage If You Decide to Join A Medicare Drug Plan?

If you decide to join a Medicare drug plan, your current coverage will be affected.

If you do decide to join a Medicare drug plan and drop your current coverage, be aware that you and your dependents will not be able to get this coverage back.

Please contact Human Resources for more information about what happens to your coverage if you enroll in a Medicare prescription drug plan.

Your medical benefits brochure contains a description of your current prescription drug benefits.

When Will You Pay A Higher Premium (Penalty) To Join A Medicare Drug Plan?

You should also know that if you drop or lose your current coverage with and don't join a Medicare drug plan within 63 continuous days after your current coverage ends, you may pay a higher premium (a penalty) to join a Medicare drug plan later.

If you go 63 continuous days or longer without creditable prescription drug coverage, your monthly premium may go up by at least 1% of the Medicare base beneficiary premium per month for every month that you did not have that coverage. For example, if you go nineteen months without creditable coverage, your premium may consistently be at least 19% higher than the Medicare base beneficiary premium. You may have to pay this higher premium (a penalty) as long as you have Medicare prescription drug coverage. In addition, you may have to wait until the following October to join.

For More Information about This Notice or Your Current Prescription Coverage…

Contact your Human Resources Department for further information.

NOTE: You will get this notice each year. You will also get it before the next period you can join a Medicare drug plan, and if this coverage changes. You also may request a copy of this notice at any time.

For More Information About Your Options Under Medicare Prescription Drug Coverage…

More detailed information about Medicare plans that offer prescription drug coverage is in the "Medicare & You" handbook. You'll get a copy of the handbook in the mail every year from Medicare. You may also be contacted directly by Medicare drug plans.

For more information about Medicare prescription drug coverage:

Visit www.medicare.gov

Call your State Health Insurance Assistance Program (see the inside back cover of your copy of the "Medicare & You" handbook for their telephone number) for personalized help.

Call 1-800-MEDICARE (1-800-633-4227).

TTY users should call 1-877-486-2048.

If you have limited income and resources, extra help paying for Medicare prescription drug coverage is available. For information about this extra help, visit Social Security on the web at www.socialsecurity.gov or call them at 1-800-772-1213 (TTY 1 -800-325-0778).

Remember: Keep this Creditable Coverage notice. If you decide to join one of the Medicare drug plans, you may be required to provide a copy of this notice when you join to show whether or not you have maintained creditable coverage and, therefore, whether or not you are required to pay a higher premium (a penalty).

Legal Information Regarding Your Plans

Required Notices

Women's Health & Cancer Rights Act

The Women's Health and Cancer Rights Act (WHCRA) helps protect many women with breast cancer who choose to have their breasts rebuilt (reconstructed) after a mastectomy. Mastectomy surgery is to remove all or part of the breast. This federal law requires most group insurance plans that cover mastectomies to also cover breast reconstruction.

- Reconstruction of the breast that was removed by mastectomy
- Surgery and reconstruction of the other breast to make the breasts look symmetrical or balanced after mastectomy
- Any external breast prostheses breast forms that fit into your bra that are needed before or during the reconstruction
- Any physical complications at all stages of mastectomy, including lymphedema.

Mastectomy benefits may have a yearly deductible and may require that you pay co-insurance through your group health plan.

Your plans comply with these requirements.

Newborns' and Mothers' Health Protection Act

Group health plans and health insurance issuers generally may not, under Federal law, restrict benefits for any hospital length of stay in connection with childbirth for the mother or newborn child to less than 48 hours following a vaginal delivery, or less than 96 hours following a cesarean section. However, Federal law generally does not prohibit the mother's or newborn's attending provider, after consulting with the mother, from discharging the mother or her newborn earlier than 48 hours (or 96 hours as applicable). In any case, plans and issuers may not, under Federal law, require that a provider obtain authorization from the plan or the insurance issuer for prescribing a length of stay not in excess of 48 hours (or 96 hours). [Plans subject to State law requirements will need to prepare statements describing any applicable State law]

Special Enrollment Rights

If you are declining enrollment for yourself or your dependents (including your spouse) because of other health insurance or group health plan coverage, you may be able to enroll yourself or your dependents in this plan if you or your dependents lose eligibility for that other coverage (or if the employer stops contributing towards your or your dependents' other coverage). However, you must request enrollment within 30 days after your or your dependents' other coverage ends (or after the employer stops contributing toward the other coverage).

In addition, if you have a new dependent as result of marriage, birth, adoption, or placement for adoption, you may be able to enroll yourself and your dependents. However, you must request enrollment within 30 days after the marriage, birth, adoption, or placement for adoption.

Special enrollment rights also may exist in the following circumstances:

- If you or your dependents experience a loss of eligibility for Medicaid or a state Children's Health Insurance Program (CHIP) coverage and you request enrollment within 60 days after that coverage ends; or
- If you or your dependents become eligible for a state premium assistance subsidy through Medicaid or a state CHIP with respect to coverage under this plan and you request enrollment within 60 days after the determination of eligibility for such assistance.

"Change in Status" Permitted Mid-year Election Changes

The IRS regulations for mid-year health insurance changes (i.e. outside of open enrollment period) restrict any changes to your plan or coverage unless you have a qualified "change in status." The following are considered qualified changes in status by the IRS:

1. Change in legal marital status, including marriage, divorce, legal separation, annulment, and death of a spouse
2. Change in number of dependents, including birth, adoption, placement for adoption, or death of a dependent child
3. Change in employment status, including the start or termination of employment by you, your spouse, or your dependent child
4. Change in work schedule, including an increase or decrease in hours of employment by you, your spouse, or your dependent child, including a switch between part-time and full-time employment that affects eligibility for benefits
5. Change in a child's dependent status, either newly satisfying the requirements for dependent child status or ceasing to satisfy them
6. Change in place of residence or worksite, including a change that affects the accessibility of network providers
7. Change in your health coverage or your spouse's coverage attributable to your spouse's employment
8. Change in an individual's eligibility for Medicare or Medicaid
9. A court order resulting from a divorce, legal separation, annulment, or change in legal custody (including a Qualified Medical Child Support Order) requiring coverage for your child or dependent foster child
10. An event that is a special enrollment event under HIPAA (the Health Insurance Portability and Accountability Act), including acquisition of a new dependent or spouse or loss of coverage under another health insurance policy or plan if the coverage is terminated because of:
    - Voluntary or involuntary termination of employment or reduction in hours of employment or death, divorce, or legal separation,
    - Termination of employer contributions toward the other coverage, OR
    - If the other coverage was COBRA Continuation Coverage, exhaustion of the coverage
    - Two other rules apply to making changes to your benefits during the year:
    - Any changes you make must be consistent with the change in status, AND
    - You must make the changes within 31 days of the date the event (marriage, birth, etc.) occurs.

Pre-existing Condition Exclusion

A group health plan (or issuer) may not impose a pre-existing condition exclusion with respect to an individual before notifying the participant, in writing, of the following –

The existence and terms of any pre-existing condition exclusion under the plan. This includes –

- The length of the plan's look-back period,
- The maximum pre-existing condition exclusion under the plan, and
- How the plan will reduce the maximum pre-existing condition exclusion by creditable coverage.

- A description of the rights of individuals to demonstrate creditable coverage, and any applicable waiting periods, through a certificate of creditable coverage or other means. This includes –
- A description of the right of the individual to request a certificate from a prior plan or issuer, if necessary, and
- A statement that the current plan or issuer will assist in obtaining a certificate from a prior plan or issuer, if necessary.

A person to contact (including an address or telephone number) for obtaining additional information or assistance regarding the pre-existing condition exclusion.

HIPAA Privacy Notice

This Notice describes how health information about you may be used and disclosed and how you can get access to this information. This Notice provides you with information to protect the privacy of your confidential health care information, hereafter referred to as protected health information (PHI). The Notice also describes the privacy rights you have and how you can exercise those rights. Please review it carefully.

If you have any questions about this Notice, please contact Human Resources.

OUR COMMITMENT REGARDING YOUR PERSONAL HEALTH INFORMATION

Your company is committed to maintaining and protecting the confidentiality of our employees' personal information. This Notice of Privacy Practices applies to your company and the health plan you enroll in. The Plans are required by federal and state law to protect the privacy of your individually identifiable health information and other personal information. We are required to provide you with this Notice about our policies, safeguards and practices. When the Plans use or disclose your PHI, the Plans are bound by the terms of this Notice, or the revised Notice, if applicable.

We are required by law to:

- Maintain the privacy of protected health information
- Give you this notice of our legal duties and privacy practices regarding health information about you
- Follow the terms of our notice that is currently in effect

The Plan will use Your Health Information for:

For Treatment. We may use and disclose Health Information for your treatment and to provide you with treatment-related health care services. For example, we may disclose Health Information to doctors, nurses, technicians, or other personnel, including people outside our office, who are involved in your medical care and need the information to provide you with medical care.

For Payment. We may use and disclose Health Information so that we or others may bill and receive payment from you, an insurance company or a third party for the treatment and services you received. For example, we may give your health plan information about you so that they will pay for your treatment.

For Health Care Operations. We may use and disclose Health Information for health care operations purposes. These uses and disclosures are necessary to make sure that all of our patients receive quality care and to operate and manage our office. For example, we may use and disclose information to make sure the obstetrical or gynecological care you receive is of the highest quality. We also may share information with other entities that have a relationship with you (for example, your health plan) for their health care operation activities.

As Required by Law. We will disclose Health Information when required to do so by international, federal, state or local law.

Workers' Compensation. We may release Health Information for workers' compensation or similar programs. These programs provide benefits for work-related injuries or illness.

Public Health Risks. We may disclose Health Information for public health activities. These activities generally include disclosures to prevent or control disease, injury or disability; report births and deaths; report child abuse or neglect; report reactions to medications or problems with products; notify people of recalls of products they may be using; a person who may have been exposed to a disease or may be at risk for contracting or spreading a disease or condition; and the appropriate government authority if we believe a patient has been the victim of abuse, neglect or domestic violence. We will only make this disclosure if you agree or when required or authorized by law.

Law Enforcement. We may release Health Information if asked by a law enforcement official if the information is: (1) in response to a court order, subpoena, warrant, summons or similar process; (2) limited information to identify or locate a suspect, fugitive, material witness, or missing person; (3) about the victim of a crime even if, under certain very limited circumstances, we are unable to obtain the person's agreement; (4) about a death we believe may be the result of criminal conduct; (5) about criminal conduct on our premises; and (6) in an emergency to report a crime, the location of the crime or victims, or the identity, description or location of the person who committed the crime.

Your Rights Regarding Your Health Information

You have the following rights regarding Health Information we have about you:

Right to Inspect and Copy. You have a right to inspect and copy Health Information that may be used to make decisions about your care or payment for your care. This includes medical and billing records, other than psychotherapy notes. To inspect and copy this Health Information, you must make your request, in writing, to Human Resources. We have up to 30 days to make your Protected Health Information available to you and we may charge you a reasonable fee for the costs of copying, mailing or other supplies associated with your request. We may not charge you a fee if you need the information for a claim for benefits under the Social Security Act or any other state of federal needs-based benefit program. We may deny your request in certain limited circumstances. If we do deny your request, you have the right to have the denial reviewed by a licensed healthcare professional who was not directly involved in the denial of your request, and we will comply with the outcome of the review.

Right to Request Confidential Communications. You have the right to request that we communicate with you about medical matters in a certain way or at a certain location. For example, you can ask that we only contact you by mail or at work. To request confidential communications, you must make your request, in writing, to Human Resources. Your request must specify how or where you wish to be contacted. We will accommodate reasonable requests.

The Plan's Responsibilities

The Plans may change the terms of this Notice at any time. If the Plans change this Notice, the Plans may make the new Notice terms effective for all of your PHI that the Plans maintain, including any information the Plans created or received before we issued the new Notice. If the Plans change this Notice, the Plans will make it available to you.

For More Information or to Report a Problem

If you believe your privacy rights have been violated, you may file a complaint with our office or with the Secretary of the Department of Health and Human Services. To file a complaint with our office, contact Human Resources. All complaints must be made in writing. You will not be penalized for filing a complaint.

Important Information on how Health Care Reform Affects Your Plan

Primary Care Provider Designations

For plans and issuers that require or allow for the designation of primary care providers by participants or beneficiaries:

- Your HMO generally requires the designation of a primary care provider. You have the right to designate any primary care provider who participates in our network and who is available to accept you or your family members. For information on how to select a primary care provider, and for a list of the participating primary care providers, contact your Human Resources office.

For plans and issuers that require or allow for the designation of a primary care provider for a child.

- For children, you may designate a pediatrician as the primary care provider.

For plans issuers that provide coverage for obstetric or gynecological care and require the designation by a participant or beneficiary of a primary care provider:

- You do not need prior authorization from your insurance provider of from any other person (including a primary care provider) in order to obtain access to obstetrical or gynecological care from a health care professional in our network who specializes in obstetrics or gynecology. The health care professional however, may be required to comply with certain procedures, including obtaining prior authorization for certain services, following a pre-approved treatment plan, or procedures for making referrals. For a list of participating health care professionals who specialize in obstetrics or gynecology, contact your Human Resources department.

Important Information about Your COBRA Continuation Coverage Rights

Note: For use by single employer groups, please read the information contained in this notice very carefully.

To elect COBRA continuation coverage, contact your Human Resource Representative to obtain a copy of the COBRA election form.

If you do not elect COBRA continuation coverage, your coverage under the plan will end on the last day of the month in which the following "qualifying events" occur:

- Termination of employment (18 months of COBRA)
- Reduction in hours (18 months of COBRA)
- Death of employee (36 months of COBRA for the spouse and dependents)
- Divorce or legal separation (36 months of COBRA for the ex-spouse)
- Entitlement to Medicare (36 months of COBRA for the spouse and dependents)
- Loss of dependent child status (36 months of COBRA for the dependent)

Each person ("qualified beneficiary") in the category(ies) checked below is entitled to elect COBRA continuation coverage, which will continue group health care coverage under the plan for up to 18 or 36 months. (Extensions under state continuation coverage of due to disability may also be available. Contact Human Resources to find out more). The following are eligible to elect COBRA:

- Employee or former employee
- Spouse of former spouse
- Dependent child(ren) covered under the plan on the day before the event that caused the loss of coverage
- Child who is losing coverage under the plan because he or she is no longer a dependent under the plan.

If elected, COBRA continuation coverage will begin on the date specified by your plan administrator. You may elect any coverage you currently were enrolled in for COBRA continuation coverage.

COBRA continuation coverage will cost the amount determined at the time of the loss as specified by your plan administrator. You do not have to send any payment with the Election Form. Important additional information about payment for COBRA continuation coverage is included in the following pages.

If you have any questions about this notice or your rights to COBRA continuation coverage, you should contact Human Resources.

What is continuation coverage?

Federal law requires that employers give employees and their families the opportunity to continue their health care coverage when there is a "qualifying event" that would result in a loss of coverage under an employer's plan. Qualifying events are situations that would ordinarily cause an individual to lose group health coverage. Depending on the type of qualifying event, "qualified beneficiaries" can include the employee or retiree covered under the group health plan, the covered employee's or retiree's spouse or domestic partner, and the dependents of the covered employee or retiree.

COBRA continuation coverage is identical to the group coverage provided to employees and retirees (the same coverage the qualified beneficiary had immediately before qualifying for continuation coverage). Any change in benefits under the plan for active employees or retirees will also apply to COBRA qualified beneficiaries.

How long will continuation coverage last?

Coverage generally may be continued for up to 18 months in the case of the employee's loss of coverage due to termination of employment or reduction in hours of employment (includes leave without pay or layoff).

Coverage may be continued for up to 36 months in the case of a loss of coverage due to the employee's or retiree's divorce/legal separation/ annulment or termination of domestic partnership, the employee's or retiree's death, or a dependent's loss of eligibility.

If a covered employee becomes entitled to Medicare (due to age) within 18 months before a termination of employment or reduction of hours, family members who are qualified beneficiaries may continue COBRA continuation coverage for up to 36 months counted from the date of the employee's Medicare entitlement.

Continuation coverage will be terminated before the end of the maximum period if:

- Any required premium is not paid in full on time.
- A qualified beneficiary becomes covered, after electing continuation coverage, under another group health plan that does not impose any pre-existing condition exclusion for a pre-existing condition of the qualified beneficiary.
- The employer ceases to provide any group health plan for its employees.

Continuation coverage may also be terminated for any reason to plan would terminate coverage of a participant or beneficiary not receiving continuation coverage (such as fraud).

How can you extend the length of COBRA continuation coverage?

If you elect continuation coverage, an extension of the maximum period of coverage may be available if a qualified beneficiary is a disabled or a second qualifying event occurs. You must notify Human Resources of a disability or a second qualifying event within 60 days in order to extend the period of continuation coverage. Failure to provide notice of a disability or second qualifying event may affect the right to extend the period of continuation coverage.

Disability An 11-month extension of coverage may be available if a qualified beneficiary is determined by the Social Security Administration (SSA) to be disabled. The disability must have started at some time before the 60th day of COBRA continuation coverage. It is the qualified beneficiary's responsibility to obtain the disability determination from the SSA and provide a copy of the Social Security disability determination to the Plan within 60 days of the date of determination and before the original 18 months of COBRA expire. Each qualified beneficiary who has elected continuation coverage will be entitled to the 11-month disability extension even if only one of them qualifies. If the qualified beneficiary does not comply with these time frames, the additional 11-month extension of COBRA coverage will not be provided. If the qualified beneficiary is determined by SSA to no longer be disabled, he or she must notify the Plan of that fact within 30 days after the SSA's determination.

Second Qualifying Event An 18-month extension of coverage will be available to a spouse or domestic partner and dependents who elect continuation coverage if a second qualifying event occurs during the first 18 months of continuation coverage. The maximum amount of continuation coverage available when a second qualifying event occurs is 36 months from the date of the original qualifying event. Such second qualifying events may include the death of a covered employee or retiree, divorce/legal separation/ annulment or termination of domestic partner relationship from the employee or retiree, or a dependent losing eligibility. These events will be considered to be second qualifying events only if they would have caused the qualified beneficiary to lose coverage under the Plan if the first qualifying event had not occurred. The qualified beneficiary must notify the Plan within 60 days after a second qualifying event occurs if he or she wants to extend continuation coverage.

How can you elect COBRA continuation coverage?

To elect continuation coverage, you must complete the Election Form and furnish it according to the directions on the form. Each qualified beneficiary has a separate right to elect continuation coverage. For example, the employee's spouse may elect continuation coverage even if the employee does not. Continuation coverage may be elected for only one, several, or for all dependent children who are qualified beneficiaries. A parent may elect to continue coverage on behalf of any dependent children. The employee or the employee's spouse can elect continuation coverage on behalf of all of the qualified beneficiaries.

In considering whether to elect continuation coverage, you should take into account that you have special enrollment rights under federal law. You have the right to request special enrollment in another group health plan for which you are otherwise eligible (such as a plan sponsored by your spouse's employer) within 30 days after your group health coverage ends because of the qualifying event listed above. You will also have the same special enrollment right at the end of continuation coverage if you get continuation coverage for the maximum time available to you.

You must notify Human Resources within 30 days of any of the following COBRA triggering events:

- Entitlement to Medicare
- Termination of Employment
- Reduction in hours

You must notify Human Resources within 60 days of the following resulting in a loss of coverage:

- Divorce or Legal Separation
- Loss of Dependent Child Status

How much does COBRA continuation coverage cost?

Generally, each qualified beneficiary is required to pay the entire cost of continuation coverage. The amount a qualified beneficiary is required to pay may not exceed 102 percent (or, in the case of an extension of continuation coverage due to a disability, 150 percent) of the cost to the group health plan (including both employer and employee contributions) for coverage of a similarly situated plan participant or beneficiary who is not receiving continuation coverage.

When and how must payment be made for COBRA continuation coverage?

First payment for continuation coverage

If you elect continuation coverage, you do not have to send any payment with the Election Form. However, you must make your first payment for continuation coverage not later than 45 days after the date of your election. (This is the date the Election Notice is post-marked, if mailed.) If you do not make your first payment for continuation coverage in full not later than 45 days after the date of your election, you will lose all continuation coverage rights under the Plan. You are responsible for making sure that the amount of your first payment is correct. You may contact [enter appropriate contact information, e.g., the Plan Administrator or other party responsible for COBRA administration under the Plan] to confirm the correct amount of your first payment.

Periodic payments for continuation coverage

After you make your first payment for continuation coverage, you will be required to make periodic payments for each subsequent coverage period. The amount due for each coverage period for each qualified beneficiary is shown in this notice. The periodic payments can be made on a monthly basis. Under the Plan, each of these periodic payments for continuation coverage is due on the specified date for that coverage period. If you make a periodic payment on or before the first day of the coverage period to which it applies, your coverage under the Plan will continue for that coverage period without any break. The Plan will not send periodic notices of payments due for these coverage periods.

Grace periods for periodic payments

Although periodic payments are due on the dates shown above, you will be given a grace period of 30 days after the first day of the coverage period to make each periodic payment. Your continuation coverage will be provided for each coverage period as long as payment for that coverage period is made before the end of the grace period for that payment. However, if you pay a periodic payment later than the first day of the coverage period to which it applies, but before the end of the grace period for the coverage period, your coverage under the Plan will be suspended as of the first day of the coverage period and then retroactively reinstated (going back to the first day of the coverage period) when the periodic payment is received. This means that any claim you submit for benefits while your coverage is suspended may be denied and may have to be resubmitted once your coverage is reinstated.

If you fail to make a periodic payment before the end of the grace period for that coverage period, you will lose all rights to continuation coverage under the Plan.

For More Information

This notice does not fully describe continuation coverage or other rights under the plan. More information about continuation coverage and your rights under the plan is available in your summary plan description from the plan Administrator.

If you have any questions concerning the information in this notice, your rights to coverage, or if you want a copy of your summary plan description, you should contact Human Resources.

For more information about your rights under ERISA, including COBRA, the Health Insurance Portability and Accountability Act (HIPAA), and other laws affecting group health plans, contact the U.S. Department of Labor's Employee Benefits Security Administration (EBSA) in your area or visit the EBSA website at www.dol.gov/ebsa . Addresses and phone numbers of Regional and District EBSA Offices are available through EBSA's website.

Keep Your Plan Informed of Address Changes

In order to protect your and your family's rights, you should keep the plan administrator informed of any changes in your address and the addresses of family members. You should also keep a copy, for your records, of any notices you send to the plan administrator.

Employee Rights & Responsibilities Under the Family Medical Leave Act

The Family and Medical Leave Act (FMLA) entitles eligible employees of covered employers to take unpaid, job-protected leave for specified family and medical reasons. This fact sheet provides general information about which employers are covered by the FMLA, when employees are eligible and entitled to take FMLA leave, and what rules apply when employees take FMLA leave.

COVERED EMPLOYERS

The FMLA only applies to employers that meet certain criteria. A covered employer is a:

- Private-sector employer, with 50 or more employees in 20 or more workweeks in the current or preceding calendar year, including a joint employer or successor in interest to a covered employer;
- Public agency, including a local, state, or Federal government agency, regardless of the number of employees it employs; or
- Public or private elementary or secondary school, regardless of the number of employees it employs.

ELIGIBLE EMPLOYEES

Only eligible employees are entitled to take FMLA leave. An eligible employee is one who:

- Works for a covered employer;
- Has worked for the employer for at least 12 months;
- Has at least 1,250 hours of service for the employer during the 12 month period immediately preceding the leave*; and
- Works at a location where the employer has at least 50 employees within 75 miles.

The 12 months of employment do not have to be consecutive. That means any time previously worked for the same employer (including seasonal work) could, in most cases, be used to meet the 12-month requirement. If the employee has a break in service that lasted seven years or more, the time worked prior to the break will not count unless the break is due to service covered by the Uniformed Services Employment and Re-employment Rights Act (USERRA), or there is a written agreement, including a collective bargaining agreement, outlining the employer's intention to rehire the employee after the break in service. See "FMLA Special Rules for Returning Reservists".

LEAVE ENTITLEMENT

Eligible employees may take up to 12 work weeks of leave in a 12-month period for one or more of the following reasons:

- The birth of a son or daughter or placement of a son or daughter with the employee for adoption or foster care;
- To care for a spouse, son, daughter, or parent who has a serious health condition;
- For a serious health condition that makes the employee unable to perform the essential functions of his or her job; or
- For any qualifying exigency arising out of the fact that a spouse, son, daughter, or parent is a military member on covered active duty or call to covered active duty status.

An eligible employee may also take up to 26 workweeks of leave during a "single 12-month period" to care for a covered servicemember with a serious injury or illness, when the employee is the spouse, son, daughter, parent, or next of kin of the servicemember. The "single 12-month period" for military caregiver leave is different from the 12-month period used for other FMLA leave reasons

Under some circumstances, employees may take FMLA leave on an intermittent or reduced schedule basis. That means an employee may take leave in separate blocks of time or by reducing the time he or she works each day or week for a single qualifying reason. When leave is needed for planned medical treatment, the employee must make a reasonable effort to schedule treatment so as not to unduly disrupt the employer's operations. If FMLA leave is for the birth, adoption, or foster placement of a child, use of intermittent or reduced schedule leave requires the employer's approval.

Under certain conditions, employees may choose, or employers may require employees, to "substitute" (run concurrently) accrued paid leave, such as sick or vacation leave, to cover some or all of the FMLA leave period. An employee's ability to substitute accrued paid leave is determined by the terms and conditions of the employer's normal leave policy.

NOTICE

Employees must comply with their employer's usual and customary requirements for requesting leave and provide enough information for their employer to reasonably determine whether the FMLA may apply to the leave request. Employees generally must request leave 30 days in advance when the need for leave is foreseeable. When the need for leave is foreseeable less than 30 days in advance or is unforeseeable, employees must provide notice as soon as possible and practicable under the circumstances.

When an employee seeks leave for a FMLA-qualifying reason for the first time, the employee need not expressly assert FMLA rights or even mention the FMLA. If an employee later requests additional leave for the same qualifying condition, the employee must specifically reference either the qualifying reason for leave or the need for FMLA leave. See Fact Sheet 28E: Employee Notice Requirements under the FMLA .

Covered employers must:

(1) Post a notice explaining rights and responsibilities under the FMLA (and may be subject to a civil money penalty of up to $110 for willful failure to post);

(2) Include information about the FMLA in their employee handbooks or provide information to new employees upon hire;

(3) When an employee requests FMLA leave or the employer acquires knowledge that leave may be for a FMLA-qualifying reason, provide the employee with notice concerning his or her eligibility for FMLA leave and his or her rights and responsibilities under the FMLA; and

(4) Notify employees whether leave is designated as FMLA leave and the amount of leave that will be deducted from the employee's FMLA entitlement.

CERTIFICATION

When an employee requests FMLA leave due to his or her own serious health condition or a covered family member's serious health condition, the employer may require certification in support of the leave from a health care provider. An employer may also require second or third medical opinions (at the employer's expense) and periodic recertification of a serious health condition.

- Certification of a Serious Health Condition under the FMLA
- Certification requirements for military family leave
- Qualifying Exigency Leave under the FMLA
- Military Caregiver Leave for a Current Servicemember under the FMLA
- Military Caregiver Leave for a Veteran under the FMLA.

JOB RESTORATION AND HEALTH BENEFITS

Upon return from FMLA leave, an employee must be restored to his or her original job or to an equivalent job with equivalent pay, benefits, and other terms and conditions of employment. An employee's use of FMLA leave cannot be counted against the employee under a "no-fault" attendance policy. Employers are also required to continue group health insurance coverage for an employee on FMLA leave under the same terms and conditions as if the employee had not taken leave.

OTHER PROVISIONS

Special rules apply to employees of local education agencies. Generally, these rules apply to intermittent or reduced schedule FMLA leave or the taking of FMLA leave near the end of a school term.

NOTICE OF PATIENT PROTECTIONS

For plans and issuers that require or allow for the designation of primary care providers by participants or beneficiaries, insert:

Kaiser Permanente generally requires the designation of a primary care provider. You have the right to designate any primary care provider who participates in our network and who is available to accept you or your family members. If you do not designate one, Kaiser Permenente will designate a primary care provider automatically for you. For information on how to select a primary care provider, and for a list of the participating primary care providers, contact the Kaiser Permanente Membership Team at 800-731-4661, option 4.

For children, you may designate a pediatrician as the primary care provider.

You do not need prior authorization from Kaiser Permanente or from any other person (including a primary care provider) in order to obtain access to obstetrical or gynecological care from a health care professional in our network who specializes in obstetrics or gynecology. The health care professional, however, may be required to comply with certain procedures, including obtaining prior authorization for certain services, following a pre-approved treatment plan, or procedures for making referrals. For a list of participating health care professionals who specialize in obstetrics or gynecology, contact the Kaiser Permanente Membership Team at 800-731-4661, option 4.

NOTICE OF SPECIAL ENROLLMENT RIGHTS

If you are declining enrollment for yourself or your dependents (including your spouse) because of other health insurance or group health plan coverage, you may be able to enroll yourself and your dependents in this plan if you or your dependents lose eligibility for that other coverage (or if the employer stops contributing toward your or your dependents' other coverage). However, you must request enrollment within "30 days" after your or your dependents' other coverage ends (or after the employer stops contributing toward the other coverage).

In addition, if you have a new dependent as a result of marriage, birth, adoption, or placement for adoption, you may be able to enroll yourself and your dependents. However, you must request enrollment within "30 days" after the marriage, birth, adoption, or placement for adoption.

To request special enrollment or obtain more information, contact Human Resouce at 510-904-6353.

MICHELLE'S LAW NOTICE

Note: Pursuant to Michelle's Law, you are being provided with the following notice because the Education for Change group health plan provides dependent coverage beyond age 26 and bases eligibility for such dependent coverage on student status. Please review the following information with respect to your dependent child's rights under the plan in the event student status is lost.

When a dependent child loses student status for purposes of Education for Change group health plan coverage as a result of a medically necessary leave of absence from a post-secondary educational institution, the Education for Change group health plan will continue to provide coverage during the leave of absence for up to one year, or until coverage would otherwise terminate under the Education for Change group health plan, whichever is earlier.

In order to be eligible to continue coverage as a dependent during such leave of absence:

The Education for Change group health plan must receive written certification by a treating physician of the dependent child which states that the child is suffering from a serious illness or injury and that the leave of absence (or other change of enrollment) is medically necessary; and eligibility requirements are met.

Education for Change
Strategic Plan 2015-2018

Protecting, restoring and advancing neighborhood schools

2015

Education *for* Change

We will provide a **superior public education** to Oakland's most underserved children by creating a system of public schools that **relentlessly focuses on our students' academic achievement**. We believe that **high quality instruction**, and its continuous refinement, will lead to success for our students. When our students succeed, they will be prepared to make thoughtful and informed choices that will set them on **a path for a successful life**.

EFC's MISSION

Self-motivated, self-aware, and confident learners with a high level of resilience who strive for excellence

↓

Critical-thinkers who know how to solve problems, make informed decisions and generally navigate life in the 21^{st} century

↓

A powerful, culturally-competent and positive citizen of the world

↓

Technologically and academically capable young people who are prepared to succeed and compete with their peers when they move from EFCPS

↓

Collaborative team players who can both facilitate and participate in collective efforts

↓

Fit young people who are able to make good choices to maintain a healthy and safe life

INGREDIENTS FOR A SUCCESSFUL LIFE

EFC's MISSION

We collaborate. We are a team. We plan together, observe and analyze each other's work, collaborate with our coaches and site leaders, partner with our families, and together make decisions about our programming

We are a learning organization. We approach our practice with an inquiry stance and a growth mindset; we analy innovate, and iterate every day so that we continually improve. We believe in coaching and developing people at ev level of experience, at every level of the organization.

We are solutions-oriented. We approach every challenge with a problem-solving orientation. We listen to and encourage each other. We are resilient in the face of adversity.

We are accountable. Our mission is to provide a superior public education to Oakland's most underserved childre We assume personal accountability for student growth; we analyze multiple forms of data, and that analysis drives instruction.

We are student-focused. We form close relationships, utilize personalized learning, differentiate instruction, make learning culturally relevant, engage families, and provide individualized interventions to meet the needs of every chi

We listen. We are a small, responsive organization that values student, family, and employee voice and input.

We are rooted in community. Ours is a place-based strategy that works deeply with neighborhood leaders and partners to serve our children. We understand that the cultures, values, traditions, and assets that our families brin must be leveraged and honored to reach and teach our children.

EFC's VALUES

EFC's HISTORY

2005 | 2008 | 2011 | 2014 | 2017

OUSD partners with New Schools Venture Fund to create a CMO that will take over failing OUSD elementary schools. The original business plan targeted ten failing elementary schools over five years.

Hawthorne Elementary and E. Morris Cox Elementary convert to become Education for Change public charter schools, their respective API scores were 596 and 556.

In 2010, the three schools managed by EFC have APIs of 819, 822, and 783, but converting existing district schools proves controversial, and EFC's portfolio remains at three schools until 2012.

In 2011, Hae-Sin Thomas becomes the new CEO of EFC. She converts three OUSD schools in one year, doubling EFC in size, revisioning EFC as a K-12 neighborhood pipeline, and reinstating a partnership with the district.

In 2012, EFC transitions its instructional models across all of its schools from intervention/remediation to college readiness and success. EFC partners with Seneca Center to develop a nationally-recognized model to serve our most at-risk children.

In 2013, EFC adopts blended learning/personalized learning across all of its schools and begins to shift its focus from more teacher-directed to increasingly student-directed.

In 2014, EFC opens Epic School, our first new school (non-conversion) and first middle school. Epic is recognized as a national "Breakthrough" school model by Next Generation Learning Challenge.

In 2014, EFC serves almost 2,400 students in the Fruitvale alone and almost 3,000 students in East Oakland.

Diverse Portfolio of Schools

No strict academic model,
Schools have instructional programs unique to their site but adhere to EFC non-negotiables,
Flexibility facilitates and encourages innovation across the schools.

Committed to Serving ALL Children

Comprehensive system of academic, socio-emotional, and behavioral interventions leveraging a nationally-recognized partnership with Seneca,

Neighborhood schools serving neighborhood children and families,

Powerful Special Education model that serves a diverse range of disabilities

Personalizing learning to ensure every child receives what they need and they are empowered and metacogntive as learners

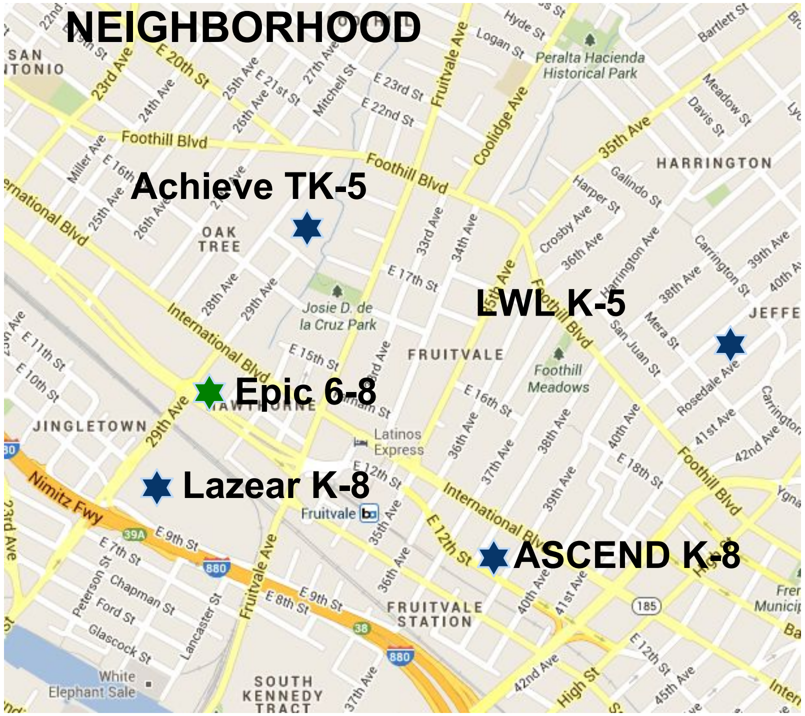
Neighborhood Transformation

Place-based strategy that builds powerful preK-12 neighborhood pipelines that ultimately have the ability to transform neighborhoods

Engage and empower parents as community leaders and partners to accelerate student learning and neighborhood transformation

WHAT MAKES US UNIQUE

THE FRUITVALE NEIGHBORHOOD



THE ELMHURST NEIGHBORHOOD

- Current EFC elementary or TK-8 school
  -serving 2,000 students
- Current EFC middle school
  -serving 500 students at capacity

- Current EFC elementary school
  -serving 600 students

NEIGHBORHOOD SCHOOLS

Mission:

Provide a superior public education to Oakland's most underserved children by creating a system of public schools that relentlessly focuses on our students' academic achievement.

Three-Year Objectives:

1. Provide quality educational programs that prepare EFC students for success in the 21st Century
2. Transition the EFC instructional framework and instructional support systems to ensure success in the Common Core and NGSS standards
3. Develop strong relationships with Oakland Unified and community partners to build strong preK-12 neighborhood pipelines in the Elmhurst and Fruitvale neighborhoods

Strategic Imperatives

Accelerating student outcomes and ensuring students are on a path for success in the 21st Century

1 **HUMAN CAPITAL STRATEGY: recruit, select, retain, and support excellent staff**

2 **EFC GROWTH STRATEGY: Convert/build powerful new preK-12 schools in our target neighborhoods**

4 **FAMILY PARTNERSHIP: ally with and empower families to accelerate student learning**

5 **ACADEMIC APPROACH: build an instructional system that supports powerful Common Core teaching and learning**

EFC's PRIORITIES

EFC's PRIORITIES

Strong Student Outcomes

Human Capital Strategy (CTO)	EFC Growth Strategy and Plan (CEO)	Academic Approach and Framework (CAO)	Family Partnerships to support Student Learning (COS)

Communications Strategy (DI,CEO)

Infrastructure, Process, Systems (DI)

Financial Feasibility (COO)

Organizational Culture (CEO)

LEADS FOR PRIORITY AREAS - CTO: Chief Talent Officer; CEO: Chief Executive Officer; CAO: Chief Academic Officer; COS: Chief of Schools; COO: Chief Operating Officer; DI: Director of Innovation

Competency	Objectives
1 **Develop effective communication systems**	• Ensure all EFC staff receive regular communications around new initiatives and proposed changes • Strengthen systems to facilitate stakeholder input and feedback to EFC leadership • Build a stronger EFC brand in the larger community using social media, news media, website, and other strategic communications media
2 **Strengthen the organizational culture**	• Develop adult resiliency and excitement around change, growth, and iteration • Strengthen staff and family pride in being part of EFC and its mission • Build stronger connections and relationships between and across school communities • Develop innovation culture that supports strategic problem solving in priority areas
3 **Build the infrastructure and systems to support strategic initiatives**	• Improve information flow and sharing throughout organization so that all stakeholders feel more informed and connected to EFC and to each other • Develop knowledge sharing system for sharing instructional best practices • Develop processes to evaluate the effectiveness and scalability of initiatives/pilots • Ensure all operational/organizational systems are efficient, effective, and scaleable • Build a strong data management system and processes to facilitate self-evaluation and inquiry
4 **Maintain financial sustainability**	• Develop 3-year budget projections to ensure multiyear sustainability for EFC • Build a financial model for growth - TK/preK, elementary conversion, new school • Develop a sustainable development plan that ensures a steady source of soft income for strategic initiatives

CORE COMPETENCIES

Priorities for EFC	Objectives
1 Grow quality pK-12 neighborhood schools	• Ensure EFC students have the skills/motivation to attend and complete a quality 4-year college • Increase the EFC impact in target neighborhoods; support neighborhood transformation • Convert, design and open schools to serve grades preK-12 in target neighborhoods
2 Recruit, retain, support talent	• Ensure human capital systems are in place to ensure high quality staff are recruited, selected, evaluated, developed, and retained • Develop a leadership pipeline for instructional and operations staff
3 Family partnership to accelerate student learning	• Build family leadership through site and organization-wide Family Leadership Councils; build leader capacity to participate authentically on the Board of Directors • Increase site capacity to more authentically engage families and build a family community that becomes strong advocates for EFC
4 A powerful academic approach and instructional framework	• Align all EFC schools around research-based best practices • Strengthen instructional practices of all teachers at all sites by providing effective instructional coaching, collaborative structures and professional development opportunities • Build site capacity to develop, refine, articulate and manage their instructional programs • Develop a comprehensive assessment system that effectively drives instructional and programmatic decisions

EFC's PRIORITIES

1 Ensuring EFC Students have Quality Neighborhood Schools

Objectives:

- Ensure EFC students have the skills/motivation to attend and complete a quality 4-year college
- Increase the EFC impact in target neighborhoods; support neighborhood transformation
- Convert, design and open schools to serve grades preK-12 in target neighborhoods

Owners:

- CEO/CAO
- Chief of Growth/School Improvement
- Director Early Childhood

Actions:

1. Develop and open pre-K and TK programs

- Evaluate options for opening pre-K programs at existing school sites
- Develop TK facilities at Lazear and seek TK facilities for ASCEND and LWL; open TK programs for all three sites

2. Facilitate ongoing opportunities for EFCPS growth in the Elmhurst and Fremont neighborhoods

- Work with charter funders and partners to build an EFC brand identity in target neighborhoods and in national and statewide education reform community
- Strengthen Epic School and develop replicable instructional and operational systems
- Engage strategically with OUSD, GO, CCSA on Quality Schools Initiatives, Charter Compact, SPED SELPA, Common Enrollment
- Develop strategic partnership with high school operators to address high school need in Fruitvale

3. Submit powerful charter proposals in alignment with the growth timeline

- Submit renewal petitions for Achieve, LWL, Lazear, and ASCEND; materials revisions for TK as appropriate
- Work with elementary conversions school communities to write and submit charter proposals as appropriate
- Work with elementary conversion communities to garner community support for conversions as appropriate
- Submit material revision of Epic charter to facilitate pilot high school

4. Ensure all operational and instructional systems are scaleable and facilitate growth

- Develop financial models in alignment with the growth strategy
- Transition operational and financial systems to ensure they are scaleable and efficient
- Develop a school improvement process that facilitates strong renewal proposals, develops powerful new school proposals, and thoughtfully integrates existing schools to EFC; ensure the process encourages innovation, iteration, and aligns with the larger instructional framework developed by the CAO

Metrics and targets:

- All charters submitted are high quality and reflect some of the strongest in the district/county; all charters recommended for approval by authorizers
- Facilities secured for all TK programs
- 100% of targeted state start-up funds secured
- All conversion opportunities come with 150 parent signatures indicating interest and support for EFC operating their school
- All new and newly-added schools meet year 1 growth targets and have strong staff and family satisfaction data (>=75%)
- >80% of existing EFC schools meet academic KPI targets

Resources required:

- Chief of Growth/School Improvement
- Additional recruitment staff; secondary HO instructional team for 6-12; operations support/expertise to evaluate/develop scaleable systems
- For conversions, a community organizer to engage parents
- For new schools, a principal and an office support person ½ year in advance, seasonal ops support during summer/ fall
- Marketing materials
- Startup materials, equipment, furniture in non-conversion schools, curricular resources

STRENGTHS

- Strong charter authorizer relationship and authorizing rate
- Solid leadership team
- Healthy reserve and financial stability
- Recognized RTI/innovative SPED model
- Respected charter leader
- Strong relationships with local funders

WEAKNESSES

- Lack of scaleable systems
- Human capital systems
- Minimal high school capacity
- Results not strong yet in existing schools
- Middle school is still new - still growing capacity
- HO staff at capacity; growth would require additional HC

Internal factors

OPPORTUNITIES

- New OUSD superintendent has a turnaround strategy that includes charters
- Epic, NGLC, and Next Gen Personalized Learning models = a lot of funding potential
- Strong foundation partners in Rainin, Rogers, Silicon, Startup
- Community engagement opps

THREATS

- Too many charters in OUSD? Political environment
- Cost of secondary facilities
- Churn of leadership at OUSD in last three years
- Charter high schools performance variable
- Teacher shortage
- Lack of state academic accountability system

External factors

Positive

Negative

GROWTH POSSIBILITIES

GROWTH STRATEGY

	Y0: 2014-15	Y1: 2015-16	Y2: 2016-17	Y3: 2017-18

				School 7 (TK-5)* *425 students*

*In response to OUSD RFQ if appropriate

**A small extension of Epic as a pilot HS

2 The Human Capital Strategy: Ensuring We Have the Talent

Objectives:
- Ensure human capital systems are in place to ensure high quality staff are recruited, selected, evaluated, developed, and retained
- Develop a leadership pipeline for instructional and operations staff

Owners:
- CTO/COO/CAO/CEO
- Director of Recruitment
- Director Human Resources
- Site principals

Actions:

1. Strengthen the existing staff recruitment, selection, and on-boarding processes to attract top talent
- Develop and implement effective marketing strategies and partnerships to increase quality, diversity, and quantity of applicants for all positions
- Evaluate national best practice with respect to selection and revise the existing selection processes for ALL staff positions
- Train all leadership in effective selection and on-boarding processes

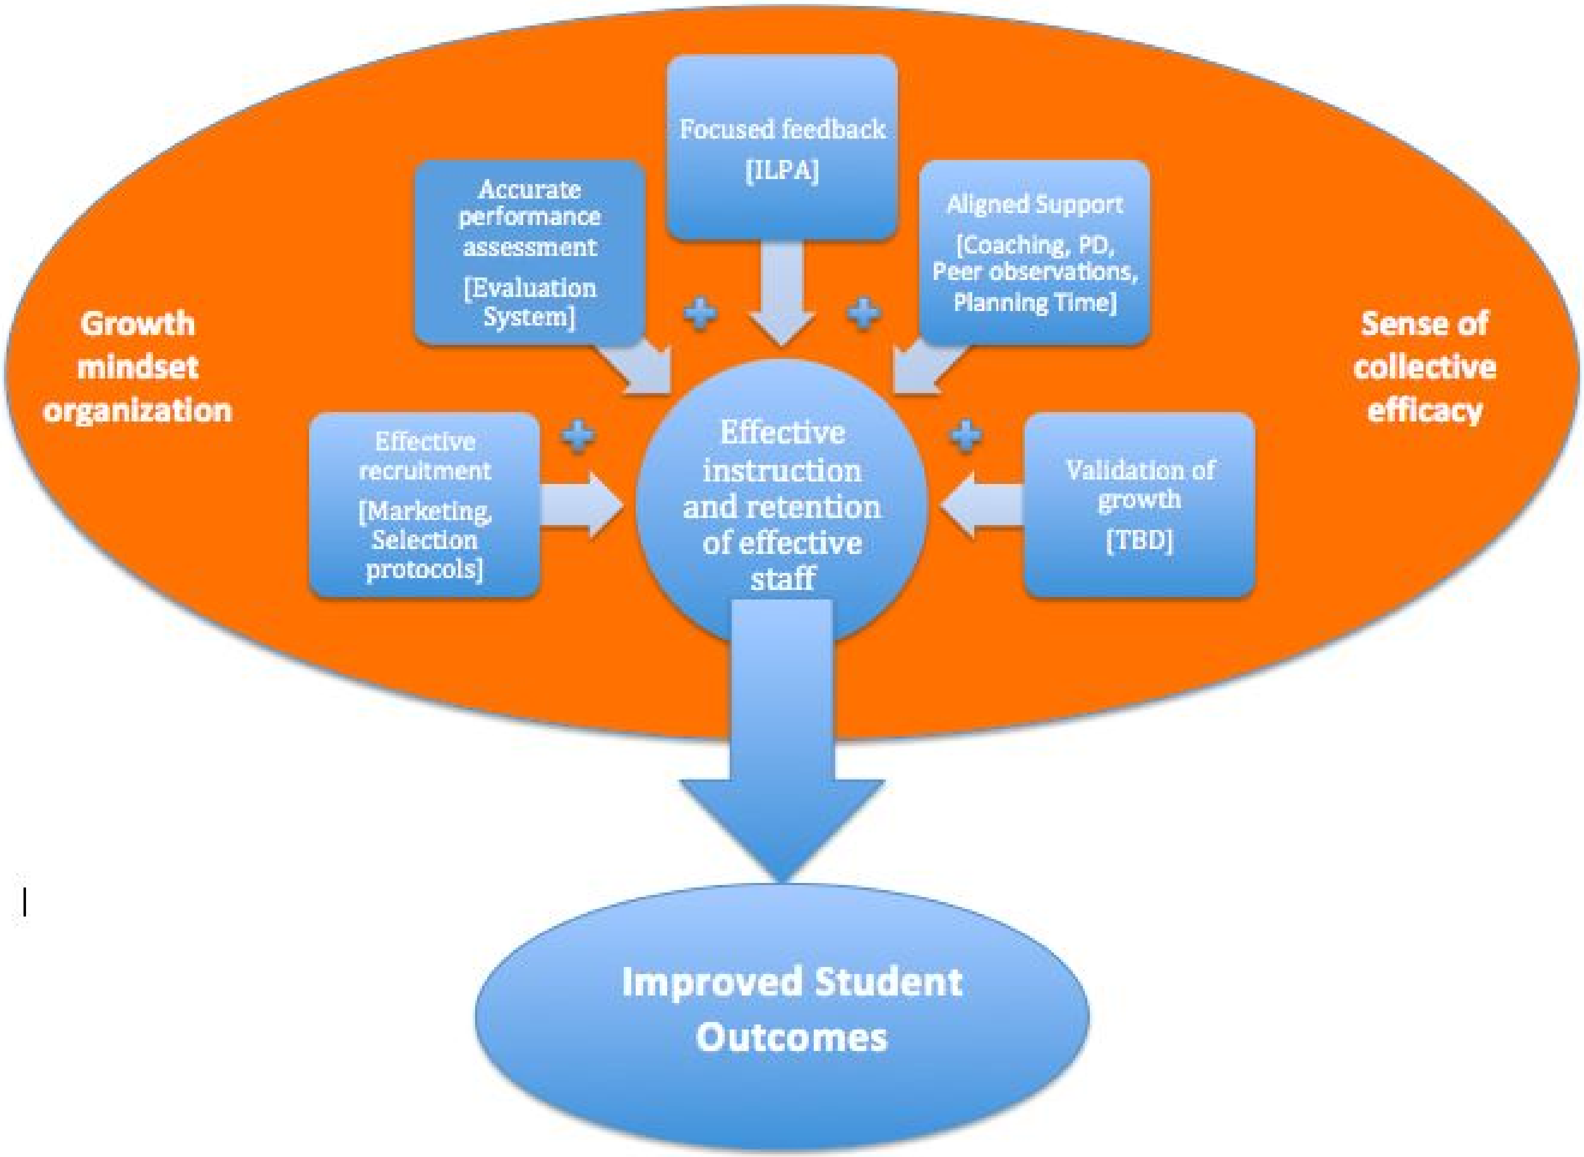
2. Develop and implement an internal leadership development plan for all staff that retains talent
- Develop and implement a leadership development plan for teachers who wish to continue teaching
- Develop and implement an internal leadership development plan for existing staff with administrative interest or potential
- Develop and implement a professional development plan to develop staff leadership in ALL positions

3. Develop and implement strategic evaluation and compensation systems that drive student outcomes
- Evaluate national best practice with respect to evaluation and compensation systems
- Develop and implement revised evaluation systems for all staff that align with current research with respect to best practice
- Develop and implement a revised compensation system in alignment with the new evaluation system

4. Strengthen existing support systems in alignment with revised evaluation systems to drive powerful instruction
- Support sites to develop effective professional development models that include extensive peer observation
- Develop and implement systems to ensure staff receive effective coaching aligned to evaluation goals
- Revise calendar to include increased amounts of high quality, structured data analysis, planning, and professional development time
- Develop and implement a systematic and effective new teacher development system

Metrics and targets:
- >80% of staff report the compensation system is relatively/very competitive with the Bay Area
- >80% of open positions filled with either high quality or growing staff (as measured by staff evaluations)
- >80% of staff report they are committed to staying at EFC
- >80% of staff report the performance management system enhances their work and contributes to their professional development
- >80% of staff report they had informal and formal opportunities to take leadership roles at the site and organizational levels

Resources required:
- Staff (Director of Recruitment, Induction Coaches, *Seasonal staffing support for Director of Recruitment, Master Educator Teacher positions*)
- Recruitment/selection/collateral materials, service contracts, events
- Leadership development resources, site visits, stipends, release time
- *Consultant support to provide eval norming and certification system*
- Ed Pioneer support to revise compensation system
- *Increased teacher compensation (increased work year)*



HUMAN CAPITAL STRATEGY

3 Family Partnerships to Support Student Learning

Objectives:
- Increase principal, teacher and staff capacity to more authentically engage families and build a family community that becomes strong partners in their children's education
- Establish a strong home & school connection
- Develop collective responsibility around the organization's advancement towards academic targets

Owners:
- COS/CAO
- Director of ELA/ELD
- Director of Math
- Site principals

Actions:

1. Deepen the work of the Family Leadership Council to build collective responsibility towards academic targets
- Build FLC capacity to be engage in strategic governance – focusing resources on academic targets
- Ensure that each site FLC has 2 academic goals, 1 community organizing "squeeky wheel" goal and at least one fundraising goal
- Build FLC representatives' capacity to be active members of the EFC board

2. Build staff capacity to authentically engage families in student learning
- Build capacity of teachers, site leadership, and parent coordinators to more authentically and strategically work with families
- Ensure that sites participate in home visits or some similar structure to build relationship between teachers and families
- Ensure that each site has a FRC staffed with a Family Resource Coordinator

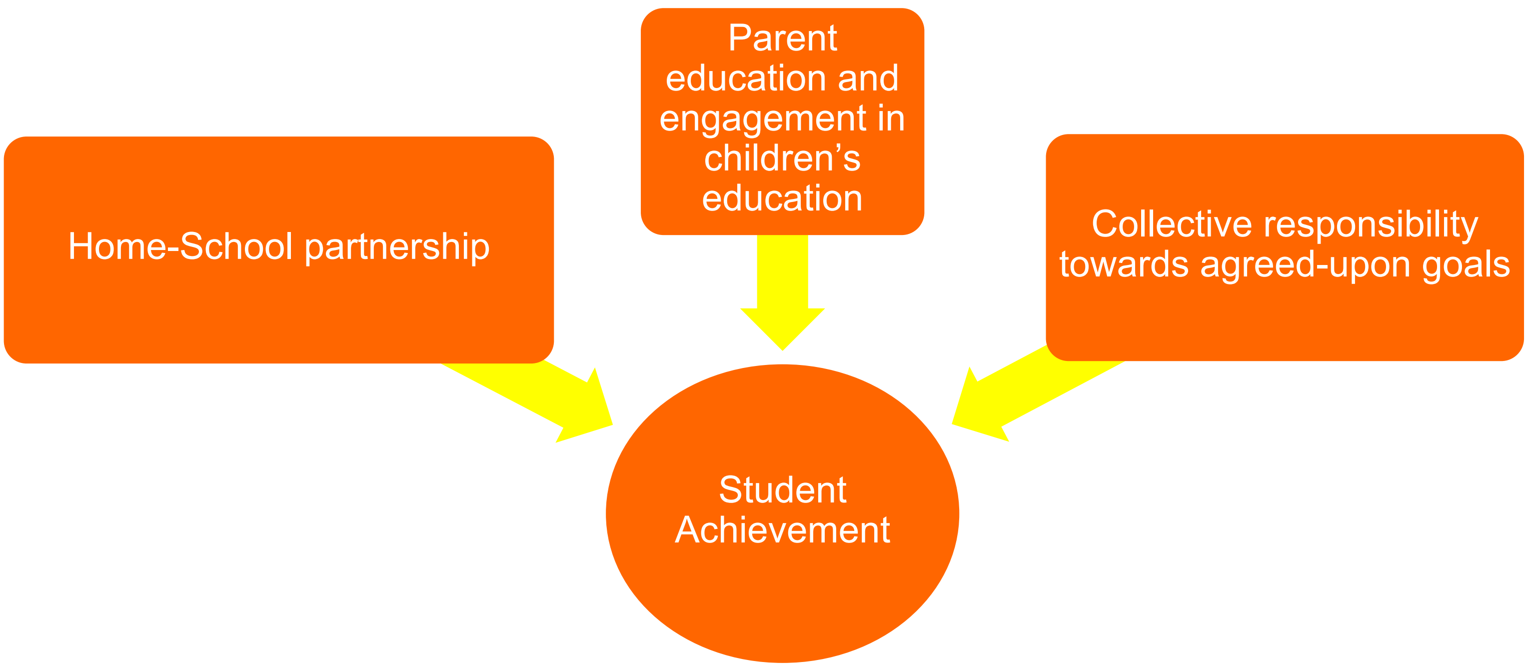
3. Build Family Engagement Core Teams at all Sites
- Ensure that each site creates a common vision for family partnerships
- Systematize practice of monthly meetings with principal, family resource coordinator, teacher

4. Engage Families in Student Learning
- Ensure that every school identifies a systemic way in which every teacher engages families in student learning (eg. APTT-like structure)
- Facilitate structures for parent education and involvement in student learning and achievement (via strategies such as Cycles of Inquiry and Classroom/Site Observations, Data Talks, Content Events, & Parent Workshops and Trainings)
- Pilot initiatives to build capacity of parents in grades TK-2 to build students' reading skills

Metrics and targets:
- 100% of sites have Family Resources Coordinator and designated FRC that offer comprehensive services
- 100% of sites have a family engagement planning team in place
- 100% of sites have identified a systemic approach to meaningfully involve families in student learning
- >75% of sites participate in home visits or some similar structure
- >80% of responses to Family Survey indicate that families are involved in decision making & understand their child's academic performance

Resources required:
- Consultant support to build principal and organization capacity to implement a family leadership council at all levels
- Materials, supplies, refreshments, service contracts and events
- Leadership development resources
- Staff: Parent Resource Coordinator at each site
- Community organizer/parent engagement lead at HO level
- Resources to implement literacy pilots – Learning Lab, Springboard, Build a Better Reader, etc

WHEN schools create an optimal pathway for parents and teachers to work as partners (intentionally bridging the gap in culture and power between parents and educators), are systematic in their attempts to engage families broadly and deeply around the education of their children, and have collaborative structures in which stakeholders can act collectively to achieve agreed-upon ends, **THEN** parent efficacy for engagement grows, students thrive, and schools improve.



PARENT PARTNERSHIP STRATEGY

4 Academic Approach and Framework

Objectives:

- Align all EFC schools around research-based best practices
- Develop instructional practices of all teachers at all sites through providing effective instructional coaching, collaborative structures and professional development opportunities
- Build site capacity to develop, refine, articulate and manage their instructional programs
- Develop a comprehensive assessment system that effectively drives instructional and programmatic decisions

Owners:

- CAO
- Chief Team
- Directors of ELA/ELD, Math/Science, Data
- Site principals

Actions:

1. Ensure there are strong, research-based org-wide and site-based instructional frameworks

- Develop an EFC TK-5 academic framework that coalesces all sites around essential programmatic components while providing site-based flexibility
- Design and align all EFC 6-8 programs around an EFC middle school instructional framework that effectively prepares our middle school students for success in high school and beyond
- Ensure each site develops and implements strong frameworks aligned to the EFC frames and communicated across stakeholders
- Facilitate site's revisioning processes during charter renewal process
- Lead annual site-planning and build site capacity to strategically align resources to move their educational program forward in alignment with their approved instructional framework and their approved charter petition

2. Refine EFC's comprehensive assessment and analysis system

- Develop analysis tools and protocols for all levels of the organization to drive instructional and programmatic decision-making
- Develop and implement EFC-wide performance tasks and formative assessment portfolio
- Refine strategic qualitative assessments (i.e., surveys, walkthrough tools) as part of the comprehensive assessment system

3. Build instructional capacity across the organization

- Strengthen site leader pedagogical and content knowledge and leadership capacities to ensure effective programmatic implementation and teacher development
- Ensure all sites (priority around middle school) have strong teacher development structures in place (instructional coaching, walkthrough structures, professional development, collaborative structures)
- Invest in instructional coach pedagogy and content expertise development

4. Advance knowledge and practices around competency-based and personalized learning

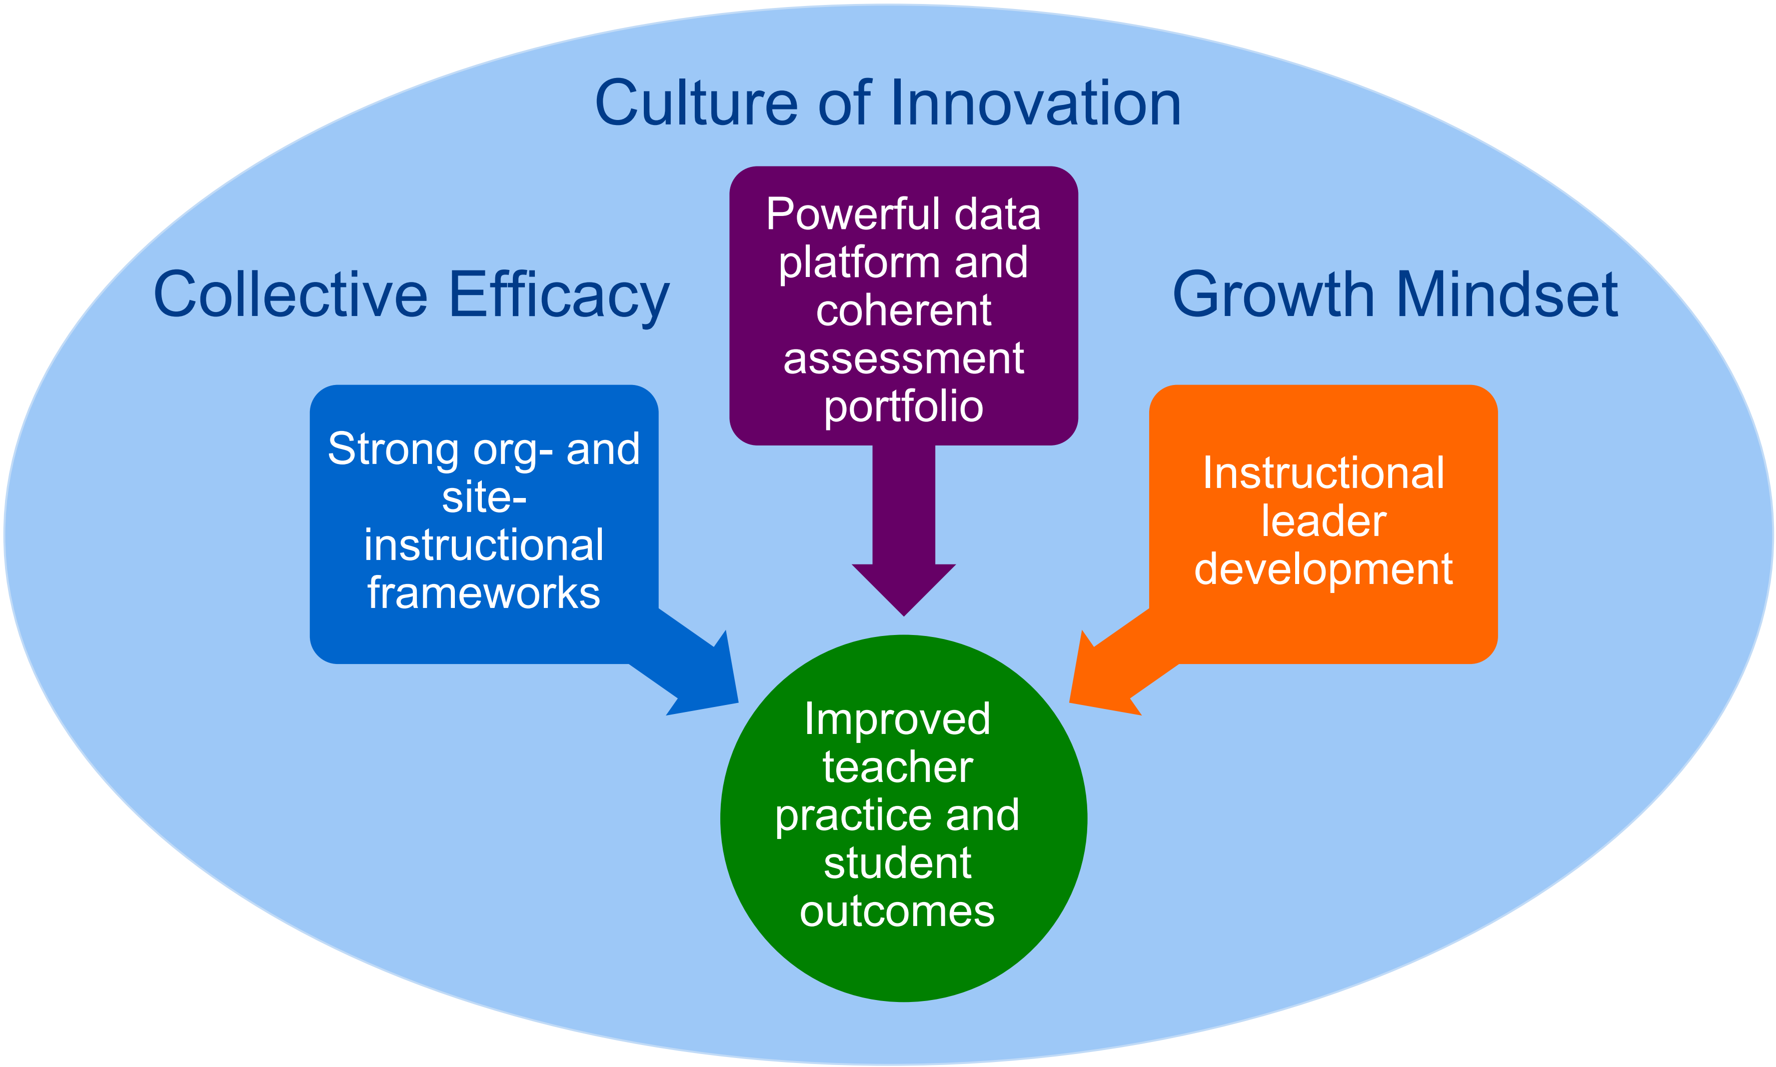
- Continue to deepen the implementation of personalized learning
- Research and investigate innovative solutions to individualize and personalize learning
- Identify and manage strategic pilots

Metrics and targets:

- All site plans reflect clarity of program, integration of EFC instructional frameworks, strategic use of resources to implement the approved program
- All sites demonstrate effective implementation of site plans demonstrated through an annual review process
- >80% of staff report that the PD they participated in positively impacted their practice
- >80% of staff report they have access to frequent and accurate academic data and effective tools to enable strategic instructional decisions
- >80% of sites achieve targeted annual growth on academic KPIs
- >80% of staff report the organization has a culture of continuous learning and improvement

Resources required:

- Staff (Instructional Coaches, CALPADs management, Data Manager, Directors of ELA/ELD, Math/Science, Data)
- *Schoolzilla or similar data reporting platform*
- Instructional leadership development resources (site visits, stipends, release time, outside PD)
- Professional development resources for HO Instructional Team and coaches around personalized learning
- Resources to visit best practices sites/learn from innovative conferences
- Resources to pilot LMS systems or platforms that facilitate personalized competency-based learning
- Partnerships (e.g., Rainin, SEEDS, Spring Board, New Classrooms)



ACADEMIC APPROACH STRATEGY

WHAT PROGRAMMATIC FEATURES AND VALUES PERMEATE EFC AND DEFINE US?

The Instructional Model	Teacher development	Supporting the whole child
• Coherent, research-based standards-aligned instructional model • EFC standards-aligned benchmarks • Grade-level coherence – instructional goals, content, instructional strategies, pacing • Structures that support high levels of student engagement • Rigor – higher levels of Blooms taxonomy	• Structures that enable coaching, modeling, training, feedback • Data-based inquiry • Grade-level collaboration • Teacher leadership/decision-making structure • Appropriate levels of teacher planning time built into schedule	• Family leadership council • RTI – research-based interventions at every tier • Schoolwide school culture policy with clearly communicated values and expectations and an aligned curriculum • Structures and practices to promote physically healthy kids

EFC's NON-NEGOTIABLES

COMMUNICATION

[illegible] Connection
- Weekly email to site admin

Monthly newsletters
- Human capital (CTO)
- Instruction (CAO)
- Growth/larger community (CEO)
- Family engagement (share site best practices)
- Calendar – coming events

- Video highlights

Marketing
Student Recruitment
- Events
- Collateral materials

Staff Recruitment
- Events
- Collateral materials
- Website

Intranet/Website
- Website, social media
- Communication strategy for families
- Refine Intranet – create strategy to increase use

Leadership/Advisory Structures:
- Staff Leadership Council
- Family Leadership Council
- ILTs at sites
- FLCs at sites
- Principals Advisory Committee
- Teacher Evaluation Working Group

6 Dine and Delves:
- BOY and EOY general feedback
- Human capital initiatives
- 2 instructional initiatives
- Culture/communication pulse points

CULTURE

Instructional Initiatives
- Assessment calendar
- Report cards
- Quality of coaching
- HO support/collective accountability

Human Capital Initiatives
- NAATE – teacher leaders and admin teams
- Quality of coaching
- Quality of site leadership
- Seminars

Social events:
- BOY Retreat
- Holiday Party
- EOY Happy Hour
- 2-3 hosted Happy Hours
- Org-Wide design challenges

CULTURE/COMMUNICATION DRIVERS

Infrastructure, Processes & Systems

Systems efficiency and effectiveness

Support data management & information flow

- Comprehensive Human Capital Management (HCM) system
- Applicant tracking system
- Knowledge-sharing system
- Principal dashboard
- Assessment system
- Communications platform

Infrastructure to scale

Support growth/scaleability

- Facilities
- Information Technology
- Financial systems
- Operational systems

Processes to facilitate decision making

Support development of innovation culture

- Design & Evaluation framework for Pilots / Prototypes
  - ✓ *Tech-enhanced parental communication*
  - ✓ *Springboard*
  - ✓ *Long-term substitutes*
- Overall evaluation framework (ROI)
  - ✓ *Seneca*
  - ✓ *Blended learning*
- Align site planning & long-term strategic planning (school life cycle)
  - ✓ Renewal – annual site plan
  - ✓ New school charter – annual site plan
- Performance management framework
  - ✓ *Home office pilot*

EFC's INVESTMENTS

Priority	Year 0	Year 1	Year 2	Year 3
1. A pK-12 Portfolio	a. Plan for TK classrooms at LWL, ASCEND, and Lazear (LWL and ASCEND pending facilities) b. Grow Lazear to K-8 c. Launch Epic grade 6 only	a. Launch Epic grade 7 b. Launch TK classes at Lazear, LWL, ASCEND c. Plan and develop renewal petitions for ASCEND, LWL, Lazear; submit Achieve renewal d. Build secondary instructional leadership; research high school best practice; develop HS design team e. Transition instructional/operational systems to scalable f. Identify K-5 Elmhurst growth opportunities g. Develop a new school/conversion process that facilitates maximum growth from year 1	a. Launch Epic grade 8 b. Submit and facilitate renewals for Lazear, LWL, ASCEND c. Design high school model for EFC d. Design and submit Elmhurst area elementary school charter (if possible?)	a. Launch Elmhurst area elementary school b. Prototype a small high school model as an extension of Epic
2. Human Capital	a. Revise teacher eval system b. Aggressively market EFC teaching positions c. Develop/strengthen partnerships with teacher credentialing and leadership development programs d. Develop and implement selection/on-boarding training for sites e. Revise new teacher Induction Program f. Revise teacher work calendar, Phase I	a. Implement Phase I of revised teacher eval system b. Revise admin eval system c. Develop and implement revised selection process for operations staff d. Develop leadership development plan for all staff e. Implement revised new teacher Induction Program f. Revise teacher work calendar, Phase II	a. Implement Phase II of revised teacher eval system b. Implement revised admin eval system c. Revise Ops and HO staff eval systems d. Implement leadership development plan e. Develop revised compensation system	a. Implement revised Ops and HO staff eval systems b. Implement revised compensation system
3. Family Partnership	a. Establish clear goals for EFC FLC b. Establish and Pilot Parent Engagement Core Team at select sites c. Develop Parent Engagement Action Plan Template d. Establish Parent Coordinator monthly PLC e. Develop Models for APTT like structure f. Revise EFC Parent Engagement Handbook	a. Pilot home visit structures at select sites b. Develop Parent Engagement training plans for all staff c. Develop/strengthen partnerships with select CBOs d. Establish Parent Engagement Core Teams at all sites e. Develop and Pilot Family Leadership Development Model/Series f. Implement APTT-like structure at select school sites	a. Develop/strengthen partnerships with strategic partners like WestEd b. Implement Parent Engagement training plans for all staff c. Implement Family Leadership Development Model/Series	a. Implement home visit structures at all sites
4. Academic Approach and Framework	a. Develop comprehensive site planning process b. Implement CC-aligned benchmarks c. Develop TK framework d. Develop EFC instructional framework in math, ELA and ELD e. Develop instructional coach program Phase 1 f. Develop assessment analysis tools for site leaders and teachers	a. Develop and implement site plan evaluation and implementation rubrics b. Develop EFC-wide performance tasks c. Develop MS writing program d. Develop aligned instructional frameworks at all sites e. Develop Middle School EFC instructional frameworks f. Refine EFC assessment portfolio to fully align to CC/SBAC g. Develop instructional coach program Phase 2 h. Refine assessment analysis tools for site leaders/ teachers i. Deepen Epic's personalized learning	a. Develop NGSS-aligned EFC framework b. Refine assessment and analysis system and tools c. Refine EFC frameworks d. Define academic competencies	a. Refine assessment and analysis system and tools b. Refine EFC frameworks c. Finalized EFC personalized learning framework

EFC's MILESTONES

Priority	Year 1	Year 2	Year 3
1. A pK-12 Portfolio	• All charters submitted are high quality and reflect some of the strongest in the district/county; all charters recommended for approval by authorizers • Facilities secured for all TK programs • $350,000 committed to resource EFC growth in addition to state start-up funds	• 100% of targeted state start-up funds secured • All charters submitted are high quality and reflect some of the strongest in the district/county; all charters recommended for approval by authorizers • $350,000 committed to resource EFC growth in addition to state start-up funds • All conversion opportunities come with 150 parent signatures indicating interest and support for EFC operating their school • >80% EFC schools meet academic KPI targets	• $350,000 committed to resource EFC growth in addition to state start-up funds • All new and newly-added schools meet year 1 growth targets and have strong staff and family satisfaction data (>=75%) • Existing EFC schools meet academic KPI targets
2. Human Capital	• >80% of open positions filled with either high quality or growing staff (as measured by staff evaluations) • >80% of staff report they are committed to staying at EFC • >80% of staff report they had informal and formal opportunities to take leadership roles at the site and organizational levels	• >80% of open positions filled with either high quality or growing staff (as measured by staff evaluations) • >80% of staff report they are committed to staying at EFC • >80% of staff report the performance management system enhances their work and contributes to their professional development • >80% of staff report they had informal and formal opportunities to take leadership roles at the site and organizational levels	• >80% of open positions filled with either high quality or growing staff (as measured by staff evaluations) • >80% of staff report they are committed to staying at EFC • >80% of staff report the performance management system enhances their work and contributes to their professional development • >80% of staff report they had informal and formal opportunities to take leadership roles at the site and organizational levels • >80% of staff report the compensation system is relatively/very competitive with the Bay Area
3. Family Partnership	• 100% of sites have Family Resources Coordinator and designated FRC that offer comprehensive services • 100% of sites have a family engagement planning team in place • 100% of sites have identified a systemic approach to meaningfully involve families in student learning • >80% of responses to Family Survey indicate that families are involved in decision making & understand their child's academic performance	• 100% of sites have Family Resources Coordinator and designated FRC that offer comprehensive services • 100% of sites have a family engagement planning team in place • 100% of sites have identified a systemic approach to meaningfully involve families in student learning • >75% of sites participate in home visits or some similar structure • >80% of responses to Family Survey indicate that families are involved in decision making & understand their child's academic performance	• 100% of sites have Family Resources Coordinator and designated FRC that offer comprehensive services • 100% of sites have a family engagement planning team in place • 100% of sites have identified a systemic approach to meaningfully involve families in student learning • >75% of sites participate in home visits or some similar structure • >80% of responses to Family Survey indicate that families are involved in decision making & understand their child's academic performance
4. Academic Approach and Framework	• All site plans reflect clarity of program, integration of EFC instructional frameworks, strategic use of resources to implement the approved program • All sites demonstrate effective implementation of site plans demonstrated through an annual review process • >80% of staff report that the PD they participated in positively impacted their practice • >80% of sites achieve targeted annual growth on academic KPIs	• All site plans reflect clarity of program, integration of EFC instructional frameworks, strategic use of resources to implement the approved program • All sites demonstrate effective implementation of site plans demonstrated through an annual review process • >80% of staff report that the PD they participated in positively impacted their practice • >80% of staff report they have access to frequent and accurate academic data and effective tools to enable strategic instructional decisions • >80% of sites achieve targeted annual growth on academic KPIs • >80% of staff report the organization has a culture of continuous learning and improvement	• All site plans reflect clarity of program, integration of EFC instructional frameworks, strategic use of resources to implement the approved program • All sites demonstrate effective implementation of site plans demonstrated through an annual review process • >80% of staff report that the PD they participated in positively impacted their practice • >80% of staff report they have access to frequent and accurate academic data and effective tools to enable strategic instructional decisions • >80% of sites achieve targeted annual growth on academic KPIs • >80% of staff report the organization has a culture of continuous learning and improvement

INDEPENDENT AUDITOR'S REPORT

Board of Directors
Education for Change
Oakland, CA

Report on the Financial Statements

We have audited the accompanying financial statements of Education for Change (the School), a California nonprofit public benefit corporation, which comprise the statement of financial position as of June 30, 2014, and the related statements of activities, cash flows and functional expenses for the year then ended, and the related notes to the financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Board of Directors
Education for Change

Opinion

In our opinion, the financial statements referred to on page one present fairly, in all material respects, the financial position of the School as of June 30, 2014, and the changes in its net assets and its cash flows for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Other Matters

Supplementary Information

Our audit was conducted for the purpose of forming an opinion on the School's financial statements as a whole. The accompanying schedule of expenditures of federal awards is presented for purposes of additional analysis as required by U.S. Office of Management and Budget Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*. The accompanying supplementary schedules are presented for purposes of additional analysis and are not a required part of the basic financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the financial statements. The information has been subjected to the auditing procedures applied in the audit of the financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the financial statements or to the financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the information is fairly stated, in all material respects, in relation to the financial statements as a whole.

Other Reporting Required by Government Auditing Standards

In accordance with *Government Auditing Standards*, we have also issued a report dated December 10, 2014 on our consideration of the School's internal control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on the internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the School's internal control over financial reporting and compliance.

The accompanying notes are an integral part of these financial statements.

NOTES TO THE FINANCIAL STATEMENTS
For the Year Ended June 30, 2014

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Nature of Activities **–** Education for Change (the School), a charter management organization, was incorporated on January 21, 2005, under the laws of the State of California as a nonprofit benefit corporation. The School currently manages seven (7) charter schools, Achieve Academy (Achieve), ASCEND, Cox, Epic Charter (Epic), Lazear Charter Academy (Lazear), Learning Without Limits (LWL), and World Academy (World) (the Schools). Cox and World were granted their charter in 2005; Achieve in 2006; ASCEND, Lazear, and LWL in 2012; and Epic in 2014, all pursuant to the terms of the Charter Schools Act of 1992, as amended. Achieve, ASCEND, Epic LWL, and World are all sponsored by the Oakland Unified School District (the District); Cox and Lazear are sponsored by the Alameda County Office of Education (ACOE). Epic began serving students in August 2014. The District and ACOE have certain responsibilities as the authorizers of the charter petitions of the Schools, and additional responsibilities as outlined in these agreements. The School also has certain responsibilities as the lead petitioner for these charters, and additional responsibilities as outlined in these agreements. The mission of the School is to achieve an excellent, high quality, free public education for all children with its focus on traditionally underserved children in the Oakland geographical area.

Cash and Cash Equivalents **–** The School defines its cash and cash equivalents to include only cash on hand, demand deposits, and liquid investments with original maturities of three months or less.

Use of Estimates **–** The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, and disclosures. Accordingly, actual results could differ from those estimates.

Basis of Accounting **–** The financial statements have been prepared on the accrual method of accounting and accordingly reflect all significant receivables and liabilities.

Functional Allocation of Expenses **–** Costs of providing the School's programs and other activities have been presented in the statement of functional expenses. During the year, such costs are accumulated into separate groupings as either direct or indirect. Indirect or shared costs are allocated among program and support services by a method that best measures the relative degree of benefit.

Basis of Presentation **–** The accompanying financial statements have been prepared in conformity with accounting principles generally accepted in the United States as prescribed by the Financial Accounting Standards Board.

Principles of Consolidation **–** The accompanying financial statements include the activity of Epic 1112 LLC (the LLC), of which the School is the sole member. The LLC was formed to hold title to property located in Oakland, California. As of and for the year ended June 30, 2014, the LLC had no assets, liabilities, net assets, or activities.

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Net Asset Classes **–** The School is required to report information regarding its financial position and activities according to three classes of net assets: unrestricted, temporarily restricted, and permanently restricted. Net assets of the School are defined as:

- Unrestricted: All resources over which the governing board has discretionary control to use in carrying on the general operations of the School.
- Temporarily restricted: These net assets are restricted by donors to be used for specific purposes. The School does not currently have any temporarily restricted net assets.
- Permanently restricted: These net assets are permanently restricted by donors and cannot be used by the School. The School does not currently have any permanently restricted net assets.

Receivables **–** Accounts receivable primarily represent amounts due from federal and state governments as of June 30, 2014. Management believes that all receivables are fully collectible, therefore no provisions for uncollectible accounts were recorded.

Property, Plant and Equipment **–** Property, plant and equipment are stated at cost if purchased or at estimated fair market value if donated. Depreciation is provided on a straight-line basis over the estimated useful lives of the asset. Depreciation expense was $1,013 for the year ended June 30, 2014.

Property Taxes **–** Secured property taxes attach as an enforceable lien on property as of January 1. Taxes are levied on September 1 and are payable in two installments on or before November 1 and February 1. Unsecured property taxes are not a lien against real property and are payable in one installment on or before August 31. The County bills and collects property taxes for all taxing agencies within the County and distributes these collections to the various agencies. The sponsor agency of the School is required by law to provide in-lieu property tax payments on a monthly basis, from August through July. The amount paid per month is based upon an allocation per student, with a specific percentage to be paid each month.

Compensated Absences **–** Accumulated unpaid employee vacation benefits are recognized as a liability of the School. The current portion of the liability, if material, is recognized at year-end. The entire compensated absences liability is reported on the statement of financial position. Employees of the School are paid for days or hours worked based upon Board approved schedules which include vacation. Sick leave is accumulated without limit for each employee at the equivalent rate of one day for each full month of service. Sick leave with pay is provided when employees are absent for health reasons.

Revenue Recognition **–** Amounts received from the California Department of Education are recognized as revenue by the School based on the average daily attendance (ADA) of students. Revenue that is restricted is recorded as an increase in unrestricted net assets if the restriction expires in the reporting period in which the revenue is recognized. All other restricted revenues are reported as increases in temporarily restricted net assets.

NOTES TO THE FINANCIAL STATEMENTS
For the Year Ended June 30, 2014

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Contributions – All contributions are considered to be available for unrestricted use unless specifically restricted by the donor. Amounts received that are restricted to specific use or future periods are reported as temporarily restricted. Restricted contributions that are received and released in the same period are reported as unrestricted revenue. Unconditional promises to give expected to be received in one year or less are recorded at net realizable value. Unconditional promises to give expected to be received in more than one year are recorded at fair market value at the date of the promise. Conditional promises to give are not recognized until they become unconditional, that is, when the conditions on which they depend are substantially met.

Income Taxes – The School is a non-profit entity exempt from the payment of income taxes under Internal Revenue Code Section 501(c)(3) and California Revenue and Taxation Code Section 23701d. Accordingly, no provision has been made for income taxes. Management has determined that all income tax positions are more likely than not of being sustained upon potential audit or examination; therefore, no disclosures of uncertain income tax positions are required. The School files informational returns in the U.S. federal jurisdiction, and the state of California. The statute of limitations for federal and California state purposes is generally three and four years, respectively.

Evaluation of Subsequent Events – The School has evaluated subsequent events through December 10, 2014, the date these financial statements were available to be issued.

NOTE 2: CONCENTRATION OF CREDIT RISK

The School maintains cash balances held in banks which are insured up to $250,000 by the Federal Depository Insurance Corporation (FDIC). At times, cash in these accounts exceeds the insured amounts. The School has not experienced any losses in such accounts and believes it is not exposed to any significant credit risk on its cash and cash equivalents.

NOTE 3: EMPLOYEE RETIREMENT

Multi-employer Defined Benefit Pension Plans

Qualified employees are covered under multi-employer defined benefit pension plans maintained by agencies of the State of California.

The risks of participating in these multi-employer defined benefit pension plans are different from single-employer plans because: (a) assets contributed to the multi-employer plan by one employer may be used to provide benefits to employees of other participating employers, (b) the required member, employer, and state contribution rates are set by the California Legislature, and (c) if the School chooses to stop participating in the multi-employer plan, it may be required to pay a withdrawal liability to the plan. The School has no plans to withdraw from this multi-employer plan.

NOTE 3: EMPLOYEE RETIREMENT

State Teachers' Retirement System (STRS)

Plan Description

The School contributes to the State Teachers' Retirement System (STRS), a cost-sharing multi-employer public employee retirement system defined benefit pension plan administered by STRS. Plan information for STRS is not publicly available. The plan provides retirement, disability and survivor benefits to beneficiaries. Benefit provisions are established by State statutes, as legislatively amended, within the State Teachers' Retirement Law. According to the most recently available Comprehensive Annual Financial Report and Actuarial Valuation Report for the year ended June 30, 2013, total plan net assets are $166.3 billion, the total actuarial present value of accumulated plan benefits is $277 billion, contributions from all employers totaled $2.3 billion, and the plan is 66.9% funded. The School did not contribute more than 5% of the total contributions to the plan.

Copies of the STRS annual financial reports may be obtained from STRS, 7667 Folsom Boulevard, Sacramento, CA 95826 and www.calstrs.com.

Funding Policy

Active plan members are required to contribute 8.0% of their salary and the School is required to contribute an actuarially determined rate. The actuarial methods and assumptions used for determining the rate are those adopted by the STRS Teachers' Retirement Board. The required employer contribution rate for year ended June 30, 2014 was 8.25% of annual payroll. The contribution requirements of the plan members are established and may be amended by State statute.

The School's contributions to STRS for the past three years are as follows:

Year Ended June 30,	Required Contribution	Percent Contributed
2012	$ 320,648	100%
2013	$ 636,228	100%
2014	$ 655,318	100%

Public Employees' Retirement System (PERS)

Plan Description

The School contributes to the School Employer Pool under the California Public Employees' Retirement System (CalPERS), a cost-sharing multi-employer public employee retirement system defined benefit pension plan administered by CalPERS. Plan information for PERS is not publicly available. The plan provides retirement and disability benefits, annual cost-of-living adjustments, and death benefits to plan

NOTE 3: EMPLOYEE RETIREMENT

members and beneficiaries. Benefit provisions are established by State statutes, as legislatively amended, within the Public Employees' Retirement Law. According to the most recently available Actuarial Valuation Report for the year ended June 30, 2013, the Schools Pool total plan assets are $49 billion, the total actuarial present value of accumulated plan benefits is $72 billion, contributions from all employers totaled $1.8 billion, and the plan is 80.5% funded. The School did not contribute more than 5% of the total contributions to the plan.

Copies of the CalPERS' annual financial reports may be obtained from the CalPERS Executive Office, 400 P Street, Sacramento, CA 95814 and www.calpers.ca.gov.

Funding Policy

Active plan members are required to contribute 7.0% of their salary and the School is required to contribute an actuarially determined rate. The actuarial methods and assumptions used for determining the rate are those adopted by the CalPERS Board of Administration. The required employer contribution rate for year ended June 30, 2014 was 11.442%. The contribution requirements of the plan members are established and may be amended by State statute.

Contributions to PERS

The School's contributions to PERS for each of the last three years are as follows:

Year Ended June 30,	Required Contribution	Percent Contributed
2012	$ 137,048	100%
2013	$ 170,128	100%
2014	$ 251,024	100%

Defined Contribution Plan

The School offers an Internal Revenue Code Section 403(b) retirement plan to each of its qualifying employees. Employee contributions are used to purchase annuity contracts for each participant employee. Additionally, the employer may elect to make a discretionary contribution for each qualifying employee for each plan year. The School did not contribute to the plan for the year ended June 30, 2014.

NOTE 4: OPERATING LEASES

The School has facility use and lease agreements and various equipment leases. These agreements have varying terms with expirations ranging from 2014 to 2017. Lease expense for the year ended June 30, 2014 was $992,039. Future estimated minimum lease payments under these agreements are as follows:

Future minimum lease payments are as follows:

Year Ended June 30,		
2015		$ 1,135,432
2016		1,429,560
2017		1,603,932
2018		65,000
	Total	$ 4,233,924

NOTE 5: CONTINGENCIES

The School has received state and federal funds for specific purposes that are subject to review and audit by the grantor agencies. Although such audits could generate disallowances under terms of the grants, it is believed that any required reimbursement would not be material.

NOTE 6: CLOSURE OF WORLD ACADEMY

On June 11, 2014, the Oakland Unified School District approved the closure and merger of World Academy. As of June 30, 2014 World Academy closed and merged with Achieve Academy.

NOTE 7: SUBSEQUENT EVENTS

The School began construction on a facility (through the LLC) for Epic in the summer of 2014.

Epic began serving students in August 2014.

SUPPLEMENTARY INFORMATION

EDUCATION FOR CHANGE

LOCAL EDUCATION AGENCY ORGANIZATION STRUCTURE
For the Year Ended June 30, 2014

Education for Change (the School), a charter management organization, was incorporated on January 21, 2005, under the laws of the State of California as a nonprofit benefit corporation and is the founder of Cox Academy which was formerly named as E. Morris Cox Elementary Charter School. The Organization currently manages seven (7) charter schools: Achieve Academy, ASCEND, Cox Academy, Epic Charter, Lazear Charter Academy, Learning Without Limits, and World Academy. Epic Charter began serving students in August 2014. On June 11, 2014, Oakland Unified School District approved the closure and merger of World Academy. As of June 30, 2014 World Academy will merge with Achieve Academy. Each charter was granted pursuant to the terms of the Charter Schools Act of 1992, as amended.

The School's current charters are as follows:

Achieve Academy
Charter granted in 2006 by Oakland Unified School District.
State charter number: 0780

ASCEND
Charter granted in 2012 by Oakland Unified School District.
State charter number: 1443

Cox Academy
Charter granted in 2005 by Oakland Unified School District and renewed in 2010 by Alameda County Office of Education.
State charter number: 0740

Epic Charter (Opened in August 2014)
Charter granted in 2014 by Oakland Unified School District.
State charter number: 1632

Lazear Charter Academy
Charter granted in 2012 by Alameda County Office of Education.
State charter number: 1464

Learning Without Limits
Charter granted in 2012 by Oakland Unified School District.
State charter number: 1442

World Academy
Charter granted in 2005 by Oakland Unified School District.
State charter number: 0745

EDUCATION FOR CHANGE

LOCAL EDUCATION AGENCY ORGANIZATION STRUCTURE (continued)
For the Year Ended June 30, 2014

NOTES TO THE SUPPLEMENTARY INFORMATION
For the Year Ended June 30, 2014

NOTE 1: PURPOSE OF SCHEDULES

Schedule of Instructional Time

This schedule presents information on the amount of instructional time offered by the School and whether the School complied with the provisions of Education Code Sections 46200 through 46206.

Schedule of Average Daily Attendance

Average daily attendance is a measurement of the number of pupils attending classes of the School. The purpose of attendance accounting from a fiscal standpoint is to provide the basis on which apportionments of state funds are made to charter schools. This schedule provides information regarding the attendance of students at various grade levels.

Reconciliation of Annual Financial Report with Audited Financial Statements

This schedule provides the information necessary to reconcile the net assets of the charter schools as reported on the Annual Financial Report form to the audited financial statements.

Schedule of Expenditures of Federal Awards

OMB Circular A-133 requires a disclosure of the financial activities of all federally funded programs and is presented on the modified accrual basis of accounting.

Combined Financial Statements

These statements report the financial position, activities, and cash flows for each of Education for Change's charter schools.

INDEPENDENT AUDITOR'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

Board of Directors
Education for Change
Oakland, CA

We have audited, in accordance with the auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of Education for Change (the School), a nonprofit California public benefit corporation, which comprise the statement of financial position as of June 30, 2014, and the related statements of activities, cash flows and functional expenses for the year then ended, the related notes to the financial statements, and have issued our report thereon dated December 10, 2014.

Internal Control Over Financial Reporting

In planning and performing our audit of the financial statements, we considered the School's internal control over financial reporting (internal control) to determine the audit procedures that are appropriate in the circumstances for the purpose of expressing our opinion on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the School's internal control. Accordingly, we do not express an opinion on the effectiveness of the School's internal control.

A deficiency in internal control exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect and correct misstatements on a timely basis. A material weakness is a deficiency or a combination of deficiencies in internal control such that there is a reasonable possibility that a material misstatement of the financial statements will not be prevented or detected and corrected on a timely basis. A significant deficiency is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

INDEPENDENT AUDITOR'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

Compliance and Other Matters

As part of obtaining reasonable assurance about whether the School's financial statements are free from material misstatement, we performed tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit, and accordingly, we do not express such an opinion. The results of our tests disclosed no instances of non-compliance or other matters that are required to be reported under *Government Auditing Standards*.

Purpose of this Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the entity's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the entity's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.

INDEPENDENT AUDITOR'S REPORT ON COMPLIANCE FOR EACH MAJOR FEDERAL PROGRAM; AND REPORT ON INTERNAL CONTROL OVER COMPLIANCE REQUIRED BY OMB CIRCULAR A-133

Board of Directors
Education for Change
Oakland, CA

Report on Compliance for Each Major Federal Program

We have audited the compliance of Education for Change (the School) with the types of compliance requirements described in the U.S. Office of Management and Budget (OMB) Circular A-133 *Compliance Supplement* that could have a direct and material effect on each of its major federal programs for the year ended June 30, 2014. The School's major federal programs are identified in the summary of auditor's results section of the accompanying schedule of findings and questioned costs.

Management's Responsibility

Management is responsible for compliance with the requirements of laws, regulations, contracts and grants applicable to its federal programs.

Auditor's Responsibility

Our responsibility is to express an opinion on compliance for each of the School's major federal programs based on our audit of the types of compliance requirements referred to above. We conducted our audit of compliance in accordance with auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and OMB Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*. Those standards and OMB Circular A-133 require that we plan and perform the audit to obtain reasonable assurance about whether noncompliance with the types of compliance requirements referred to above that could have a direct and material effect on a major federal program occurred. An audit includes examining, on a test basis, evidence about the School's compliance with those requirements and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion on compliance for each major federal program. However, our audit does not provide a legal determination of the School's compliance.

Opinion on Each Major Federal Program

In our opinion, the School complied, in all material respects, with the types of compliance requirements referred to above that could have a direct and material effect on each of its major federal programs for the year ended June 30, 2014.

2210 E. Route 66, Suite 100, Glendora, CA 91740

INDEPENDENT AUDITOR'S REPORT ON COMPLIANCE FOR EACH MAJOR FEDERAL PROGRAM; AND REPORT ON INTERNAL CONTROL OVER COMPLIANCE REQUIRED BY OMB CIRCULAR A-133

Report on Internal Control Over Compliance

Management of the School is responsible for establishing and maintaining effective internal control over compliance with the types of compliance requirements referred to above. In planning and performing our audit of compliance, we considered the School's internal control over compliance with the types of requirements that could have a direct and material effect on each major federal program to determine the auditing procedures that are appropriate in the circumstances for the purpose of expressing an opinion on compliance for each major federal program and to test and report on internal control over compliance in accordance with OMB Circular A-133, but not for the purpose of expressing an opinion on the effectiveness of internal control over compliance. Accordingly, we do not express an opinion on the effectiveness of the School's internal control over compliance.

A deficiency in internal control over compliance exists when the design or operation of a control over compliance does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect and correct noncompliance with a type of compliance requirement of a federal program on a timely basis. A material weakness in internal control over compliance is a deficiency, or combination of deficiencies in internal control over compliance such that there is a reasonable possibility, that material noncompliance with a type of compliance requirement of a federal program will not be prevented or detected and corrected on a timely basis. A significant deficiency in internal control over compliance is a deficiency, or a combination of deficiencies, in internal control over compliance with a type of compliance requirement of a federal program that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control over compliance was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control over compliance that might be material weaknesses or significant deficiencies. We did not identify any deficiencies in internal control over compliance that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

Purpose of this Report

The purpose of this report on internal control over compliance is solely to describe the scope of our testing of internal control over compliance and the results of that testing based on the requirements of OMB Circular A-133. Accordingly, this report is not suitable for any other purpose.

Education for Change
Oakland, CA

We have audited Education for Change's (the School) compliance with the types of compliance requirements described in the *2013-2014 Standards and Procedures for Audits of California K-12 Local Educational Agencies*, published by the Education Audit Appeals Panel for the year ended June 30, 2014. The School's State compliance requirements are identified in the table below.

Management's Responsibility

Management is responsible for the compliance with the State laws and regulations as identified below.

Auditor's Responsibility

Our responsibility is to express an opinion on the School's compliance based on our audit of the types of compliance requirements referred to below. We conducted our audit of compliance in accordance with auditing standards generally accepted in the United States of America, the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States, and the *2013-2014 Standards and Procedures for Audits of California K-12 Local Educational Agencies*, published by the Education Audit Appeals Panel. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether noncompliance with the specific areas listed below has occurred. An audit includes examining, on a test basis, evidence about the School's compliance with those requirements and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion on State compliance. Our audit does not provide a legal determination of the School's compliance.

Compliance Requirements Tested

In connection with the audit referred to above, we selected and tested transactions and records to determine the School's compliance with the laws and regulations applicable to the following items:

Description	Procedures in Audit Guide	Procedures Performed
Attendance accounting:		
Attendance reporting	6	Not applicable
Teacher Certification and Misassignments	3	Not applicable
Kindergarten continuance	3	Not applicable
Independent study	23	Not applicable
Continuation education	10	Not applicable

INDEPENDENT AUDITOR'S REPORT ON STATE COMPLIANCE

Description	Procedures in Audit Guide	Procedures Performed
Instructional time for School Districts	10	Not applicable
Instructional materials general requirements	8	Not applicable
Ratios of administrative employees to teachers	1	Not applicable
Classroom teacher salaries	1	Not applicable
Early retirement incentive	4	Not applicable
GANN limit calculation	1	Not applicable
School Accountability Report Card	3	Not applicable
Juvenile Court Schools	8	Not applicable
Local Control Funding Formula Certification	1	Yes
California Clean Energy Jobs Act	3	Yes
After School Education and Safety Program:		
General requirements	4	Yes
After school	5	Yes
Before school	6	Not applicable
Education Protection Account Funds	1	Yes
Common Core Implementation Funds	3	Yes
Unduplicated Local Control Funding Formula Pupil Counts	3	Yes
Charter Schools:		
Contemporaneous records of attendance	8	Yes
Mode of Instruction	1	Yes
Nonclassroom-based instructional/independent study	15	Not applicable
Determination of funding for nonclassroom-based instruction	3	Not applicable
Annual instructional minutes – classroom based	4	Yes
Charter School Facility Grant Program	1	Not applicable

Opinion on State Compliance

In our opinion, the School complied with the laws and regulations of the state programs referred to above in all material respects for the year ended June 30, 2014.

Other Matters

The results of our auditing procedures disclosed instances of noncompliance, which are required to be reported in accordance with the *2013-2014 Standards and Procedures for Audits of California K-12 Local Educational Agencies*, published by the Education Audit Appeals Panel, and which are described in the accompanying schedule of findings and questioned costs as 2014-001. Our opinion on each state program is not modified with respect to these matters.

The School's response to the noncompliance finding identified in our audit is described in the accompanying schedule of findings and questioned costs. The School's response was not subjected to the auditing procedures applied in the audit of compliance and, accordingly, we express no opinion on the response.

INDEPENDENT AUDITOR'S REPORT ON STATE COMPLIANCE

Purpose of this Report

The purpose of this report on state compliance is solely to describe the results of testing based on the requirements of the *2013-2014 Standards and Procedures for Audits of California K-12 Local Education Agencies*, published by the Education Audit Appeals Panel. Accordingly, this report is not suitable for any other purpose.

SCHEDULE OF FINDINGS AND QUESTIONED COSTS
SUMMARY OF AUDITOR RESULTS
For the Year Ended June 30, 2014

Section I - Summary of Auditor's Results

Financial Statements

Type of auditor's report issued:	*Unmodified*
Internal control over financial reporting:	
Material weakness(es) identified?	*No*
Significant deficiencies identified that are not considered to be material weakness(es)?	*None Reported*
Noncompliance material to financial statements noted?	*No*

Federal Awards

Internal control over major programs:	
Material weakness(es) identified?	*No*
Significant deficiencies identified that are not considered to be material weakness(es)?	*None Reported*
Type of auditor's report issued on compliance for major programs:	*Unmodified*
Any audit findings disclosed that are required to be reported in accordance with section 510(a) of (Circular A-133)?	*No*

Identification of major programs:

CFDA Number(s)	Name of Federal Program or Cluster
84.282A	Title V, Part B, Charter Schools

Dollar threshold used to distinguish between type A and type B programs:	$300,000
Auditee qualified as low-risk auditee?	*Yes*

EDUCATION FOR CHANGE

SCHEDULE OF FINDINGS AND QUESTIONED COSTS
For the Year Ended June 30, 2014

All audit findings must be identified as one or more of the following eleven categories:

Five Digit Code	Finding Types
10000	Attendance
20000	Inventory of Equipment
30000	Internal Control
40000	State Compliance
41000	CalSTRS
50000	Federal Compliance
60000	Miscellaneous
61000	Classroom Teacher Salaries
70000	Instructional Materials
71000	Teacher Misassignments
72000	School Accountability Report Card

FINANCIAL STATEMENT FINDINGS

There were no findings and questioned costs related to the basic financial statements for the year ended June 30, 2014.

FEDERAL AWARDS FINDINGS

There were no findings and questioned costs related to federal awards for June 30, 2014.

STATE COMPLIANCE FINDINGS

Finding 2014-001 – Unduplicated Local Control Funding Formula Pupil Counts **40000**

Schools: Achieve Academy, Cox Academy, Lazear Charter Academy, and World Academy

Criteria: Education code section 42238.02 (b)(2) requires a charter school to submit its enrolled free and reduced-price meal eligibility, foster youth and English learner pupil-level records for enrolled pupils using the California Longitudinal Pupil Achievement Data System (CALPADS). The CALPADS reports should accurately report the number of students as identified above.

Condition: Documentation did not support the number of students reported as eligible for free or reduced meals (FRPM).

Cause: A formula error in the spreadsheets used to calculate each student's eligibility caused no students to be classified as "paid" and all students to be classified as either "free" or "reduced."

Finding 2014-001 – Unduplicated Local Control Funding Formula Pupil Counts (Continued) **40000**

Effect: The Schools are not in compliance with Education Code 42238.02 (b)(2) and 1.17 and 1.18 reports contained errors as follows:

	Total Enrollment	Total Unduplicated Eligible Free/Reduced Meal Counts	EL Funding Eligible	Unduplicated FRPM/EL Eligible Count	Unduplicated FRPM/EL/Foster Youth Total
Achieve Academy					
As reported	207	198	100	200	200
Audit adjustments	-	(9)	-	(7)	(7)
As adjusted	207	189	100	193	193
Cox Academy					
As reported	558	529	337	546	546
Audit adjustments	-	(44)	-	(24)	(24)
As adjusted	558	485	337	522	522
Lazear Charter Academy					
As reported	401	372	254	386	386
Audit adjustments	-	(40)	-	(22)	(22)
As adjusted	401	332	254	364	364
World Academy					
As reported	475	448	349	463	463
Audit adjustments	-	(33)	-	(15)	(15)
As adjusted	475	415	349	448	448

Questioned Costs and Units: The Schools fixed the spreadsheet error and additional samples were tested from the revised data. No errors were noted in the revised data and therefore the revised reports were used to determine total questioned costs. The questioned costs result in a lower transition entitlement for each school as follows:

Achieve Academy: $2,289
Cox Academy: $5,589
Lazear Charter Academy: $6,135
World Academy: $3,763

Finding 2014-001 – Unduplicated Local Control Funding Formula Pupil Counts (Continued) **40000**

Recommendation: We recommend each School revise its CALPADS reporting accordingly and implement additional review procedures to ensure that errors are prevented on future CALPADS reporting.

Corrective Action Plan: The following processes have been implemented in response to the CALCPADS reporting errors:

- Review of Alternative Income forms by at least two individuals for accuracy.
- Manual sign off of all criteria met on the form prior to input into the calculation spreadsheet.
- Formula verification within calculation spreadsheet from two separate departments (Enrollment and Finance) prior to certification.
- Cross year data comparison by two separate departments (Enrollment and Finance) to verify numbers are in line with expectations prior to certification

Report on the Financial Statements

We have audited the accompanying financial statements of Education for Change (the School), a California nonprofit public benefit corporation, which comprise the statement of financial position as of June 30, 2015, and the related statements of activities, cash flows and functional expenses for the year then ended, and the related notes to the financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Board of Directors
Education for Change

Opinion

In our opinion, the financial statements referred to on page one present fairly, in all material respects, the financial position of the School as of June 30, 2015, and the changes in its net assets and its cash flows for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Other Matters

Report on Summarized Comparative Information

We have previously audited the School's 2014 financial statements, and we expressed an unmodified audit opinion on those audited financial statements in our report dated December 10, 2014. In our opinion, the summarized comparative information presented herein as of and for the year ended June 30, 2014, is consistent, in all material respects, with the audited financial statements from which it has been derived.

Supplementary Information

Our audit was conducted for the purpose of forming an opinion on the School's financial statements as a whole. The accompanying schedule of expenditures of federal awards is presented for purposes of additional analysis as required by U.S. Office of Management and Budget Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*. The accompanying supplementary schedules are presented for purposes of additional analysis and are not a required part of the basic financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the financial statements. The information has been subjected to the auditing procedures applied in the audit of the financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the financial statements or to the financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the information is fairly stated, in all material respects, in relation to the financial statements as a whole.

Board of Directors
Education for Change

Other Reporting Required by Government Auditing Standards

In accordance with *Government Auditing Standards*, we have also issued a report dated December 11, 2015 on our consideration of the School's internal control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on the internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the School's internal control over financial reporting and compliance.

EDUCATION FOR CHANGE

NOTES TO THE FINANCIAL STATEMENTS
For the Year Ended June 30, 2015

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

***Nature of Activities* –** Education for Change (the School), a charter management organization, was incorporated on January 21, 2005, under the laws of the State of California as a nonprofit benefit corporation. The School currently manages six (6) charter schools, Achieve Academy (Achieve), ASCEND, Cox, Epic Charter (Epic), Lazear Charter Academy (Lazear), and Learning Without Limits (LWL) (the Schools). Cox was granted its charter in 2005; Achieve in 2006; ASCEND, Lazear, and LWL in 2012; and Epic in 2014, all pursuant to the terms of the Charter Schools Act of 1992, as amended. Achieve, ASCEND, Epic, and LWL are all sponsored by the Oakland Unified School District (the District); Cox and Lazear are sponsored by the Alameda County Office of Education (ACOE). Epic began serving students in August 2014. The District and ACOE have certain responsibilities as the authorizers of the charter petitions of the Schools, and additional responsibilities as outlined in these agreements. The School also has certain responsibilities as the lead petitioner for these charters, and additional responsibilities as outlined in these agreements. The mission of the School is to achieve an excellent, high quality, free public education for all children with its focus on traditionally underserved children in the Oakland geographical area.

The accompanying financial statements also include the activity of Epic 1112 LLC (the LLC), of which the School is the sole member. The LLC was formed to hold title to property located in Oakland, California. As of and for the year ended June 30, 2015, the LLC had no assets, liabilities, net assets, or activities.

***Cash and Cash Equivalents* –** The School defines its cash and cash equivalents to include only cash on hand, demand deposits, and liquid investments with original maturities of three months or less.

***Use of Estimates* –** The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, and disclosures. Accordingly, actual results could differ from those estimates.

***Basis of Accounting* –** The financial statements have been prepared on the accrual method of accounting and accordingly reflect all significant receivables and liabilities.

***Functional Allocation of Expenses* –** Costs of providing the School's programs and other activities have been presented in the statement of functional expenses. During the year, such costs are accumulated into separate groupings as either direct or indirect. Indirect or shared costs are allocated among program and support services by a method that best measures the relative degree of benefit.

***Basis of Presentation* –** The accompanying financial statements have been prepared in conformity with accounting principles generally accepted in the United States as prescribed by the Financial Accounting Standards Board.

EDUCATION FOR CHANGE

NOTES TO THE FINANCIAL STATEMENTS
For the Year Ended June 30, 2015

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Net Asset Classes **–** The School is required to report information regarding its financial position and activities according to three classes of net assets: unrestricted, temporarily restricted, and permanently restricted. Net assets of the School are defined as:

- Unrestricted: All resources over which the governing board has discretionary control to use in carrying on the general operations of the School.
- Temporarily restricted: These net assets are restricted by donors to be used for specific purposes. The School does not currently have any temporarily restricted net assets.
- Permanently restricted: These net assets are permanently restricted by donors and cannot be used by the School. The School does not currently have any permanently restricted net assets.

Receivables **–** Accounts receivable primarily represent amounts due from federal and state governments as of June 30, 2015. Management believes that all receivables are fully collectible, therefore no provisions for uncollectible accounts were recorded.

Property, Plant and Equipment **–** Property, plant and equipment are stated at cost if purchased or at estimated fair market value if donated. Depreciation is provided on a straight-line basis over the estimated useful lives of the asset. Depreciation expense was $27,667 for the year ended June 30, 2015.

Property Taxes **–** Secured property taxes attach as an enforceable lien on property as of January 1. Taxes are levied on September 1 and are payable in two installments on or before November 1 and February 1. Unsecured property taxes are not a lien against real property and are payable in one installment on or before August 31. The County bills and collects property taxes for all taxing agencies within the County and distributes these collections to the various agencies. The sponsor agency of the School is required by law to provide in-lieu property tax payments on a monthly basis, from August through July. The amount paid per month is based upon an allocation per student, with a specific percentage to be paid each month.

Compensated Absences **–** Accumulated unpaid employee vacation benefits are recognized as a liability of the School. The current portion of the liability, if material, is recognized at year-end. The entire compensated absences liability is reported on the statement of financial position. Employees of the School are paid for days or hours worked based upon Board approved schedules which include vacation. Sick leave is accumulated without limit for each employee at the equivalent rate of one day for each full month of service. Sick leave with pay is provided when employees are absent for health reasons.

Revenue Recognition **–** Amounts received from the California Department of Education are recognized as revenue by the School based on the average daily attendance (ADA) of students. Revenue that is restricted is recorded as an increase in unrestricted net assets if the restriction expires in the reporting period in which the revenue is recognized. All other restricted revenues are reported as increases in temporarily restricted net assets.

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Contributions – All contributions are considered to be available for unrestricted use unless specifically restricted by the donor. Amounts received that are restricted to specific use or future periods are reported as temporarily restricted. Restricted contributions that are received and released in the same period are reported as unrestricted revenue. Unconditional promises to give expected to be received in one year or less are recorded at net realizable value. Unconditional promises to give expected to be received in more than one year are recorded at fair market value at the date of the promise. Conditional promises to give are not recognized until they become unconditional, that is, when the conditions on which they depend are substantially met.

Income Taxes **–** The School is a non-profit entity exempt from the payment of income taxes under Internal Revenue Code Section 501(c)(3) and California Revenue and Taxation Code Section 23701d. Accordingly, no provision has been made for income taxes. Management has determined that all income tax positions are more likely than not of being sustained upon potential audit or examination; therefore, no disclosures of uncertain income tax positions are required. The School files informational returns in the U.S. federal jurisdiction, and the state of California. The statute of limitations for federal and California state purposes is generally three and four years, respectively.

The LLC is considered disregarded and therefore exempt from the payment of income taxes. Additionally, the LLC is in the process of obtaining exemption from the California state LLC fee under California Revenue and Taxation Code Section 23701h.

Evaluation of Subsequent Events **–** The School has evaluated subsequent events through December 11, 2015, the date these financial statements were available to be issued.

Comparative Totals **–** The financial statements include certain prior-year summarized comparative information in total, but not by net asset class. Such information does not include sufficient detail to constitute a presentation in conformity with generally accepted accounting principles. Accordingly, such information should be read in conjunction with the School's financial statements for the year ended June 30, 2014, from which the summarized information was derived.

NOTE 2: CONCENTRATION OF CREDIT RISK

The School maintains cash balances held in banks which are insured up to $250,000 by the Federal Depository Insurance Corporation (FDIC). At times, cash in these accounts exceeds the insured amounts. The School has not experienced any losses in such accounts and believes it is not exposed to any significant credit risk on its cash and cash equivalents.

NOTE 3: EMPLOYEE RETIREMENT

Multi-employer Defined Benefit Pension Plans

Qualified employees are covered under multi-employer defined benefit pension plans maintained by agencies of the State of California.

The risks of participating in these multi-employer defined benefit pension plans are different from single-employer plans because: (a) assets contributed to the multi-employer plan by one employer may be used to provide benefits to employees of other participating employers, (b) the required member, employer, and state contribution rates are set by the California Legislature, and (c) if the School chooses to stop participating in the multi-employer plan, it may be required to pay a withdrawal liability to the plan. The School has no plans to withdraw from this multi-employer plan.

State Teachers' Retirement System (STRS)

Plan Description

The School contributes to the State Teachers' Retirement System (STRS), a cost-sharing multi-employer public employee retirement system defined benefit pension plan administered by STRS. Plan information for STRS is not publicly available. The plan provides retirement, disability and survivor benefits to beneficiaries. Benefit provisions are established by State statutes, as legislatively amended, within the State Teachers' Retirement Law. According to the most recently available Comprehensive Annual Financial Report and Actuarial Valuation Report for the year ended June 30, 2014, total plan net assets are $191 billion, the total actuarial present value of accumulated plan benefits is $287 billion, contributions from all employers totaled $2.3 billion, and the plan is 68.5% funded. The School did not contribute more than 5% of the total contributions to the plan.

Copies of the STRS annual financial reports may be obtained from STRS, 7667 Folsom Boulevard, Sacramento, CA 95826 and www.calstrs.com.

Funding Policy

Active plan members are required to contribute 8.15% of their salary and the School is required to contribute an actuarially determined rate. The actuarial methods and assumptions used for determining the rate are those adopted by the STRS Teachers' Retirement Board. The required employer contribution rate for year ended June 30, 2015 was 8.88% of annual payroll. The contribution requirements of the plan members are established and may be amended by State statute.

EDUCATION FOR CHANGE

NOTES TO THE FINANCIAL STATEMENTS
For the Year Ended June 30, 2015

NOTE 3: EMPLOYEE RETIREMENT

The School's contributions to STRS for the past three years are as follows:

Year Ended June 30,	Required Contribution	Percent Contributed
2013	$ 636,228	100%
2014	$ 655,318	100%
2015	$ 830,995	100%

Public Employees' Retirement System (PERS)

Plan Description

The School contributes to the School Employer Pool under the California Public Employees' Retirement System (CalPERS), a cost-sharing multi-employer public employee retirement system defined benefit pension plan administered by CalPERS. Plan information for PERS is not publicly available. The plan provides retirement and disability benefits, annual cost-of-living adjustments, and death benefits to plan members and beneficiaries. Benefit provisions are established by State statutes, as legislatively amended, within the Public Employees' Retirement Law. According to the most recently available Actuarial Valuation Report for the year ended June 30, 2014, the Schools Pool total plan assets are $56.8 billion, the total actuarial present value of accumulated plan benefits is $76.9 billion, contributions from all employers totaled $1.2 billion, and the plan is 86.6% funded. The School did not contribute more than 5% of the total contributions to the plan.

Copies of the CalPERS' annual financial reports may be obtained from the CalPERS Executive Office, 400 P Street, Sacramento, CA 95814 and www.calpers.ca.gov.

Funding Policy

Active plan members prior to January 1, 2013 are required to contribute 7.0% of their salary while new members after January 1, 2013 are required to contribute 6.0% of their salary. The School is required to contribute an actuarially determined rate. The actuarial methods and assumptions used for determining the rate are those adopted by the CalPERS Board of Administration. The required employer contribution rate for year ended June 30, 2015 was 11.771%. The contribution requirements of the plan members are established and may be amended by State statute.

EDUCATION FOR CHANGE

NOTES TO THE FINANCIAL STATEMENTS
For the Year Ended June 30, 2015

NOTE 3: EMPLOYEE RETIREMENT

Contributions to PERS

The School's contributions to PERS for each of the last three years are as follows:

Year Ended June 30,	Required Contribution	Percent Contributed
2013	$ 170,128	100%
2014	$ 251,024	100%
2015	$ 291,011	100%

Defined Contribution Plan

The School offers an Internal Revenue Code Section 403(b) retirement plan to each of its qualifying employees. Employee contributions are used to purchase annuity contracts for each participant employee. Additionally, the employer may elect to make a discretionary contribution for each qualifying employee for each plan year. The School did not contribute to the plan for the year ended June 30, 2015.

NOTE 4: OPERATING LEASES

The School has facility use and lease agreements. These agreements have varying terms with expirations ranging from 2016 to 2018. Lease expense for the year ended June 30, 2015 was $1,129,623. Future estimated minimum lease payments under these agreements are as follows:

Future minimum lease payments are as follows:

Year Ended June 30,	
2016	$ 1,317,933
2017	1,492,305
2018	407,444
2019	85,611
Total	$ 3,303,293

NOTE 5: CONTINGENCIES

The School has received state and federal funds for specific purposes that are subject to review and audit by the grantor agencies. Although such audits could generate disallowances under terms of the grants, it is believed that any required reimbursement would not be material.

NOTE 6: SUBSEQUENT EVENTS

In November 2015, the School purchased land in Oakland for $1,050,000.

In November 2015, the School entered into a facility use agreement in connection with funding under the California School Facilities Program (CSFP). The School expects to construct a new building at Lazear with CSFP funding. The facility use agreement commences on July 1, 2015 and end on June 30, 2035 with the option to extend for two additional terms of 10 years each. The School is expected to make annual payments of $112,217 subject to a 3% annual increase effective July 1st of each year, with the first increase effective July 1, 2016. Within three months of the completion and/or beneficial occupancy by the School of the recreational improvements the annual rent payments for the remaining years will be renegotiated.

SUPPLEMENTARY INFORMATION

EDUCATION FOR CHANGE

LOCAL EDUCATION AGENCY ORGANIZATION STRUCTURE
For the Year Ended June 30, 2015

Education for Change (the School), a charter management organization, was incorporated on January 21, 2005, under the laws of the State of California as a nonprofit benefit corporation and is the founder of Cox Academy which was formerly named E. Morris Cox Elementary Charter School. The Organization currently manages six (6) charter schools: Achieve Academy, ASCEND, Cox Academy, Epic Charter, Lazear Charter Academy, and Learning Without Limits. Each charter was granted pursuant to the terms of the Charter Schools Act of 1992, as amended.

The School's current charters are as follows:

Achieve Academy
Charter granted in 2006 by Oakland Unified School District and renewed in 2011.
State charter number: 0780

ASCEND
Charter granted in 2012 by Oakland Unified School District.
State charter number: 1443

Cox Academy
Charter granted in 2005 by Oakland Unified School District and renewed in 2015 by Alameda County Office of Education.
State charter number: 0740

Epic Charter
Charter granted in 2014 by Oakland Unified School District.
State charter number: 1632

Lazear Charter Academy
Charter granted in 2012 by Alameda County Office of Education.
State charter number: 1464

Learning Without Limits
Charter granted in 2012 by Oakland Unified School District.
State charter number: 1442

EDUCATION FOR CHANGE

NOTES TO THE SUPPLEMENTARY INFORMATION
For the Year Ended June 30, 2015

NOTE 1: PURPOSE OF SCHEDULES

Schedule of Instructional Time

This schedule presents information on the amount of instructional time offered by the School and whether the School complied with the corresponding provisions of California Education Code.

Schedule of Average Daily Attendance

Average daily attendance is a measurement of the number of pupils attending classes of the School. The purpose of attendance accounting from a fiscal standpoint is to provide the basis on which apportionments of state funds are made to charter schools. This schedule provides information regarding the attendance of students at various grade levels.

Reconciliation of Annual Financial Report with Audited Financial Statements

This schedule provides the information necessary to reconcile the net assets of the charter schools as reported on the Annual Financial Report form to the audited financial statements.

Schedule of Expenditures of Federal Awards

OMB Circular A-133 requires a disclosure of the financial activities of all federally funded programs and is presented on the modified accrual basis of accounting.

Combined Financial Statements

These statements report the financial position, activities, and cash flows for each of Education for Change's charter schools.

INDEPENDENT AUDITOR'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

Board of Directors
Education for Change
Oakland, CA

We have audited, in accordance with the auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of Education for Change (the School), a nonprofit California public benefit corporation, which comprise the consolidated statement of financial position as of June 30, 2015, and the related statements of activities, cash flows and functional expenses for the year then ended, the related notes to the financial statements, and have issued our report thereon dated December 11, 2015.

Internal Control Over Financial Reporting

In planning and performing our audit of the financial statements, we considered the School's internal control over financial reporting (internal control) to determine the audit procedures that are appropriate in the circumstances for the purpose of expressing our opinion on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the School's internal control. Accordingly, we do not express an opinion on the effectiveness of the School's internal control.

A deficiency in internal control exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect and correct misstatements on a timely basis. A material weakness is a deficiency or a combination of deficiencies in internal control such that there is a reasonable possibility that a material misstatement of the financial statements will not be prevented or detected and corrected on a timely basis. A significant deficiency is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

INDEPENDENT AUDITOR'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

Compliance and Other Matters

As part of obtaining reasonable assurance about whether the School's financial statements are free from material misstatement, we performed tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit, and accordingly, we do not express such an opinion. The results of our tests disclosed no instances of non-compliance or other matters that are required to be reported under *Government Auditing Standards*.

Purpose of this Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the entity's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the entity's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.

INDEPENDENT AUDITOR'S REPORT ON COMPLIANCE FOR EACH MAJOR FEDERAL PROGRAM; AND REPORT ON INTERNAL CONTROL OVER COMPLIANCE REQUIRED BY OMB CIRCULAR A-133

Board of Directors
Education for Change
Oakland, CA

<u>Report on Compliance for Each Major Federal Program</u>

We have audited the compliance of Education for Change (the School) with the types of compliance requirements described in the U.S. Office of Management and Budget (OMB) Circular A-133 *Compliance Supplement* that could have a direct and material effect on each of its major federal programs for the year ended June 30, 2015. The School's major federal programs are identified in the summary of auditor's results section of the accompanying schedule of findings and questioned costs.

Management's Responsibility

Management is responsible for compliance with the requirements of laws, regulations, contracts and grants applicable to its federal programs.

Auditor's Responsibility

Our responsibility is to express an opinion on compliance for each of the School's major federal programs based on our audit of the types of compliance requirements referred to above. We conducted our audit of compliance in accordance with auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and OMB Circular A-133, *Audits of States, Local Governments, and Non-Profit Organizations*. Those standards and OMB Circular A-133 require that we plan and perform the audit to obtain reasonable assurance about whether noncompliance with the types of compliance requirements referred to above that could have a direct and material effect on a major federal program occurred. An audit includes examining, on a test basis, evidence about the School's compliance with those requirements and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion on compliance for each major federal program. However, our audit does not provide a legal determination of the School's compliance.

Opinion on Each Major Federal Program

In our opinion, the School complied, in all material respects, with the types of compliance requirements referred to above that could have a direct and material effect on each of its major federal programs for the year ended June 30, 2015.

INDEPENDENT AUDITOR'S REPORT ON COMPLIANCE FOR EACH MAJOR FEDERAL PROGRAM; AND REPORT ON INTERNAL CONTROL OVER COMPLIANCE REQUIRED BY OMB CIRCULAR A-133

Report on Internal Control Over Compliance

Management of the School is responsible for establishing and maintaining effective internal control over compliance with the types of compliance requirements referred to above. In planning and performing our audit of compliance, we considered the School's internal control over compliance with the types of requirements that could have a direct and material effect on each major federal program to determine the auditing procedures that are appropriate in the circumstances for the purpose of expressing an opinion on compliance for each major federal program and to test and report on internal control over compliance in accordance with OMB Circular A-133, but not for the purpose of expressing an opinion on the effectiveness of internal control over compliance. Accordingly, we do not express an opinion on the effectiveness of the School's internal control over compliance.

A deficiency in internal control over compliance exists when the design or operation of a control over compliance does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect and correct noncompliance with a type of compliance requirement of a federal program on a timely basis. A material weakness in internal control over compliance is a deficiency, or combination of deficiencies in internal control over compliance such that there is a reasonable possibility, that material noncompliance with a type of compliance requirement of a federal program will not be prevented or detected and corrected on a timely basis. A significant deficiency in internal control over compliance is a deficiency, or a combination of deficiencies, in internal control over compliance with a type of compliance requirement of a federal program that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control over compliance was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control over compliance that might be material weaknesses or significant deficiencies. We did not identify any deficiencies in internal control over compliance that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

Purpose of this Report

The purpose of this report on internal control over compliance is solely to describe the scope of our testing of internal control over compliance and the results of that testing based on the requirements of OMB Circular A-133. Accordingly, this report is not suitable for any other purpose.

INDEPENDENT AUDITOR'S REPORT ON STATE COMPLIANCE

Board of Directors
Education for Change
Oakland, CA

We have audited Education for Change's (the School) compliance with the types of compliance requirements described in the *2014-2015 Guide for Annual Audits of K-12 Local Education Agencies and State Compliance Reporting*, published by the Education Audit Appeals Panel for the year ended June 30, 2015. The School's State compliance requirements are identified in the table below.

Management's Responsibility

Management is responsible for the compliance with the State laws and regulations as identified below.

Auditor's Responsibility

Our responsibility is to express an opinion on the School's compliance based on our audit of the types of compliance requirements referred to below. We conducted our audit of compliance in accordance with auditing standards generally accepted in the United States of America, the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States, and the *2014-2015 Guide for Annual Audits of K-12 Local Education Agencies and State Compliance Reporting*, published by the Education Audit Appeals Panel. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether noncompliance with the specific areas listed below has occurred. An audit includes examining, on a test basis, evidence about the School's compliance with those requirements and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion on State compliance. Our audit does not provide a legal determination of the School's compliance.

Compliance Requirements Tested

In connection with the audit referred to above, we selected and tested transactions and records to determine the School's compliance with the laws and regulations applicable to the following items:

Description	Procedures Performed
School Districts, County Offices of Education, and Charter Schools:	
California Clean Energy Jobs Act	No[2]
After School Education and Safety Program	Yes
Proper Expenditure of Education Protection Account Funds	Yes
Common Core Implementation Funds	Yes

INDEPENDENT AUDITOR'S REPORT ON STATE COMPLIANCE

Description	Procedures Performed
Unduplicated Local Control Funding Formula Pupil Counts	Yes
Local Control and Accountability Plan	Yes
Charter Schools:	
Attendance	Yes
Mode of Instruction	Yes
Nonclassroom-based instructional/independent study	No[1]
Determination of funding for nonclassroom-based instruction	Not applicable
Annual instructional minutes – classroom based	Yes
Charter School Facility Grant Program	Yes

[1] We did not perform testing for independent study because the independent study ADA was under the level which requires testing.

[2] The School had no expenditures of California Clean Energy Jobs Act funding during the year ended June 30, 2015.

Opinion on State Compliance

In our opinion, the School complied with the laws and regulations of the state programs referred to above in all material respects for the year ended June 30, 2015.

Other Matters

The results of our auditing procedures disclosed instances of noncompliance, which are required to be reported in accordance with the *2014-2015 Guide for Annual Audits of K-12 Local Education Agencies and State Compliance Reporting,* published by the Education Audit Appeals Panel, and which are described in the accompanying schedule of findings and questioned costs as 2015-001. Our opinion on each state program is not modified with respect to these matters.

The School's response to the noncompliance finding identified in our audit is described in the accompanying schedule of findings and questioned costs. The School's response was not subjected to the auditing procedures applied in the audit of compliance and, accordingly, we express no opinion on the response.

Purpose of this Report

The purpose of this report on state compliance is solely to describe the results of testing based on the requirements of the *2014-2015 Guide for Annual Audits of K-12 Local Education Agencies and State Compliance Reporting,* published by the Education Audit Appeals Panel. Accordingly, this report is not suitable for any other purpose.

EDUCATION FOR CHANGE

SCHEDULE OF FINDINGS AND QUESTIONED COSTS
For the Year Ended June 30, 2015

Section I - Summary of Auditor's Results

Financial Statements

Type of auditor's report issued:	*Unmodified*
Internal control over financial reporting:	
Material weakness(es) identified?	*No*
Significant deficiencies identified that are not considered to be material weakness(es)?	*None Reported*
Noncompliance material to financial statements noted?	*No*

Federal Awards

Internal control over major programs:	
Material weakness(es) identified?	*No*
Significant deficiencies identified that are not considered to be material weakness(es)?	*None Reported*
Type of auditor's report issued on compliance for major programs:	*Unmodified*
Any audit findings disclosed that are required to be reported in accordance with section 510(a) of (Circular A-133)?	*No*

Identification of major programs:

CFDA Number(s)	Name of Federal Program or Cluster
84.010	Title I, Part A, Basic Grants Low-Income and Neglected

Dollar threshold used to distinguish between type A and type B programs:	$300,000
Auditee qualified as low-risk auditee?	*Yes*

EDUCATION FOR CHANGE

SCHEDULE OF FINDINGS AND QUESTIONED COSTS
For the Year Ended June 30, 2015

All audit findings must be identified as one or more of the following twelve categories:

Five Digit Code	Finding Types
10000	Attendance
20000	Inventory of Equipment
30000	Internal Control
40000	State Compliance
42000	Charter School Facilities Program
50000	Federal Compliance
60000	Miscellaneous
61000	Classroom Teacher Salaries
62000	Local Control Accountability Plan
70000	Instructional Materials
71000	Teacher Misassignments
72000	School Accountability Report Card

FINANCIAL STATEMENT FINDINGS

There were no findings and questioned costs related to the basic financial statements for the year ended June 30, 2015.

FEDERAL AWARDS FINDINGS

There were no findings and questioned costs related to federal awards for June 30, 2015.

STATE COMPLIANCE FINDINGS

Finding 2015-001 – Average Daily Attendance Reporting **10000**

Schools: ASCEND and Learning Without Limits

Criteria: Per Education Code Section 47612, Average Daily Attendance (ADA) reported on the P-2 should be computed by dividing the charter school's total number of pupil days of attendance by the number of calendar days on which the school was taught. The calendar days on the divisor should correspond to the school calendar.

EDUCATION FOR CHANGE

SCHEDULE OF FINDINGS AND QUESTIONED COSTS
For the Year Ended June 30, 2015

<u>Finding 2015-001 – Average Daily Attendance Reporting</u> **10000**
(Continued)

Condition: Instructional days per the P-2 attendance reports for Learning Without Limits and Ascend did not agree with the respective published calendars. After inquiring about this issue we discovered that at Ascend and Learning Without Limits, the School was using the District system for attendance reporting (AERIES). The School mistakenly assumed the District would have the same reporting days as Ascend and Learning Without Limits. However, one school day was cancelled at all of the School's sites due to a storm. The District did not account for this and as a result 180 days were mistakenly reported for the fiscal year but with the weather day, only 179 should have been reported.

Cause: The School mistakenly assumed the District would have the same reporting days as Ascend and Learning Without Limits.

Effect: ADA was under-reported on the P-2 and P-Annual reports, for Learning Without Limits and over-reported on the P-2 and P-Annual reports for Ascend.

Questioned Costs and Units: ADA was over-reported by .37 for Ascend and was under-reported by .10 for Learning Without Limits. Correcting these errors will result in an estimated decrease to principal apportionment in the amount of $2,992 for Ascend and an estimated increase to principal apportionment in the amount $650 for Learning Without Limits.

Recommendation: We recommend the School work with the District to amend its attendance reports and to implement additional review procedures in order to identify potential errors resulting from irregular events such as cancelled school days.

Corrective Action Plan: The School was previously using Oakland Unified School District's Student Information System (SIS) - (AERIES) for ASCEND and Learning Without Limits. Beginning in FY 2015-2016, the School has converted ASCEND and Learning Without Limits over to the SIS (Illuminate) that is in use for all other of its schools. This will allow the School to more closely insure reporting accuracy. In addition, the School will implement a system of checks and balances within and separately from Illuminate, which will account for cancelled school days. This will include the Student Information System Administrator checking the reported days in Illuminate against the school calendar and the school calendar administrator (currently the Director of Human Resources/ Payroll) confirming the number of days (and cancelled days if applicable) via written communication at the P-2 and P-Annual reporting periods.

EDUCATION FOR CHANGE

STATUS OF PRIOR YEAR FINDINGS AND QUESTIONED COSTS
For the Year Ended June 30, 2015

There were no findings and questioned costs relating to the financial statements or federal awards for the prior year.

STATE COMPLIANCE FINDINGS

Finding 2014-001 – Unduplicated Local Control Funding Formula Pupil Counts **40000**

Schools: Achieve Academy, Cox Academy, Lazear Charter Academy, and World Academy

Criteria: Education code section 42238.02 (b)(2) requires a charter school to submit its enrolled free and reduced-price meal eligibility, foster youth and English learner pupil-level records for enrolled pupils using the California Longitudinal Pupil Achievement Data System (CALPADS). The CALPADS reports should accurately report the number of students as identified above.

Condition: Documentation did not support the number of students reported as eligible for free or reduced meals (FRPM).

Cause: A formula error in the spreadsheets used to calculate each student's eligibility caused no students to be classified as "paid" and all students to be classified as either "free" or "reduced."

Effect: The Schools are not in compliance with Education Code 42238.02 (b)(2) and 1.17 and 1.18 reports contained errors as follows:

EDUCATION FOR CHANGE

STATUS OF PRIOR YEAR FINDINGS AND QUESTIONED COSTS
For the Year Ended June 30, 2015

	Total Enrollment	Total Unduplicated Eligible Free/Reduced Meal Counts	EL Funding Eligible	Unduplicated FRPM/EL Eligible Count	Unduplicated FRPM/EL/Foster Youth Total
Achieve Academy					
As reported	207	198	100	200	200
Audit adjustments	-	(9)	-	(7)	(7)
As adjusted	207	189	100	193	193
Cox Academy					
As reported	558	529	337	546	546
Audit adjustments	-	(44)	-	(24)	(24)
As adjusted	558	485	337	522	522
Lazear Charter Academy					
As reported	401	372	254	386	386
Audit adjustments	-	(40)	-	(22)	(22)
As adjusted	401	332	254	364	364
World Academy					
As reported	475	448	349	463	463
Audit adjustments	-	(33)	-	(15)	(15)
As adjusted	475	415	349	448	448

Finding 2014-001 – Unduplicated Local Control Funding Formula Pupil Counts (Continued) **40000**

Questioned Costs and Units: The Schools fixed the spreadsheet error and additional samples were tested from the revised data. No errors were noted in the revised data and therefore the revised reports were used to determine total questioned costs. The questioned costs result in a lower transition entitlement for each school as follows:

Achieve Academy: $2,289
Cox Academy: $5,589
Lazear Charter Academy: $6,135
World Academy: $3,763

Recommendation: We recommend each School revise its CALPADS reporting accordingly and implement additional review procedures to ensure that errors are prevented on future CALPADS reporting.

Status: Implemented.

INDEPENDENT AUDITOR'S REPORT

Board of Directors
Education for Change
Oakland, CA

Report on the Financial Statements

We have audited the accompanying financial statements of Education for Change (the School), a California nonprofit public benefit corporation, which comprise the statement of financial position as of June 30, 2016, and the related statements of activities, cash flows and functional expenses for the year then ended, and the related notes to the financial statements.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Board of Directors
Education for Change

Opinion

In our opinion, the financial statements referred to on page one present fairly, in all material respects, the financial position of the School as of June 30, 2016, and the changes in its net assets and its cash flows for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Other Matters

Report on Summarized Comparative Information

We have previously audited the School’s 2015 financial statements, and we expressed an unmodified audit opinion on those audited financial statements in our report dated December 11, 2015. In our opinion, the summarized comparative information presented herein as of and for the year ended June 30, 2015, is consistent, in all material respects, with the audited financial statements from which it has been derived.

Supplementary Information

Our audit was conducted for the purpose of forming an opinion on the School’s financial statements as a whole. The accompanying schedule of expenditures of federal awards is presented for purposes of additional analysis as required by Title 2 U.S. *Code of Federal Regulations* (CFR) Part 200, *Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards*. The accompanying supplementary schedules are presented for purposes of additional analysis and are not a required part of the basic financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the financial statements. The information has been subjected to the auditing procedures applied in the audit of the financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the financial statements or to the financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the information is fairly stated, in all material respects, in relation to the financial statements as a whole.

Board of Directors
Education for Change

Other Reporting Required by Government Auditing Standards

In accordance with *Government Auditing Standards*, we have also issued a report dated December 8, 2016 on our consideration of the School's internal control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on the internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the School's internal control over financial reporting and compliance.

NOTES TO THE FINANCIAL STATEMENTS
For the Year Ended June 30, 2016

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

***Nature of Activities* –** Education for Change (the School), a charter management organization, was incorporated on January 21, 2005, under the laws of the State of California as a nonprofit benefit corporation. The School currently manages six (6) charter schools, Achieve Academy (Achieve), ASCEND, Cox, Epic Charter (Epic), Lazear Charter Academy (Lazear), and Learning Without Limits (LWL) (the Schools). Cox was granted its charter in 2005; Achieve in 2006; ASCEND, Lazear, and LWL in 2012; and Epic in 2014, all pursuant to the terms of the Charter Schools Act of 1992, as amended. Achieve, ASCEND, Epic, and LWL are all sponsored by the Oakland Unified School District (the District); Cox and Lazear are sponsored by the Alameda County Office of Education (ACOE). Epic began serving students in August 2014. The District and ACOE have certain responsibilities as the authorizers of the charter petitions of the Schools, and additional responsibilities as outlined in these agreements. The School also has certain responsibilities as the lead petitioner for these charters, and additional responsibilities as outlined in these agreements. The mission of the School is to achieve an excellent, high quality, free public education for all children with its focus on traditionally underserved children in the Oakland geographical area.

The accompanying financial statements also include the activity of Epic 1112 LLC (the LLC), of which the School is the sole member. The LLC was formed to hold title to property located in Oakland, California.

***Cash and Cash Equivalents* –** The School defines its cash and cash equivalents to include only cash on hand, demand deposits, and liquid investments with original maturities of three months or less.

***Use of Estimates* –** The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, and disclosures. Accordingly, actual results could differ from those estimates.

***Basis of Accounting* –** The financial statements have been prepared on the accrual method of accounting and accordingly reflect all significant receivables and liabilities.

***Functional Allocation of Expenses* –** Costs of providing the School's programs and other activities have been presented in the statement of functional expenses. During the year, such costs are accumulated into separate groupings as either direct or indirect. Indirect or shared costs are allocated among program and support services by a method that best measures the relative degree of benefit.

***Basis of Presentation* –** The accompanying financial statements have been prepared in conformity with accounting principles generally accepted in the United States as prescribed by the Financial Accounting Standards Board.

EDUCATION FOR CHANGE

NOTES TO THE FINANCIAL STATEMENTS
For the Year Ended June 30, 2016

NOTE 1: <u>SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES</u>

Net Asset Classes – The School is required to report information regarding its financial position and activities according to three classes of net assets: unrestricted, temporarily restricted, and permanently restricted. Net assets of the School are defined as:

- Unrestricted: All resources over which the governing board has discretionary control to use in carrying on the general operations of the School.
- Temporarily restricted: These net assets are restricted by donors to be used for specific purposes. The School does not currently have any temporarily restricted net assets.
- Permanently restricted: These net assets are permanently restricted by donors and cannot be used by the School. The School does not currently have any permanently restricted net assets.

Receivables – Accounts receivable primarily represent amounts due from federal and state governments as of June 30, 2016. Management believes that all receivables are fully collectible, therefore no provisions for uncollectible accounts were recorded.

Property, Plant and Equipment – Property, plant and equipment are stated at cost if purchased or at estimated fair market value if donated. The School capitalizes all expenditures for land, buildings and equipment in excess of $2,000. Depreciation is provided on a straight-line basis over the estimated useful lives of the asset. Depreciation expense was $40,563 for the year ended June 30, 2016.

Property Taxes – Secured property taxes attach as an enforceable lien on property as of January 1. Taxes are levied on September 1 and are payable in two installments on or before November 1 and February 1. Unsecured property taxes are not a lien against real property and are payable in one installment on or before August 31. The County bills and collects property taxes for all taxing agencies within the County and distributes these collections to the various agencies. The sponsor agency of the School is required by law to provide in-lieu property tax payments on a monthly basis, from August through July. The amount paid per month is based upon an allocation per student, with a specific percentage to be paid each month.

Compensated Absences – Accumulated unpaid employee vacation benefits are recognized as a liability of the School. The current portion of the liability, if material, is recognized at year-end. The entire compensated absences liability is reported on the statement of financial position. Employees of the School are paid for days or hours worked based upon Board approved schedules which include vacation. Sick leave is accumulated without limit for each employee at the equivalent rate of one day for each full month of service. Sick leave with pay is provided when employees are absent for health reasons.

Revenue Recognition – Amounts received from the California Department of Education are recognized as revenue by the School based on the average daily attendance (ADA) of students. Revenue that is restricted is recorded as an increase in unrestricted net assets if the restriction expires in the reporting period in which the revenue is recognized. All other restricted revenues are reported as increases in temporarily restricted net assets.

NOTE 1: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Contributions – All contributions are considered to be available for unrestricted use unless specifically restricted by the donor. Amounts received that are restricted to specific use or future periods are reported as temporarily restricted. Restricted contributions that are received and released in the same period are reported as unrestricted revenue. Unconditional promises to give expected to be received in one year or less are recorded at net realizable value. Unconditional promises to give expected to be received in more than one year are recorded at fair market value at the date of the promise. Conditional promises to give are not recognized until they become unconditional, that is, when the conditions on which they depend are substantially met.

Income Taxes **–** The School is a non-profit entity exempt from the payment of income taxes under Internal Revenue Code Section 501(c)(3) and California Revenue and Taxation Code Section 23701d. Accordingly, no provision has been made for income taxes. Management has determined that all income tax positions are more likely than not of being sustained upon potential audit or examination; therefore, no disclosures of uncertain income tax positions are required. The School files informational returns in the U.S. federal jurisdiction, and the state of California. The statute of limitations for federal and California state purposes is generally three and four years, respectively.

The LLC is considered a disregarded entity and therefore exempt from the payment of income taxes. Additionally, the LLC is in the process of obtaining exemption from the California state LLC fee under California Revenue and Taxation Code Section 23701h.

Evaluation of Subsequent Events **–** The School has evaluated subsequent events through December 8, 2016, the date these financial statements were available to be issued.

Comparative Totals **–** The financial statements include certain prior-year summarized comparative information in total, but not by net asset class. Such information does not include sufficient detail to constitute a presentation in conformity with generally accepted accounting principles. Accordingly, such information should be read in conjunction with the School's financial statements for the year ended June 30, 2015, from which the summarized information was derived.

NOTE 2: CONCENTRATION OF CREDIT RISK

The School maintains cash balances held in banks which are insured up to $250,000 by the Federal Depository Insurance Corporation (FDIC). At times, cash in these accounts exceeds the insured amounts. The School has not experienced any losses in such accounts and believes it is not exposed to any significant credit risk on its cash and cash equivalents.

NOTE 3: EMPLOYEE RETIREMENT

Multi-employer Defined Benefit Pension Plans

Qualified employees are covered under multi-employer defined benefit pension plans maintained by agencies of the State of California.

The risks of participating in these multi-employer defined benefit pension plans are different from single-employer plans because: (a) assets contributed to the multi-employer plan by one employer may be used to provide benefits to employees of other participating employers, (b) the required member, employer, and state contribution rates are set by the California Legislature, and (c) if the School chooses to stop participating in the multi-employer plan, it may be required to pay a withdrawal liability to the plan. The School has no plans to withdraw from this multi-employer plan.

State Teachers' Retirement System (STRS)

Plan Description

The School contributes to the State Teachers' Retirement System (STRS), a cost-sharing multi-employer public employee retirement system defined benefit pension plan administered by STRS. Plan information for STRS is not publicly available. The plan provides retirement, disability and survivor benefits to beneficiaries. Benefit provisions are established by State statutes, as legislatively amended, within the State Teachers' Retirement Law. According to the most recently available Comprehensive Annual Financial Report and Actuarial Valuation Report for the year ended June 30, 2015, total plan net assets are $181 billion, the total actuarial present value of accumulated plan benefits is $242 billion, contributions from all employers totaled $2.55 billion, and the plan is 68.5% funded. The School did not contribute more than 5% of the total contributions to the plan. Copies of the STRS annual financial reports may be obtained from STRS, 7667 Folsom Boulevard, Sacramento, CA 95826 and www.calstrs.com.

Funding Policy

Active plan members hired before December 31, 2012 are required to contribute 9.20% of their salary and those hired after are required to contribute 8.56% of their salary. The School is required to contribute an actuarially determined rate. The actuarial methods and assumptions used for determining the rate are those adopted by the STRS Teachers' Retirement Board. Under the 2014 funding plan, employer contributions on compensation creditable to the program will increase every year for the next seven years, up to 19.10% in 2020–21. The required employer contribution rate for year ended June 30, 2016 was 10.73% of annual payroll. The contribution requirements of the plan members are established and may be amended by State statute.

NOTE 3: EMPLOYEE RETIREMENT

The School's contributions to STRS for the past three years are as follows:

Year Ended June 30,	Required Contribution	Percent Contributed
2014	$ 655,318	100%
2015	$ 830,995	100%
2016	$ 1,137,507	100%

Public Employees' Retirement System (PERS)

Plan Description

The School contributes to the School Employer Pool under the California Public Employees' Retirement System (CalPERS), a cost-sharing multi-employer public employee retirement system defined benefit pension plan administered by CalPERS. Plan information for PERS is not publicly available The plan provides retirement and disability benefits, annual cost-of-living adjustments, and death benefits to plan members and beneficiaries. Benefit provisions are established by State statutes, as legislatively amended, within the Public Employees' Retirement Law. According to the most recently available Actuarial Valuation Report for the year ended June 30, 2015, the Schools Pool total plan assets are $56.8 billion, the total actuarial present value of accumulated plan benefits is $86 billion, contributions from all employers totaled $1.3 billion, and the plan is 77.5% funded. The School did not contribute more than 5% of the total contributions to the plan.

Copies of the CalPERS' annual financial reports may be obtained from the CalPERS Executive Office, 400 P Street, Sacramento, CA 95814 and www.calpers.ca.gov.

Funding Policy

Active plan members are required to contribute 7.0% of their salary while new members after January 1, 2013 are required to contribute 6.0% of their salary. The School is required to contribute an actuarially determined rate. The actuarial methods and assumptions used for determining the rate are those adopted by the CalPERS Board of Administration. The required employer contribution rate for year ended June 30, 2016 was 11.847%. The contribution requirements of the plan members are established and may be amended by State statute.

EDUCATION FOR CHANGE

NOTES TO THE FINANCIAL STATEMENTS
For the Year Ended June 30, 2016

NOTE 3: EMPLOYEE RETIREMENT

Contributions to PERS

The School's contributions to PERS for each of the last three years are as follows:

Year Ended June 30,	Required Contribution	Percent Contributed
2014	$ 251,024	100%
2015	$ 291,011	100%
2016	$ 380,827	100%

Defined Contribution Plan

The School offers an Internal Revenue Code Section 403(b) retirement plan to each of its qualifying employees. Employee contributions are used to purchase annuity contracts for each participant employee. Additionally, the employer may elect to make a discretionary contribution for each qualifying employee for each plan year. The School did not contribute to the plan for the year ended June 30, 2016.

NOTE 4: OPERATING LEASES

The School has facility use and lease agreements. These agreements have varying terms with expirations ranging from 2016 to 2035. Lease expense for the year ended June 30, 2016 was $1,454,516. Future estimated minimum lease payments under these agreements are as follows:

Year Ended June 30,	
2017	$ 1,721,769
2018	526,496
2019	208,235
2020	126,303
2021	130,092
Thereafter	2,289,480
Total	$ 5,002,375

NOTE 5: SUBSEQUENT EVENT

The School obtained a $1,500,000 line of credit in August 2016.

NOTE 6: CONTINGENCIES

The School is subject to a claim for damages that arose in the normal course of business. The School has referred the claim to its insurance company and legal representation has been assigned. The outcome of this claim is currently unknown; however, the School believes any loss resulting from this claim will not be material.

The School has received state and federal funds for specific purposes that are subject to review and audit by the grantor agencies. Although such audits could generate disallowances under terms of the grants, it is believed that any required reimbursement would not be material.

SUPPLEMENTARY INFORMATION

EDUCATION FOR CHANGE

LOCAL EDUCATION AGENCY ORGANIZATION STRUCTURE
For the Year Ended June 30, 2016

Education for Change (the School), a charter management organization, was incorporated on January 21, 2005, under the laws of the State of California as a nonprofit benefit corporation and is the founder of Cox Academy which was formerly named E. Morris Cox Elementary Charter School. The Organization currently manages six (6) charter schools: Achieve Academy, ASCEND, Cox Academy, Epic Charter, Lazear Charter Academy, and Learning Without Limits. Each charter was granted pursuant to the terms of the Charter Schools Act of 1992, as amended.

The School's current charters are as follows:

Achieve Academy
Charter granted in 2006 by Oakland Unified School District and renewed in 2011.
State charter number: 0780

ASCEND
Charter granted in 2012 by Oakland Unified School District.
State charter number: 1443

Cox Academy
Charter granted in 2005 by Oakland Unified School District and renewed in 2015 by Alameda County Office of Education.
State charter number: 0740

Epic Charter
Charter granted in 2014 by Oakland Unified School District.
State charter number: 1632

Lazear Charter Academy
Charter granted in 2012 by Alameda County Office of Education.
State charter number: 1464

Learning Without Limits
Charter granted in 2012 by Oakland Unified School District.
State charter number: 1442

NOTES TO THE SUPPLEMENTARY INFORMATION
For the Year Ended June 30, 2016

NOTE 1: PURPOSE OF SCHEDULES

Schedule of Instructional Time

This schedule presents information on the amount of instructional time offered by the School and whether the School complied with the corresponding provisions of California Education Code.

Schedule of Average Daily Attendance

Average daily attendance is a measurement of the number of pupils attending classes of the School. The purpose of attendance accounting from a fiscal standpoint is to provide the basis on which apportionments of state funds are made to charter schools. This schedule provides information regarding the attendance of students at various grade levels.

Reconciliation of Annual Financial Report with Audited Financial Statements

This schedule provides the information necessary to reconcile the net assets of the charter schools as reported on the Annual Financial Report form to the audited financial statements.

Schedule of Expenditures of Federal Awards

The accompanying schedule of expenditures of federal awards (the Schedule) includes the federal award activity of the School under programs of the federal governmental for the year ended June 30, 2016. The information in this Schedule is presented on the accrual basis of accounting in accordance with the requirements of the Title 2 U.S. Code of Federal Regulations Part 200, *Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards* (Uniform Guidance). Because the Schedule presents only a selected portion of operations of the School, it is not intended to and does not present the financial position, changes in net assets, or cash flows of the School.

Indirect Cost Rate

The School has elected to use the 10-percent de minimis indirect cost rate allowed under the Uniform Guidance.

Combined Financial Statements

These statements report the financial position, activities, and cash flows for each of Education for Change's charter schools.

Vicenti, Lloyd & Stutzman, CPAs

INDEPENDENT AUDITOR'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

Board of Directors
Education for Change
Oakland, CA

We have audited, in accordance with the auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of Education for Change (the School), a nonprofit California public benefit corporation, which comprise the consolidated statement of financial position as of June 30, 2016, and the related statements of activities, cash flows and functional expenses for the year then ended, the related notes to the financial statements, and have issued our report thereon dated December 8, 2016.

Internal Control Over Financial Reporting

In planning and performing our audit of the financial statements, we considered the School's internal control over financial reporting (internal control) to determine the audit procedures that are appropriate in the circumstances for the purpose of expressing our opinion on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the School's internal control. Accordingly, we do not express an opinion on the effectiveness of the School's internal control.

A deficiency in internal control exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect and correct misstatements on a timely basis. A material weakness is a deficiency or a combination of deficiencies in internal control such that there is a reasonable possibility that a material misstatement of the financial statements will not be prevented or detected and corrected on a timely basis. A significant deficiency is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

INDEPENDENT AUDITOR'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

Compliance and Other Matters

As part of obtaining reasonable assurance about whether the School's financial statements are free from material misstatement, we performed tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit, and accordingly, we do not express such an opinion. The results of our tests disclosed no instances of non-compliance or other matters that are required to be reported under *Government Auditing Standards*.

Purpose of this Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the entity's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the entity's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.

INDEPENDENT AUDITOR'S REPORT ON COMPLIANCE FOR EACH MAJOR FEDERAL PROGRAM; AND REPORT ON INTERNAL CONTROL OVER COMPLIANCE REQUIRED BY THE UNIFORM GUIDANCE

Board of Directors
Education for Change
Oakland, CA

Report on Compliance for Each Major Federal Program

We have audited the compliance of Education for Change (the School) with the types of compliance requirements described in the U.S. Office of Management and Budget (OMB) *Compliance Supplement* that could have a direct and material effect on each of its major federal programs for the year ended June 30, 2016. The School's major federal programs are identified in the summary of auditor's results section of the accompanying schedule of findings and questioned costs.

Management's Responsibility

Management is responsible for compliance with federal statutes, regulations, and terms and conditions of federal awards applicable to its federal programs.

Auditor's Responsibility

Our responsibility is to express an opinion on compliance for each of the School's major federal programs based on our audit of the types of compliance requirements referred to above. We conducted our audit of compliance in accordance with auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and the audit requirements of Title 2 U.S. *Code of Federal Regulations* Part 200, *Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards* (Uniform Guidance). Those standards and the Uniform Guidance require that we plan and perform the audit to obtain reasonable assurance about whether noncompliance with the types of compliance requirements referred to above that could have a direct and material effect on a major federal program occurred. An audit includes examining, on a test basis, evidence about the School's compliance with those requirements and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion on compliance for each major federal program. However, our audit does not provide a legal determination of the School's compliance.

Opinion on Each Major Federal Program

In our opinion, the School complied, in all material respects, with the types of compliance requirements referred to above that could have a direct and material effect on each of its major federal programs for the year ended June 30, 2016.

INDEPENDENT AUDITOR'S REPORT ON COMPLIANCE FOR EACH MAJOR FEDERAL PROGRAM AND REPORT ON INTERNAL CONTROL OVER COMPLIANCE REQUIRED BY THE UNIFORM GUIDANCE

Report on Internal Control Over Compliance

Management of the School is responsible for establishing and maintaining effective internal control over compliance with the types of compliance requirements referred to above. In planning and performing our audit of compliance, we considered the School's internal control over compliance with the types of requirements that could have a direct and material effect on each major federal program to determine the auditing procedures that are appropriate in the circumstances for the purpose of expressing an opinion on compliance, for each major federal program and to test and report on internal control over compliance in accordance with the Uniform Guidance, but not for the purpose of expressing an opinion on the effectiveness of internal control over compliance. Accordingly, we do not express an opinion on the effectiveness of the School's internal control over compliance.

A deficiency in internal control over compliance exists when the design or operation of a control over compliance does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect and correct noncompliance with a type of compliance requirement of a federal program on a timely basis. A material weakness in internal control over compliance is a deficiency, or combination of deficiencies in internal control over compliance such that there is a reasonable possibility, that material noncompliance with a type of compliance requirement of a federal program will not be prevented or detected and corrected on a timely basis. A significant deficiency in internal control over compliance is a deficiency, or a combination of deficiencies, in internal control over compliance with a type of compliance requirement of a federal program that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control over compliance was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control over compliance that might be material weaknesses or significant deficiencies. We did not identify any deficiencies in internal control over compliance that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

Purpose of this Report

The purpose of this report on internal control over compliance is solely to describe the scope of our testing of internal control over compliance and the results of that testing based on the requirements of the Uniform Guidance. Accordingly, this report is not suitable for any other purpose.

INDEPENDENT AUDITOR'S REPORT ON STATE COMPLIANCE

Board of Directors
Education for Change
Oakland, CA

We have audited Education for Change's (the School) compliance with the types of compliance requirements described in the *2015-2016 Guide for Annual Audits of K-12 Local Education Agencies and State Compliance Reporting*, published by the Education Audit Appeals Panel for the year ended June 30, 2016. The School's State compliance requirements are identified in the table below.

Management's Responsibility

Management is responsible for the compliance with the State laws and regulations as identified below.

Auditor's Responsibility

Our responsibility is to express an opinion on the School's compliance based on our audit of the types of compliance requirements referred to below. We conducted our audit of compliance in accordance with auditing standards generally accepted in the United States of America, the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States, and the *2015-2016 Guide for Annual Audits of K-12 Local Education Agencies and State Compliance Reporting*, published by the Education Audit Appeals Panel. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether noncompliance with the specific areas listed below has occurred. An audit includes examining, on a test basis, evidence about the School's compliance with those requirements and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion on state compliance. Our audit does not provide a legal determination of the School's compliance.

Compliance Requirements Tested

In connection with the audit referred to above, we selected and tested transactions and records to determine the School's compliance with the laws and regulations applicable to the following items:

Description	Procedures Performed
School Districts, County Offices of Education, and Charter Schools:	
Educator Effectiveness	Yes
California Clean Energy Jobs Act	Yes
After School Education and Safety Program	Yes
Proper Expenditure of Education Protection Account Funds	Yes

INDEPENDENT AUDITOR'S REPORT ON STATE COMPLIANCE

Description	Procedures Performed
Unduplicated Local Control Funding Formula Pupil Counts	Yes
Local Control and Accountability Plan	Yes
Independent Study-Course Based	Not applicable
Immunizations	Yes
Charter Schools:	
Attendance	Yes
Mode of Instruction	Yes
Nonclassroom-based instructional/independent study	No[1]
Determination of funding for nonclassroom-based instruction	Not applicable
Annual instructional minutes – classroom based	Yes
Charter School Facility Grant Program	Yes

---

[1] We did not perform testing for independent study because the independent study ADA was under the level which requires testing.

Opinion on State Compliance

In our opinion, the School complied with the laws and regulations of the state programs referred to above in all material respects for the year ended June 30, 2016.

Purpose of this Report

The purpose of this report on state compliance is solely to describe the results of testing based on the requirements of the *2015-2016 Guide for Annual Audits of K-12 Local Education Agencies and State Compliance Reporting,* published by the Education Audit Appeals Panel. Accordingly, this report is not suitable for any other purpose.

EDUCATION FOR CHANGE

SCHEDULE OF FINDINGS AND QUESTIONED COSTS
For the Year Ended June 30, 2016

SECTION I – SUMMARY OF AUDITOR'S RESULTS

<u>Financial Statements</u>

Type of report the auditor issued on whether the financial statements audited were prepared in accordance with GAAP: *Unmodified*

Internal control over financial reporting:

Material weakness(es) identified?	___	*Yes*	X	*No*
Significant deficiency(ies) identified?	___	*Yes*	X	*None Reported*
Noncompliance material to financial statements noted?	___	*Yes*	X	*No*

<u>Federal Awards</u>

Internal control over major federal awards:

Material weakness(es) identified?	___	*Yes*	X	*No*
Significant deficiency(ies) identified?	___	*Yes*	X	*None Reported*

Type of auditor's report issued on compliance for major federal programs: *Unmodified*

Any audit findings disclosed that are required to be reported in accordance with 2 CFR 200.516(a)?	___	*Yes*	X	*No*

Identification of Major Federal Programs:

<u>CFDA Number(s)</u>	<u>Name of Federal Program or Cluster</u>
84.010	Title I, Part A – Low Income and Neglected

Dollar threshold used to distinguish between type A and type B programs: $750,000

Auditee qualified as low-risk auditee?	X	*Yes*	___	*No*

EDUCATION FOR CHANGE

SCHEDULE OF FINDINGS AND QUESTIONED COSTS
For the Year Ended June 30, 2016

All audit findings must be identified as one or more of the following categories:

Five Digit Code	Finding Types
10000	Attendance
20000	Inventory of Equipment
30000	Internal Control
40000	State Compliance
42000	Charter School Facilities Program
50000	Federal Compliance
60000	Miscellaneous
61000	Classroom Teacher Salaries
62000	Local Control Accountability Plan
70000	Instructional Materials
71000	Teacher Misassignments
72000	School Accountability Report Card

There were no findings and questioned costs related to the basic financial statements, federal awards, or state awards for the year ended June 30, 2016.

EDUCATION FOR CHANGE

STATUS OF PRIOR YEAR FINDINGS AND QUESTIONED COSTS
For the Year Ended June 30, 2016

There were no findings and questioned costs related to the basic financial statements or federal awards in the prior year.

STATE COMPLIANCE FINDINGS

<u>Finding 2015-001 – Average Daily Attendance Reporting</u> **10000**

Schools: ASCEND and Learning Without Limits

Criteria: Per Education Code Section 47612, Average Daily Attendance (ADA) reported on the P-2 should be computed by dividing the charter school's total number of pupil days of attendance by the number of calendar days on which the school was taught. The calendar days on the divisor should correspond to the school calendar.

Condition: Instructional days per the P-2 attendance reports for Learning Without Limits and Ascend did not agree with the respective published calendars. After inquiring about this issue we discovered that at Ascend and Learning Without Limits, the School was using the District system for attendance reporting (AERIES). The School mistakenly assumed the District would have the same reporting days as Ascend and Learning Without Limits. However, one school day was cancelled at all of the School's sites due to a storm. The District did not account for this and as a result 180 days were mistakenly reported for the fiscal year but with the weather day, only 179 should have been reported.

Cause: The School mistakenly assumed the District would have the same reporting days as Ascend and Learning Without Limits.

Effect: ADA was under-reported on the P-2 and P-Annual reports.

Questioned Costs and Units: ADA was under-reported by 2.82 for Ascend and 2.58 for Learning Without Limits. Correcting these errors will result in an estimated increase to principal apportionment in the amount of $23,644 for Ascend and $19,733 for Learning Without Limits.

Recommendation: We recommend the School work with the District to amend its attendance reports and to implement additional review procedures in order to identify potential errors resulting from irregular events such as cancelled school days.

Status: Implemented.

School Sites Only Statement of Revenues Expenditures and Change in Fund Balance as of 05/31/17

Cycle: FY2016-2017; Fund Class: [All]; Fund Columns: [All Funds]; Account Code Expression: ([School] > '100') ; Include Element Value: Yes; Revenue Element: Object; Expenditure Element: Object; Begin Date: 07/01/2016; End Date: 05/31/2017

Attorneys for Plaintiff
JUDITH McCRARY

SUPERIOR COURT OF THE STATE OF CALIFORNIA

COUNTY OF ALAMEDA

JUDITH MCCRARY, **Plaintiff,** **vs.** **EDUCATION FOR CHANGE; and DOES 1-10, inclusive** **Defendants.**	Case No.: RG16 814576 **COMPLAINT FOR DAMAGES** 1. Failure to Engage in the Interactive Process 2. Failure to Accommodate 3. Disability Discrimination **JURY TRIAL DEMANDED**

Plaintiff Judith McCrary alleges:

PARTIES

1. Plaintiff Judith McCrary was at all times relevant hereto a resident of the County of Alameda, California.

2. Defendant Education for Change is a corporation organized and existing under the laws of the State of California, with its principal place of business in Oakland, California.

3. Plaintiff is ignorant of the true names and capacities of the defendants sued herein as Does 1-10, inclusive and therefore sues these defendants by such fictitious names. Plaintiff is informed and believes and thereon alleges that each of these fictitiously named

defendants is in some manner responsible for the acts and occurrences alleged herein. Plaintiff will amend this complaint to allege their true names and capacities when ascertained.

4. Plaintiff is further informed and believes that each defendant, including the Doe defendants, were the agents, employees, principals, partners, and joint ventures of all the other defendants, and in the doing the acts alleged herein with acting within the course of said agency and employment.

5. Plaintiff began working as a cafeteria worker for Education for Change in August 2014.

6. In or about December 2014, plaintiff sustained an ankle injury which limited her ability to work. Plaintiff provided regular doctors' notes to her employer regarding her status.

7. When plaintiff's doctors certified that she was able to return to work in 2015, Education for Change refused to allow her to do so.

8. Education for Change told plaintiff she had been terminated.

9. Education for Change also told plaintiff she would need to re-interview for her job. Plaintiff disagreed with this, but did the interview and was then not hired.

10. Plaintiff filed timely charges with the California Department of Fair Employment and Housing as the claims alleged herein, and received a right to sue within the year prior to the filing of this complaint.

FIRST CAUSE OF ACTION

Failure to Engage in the Interactive Process

(Against all Defendants)

11. Plaintiff incorporates by reference paragraphs 1-10 above, as though fully set forth herein.

12. At all times relevant to this complaint, the Fair Employment and Housing Act (FEHA) and its implementing regulations were in full force and effect and binding on the defendant.

13. Pursuant to Government Code § 12940(n) it is unlawful for an employer to fail to

engage in the interactive process after a reasonable accommodation is requested by an employee or after it becomes apparent to the employer that an employee's physical disability is impeding the employee's ability to carry out the essential functions of his job.

14. Pursuant to Government Code §§ 12926 and 12926.1 plaintiff has a physical disability, a record of physical disability, and/or was perceived or treated as having a physical disability by the defendant.

15. The doctors' notes presented by plaintiff constituted requests for accommodation. Defendant took no action in response to those requests and failed and refused to engage in a timely, good faith interactive process at any point prior to terminating plaintiff.

16. As a direct and proximate result of defendant's wrongful conduct, plaintiff has suffered damages including, but not limited to, a loss of income and benefits, and has further suffered emotional distress and other general damages.

17. In doing the things alleged herein, defendant's conduct was despicable, and defendant acted toward plaintiff with malice, oppression, fraud, and with willful and conscious disregard of plaintiff's rights, entitling plaintiff to an award of punitive damages. Defendant's conduct described herein was engaged in by managing agents for the defendant and/or ratified by managing agents.

SECOND CAUSE OF ACTION

Failure to Accommodate

(*Against all Defendants*)

18. Plaintiff incorporates by reference paragraphs 1-17 above, as though fully set forth herein.

19. Pursuant to Government Code § 12940(m) it is unlawful for an employer to fail to provide reasonable accommodation to an employee with a disability.

20. Pursuant to Government Code §§ 12926 and 12926.1 plaintiff's ankle injury

constituted a physical disability. She also had a record of physical disability, and/or was perceived as or treated as having a physical disability by the Defendant.

21. The doctors' notes plaintiff provided to defendant constituted requests for accommodation. Defendant never addressed or attempted to address plaintiff's requests for accommodation prior to terminating her.

22. As a direct and proximate result of Defendant's wrongful conduct, plaintiff has suffered damages including, but not limited to, a loss of income and benefits, and has further suffered emotional distress and other general damages.

23. In doing the things alleged herein, defendant's conduct was despicable, and defendant acted toward plaintiff with malice, oppression, fraud, and with willful and conscious disregard of her rights, entitling plaintiff to an award of punitive damages. Defendant's conduct described herein was engaged in by managing agents for the Defendant and/or ratified by managing agents.

THIRD CAUSE OF ACTION

Disability Discrimination

(*Against all Defendants*)

24. Plaintiff incorporates by reference paragraphs 1-23 above, as though set for herein.

25. The above-described conduct, including but not limited to terminating plaintiff and asking her to re-interview for her own job, were discriminatory actions based on plaintiff's disability, perceived disability and record and history of having a disability.

26. As a proximate result of defendant's conduct, plaintiff has suffered and continues to suffer loss of earnings and employment benefits in an amount according to proof.

27. As a further proximate result of defendant's conduct, plaintiff has suffered and will continue to suffer emotional pain, humiliation, and mental anguish, all to her damage in an amount according to proof.

28. In doing the things alleged herein, defendant's conduct was despicable, and defendant acted toward plaintiff with malice, oppression, fraud, and with willful and conscious disregard of her rights, entitling plaintiff to an award of punitive damages. Defendant's conduct described herein was engaged in by managing agents for the Defendant and/or ratified by managing agents.

29. Plaintiff is entitled to recover attorneys' fees and costs pursuant to Govt. Code 12965(b).

PRAYER

WHEREFORE, Plaintiff prays for judgment against defendants and each of them, as follows:

1. For general damages, according to proof;
2. For emotional distress;
3. For lost earnings and employment benefits;
4. For attorneys' fees;
5. For punitive damages;
6. For costs of suit;
7. For interest to the maximum extent allowed by law; and
8. For such other and further relief as the court may deem just and proper.

EDUCATION FOR CHANGE

Exempt from Filing Fees
Gov. Code § 6103

IN THE SUPERIOR COURT OF THE STATE OF CALIFORNIA

COUNTY OF ALAMEDA

JUDITH MCCRARY,

Plaintiff,

v.

EDUCATION FOR CHANGE; and DOES 1 through 10, inclusive,

Defendants,

CASE NO.: RG16814576

DEFENDANT'S ANSWER TO PLAINTIFF'S COMPLAINT FOR DAMAGES

[Assigned for All Purposes to the Honorable Julia Spain, Dept. 19, Administration Building]

Complaint filed: May 5, 2016

BY FAX

Defendant EDUCATION FOR CHANGE (hereinafter, "School" or "Defendant") hereby answers Plaintiff' Complaint for Damages as follows:

Defendant generally denies each and every allegation of Plaintiff's complaint:

AFFIRMATIVE DEFENSES

FIRST AFFIRMATIVE DEFENSE

(No Cause of Action)

Defendant alleges that Plaintiff's Complaint, in its entirety, and all purported causes of action set forth therein, fail to allege facts sufficient to constitute a cause of action against Defendant.

SECOND AFFIRMATIVE DEFENSE

(Failure to Exhaust Administrative Remedies)

Defendant alleges that Plaintiff failed to exhaust administrative remedies which are a precondition to the claims she seeks to allege and as a result such claims are barred, including, but not limited to filing a complaint with the Department of Fair Employment and Housing and obtaining a right to sue letter.

THIRD AFFIRMATIVE DEFENSE

(Good Cause)

Defendant alleges there was good cause for Plaintiff's release from her employment.

FOURTH AFFIRMATIVE DEFENSE

(Failure to Mitigate Damages)

Defendant alleges that by the exercise of reasonable effort, Plaintiff could have obtained and retained employment substantially similar to her employment with Defendant promptly after release of her employment with Defendant. However, Plaintiff failed and refused, and continues to fail and refuse, to exercise a reasonable effort to obtain other employment.

FIFTH AFFIRMATIVE DEFENSE

(Legitimate Independent Reasons for Termination)

Defendants allege that such employment would have ended for legitimate, independent, non-discriminatory reasons and as a result Plaintiff cannot prevail on its claims.

SIXTH AFFIRMATIVE DEFENSE

(Privileged Conduct)

Defendant alleges that Plaintiff's claims are barred in that Defendant was exercising their legal right to terminate, release, or not renew Plaintiff; that Defendant's conduct was lawful and consistent with community standards; and that Defendant had a good-faith belief that it had legal right to engage in the conduct.

///

///

///

SEVENTH AFFIRMATIVE DEFENSE

(No punitive damages)

Defendant alleges the imposition of punitive damages in this matter would violate Defendant's rights to due process of law in violation of the California Constitution and are barred by Cal. Gov. Code §818, as punitive damages are expressly prohibited against public entities.

EIGHTH AFFIRMATIVE DEFENSE

(Business Necessity)

Defendant alleges that its actions with respect to Plaintiff were taken solely for legitimate, business reasons unrelated to any alleged discrimination of Plaintiff.

NINTH AFFIRMATIVE DEFENSE

(Government Claims Act)

Defendant alleges that Plaintiff failed to comply with the requirements of the Government Claims Act (Govt. Code §810, *et seq*.) and as a result, Plaintiff's claims are barred.

William J. Trinkle
Attorney for Defendant,
EDUCATION FOR CHANGE

PROOF OF SERVICE

I, Jolanthe V. Onishi, declare:

I am over the age of eighteen years and not a party to the within action. I am employed by the law firm of Young, Minney & Corr, LLP. in the County of Sacramento, California and my business address is 655 University Ave., Suite 150, Sacramento, CA 95825. On the date set forth below, I served the foregoing document described as **DEFENDANT'S ANSWER TO PLAINTIFF'S COMPLAINT FOR DAMAGES**, on the interested parties in this action by placing a true copy thereof enclosed in a sealed envelope and addressed as follows:

MAUREEN E. McFADDEN Law Offices of Maureen E. McFadden 300 Lakeside Avenue, Suite 100 Oakland, CA 94612 Telephone: (510) 835-5203 Facsimile: (510) 835-5205	Attorney for Plaintiff, Judith McCrary

[**XX**]	**(VIA U.S. MAIL)** I caused such document to be placed in the U.S. Mail at Sacramento, California with postage thereon fully prepaid. I am "readily familiar" with the firm's practice of collection and processing correspondence for mailing. It is deposited with the U.S. Postal Service on that same day in the ordinary course of business. I am aware that on motion of party served, service is presumed invalid if postal cancellation date or postage meter date is more than one day after date of deposit for mailing in affidavit.
[ ]	**(VIA ELECTRONIC MAIL)** I caused such document to be transmitted via e-mail to the addressee from the e-mail address of jonishi@mycharterlaw.com
[ ]	**(BY PERSONAL SERVICE)** I caused such envelope to be delivered by hand to the offices of the addressee.
[ ]	**(VIA OVERNIGHT MAIL)** by placing a true copy thereof enclosed in a sealed envelope, with delivery fees paid or provided for, in a designated area for outgoing overnight mail, addressed as set forth below. In the ordinary course of business mail placed in that designated area is picked up that same day for delivery the following business day.

[**XX**]	**(STATE)** I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.
[ ]	**(FEDERAL)** I declare that I am employed in the office of a member of the bar of this court at whose direction this service was made.

Executed on July 15, 2016, at Sacramento, California.
