CHARTER PETITION

SUBMITTED TO
OAKLAND UNIFIED SCHOOL DISTRICT
ON
AUGUST 23, 2017

For the term of July 1, 2018 - June 30, 2023

Submitted by:
Hae-Sin Thomas
Lead Petitioner

Statement of Assurances

As the authorized representative of the applicant group, I hereby certify under the penalties of perjury that the information submitted in this petition for a charter for Latitude 37.8 High School to be located at 1045 Derby Avenue in Oakland, California 94601 is true to the best of my knowledge and belief; and further, I certify that, if granted a charter, the school:

1. Will not charge tuition, fees, or other mandatory payments for attendance at the charter school or for participation in programs that are required for students.

2. Will enroll any eligible student who submits a timely and complete application, unless the school receives a greater number of applications than there are spaces for students, in which case a lottery will take place in accordance with California charter laws and regulations.

3. Will be non-sectarian in its curriculum, programs, admissions, policies, governance, employment practices, and all other operations.

4. Will be open to all students, on a space available basis, and shall not discriminate on the basis of the characteristics included in Education Code section 220, including but not limited to race, color, national origin, creed, sex, ethnicity, sexual orientation, mental or physical disability, age, ancestry, athletic performance, special need, proficiency in the English language or a foreign language, or academic achievement.

5. Will not exclude admission based on the student's or parent's/guardian's place of residence, except that a conversion school shall give admission preference to students who reside within the former attendance area of the public school.

6. Will meet all statewide standards and conduct the pupil assessments required pursuant to Education Code Sections 60605 and 60851 and any other statewide standards authorized in statute or pupil assessments applicable to pupils in noncharter public schools.

7. Will comply with all applicable portions of the 2001 reauthorization of the Elementary and Secondary Act (also known as "No Child Left Behind"). (20 U.S.C. § 6319.)

8. Will consult, on a regular basis, with parents, guardians and teachers regarding its educational programs, as required by Education Code section 47605(c)(2).

9. Will offer at least the minimum amount of instructional time at each grade level as required by law, and comply with Title 5, California Code of Regulations, section 11960(b) with respect to the legally required minimum school days.

10. Will comply with the conditions of apportionment set forth in Education Code section 47612(b) that average daily attendance not be generated by a pupil who is not a California resident, and that "a pupil over 19 years of age shall be continuously enrolled in public school and make satisfactory progress towards award of a high school diploma," to remain eligible for generating charter school apportionments.

11. Will provide to the Office of Charter Schools information regarding the proposed operation and potential effects of the school, including, but not limited to, the facilities to be used by the school, including where the school intends to locate, the manner in which administrative services will be provided, and potential civil liability effects, if any, upon the school and authorizing board.

12. Will adhere to all applicable provisions of federal law relating to students with disabilities, including the Individuals with Disabilities Education Act; section 504 of the Rehabilitation Act of 1974; and Title II of the Americans with Disabilities Act of 1990.

13. Will comply with the requirement set forth in Education Code section 47605(d)(3) that "[i]f a pupil is expelled or leaves the charter school without graduating or completing the school year for any reason, the charter school shall notify the superintendent of the school district of the pupil's last known address within 30 days, and shall, upon request, provide that school district with a copy of the cumulative record of the pupil, including a transcript of grades or report card, and health information."

14. Will adhere to all applicable provisions of federal law relating to students who are English language learners, including Title VI of the Civil Rights Act of 1964; the Equal Educational Opportunities Act of 1974; MGL c. 76, §5; and MGL c. 89, 71 § (f) and (I).

15. Will comply with the Family Educational Rights and Privacy Act (20 U.S.C. § 1232g; 34 CFR Part 99).

16. Will comply with all other applicable federal and state laws and regulations, including the California Code of Regulations.

17. Will submit an annual report and annual independent audits to the OUSD Office of Charter Schools by all required deadlines.

18. Will maintain written contemporaneous records that document all pupil attendance and make these records available for audit and inspection, as required by Education Code section 47612.5(a)(2).

19. Will submit required enrollment data each March to the OUSD Office of Charter Schools by the required deadline.

20. Will comply with "[a]ll laws establishing minimum age for public school attendance," as required by Education Code section 47610(c).

21. Will operate in compliance with generally accepted government accounting principles.

22. Will maintain separate accountings of all funds received and disbursed by the school.

23. Will participate in the California State Teachers' Retirement System and other retirement systems, as applicable.

24. Will obtain, keep current, and make available for inspection all necessary permits, licenses, and certifications related to fire, health and safety within the building(s) and on school property.

25. Will obtain, keep current, and make available for inspection all necessary teacher certifications, permits or other documents as required under EC Section 47605(l).

26. Will at all times maintain all necessary and appropriate insurance coverage.

27. Will submit to the OUSD Office of Charter Schools the names, mailing addresses, and employment and educational histories of proposed new members of the Board of Trustees prior to their service.

28. Will, in the event the Board of Trustees intends to procure substantially all educational services for the charter school through a contract with another person or entity, provide for approval of such contract by the Board of Education in advance of the beginning of the contract period.

29. Will require the Charter School Board to comply with the provisions of the Ralph M. Brown Act (California Government section Code 54950 et seq.)

30. Will comply with the provisions of the California Public Records Act (California Government Code section 6250 et seq.).

31. Will provide financial statements that include a proposed first-year operational budget with start-up costs and anticipated revenues and expenditures necessary to operate the school, including special education; and cash-flow and financial projections for the first three years of operation.

32. Will provide to the Office of Charter Schools a school code of conduct, Board of Trustee bylaws, an enrollment policy, and an approved certificate of building occupancy for each facility in use by the school, according to the schedule set by the Office of Charter Schools but in any event prior to the opening of the school.

33. Will be located within the geographical boundaries of the District in locating its site, or otherwise comply with the requirements in Education Code section 47605 and 47605.1.

34. Will agree to defend, indemnify and hold harmless the District against any and all liability and claims arising out of the Charter School's acts, errors and omissions.

Hae-Sin Thomas, CEO, Education for Change

Executive Summary

Founded in 2005 by experienced educators and entrepreneurs, Education for Change (EFC) is a nonprofit public benefit corporation. As a Charter School Management Organization, EFC operates public TK-8 schools designed to offer a high quality education at no cost to parents. EFC serves ethnically and economically diverse student bodies.

The staff and community of Education for Change Public Schools and the Latitude 37.8 High School community are submitting this petition for a new charter public high school for the term July 1, 2018 through June 30, 2023.

Name of Proposed Charter School	Latitude 37.8 High School
Grade Configuration	9-12
Model or Focus (e.g., Blended Learning, Dual Language, etc.)	Project Based, Competency Based, Diverse by Design, Fieldwork Oriented
Proposed Region and/or Neighborhood	City-Wide
Primary Contact (name, email, mobile phone)	Hae-Sin Thomas hthomas@efcps.net, (510) 568-7936
Board Chair (name, email, mobile phone)	Nick Driver ndriver@csmci.com, (415) 225-4661
Affiliated Charter Management Organization	Education for Change Public Schools

Latitude 37.8 High School

Latitude 37.8 is a new high school model in Oakland, California that leverages the assets of the city to provide students with the experiences, skills, and network they need for a meaningful and productive life. Forged by a team of educators, designers, makers, artists, parents, students, civic leaders, and business leaders, Latitude will harness the dynamic resources of the Bay Area to provide students with experiential, place-based learning, personalized for each individual.

- **Latitude Vision**
  Latitude 37.8 High School graduates will have the personal agency, essential competencies, and integrated identity necessary to be prepared for a meaningful and productive life.

- **Latitude Mission**
  Latitude 37.8 High School facilitates self-directed, passion-driven learning that leverages the assets and resources of the city to provide students with a personalized and authentic learning experience.

Latitude 37.8 High School - History and Design Process

Latitude 37.8 is a new high school model for Oakland, California that leverages the assets of the city to provide students with the experiences, skills, and network they need for a meaningful and productive life. Forged by a team of educators, designers, makers, artists, parents, students, civic leaders, and business leaders, Latitude will harness the dynamic resources of the Bay Area to provide students with experiential, place-based learning, personalized for each individual.

In the fall of 2015, a diverse team came together to respond to the challenge posed by the XQ Super School Project of determining a new vision of high school for Oakland students. To inform their design, the team engaged in a number of discovery activities that included research, school visits, and community engagement. The focus of this research was to determine both the hopes and aspirations of students for their high school experience, as well as their explicit needs. A survey was administered to over 250 middle and high school students to examine their schooling experience. The team then facilitated focus groups with two sets of middle school students to dig deeper into their hopes and needs for a high school experience. As an additional engagement strategy the team hosted a viewing of 'Most Likely To Succeed' and facilitated a discussion afterward. Through this research it became clear that students desired the opportunity to learn about the real world in collaborative projects that had meaningful impact on their communities. Armed with these perspectives, the Latitude XQ team developed a prototype for the high school program that was summarized in our final XQ application. We were proud to ultimately be one of 50 national finalists out of over 700 applications.

Please see Appendices A1, A2, and A3 for Latitude's XQ Team Roster, Community Engagement Data, and XQ Application.

Throughout the past year, the school design work has continued to move from a school concept to a school program that will deliver powerful learning experiences for students and improve their educational and life outcomes. A design team of educational experts, the Latitude Design Team, met regularly throughout the year to build a prototype of the instructional program to accomplish the school vision. Additionally, we recruited and hired the founding team that will be charged with the execution of the program. As these plans were developed, we continued our community engagement efforts to get feedback on our design from students and families and to build a community of meaningfully interested students and families.

Latitude 37.8 High School Overview

<u>Latitude Theory of Change:</u>
Students thrive when they have close relationships with adults who believe in their potential, hold them to high expectations, and mentor them through the steps necessary to achieve success.

Latitude expands the definition of teacher to include members of the community, who have knowledge and skills to share and can provide applied learning opportunities in alignment with students' academic and life goals. Latitude transforms "high school" into a series of experiences that create confident, connected young adults who have developed a strong, supportive, citywide network. Collaborating within a community of learners, students create work that matters, enlarging their sense of possibility about the impact they are capable of achieving.

Latitude Graduate Profile

The vision for Latitude graduates exceeds common notions of educational attainment and academic outcomes for students. Our vision of the Latitude graduate is inclusive of college and career readiness. All Latitude students will graduate with A-G transcripts and powerful experiences across a broad array of career interests. Additionally, these college and career readiness indicators are a means to deeper life outcomes for all of our students. These outcomes include being able to articulate goals for themselves and having the ability to fulfill them. It also includes their ability to have agency and influence the world around them. This broader definition of a successful young person is influenced by the review, "Foundations for Young Adult Success: A Developmental Framework".[1] As such, a Latitude graduate will have…

- **Personal Agency**—Latitude graduates will have the agency to make choices about one's life and have the ability to take an active role in their life path. Latitude graduates will be able to determine goals and plans to accomplish them while also leveraging their other skills, abilities, and mindsets to navigate challenges and make adjustments to their goals and plans.

- **Essential Competencies**—Latitude graduates will demonstrate mastery of a core set of college and career readiness academic and non-cognitive competencies that allows them to perform effectively in a variety of roles and settings. These include academic competencies within traditional academic disciplines as well as non-cognitive competencies from the fields of design thinking and social emotional learning.

- **Integrated Identity**—Latitude graduates will have a strong consistent understanding of themselves across a variety of settings and social contexts. Latitude graduates will have a strong sense of who they are including where they have come from and where they see themselves going.

To attain these broader outcomes for students, the Latitude model expands and reimagines our vision of 'school' from a building or a place to a set of experiences students have that enable their growth and mastery along academic and social emotional lines. The Latitude High experience plays an important role in leveling the playing field for all learners by ensuring all students have access to the resources and assets of the city to pursue their passions and leverage the resources and assets of the city in service of them.

Latitude Design Principles:

In developing the Latitude program, the Design Team has adhered to the following principles, which will continue to guide the school through implementation and operation.

[1] See Nagakoa, et al. (2015), "Foundations for Young Adult Success: A Developmental Framework".

- **Relevance**—Real -life challenges are our coursework at Latitude. By removing the walls of a high school, the city is our classroom, and students investigate authentic problems confronting our community.

- **Personalization**—Students' needs and interests drive their educational paths. We will understand where a student is and where they hope to go and build a personalized education plan with them and their families.

- **Integration**—Studies at Latitude are always interdisciplinary, and students always learn within an integrated community. Because learning takes place within a diverse school population and outside of a neighborhood--bound building, students work with people of all socioeconomic, ethnic, and racial backgrounds and approach problems from multiple perspectives.

- **Creativity**—Latitude students, nurtured by makers and designers, entrepreneurs and artists, acquire the creative confidence they need to navigate the knowledge economy with ease and inspiration.

Latitude Key Practices:
To apply the Latitude design principles, there are two key practices that run throughout our program and enable us to support students to attain the elements of our graduate profile.

- **Place Based**—At Latitude, we seek to leverage all of the human, organizational, and physical resources of the city and community on behalf of our students. We apply a deep place and project based learning approach to create relevant and personalized learning experiences for our students. Thus, this element of our model redefines the traditional notion of facilities for 'school'. Latitude will operate in a 'hub' model in which we utilize two smaller, innovative facilities in different parts of the city that provide students with supports and resources as they access the various resources and participate in place based learning activities in that part of the city. By leveraging underutilized facilities and partnerships within the city, we will be able to redirect those resources to staffing and programming for students.

- **Competency Based**—Latitude will offer a competency based approach to our program to allow students to personalize their learning experience and allow flexibility in when and how students learn and demonstrate their achievement. Our instructional approach values the demonstration of mastery over conventional seat time requirements and is manifested in our partnerships with families for individualized learning plans and the authentic assessment practices that are integrated throughout the Latitude learning experience.

Latitude Learning Experience:
The Latitude learning experience is organized around four key structures that operationalize each of our design principles and employ our key practices:

- **Studios**—Latitude's studio model will engage students in experiential project-based learning grounded in the city of Oakland, exploring its cultural dynamism, entrepreneurial assets, and unique challenges. Instructors will facilitate learning experiences in authentic settings, in partnership with professionals from the community. Students' project work will be organized into two interdisciplinary studios, Humanities Studio and Science and Design Studio, as they investigate, document, and develop creative solutions to real challenges confronting the Oakland community. The benefits of operating within a professional studio are many: from Day 1, Latitude students will have the opportunity to step into the shoes of professionals, to begin building a portfolio of work, to take on authentic leadership roles, and to develop the agency, skills and methods of inquiry that will facilitate their pursuit of independent projects in later phases.

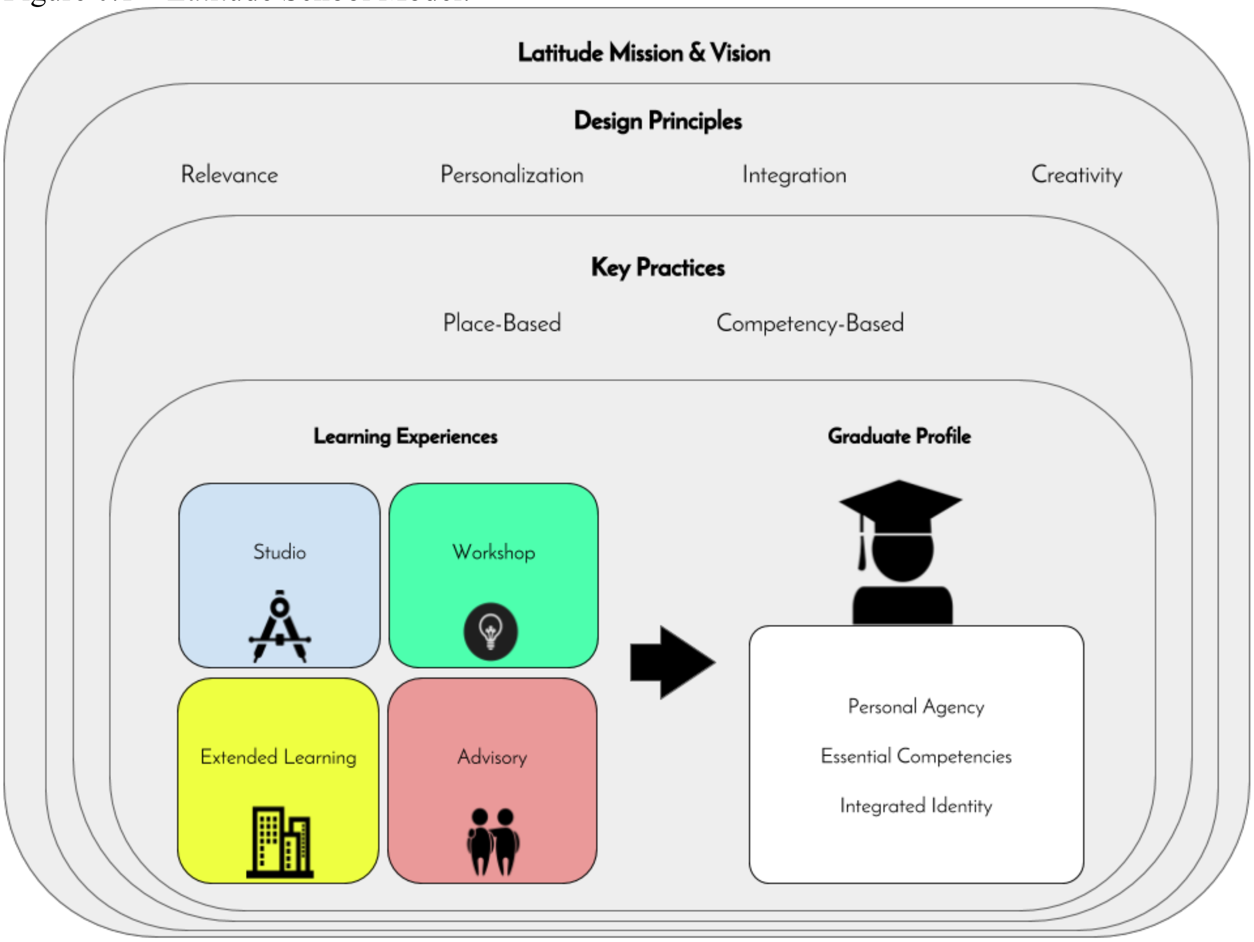
- **Workshops**—Latitude's Workshops will complement and enrich the work happening in our Studios. Students will develop foundational literacy, communication, and mathematical thinking skills through a highly differentiated, personalized learning approach, balanced with opportunities to share their learning and defend their reasoning through Socratic seminars and group-worthy mathematical inquiry.

- **Advisory**—Cultivating a strong sense of belonging will permeate all aspects of the Latitude experience, but advisory will be students' home within the school throughout their time at Latitude. Advisory will provide students with the space and support to reflect on their evolving sense of identity. Throughout their time at Latitude, students will develop an ever clearer sense of purpose about the lives they hope to lead and reflect on how their values and beliefs align with their aspirations. The advisor's job is to know each student and their family deeply, so that they can support each student's unique college and career goals through a personalized educational plan.

- **Extended Learning Opportunities (ELOs)**—Advisors will support students in securing ELOs, such as internships or service learning experiences, off campus. They will coordinate Networking Power Lunches and Career Site Visits with professionals in the community. Advisors will support advisees in conducting regular informational interviews, so that the task of networking becomes second nature. Students will have the option of identifying their own ELOs, or they may choose an ELO from one of several core community partners that Latitude will cultivate. Within advisory, students will have dedicated time to reflect on their ELOs and to curate a digital portfolio that documents their evolving intellectual and career interests, as well as a virtual "rolodex" of their ever expanding network of professional contacts.

The following graphic demonstrates the nested nature of the school's design:

Figure 0.1—Latitude School Model:



Phases of Latitude Program:

Latitude is structured as a gradual release model. Instructors initially provide a higher level of structure and support and then release students to an increasingly self--directed approach in the later phases.

1. Phase 1 is structured around Math and Humanities Workshop, as well as the Humanities and Science and Design Studios: highly scaffolded, project-based learning experiences that support students in developing the academic, design, and SEL competencies essential for successful self-directed learning.

2. In Phase 2, students' educational plans become more personalized, as they experience greater voice and choice within their studios, as well as an increased emphasis on Extended Learning Opportunities off campus, such as professional internships.

3. In the Graduation Phase, students apply the highest levels of mastery of the competencies as they prepare to move into adult life. The learning plans in this phase focus on demonstrating their high school achievement and implementing a plan to prepare for their post-secondary life.

Supporting All Latitude Students:
As an intentionally diverse school, Latitude seeks to reflect the diversity of learners across our city.[2] The design principles, key practices, and learning structures have been developed upon the notion that school must start with the individual students and then be designed to provide the experiences necessary for them to attain our graduate outcomes. We believe that our model is supportive of all types of learners from any type of life circumstance. Latitude's personalized and competency based approach will provide the flexibility to serve students who are over age, credit deficient, and/or require flexibility in their schedules and program, such as newcomers, homeless youth, and teen parents, as well as high achieving, accelerated students. By building systems to serve students with these diverse types of needs and leveraging the resources of the city to support them, we will be able to serve an authentically diverse student body that reflects all of the different experiences of young people in our city.

Latitude School Leadership Team

Lillian Hsu, Principal
Lillian's work is rooted in the belief that all students are capable of doing incredible things when given the right opportunity and support.

Lillian was a founding teacher at Oakland Unity High School. At Unity, Lillian discovered the power of engaging students in authentic project-based learning. Her students profiled Oakland's community heroes, published a guide to local restaurants, penned and performed a play about the impact of incarceration, wrote their own business plans, and recorded podcasts documenting the journeys of Oakland immigrants. Lillian started the journalism program at Unity High School and traveled with a group of students to New Orleans after Hurricane Katrina to capture the stories of undocumented migrant workers who took on the toxic clean-up of houses in the Ninth Ward.

In 2009, Lillian relocated to San Diego to become the pioneer School Leadership Resident at High Tech High, a diverse by design school that attracts over 4,000 visitors every year to learn about its project-based learning model. After completing her Master's in School Leadership, Lillian became the Director of High Tech High Chula Vista, a school of 600 students near the US-Mexico border. As Director, Lillian was a strong advocate for projects that had authentic community connections. Students at HTH Chula Vista designed and built affordable live-work units to keep artists in the city, produced a full-length documentary about reducing gun violence in the United States, reviewed legal cases for the California Innocence Project, and dissected a juvenile humpback whale in partnership with scientists from NOAA.

Since returning to Oakland, Lillian has coached Oakland principals in design thinking through School Retool and supported OUSD schools through the School Design Lab. She also coached the intrepid teaching staff at Rudsdale Continuation High School towards their first annual student exhibition. As a Deeper Learning Equity Fellow with Big Picture Learning and the Internationals Network for Public Schools, Lillian documented the efforts of San Diego County Office of Education's Juvenile Court and Community Schools to bring literacy rich project-based learning to some of the most vulnerable students in our state.

[2] Latitude intends to join the Diverse Charter Schools Coalition (www.diversecharters.org).

Lillian has worked in a variety of educational settings, including Teacher Magazine in Washington, D.C., the television program Sesame Street, and the Metropolitan Museum of Art in New York. Lillian earned her B.A. in psychology from Yale University, her M.A.T. from Brown University, and her M.Ed. in School Leadership from the High Tech High Graduate School of Education.

John Bosselman, Director of Instruction
John is a dedicated educator, leader and changemaker who evolves his practice by exploring various professions in the community to see how he can bring those back to his students. John is an advocate for school change and transformation, and he believes that schools need to change the way they educate young people.

Prior to joining the team at Latitude, John worked at High Tech High Chula Vista from 2009-2017 where he helped develop the four week immersive internship program, senior individual inquiry projects, the school's drama program, and student support for struggling students. During his final two years there, John was the co-founder of the ReVision Project, a consultation design firm incubated at HTHCV. The ReVision Project utilizes the power of high school seniors to advocate for change in the community through the use of design thinking. The ReVision Project re-designed a food pantry, designed and built a community cafe, planned a Bio-Swale and Trash Boom, and conceptualized a prototype for a new university in Chula Vista. In 2016, the ReVision Project was commissioned by the city of Chula Vista Cultural Arts Commission to prototype a cultural arts lab for the city.

From 2013-15, John was the Professional Development Lead of Learning through REAL Projects with the Innovation Unit UK, a not for profit social enterprise that works to solve social problems through innovation. John focused on the growth of teachers and over 30 schools in their development and understanding of project based learning. He was also a resident educator at School 21 in the UK where he helped develop their model for PBL. While at IU, John led work across the education portfolio including the design of Rising Academies, a PBL school in Sierra Leone.

John is a graduate of the University of New Hampshire where he majored in History, with a focus in Modern American History. He also has a M.Ed. in Secondary Teaching from the University of New Hampshire and a M.Ed. from the High Tech High Graduate School of Education in School Leadership.

Aatash Parikh, Founding Teacher
Aatash grew up in the Bay Area and graduated from Mission San Jose High School in Fremont. He went on to study Electrical Engineering and Computer Science at UC Berkeley. While at UC Berkeley, Aatash spent three years as an instructor for the school’s introductory computer science class, called CS10: Beauty and Joy of Computing, and completed software engineering internships at Google and Khan Academy.

It was also during his time at UC Berkeley that Aatash began to really notice what was and was not working for him and for his peers within the education system. When Sal Khan of Khan

Academy gave a guest lecture on his school campus, it clicked for Aatash that he could use the technology skills he had been developing to improve the education system.

After a few years working in education technology and online learning, Aatash sought to enter the classroom. He visited schools around the world before deciding to immerse himself at High Tech High in San Diego. Aatash recently completed his Masters in Educational Leadership through the High Tech High Graduate School of Education, while spending a year closely working with students and faculty at High Tech High Chula Vista. Aatash is excited to be a design teacher at Latitude High, where he will share his background in media, design, and technology with students, while helping them discover their own sense of purpose as students and as citizens.

Joi Ward, Social Emotional Learning and Restorative Justice Lead
At the core of Joi's educational practice is her passion for creating innovative learning experiences and building meaningful and authentic relationships with students.

Before joining the Latitude team, Joi worked as a Public Allies Health, Wellness and Counseling Fellow at Eagle Rock School and Professional Development Center from 2015-2017. As a Fellow, Joi supervised Personal Growth Projects, provided low-level counseling, co-led weekend wilderness trips and served as a key adult through the restorative justice process. During her time at Eagle Rock, Joi recognized the importance of integrating social and emotional learning into curriculum. She realized that building relationships with students played an integral role in creating learning environments that addressed the needs of a diverse group of learners. In her final trimester at Eagle Rock, Joi designed and co-taught a class titled Decolonizing Gender where students explored issues of identity.

Joi has traveled extensively during her years of study in both England and Ecuador and as a Fulbright teaching assistant in Malaysia. During her Fulbright year, Joi focused on creating engaging opportunities for students to learn and practice their English skills. She also developed and facilitated English workshops for over 300 students. It was these experiences that inspired her to develop educational practices that disrupt tradition in an effort to create unique learning environments.

Joi is a creative individual and considers her interpersonal skills to be one of her strongest assets. She is inspired by youth and enjoys contributing to projects that support their academic and personal growth. Joi is excited to join Latitude High, where she will contribute her skills and creativity.

Joi is a graduate of Scripps College where she studied Sociology and Music.

Aaron Townsend, Project Manager
Aaron has been an educational leader and innovator for over 20 years with the singular goal of transforming educational outcomes for underserved students and communities. Aaron started his career in the classroom in Karasu, Kazakhstan as a Peace Corps Volunteer. Since that time, he has been a teacher, school leader, and district leader in Maine and California. Aaron was the founding principal of Coliseum College Prep Academy in Oakland, CA. Under his leadership,

CCPA was transformed from a low performing middle school into one of the leading secondary schools in the city. Following his time at CCPA, Aaron supported the transformation of four district middle schools through the district's Office of School Transformation. Based on the educator effectiveness work launched through this office, Aaron joined the district human resources division to transform it into a Talent Development Division that finds, keeps, and grows extraordinary adults for Oakland students and families. Aaron served as the Deputy Chief of Talent Management and was responsible for the development of new teacher and school leader evaluation systems in addition to other talent strategy. Aaron's combination of school design and talent development work anchors his beliefs about how we produce transformative results: powerful, innovative school designs with educators who have the capacity to enact them!

Please see Appendix A4 for the Latitude Founding Team Resumes.

Latitude Design Team

The following individuals participated in the Latitude Design Team during the 2016-2017 school year. They were charged with building a school based on the concept developed during the XQ Super School community engagement process. The team represented a diverse group of educators, designers, and community members with significant experience in innovative educational design. The Latitude team is deeply indebted to them for their contributions:

- Francis Abbatantuono, Science Teacher, EPIC Middle School
- Pamela Briskman, Director of Curriculum, Galileo Learning
- Greg Cluster, Work Based Learning Coordinator, Oakland Unified School District
- Loren Demetrius, School Coach, Big Picture Learning
- Randall Depew, Managing Director of Education, KQED
- Jeff Embleton, Assistant Principal, ASCEND K-8 School
- Christina Jenkins, Program Director, Project H Design
- Greg Klein, Senior Director of Innovation and Learning, Rogers Family Foundation
- Louise Mackie, Senior Designer, Gyroscope, Inc.
- Tuan Nguyen, Computer Sciences Instructor, Laney College
- Parker Thomas, Managing Partner, Mirus Labs

Education for Change Mission Statement

Our mission is to provide a superior public education to Oakland's most underserved children by creating a system of public schools that relentlessly focuses on our students' academic achievement. We believe that high quality instruction, and its continuous refinement, will lead to success for our students. When our students succeed, they will be prepared to make thoughtful and informed choices that will set them on a path for a successful life.

Education for Change Public Schools believes it is the right for *every* child to have access to a high-quality, 21st century education. Through our unique model, **we transform** neighborhood schools into high performing organizations for the children that are most dependent upon them and build strong secondary school options to ensure all children in the neighborhood have access to a powerful TK-12 pipeline to success in college and career. **We invest** in *strong partnerships* with dedicated parents and community organizations, allowing us to provide a full spectrum of education services to our students and their families. **We recruit and develop** the most *talented, passionate* teacher leaders who *collaborate* and *innovate* within their classrooms and across our growing organization. **And we support** autonomy among our campuses, allowing each school to lead its own instructional program while promoting a culture of *consistently high expectations* and *accountability* that is central to our mission.

Education for Change Public Schools is committed to *improving* and *increasing outcomes* for our students, their families and the communities in which they live. Our children will become self-motivated learners, critical-thinkers and resilient leaders prepared for the academic and professional challenges that await them in life.

Education for Change - History and Accomplishments

Founded in 2005 by experienced educators and entrepreneurs, Education for Change (EFC) is a nonprofit public benefit corporation that was founded in partnership with Oakland Unified School District to turn around chronically underperforming schools. As a Charter School Management Organization, EFC operates public TK-8 schools in traditionally underserved communities in Oakland, California designed to offer a high quality public education. EFC currently operates six schools in Oakland, California: Achieve Academy, ASCEND, Cox Academy, Lazear Charter Academy, Learning Without Limits, and Epic, and all but Epic were originally OUSD schools that became EFC charter schools.

At Education for Change our core beliefs are the foundation for our organization. We have built strict and deliberate screens into our hiring process to ensure that we hire individuals who share our beliefs about what makes a great school - and what it takes for all children to succeed in school and in life. We believe that organizations can only be successful when people are aligned around a common purpose and a shared set of goals. This applies to our schools, and to Education for Change as a whole. Through that shared set of core beliefs, we are building one community of adults across multiple schools that share responsibility for the EFC mission. Our core beliefs have been translated into a set of non-negotiables across all of our sites. They are outlined below.

Figure 0.2—EFC Non-Negotiables:

The Instructional Model	Teacher development	Supporting the whole child
• Coherent, research-based standards-aligned instructional model • EFC standards-aligned benchmarks • Grade-level coherence – instructional goals, content, instructional strategies, pacing • Structures that support high levels of student engagement • Rigor – higher levels of Blooms taxonomy	• Structures that enable coaching, modeling, training, feedback • Data-based inquiry • Grade-level collaboration • Teacher leadership/ decision-making structure • Appropriate levels of teacher planning time built into schedule	• Family leadership council • MTSS - a multi-tiered system of academic, behavioral, and social-emotional supports • Schoolwide school culture policy with clearly communicated values and expectations and an aligned curriculum • Structures and practices to promote physically healthy kids

<u>Academic Success</u>
All of EFC's schools have experienced academic gains over the past ten years. With respect to serving high poverty students, EFC manages some of the highest performing elementary schools in the Fruitvale, and currently Learning Without Limits is the highest performing Oakland elementary school in Mathematics and the second highest in ELA with respect to serving high poverty Latino students as reported by Innovate Public Schools.

While we are definitely not where we want to be yet, we are on a growth trajectory that continues to outperform or maintain pace with other Oakland Unified schools serving a similarly high-need student population (see table below).

Figure 0.3—EFC-OUSD Elementary SBAC Proficiency Comparison:

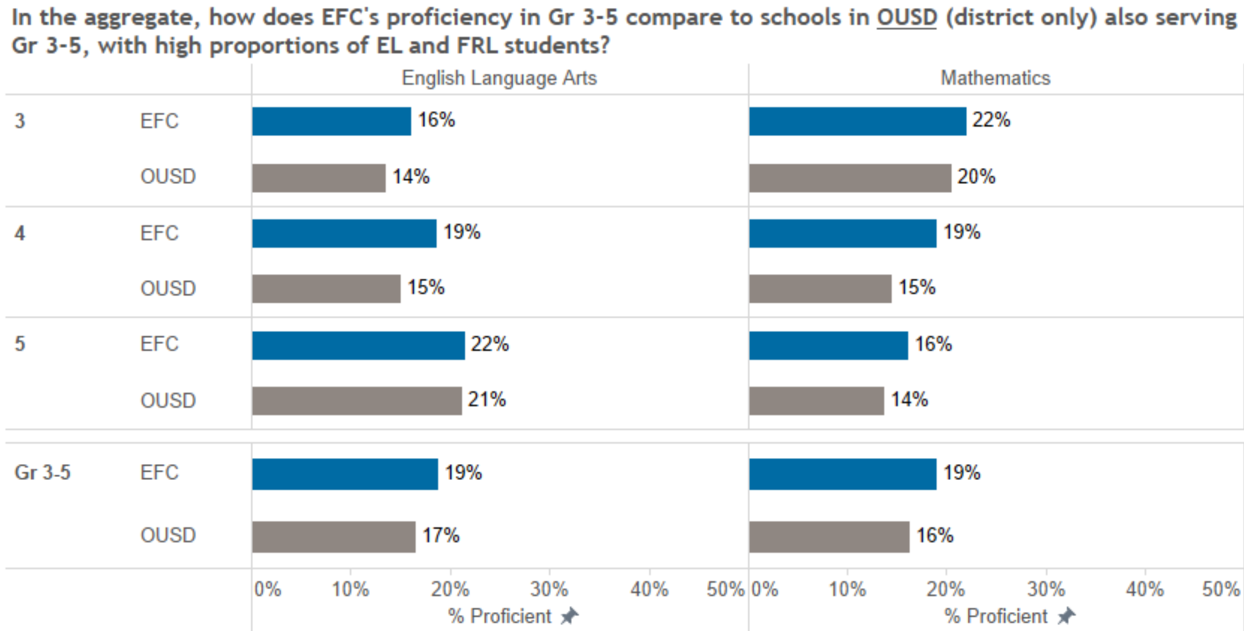


Figure 0.4—EFC-OUSD Middle SBAC Proficiency Comparison:

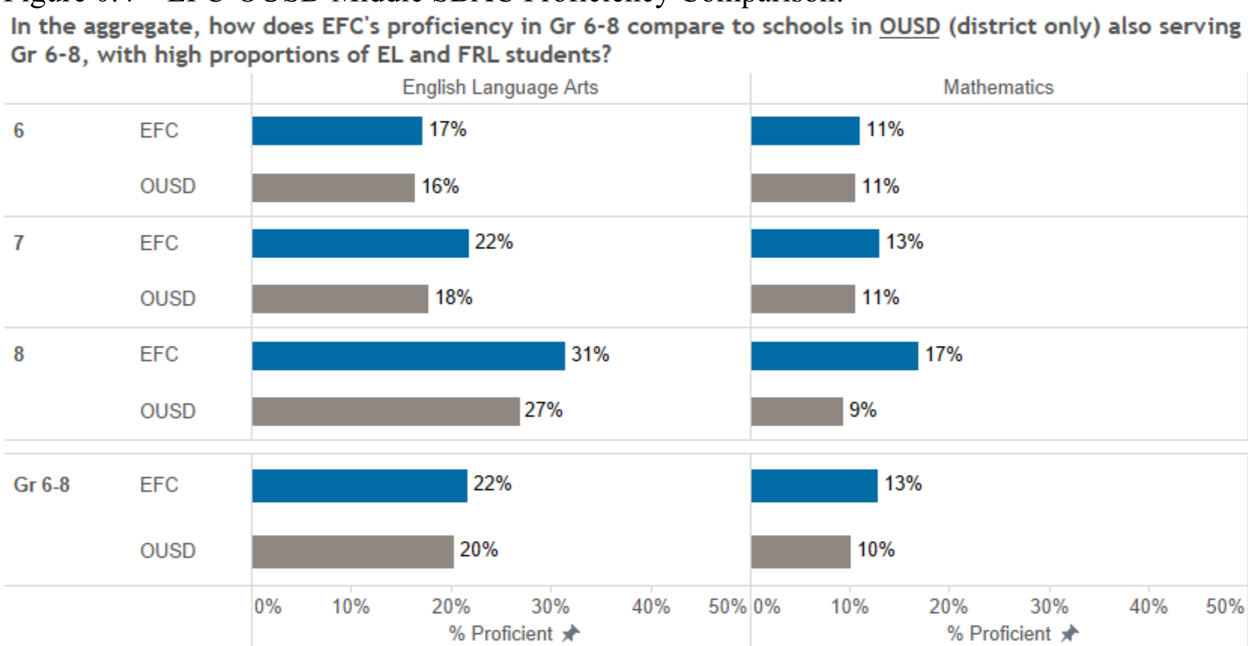


As illustrated in the graphs above, in the 15-16 school year EFC, as an organization, achieved higher proficiency rates than schools in Oakland Unified serving 40% or more English Learners and 80% or more students eligible for free or reduced-priced lunch. This trend holds at both the elementary and secondary grade spans.

Despite these promising results, EFC recognizes that there is much room for improvement. To this end, we continue to seek out innovative programs to meet the needs of our students. Specifically, EFC has:

- Implemented a multi-tiered system of supports to support students' social-emotional, academic, and behavioral needs and create a strong student-centered culture;
- Leveraged technology, rethought scheduling and space, and iterated on student grouping to implement greater personalization strategies K-8, building teacher capacity to use data strategically to target and accelerate instruction one student at a time;
- Invested in enrichment programs to create authentic opportunities for students to apply their science, technology and mathematical content;
- Invested in a language and literacy-focused Transitional Kindergarten program and launched our first pre-K program in 2016;
- Partnered with the Rainin Foundation to design and implement a strategic and focused TK-1 balanced literacy program that leverages small group in-class instruction, focused intervention in kindergarten and first grade, and a deep implementation of proven Common Core curricula;
- Piloted Teach To One at ASCEND to facilitate deeper internal learning around personalization in mathematics; and
- Partnered with Achievement First in prioritizing the implementation of a problem-based math program in grades 2-8 that strategically shifts the cognitive load from teacher to student.

The above programs are only a few examples of the innovative programs that EFC encourages its schools to seek out. All of the programs appropriate to high school will be in operation at Latitude.

School Culture

Education for Change prides itself on operating an inclusive and thoughtful organization based on our core values:

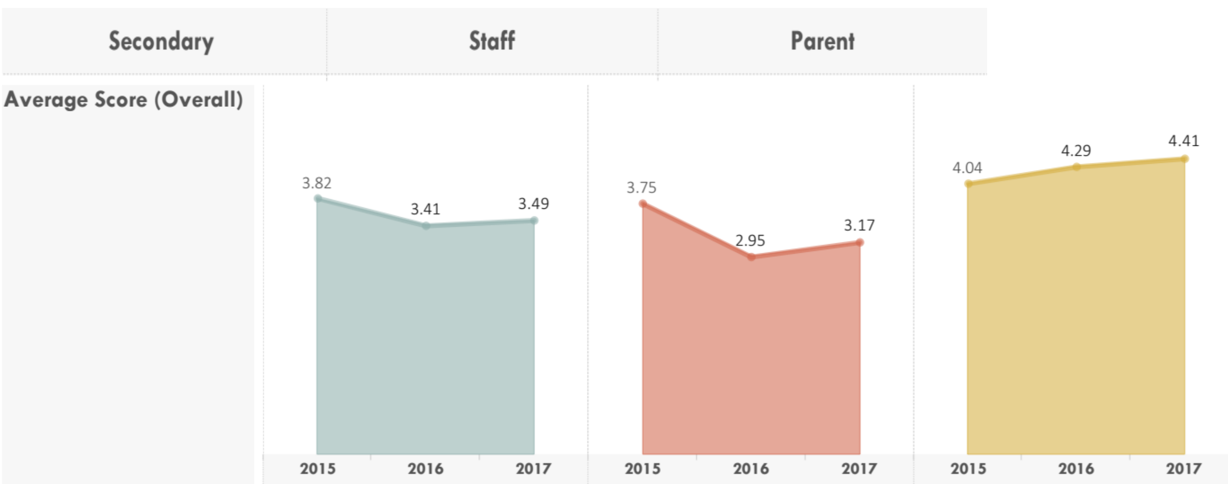
- **We collaborate.** We are a team. We plan together, observe and analyze each other's work, collaborate with our coaches and site leaders, partner with our families, and together make decisions about our programming
- **We are a learning organization.** We approach our practice with an inquiry stance and a growth mindset; we analyze, innovate, and iterate every day so that we continually improve. We believe in coaching and developing people at every level of experience, at every level of the organization.
- **We are solution-oriented.** We approach every challenge with a problem-solving orientation. We listen to and encourage each other. We are resilient in the face of adversity.
- **We are accountable.** Our mission is to provide a superior public education to Oakland's most underserved children. We assume personal accountability for student growth; we analyze multiple forms of data, and that analysis drives our instruction.
- **We are student-focused.** We form close relationships, utilize personalized learning, differentiate instruction, make learning culturally relevant, engage families, and provide individualized interventions to meet the needs of every child.
- **We listen.** We are a small, responsive organization that values student, family, and employee voice and input.
- **We are rooted in community.** Ours is a place-based strategy that works deeply with

neighborhood leaders and partners to serve our children. We understand that the cultures, values, traditions, and assets that our families bring must be leveraged and honored to reach and teach our children.

Across the organization, we are intentional about creating systems, routines, rituals, and processes that incorporate the EFC values and bring them to life for our children, families, and staff.

As a result of our intentional work, on the annual SCAI (School Climate Assessment Inventory) survey, EFC has maintained consistently high scores that place us at the high-functioning and intentional quadrant for most areas, particularly with respect to parent satisfaction. The SCAI provides our schools with an overall score as well as individual scores in 8 dimensions of school climate - physical appearance; faculty relations; student interactions; leadership and decision-making; discipline and management environment; learning, instruction and assessment; attitude and culture; and community relations. A score of 3.5 or higher correlates with student achievement.

Figure 0.5—SCAI School Culture Survey 2016-17 for Epic Middle:



On our 16-17 staff survey, 84% of EFC staff indicated they were committed to returning to EFC as an employee in 17-18. This is an indicator of staff satisfaction with EFC's support systems and their overall investment in our mission and vision.

<u>Serving the Most Underserved Children Effectively</u>

Education for Change partnered with Seneca Family of Agencies in 2011 to develop the "Unconditional Education" approach to implementing a multi-tiered system of academic, social-emotional, and behavioral supports for children in a school setting. This effort was recognized nationally by the Department of Education when Seneca received a federal Invest in Innovation grant (I3) in 2014 in recognition of its promise. Across the organization, <u>students with IEPs at EFC have greater growth on average than children without</u>. We are proud that we are beginning to show promise in an area that is a national challenge.

The Unconditional Education program is in deep alignment with our values as an organization. Because EFC primarily serves neighborhood students, EFC's student population mirrors the myriad needs of the most high poverty OUSD schools. Many EFC children come to school from some of the most high poverty neighborhoods in Alameda County, and our students confront significant "toxic stress" due to a confluence of several factors including poverty, crime in their communities and recent immigration among others. To address the needs of our children, we provide intervention early and often, train our staff in trauma-informed practices, and partner with Alameda County Behavioral Health to leverage Medi-Cal resources for our youth and families. All six EFC schools have EPSDT contracts with mental health providers. Latitude will leverage the Department of Student Support Services at EFC, a centralized division that supports schools in implementing effective multi tiered systems of supports (MTSS) and ensures students with IEPs are receiving the services as outlined in their plans. Like all EFC schools, the Latitude MTSS structure will ensure both General Education and Special Education students receive the social-emotional, behavioral and academic services needed to graduate Latitude prepared for college and career, and because Latitude will be a diverse by design school, it will be able to more effectively target resources to our students with the greatest needs.

Education for Change - Organizational Leadership

The Education for Change management team blends professional experience across public education, the public sector, for-profit and nonprofit organizations, and business. Our team brings the best practices from these many sectors to accomplish our ambitious goals and our mission.

<u>Senior Leadership Team, Education for Change</u>

- *Hae-Sin Thomas, Chief Executive Officer*
  Hae-Sin has been the CEO of EFC for four years and brings 24 years of TK-12 public education experience to this team. Her focus before joining EFCPS was in the turnaround space – working with school districts and charter management organizations to recreate their lowest-performing schools as the CEO of urbanED solutions. She is the co-founder of GO Public Schools, an Oakland-based education advocacy group and watchdog. Before urbanED solutions, Hae-Sin worked for the Oakland Unified School District as a teacher, principal, school developer, and executive officer. She led a team charged with creating quality school options for families in every neighborhood and ensuring high-performing, more personalized communities of learning for children and facilitated the design and opening of 22 new schools, replacing 18 chronically-failing schools. An external evaluation of the new schools reform work in Oakland found that the new schools significantly outperformed the schools they replaced in academic achievement, suspension rates, attendance rates, and overall student, teacher, and parent satisfaction. Prior to that, she was the founding principal of ASCEND, one of the five original new small and autonomous schools opened in Oakland, California. She holds a B.A in Economics from the University of Pennsylvania, a Masters in Curriculum and Instruction from the University of San Francisco, and a Masters in Administration, Planning, and Social Policy from Harvard University.

- *Sundar Chari, Chief Strategy Officer*
  Sundar Chari has been with Education for Change Public Schools for four years. Prior to becoming Chief of Staff, Sundar served as the Director of Innovation & Technology. In that role, he project managed the development of Epic Middle School, a new innovative NGLC school and implemented systems and capacity upgrades across the network, including transitioning Education for Change to become a Google Apps for Education network. Prior to joining Education for Change Mr. Chari had been on the front-line helping to lead high-profile initiatives for the Chicago Public Schools for 6 years. Mr. Chari has numerous experiences leading change management processes and developing the capacity of leaders to adopt new strategies, including leading a blended learning pilot program and developing the processes that guided over 500 schools through the major effort of redesigning their school day around student needs. Mr. Chari brings a strong background in public policy, analytics, and project management to EFC.

- *Fabiola Harvey, Chief Operating Officer*
  Fabiola Harvey has served as Chief Operating Officer for over seven years. Prior to joining Education for Change, she served as the Area Financial Manager for the Las Vegas Cluster of Edison Schools. She led start-up and business operations for 7 schools with over 6,000 students and 500 employees in the Clark County School District. This was the first time that the district awarded a cluster of schools to be managed by one Charter Management Organization. Prior to working in Las Vegas, Ms. Harvey was the Business Manager for one of the most troubled schools in the San Francisco Unified School District. At Edison Charter Academy, Ms. Harvey was able to turn around a difficult financial situation and get the school on firm financial footing. Ms. Harvey brings with her a wealth of experience operating charter schools and a long-standing commitment to urban education.

- *Noah Bradley, Chief Academic Officer*
  Noah Bradley has been Chief Academic Officer for two years, and was the Director of ELA prior to that. He came to EFC with over 16 years of experience in education. After joining Teach for America in 1997, he taught 2nd and 3rd grades for 13 years in Oakland public schools, receiving OUSD's Teacher of the Year award in 2010. Mr. Bradley went on to serve as a teacher coach, reading interventionist, and Assistant Principal at Think College Now, a high-performing public school in Oakland's Fruitvale district and the first OUSD school serving high poverty Latino students to achieve an 800+API. He has provided strategic consulting for teacher teams, school sites, and districts across the greater Bay Area. He received his B.A. from Vanderbilt University.

- *Larissa Adam, Chief Talent Officer*
  Larissa Adam has been Chief Talent Officer for two years. Prior to that, she served for ten years as Principal at ASCEND, a K-8 school recognized for its arts-integrated expeditionary learning model and effective community engagement practices. During that period, she facilitated significant increases in student achievement and led her staff and families to successfully petition for charter status. Prior to being Principal, she collaborated closely with community leaders to get Oakland's New Small Autonomous school reform policy passed, and went on to co-found ASCEND, one of the first five

New Small Autonomous Schools, as a teacher leader. Ms. Adam started teaching in Oakland through Teach for America in 1993, and continued teaching at her original placement site for eight years. She holds a B.A. in Spanish and International Relations from UC Davis, and a Masters in Educational Leadership from UC Berkeley.

- *Jen Nguyen, Chief of Leadership Development*
  Jen Nguyen has been with EFC for three years. Jen came to EFC with over 18 years of experience in education. She began her teaching career in OUSD in 1996, and has taught at the early elementary level as well as in middle and high school. Jen is Reading Recovery Certified, a National Writing Project Fellow, National Board Certified, and has a Master's Degree in Urban Educational Leadership. She has been coaching teachers and school leaders for the past ten years. After spending 16 years as a teacher and site leader, Jen took a district level position where she is able to work with coaches and site leaders to ensure high quality instruction is happening for every student in every classroom.

Please see **Element 5 - Employee Qualifications** for more information regarding the EFC Leadership Team.

Please see Appendix A5 for profiles of the EFC Senior Leadership Team.

EFC Board of Directors

Name	Current Professional Title and Organization	Board Role	Focus/Expertise
Nick Driver	Vice President, California Charter Schools Organization	President	Finance, Public Policy

ELEMENT 1: EDUCATIONAL PROGRAM

"A description of the educational program of the school, designed, among other things, to identify those whom the school is attempting to educate, what it means to be an "educated person" in the 21st century, and how learning best occurs. The goals identified in that program shall include the objective of enabling pupils to become self-motivated, competent, and lifelong learners." Ed. Code §47605(b)(5)(A)(i).

"A description, for the charter school, of annual goals, for all pupils and for each subgroup of pupils identified pursuant to Section 52052, to be achieved in the state priorities, as described in subdivision (d) of Section 52060, that apply for the grade levels served, or the nature of the program operated, by the charter school, and specific annual actions to achieve those goals. A charter petition may identify additional school priorities, the goals for the school priorities, and the specific annual actions to achieve those goals." Ed. Code § 47605(b)(5)(A)(ii).

"In accordance with SB 1290, Latitude 37.8 High School pupil outcomes related to annual academic achievement goals will be set and disaggregated by all major subgroups identified in Education Code section 52052; including race/ethnicity, socio-economic status (SES), English Learner status, and Special Education designations, in the state priorities that apply for the grade levels served or the nature of the program operated, as well as the specific annual actions to achieve those goals, any additional school priorities, the goals for the school priorities, and the specific annual actions to achieve those additional goals.

Charter School acknowledges and agrees that it must comply with all applicable laws and regulations related to AB 97 (Local Control Funding Formula), as they may be amended from time to time, which include the requirement that Charter School shall annually submit a Local Control and Accountability Plan (LCAP)/annual update to the Office of Charter Schools on or before July 1. In accordance with Education Code sections 47604.33 and 47606.5, Charter School shall annually update its goals and annual actions to achieve those goals identified in the charter pursuant to Education Code section 47605(b)(5)(A)(ii), using the Local Control and Accountability Plan template adopted by the State Board of Education, as it may be changed from time to time. Charter School shall comply with all requirements of Education Code section 47606.5, including but not limited to the requirement that Charter School "shall consult with teachers, principals, administrators, other school personnel, parents, and pupils in developing the annual update." (Ed. Code § 47606.5(e).)

Latitude's pupil outcomes, disaggregated by major subgroups in compliance with Education Code section 47607(b)(5)(A)(ii), are as follows:"

[Charter School to insert pupil outcomes in compliance with Education Code section 47607(b)(5)(A)(ii)].

"If Charter School serves students in grades 9-12, Charter School shall obtain Western Association of Schools and Colleges (WASC) accreditation before Charter School graduates its first class of students."

Charter School shall comply with the requirements of Education Code section 51224.7 with respect to implementing a fair, objective and transparent mathematics placement policy for pupils entering the ninth grade.

Introduction

Latitude 37.8 is a new high school model in Oakland, California that leverages the assets of the city to provide students with the experiences, skills, and network they need for a meaningful and productive life. Forged by a team of educators, designers, makers, artists, parents, students, civic leaders, and business leaders, Latitude will harness the dynamic resources of the Bay Area to provide students with experiential, place-based learning, personalized for each individual.

- **Latitude Vision**
  Latitude 37.8 High School graduates will have the personal agency, essential competencies, and integrated identity necessary to be prepared for a meaningful and productive life.

- **Latitude Mission**
  Latitude 37.8 High School facilitates self-directed, passion driven learning that leverages the assets and resources of the city to provide students with a personalized and authentic learning experience.

Education for Change Mission Statement

The Education for Change mission is straightforward. Education for Change Public Schools believes it is the right for *every* child to have access to a high-quality, 21st century education. Our mission is to provide a superior public education to Oakland's most underserved children by creating a system of schools that focuses *relentlessly* on our students' academic achievement.

Through our unique model, **we transform** neighborhood schools into high performing organizations for the children that are most dependent upon them and build strong secondary school options to ensure all children in the neighborhood have access to a powerful TK-12 pipeline to success in college and career. **We invest** in *strong partnerships* with dedicated parents and community organizations, allowing us to provide a full spectrum of education services to our students and their families. **We recruit and develop** the most *talented, passionate* teacher leaders who *collaborate* and *innovate* within their classrooms and across our growing organization. **And we support** autonomy among our campuses, allowing each school to lead its own instructional program while promoting a culture of *consistently high expectations* and *accountability* that is central to our mission.

Education for Change Public Schools is committed to *improving* and *increasing outcomes* for our students, their families and the communities in which they live. Our children will become self-motivated learners, critical-thinkers and resilient leaders prepared for the academic and professional challenges that await them in life.

A. Target Population and Community Need

Students To Be Served

Enrollment and Growth Plan

Located in Oakland, Latitude 37.8 High School will serve 360 students in grades 9-12 once fully enrolled in Year 6. The school will open in the fall of 2018 with an initial cohort of 50 9th grade students. We will add a grade per year and increase the size of our incoming cohort in the third year to our target of 90 students. This slow growth model is strategic - it allows us to build a culture of academic achievement and develop and implement curricular models, materials, and instructional programs one grade level at a time.

Figure 1.1—Latitude Enrollment Plan:

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
GRADE	2018 - 2019	2019-2020	2020 - 2021	2021 - 2022	2022 - 2023	2023 - 2024
9	50	50	90	90	90	90
10		50	50	90	90	90
11			50	50	90	90
12				50	50	90
Total # students	50	100	190	280	320	360

Student Demographics

One of the core design principles of Latitude is integration. In order to best prepare all students for a meaningful and productive life, we believe it is essential for students to build a strong sense of their personal identity and to be able to successfully engage across different cultures, backgrounds, and perspectives. To build these capacities in students, they must be exposed to a diverse community and be supported in engaging productively with a variety of people. Toward this end, Latitude strives to represent Oakland's diversity from different socioeconomic, racial, linguistic, cultural, and learning needs perspectives and will build community across these groups. Latitude will be an intentionally diverse school that reflects the demographics of the city of Oakland. Our projected demographics strive to represent a balance of the school age population in the city of Oakland that is both in and out of the school district.

Figure 1.2—Latitude Projected Student Demographics:

	FRL %	SPED %	EL %
Latitude Projected Demographics	50%	15%	25%
OUSD Comparison Demographics[3]	73%	12%	31%

In order to achieve the desired diversity for the Latitude community, we have embarked upon a city wide engagement plan to build support for the Latitude model and to make connections across many different groups. This effort leverages a variety of existing school, recreational, service and religious communities to attain a student body that reflects all types of diversity in Oakland. Additionally, Latitude intends to utilize legally permissible means to enroll a profile of students representative of the racial, ethnic and socioeconomic diversity of the city of Oakland. In this regard, Latitude employs certain weighting mechanisms in relation to its lottery that foster diversity and that fit squarely within acceptable admissions protocols.

Please see Appendix A7 for the Latitude Community Engagement Plan.

Please see **Element 7 - Means to Racial and Ethnic Balance** for information on student recruitment efforts, including the following:

- Outreach to families in poverty, academically low-achieving students, students with disabilities, linguistically diverse families, and other youth at risk of academic failure

Please see **Element 8 - Admission Requirements** for information on student admission and enrollment processes and procedures, including:

- Recruitment efforts in Year Zero
- Target re-enrollment rate
- Ongoing student recruitment efforts

Also, please see **Element 8 - Admission Requirements** for information on student admission and enrollment processes and procedures, including specifics around any admission preferences for students, timelines, lottery procedures and policies around waiting lists.

Community and Student Needs

Overall Community Needs

Lack of quality high school options for families

The primary need in the community is to increase the availability of high quality high school options for Oakland students and families. According to Oakland Unified's most recent School Performance Framework (SPF), only 7% of traditional high school seats were classified as 'Green', the district indicator of quality. Additionally, while there has been progress in high school graduation rates, there remain broad challenges in terms of graduation and college

[3] Data obtained from OUSD Fast Facts 2016-2017.

preparedness. The citywide graduation rate has only increased from 55% to 65% over the past 7 years.

In terms of measures of academic skills, the data also demonstrates a significant need for additional high quality school options. On the 2016 SBAC assessment, only 35% of OUSD 11th graders met or exceeded the standard in ELA and only 15% met or exceeded the standard in math. The following table demonstrates that access to quality high school options or those with stronger outcomes are limited to a cohort of smaller, more innovative schools.

Figure 1.3—OUSD High School Performance Data[4]

School Name	Enrollment	SPF Rating 2016-2017	SRA Region	Graduation Rate	UC/CSU A-G	SBAC ELA 2016	SBAC Math 2016
Castlemont	759		East	68%	62%	6%	0%
CCPA	475		East	88%	79%	29%	13%
Fremont	764		East	50%	38%	18%	4%
Life	471		East	86%	83%	61%	25%
Madison	768		East	NA	NA	32%	13%
McClymonds	372		West	81%	53%	27%	6%
MetWest	171		Central	93%	83%	12%	7%
Oakland High	1562		Central	72%	57%	38%	16%
Oakland Tech	2031		Northwest	87%	63%	61%	32%
Skyline	1843		Northeast	72%	50%	40%	18%

[4] Data obtained from Oakland Unified (www.ousddata.org) and the California Department of Education (dq.cde.ca.gov).

In addition to the variability of student performance across schools, the data indicates that there are persistent challenges in supporting all students equitably. Oakland needs schools that are able to accelerate the achievement of various sub-groups to eliminate these gaps. The following tables demonstrate significant differences in graduation, UC/CSU A-G completion rates, and SBAC performance across different subgroups within OUSD.

Figure 1.4—OUSD High School Cohort Graduation Rates by Subgroups 2015-2016:[5]

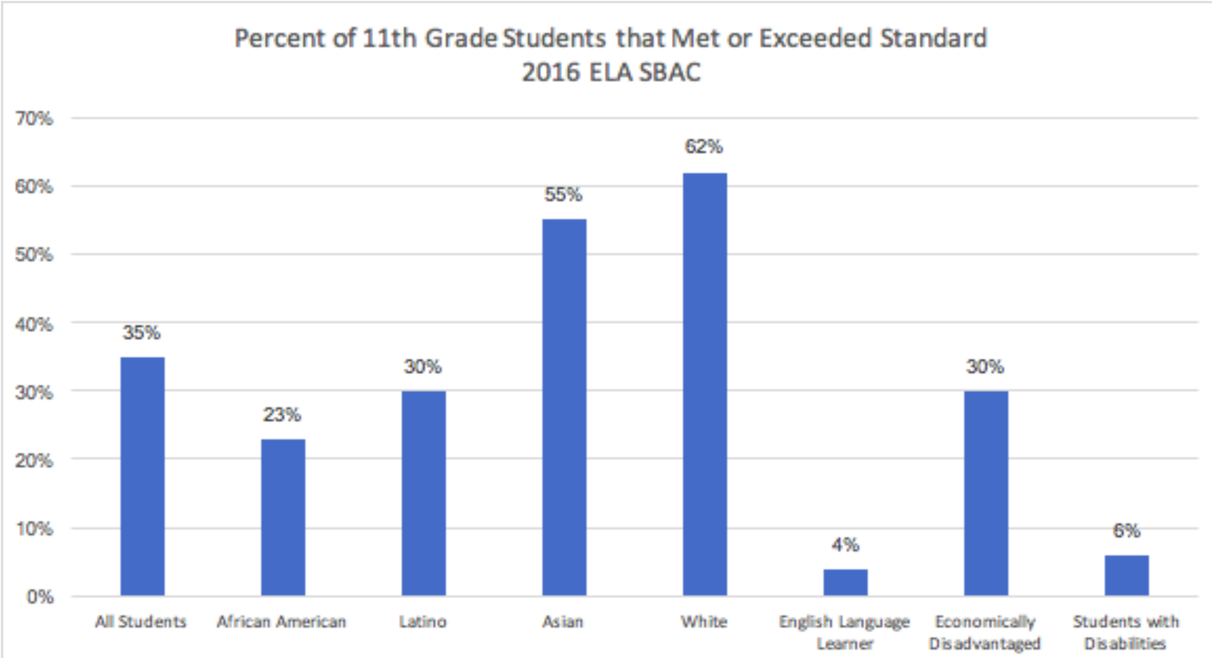

Figure 1.7—2016 OUSD 11th Grade ELA SBAC Results:[8]

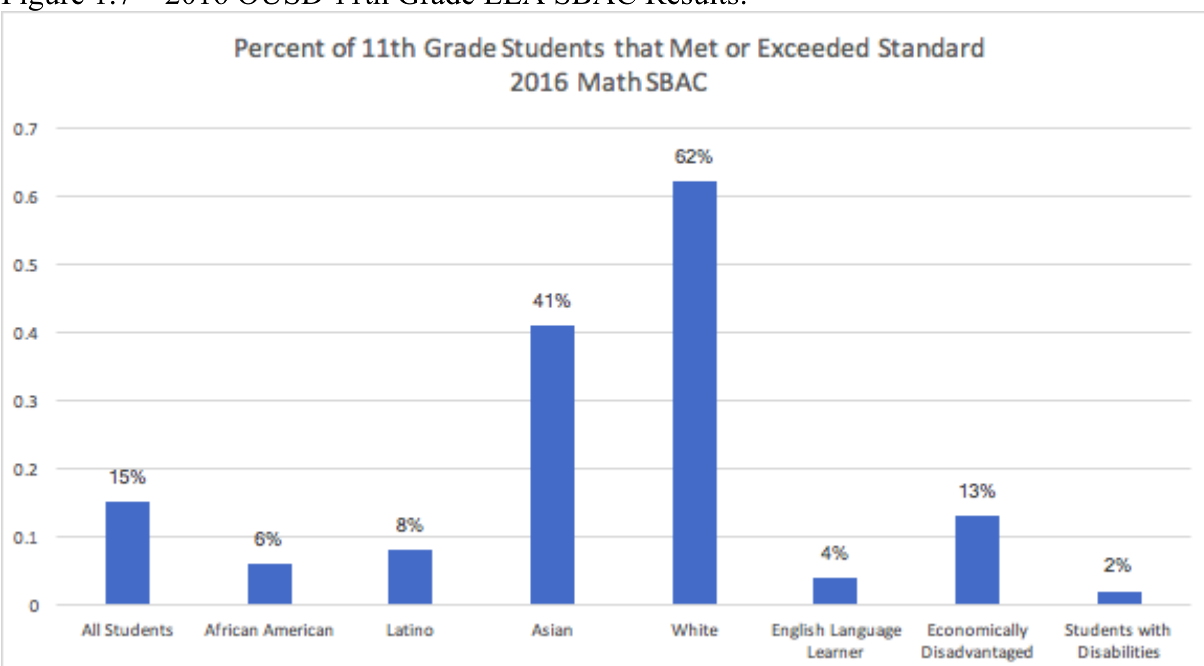

Latitude's school design is building off of two national models, High Tech High and Big Picture Learning, that have consistently achieved high outcomes for diverse student populations. Within Oakland, MetWest High School is based on the Big Picture Learning model, and it had the highest graduation rate and highest UC/CSU A-G completion rate of all district high schools in 2015-2016.

---

[7] Data obtained from the California Department of Education (dq.cde.ca.gov).
[8] Data obtained from the California Department of Education (dq.cde.ca.gov).

High Tech High is a charter management organization that operates five high schools in San Diego County with a student body comparable to Latitude's projected demographics. Each of their high schools has a graduation rate above 92%, and at least 98% of all High Tech High graduates complete the UC/CSU A-G requirements. The Latitude school model incorporates key elements from both of these high performing school models to provide an additional quality high school option for Oakland students and families.

Lack of diverse school communities

Latitude intends to serve a student population that is representative of the socioeconomic, racial, cultural, and geographic diversity of the city of Oakland, California. According to the 2010 United States Census, Oakland is a linguistically and racially diverse city - 25% Hispanic or Latino, 26% White, 27% Black or African-American, and 17% Asian. We believe that the diversity of Oakland is a tremendous asset in preparing children for success in life in the 21st Century. Unfortunately, there are currently no public high school options in the city that fully reflect this diversity.

Figure 1.8—OUSD High School Demographic Data 2016-2017:[9]

OUSD High Schools	Enrollment 16-17	Econ. Disadv.	ELL	Latino	Afr- Am	Asian	White
Castlemont	759	86%	42%	60%	32%	1%	1%
CCPA	475	96%	29%	85%	12%	1%	0%

Latitude will be an intentionally diverse school in order to facilitate the achievement of all students. The Poverty & Race Research Action Council's report "Can Racial and Socioeconomic Integration Promote Better Outcomes for Students?" provides strong research in this area.

> *"In theory, charter schools, as schools of choice, could be far more integrated than traditional neighborhood public schools and could achieve this integration through voluntary parent choice. Public policy, however, generally does not encourage the creation of socioeconomically and racially diverse schools. In fact, to the contrary, many state charter laws provide an incentive to create high-poverty charter schools."*[10]

While focusing charter school efforts on high-needs students has merit, there is strong evidence to suggest that the current tilt in the policy and philanthropic communities toward supporting charter schools that educate low-income and at-risk children in high-poverty settings results in an overly narrow approach. Widening the focus so that it also supports charter schools that provide high-needs students with a racially and economically diverse educational setting makes sense for a number of reasons:

- *Civic, Social, and Cognitive Benefits for All Students.* Socioeconomically and racially integrated schools are beneficial to all students who attend them because integration in public schools is important to fostering open-minded adults and good citizens. Students educated in diverse settings have been shown to develop higher-level critical thinking and cognitive skills. Furthermore, when low-income students graduate and search for jobs, those in economically mixed schools have access to valuable networks that can facilitate employment.
- *Resources for Improving Academic Performance.* Integrated charter schools hold particular promise for students currently in low-performing schools. Data show that many of the nation's charter schools, which on the whole are disproportionately high poverty and racially isolated, still struggle to post significant academic gains for students. Numerous studies have shown that low-income students generally perform better in schools with a more balanced distribution of socioeconomic and racial groups. Investing more heavily in socioeconomically and racially integrated charter schools would provide low-income students with the documented benefits of peer-to-peer contact with a more diverse group of students, along with other resources related to school quality that, at least in the traditional public school context, are associated with increased school diversity."[11]

Please see Appendix A8 for the Poverty & Race Research Action Council's full report.

To successfully serve this type of diverse population and achieve these results, Latitude must be prepared to support a wide range of academic and social emotional needs. Central to this is

---

[11] See Kahlenberg and Potter (2012), "Can Racial and Socioeconomic Integration Promote Better Outcomes for Students".

developing a school culture that supports students of different backgrounds in being, learning, and growing together. We believe this is best accomplished through a school culture and academic program that allows students to learn about, investigate, and interrogate the various histories and perspectives of Oakland and beyond. Too often, students from nondominant cultures are subtly and overtly expected to conform to the academic and cultural expectations of the dominant culture. Latitude's academic program--the content, curricula, and learning experiences--as well as its school culture--the rituals, systems, and structures--will provide opportunities for students to make meaning of their own life experiences and grapple with those of their classmates and the broader Oakland community to build the integrated identity that is part of our graduate profile.

Lack of Innovative Options

At Latitude we believe that one of the reasons the public school systems have not achieved the outcomes they aspire to for their students is because the schools still look and feel like schools from the past fifty years. While there has been significant community and district investment in Linked Learning, the overall portfolio of schools remains traditionally organized and run. The student experiences far too often remain similar to how they have been historically; thus, we continue to see the same patterns of outcomes.

Underneath these overall trends, there are pockets of innovation and acceleration of outcomes. Enrollment demand at these schools demonstrates the community interest in new school models. Unfortunately, there is not sufficient capacity for high quality options for all Oakland families as discussed previously in this section. Schools such as Life Academy, CCPA, and MetWest have innovative models as well as some of the highest outcomes in the city. Consequently, they are the most in demand schools within the district.

Figure 1.9—OUSD High School Enrollment Demand:[12]

OUSD High School	Percent of 1st Choice Applicants
Castlemont	50%
CCPA (6-12)	500%
Fremont	36%
Life Academy (6-12)	836%
Madison (6-12)	166%

12 Data obtained from Oakland Unified (www.ousddata.org).

MetWest	538%
Oakland High	46%
Oakland Tech	203%
Skyline	68%

At Latitude, we believe that our current conception of school needs to be reorganized to provide students furthest from success the opportunity to achieve and to provide all students the depth of learning across the essential academic and non-cognitive competencies needed for meaningful and productive adult lives. Our school model leverages the assets and resources of the city to provide students with a personalized, authentic learning experience that will be a unique offering and complement the existing portfolio of district and charter high schools.

As the school grows and demonstrates its ability to provide a high quality school experience, we anticipate being able to contribute to innovation in the broader high school eco-system in the following areas:

- Sharing our technology platforms for tracking and reporting student competency performance
- Supporting teacher communities of practice around high quality project based learning
- Demonstrating innovative strategies to support high needs student communities.

Needs of Sub-Groups

In addition to the need to be intentionally inclusive, Latitude is organized to serve a broad range of academic and social emotional needs of various student groups. As a school that is representative of all students in Oakland, we expect to be able to serve students who are academically accelerated as well as those who have traditionally struggled within the current landscape. The Latitude program has been designed to meet the language development, literacy, and social emotional needs of these varied student populations. Latitude's design principles of personalization and relevance have driven the creation of an instructional program that focuses on each learner as an individual; collaborates around student specific academic, social emotional and post graduate goals; and designs a learning plan to achieve them.

Please see **Element 1 - Educational Program, Section H - Special Populations: Identification, Remediation, & Acceleration** of this petition for more information about how our educational model serves these various groups of learners.

Latitude Community Engagement and Support

Latitude 37.8 is a new high school model for Oakland, California that leverages the assets of the city to provide students with the experiences, skills, and network they need for a meaningful and productive life. Forged by a team of educators, designers, makers, artists, parents, students, civic leaders, and business leaders, Latitude will harness the dynamic resources of the Bay Area to provide students with experiential, place-based learning, personalized for each individual.

In the fall of 2015, a diverse team came together to respond to the challenge posed by the XQ Super School Project of determining a new vision of high school for Oakland students. To inform their design, the team engaged in a number of discovery activities that included research, school visits, and community engagement. The focus of this research was to determine both the hopes and aspirations of students for their high school experience, as well as their explicit needs. A survey was administered to over 250 middle and high school students to examine their schooling experience. The team then facilitated focus groups with two sets of middle school students to dig deeper into their hopes and needs for a high school experience. As an additional engagement strategy the team hosted a viewing of 'Most Likely To Succeed' and facilitated a discussion afterward. Through this research it became clear that students desired the opportunity to learn about the real world in collaborative projects that had meaningful impact on their communities. Armed with these perspectives, the Latitude XQ team developed a prototype for the high school program that was summarized in our final XQ application. We were proud to be ultimately one of 50 national finalists out of over 700 applications.

Please see Appendices A1, A2, and A3 for Latitude's XQ Team Roster, Community Engagement Data, and XQ Application.

Over the past year, the school design work has moved the school from a concept to a program that will deliver powerful learning experiences for students and improve their educational and life outcomes. The Latitude Design Team, as described in the Executive Summary, met regularly throughout the year to build a prototype of the instructional program necessary to accomplish the school vision. Additionally, we recruited and hired the founding team that will be charged with the execution of the program. As these plans were developed, we continued our community engagement efforts to elicit feedback that informed the design iterations, as well as build a community of interested students and families.

Please see Appendix A9 for Latitude Community Engagement Artifacts.

In addition to our engagement with students and families, we have actively pursued partnerships with organizations and institutions across the city to support the execution of our school model. Through our engagement efforts to date, the following organizations have committed to being part of the Latitude community and provided letters of support for this petition to that effect:

- Gyroscope
- Galileo
- KQED
- Big Picture
- High Tech High
- National Equity Project

Please see Appendix A10 for the organizational Letters of Support.

These organizations reflect the beginnings of the overall Latitude network. As the school grows, we will resource staff within the school to continue to do outreach and engagement and partner with existing city and school district initiatives around youth engagement and work based learning.

B. Philosophy and Approach to Instruction

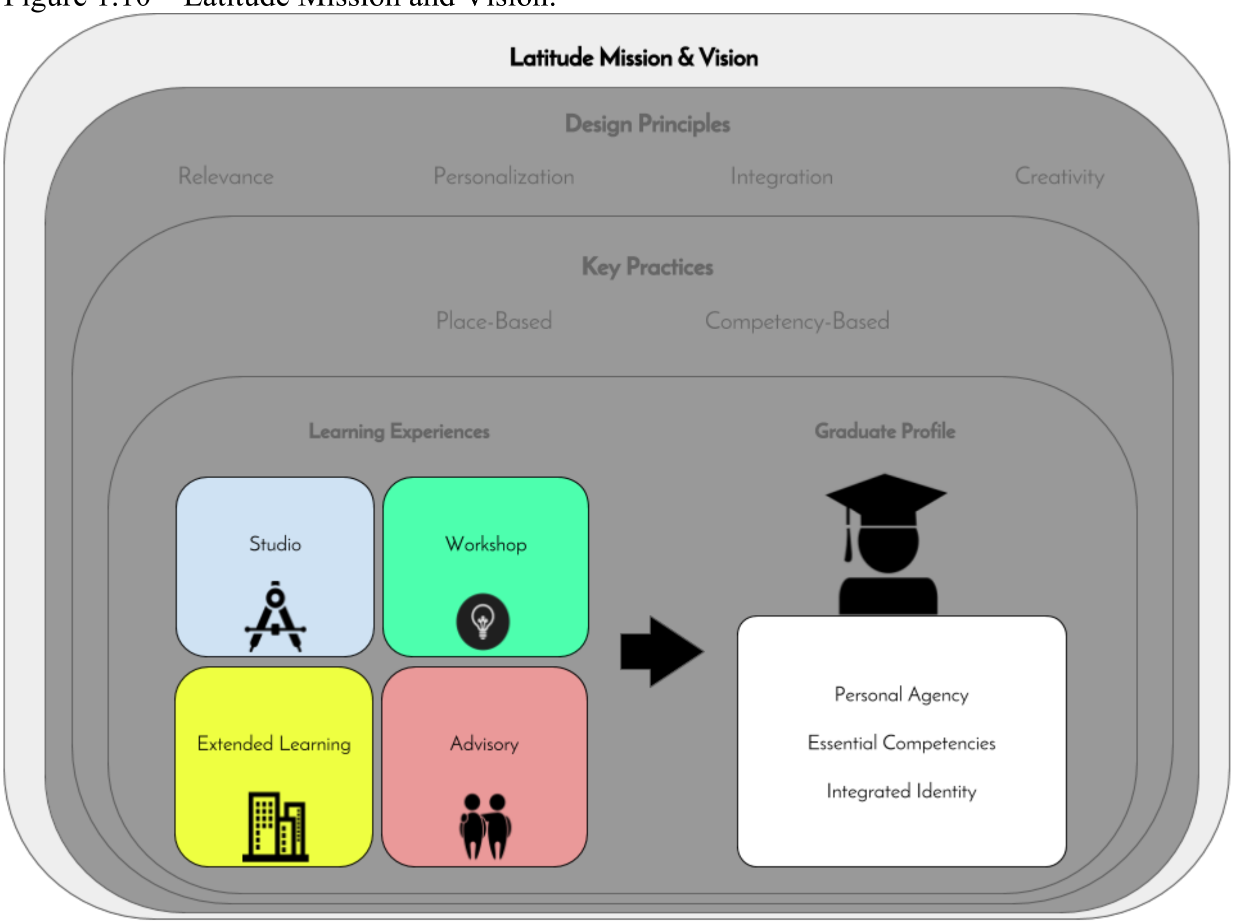
Latitude Vision Statement

Latitude 37.8 High School graduates will have the personal agency, essential competencies, and integrated identity necessary to be prepared for a meaningful and productive life.

Latitude Mission Statement

Latitude 37.8 High School facilitates self-directed, passion driven learning that leverages the assets and resources of the city to provide students with a personalized and authentic learning experience.

Figure 1.10—Latitude Mission and Vision:



Educational Philosophy

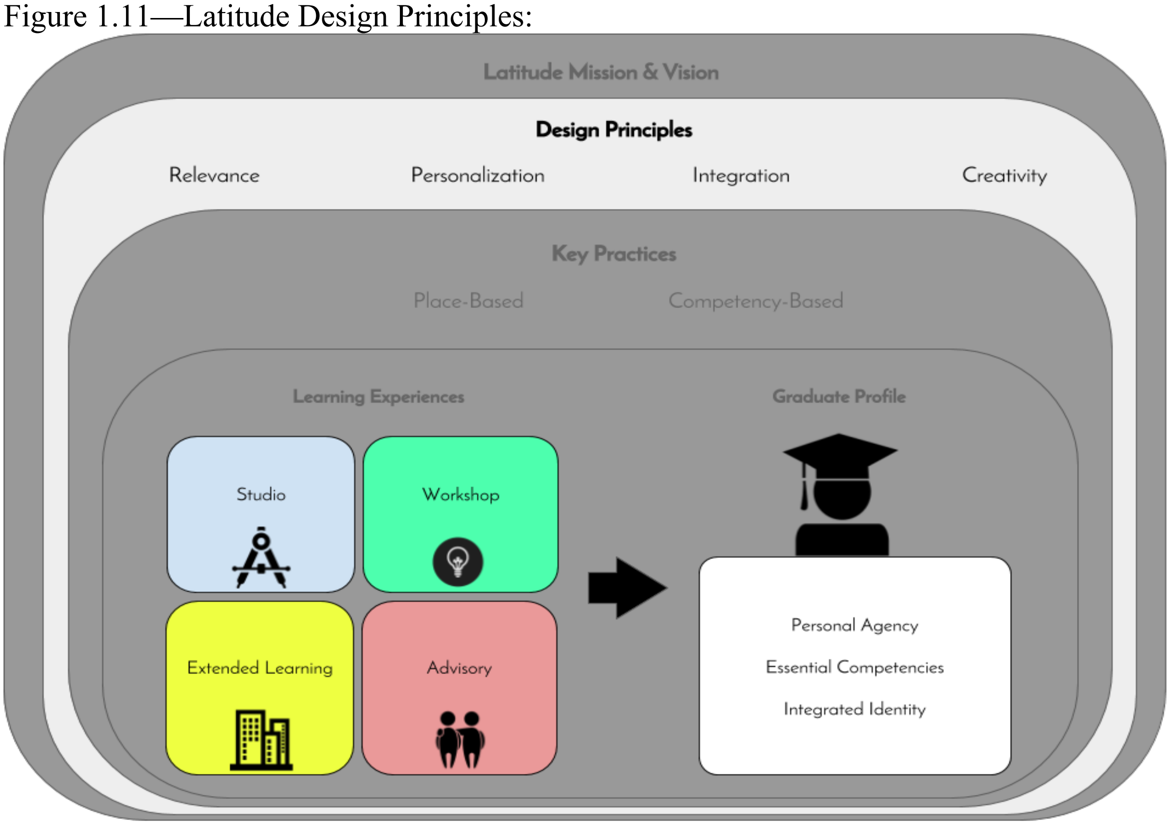
Latitude 37.8 High is a high school model in Oakland, California through which students leverage the assets and resources of their city to design and secure the experiences, education and network they need to be prepared for a meaningful and productive life. We are a network of educators, designers, makers, artists, parents, students, civic leaders, and business leaders committed to designing and opening a high school that facilitates self-directed, passion-driven learning for our city's youth in which the Bay Area is their personalized learning environment.

Students thrive when they have close relationships with adults who believe in their potential, hold them to high expectations, and mentor them through the steps necessary to achieve success. Latitude expands the definition of teacher to include members of the community, who have knowledge and skills to share and can provide applied learning opportunities in alignment with students' academic and life goals. Latitude transforms "high school" into a series of experiences that create confident, connected young adults with a strong supportive citywide network.

The Latitude Learning Experience

Latitude's planned approaches to school mission and culture, teaching and learning, student agency and engagement, and to networks and partnerships is really a single integrated approach that is driven by the design principles of personalization, relevance, integration and creativity, which in turn become the four pillars of the Latitude student learning experience.

Figure 1.11—Latitude Design Principles:



Personalization

At the foundation of the student experience at Latitude is a personalized pathway that is driven by the student's passions and structured through a competency-based evaluation system. Personalized learning has become an educational buzzword for many things. However, at Latitude, a truly personalized education begins with knowing the students deeply:

- What are their interests?
- What motivates and drives them?
- How do they best learn?
- What are their cultural norms and expectations with respect to learning and school?
- Who is the family and community that surrounds them?
- What are the past experiences that impact their learning?
- What are their goals?
- What are their worries?

Personalized learning requires that we understand a student's needs so we can help craft a program that meets those needs and builds on his or her assets. Personalized learning without clearly detailed competencies can lead to low rigor and expectations that too often follow patterns of poverty and lack of power. Therefore, our personalized learning model is based on rigorous competencies, identified by the most current research on college and career readiness and designed to ensure success in the 21st Century. All students will be supported as they work to achieve mastery of these rigorous competencies, and all students will be supported as they design the personalized pathway they will utilize to achieve that mastery. Finally, personalization at the secondary level requires that students have a deep commitment and agency with respect to their goals - and the self-management, resilience, and perseverance to achieve those goals. Ours is a gradual release model in which we initially provide a certain level of structure and support to students as they develop these traits, then gradually release them to a more self-directed approach in the later years while staying alongside them with the support they need.

Integration

Integration is the second pillar of Latitude's educational experience, both with respect to the actual learning and the cultural experience. Too often, school learning is siloed by content or by period and students do not understand the connection between what they learn in these silos and their life experiences. Our goal is to create an integrated and interdisciplinary curriculum that teaches math in the service of science and engineering, language arts in the service of science and social science, and the arts in the service of all. In this model, students will be required to integrate learning across content areas and apply that learning in interdisciplinary performance tasks.

Integration is also at the heart of the cultural experience at Latitude as an intentionally diverse school. Students will be organized into an advisory that will meet daily and provide opportunities to build community across differences. This group will also be the foundational humanities class that comes together to discuss relevant current events, read compelling contemporary works, and have difficult conversations about race, class, and power in the context of book study in seminar sessions that are guided by Socratic methodology. The entire community will regularly come together around cultural celebrations and more informal talks. We plan to expose our students to some of the greatest artists, poets, historians, writers, and leaders in Oakland to help them expand their perspectives. Also, the larger network of adult allies that we will build for our students and all of the citywide partnerships will enable students to interact with adults from all backgrounds and fields, further building their confidence in diverse settings.

Integration is deeply intertwined with our approach to personalization. Only when a student is known, respected, and cared for as an individual is he or she able to have the confidence and security to actively engage in what is persistently a segregated and unjust society.

Relevance

Relevance is our third pillar, and intersects with integration and personalization throughout. Too many students today express that they do not know why they are learning what they are learning or how it matters to them as individuals. Students become disengaged in the learning experiences and, as a result, agency declines. At Latitude, we hope to leverage the rich assets throughout the city of Oakland to facilitate learning experiences in authentic settings in partnership with actual practitioners. Our plan is to see students learning civics in City Hall, research skills in the Oakland Public Library, ceramics at the Crucible, drama with actors at the Gritty City Repertory Theatre, art history and design in the Oakland Museum of California, conservation in the bay with the Port of Oakland, and world language in cultural settings in which those languages are used. Connecting learning experiences to adults who are passionate builds engagement, and facilitating learning in real settings builds relevance and deeper understanding.

The competency-based evaluation system that guides all of the learning at Latitude will support this relevance by requiring students to perform, present, create, integrate, and debate. These evaluations will support students in demonstrating aptitude in a range of ways to ensure students are building capacity in presenting their learning for a variety of audiences and settings.

Creativity

Our fourth pillar is creativity, with a focus less on the hard or technical skills and more on building a student's creative confidence in multiple settings and content areas. Students will be supported to meet their creative confidence competencies by first identifying where they have passion for innovation and creativity. Students will be required to take a foundational design course in 9th grade that will support them in developing their creative confidence pathway. Then, citywide networks will provide students opportunities to develop their creative agency in their areas of passion through internships with local partners such as startup companies, gaming companies, music studios as well as individual entrepreneurs, scientists, authors, makers and artists. Finally, their creativity will be enhanced throughout their Latitude experience through thoughtful integration of the arts.

What it means to be an educated person in the 21st Century?

To be an educated person in the 21st century demands nothing less than global citizenship. Our students are entering a world undergoing technological, cultural, linguistic, climatic, economic, and social disruption. The world students will face after they graduate will look different than our world today, both in terms of challenges and opportunities; the jobs of tomorrow look different than the jobs of today. In addition, the world is increasingly global and interconnected, requiring interdisciplinary, knowledgeable global citizens who can negotiate questions of justice and morality while grappling with the most complex problems facing our world, from climate change, to economic inequities, to international terrorism and conflict.

To be prepared for this evolving world, the vision for Latitude graduates exceeds common notions of educational attainment and academic outcomes for students. Our vision of the Latitude graduate is inclusive of college and career readiness. All Latitude students will graduate with A-G transcripts and powerful experiences across a broad array of career interests. Additionally, these college and career readiness indicators are a means to deeper life outcomes for all of our students. These outcomes include being able to articulate goals for themselves and having the ability to fulfill them. It also includes their ability to have agency and influence the world around them. This broader definition of a successful young person is influenced by the review, "Foundations for Young Adult Success: A Developmental Framework" which accounted for the broader range of outcomes. As such, a Latitude 37.8 High School graduate will have…

- **Personal Agency**-- Latitude graduates will have the agency to make choices about one's life and have the ability to take an active role in their life path. Latitude graduates will be able to determine goals and plans to accomplish them while also leveraging their other skills, abilities, and mindsets to navigate challenges and make adjustments to their goals and plans.

- **Essential Competencies**-- Latitude graduates will demonstrate mastery of a core set of college and career readiness academic and non-cognitive competencies that allows them to perform effectively in a variety of roles and settings. These include academic competencies within traditional academic disciplines as well as non-cognitive competencies from the fields of design thinking and social emotional learning.

- **Integrated Identity**-- Latitude graduates will have a strong consistent understanding of themselves across a variety of settings and social contexts. Latitude graduates will have a strong sense of who they are, including where they have come from and where they see themselves going.

See Appendix A11 for the Foundations for Young Adult Success: A Developmental Framework.

To attain these broader outcomes for students, the Latitude High model expands and reimagines our vision of 'school' from a place to a set of experiences students have that enable their growth and mastery along academic and social emotional lines. The Latitude High experience plays an important role in leveling the playing field for all learners by ensuring all students have access to the resources and assets of the city to pursue their passions and leverage the resources and assets of the city in service of them.

Latitude Competency Model

The foundation of the instructional program at Latitude is our competency model. This model articulates in student friendly language the specific skills, habits, and knowledge that students must attain to be prepared for their post-secondary lives and embodies what it means to be an educated person in the 21st century. The competencies have been backwards mapped from college and career readiness expectations[13] to ensure all students graduate from Latitude with these skills. There are three different domains of competencies that are relevant to be prepared for a meaningful and productive adult life and that our instructional program supports:

Figure 1.12—Latitude Competency Framework:

Academic	
English Language Arts *Aligned to CCSS*	● Reading Literature ● Reading Informational Text ● Writing Evidenced Based Arguments ● Writing Informational Texts ● Writing Narrative Texts ● Engaging in Text Based Discussions ● Giving Presentations ● Conducting Research
Math *Aligned to CCSS*	● Mathematical Problem Solving ● Mathematical Argumentation and Reflection
History *Aligned to C3 Framework for Social Studies*	● Analyzing Historical Outcomes ● Analyzing Historical Perspectives
Science *Aligned to Next Generation Science Standards*	● Leading Scientific Investigation ● Analyzing and Interpreting Data ● Developing and Using Models ● Applying Cross-Cutting Concepts
Foreign Language	● Speaking and Listening ● Reading and Writing ● Engaging in Cultures
Health and Wellness	● Applying Knowledge of Health Concepts ● Analyzing Health Promotion and Risk Reduction ● Engaging in Health Advocacy
Design Thinking	
Design *Adapted from Stanford Design School*	● Designing Processes ● Building Empathy and Learning from Others ● Defining Problems ● Fabricating and Crafting
Social Emotional Learning	

13 See Conley (2012), “A complete definition of college and career readiness”.

Non-Cognitive Skills *Aligned to SEL Standards and Big Picture Learning Model*	● Positive Self Concept and Growth Mindset ● Realistic Self Appraisal ● Navigating Systems and Self Advocacy ● Preference for Long Term Goals ● Availability and Support of Adult Mentors ● High Quality Leadership Experience ● Community Involvement ● Knowledge Acquired in a Field Outside School

The Latitude learning experiences and course sequence will ensure that all students have sufficient opportunity to develop mastery in these areas. Additionally, these competencies are aligned to the UC/CSU A-G expectations for each content area, and all students will earn comprehensive A-G credits.

Please see **Element 1 - Educational Program, Section C - Instructional Design** for additional information on the Latitude Competency model.

Please see Appendix A12 for Academic Competencies and Continua from Building 21 and The School District of Philadelphia.

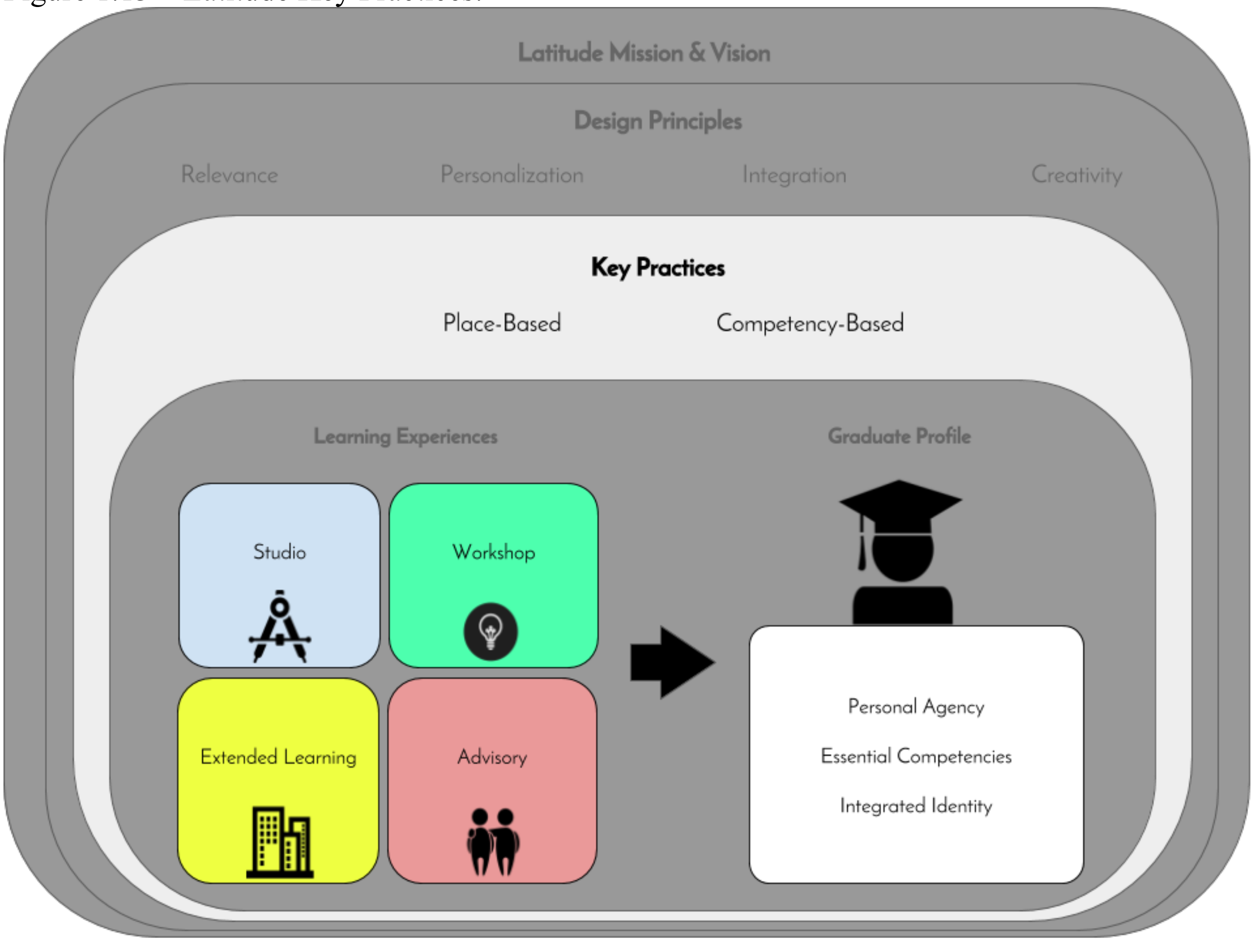
Please see Appendix A13 for the Big Picture Learning Non-Cognitive Competencies Guide.

How Learning Best Occurs

Students thrive when they have close relationships with adults who believe in their potential, hold them to high expectations, and mentor them through the steps necessary to achieve success. Latitude expands the definition of teacher to include members of the community, who have knowledge and skills to share and can provide applied learning opportunities in alignment with students' academic and life goals. Latitude transforms "high school" into a series of experiences that create confident, connected young adults who have developed a strong supportive citywide network. Collaborating within a community of learners, students create work that matters, enlarging their sense of possibility about the impact they are capable of achieving.

To apply the Latitude design principles, there are two key practices of our program that reflect our beliefs about how learning best occurs.

Figure 1.13—Latitude Key Practices:



Place Based

At Latitude, we seek to leverage all of the human, organizational, and physical resources of the city and community on behalf of our students. We apply a deep place and project based learning approach to create relevant and personalized learning experiences for our students. Project based learning is a natural fit for the application of our design principles in our instructional model as it supports the integration of content, creates authentic real-world connections, and allows students to explore their creativity as they develop and implement solutions. Research over the years has shown the many benefits of project based learning in service of the type of learning goals we have at Latitude and increasing student motivation and agency. Among the different studies of project based learning, researchers have found this approach to have positive impacts in the following areas[14]:

- **Academic Achievement**—Students learning through PBL retain content longer and have a deeper understanding of what they are learning than traditional methods, which in turn leads to increased performance on standardized tests.

[14] See Buck Institute of Education (2013), "Research Summary: PBL and 21st Century Competencies".

- **21st Century Competencies**—Students demonstrate better problem solving and critical thinking skills, collaborate more effectively, and are able to apply their learnings to the real world when engaged in PBL.

- **Equity**—Project based learning is effective in engaging lower achieving students and diverse learners.

- **Student Motivation**—Students in project based learning environments demonstrate better attitudes towards learning, exhibit higher levels of engagement, are more self-reliant, and have increased attendance over students in more traditional environments.

Project based learning is an instructional approach that integrates sustained inquiry, project management, and the creation of a publicly-shared product. Students work to complete an extended project that engages them in solving a real-world problem or answering a complex question, and perhaps even making an impact on their community. Project based learning introduces students to the perspectives, tools and concepts disciplines use to make sense of the world. Project based learning also allows students to learn about themselves, their strengths and challenges, and their own relationship to the world.

At Latitude, our approach to project based learning will draw on the many years of experience of high quality implementation at High Tech High in San Diego. The founding team at Latitude brings significant instructional leadership experience to ensure strong implementation and results for our students. Our project based learning work is based in the framework for High Quality Project Based Learning (HQPBL). This framework will guide our instructional planning and the student learning experience.

The High Quality Project Based Learning Framework
Developed by a 27 member steering committee of education leaders from the U.S. and other nations, and informed by the perspectives of a 90 member advisory team, the High Quality Project Based Learning Framework elucidates the key elements that distinguish high quality implementation of PBL from less successful implementations. The framework describes High Quality Project Based Learning according to four categories: the **Principles** on which it rests, the **Purposes** it seeks to achieve, the **Processes** that contribute to student learning and growth, and the **Products** that emerge.

- **Principles**
  Equity—Educational equity means that each child receives what he or she needs to develop to his or her full academic and social potential. High Quality Project Based Learning should not be reserved only for students who are high-achieving. All students benefit from acquiring the deeper learning and success skills that can be taught so effectively by High Quality Project Based Learning.

  High Quality Project Based Learning promotes equity by holding all students to the same high expectations for project products, an ethic that is reinforced by shared norms and accountability. Moreover, it fosters an equitable environment when students' interests, cultures, and identities are valued and used to inform the issues and problems that projects focus on—and when students' unique gifts and talents are recognized and leveraged to improve project work.

A great project has a powerful effect on students that can help them reach their potential, and can even be transformative for young people. This is especially important for students farthest from educational opportunity. A project that makes a real-world impact can give students a sense of agency and purpose; they see that they can make a difference in their community and the world beyond it. An authentic project provides opportunities, for students who might not otherwise be exposed to them, to visit real-world settings, interact with professionals in the workplace, and develop a passion or career interest.

Authenticity—PBL research reveals that authenticity enhances students' engagement in projects. Authenticity not only increases motivation, but it can also increase achievement. Authenticity is a complex concept, but it's generally synonymous with making a learning experience as "real" as possible. Teachers and students can make projects authentic in multiple ways, and in varying degrees.

First, projects can have an actual impact on the world, as when students make a presentation to the school board proposing the redesign of a school playground, write books and create a tutoring program for younger readers, or conduct research projects and submit data that will be used by scientists to better understand climate change. Second, the context of a project can be a simulation or reflection of what happens in the world outside of school, even if students are not actually working in the real world—for example when high school students act as advisors to the president on economic or social policies. Third, the tasks, tools, processes, and performance standards that students use make a project authentic when those things reflect what people do in the world outside school or the workplace. For example, students in some PBL projects today follow the process of design thinking, used by professionals who design products and services. Finally, projects can have a personal authenticity because they speak to students' personal concerns, interests, or issues in their lives, or because they engage the needs, values, language, and cultural practices of students' communities.

Student Agency—Student agency is synonymous with experiencing control, autonomy, and power. It is exercised when students make decisions that affect their learning, including the way in which they learn, what they learn, and the pace at which they learn. Higher levels of student agency are associated with greater engagement and commitment to the learning process. Students vary in their readiness to take on certain responsibilities and challenges, and teachers must determine how much autonomy is appropriate for each student. As a principle of High Quality Project Based Learning, however, the general goal is to help students reach the highest level of student agency they are capable of achieving. With a sense of agency, students are more likely to welcome and address new challenges, including issues in their own lives and communities.

An aspect of agency is holding a growth mindset, in which students' skills, knowledge, and interests can be developed through hard work, support and guidance, and effort.

Students with a growth mindset build confidence, rebound from setbacks, and are willing to put in the time and effort it takes to make projects successful.

- **Purposes**
  The overarching purpose of High Quality Project Based Learning is to build the knowledge, skills, and confidence needed for learners to succeed in a complex and changing world. In addition to increasing the retention of knowledge and acquisition of deeper understanding, projects provide multiple opportunities for students to build skills valuable in the modern workplace: critical thinking, problem solving, communication, collaboration, and creativity/innovation. Of equal importance, however, is the explicit attention given to fostering learners' personal and social development, to help them become self-aware, and acquire the confidence needed to undertake and prevail in new challenges.

- **Processes**
  Sustained Inquiry—High Quality Project Based Learning defines inquiry as a disciplined process of asking questions and gathering data necessary to achieve project goals. Through inquiry, the act of seeking information becomes the foundation of meaningful learning. Students confront problems and difficult tasks through an iterative approach of making meaning out of the information they have collected and determining if they have answered their questions or need to ask new ones. In contrast to "hands-on activities," it is the project itself, carefully planned by the instructor (and at times, by the learners themselves) that structures student inquiry and guides learning activities toward project culmination.

  The presence of inquiry, however, is not a sufficient marker of High Quality Project Based Learning. Inquiry must be sustained. By extending the project timeline, learners have the opportunity to grapple with significant conceptual and practical issues, and persevere in a productive struggle to achieve project goals. Project teams go through developmental phases as well as emotional ups and downs. Learning the collaborative skills necessary to contribute to an ongoing team may take time. Finally, if students are to develop the self-management and project-management skills that will be useful in college, career, and life, then they must be able to manage themselves and others over the course of weeks, rather than days. High Quality Project Based Learning provides opportunities for sustained inquiry over multiple working sessions.

  Project Management—High Quality Project Based Learning projects are not simply launched and allowed to unfold, with students working on their own, without a process for completing tasks. That would be a recipe for unfocused drift, wasted time, and frustration for students and teachers. In High Quality Project Based Learning, projects are managed. Not just teachers but also students take on the role of project managers, to the extent appropriate for their age and experience.

  Teachers and students in PBL use project management practices when designing a project; setting learning goals; organizing and accomplishing tasks; setting checkpoints and deadlines, monitoring progress and testing ideas; reflecting on what is being learned; and wrapping up the project by sharing products publicly and assessing the results.

Instruction and Facilitation—Although Project Based Learning rightly emphasizes the key role of the learner, the importance of the teacher is often neglected. High Quality Project Based Learning explicitly addresses the central role of the teacher, and the prominence of traditional instructional practices as productive project activities. In addition to reading, writing, math, science, and other relevant academic subject content, many – if not most – projects require learners to develop specific skills. Some are practical (e.g., designing a survey, conducting an interview, using a measuring instrument, drawing a plan to scale), others are more conceptual (evaluating the reliability of a website, summarizing raw data using statistics, making suggestions for improving written work). Projects also often require students to develop new background knowledge (understanding the difference between federalism and states' rights, supply and demand, persona and author) to be completed successfully. There are different strategies students can use to develop these skills and knowledge, and it is part of effective teaching to determine when it is most appropriate for learners to master these on their own or to receive targeted instruction or scaffolding through lectures, practice exercises, selected readings or videos, and the like.

In High Quality Project Based Learning, the teacher also acts as a facilitator and coach, enabling students to work productively and providing emotional support and encouragement. As the project unfolds, teachers learn about students as individuals and show their respect for students' individuality and preferences. Teachers share students' accomplishments and listen to their frustrations as informed "guides on the side" who engage with students to advance thinking, working, and learning.

Reflection—In High Quality Project Based Learning, both learners and teachers need to reflect throughout the project on the effectiveness of their inquiry and project activities, the quality of work completed, and the obstacles to be confronted and overcome. High Quality Project Based Learning aims to prepare learners who, when confronted with a new problem, size it up and reflect on whether they've seen this type of problem before, and whether they've already developed knowledge and strategies they can use to address it.

When reflection is applied to one's own thinking processes (e.g., thinking about one's thinking), psychologists refer to it as metacognition. Cast outward, it enables students to progress thoughtfully through project tasks and modify their behavior as needed. This is often known as "self-regulation". Cast inward, it provides awareness of the learning and problem-solving strategies they are using, and enables students to better understand and modify these strategies.

- **Products**
  Applied Learning—High Quality Project Based Learning is different from traditional instruction in that it emphasizes the active application of learning rather than the static acquisition of content. Project products provide opportunities for learners to demonstrate

what they have learned, as well as what they can accomplish with these knowledge and skills. By testing new knowledge and skills through application, nuance is revealed, and knowledge and skills are deepened. These become more memorable and consequently, more accessible in the future. The application process also enables learners to understand very concretely the worth of what they are learning, and how such knowledge and skills are used in the world outside of school.

Public—PBL provides the opportunity for students to create a product and share it with an audience beyond the classroom, when students display and describe their products in an exhibition, at a community meeting or other real-world setting, or online. This has several positive consequences. First, the products that result from a project are perceived as more real (i.e., authentic) and consequential than schoolwork that is only graded by the teacher and returned to students' notebooks. Since students tend to care more about work that will be made public and taken seriously by others, students are encouraged to do their best. Making project work public raises the stakes for both students and teachers. By creating a product, students make what they have learned tangible and thus, when shared publicly, discussable. Instead of only being a private exchange between an individual student and teacher, the social dimension of learning becomes more important. This has an impact on classroom and school culture, helping create a "learning community," where students and teachers discuss what is being learned, how it is learned, what are acceptable standards of performance, and how student performance can be made better.

Balanced Assessment—Assessment in High Quality Project Based Learning includes many of the practices found in traditional instruction, but it requires instructors to go beyond the assignments, quizzes, tests, and other tools with which they might be most familiar. Balanced assessment emphasizes the need for both formative assessment—used to inform the learner and teacher about progress toward a learning goal—and summative assessment—used to make a judgment about what has been learned. Both are important in High Quality Project Based Learning.

Summative assessment in High Quality Project Based Learning, like formative, is a combination of traditional and, for many teachers, new practices. In a traditional curriculum unit, for example, a teacher might give a test or ask students to write an essay to determine whether they have learned what the teacher intended. In a project, those tools might still have a place— especially to assess content knowledge and conceptual understanding—but so does a final evaluation of a team-created product and of students' ability to employ critical thinking/problem solving, collaboration, and project management skills. In addition to formative and summative assessment, other kinds of "balance" apply in High Quality Project Based Learning. A project should include self-assessment, in which students use evidence and reflection to evaluate their own progress and achievements. Peer assessment plays a role in evaluating the quality of a piece of work or one's participation as a member of a team.

In addition to assessing individual work, teachers in a project-based classroom might need to assess the work done as a group. Because a project requires students not only to gain knowledge but to apply it, traditional measures of knowledge gained must be balanced with performance assessment.

Please see Appendix A14 for the Framework for High Quality Project Based Learning.

To support our implementation of high quality project based learning, we envision a facilities plan that redefines the traditional notion of facilities for 'school.' Latitude will operate in a 'hub' model in which we utilize two smaller, innovative facilities in different parts of the city that provide students with supports and resources as they access the various resources and participate in place based learning activities in that part of the city. By leveraging underutilized facilities and partnerships within the city, we will be able to redirect those resources to staffing and programming for students.

Competency Based

Latitude will offer a competency based approach to our program to allow students to personalize their learning experience and allow flexibility in when and how students learn and demonstrate their achievement. Our instructional approach values the demonstration of mastery over conventional seat time requirements and is manifested in our partnerships with families for individualized learning plans and the authentic assessment practices that are integrated throughout the Latitude learning experience.

Competency education builds upon standards reforms, offering a new value proposition for our education system. Frequently, competency education is described as simply flexibility in awarding credit or defined as an alternative to the Carnegie unit. Yet, this does not capture the depth of the transformation of our education system from a time-based system to a learning-based system. Competency education also challenges the assumption that learning takes place within the classroom, encouraging schools to explore new ways to expand and enrich support for students. Competency-based approaches are being used at all ages from elementary school to graduate school level, focusing the attention of teachers, students, parents, and the broader community on students mastering measurable learning topics.

The research study 'Making Mastery Work' details the efforts at a dozen different schools to make the transition from the traditional model of schooling to a competency based approach. In examining their efforts, the authors of the study identified three key characteristics of a competency based education[15]:

- Students progress at their own pace, through:
  - A transparent system for tracking and reporting progress.
  - Flexible learner centric use of time, often beyond the typical school day and year.
  - Explicit methods of providing additional supports or opportunities for learning.
- Graduation is based upon demonstration of mastery of a comprehensive list of competencies, in which:
  - Courses are designed around a set of competencies aligned with the Common Core State Standards.

15 See Priest, et al. (2012), "Making Mastery Work".

    - "Credit" is awarded upon mastery of competencies associated with a course or smaller module, based on summative assessments.
    - A transparent system for tracking and reporting progress is in place.
- Teachers skilled at facilitating differentiated learning environments:
    - Utilize frequent formative assessments to provide real time feedback to students and teachers on progress toward competencies and help guide instruction.
    - Develop robust approaches to supporting students as they move through the competencies, especially for those who progress slowly.

Please see Appendix A15 for the Making Mastery Work Executive Summary.

The Latitude design principles of personalization and relevance are central to our adoption of a competency based approach to our education program. The Latitude instructional model operationalizes these characteristics through our competency model, learning experiences, and program phases.

C. Instructional Design

Introduction

Following the establishment of the concept for Latitude 37.8 High School by a broad based community, the design team was charged this past year to build an instructional program that attained the vision and mission that had been established to prepare a diverse student body for meaningful, productive adult lives through a personalized and authentic learning experience. The Latitude founding team will continue to develop the instructional program as described in the curriculum development timeline later in this section.

The core elements of the Latitude instructional design include:

- Latitude competency system: Latitude's competency system includes the descriptions of the competencies, the tools and systems for student assessment and reporting, and personalized student learning plans that determine when and how students learn and demonstrate their performance.

- Latitude learning experiences: Latitude learning experiences are organized around four key structures that operationalize each of our design principles: Studios, Workshops, Extended Learning Opportunities, and Advisory.

- Latitude program phases: Latitude is structured as a gradual release model. Instructors initially provide a higher level of structure and support and then release students to an increasingly self--directed approach in the later phases.

Latitude Competency System

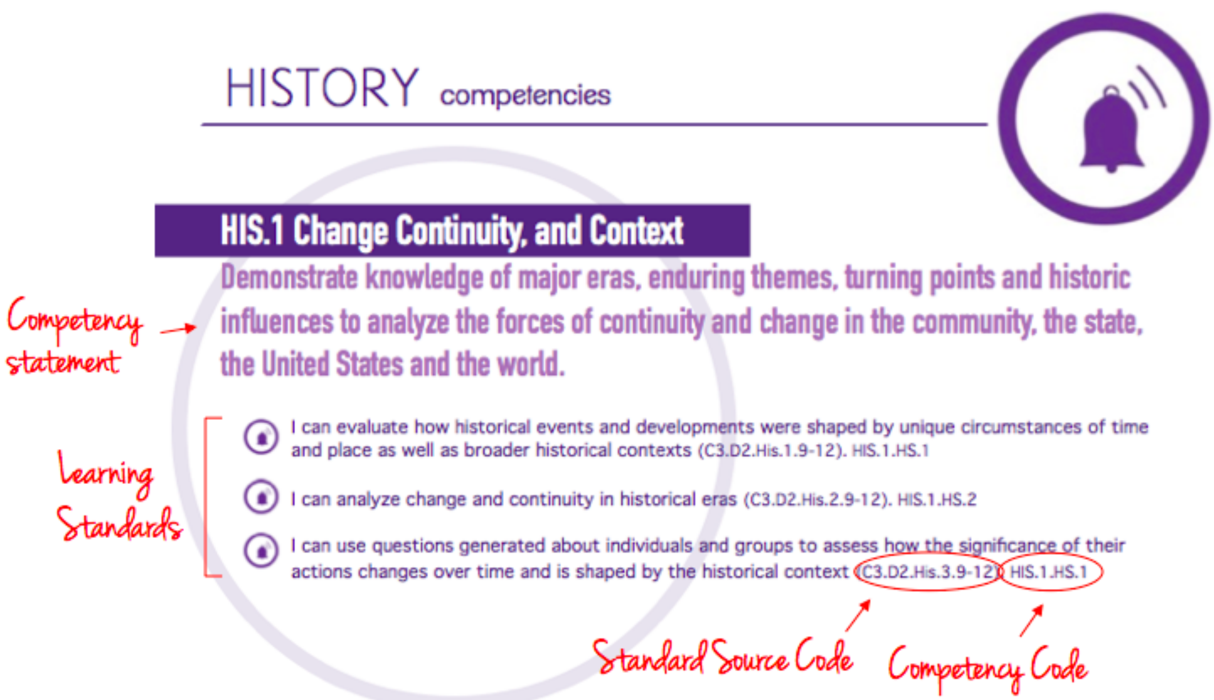
The Latitude Competency model is the foundation of our instructional program as it reorganizes all of the systems of the school around the development of mastery of the core set of competencies that fulfill our graduate profile. There are three elements of the competency system that work in concert to maintain all stakeholders' focus on the learning and outcomes for each student: 1) Graduate Competencies 2) Assessment and Reporting and 3) Personalized Learning Plans. The Latitude learning experiences and program phases provide the opportunities and supports for students to develop mastery of the graduate outcomes.

Latitude Graduate Competencies
The Latitude Graduate Competencies reflect the skills, knowledge, and habits necessary to be prepared for a meaningful and productive adult life. The competencies that we develop will be based on national standards (i.e. CCSS, NGSS, C3, SEL) and college and career readiness research, and those used in practice by national partners. Our academic competencies are informed by the work of Stanford's Center for Assessment, Learning, and Equity and 'Learning What Matters,' a collaborative project of Building 21 and the Philadelphia School District. Our design competencies are built off of the work at the Stanford d.School's K-12 lab. Finally, the non-cognitive competencies that are part of our graduate profile were developed by Big Picture Learning and have been used in their schools across the country.

Each competency is described in a statement that articulates the specific skill, knowledge, or habit a student is expected to master. It is written in student friendly language so that all stakeholders can share a common understanding of the expectation. Most competencies also have sub skills that describe specific learning standards that guide instruction and assessment.

See the figure below for an example history competency:

Figure 1.14—Competency Example:



Please refer to **Element 1 - Educational Program, Section B - Philosophy and Approach to Instruction** for the full list of Latitude competencies.

Please see Appendix A12 for Academic Competencies and Continua from Building 21 and The School District of Philadelphia.

Please see Appendix A13 for the Big Picture Learning Non-Cognitive Competencies Guide.

<u>Latitude Assessment System</u>
While the competency statements describe the key skills, knowledge, and habits of a Latitude graduate, the Latitude assessment system provides the information that informs each student's personalized learning plan. There are a number of important components of the Latitude assessment system to effectively monitor, communicate, and document student learning:

Competency Continua
A continuum is a tool for scoring student performance tasks and providing clear, constructive feedback to students. Each competency has its own continuum that describes in detail the progression toward mastery in student-facing language. Continua are designed to make each step toward mastery clear and understandable to students and families. Performance levels - which correspond to grade levels - are the "stepping stones" toward college and career readiness.

The excerpt below illustrates that each competency is made up of a group of related standards, and that standards are the dimensions of analysis (horizontal) for each competency. Standards describe the discrete skills and knowledge for which growth and progress can be measured for each competency.

Figure 1.15—Example of Competency Continua:

	Level 6	Level 7	Level 8	Level 10	Level 12
How well do I introduce my claim (W1.a)?	I can write a thesis statement to introduce my claim. I can write a hook to engage my reader, such as an interesting fact, quotation or question. I can provide some context or background information about my topic.	I can write a thesis statement that clearly introduces my claim(s). I can write a hook to engage my reader, such as an interesting fact, quotation or question. I can provide necessary context or background information that will help my reader understand my topic and my claim.	I can write a thesis statement that clearly introduces my claims(s). I can write an engaging hook. I can identify the most important counterclaim. I can provide necessary context or background information that will help my reader understand my topic and my claim.	I can choose a substantive topic that relates to an issue with local or global significance. I can write a thesis statement that precisely introduces my claim(s). I can write a compelling hook to captivate my audience. I can logically present my reasons in the order they will be discussed. I can identify the most important counterclaim(s). I can provide necessary context or background information that will help my reader understand my topic and my claim.	I can choose a substantive topic that relates to a compelling or provocative issue or controversy with local or global significance. I can write a thesis statement that knowledgeably and precisely introduces my claim(s). I can write a provocative hook to captivate my audience. I can logically present and connect my reasons in the order they will be discussed. I can identify one or more of the most important counterclaim(s). I can purposefully integrate critical contextual and/or background information that helps to convey the importance and relevance of the topic to my audience.

Competency continua are an intentional shift away from traditional rubrics that typically describe what's missing in students' work, and that lack a learning progression. Continua enable educators to show students exactly where they are on the continuum toward mastery, where they are headed, and what they need to do to get there. This design is consistent with our principles of competency based learning and positive youth development. The continua help educators identify and build on strengths in student work, communicate expectations clearly and equitably, and provide continuous and timely feedback to guide students in their learning progression toward mastery.

Evidence requirements
For students to demonstrate their growth within each competency, there are specific evidence requirements to achieve that define the number of times a student must demonstrate mastery "on grade level" or higher before advancing to the next phase of the Latitude program. The purpose of the evidence requirements is to ensure that students have multiple opportunities to demonstrate proficiency or higher in different ways and different contexts.

Evidence requirements may only be filled via performance based assessments because they require the application of skills and knowledge to solve problems and create authentic work products. A single performance task can fulfill an evidence requirement across multiple unique standards, competencies, and subject areas. However, a single performance task cannot fulfill multiple evidence requirements for the same standard. Each evidence requirement requires multiple tasks to be fulfilled. Students must meet the evidence requirements for the focal competencies within each learning experience and phase in order to be promoted to the next phase.

Figure 1.15—Example Latitude Evidence Requirements:

Latitude Program Phase	**Focal Competencies**	**Evidence Requirements**[16]
Phase 1	ELA Math Design Non-Cognitive	3 performance tasks per competency with an average scoring of at least 8.5 across all of the competencies.
Phase 2	ELA Math History Science Foreign Language Design Non-Cognitive	3 performance tasks per competency with an average scoring of at least 10.5 across all of the competencies.
Phase 3	ELA	3 performance tasks per competency

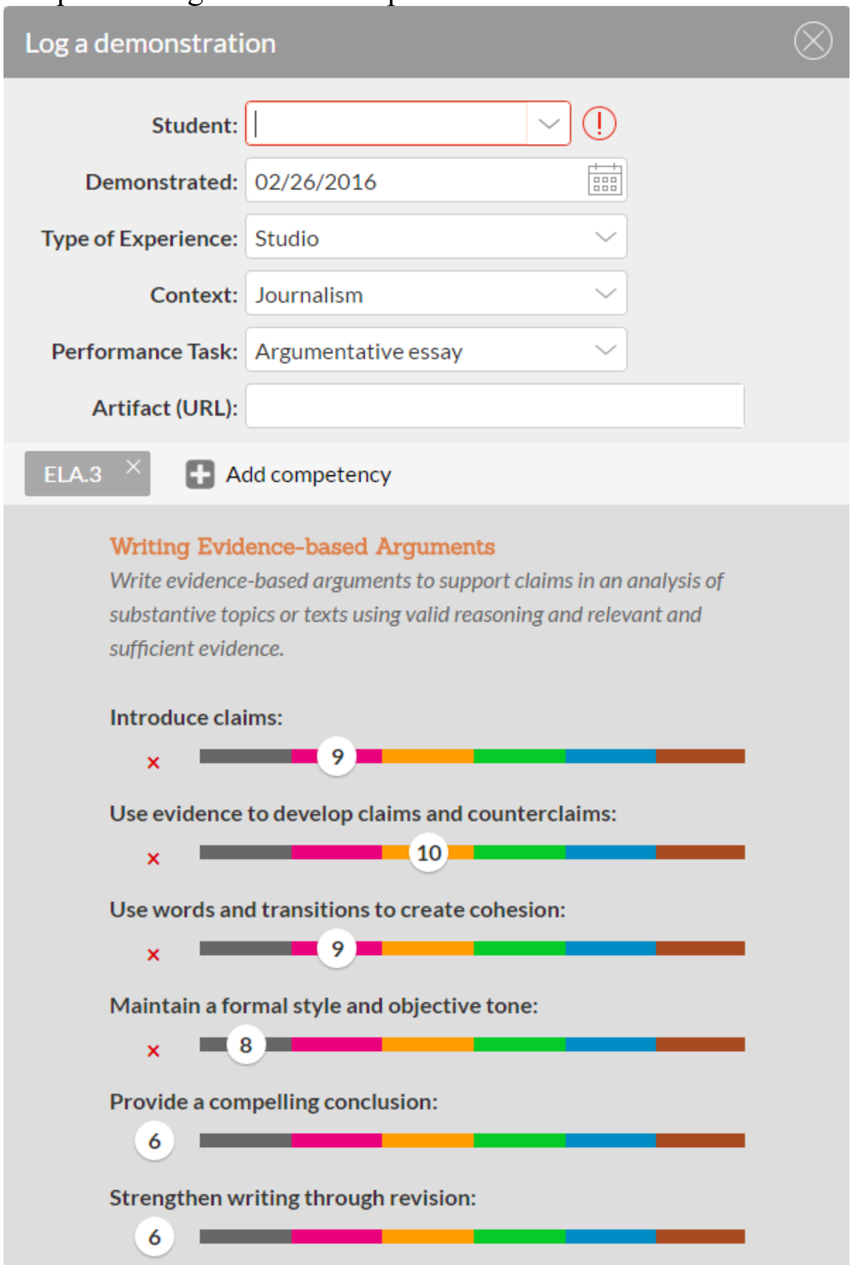
[16] Latitude and EFC reserve the right to amend these requirements based on learning from implementation.

	Math History Science Design Non-Cognitive	with an average scoring of at least 11.5 across all of the competencies.

Performance Based Assessment Tasks and Scoring

These tasks are the authentic products that students produce through their learning experiences in each of the Latitude Learning Structures: Studio, Workshop, Extended Learning Opportunities and Advisory. These tasks are scored using the continua to document student performance on individual standards within each competency. Scores are assigned based on the demonstration of all the criteria at a given performance level. If the student work meets part of the criteria for one performance level, and part of the criteria for one or more higher performance levels, the standard is to be rated at the lowest performance level. This allows for the maintenance of high expectations while also providing specific information for additional supports or interventions as needed. If a student shows no evidence for a particular indicator within a standard, it is assessed as ‘insufficient evidence’ and returned for revisions. For a student to earn an ‘in between’ rating on the continuum (i.e. a level 9), they must demonstrate all of the criteria on the lower level and show significant progress toward the higher performance level. The picture below of a competency tracking system demonstrates how a student can be scored at multiple levels within the same competency, Writing Evidence-Based Arguments:

Figure 1.16—Example Scoring Tool for Competencies:



Grading and Credits

Students earn grades and credits through the accumulation of evidence and demonstration of mastery based on the scoring of their work. Grades are calculated by averaging the standard scores within each competency and then across all competencies within a subject area (i.e. ELA). Students must meet a minimum competency average for each subject area as well as complete all evidence requirements to earn credit in that subject area for that learning experience. All learning experiences are mapped to specific competencies that allow students opportunities to develop their mastery of those competencies and to demonstrate mastery via their summative performance tasks. Credits are awarded based on meeting all of the evidence requirements and competency averages within each learning experience.

Please see **Element 1 - Educational Program, Section C - Instructional Design** for the Graduation Requirements and UC/CSU A-G Alignment sections for further information regarding credits, graduation, and A-G course sequences.

Latitude Personalized Learning Plan

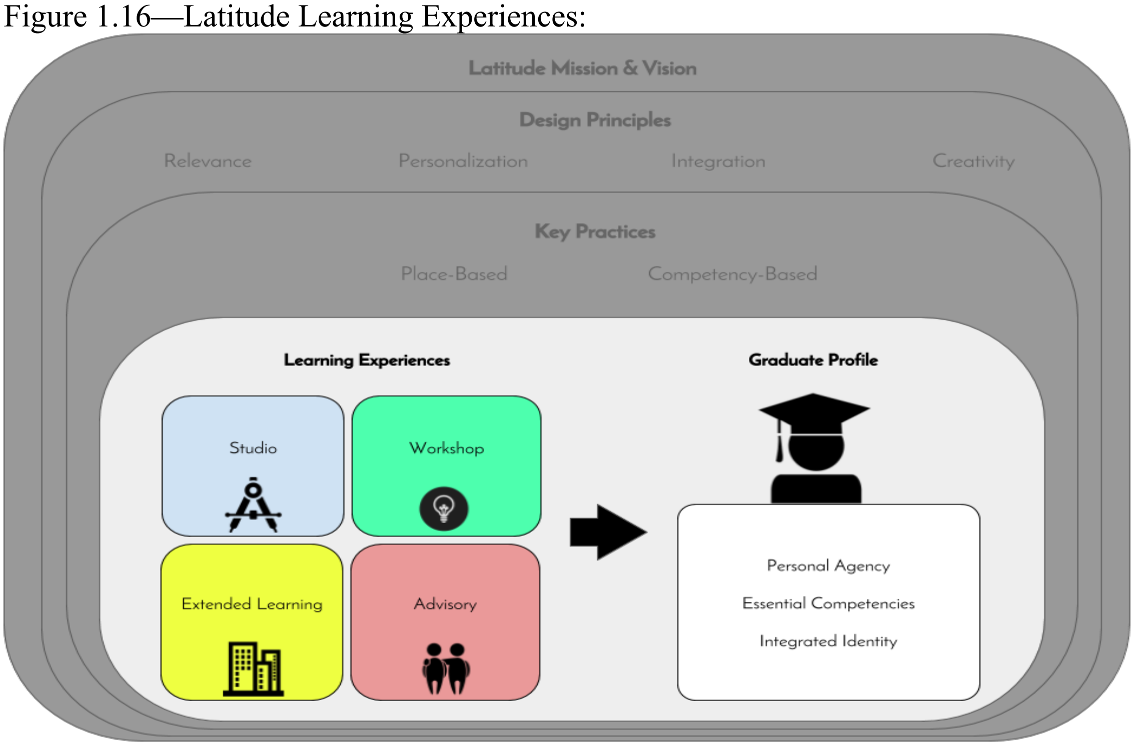
The Latitude Personalized Learning Plan has two purposes. The first is to manage what students are working on and how they are working on it. Learning plans are developed between students and advisors, and they are reviewed through quarterly exhibitions that include parents or caregivers, students, advisors, and mentors. Within advisory, students will also engage in daily and weekly goal setting and reflection so they can build the capacity to direct their own learning over time. As a gradual release model, the student learning plans will be more highly scaffolded in Phase 1, and students will earn increasing autonomy in designing their learning plans as they demonstrate increased capacity to direct their learning in Phases 2 and 3.

The second purpose is to continue to explore students' longer term vision for themselves and their plans to achieve that vision. When students have met the criteria for each of their learning experiences in each phase, they will present a more formal gateway presentation in which they are required to present their accomplishment of that phase's goals and a self reflection of their growth and readiness for the next phase to their learning team.

Latitude Learning Experiences

To support students' attainment of the Latitude graduate profile and competencies, the instructional program is organized into four core learning experiences.

Figure 1.16—Latitude Learning Experiences:



- **Studios** — Latitude's studio model will engage students in experiential project-based learning grounded in the city of Oakland, exploring its cultural dynamism, entrepreneurial assets, and unique challenges. Instructors will facilitate learning experiences in authentic settings, in partnership with professionals from the community. Students' project work will be organized into two interdisciplinary studios, Humanities Studio and Science and Design Studio, as they investigate, document, and develop creative solutions to real challenges confronting the Oakland community. The benefits of operating within a professional studio are many: from Day 1, Latitude students will have the opportunity to step into the shoes of professionals, to begin building a portfolio of work, to take on authentic leadership roles, and to develop the agency, skills and methods of inquiry that will facilitate their pursuit of independent projects in later phases.

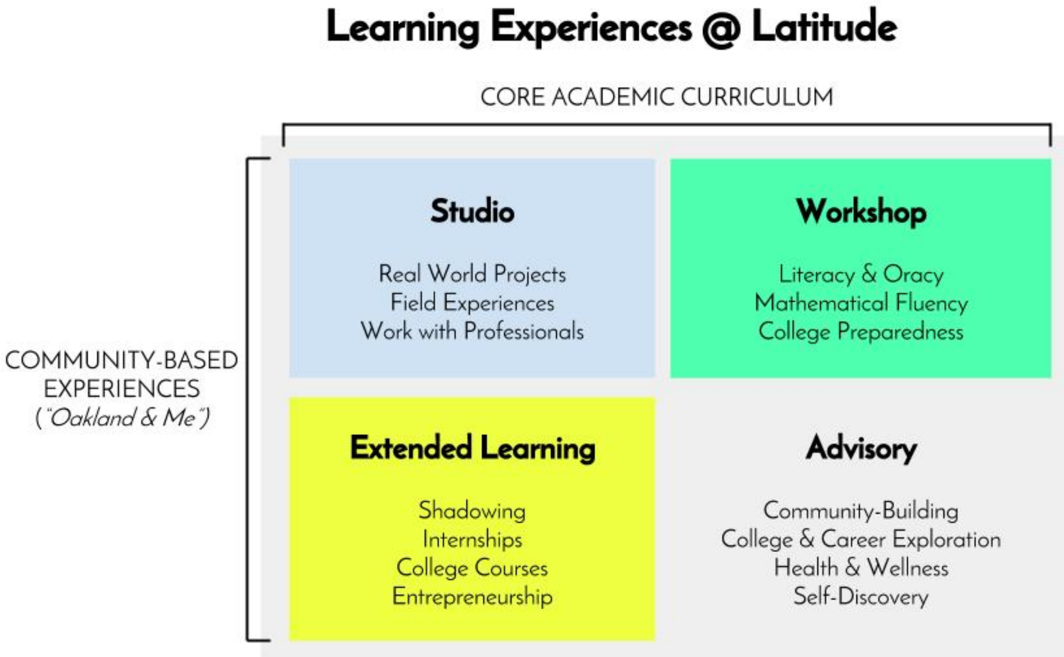
- **Workshops** — Latitude's Workshops will complement and enrich the work happening in our Studios. Students will develop foundational literacy, communication, and mathematical thinking skills through a highly differentiated, personalized learning approach, balanced with opportunities to share their learning and defend their reasoning through Socratic seminars and group-worthy mathematical inquiry.

- **Advisory** — Cultivating a strong sense of belonging will permeate all aspects of the Latitude experience, but advisory will be students' home within the school throughout their time at Latitude. Advisory will provide students with the space and support to reflect on their evolving sense of identity. Throughout their time at Latitude, students will develop an ever clearer sense of purpose about the lives they hope to lead and reflect on how their values and beliefs align with their aspirations. The advisor's job is to know each student and their family deeply, so that they can support each student's unique college and career goals through a personalized educational plan.

- **Extended Learning Opportunities (ELOs)** —Advisors will support students in securing ELOs, such as internships or service learning experiences, off campus. They will coordinate Networking Power Lunches and Career Site Visits with professionals in the community. Advisors will support advisees in conducting regular informational interviews, so that the task of networking becomes second nature. Students will have the option of identifying their own ELOs, or they may choose an ELO from one of several core community partners that Latitude will cultivate. Within advisory, students will have dedicated time to reflect on their ELOs and to curate a digital portfolio that documents their evolving intellectual and career interests, as well as a virtual "rolodex" of their ever expanding network of professional contacts.

The following graphic indicates how these four learning experiences work together to support students' progress towards the graduate profile:

Figure 1.17—Latitude Learning Experiences:



Studio

Latitude's studio model will engage students in High Quality Project-Based Learning grounded in the city of Oakland, exploring its historical legacy, cultural dynamism, entrepreneurial assets, and unique challenges. Instructors will facilitate learning experiences in authentic settings, in partnership with adult professionals from the community.

Students' project work will be organized into two interdisciplinary studios (detailed below):

- Humanities Studio (UC a-g credit in English, Social Studies, Performing Arts)

- Science & Design Studio (UC a-g credit in Science & College Prep Elective)
  - Phase I: Engineering/Coding & Design
  - Phase II: Physics & Design/Biology & Design/Chemistry & Design

(Students will receive UC a-g credit in Mathematics through Math Workshop, described below.)

In each studio, students will operate as a professional team. The benefits of operating as a professional studio are many: from Day 1, Latitude students will have the opportunity to step into the shoes of professionals, to begin building a portfolio of work, to take on authentic leadership roles, and to develop the agency, skills and methods of inquiry that will facilitate their pursuit of independent projects in later phases.

Latitude's Studios will integrate these signature experiences:

- **Real-World Projects**—Authentic community stories, issues, and challenges

- **Work with Professionals—**Mentorship by and collaboration with adult professionals in the community

- **Field Experiences**—Opportunities for students to experience firsthand the issues they are studying through interviews, investigating primary source documents, and visits to professional workplaces, as well as sites of historical, social, or artistic significance.

Humanities Studio
In Humanities, students step into the shoes of journalists, historians, and ethnographers to investigate the stories and culture of Oakland. Students develop the habits of inquiry & methods of research underlying these professions. They learn to communicate powerfully—through writing, speech, and multimedia—to share the hidden stories of Oakland.

Figure 1.18—Example of a Humanities Studio Project:

"Oakland & Me: Exploring the City's Hidden Stories"
Real-World Project: Students write, record, and edit professional quality audio podcasts exploring sites of historical, social, and artistic significance across Oakland. In the process, students conduct a deep study into the history of Oakland, digging into historical archives, conducting in-depth interviews with local historians, and documenting the oral history of Oakland changemakers. **Work with Professionals:** For this project, the anchor community partners will be KQED radio & East Bay Yesterday (a producer of local history podcasts). Professionals from KQED and East Bay Yesterday will complement the work of Latitude teachers in mentoring students throughout their project process, offering writing and production workshops, sharing feedback on drafts of students' scripts, and providing a public audience for students' work. After multiple drafts and revisions, excerpts from students' final podcasts will be aired on KQED. Their full-length podcasts, along with their accompanying research and photography, will be published online in their digital portfolios. **Field Experiences:** ● Investigating primary source documents and photographs at Oakland History Room and Oakland Museum of California. ● Walking tours with Oakland Urban Paths and Oakland Heritage Alliance ● Conducting oral history interviews with community leaders, artists, and activists ● Facilitating a local history panel with historians/professors from UC Berkeley, CSU East Bay, Peralta Colleges, Mills College, and Holy Names ● Hosting a book reading and discussion with local history authors Gene Anderson, Ruben Llamas, and Rev. Dr. Martha C. Taylor ● Engaging in a professional critique session with journalists from KQED and East Bay Yesterday ● Attending a sound design and production workshop at KQED, Youth Radio, or Berkeley Media Center ● Participating in a photography & multimedia design intensive with Pochino Press

Anchor Texts: ● Legendary Locals of Oakland by Gene Anderson ● Oakland: The Story of a City by Ruth Bagwell ● Eye from the Edge: A Memoir of West Oakland, California by Ruben Llamas ● American Babylon: Race and the Struggle for Postwar Oakland by Robert Self ● From Labor to Reward: Black Church Beginnings in San Francisco, Oakland, Berkeley, and Richmond by Rev. Dr. Martha C. Taylor ● The Warmth of Other Suns: The Epic Story of America's Great Migration by Isabel Wilkerson

Please see Appendix A16 for the scope and sequence of Latitude's 9th grade Humanities Studio.

Science & Design Studio

In Science & Design, students step into the shoes of researchers and data analysts to design studies, conduct labs, unpack statistics, and visualize data undergirding the issues they are researching. Students learn to tell stories using math and science, communicating complex concepts through visuals and graphs, and develop familiarity with computational thinking and programming.

Students also step into the shoes of designers, engineers, and architects to develop innovative solutions to authentic community challenges. They practice the mindsets of a designer and develop facility with fabrication skills to represent their ideas through building and testing prototypes. As students tackle authentic design challenges rooted in Oakland community needs, their thinking will be enriched by workshops with local scientists, designers, and makers.

Figure 1.19—Example of a Science & Design Studio Project:

Myth or Fact -- Lead Levels in Oakland Surpass Flint?
Real-World Project: Students investigate lead pollution levels across the city of Oakland, to assess the validity of recent news reports that parts of Alameda County have lead contamination levels higher than levels in Flint, Michigan. This initial discovery process prepares students to design an affordable, portable lead testing kit for parents to use in their own backyards. After developing their prototype, students work in teams to test neighborhood soil and water quality using their designs and program data-embedded maps to present to EBMUD, Alameda County Hazardous Waste, and the Oakland City Council. **Work with Professionals:** For this project, the anchor community partners will be UC Berkeley Department of Chemistry and Google's Code Next Lab. Graduate students from UC Berkeley's Department of Chemistry will support students in developing effective lead test procedures and analyzing data from soil and water sampling in different parts of the city. Professional computer programmers at Google's Code Next Lab, at Fruitvale Station, will mentor students as they embed their lead data into digital maps that can be a resource for the broader Oakland community. **Field Experiences:**

- Neighborhood soil and water testing, working with graduate students from UC Berkeley Department of Chemistry
- Interviews with physicians and nurses at Clinica de la Raza and West Oakland Health Center treating children with lead poisoning
- Wastewater treatment plant tours with East Bay Municipal Utility District
- Visit to San Leandro's Garbage Pit and Material Recovery Facility
- Programming/coding workshops at Google's Code Next Lab at Fruitvale Station

Anchor Texts:
- Full Body Burden by Kristen Iverson
- Yellow Dirt by Judy Pasternak

Please see Appendix A16 for the scope and sequence of Latitude's 9th grade Science and Design Studio.

High Quality Work
The student work produced as a result of Latitude's studios will embody the "Attributes of High Quality Work", a set of descriptors adopted by several Deeper Learning schools, including Expeditionary Learning and High Tech High, to provide educators with a common vocabulary as they engage in using student work to improve teaching and learning.[17] This set of descriptors clearly articulates the three dimensions of High Quality Work as follows:

- **Complexity**
  - Complex work is rigorous: it aligns with or exceeds the expectations defined by grade-level standards and includes higher-order thinking by challenging students to apply, analyze, evaluate, and create during daily instruction and throughout longer projects.
  - Complex work often connects to the big concepts that undergird disciplines or unite disciplines.
  - Complex work prioritizes transfer of understanding to new contexts.
  - Complex work prioritizes consideration of multiple perspectives.
  - Complex work may incorporate students' application of higher order literacy skills through the use of complex text and evidence-based writing and speaking.

- **Craftsmanship**
  - Well-crafted work is done with care and precision. Craftsmanship requires attention to accuracy, detail, and beauty.
  - In every discipline and domain, well-crafted work should be beautiful work in conception and execution. In short tasks or early drafts of work, craftsmanship may be present primarily in thoughtful ideas, but not in polished presentation; for long-term projects, craftsmanship requires perseverance to refine work in conception, conventions, and presentation, typically through multiple drafts or rehearsals with critique from others.

17 See EL Education (2015), "Attributes of High Quality Student Work".

- **Authenticity**
    - Authentic work demonstrates the original, creative thinking of students—authentic personal voice and ideas—rather than simply showing that students can follow directions or fill in the blanks.
    - Authentic work often uses formats and standards from the professional world, rather than artificial school formats (e.g., students create a book review for a local newspaper instead of a book report for the teacher).
    - Authentic work often connects academic standards with real-world issues, controversies, and local people and places.
    - Authenticity gives purpose to work; the work matters to students and ideally contributes to a larger community as well. When possible, it is created for and shared with an audience beyond the classroom.

To support students in producing High Quality Work, Latitude teachers will use a consistent approach to designing and facilitating projects. Across all disciplines, teachers will consistently implement the stages of High Quality Project Based Learning as defined in "Work That Matters: The Teacher's Guide to Project Based Learning":

1. **Project Launch**
   Here the goals are to:
   A. Get students excited about the project (the learning journey ahead)!
   B. Clarify what the project is, meaning what students will be *learning* through the project and how students will *demonstrate* their learning
   C. Share the *rationale* behind the project (*why* we are learning what we are learning and doing what we are doing)
   D. Share how students will be credited for their learning and work on the project.

2. **Developing Deep Understanding**
   Here the goal is to design learning experiences that cause students to develop a deep understanding of the relevant content standards, concepts, and skills. Students are more likely to develop a deep understanding when teachers:
    - design and facilitate lessons with clear *learning goals* and clear *evidence* to look for, listen for, and/or collect to assess student progress towards the learning goals
    - design and facilitate lessons that cause students to think critically; make sense of texts, problems, information, or experiences; share their thinking, ideas, and understanding with their peers; and demonstrate their learning in writing and speech for timely feedback and/or self-assessment
    - design and facilitate lessons that build on prior learning and connect to future learning (i.e., learning over time on the same topic, concept, or theme from multiple sources)
    - design and facilitate lessons that incorporate structures and scaffolds that promote access/challenge for all learners (cooperative learning, small-group instruction, use of models/exemplars, think-pair-share, sentence starters, graphic organizers, etc.)

3. **Analyzing Models of High-Quality Work**

Here the goal is to design learning experiences that *cause* students to co-construct the essential elements of high-quality work for the specific product they will be working on, refining, and exhibiting to a real audience as a way of demonstrating a deep understanding of the relevant content and skills. Teachers do this by getting students to analyze models of high-quality work (professional work, ideally) and to co-construct criteria for a high-quality final product using a focus question such as: What makes a high-quality (*name of product*, e.g. argumentative essay, short film, photo essay, short story, podcast, persuasive speech, etc.)?

4. **Project Work Time**
   Here the goal is to design learning experiences in which students are given *structured* time to make progress on their projects. Structure means students make it clear in writing what they hope to accomplish by the end of the class period and present their progress before the end of the class period. Structure also means that regular classroom rituals and routines are followed and that larger tasks are broken down into smaller chunks, so students regularly present progress on their project work throughout a class period.

5. **Feedback/Refinement**[18]
   Here the goal is to design learning experiences that cause students to present their *products-in-progress* to their peers, teachers, or community partners for "kind, helpful, and specific" feedback. The *presenting students* will then refine and improve their *products-in-progress* based on feedback they found particularly helpful. Students are also reminded that the goal is to produce truly high-quality work (and work they are truly proud of) for a real audience, not to turn work in for a grade.

6. **Exhibition (Demonstrating Deep Understanding)**
   Here students exhibit their learning and final products (in as professional and authentic a way as possible) to a real audience who may ask questions.

7. **Reflection**
   In this stage, teachers facilitate learning experiences that *cause* students to reflect on their learning, skill development, academic and character growth, next steps, and the connections they can make between their learning and work on the project and their future success.

Please see Appendix A17 for 'Work That Matters: A Teacher's Guide to Project Based Learning'.

Workshop

Latitude's Workshops will complement and enrich the work happening in our Studios. Students will develop foundational literacy, research, communication, and mathematical thinking skills through a highly differentiated, personalized learning approach, balanced with opportunities to share their learning and defend their reasoning through Socratic seminars and group-worthy mathematical inquiry.

---

[18] See EL Education (2012), "Models, Critique, and Descriptive Feedback".

Using LEAP Innovations' Learning Framework for Personalized Learning as our foundation, Latitude's workshops will be authentically:

- **Learner-Focused**—providing learning experiences that are relevant, contextualized, and designed around a deep understanding of each individual's needs, interests, and strengths;
- **Learner-Demonstrated**—providing supports and pacing that fit students' needs, demonstrate evidence of learning in multiple ways, and receive recognition based on demonstrated competency;
- **Learner-Led**—empowering learners to take ownership of their learning, adjusting dynamically to their skills, curiosity and goals.

Please see Appendix A18 for the complete LEAP Learning Framework.

Latitude's Humanities Workshops will focus on developing powerful literacy and communication skills. Our vision for the workshops is to ensure that skill development feels purposeful and contextualized, while differentiating to meet the needs of each student. For instance, while tackling a Humanities Studio project documenting the stories of refugee youth in Oakland, in Humanities Workshop, students will read nonfiction articles about immigration patterns and policies to develop a deep shared understanding of topics relevant to their studios. To engender student ownership, these texts will be thoughtfully differentiated for students' lexile levels, and instructors will curate customized playlists for each student, drawing on assessment data to develop personalized reading activities that challenge and extend each student's learning. Students may also use workshop time to practice targeted reading skills through software tools such as Reading Plus, ThinkCERCA, Lexia, or DuoLingo.

To complement Latitude's personalized learning approach, student-centered discussions and conversation protocols will be a core learning practice within Humanities Workshop to develop key competencies in analysis, critique, and public speaking. Throughout Phase I, all Latitude students will have regular opportunities to engage in and lead Socratic Seminars, World Cafes, tuning protocols, and dilemma consultancies. Latitude's Humanities teachers will have extensive training in using Expeditionary Learning's strategies for building academic literacy, as well as Arts Integration literacy strategies, such as those developed by Brown University's Arts Literacy Project. Latitude's curriculum for Humanities Workshop will draw from the Stanford History Education Group's "Reading Like a Historian" and "Historical Thinking Matters" curricula, as well as Facing History and Ourselves' curricula focused on "Race in U.S. History" and "Democracy and Civic Engagement." We will also draw from Harvard professor Eleanor Duckworth's Critical Explorers curriculum and the International Studies Schools Network's Global Competence resources, though we will adapt their global framework to our local context.

As with Humanities Workshop, Latitude's Math Workshop will integrate personalized learning, differentiated to meet the needs of each learner, with discussion-based mathematical inquiry practices rooted in the research of Stanford University's Jo Boaler and Vanderbilt University's Ilana Horn. Latitude math instructors will cultivate the key competencies of *Mathematical Problem-Solving and Mathematical Argumentation & Reflection* through melding high quality digital content with best practices developed by the Math for America fellowship and the Knowles Teaching Foundation.

Latitude's personalized learning approach will facilitate data collected at an individual student level, students setting their own pace and reaching mastery, and student choice over the optimal medium for their learning. To complement their personalized learning experiences, students will develop core mathematical mindsets and skills through an inquiry-focused math approach, exploring multiple methods of solving group-worthy problems and engaging in mathematical discussions to defend their reasoning. For mathematics, Latitude teachers will draw curriculum from the Interactive Mathematics Program, as well as materials developed by Stanford's youcubed. Our teachers will be trained in Common-Core aligned instructional strategies tested by the Teachers Development Group**,** focused on Cognitively Guided Instruction. This work is rooted in foundational research on Complex Instruction by Stanford researchers Elizabeth Cohen and Rachel Lotan, whose pedagogical approach promotes equitable collaboration within heterogeneous math classrooms.

<u>Advisory</u>
Cultivating a strong sense of belonging will permeate all aspects of the Latitude experience, but advisory will be students' home within the school throughout their time at Latitude. Advisory will provide students with the space and support to reflect on their evolving sense of purpose. Throughout their time at Latitude, students will develop an ever clearer sense of purpose about the lives they hope to lead and reflect on how their values and beliefs align with their aspirations. All Latitude teachers and administrators will have an advisory to allow for small enough groups to be able to accomplish the program's goals. The advisor's job is to know each student and their family deeply, so that they can support each student's unique college and career goals through a personalized educational plan.

Latitude's goals for advisory focus on three key areas:
- Building a Strong Sense of Community
- Developing Non-Cognitive Competencies
- Career and College Discovery, integrated with Purpose Exploration

Building a Strong Sense of Community
When properly facilitated, advisory period can be a time for the authentic relationship and community building that students need to feel safe and supported in their schools. University of Chicago researcher Camille Farrington has found that a strong sense of belonging within an academic community is associated with increased perseverance, better academic behaviors, and higher grades. Building students' sense of belonging is a critical lever for increasing the student engagement and the persistence necessary for students to achieve mastery. Advisory can play a key role in cultivating students' sense of belonging within a learning community.

Please see Appendix A19 for the report, Academic Mindsets as a Critical Component of Deeper Learning.

A key advisory structure that Latitude will use to build an inclusive community is the Circle of Power and Respect (CPR). In Phase I, advisors will draw from Teaching Tolerance's Perspectives for a Diverse America advisory activities to facilitate CPR. Serving as a shared foundation for Latitude's restorative justice model, Circle of Power and Respect helps students understand diverse perspectives and critically and honestly analyze ideas from a variety of cultures. Grouped by the domains of Teaching Tolerance's Anti-bias Framework: Identity, Diversity, Justice and Action, these activities create a safe, inclusive atmosphere in which students and their teachers can learn about each other and grow closer—even when discussing challenging subjects like racism and heterosexism. They become more open to diverse people and cultures, ready to take a stand for equity. Such connections and understandings help create the optimal social emotional conditions for learning. They foster awareness of social biases and reveal possibilities for transforming them.

Please see Appendix A20 'Perspectives for a Diverse America: 20 Face to Face Advisories'.

Developing Non-Cognitive Competencies

The research underlying Latitude's approach to advisory is grounded in the body of research on non-cognitive competencies, which suggests that "In addition to content knowledge and academic skills, students must develop sets of behaviors, skills, attitudes, and strategies that are crucial to academic performance in their classes, but that may not be reflected in their scores on cognitive tests."

At Latitude, we will adapt the open-source Personalized Leadership Training (PLT) Social-Emotional Learning curriculum to support students in developing these non-cognitive competencies. PLT leverages a Case Study format to increase students' critical thinking and discussion skills alongside the development of their non-cognitive skills. Students also have the opportunity to apply PLT strategies to their own, real-life scenarios through Dilemma Consultancies with their peers.

Please see Appendix A21 'The Role of Noncognitive Factors in Shaping School Performance'.

Please see Appendix A22 and A23 for HS PLT Lab Structures and Core Leadership Habits.

Career and College Discovery, integrated with Purpose Exploration

A key goal of Latitude's advisory is to demystify the path to college, as well as the path to a wide spectrum of careers. Latitude advisors will support students in exploring their Career and College options, expanding their sense of possibility about options for their future. Drawing on Big Picture Learning's Real World Learning guide, advisors will lead students through Interest Exploration, Community Assets Mapping, and Development of Professionalism Skills. Advisors will support advisees in conducting regular informational interviews, so that the task of networking becomes second nature. Advisors will also coordinate regular Networking Power Lunches or Career Site Visits with professionals in the community. Students may complete a series of mini projects like What I Wish I'd Known[19]-inspired video interviews with adult professionals in the career fields they aspire to. Advisors will also coordinate formal college visits for their advisees, though students will already be familiar with local college campuses through on-site work in university libraries.

Please see Appendix A24 Big Picture Learning's Real World Learning Guide.

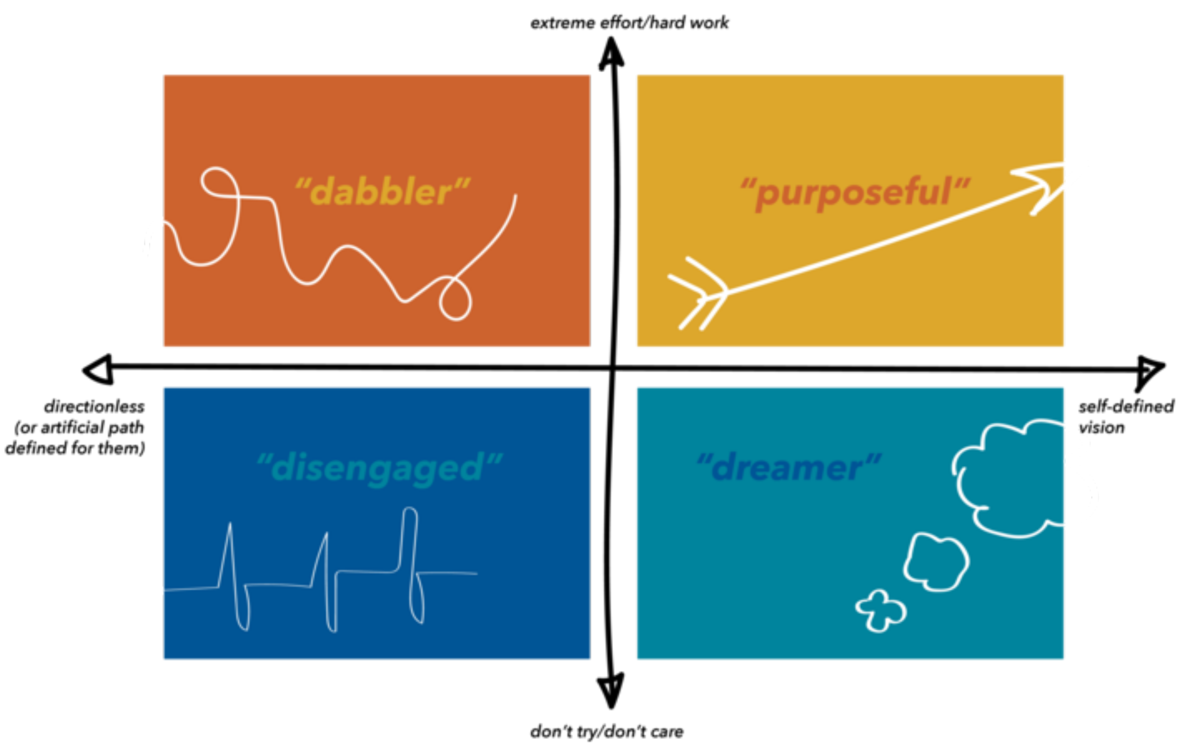
[19] See New York Times (2017), "From the Elders to the Kids: What I Wish I'd Known".

As students discover the variety of career options available to them through direct interactions with a wide range of professionals, they will also be engaged in an ongoing cycle of Purpose Exploration activities. Advisory will provide students with the space and support to reflect on their evolving sense of purpose. Throughout their time at Latitude, our hope is that students will develop an ever clearer sense of purpose about the lives they hope to lead and reflect on how their values and beliefs align with their aspirations.

The research underlying Latitude's approach to purpose exploration is grounded in the work of Kendall Bronk at Claremont Graduate University and Bill Damon, Director of the Stanford Center for Adolescence, who have both done extensive research into the formation of purpose in youth. Purpose, as defined by Damon, is "a stable and generalized intention to accomplish something that is at the same time meaningful to the self and consequential for the world beyond the self."[20] Bronk's research suggests that when young people identify a purpose in life and are working toward achieving it, they report higher levels of well-being and lower levels of depression.

In *The Path to Purpose*, Damon describes four broad categories of youth in the realm of purpose development: the disengaged, the dreamers, the dabblers, and the purposeful.

Figure 1.20—Four Categories of Youth in Purpose Development:



20 See Bronk, et al. (2009), "Purpose, hope, and life satisfaction in three age groups".

- The ***disengaged*** are students who express no purpose at all, and are not active in any endeavor that might turn into a purposeful pursuit.

- The ***dreamers*** are those who express ideas about a purpose they'd like to have, but who have done very little to try out any of their ideas.

- The ***dabblers*** are those who have engaged in activities that appear to be purposeful, but show little awareness of the meaning of these activities beyond the present. They often skip from one activity to the next without any coherent sense of what they wish to accomplish in their lives.

- The ***purposeful*** are those who have found something meaningful to dedicate themselves to, who have sustained this interest over a period of time, and who express a clear sense of what they're trying to accomplish in the world and why.

Damon's research findings show that statistically, only about 25% of high school students are in the "purposeful" quadrant. Latitude's advisory program will equip students to move toward the "purposeful" quadrant through a partnership with Project Wayfinder, a Stanford project that has developed research-based materials, activities, and experiences to help students sharpen their sense of purpose.

Please see Appendix A25 'Purpose, Hope, and Life Satisfaction in Three Age Groups'.

The advisor's job is to know each student and their family deeply, so that they can support each student's unique college and career goals through a personalized learning plan. We will carve out dedicated time for advisors to meet one-to-one with their advisees and families to reflect on the progress of the plan and make adjustments as needed.

Students will document their exploration of Career, College, and Purpose through an individual Journey Journal—in the form of a digital portfolio—that documents their evolving intellectual and professional interests, their "Minds on Fire" moments, and their career exploration reflections. The Journey Journal will include a visual map of all the destinations each student explores throughout their Latitude experience, as well as a virtual "rolodex" of their ever expanding network of professional contacts. It will also include a personalized reading list of books, magazines, and blogs relevant to their career interests and intellectual passions. Within advisory, students will have dedicated time to reflect on their explorations and to give their fellow advisees feedback on their written reflections.

Advisory Structures
In summary, to build a Sense of Community amongst students as well as Non-Cognitive Competencies, Career and College Readiness, and a Sense of Purpose within students, Advisory will utilize the following structures:

- Circles of Power and Respect

- Case Studies on Non-Cognitive Competencies & Applied Dilemma Consultancies

- Personalized Learning Plans, developed through One-to-One Advisor-Advisee Meetings
- Reflection Through Journey Journals

Together these structures will support students in their goal setting, tracking of progress, and action planning.

Extended Learning Opportunities (ELOs)

Latitude's Extended Learning Opportunities are designed to allow for students to explore their interests and pursue them with learning opportunities in the real world. To achieve our vision of developing students who are prepared for meaningful and productive lives, we believe that students must be intentionally supported as they engage with the city and world around them. This process is critical to deepen students' understanding and vision for their future so that they can develop a plan for success that is authentic to them. Through these varied experiences, students will develop the kind of network of caring adults that will help them succeed in achieving their vision for themselves. Additionally, it is this type of experiential learning that not only provides students the opportunity to develop their academic competencies, but it creates the challenges, successes, and real world experiences that drive students' growth in our non-cognitive competencies. Too often schools focus narrowly on the academic competencies without sufficient real world experiences that are what students ultimately face and struggle with once they graduate.

Latitude will staff a Community Partnerships Coordinator to lead our ELO program. This person will build the curriculum and materials for advisors to use as they support their individual students. Advisors will support students in securing ELOs and frequently reflecting on their experiences. They will coordinate Networking Power Lunches and Career Site Visits with professionals in the community. Advisors will support advisees in conducting regular informational interviews, so that the task of networking becomes second nature. Students will have the option of identifying their own ELOs, or they may choose an ELO from one of several core community partners that Latitude will cultivate. Within advisory, students will have dedicated time to reflect on their ELOs and to curate a digital portfolio that documents their evolving intellectual and career interests, as well as a virtual "rolodex" of their ever expanding network of professional contacts.

To support the development of meaningful Extended Learning Opportunities, the Latitude program is designed through its three phases to build student's capacity to authentically engage with these experiences. Our structure for these ELOs is based on the work of the Big Picture Learning Network as we seek to connect student interest and real world learning. There are three main parts of our structure to support ELOs:

1. **Interest Exploration**—This is the initial part of the ELO process as all learning experiences will be personalized by student interest. Through advisory, students will participate in a variety of different interest exploration activities from reflective type activities that push students to think about their interests to exposure type activities that broaden their understanding of what is possible in the world. Students may come with

very clear interests and passions; they may have lots of questions about themselves, their families, their communities, and jobs and careers; or they may be unsure what it is that they want to learn more about. A student may have never heard of 3D printing, or underwater welding, or nutrition counseling, or undertaking, but these may be the careers and interests that pique their curiosity and set them on a path to learning. Regardless of what point students enter in this process, Latitude will expose them to the wider world through the process of Interest Exploration.

2. **ELO Process**—The following steps are iterative, which most students will repeat multiple times throughout their careers at Latitude. Students will learn how to communicate and conduct themselves in a professional manner through this process. We believe the skills learned through this process are as valuable as many of the actual experiences students will have. It develops their agency to be able to pursue their interests for the rest of their lives.
    a. *Research*--The first step in pursuing an area of interest for students will be research. With the support of their advisors and other Latitude staff, students will brainstorm and research possible organizations, companies, and individual contacts to interview to learn more about a potential area of interest.
    b. *Contact*--Once students have identified potential contacts, they will reach out to them via email and phone. During this step, students will develop email and phone scripts with advisors as they build their capacity to engage professionally.
    c. *Interview*--The goal of their contact and research is to obtain an informational interview. Students will be expected to complete numerous informational interviews before they decide upon an ELO. Advisors will support students in practicing for these experiences and reflecting on them afterwards.
    d. *Shadow*--Following a successful interview, the next step for students is to set up a shadowing experience at their ELO site. Depending on the type of ELO they are pursuing, this may look like a job shadow, a class audit, or participating in an introductory experience. The goal of this step is to deepen students understanding of the work and experience they will have.
    e. *Project Set Up*--At this step, students have decided on a specific ELO. To formalize it, there will typically be a meeting between the student, advisor, and mentor at the ELO. The mentor may be the professional the student will work with or it may be the professor of the class they will take. The purpose of the meeting is to develop shared understanding of the agreements by all parties and the scope of work that the student will accomplish.
    f. *Documenting Learning*--This step is actually one that happens throughout the whole ELO process. Students will be required to document and reflect on all of their experiences from interest exploration through the specific projects they may complete through their ELO. Once a specific ELO is established, the student and advisor will determine which of the Latitude Graduate Competencies the student may demonstrate growth towards through the work he or she will complete. All of this work and reflection will be documented in an ongoing way in a digital portfolio.

3. **Mentor Recruitment and Support**-This element of the ELO process is an ongoing one. Latitude's Community Partnerships Coordinator will lead the mentor recruitment and support process. However, all Latitude staff and community members will contribute to the sourcing of potential mentors. Latitude will utilize the Big Picture Learning ImBlaze platform to track these contacts and make them accessible to students. Prior to the ELO process, the Community Partnerships Coordinator will provide orientation trainings for all mentors to set them up to support students effectively. During a specific student's ELO experience, the advisor will be the primary contact and support for a mentor, and they will conduct site visits at least once a month to ensure it is a successful experience.

Please see Appendix A24 for the Big Picture Real World Learning Guide.

The focus of the ELO work will evolve during the Latitude phases as students build their capacity to engage with their community:

- **Phase 1**—This phase will focus on the interest exploration and initial ELO research steps including informational interviews and job shadowing. Additionally, through both the studios in Phase 1 and the advisory activities, students will build the practical skills to access their community. This content will include route planning, time management, and safety. The goal of this phase is for students to be prepared to start an ELO in Phase 2.

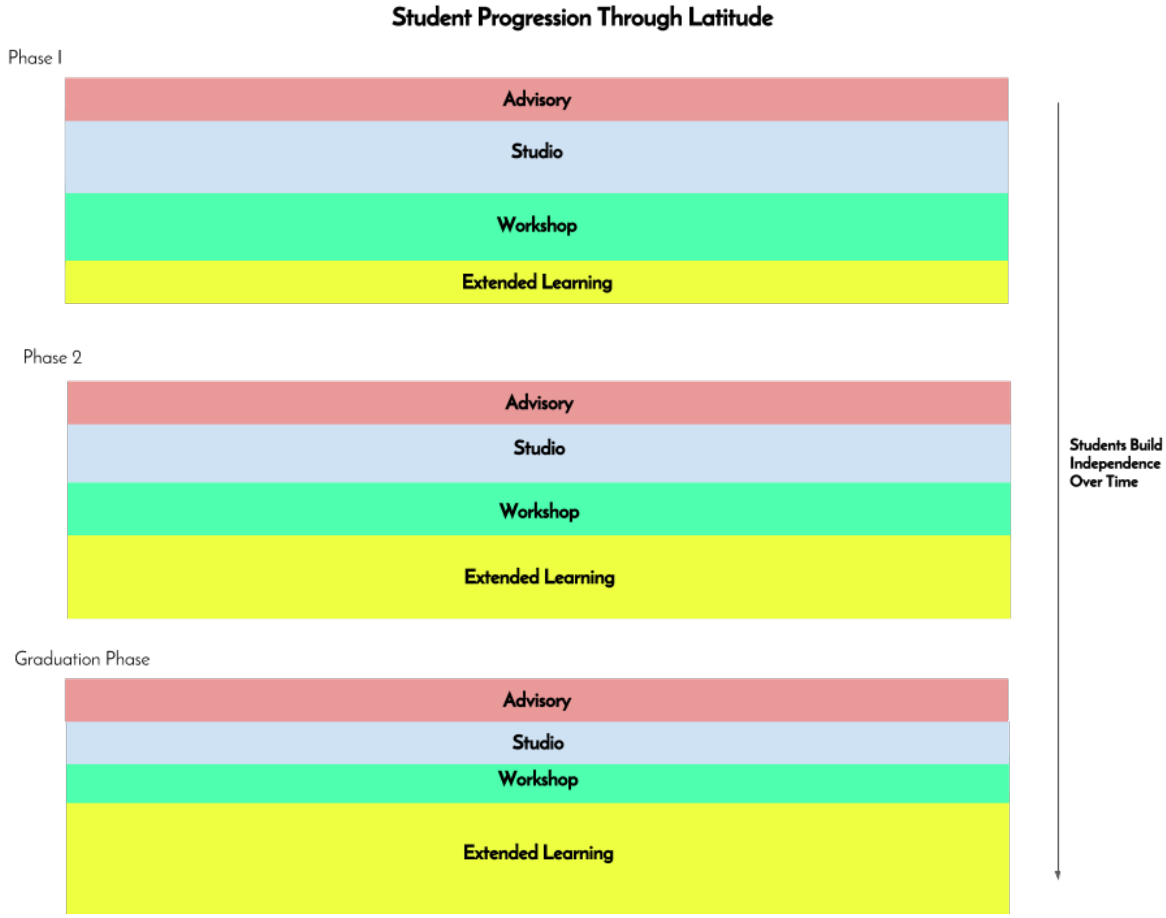
- **Phase 2**—This phase will be when students are actively pursuing their interests through ELOs. Initially, students will be expected to have at least one ELO, but as they gain experience managing their learning and continue to understand their interest, they may take on multiple ELOs. Each ELO will be aligned to student's personalized learning plan and post secondary goals. Students may be pursuing ELOs with small groups or individually.

- **Phase 3**—This final phase is when students will be doing their most significant work through ELOs. For most students, their ELOs will be connected to their senior project capstone. It should also help them finalize their post secondary plan so that they are prepared with the skills, knowledge, and network necessary to achieve meaningful and productive lives after graduation.

Latitude Program Phases

Latitude is structured as a gradual release model. Instructors initially provide a higher level of structure and support and then release students to an increasingly self--directed approach in the later phases. The following figure demonstrates how the students experience the Latitude Learning Experiences across the three phases as they build greater self direction and autonomy with their learning.

Figure 1.21—Latitude Phases:



Phase 1 is structured around the Workshops and the Humanities, Science and Design Studios: highly scaffolded, project-based learning experiences that support students in developing the academic, design, and Non-Cognitive competencies essential for successful self-directed learning. In Phase 2, students' educational plans become more personalized, as they experience greater voice and choice within their studios, as well as an increased emphasis on Extended Learning Opportunities off campus, such as professional internships. In the Graduation Phase, students apply the highest levels of mastery of the competencies as they prepare to move into adult life. The learning plans in this phase focus on demonstrating their high school achievement and implementing a plan to prepare for their post-secondary life.

Curriculum Development Timeline

Studio (High Quality Projects): Development Schedule

Target Dates & Person Responsible	Deliverables & Key Tasks	Core Resources/ Exemplar Models
Sept. - Oct. 2017	**COMPETENCY FRAMEWORK**	-Common Core Standards

Lillian Hsu (Lead) John Bosselman Aatash Parikh	**& STANDARDS ALIGNMENT** -Identify the core competencies targeted in each phase of Latitude -Identify Common Core standards, NGSS standards, and Social Justice standards to be addressed through Studio Projects -Map the competencies to Common Core standards and NGSS standards -Develop comprehensive Latitude Competency Framework in easily accessible language for all school stakeholders	-Next Generation Science Standards -Social Justice Standards: Teaching Tolerance Anti-Bias Framework -Resources from Competency Works -Learning What Matters Competency Framework from Building 21
Nov. - Dec. 2017 John Bosselman (Lead) Aatash Parikh	**PROJECT PLANS** Develop in-depth Phase I project plans with all necessary components of a high quality project: -Key learning targets and essential questions -Anchor texts, differentiated for multiple lexile levels -Opportunities for real-world learning: field experiences and collaborations with professionals -Project milestones/ benchmarks -Project scaffolds and project management plan -Differentiation strategies to provide access points for a diversity of learners (ELL, Special Education, etc.)	-Work That Matters: A Teacher's Guide to Project-Based Learning -Exemplar Project Plans from High Tech High & The Innovation Unit -Resources from Teaching Tolerance: Perspectives for a Diverse America -Resources from Stanford History Education Group & Eleanor Duckworth's Critical Explorers curriculum -Resources from Knowles Science Teaching Foundation

	-Strategies for supporting effective group work -Exhibition plan -Project reflection and assessment rubrics	
Jan. - Apr. 2018 John Bosselman (Lead) Aatash Parikh	**LESSON PLANS & STUDENT-FACING MATERIALS** -Develop templates and guidelines for daily lesson plans -Develop daily lesson plans for all Phase I projects -Develop student-facing materials to accompany each lesson plan -Test and refine lesson plans and student-facing materials through spring pilot with students	-Exemplar Lesson Plans from High Tech High -Exemplar Student Facing Materials from High Tech High -Resources from Facing History and Ourselves -Resources from Brown University's Arts/Literacy Project
Jan. - Apr. 2018 Lillian Hsu (Lead) John Bosselman Aatash Parikh	**ASSESSMENT SYSTEM** **-**Develop rubrics and assessment protocols for project artifacts, aligned to competency framework and standards -Identify SBAC Performance Task Interim Assessments -Test and refine rubrics and assessment protocols through spring pilot with students	-SBAC Performance Tasks Interim Assessments -Exemplar rubrics from Building 21 -Knowledge and Thinking rubrics, developed by Stanford Center for Assessment, Learning, and Equity (SCALE)
Sept. 2017 - July 2018 John Bosselman (Lead) Lillian Hsu	**ADULT LEARNING PLAN & SCAFFOLDS** **-**Develop teacher capacity to implement high quality projects, create detailed daily lesson plans, and develop student-facing materials	-Materials from High Tech High Graduate School of Education's Advanced Project Based Learning course -Materials from Knowles Science Teaching Foundation, UnboundEd, and EL

	-Develop teacher capacity to embed inquiry and literacy-rich strategies into project designs and daily lesson plans -Create and facilitate immersive summer training, modeling core High Quality Project practices	Education -Materials from High Tech High New Teacher Odyssey

Workshops: Development Schedule

Target Dates & Person Responsible	Deliverables & Key Tasks	Core Resources/ Exemplar Models
Sept. - Oct. 2017 Lillian Hsu (Lead) John Bosselman Gavin Ishihara-Wing Bryan Meyer (math consultant from Teachers Development Group)	**COMPETENCY FRAMEWORK & STANDARDS ALIGNMENT** -Identify the core ELA and Math competencies targeted in each phase of Latitude -Build the 9-12 ELA and Math progression -Identify Common Core standards to be addressed through Workshops -Map the competencies to Common Core standards -Develop comprehensive Latitude Competency Framework in easily accessible language for all school stakeholders	-Common Core ELA Standards -Common Core Math Standards -Learning What Matters Competency Framework from Building 21 -Knowledge and Thinking rubrics developed by Stanford Center for Assessment, Learning, and Equity (SCALE)
Nov. - Dec. 2017 John Bosselman (ELA Lead) Gavin Ishihara-Wing (Math Lead) Bryan Meyer	**ASSESSMENT SYSTEM** -Research and develop competency-based benchmark assessments for ELA and Math -Develop SBAC Interim Assessments -Research and adopt technology	-SBAC Interim Assessments -LEAP Learning Framework for Personalized Learning -Resources from EdSurge and iNACOL on data systems and learning platforms

	platform for flexible tracking of student assessment data	
Oct. 2017 - Apr. 2018 John Bosselman (ELA Lead) Gavin Ishihara-Wing (Math Lead)	**PERSONALIZED LEARNING MODEL** -Research evidence-based models of personalized learning, including grouping strategies, technology platforms, and best practices -Develop first iteration of personalized learning model to meet the needs of Latitude students -Test and refine personalized learning model through spring pilot with students	-Resources and professional development from LEAP Innovations and The Highlander Institute
Jan. - Apr. 2018 John Bosselman (ELA Lead) Gavin Ishihara-Wing (Math Lead)	**LESSON PLANS, ANCHOR TEXTS, AND STUDENT-FACING MATERIALS** -Develop guidelines for selection of texts differentiated by lexile levels -Develop daily lesson plans -Develop student-facing materials to accompany each lesson plan -Test and refine lesson plans and student-facing materials through spring pilot with students	-Curriculum from Interactive Mathematics Program -Curriculum from Stanford University's youcubed -Resources from UnboundEd
Sept. 2017 - July 2018 John Bosselman (ELA Lead) Gavin Ishihara-Wing (Math Lead) Bryan Meyer	**ADULT LEARNING PLAN & SCAFFOLDS** -Develop teacher capacity to facilitate effective learning in a personalized Workshop model -Develop teacher capacity to facilitate effective inquiry and	-Materials from the Teachers Development Group, focused on Cognitively Guided Instruction -Materials from Mathematical Agency Improvement Community (MAIC)

	dialogue in Workshop small groups	-Best practices for math educator training from Math for America

Advisory: Development Schedule

Target Dates & Person Responsible	Deliverables & Key Tasks	Core Resources/ Exemplar Models
Sept. - Oct. 2017 Lillian Hsu (Lead) Joi Ward John Bosselman Aatash Parikh	**COMPETENCY FRAMEWORK & STANDARDS ALIGNMENT** -Identify the non-cognitive competencies targeted in each phase of Latitude -Identify College and Career Readiness progression -Develop schoolwide Habits of Heart and Mind -Develop comprehensive Latitude Competency Framework in easily accessible language for all school stakeholders	-Big Picture Learning Non-Cognitive Competencies -Learning What Matters Competency Framework from Building 21 -Exemplar Habits of Heart and Mind from Coalition of Essential Schools and EFC Core Values
Oct. - Dec. 2017 Joi Ward (Lead) Aatash Parikh John Bosselman Lillian Hsu	**RESTORATIVE JUSTICE PRACTICES** -Develop school-wide restorative justice system: principles and practices -Develop rhythms and rituals for advisory circles	-Resources from International Institute for Restorative Practices -Restorative Justice school-wide principles and practices from Eagle Rock School and Professional Development Center
Oct. - Dec. 2017 Aatash Parikh (Lead) Joi Ward John Bosselman Lillian Hsu	**ADVISORY CURRICULUM MAP** -Develop curriculum map for Building Strong Sense of Community -Develop curriculum map integrating:	-Big Picture Learning Advisory Guide -Social-Emotional Learning secondary curriculum from Alpha Personalized Leadership Training program -College Readiness

	- Non-Cognitive Competencies - Social-Emotional Learning - Habits of Heart & Mind -Develop College Readiness curriculum map for all Latitude phases	Curriculum Maps from High Tech High and Naviance
Jan. - Apr. 2018 Aatash Parikh (Lead) Joi Ward John Bosselman Lillian Hsu	**ASSESSMENT SYSTEM** -Identify research validated scales to assess growth of non-cognitive competencies -Develop protocols and processes for: - Presentations of Learning - Student-Led Conferences - Exhibitions - Digital Portfolios	Academic Mindsets assessment developed by Stanford's PERTS and the University of Chicago Consortium on School Research Tools from Carnegie's Student Agency Improvement Community Dr. William Sedlacek's Noncognitive Assessment (used by Big Picture Learning) Presentation of Learning, Student-Led Conference, and Exhibition protocols from High Tech High and Big Picture Learning Digital Portfolio systems and best practices from High Tech High and NuVu Studio
Jan. - Apr. 2018 Joi Ward (Co-Lead) Aatash Parikh (Co-Lead) John Bosselman Lillian Hsu	**ADVISORY LESSON PLANS** -Develop weekly advisory "Rhythms and Rituals," including advisory launch at New Student Orientation -Develop advisory activity sets and mini-projects around: Purpose & Identity	-Big Picture Learning Advisory Guide -Resources from Project Wayfinder -Resources from High Tech High's College Prep Advisory Program

	- Social-Emotional Learning - Career Exploration - College Readiness -Test and refine advisory activity sets through spring pilot with students	
Oct. - Dec. 2017 Joi Ward (Lead) Lillian Hsu	**ADULT LEARNING PLAN & SCAFFOLDS** **-**Restorative Justice Training -Schedule times and develop practices & protocols for communication with families	-Training of founding team through International Institute for Restorative Practices -High Tech High Home Visit and Student-Led Conferences protocols

Extended Learning Opportunities: Development Schedule

Target Dates & Person Responsible	Deliverables & Key Tasks	Core Resources/ Exemplar Models
Sept. - Oct. 2017 Lillian Hsu (Lead) Joi Ward Aatash Parikh John Bosselman	**COMPETENCY FRAMEWORK** -Identify the non-cognitive competencies targeted through ELOs -Identify Post-Secondary College & Career readiness Graduate Outcomes -Develop comprehensive Latitude Competency Framework in easily accessible language for all school stakeholders	-Big Picture Learning Non-Cognitive Competencies -Big Picture Learning 10 Distinguishers -Exemplar Post-Secondary Plans from Big Picture Learning -Learning What Matters Competency Framework from Building 21
Oct. - Dec. 2017 Joi Ward (Co-Lead) Aatash Parikh (Co-Lead) John Bosselman Lillian Hsu	**PERSONALIZED LEARNING PLAN & CAPSTONE PROJECT GUIDELINES** -Develop template for personalized learning plan -Explore technology platforms for digital housing of personalized	-Exemplars of Personalized Learning Plans from Big Picture Learning and Building 21 -Capstone Project Guidelines and Models from Big Picture Learning, Eagle Rock School, and High Tech High

	learning plan -Develop first iteration of guidelines for senior capstone project	-Big Picture Learning's ImBlaze, an internship management platform
Oct. 2017 - Jul. 2018 ELO Community Partnerships Coordinator (Lead) Joi Ward Lillian Hsu	**ELO COMMUNITY PARTNERS** -Develop a network of Community Partners for Extended Learning Opportunities -Develop digital platform for tracking community partners and ELOs	-Big Picture Learning Advisory Guide -Big Picture Learning ImBlaze Platform
Jan. - Apr. 2018 ELO Community Partnerships Coordinator (Co-Lead) Joi Ward (Co-Lead) Lillian Hsu	**ELO PROTOCOLS & PROCESSES** Develop protocols and processes for supporting students with: ● Resume writing and refinement ● Practicing professional workplace skills ● Identifying potential ELOs ● Conducting informational interviews and site visits ● Securing an ELO ● Building mentor relationships ● Designing individual ELO projects ● Reflecting on ELOs	-Big Picture Learning Advisory Guide -Big Picture Learning's ImBlaze, an internship management platform
May. - Jul. 2018 ELO Community Partnerships Coordinator (Co-Lead) Joi Ward (Co-Lead)	**ADULT LEARNING PLAN & SCAFFOLDS** -Training for Advisors on supporting students with ELOs	-Training from Big Picture Learning coach

Technology Skills at Latitude

At Latitude, technology will be an integral part of all aspects of the student experience. Students will be expected to develop traditional technological proficiency in the areas of word processing, graphic design, spreadsheets, slide presentation, and internet research within their project based work in studios and extended learning opportunities. Additionally, students will build their capacity to use technology to expand their community and network through developing their online presence and utilizing communication tools to explore their interests and seek learning opportunities. Students will also use digital media tools (video, photos, music, etc.) to create authentic products for the community.

Latitude Graduation Requirements

The Latitude graduation requirements reflect the demonstration of a student's growth in the areas of our graduate profile: Personal Agency, Essential Competencies, and Integrated Identify. These elements reflect the attitudes, skills, and dispositions we believe are necessary for students to pursue meaningful and productive lives. At Latitude, this expectation includes traditional college readiness requirements, such as fulfilling the UC/CSU A-G requirements, in addition to the deeper non-cognitive competencies that students need to demonstrate to continue to grow and thrive in their post-secondary lives. As a competency based school, students will have flexibility in how and when they demonstrate their readiness for graduation, and our instructional program is designed to provide all learners with the appropriate time and support to be successful.

<u>Latitude Graduate Competency Requirements</u>
At Latitude our competencies define the essential skills, attitudes, and dispositions necessary to pursue a meaningful and productive life. As such, these are the core of our graduation expectations. Students will demonstrate their attainment of these competencies through the various Latitude Learning Experiences (Studios, Workshops, Advisory, and Extended Learning Opportunities). Through the demonstration of these competencies, learners will have accumulated the credits necessary to fulfill all of the UC/CSU A-G requirements.

<u>Senior Project Capstone</u>
As a culminating experience for students at Latitude, each student must complete a senior project during Phase 3. This senior project is intended to be an opportunity for students to demonstrate their attainment of the Latitude competencies for graduation. The project must be accompanied by a substantive written component and will be included in a summative graduation defense with their learning team.

<u>Post-Secondary Plan</u>
The final graduation requirement for students at Latitude will be the development of a post-secondary plan. This plan will be an iterative tool that is aligned to their personal learning plan throughout their time at Latitude and will reflect their aspirations for life after Latitude and concrete plans to attain those goals. Students will be expected to have completed relevant activities during their Latitude careers to be positioned to accomplish their postsecondary plans (i.e. college entrance exams, applying for financial aid, etc).

UC/CSU A-G Alignment and WASC Accreditation Plan

Latitude will seek accreditation from the WASC (Western Association of Schools and Colleges) for the charter school. The timeline for securing accreditation for Latitude is aligned to supporting all High School students in earning credits that fulfill the University of California/California State University (UC/CSU) system A-G requirements during their 9th through 12th grade years. Academic courses at the high school level will be submitted and reviewed by the UC Office of the President for approval and in turn, all students at Latitude will have the opportunity to earn credits that fulfill the UC/CSU A-G requirements. All required coursework will be offered at Latitude or through approved institutions such as local community colleges. By virtue of our internal requirements at Latitude, all students will fulfill or exceed the UC/CSU A-G requirements (please see chart below) over the course of their four years at our school.

Figure 1.22—Latitude Sample A-G Course Map

Studio	Phase 1	Phase 2	Phase 3
Humanities Studio and Workshop	ELA (1 year) History (1 year)	ELA (2 years) History (1 year) VPA (1 year)	ELA (1 year)
Math Workshop	Math (1 year)	Math (2 years)	Math (1 year)
Science & Design Studio	Elective (1 year)	Lab Science (2 Years) Elective (2 years)	
Extended Learning Opportunities		Foreign Language (1 year)	Foreign Language (1 year)

Credit Recovery

As a competency based school, our credit recovery systems are built into the fabric of our instructional program. Each learning experience provides students the opportunity to demonstrate their growth and earn credit in specific competencies. Additionally, students are supported to continue the process of revision and growth in order to attain the proficiency requirements for the competencies within a particular learning experience. Students are not 'done' until they have earned the appropriate credit, thereby embedding credit recovery into the structure of our instructional program.

For students who come to Latitude as credit deficient, we will engage in a rigorous transcript analysis and student assessment to determine which competencies are needed for acceleration. Their personalized learning plan will then reflect these needs to provide students the opportunity to demonstrate the competencies and earn the credits necessary for graduation.

Inform Parents of Transferability of Credit

Parents will be notified of the courses we offer and the graduation requirements we prescribe in the Latitude handbook given to parents and students upon enrollment to the school. This handbook also publicizes the transferability of credits between Latitude and other public high schools, as determined through negotiations between Latitude and the District a minimum of two months prior to the start of the school year.

Academic Calendar

School Year
The proposed calendar for 2018-2019 will include 177 instructional days, which Latitude intends to adhere to as state and federal funding allows. However, Latitude and EFC retain the right to modify this proposed calendar to coordinate with the calendar of the district and the calendars of our professional development partners, and such modification shall not be considered a material revision of the charter.

Please see Appendix A26 for the proposed 2018-2019 Latitude school calendar.

School Day
The instructional day at Latitude is 9:00 am to 4:00 pm Monday through Friday, which Latitude intends to adhere to as state and federal funding allows. The following table indicates how the instructional day will be utilized.

Figure 1.23—Daily Schedule

Start of School Day	9:00 am
Instructional Block (Advisory, Workshop, Studio, ELO)	9:00 am -12:00 pm
Lunch	12:00 pm -12:30 pm
Instructional Block	12:30 pm - 4:00 pm
End of School Day	4:00 pm

As students progress through the three phases at Latitude, the amount of time they will spend in the different learning experiences will shift based on their personalized learning plans.

Please see Appendix A27 for student schedule examples.

Instructional Minutes
Latitude's proposed academic calendar will be in compliance with the minimum number of annual instructional minutes outlined in Education Code 47612.5. This requires, at a minimum, 64,800 minutes for students in grades 9-12.

The annual instructional minutes at Latitude in these grades will be 70,200 minutes (not including lunch and passing times). These meet or exceed the number of instructional minutes required by the state in Education Code Section 47612.5. The table below demonstrates this comparison.

Figure 1.24—Instructional Minutes Comparison:

Grades 9-12 Required Minutes	64,800
Latitude Instructional Minutes	70,200

Please see Appendix G for the Instructional Minutes Calculator.

Staffing

To recruit teachers who are qualified to deliver the proposed educational program, Latitude has developed a strong partnership with the High Tech High Graduate School of Education, a WASC accredited Master's program that prepares teachers to design high quality project-based learning curriculum and develop pedagogical skills in project planning, management, and facilitation. Beyond High Tech High, Latitude also has strong national connections with the Deeper Learning network of schools, which includes Expeditionary Learning, Big Picture Learning, the Internationals Network for Public Schools, and the International Studies Schools Network, all of whom prepare teachers to teach using project-based learning as a primary pedagogical approach and can provide a pipeline of teachers for Latitude.

To support Latitude's math program specifically, Latitude's school leadership has built strong connections with the Math for America Fellowship program and is in the process of building relationships with Stanford University professor Jo Boaler, who is an international leader in mathematics education. Boaler runs a summer math program for local students that also serves as a training ground for developing math teachers; the teachers trained through Boaler's youcubed program are another strong pipeline of math teachers for Latitude.

In terms of teacher recruitment, Latitude has a strong vision for diversity, equity, and inclusion within our school. Our plan is to move from intention to action through a formalized, intentional talent strategy. We will:

- Focus on recruitment and selection by consciously building strategic partnerships with sources of talent other than personal networks, such as universities, professional minority organizations, and leadership pipelines focused on candidates of color.

- Invest in training to ensure that interview processes and interviewers are aware of unconscious biases and that the process is fair and impartial.

- Invest in retention and development: we will track turnover rate by race, ethnicity, and gender, and we will provide targeted coaching and mentoring as well as continuously review our systems through the lens of teacher experience to retain high potential employees of color.

- Strategically hold organization-wide conversations about diversity issues and concerns, solicit feedback and input through internal diversity surveys, and communicate findings to all staff on a regular basis.

- Constantly scan for best practices inside our organization, and more broadly in both the nonprofit and for-profit sectors.

At the local level, we will build strategic partnerships with The Black Teacher Project, the National Equity Project, and San Francisco State University's Raza Studies department to extend the reach of our recruitment efforts. Nationally, we will recruit strategically through the Deeper Learning Equity Fellows, the International Network for Public Schools, the National Latino Education Network, and the National Association of Black School Educators. Latitude will also plan to have a recruiting presence at the convenings for the Education for Liberation Network, National Association for Multicultural Education (NAME), and the California Alliance of African American Educators.

Professional Development

To facilitate excellence in lesson design and instruction across all teachers, Latitude will invest significant time and staff resources into professional development and adult learning. All new faculty will participate in an intensive two-week New Teacher Odyssey that includes experiential learning, workshops, project tunings, and collaboration time with more veteran teachers. Latitude teachers will engage in ongoing professional development through daily morning meeting time and dedicated staff days. Teachers will work in cross-disciplinary teams to increase the integration and depth of subject matter, as well as to increase collegial learning through collaboration. To facilitate this collaboration, teaching partners will share a common prep period, a common office, and adjoining classrooms that open up into a common space where the partners can co-teach their shared group of students.

The Latitude leadership team will work diligently to provide exemplars of outstanding instruction to its teachers so that all teachers may achieve base mastery in Latitude teaching practices. Project designs will be documented and shared on teachers' digital portfolios, and project work will be curated publicly in our facilities to make products and process transparent.

The Latitude leadership team prioritizes instructional coaching and will spend a significant percentage of its time observing in classrooms and debriefing with teachers. Latitude will have strong structures for collegial coaching, as well as official mentor-mentee partnerships for teachers undergoing induction.

Ensuring that teachers have the capacity to deliver the educational program with quality requires a deep understanding of adult learning, encompassing all the facets of a school that can impact teacher motivation, learning, and growth. In designing the professional development plan for Latitude teachers, school leadership will be attuned not only to the *content* of the professional development but to the *nuances of delivery and implementation*, as well as the additional *school levers and enabling conditions* that can complement formal PD and accelerate adult learning.

These School Levers & Enabling Conditions include:

- Strategic use of time and space to facilitate informal staff collaboration outside of regular meeting time
- Thoughtful cohorting of teachers and students to facilitate sustainable, focused collaboration
- Intentional pairing of veteran and novice teachers in team partnerships that share the same group of students
- Open-source, easily accessible documentation of exemplar curricula and instructional strategies
- Public curation of student work, both product and process
- Common language, norms, rituals and rhythms that enculturate standards of quality and shared mindsets around growth and transparency
- A strong sense of community and collegiality among staff to enable vulnerability and openness to critical feedback

The Nuances of Delivery and Implementation include:

- Thick symmetry between adult learning practices and the pedagogical practices we aspire for teachers to enact with students
- Consistent use of protocols to facilitate collaborative problem-solving, brainstorming, and idea tuning
- Distributed facilitation that enables all teachers to take on leadership roles and share their expertise
- Anchoring of professional development in multiple forms of data and student feedback
- Providing access points for multiple types of learners through different PD approaches, including: dialogue, experiential learning, reflection, and movement

Adult Learning at Latitude will fall into four key categories:

- Learning from Colleagues
- Learning from School Leadership
- Learning from Students
- Learning from Outside Experts

<u>Learning from Colleagues</u>

Research into effectiveness of adult learning practices indicates that the most powerful levers for shifting teacher practice are not one-off PD workshops but regular opportunities for collaboration with and mutual learning from colleagues. At Latitude, we will leverage the strength of collegial learning in the following ways:

- Collegial Coaching Groups:
    - Teachers will be organized into heterogeneous collegial coaching groups with each group containing a mix of veteran and novice teachers.
    - Teachers in each group will participate in a regular rotation of Lesson Tunings, followed by in-person and video observations and debriefs focused on instructional practices.
- Protocol Groups:

    - Teachers will engage in a regular rotation of Project Tunings, Dilemma Consultancies, Root Cause Analyses/Fishboning, and Equity Protocols to facilitate critical analysis of their curriculum and instruction.
- Best Practice Documentation and Sharing:
    - Teachers will have regular opportunities to document and share their most effective practices with their peers

<u>Learning from School Leadership</u>
Latitude's school leadership, including the School Principal and Director of Instruction, will hold the responsibility for personalizing the adult learning experience for each teacher. This will include:

- Helping to set one-on-one personal learning goals for each teacher and developing a personal learning plan
- Engaging in an ongoing cycle of weekly classroom observations and debriefs
- Mid-year conversations revisiting and refining the personal learning plan
- End of year 3-2-Q (3 Celebrations, 2 Areas of Growth, and 1 Inquiry Question) reflection process, grounded in data, and modeled by the school leadership

<u>Learning from Students</u>

- Regular use of exit cards and student focus groups to elicit student feedback
- Regular use of Looking at Student Work Protocols to anchor discussions in student work
- Regular cycle of Project Tuning Protocols with student participants
- Yearly YouthTruth survey with student feedback for each teacher

<u>Learning from Outside Experts</u>

- Project "Slices" (experiential immersions in the community)
- Teacher "Shadow a Professional" Days
- Annual Community Networking Power Lunch with local professionals
- External trainings and conferences

<u>Year One Professional Development Proposed Topics</u>

AUGUST (TWO-WEEK TRAINING)	
SCHOOL CULTURE & COMMUNITY How will we build a strong sense of community from day 1? What are our rhythms and rituals to ensure that every student is known deeply and feels a profound sense of belonging? What is our shared vision around restorative practices? Around classroom management? What is our common approach when challenges/conflicts inevitably arise?	STUDENT LEARNING & MOTIVATION What is High Quality Project-Based Learning? How do we design projects that embody Authenticity, Complexity, and Craftsmanship? What is our Competency Framework, and what personalized support will all students receive to grow in these competencies? What are the data cycles we will use to inform

What are our obligations as mandated reporters? What are our health and safety policies and emergency procedures?	decision-making around instruction and student support? What data systems will we utilize?
SEPTEMBER - OCTOBER	
SCHOOL CULTURE & COMMUNITY How are we supporting students in developing and articulating their sense of identity, purpose, and passions? How are we scaffolding social-emotional learning tools in advisory and studio? Which SEL competencies are most crucial for this first year?	STUDENT LEARNING & MOTIVATION How are we scaffolding for Inquiry and Literacy across all of our disciplines? How are we ensuring that students are doing the intellectual heavy lifting?
NOVEMBER - DECEMBER	
SCHOOL CULTURE & COMMUNITY How are we preparing students to reflect on their learning through public Presentations of Learning? How are we building their metacognition and public speaking skills?	STUDENT LEARNING & MOTIVATION How are we preparing students for their first Project Exhibition? How are we helping them document their products and process? How are we supporting them to share their learning with an authentic audience?
JANUARY - FEBRUARY	
SCHOOL CULTURE & COMMUNITY Shadow a Student: All staff will take turns shadowing a student who is struggling or feeling a sense of disconnect from the community. What can we learn from stepping into the shoes of a student?	STUDENT LEARNING & MOTIVATION How are students progressing along our Competency Framework? Which students are we not serving well? What adjustments in our practice do we need to make to ensure that all students' needs are being met?
MARCH - APRIL	
SCHOOL CULTURE & COMMUNITY How are we deepening students' SEL toolbox? Which rhythms and rituals are taking hold? Which need refinement or replacement?	STUDENT LEARNING & MOTIVATION Where do we see evidence of high quality work and intellectual complexity? How do we build on our strengths? What are our growing edges?

MAY - JUNE	
SCHOOL CULTURE & COMMUNITY How are we preparing students for increased independence in phase 2 of the school? How are we leveraging year-end Presentations of Learning to launch students into the next phase?	STUDENT LEARNING & MOTIVATION Reflecting on Student Feedback: What are we learning from YouthTruth and family feedback? How can we use this feedback to inspire growth for each teacher and as a staff?

D. School Culture

At Latitude, students move toward success by demonstrating three fundamental characteristics: personal agency, essential competencies, and integrated identity. We built our school vision around supporting students in developing these foundational qualities. Accomplishing this vision begins with establishing a strong school culture. Below we describe each component of the vision and detail the systems, plans, and training we will use to realize it.

- **Latitude Vision**
  Latitude 37.8 High School graduates will have the personal agency, essential competencies, and integrated identity necessary to be prepared for a meaningful and productive life.

Values

At Latitude we seek to develop the following characteristics in all students:

- **Personal Agency**—Students with personal agency make decisions about how they learn, what they learn, and the pace at which they learn. They seek understanding and respond actively to challenges, acting with purpose to obtain results for themselves and their community. Students will learn agility as they work to overcome physical and environmental constraints, redesign their environments to their needs, and reflect their identities, skills, and values.

- **Essential Competencies**—We aim to demystify and directly teach the essential competencies that 21st century citizens need for success, such as critical thinking, teamwork, problem-solving, and responsible decision-making. We will provide differentiated teaching to insure that students move through proficiency on to mastery of these skills. We will tailor learning to each student's strengths, needs, and interest. They will have a voice and choice in what, how, when, and where they learn.

- **Integrated Identity**—To become successful adults, young people must develop an integrated identity, a sense of self that connects multiple times (past, present, and future), places (e.g. home and school, the U.S. and places of family origin), and social identities (e.g. race/ethnicity, sexuality, gender, religion). We will encourage our students to choose a curriculum that allows them to gain this essential self-knowledge.

Trainings
At Latitude, we train teachers in the skills necessary to build a strong school culture. This includes:

- In-house training on engaging students effectively. We will provide ongoing professional development to support teachers in keeping students engaged in their own learning.

- All Latitude teachers will be trained in *Restorative Practices,* learning the following methods:
    - An introduction to *Restorative Practices*: the philosophy, key principles, and variety of approaches in a school setting.
    - Ways to build effective learning environments and strong learning relationships within classrooms.
    - Culturally responsive approaches
    - How to implement effective circle time
    - Classroom conferencing
    - Using language that supports desired student behaviors

- We will thoroughly train teachers and staff in a shared method of responding to student behavior.

Practices
At Latitude, we will implement the following practices to build a strong school culture:

- Design Thinking - At Latitude, we believe that design thinking will enable young people to remake the world for themselves and their communities, an action that powerfully motivates student learning. Design thinking begins with identifying real-world problems and then trying to solve them, in the process developing one's imagination, values, knowledge-base, and skills. We will establish a school culture in which students and faculty will solve problems and approach challenges, large and small, by working together. We will honor our students' creative ideas, giving them confidence in their ability to change the world. At the same time, we will empower them with the following Design Thinking competencies:
    - Designing Processes
    - Building Empathy and Learning from Others
    - Defining Problems
    - Fabricating and Crafting

- Habits of Success - To become consistently successful, students must internalize certain habits of success, also called 'non-cognitive skills,' such as moderating one's emotions, working with others, and thinking through decisions. Developing these skills requires lots of practice, feedback, modeling, and coaching. Latitude teachers support students in developing the following non-cognitive competencies:
    - Positive Self Concept and Growth Mindset
    - Realistic Self Appraisal
    - Navigating Systems and Self Advocacy

- Preference for Long Term Goals
    - Availability and Support of Adult Mentors
    - High Quality Leadership Experience
    - Community Involvement
    - Knowledge Acquired in a Field Outside School

- Restorative Practices – As a restorative school, Latitude takes a restorative approach to resolving conflict and preventing harm. Restorative approaches enable those who have been harmed to convey the impact of the harm to those responsible, and for those responsible to acknowledge this impact and take steps to put things right. Restorative Practices utilize a range of methods and strategies both to prevent relationship-damaging incidents from happening and to resolve them if they do happen.

- Trauma Informed Model - A trauma-informed school requires a layered approach to create an environment with clear behavior expectations for everyone, open communication, and sensitivity to the feelings and emotions of others. The adults in our community (administrators, teachers, staff, parents, social services, and law enforcement) are prepared to recognize and respond to those who have been impacted by traumatic stress. In addition, we will provide students with clear expectations, social-emotional tools, and communication strategies to guide them through stressful situations. We aim not only to provide tools for coping with extreme situations, but also to create a culture of respect and support.

- Culturally Relevant School - We will take several actions to support culturally responsive teaching. First, we will dislodge the idea that our students and communities operate on a "deficit," possessing less talent or opportunity, replacing this idea with a sense of abundance and possibility. Secondly, teachers will be trained to recognize (and help students recognize) the cultural bias in educational materials (such as textbooks). Thirdly, teachers will be trained to make their teaching relevant to the cultures of their students.

Structures and Systems

At Latitude, we will implement the following structures and systems to build a strong school culture:

- Advisory and Advisors - Advisors mentor students in navigating the areas of academic achievement, personal/social development, and college and career development, ensuring Latitude students are prepared for a meaningful and productive life. Advisors ensure that students develop schoolwide Habits of Heart and Mind, lead a weekly advisory "Rhythms and Rituals," and facilitate activity sets and mini-projects built around exploring topics, such as purpose & identity, social-emotional learning, career exploration, and college readiness.

- Affinity Groups - Created based on student need, affinity groups provide students who share an identity (usually a marginalized identity) to meet in a safe space. Affinity groups provide emotional support and might lead to actions that create a more equitable experience at school.

- Retreats for Team Building - Latitude will build community with off-site retreats for both students and staff (e.g., white-water rafting, camping, orienteering). These programs help foster positive group dynamics through shared memories, as well as providing space and time to discuss deep issues, pushing out of comfort zones, and accomplishing team objectives.

- Intervention Systems - Latitude draws on the same Multi-Tiered System of Supports (MTSS) framework as other EFC schools to provide aligned academic and social emotional approaches to prevent student struggle and remedy existing gaps.

Additional Positive Culture and Climate Supports
At Latitude, positive culture is already embedded in the project-based curriculum and off-site learning. Because learning takes place outside of a school building, students will work with people of all socioeconomic, cultural, and racial backgrounds in the wider community. Latitude students will learn to understand diverse perspectives and concepts. As community engagement and whole-child development are key areas of focus for all EFC schools, Latitude will provide extended learning opportunities for its students and eventually for the wider community, as detailed below.

For students:
- Small group intervention instruction
- Homework help sessions
- Enrichment classes (e.g. arts, dance, sports, clubs)

For the community:
- School fairs (Back to School Night, Expo, Open House)
- Parent engagement classes (with topics on assisting children with homework, holding children accountable at home, nutrition, gang prevention, computer literacy, and social-emotional learning)

E. Student Recruitment and Enrollment

Latitude 37.8 High School will serve 360 students in grades 9-12 once fully enrolled in Year 6. The school will open in the fall of 2018 with an initial cohort of 50 9th grade students. We will add a grade per year and increase the size of our incoming cohort in our third year to our target of 90 students per cohort. This slow growth model is strategic - it allows us to build a culture of academic achievement and develop and implement curricular models, materials, and instructional programs one grade level at a time. It will also allow us to build sustainably towards a student body that meaningfully represents the diversity of the city of Oakland.

One of the core design principles of Latitude is integration. In order to best prepare all students for a meaningful and productive life, we believe it is essential for students to build a strong sense of their personal identity and to be able to successfully engage across difference. To build these capacities in students, they must be exposed to a diverse community and be supported to engage productively; thus, Latitude will be a diverse by design school that reflects the larger demographics of the city of Oakland. As such, Latitude will strive to represent Oakland's diversity from socioeconomic, racial, linguistic, and cultural perspectives as well as by learning needs and will build community both internally and externally.

Recruitment Plan

In order to achieve the desired diversity for the Latitude community, we have embarked upon a city wide engagement plan to build support for the Latitude model and to make connections across many different groups. This effort leverages a variety of existing school, recreational, service, and religious communities to attain a student body that reflects all types of diversity in Oakland. Additionally, Latitude intends to utilize legally permissible means to enroll a profile of students representative of the racial, ethnic and socioeconomic diversity of the city of Oakland. In this regard, Latitude employs certain weighting mechanisms in relation to its lottery that foster diversity and that fit squarely within acceptable admissions protocols.

Please see **Element 7 - Means to Racial and Ethnic Balance** for information on student recruitment efforts, including the following:

- Outreach to families in poverty, academically low-achieving students, students with disabilities, linguistically diverse families, and other youth at risk of academic failure

Please see **Element 8 - Admission Requirements** for information on student admission and enrollment processes and procedures, including:

- Recruitment efforts in Year Zero
- Target re-enrollment rate
- Ongoing student recruitment efforts

Also, please see **Element 8 - Admission Requirements** for information on student admission and enrollment processes and procedures, including specifics around any admission preferences for students, timelines, lottery procedures and policies around waiting lists.

F. Student Engagement and Satisfaction

The Latitude Design Principles - Relevance, Authenticity, Personalization, and Creativity - were identified to drive student engagement and satisfaction. As students clearly stated during the XQ listening campaign, their primary concern was to have a program that connects their lives to their academic experience. The Latitude instructional program is designed to accomplish this goal by utilizing student interests and experiences to drive their learning and to create authentic learning opportunities in their communities.

Attendance

At Latitude, the student attendance target is to maintain at least a 95% Average Daily Attendance rate for all students. Additionally, we will work to ensure that the chronic absence rate for the school is less than 10%. The school administration and staff will be responsible for tracking and monitoring student attendance. The primary intervention for student attendance is engagement with the student and their family by the advisor. If attendance issues persist, a referral to the Latitude Coordination of Services Team (COST) will be submitted to gather additional data and develop an appropriate support plan.

High School Persistence

The Latitude instructional program is designed to ensure all students progress towards high school completion and postsecondary readiness. Our advisory program is intended to develop the individualized relationship with a student and their family that is the foundation for school connectedness. The Latitude competency based instructional program provides students with flexibility in when and how they demonstrate their learning, which increases student engagement and ownership over their academic performance. Additionally, the learning experiences at the heart of a student's experience at Latitude - Studios, Workshops, Advisory, and ELOs - will be authentic and relevant, reducing the gap students often feel between their school experience and their real lives. Finally, Latitude will implement a comprehensive system to monitor student progress and intervene as necessary. The foundation of this system is the student's individualized learning plan and the learning plan teams. These structures will provide frequent, collaborative review of student progress toward graduation and their postsecondary goals. When necessary, learning plan teams and/or staff may submit a referral to the Latitude COST team and utilize the MTSS system to provide appropriate interventions to support student progress.

G. Community School: Ongoing Family Involvement and Satisfaction

Involved parents anchor Latitude in the community. Recognizing that parents are a child's first teachers, we envision a true partnership between parents, teachers, and students in order to create a thriving school. Latitude will work to involve students in their own learning and to make them feel loved and seen at school. We will encourage all parents, even those who traditionally have not engaged with the school community, to participate. Towards our goal of valued and integral partnership, we will implement structures like home visits, student-led conferences, parent education events, and a Family Leadership Council.

Goals

- Create empowered families that actively participate in school decisions
- Build strong family and school relationships
- Maintain clear, consistent, and inclusive communication
- Galvanize community partners to best serve the students at Latitude

Family Engagement Strategies

Family involvement and community partnerships are fundamental to meeting the needs of the whole child. We encourage equal participation of and appreciation for all the individuals and organizations who work for and with our students. We recognize the challenge of developing a culture and program that is authentically inclusive of families and community members. Towards our goal of valued and integral partnership, we will implement the following:

Establish Founding Families

From its inception, Latitude engaged parents in the development of the school, including several parents on the school design team, running focus groups, inviting feedback, and offering information sessions to gauge parent interest. We put effort into outreach and enrollment, educating the prospective families about the school philosophy and how they can become founding families.

Partnering with Parents
Latitude makes parents partners in the education of their children. Parents need to feel seen and heard. Latitude staff will make families welcome, know them well, and engage them actively in the life and decision-making of the school.

Communications
Latitude will communicate with families clearly, consistently, and inclusively, offering electronic and print versions of information and translating messages into the multiple languages of our community (especially into Spanish).

Sharing Student Work
Latitude will organize regular events that showcase student learning and projects, which creates a sense of pride and accomplishment and draws new families into the school. Additionally, Latitude will utilize an online platform to share student work and track progress with students, families, and teachers.

Administrative Support
Latitude will employ a family engagement coordinator, who will send out communications, organize regular coffee talks with the administration, and run a council modeled on the EFC Family Leadership Council.

Advisory Learning Teams
Teachers will spend scheduled time with parents and students in order to ensure that there is time for quality dialogue on student progress. These conferences will be mandatory for every family. Latitude students will lead these conferences, evaluating their own progress toward academic goals and presenting a portfolio of their work. Student-led conferences are a powerful way for students to take charge of their own learning, reflect on their work, and set new goals.

Parent Education
In addition to conferences, Latitude will hold regular group meetings with parents. Topics will include the shared curriculum, options for independent learning, supporting students with homework, and college counseling.

The Family Leadership Council
Parents will have a formal voice in the decision-making of the school through the Family Leadership Council (FLC). The FLC, which also includes one representative from each advisory, meets regularly to advise the principal and participate in important decisions affecting the school. Education for Change established a Family Leadership Council to ensure ongoing, consistent involvement and training for parent leadership development. Each EFCPS school site FLC will elect two representatives to the EFC Family Leadership Council. The EFC Family

Leadership Council participates in ongoing evaluation of the organization's programs and operations, schools and community concerns and priorities for improvement.

In 2011, Education for Change instituted a new governing board structure that mandates parent leadership on the governing board, as well as a clear pathway for the election of parents to the governing board. The election shall proceed as follows:

Beginning in fall 2011, two seats on the governing board are reserved for family representatives nominated by the EFC Family Leadership Council. These parent EFC board members will be recruited with the same criteria as for other board members: each parent board member shall possess one or more of the board-desired backgrounds, such as community, education, legal and finance. These members shall serve terms of one (1) year each, with no term limits.

In addition to the two elected formal board member seats, the school site Family Leadership Councils are expected to present feedback and information to the Education for Change governing board, giving family members two types of meaningful input on the strengths and weaknesses of all of its schools, programs and operations. The EFC Family Leadership Council and the school site Family Leadership Councils serve in an advisory role to the Education for Change governing board.

EFC promotes parent engagement programs at all of its schools. As enrollment at EFC is based on student and parental choice, consistent and continual communication with parents about the expectations the school has for their children is critical. At Latitude, parents/guardians are expected to participate in their children's Learning Team and to actively engage in their education by engaging in discussion about their evolving passions and interests, supporting their participation in ELOs and other learning experiences.

Latitude will also recruit and hire a Recruiting and Community Development Coordinator to guide the FLC, support coordination of events, and serve as the main liaison between the FLC and school administration. Parents will have a vital voice in every important decision made at Latitude such as budgeting, student programs, and curriculum through monthly FLC meetings and annual surveys.

Community Partnerships

Building strong links with the local community is critical to Latitude's success. Latitude and EFC have partnered with individuals and organizations in the community that are dedicated to the success of our students by providing services, partnering for studio projects, or hosting students in an ELO. The following list represents the beginning of the larger Latitude network:

- The City of Oakland
- KQED
- Unity Council
- Gyroscope
- Galileo Learning
- Junior Center for Art and Science

- Port of Oakland
- Oakland Heritage Alliance
- Oakland Urban Paths
- Berkeley Community Media
- East Bay Yesterday Podcast
- Oakland Public Library
- California College of Arts
- Fab Lab at Laney College
- National Equity Project
- Office of Alternative Education, OUSD

Latitude and EFC will continue to reach out to a wide range of organizations to develop relationships and to provide much-needed support to the school community.

<u>Community Surveys</u>
Parents are surveyed about their satisfaction with the school, including whether they feel welcome at the school site, the depth of their relationships with school staff, the degree to which the school empowers them to be part of the decision-making process, and how well the school communicates with them. EFC currently requires all of its schools to utilize the SCAI (School Climate Assessment Instrument) with students, parents, and staff because it is research-based and correlated to student achievement. We will also consider other metrics, such as parent participation in the various meetings and events, attendance at parent conferences, and the number and effectiveness of community partners.

H. Special Populations: Identification, Remediation, and Acceleration

As a diverse by design school, Latitude will seek to reflect the diversity of learners across our city. The design principles, key elements, and learning structures have been designed with the notion that school must provide individual students the experiences necessary for them to attain our graduate outcomes. While we believe that our model is supportive of any type of learner, the Latitude school program will offer opportunities designed for groups of learners whose circumstances often make it more challenging to excel within traditional school models or approaches. Specifically, Latitude's personalized and competency based approach will allow us to serve students who are over-aged, credit deficient, and/or require flexibility in their schedules and programming. In our collective experiences serving urban youth, including subgroups such as newcomers, homeless youth, and teen parents, this is often best accomplished through more flexible and relevant learning opportunities. By building systems to serve students with these diverse types of needs and leveraging the resources of the city, we will be able to serve an authentically diverse student body that reflects all of the different experiences of young people in our city, and in creating a personalized and relevant approach for all students, we will be able to serve a much larger range of students' needs and facilitate a range of students' passions.

A Multi-Tiered System of Supports

Ensuring all students succeed through our implementation of a Multi-Tiered System of Supports

In 2012, EFC collaborated with Seneca Family of Agencies to develop the All In! Partnership, a nationally-recognized multi-tiered system of supports approach that merited a federal Invest in Innovation (I3) grant at four of six schools. The Unconditional Education model (UE) focused its resources on using data to coordinate early intervention, supporting students before they fail, and facilitating the provision and coordination of both academic and non-academic services, thereby removing barriers to student success.

The I3 grant period has formally passed and EFC has fine-tuned the UE model and now manages the implementation internally (formerly managed by Seneca). EFC utilizes the Multi-Tiered System of Supports (MTSS) tiered framework co-developed by EFC and Seneca to provide aligned academic and social emotional approaches to prevent student struggle and remedy existing gaps. EFC has established a Department of Student Support Services which manages the MTSS and Special Education for the organization.

MTSS establishes criterion for decision-making around three tiers of services, with Tier 1 services implemented school-wide, and Tiers 2 and 3 targeting students who require additional services to succeed. The integrated, data-driven approach of MTSS has been shown to be effective in enhancing student achievement school-wide, but its implementation is often hindered by the level of expertise required for implementation and coordination of different levels of service provision. Over the past four years, EFC has leveraged the capacity of Seneca Family of Agencies, whose core competency lies in service coordination and the delivery of more intensive education and social emotional services, as the primary lead in managing our MTSS system. Together, Seneca and EFC have created and implemented a MTSS model formally resourced by a federal Invest in Innovation grant at four of our schools. As the grant concluded, EFC worked with Seneca to bring MTSS leadership into EFC. Beginning in 2017-18. EFC has launched a Department of Student Support Services which formally manages the implementation of MTSS across all of its schools. Seneca continues to a significant partner, particularly around behavioral health systems for our youth, and Seneca leadership continue to sit on the EFC Department of Student Support Services leadership team.

Please see Appendix A28 for Student Support Services organization chart.

The graphic below illustrates the levels of interventions Latitude is committed to providing as part of a comprehensive student support system. Latitude facilitates a Coordination of Services Team that oversees the implementation of the tiered support system. Clinicians, Behavior Interventionists, and Student Support Assistants provide Tier 2 and 3 behavioral interventions, as they have expertise in providing intensive support services for students who require targeted support in learning positive behaviors. Tier 2 and 3 socio-emotional interventions can be provided by Advisors, Clinicians and other strategic staff as appropriate. The Education Specialist (traditionally the Resource Specialist holding a Special Education teaching credential) provides Tier 2 and 3 Academic interventions. Tier 2 reading and math interventions are also provided by Latitude's Reading and Math Specialists and can even be facilitated in the context of Workshop. Tier 1 behavioral interventions are implemented by classroom teachers with support from the administration and Student Support Services staff through the PBIS framework. Tier 1 Academic interventions are provided by the classroom teacher and the school support staff. Tier

1 Social Emotional Interventions were identified as a need at the school and is described in more detail below.

Please see Appendix A29 for the EFC MTSS Overview.

Process

Figure 1.25—Seneca MTSS Model:

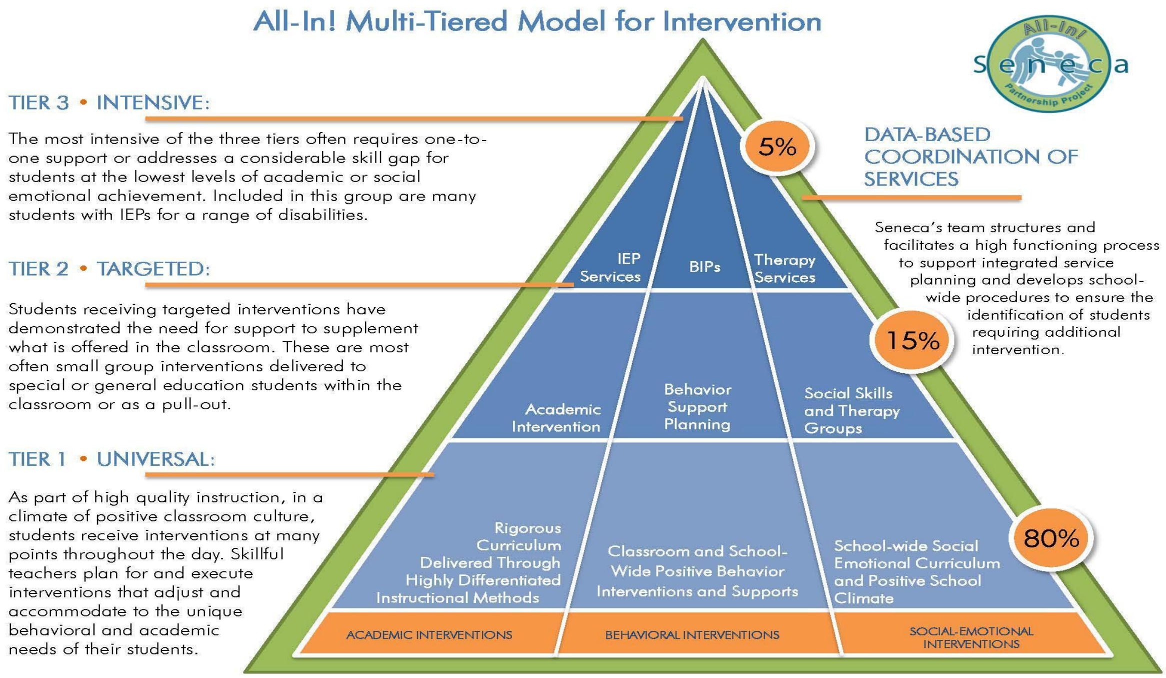


Figure 1.26—EFC Interventions Chart:

	ACADEMIC (School personnel)	BEHAVIORAL (Clinician and/or other school personnel; advisors)	SOCIAL EMOTIONAL (Clinician and school personnel)
Tier 3	Special Education (alternative curriculum to core provided by Ed Specialist)	Behavior Intervention Planning (BIP) and Case Management	Individual and Family Therapy
Tier 2	Academic Intervention and Special Education (supplemental support in/out of classroom setting; leveraging workshop)	Parent/family coordination; Individualized contracts; check in check out	Social skills and therapy Groups

Tier 1	Rigorous Curriculum delivered through Highly Differentiated Instructional Methods; Personalized Learning and individualized goal setting/progress monitoring	Classroom and School-wide Positive Behavior Systems (PBIS); Advisory; Restorative Practices and Structures	School-wide Social Emotional Curriculum and positive School Climate; Advisory

The development and implementation of the EFC Multi-Tiered System of Supports continues to be an ongoing inquiry, launched in partnership with Seneca four years ago. We are not yet getting the results we seek and continue to prototype and iterate our approach. Our goals are as follows.

Goal 1: To increase the capacity to deliver effective interventions for all students through the implementation of a multi-tiered framework

Intervention Assessment and Planning
On an annual basis, EFC Student Support Services leadership, as part of the annual site planning process, examine the current status of student supports and create a schoolwide intervention plan that builds on the particular strengths, challenges and aspirations of the individual school community. The assessment process provides the opportunity to dive deeply into the culture of the school, build trusting relationships with staff, and pose questions that will inform the collaborative creation of shared goals and strategies for the school year.

Please see Appendix A30 for sample EFC Interventions Plan.

The EFC MTSS approach ensures that systems are in place to promote continuous performance improvement through the collection and analysis of multiple sources of data and feedback, which are administered and analyzed by the Student Support Services Team:

1. An annual staff survey that provides insight from staff members regarding the effectiveness of current interventions, including whether or not services are integrated, data-driven, and youth-centered.
2. Data on the distribution of staff and student time across the three tiers of service.
3. Behavior, culture, engagement, and academic growth data for students receiving interventions.
4. The Alliance for the Study of School Climate's (ASSC) School Climate Assessment Instrument (SCAI) is implemented annually, which considers climate across eight dimensions - physical environment, faculty relationships, student interactions, leadership and decisions, management and discipline, learning and assessment, attitude and culture, community relations, and special education - effectively encompassing the critical components of school climate identified in current research.[21]

All of these assessment components are synthesized, and the school team uses this information to create a responsive implementation plan that contains prioritized goals and strategies for each new school year as part of the larger school site planning process.

[21] Austin et al., 2011; Zulig et al., 2010.

Coordination of Services Team (COST)
This team consists of 8-10 key stakeholders, including administration, intervention staff (representatives delivering Tier 2 and three interventions including members of the special education and mental health teams) and classroom teachers. The team creates a uniform, comprehensive referral form for teachers to use when concerns arise about a student's academic, behavioral, or social-emotional challenges. Each week, the team discusses teacher referrals, triaging students for more in-depth discussion and matching them with correct support services, including supportive interventions that can be implemented by teachers within the classroom. Teams also spend time focusing on school-wide academic, behavioral and social-emotional data (including academic assessment scores, office discipline referral data, and attendance rates) to determine priorities, establish thresholds for different levels of intervention and match resources to needs. Each week, the team also completes one-week reviews and eight-week reviews for students who have been assigned to specific interventions.

See Appendix A31 for a COST system flow chart and Appendix A32 for a COST form.

Cross-System Collaboration
Students with the most critical need of support, including those with disabilities, are often served by multiple providers both on and off campus. The EFC MTSS approach ensures that expertise and services provided by mental health, child welfare, and probation agencies are seamlessly integrated into a student's school-based intervention plan. This includes providing education to teachers and school staff around the role of these public agencies and coaching them around their responsibility and opportunities for coordination on individual cases.

Goal 2: To increase achievement for struggling students[22], including students with disabilities

The primary focus is to ensure that high quality, universal interventions are implemented at Tier 1, through the provision of training and support in differentiated school-wide academic, behavioral, and social emotional curricula as detailed in earlier sections of this document. Tier 2 and Tier 3 services are provided by a team of credentialed and licensed service professionals (i.e. special education providers, school psychologists, reading specialists, therapists, social workers, speech-language pathologists, occupational therapists, and behavioral analysts). These high quality, customized, data-driven interventions are designed to reduce the need for later referral to higher levels of service. The multi-tiered framework serves as a vessel for the delivery of evidence-based practices that are selected based on the unique needs of the school and students. Students identified for Tier 2 services will engage in six to ten week cycles of intervention focused on remediating specific gaps. All intervention specialists engage in regular progress monitoring to evaluate the effectiveness and to gain valuable information about adjustments needed. A team of interventionists provides both push-in and pull-out instructional supports aligned with Tier 2 and Tier 3 student goals. With such prompt and targeted intervention, many students quickly improve and can be sufficiently supported by school-wide or classroom-based Tier 1 interventions. Students who do not respond to Tier 2 interventions are considered candidates to receive support at the third tier of intensive services. This is a critical aspect of our approach - leveraging Tier 1 to minimize the need for Tier 2 and leveraging Tier 2 to minimize

[22] Students receiving Tier 2 or 3 academic, behavioral, and/or social-emotional interventions

the need for Tier 3. Overall, where EFC has been particularly successful is providing intensive Tier 3 services as appropriate AND leveraging Tier 2 to minimize the need for Tier 3. In a typical system, an IEP often triggers both Tier 2 and 3 services, but at Latitude and across EFC, the COST process can trigger intensive supports without an IEP. For example, at Learning Without Limits, another EFC school, almost one-fourth of the student population received Tier 2 and Tier 3 services, but only 7% have IEPs.

Please see Appendix A33 for a list of Academic Interventions.

Tier One, Academic

Our academic leadership team, comprised of administrators, coaching staff, and the Instructional Leadership Team, work to build capacity of Latitude teachers to implement research-based curricula, instructional methods, and assessments focused on differentiation and the engagement of diverse learners. Fidelity to the implementation of identified curricula and assessments are monitored by regularly observing classrooms and helping the school to establish systems to track classroom data. Use of data to personalize instruction is a focus at Latitude. In workshops, teachers will use a small group personalized approach leveraging online adaptive software, using data to form strategic and flexible homogenous groupings to target direct instruction. In studios, teachers will leverage the multiple access points and diverse instructional strategies inherent in project-based learning to facilitate student engagement and investment, leverage heterogeneous grouping to facilitate scaffolding and peer support, technology for modification, adaptation and text access, and targeted project-aligned mini-lessons to provide strategic direction instruction.

Tier Two, Academic

The intervention team reviews formal and informal school-wide data at each of our three cycles throughout the year to develop targeted intervention groups. In addition, the intervention team reviews formative data at monthly grade level meetings. The COST team works to develop thresholds for the initiation of Tier 2 services, considering data gathered from various assessments. Students are identified to participate in 8-10 week cycles of academic intervention groups, targeting the specific content gaps revealed through assessment data. Each student's progress is assessed at the end of the cycle by the COST team to determine if they are ready to return to Tier 1 levels of support, if they need an alternative type of intervention, or if they may be candidates for Tier 3 services.

Tier Three, Academic

Tier 3 academic services are primarily provided for students with Individualized Education Programs (IEPs) who require intensive daily instruction in a curricular program that replaces the general education curriculum in a specific content area because the general education curriculum even with modification is not appropriate based on the individual student's needs. These are push-in and/or pull-out services provided by trained special education teachers as indicated by the student's' IEP and progress on IEP goals are closely monitored over time. IEP goals are reviewed at least annually and students are re-assessed for Tier 3 services every three years.

Tiered Behavioral Services

The foundation of the school culture approach is Positive Behavioral Interventions and Supports (PBIS), a program utilized in many EFC schools and supported by the EFC Department of

Student Support Services and our partners at Seneca Family of Agencies. PBIS is not a curriculum or a program. It is part of our larger MTSS framework for behavior support. It is an approach designed to intervene effectively and prevent escalation of problematic behaviors. PBIS emphasizes four integrated elements: (a) using data strategically to inform decisions, (b) setting clear measurable outcomes, (c) identifying practices that will deliver those outcomes, and (d) establishing systems that efficiently and effectively support implementation of these practices. At the foundation of PBIS is classroom-level support and training to ensure teachers are creating supportive and rigorous classroom cultures with clear systems and procedures in place to promote positive behavior and that they have a strong toolkit of strategies to prevent and address problematic behaviors at a Tier 1 level. The school then needs a set of support systems at Tiers 2 and 3 to ensure students with more intensive behaviors have access to those resources.

Latitude utilizes School-Wide Positive Behavioral Interventions and Supports (SWPBS), an evidence-based practice that has proven effective at reducing behavioral challenges for students, including students with disabilities.[23] SWPBS provides the architecture for building system change within a school that is aimed at bringing about positive school climate. An SWPBS team is formed, consisting of six to ten key stakeholders with representation from administrative leadership, intervention and support staff, general education teachers, and family/community liaisons. The team undergoes a training series (2-3 days per school year) to build understanding of the model's core features, explore various behavioral intervention strategies at each tier, and learn about the tools and process of monitoring progress and fidelity.

Tier One, Behavioral

The SWPBS team plays a key role in the development and implementation of Tier 1 practices. Through a collaborative process that takes into account the unique culture and climate of the school, the team works to (1) identify school-wide behavioral expectations, (2) create a clear picture of what these expectations look like and (3) ensure that these behavioral expectations are explicitly taught to students. Once these expectations are clearly articulated and taught to the entire school community, the team creates a system in which students can be positively acknowledged for demonstrating these behaviors. Another important role of the SWPBS school team is to review the school's disciplinary practices for clarity and consistency and to ensure that office discipline referral (ODR) information is collected in such a way that data can be easily monitored and aggregated for the purpose of tracking outcomes and making informed decisions about referring students to higher levels of intervention. Our Culture lead is a key member of our SWPBS team. He coordinates and delivers in class supports to our higher needs students, tracks and analyzes behavior data, and communicates with teachers and families, in order to provide comprehensive behavioral and emotional supports to our students.

Tier Two, Behavioral

The COST team works to develop thresholds for the initiation of Tier 2 services, considering data gathered office discipline referrals and attendance. The team works to create behavior support plans for students in need of additional or alternative support strategies in the classroom. One such evidence-based practice that facilitates this process is *Check-In Check-Out (CICO)*. This approach offers additional motivation and counseling support for students who struggle to meet the school-wide expectations. Students on CICO receive 2 daily "check-ins," or 10 minute

[23] Bradshaw et al., 2010; Cheney & Walker, 2004; Eber et al., 2002.

counseling sessions, from a trusted staff member around a small set of behavioral goals. These goals are created based off of the school-wide expectations and the individual student's strengths and growth areas. Staff work with the student to create an incentive menu that incorporates the student's interests. Students can then use the points that they earn by meeting their behavioral goals to purchase incentives. Each student's progress is assessed after eight weeks to determine if they are ready to return to Tier 1 levels of support, or if they may be candidates for Tier 3 services.

Tier Three, Behavioral
These services include Functional Behavioral Analysis (FBA). FBAs identify antecedents to problem behaviors, the purpose or function of the problem behavior, possible replacement behaviors that could be taught to the student and strategies for ensuring that desirable behaviors are reinforced and problem behaviors are not. The process culminates in the development of an individualized behavior plan that is carried out and closely monitored by the team. Trained staff deliver Behavior Intervention Services to aid students in utilizing replacement behaviors, remaining engaged in class activities, and accessing classroom curriculum.

Tier One, Social-Emotional
To assess school-wide climate and social-emotional needs, Latitude collects data annually through the SCAI. Research supports that children growing up in violent communities in high poverty experience a level of stress that limits their abilities to excel academically. Research also supports that adolescents' developmental struggles can become barriers for academic success. Therefore, Latitude has identified Tier 1 social emotional-learning as an area of need. We are exploring multiple steps towards building our Tier 1 SEL program, including the implementation of trauma-informed practices and a school-wide social-emotional curriculum leveraging Restorative Justice.

Please see the section below on social-emotional learning.

Tier Two, Social-Emotional
The COST team works to develop thresholds for initiation of Tier 2 social-emotional services, considering office discipline referral and attendance data, as well as information gathered through the student surveys. Advisors will also provide referrals and qualitative data on students who are struggling. Students are identified to participate in 6-10 week cycles of group and individual therapy, such as Brothers on the Rise and Superflex, targeting the specific risk-factors revealed through assessment data. Progress is measured through appropriate, standardized tools such as the Strengths and Difficulties Questionnaire. Each student's progress is assessed at the end of the cycle to determine if they are ready to return to Tier 1 levels of support, or if they may be in need of intensive, Tier 3 services.

Tier Three, Social-Emotional
These services include individual and family therapy, provided by licensed clinical professionals. Clinicians collaborate with youth and families to complete the Children and Adolescent Needs and Strengths (CANS) assessment to identify the domains of greatest need for intervention. The assessment provides a basis for the development of an individualized treatment plan, which consists of measurable goals that are used to monitor treatment progress. Clinicians also utilize

the Partners for Change Outcome Measurement System to track clients' own view of their progress throughout the course of treatment.

See Appendix A34 for a list of Social Emotional and Behavioral Interventions.

Professional Development and Coaching
An essential goal of the MTSS approach is to build internal capacity for sustained implementation within each school community. This is done in large part through ongoing and responsive professional development on a wide range of topics, such as *Recognizing and Responding to the Effects of Trauma,* and *Self-care for Teachers Experiencing Vicarious Trauma.* All trainings are aimed at supporting teachers' capacity to meet the needs of struggling students and students with disabilities within the classroom/school setting. A customized professional development structure is set each school year, with additional content adjustments made throughout the year to respond to the emerging needs of teachers. At Latitude, teachers will participate in select trainings as appropriate.

Caregiver Involvement
In a review of the literature, the National Center for Family and Community Connections with Schools found that parent involvement has been shown to benefit students' academic, behavioral, and social outcomes.[24] EFC works to promote active caregiver involvement both at the school-wide community level, and the individual student level. Processes are in place to enable family members to experience themselves as active participants in the education of their children. In some cases, this might include building bridges, by supporting leadership in establishing welcoming environments (the Family Center, communication in parents' primary language, etc.) and events (parent meetings, cultural performances, fairs, etc.), and working with active parents to serve as family liaisons and perform outreach work with the larger parent community. Based on the expressed need of each school community, EFC provides trainings and workshops for parents to address such topics as child development, positive parenting, and behavior management.

Support for Students with Disabilities

Philosophy
Our general belief at Latitude is that ALL children are able to excel and succeed if instruction is aligned and differentiated to their needs and designed to accelerate and individualize.

Therefore, the best way to support the great majority of students who qualify for Special Education services is through differentiated, scaffolded, and individualized instruction in general education settings where children have access to appropriate content and concepts and are provided the support and modifications many of our other populations require to access the curriculum. Our RTI-based interventions system, in partnership with our comprehensive assessment system, supports students with disabilities by providing them maximum interventions and supports through the general education program.

---

[24] Henderson & Mapp, (2002), "A New Wave of Evidence: The Impact of School, Family, and Community Connections on Student Achievement".

Overview

Latitude shall comply with all applicable State and Federal Laws in serving children with disabilities, including, but not limited to, Section 504 of the Rehabilitation Act ("Section 504"), the Americans with Disabilities Act ("ADA") and the Individuals with Disabilities in Education Improvement Act ("IDEIA"). California law gives schools various options on how to deliver special education and related services either as (1) an arm of the charter-granting agency, (2) an independent local education agency, or (3) as a charter SELPA. Latitude will make written verifiable assurances that it will become an independent local educational agency (LEA) and, upon acceptance into a SELPA, will be an independent LEA member of that SELPA pursuant to Education Code Section 47641(a). All six of the EFC schools are currently independent LEAs as members of the el Dorado District Office of Education ("EDCOE") Special Education Local Plan Area ("SELPA"). EFC will submit an application for Latitude to become a member of the EDCOE SELPA as well. If not accepted, then we reserve the right to remain a public school of the Authorizer for purposes of special education, pursuant to Education Code Section 47641(b). EFC is participating in the Oakland Public Schools Pledge conversation about an OUSD-charter partnership specific to special education and intends to continue leading and engaging in that work.

Latitude shall comply with all state and federal laws related to the provision of special education instruction and related services and all SELPA policies and procedures; and shall utilize appropriate SELPA forms. The School shall not discriminate against any pupil with a disability in the admissions process or any other aspect of operation. The school recognizes its responsibility to enroll and support students with disabilities.

The School shall be solely responsible for its compliance with the IDEIA, Section 504 and the ADA. The facilities to be utilized by the School shall be accessible for all children with disabilities. The facilities to be utilized by the School shall provide children with disabilities equal access to all aspects of the educational program.

As described above, Education for Change Public Schools has a strategic partnership with Seneca Center to implement a comprehensive multi-tiered system of supports in alignment with our mental health and Special Education programs. We integrate Special Education into the larger interventions framework and ensure that it is in greater alignment with the larger school-wide student support system. The foundation of this system is a comprehensive assessment program that regularly assesses students using a variety of tools to track progress and growth every six to eight weeks. This data is reviewed by the school's leadership teams, and students not making appropriate progress are flagged for interventions. If a student continues to not make progress, the teacher refers the student to the COST team. Through the MTSS program, teachers are coached and supported in developing both behavioral and academic interventions plans for their students. Students not making adequate progress through the in-class Tier 1 interventions within six to eight weeks can receive either a revised Tier 1 intervention plan or more intensive Tier 2 services. Should the team observe evidence that a child may be eligible for Special Education services after numerous Tier 1 and Tier 2 interventions, they can submit a referral for Special Education to the COST team who will develop an assessment plan if appropriate.

A student with an Individualized Education Plan will have access to ALL of the interventions available school wide as part of their individualized education plan. The Coordination of Services team in partnership with the Special Education provider or lead ensures student plans are developed strategically and implemented with fidelity and utilizes all the resources available at the school to inform the development of the IEP. For example, a Special Education student could have as part of their IEP 45 minutes daily of a Tier 2 reading intervention available to all general education students to address his reading goals, receive strategic instruction from the Education Specialist twice a week specific to executive functioning skills, and participate in an after-school support group to address socio-emotional goals. While this student is receiving strategic services from a designated and appropriately-credentialed Special Education provider, he is also receiving services and interventions available to all General Education students as part of his plan. The EFC Special Education program is designed specifically to accelerate a student's growth in target areas and ensure that student's ability to succeed in the General Education setting both academically and socially.

EFC is proud of its Special Education programs, and we have presented at the California Charter Schools Association several times on the topic of implementing quality special education programming and integrating resources from Special Education, mental health, and general education to ensure Special Education students receive the services and supports they need to be successful. Our belief is that the great majority of Special Education students can be served effectively in a general education setting with targeted support. EFC has leveraged county mental health, MediCal and SELPA low incidence resources to effectively serve students with moderate to severe disabilities. One example is a young man we have renamed Joseph Starr who entered an EFC school as a fourth grader scoring Far Below Basic in both mathematics and ELA with an IEP indicating he required a Non-Public School placement for extreme behavior challenges. We supported him in the general education setting with targeted support services, and he recently graduated from the school proficient in both mathematics and ELA and meeting all of this academic and behavioral goals. EFC is the only charter operator in Alameda County that has a Memorandum of Understanding with Alameda County Behavioral Health services to leverage MediCal reimbursement for mental health services, and we are the only charter operator with EPSDT contracts in place at every site.

Please see Appendix A35 for the Joseph Starr story.

Services for Students under the IDEIA (Search and Serve)
Latitude intends to be an LEA member of the EDCOE Charter SELPA in accordance with Education Code section 47641(a). Latitude makes the following assurances:

- **Free Appropriate Public Education** – The School will assure that a free appropriate public education shall be provided to all enrolled students including children with disabilities who have been expelled from school and that no assessment or evaluation will be used for admissions purposes. No student will be denied admission to the school because he or she is in need of special education services.
- **Full Educational Opportunity** – The School will assure that all students with disabilities have access to the full range of programs available to non-disabled students
- **Least Restrictive Environment** – The School will assure that students with disabilities

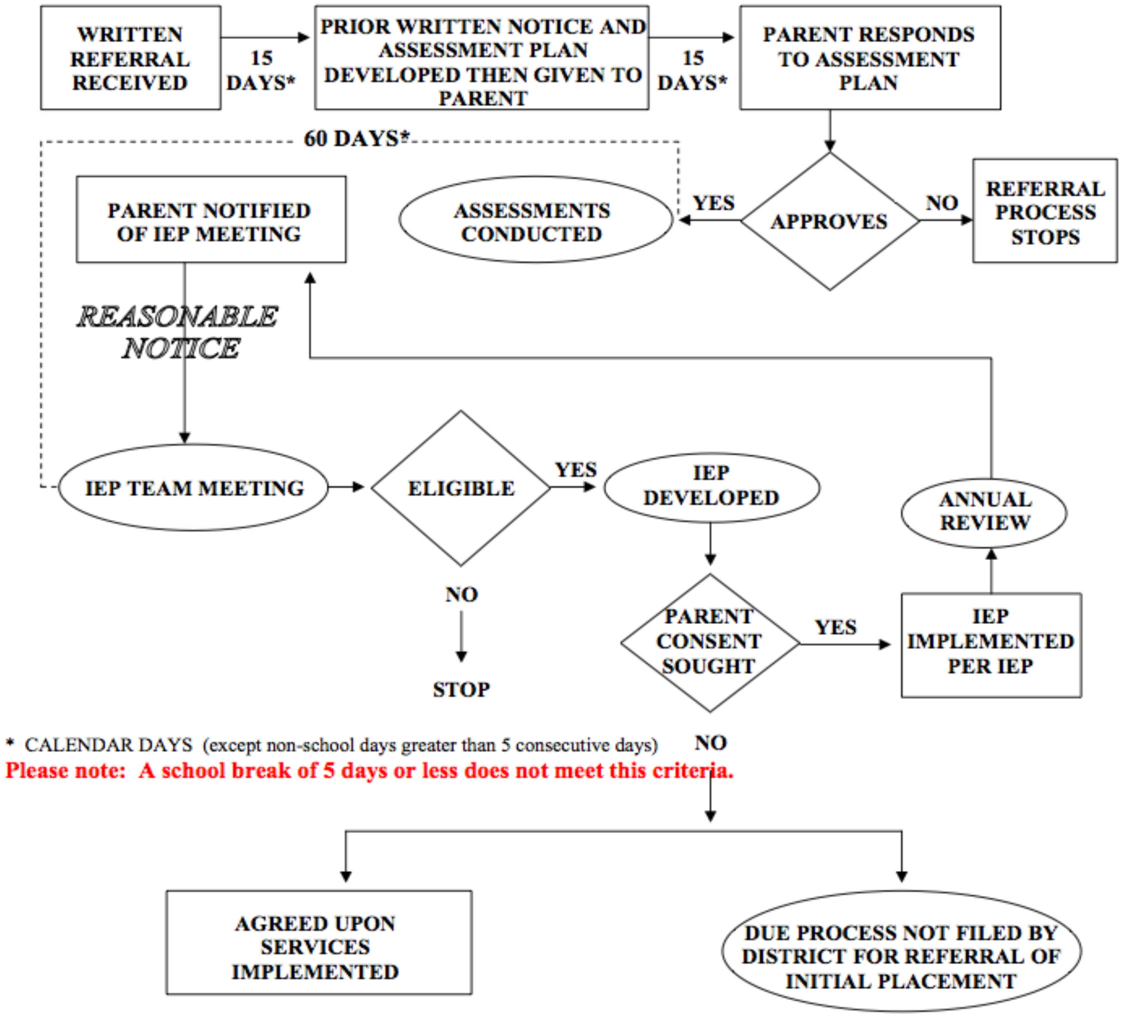
are educated with students who are not disabled to the maximum extent appropriate. This will be addressed through the use of supplementary aids and services in the general education environment in accordance with each student's IEP.

- **Individualized Education Program** – The School will assure that an Individualized Education Program ("IEP") is developed, reviewed and revised for each eligible student under the IDEIA
- **Assessments** – The School will assure that an IEP review shall be conducted on an annual basis at a minimum. In addition a reassessment shall be conducted at least once every three years, in accordance with the IDEIA, and more often if conditions warrant or requested by the student's parents or teacher. Parents will receive reports on their individual student's progress toward IEP goals and progress at the IEP meeting and student-led conferences.
- **Confidentiality and Procedural Safeguards** – The School will assure that the confidentiality of identifiable data shall be protected at the collection, storage, disclosure and destruction stages. In addition, students and their parents shall be provided with safeguards through the identification evaluation and placement process and provisions for a free appropriate public education.
- **Personnel Standards** – The School will attract, recruit and hire appropriately trained and credentialed personnel to provide special education services to children with disabilities
- **State Assessments** – The School will assure that students with disabilities either under the Individuals with Disabilities Improvement Act ("IDEIA") or Section 504 are included in State assessment programs with appropriate accommodations and modifications when necessary and appropriate. These assessments include, but are not limited to, the Smarter Balanced Assessment.
- **Child Find** – The School will assure that all students with disabilities are identified in accordance with the policies and procedures of the EDCOE SELPA

<u>Search and Serve</u>
Latitude shall actively and systematically seek out all individuals with exceptional needs and provide for the identification and assessment of an individual's exceptional needs and the planning of an instructional program to meet the assessed needs. Identification procedures shall include systematic methods of utilizing referrals of students from teachers, parents, agencies, appropriate professional persons, and from other members of the public. Identification procedures shall be coordinated with school site procedures for referral of students with needs that cannot be met with modification of the general instructional program.

A student shall be referred for special education instruction and services only after the resources of the general education program have been considered and, where appropriate, utilized. Parents have the right to request in writing that their child be assessed to determine eligibility for special education services. Through the COST process, a student may be referred for assessment to determine eligibility for special education services. The flowchart below outlines the process once a referral has been:

Figure 1.27—EFC Referral Process:



3

The referral process is a formal, ongoing review of information related to students who are suspected of having additional needs and show potential signs of needing special education and related services. The parent of any student suspected of needing or qualifying for special education services may also make a referral for an evaluation. Any such referrals will be responded to in writing by Latitude within 15 days. Parents will be informed via the Special Education lead that special education and related services are provided at no cost to them.

If Latitude concludes that an assessment is appropriate, the parent will receive a written Assessment Plan within 15 days. The parent will be given at least 15 days to provide written consent to the Assessment Plan. Assessments will be done only upon receipt of written parent permission. The assessment will be completed and an Individualized Education Program (IEP) meeting held within 60 days of receipt of the parent's written consent for assessment.

<u>Assessment</u>

The Special Education site lead will be responsible for gathering all pertinent information and sharing such information with the EFC Department of Student Support Services. Information gathered will be used as tools to determine the student's disability, eligibility for services, and determining the nature and extent of required services. Assessment procedures will be conducted in the student's primary language, and an interpreter will be provided if needed. The types of assessments that may be used for determining eligibility for specialized instruction and services will include, but not be limited to:

- Individual testing;
- Teacher observations;
- Interviews;
- Review of school records, reports, and work samples; and
- Parent input.

Unless conflicting with SELPA policies and procedures, Latitude will follow the following assessment guidelines. If a conflict with SELPA policies and procedures exists, then SELPA policies and procedures will govern.

- Parents or guardians of any student referred for assessment must give their written consent for the school to administer the assessment;
- The assessment will be completed and an Individualized Education Program (IEP) meeting held within 60 days of receipt of the parent's written consent for assessment;
- The student must be evaluated in all areas related to his/her suspected disability;
- Assessments must be conducted by a person with knowledge of the student's suspected disability, and administered by trained and knowledgeable personnel and in accordance with any instructions provided by the producer of the assessments. Individually administered tests of intellectual or emotional functioning must be administered by a credentialed school psychologist;
- Assessments must be selected and administered so as not to be racially, culturally, or sexually discriminatory;
- Assessments will be delivered in the student's primary language, and a qualified interpreter will be provided if needed;
- Assessment tools must be used for purposes for which the assessments or measures are valid and reliable; and
- Assessments will be adapted as necessary for students with impaired sensory, physical or speaking skills; and
- A multidisciplinary team will be assembled to assess the student, including a teacher knowledgeable in the disability.
- Upon completion of the assessment, an IEP team will be assembled to review the results of the assessment and determine the student's need for special education. Learning Without Limits will be responsible for scheduling, coordinating and facilitating the IEP meeting. Educators qualified to interpret test results will present the assessment data at the IEP meeting. Parents will be provided with written notice of the IEP meeting, and the meeting will be held at a mutually agreeable time and place.

Development and Implementation of IEP

Every student who is assessed by the school will have an IEP that documents assessment results and eligibility determination for special education services. Latitude will ensure that all aspects of the IEP and school site implementation are maintained. Latitude will provide modifications and accommodations (outlined within each individual's IEP) in the general education environment taught by the general education teacher. Students at the school who have IEP's will be served in the Least Restrictive Environment (LRE). Each student who has an IEP will have an IEP team that oversees the IEP development, implementation and progress of the student. All decisions concerning the special education programs and services to be provided to a student with a disability are to be made by the IEP team. The IEP team must include all of the following members:

- The parent or guardian of the student for whom the IEP was developed;
- The student, if appropriate
- The principal or administrative designee;
- At least one special education teacher;
- A General Education teacher who is familiar with the curriculum appropriate to that student, if the student is, or may be, participating in the general education environment;
- If the child was recently assessed, the individual who conducted the assessment or who is qualified to interpret the assessment results;
- Others familiar with the student may be invited as needed.

Latitude views the parent as a key stakeholder in these meetings and will make every effort to accommodate parents' schedules and needs so that they will be able to participate effectively on the IEP team. The school will provide an interpreter if necessary to ensure that all parents and/or guardians understand and can participate in the IEP process. If a parent cannot attend the IEP meeting, the school will ensure his/her participation using other methods, such as conferencing by telephone or meeting at the parent's home. A copy of the IEP will be given to the parent in accordance with state laws and SELPA policies. Upon the parent or guardian's written consent, the IEP will be implemented by Latitude, in cooperation with the EDCOE SELPA in which Latitude is a member.

Upon the parent or guardian's written consent, the IEP will be implemented by Latitude. The IEP will include all required components and be written on SELPA forms.

The student's IEP will include the following:

- A statement of the student's present levels of academic achievement and functional performance;
- The rationale for placement decisions;
- The services the student will receive and the means for delivering those services;
- A description of when services will begin, how often the student will receive them, who will provide them, and where and when they will be delivered;
- Measurable annual goals and short-term objectives focusing on the student's current level of performance;
- A description of how the student's progress toward meeting the annual goals will be measured and monitored and when reports will be provided; and
- Accommodations necessary to measure the academic achievement and functional performance of the pupil on state and district assessments;

- For students 16 years of age and older, measurable postsecondary goals related to training, education, employment and independent living skills, along with transition services needed to assist the student in reaching those goals.

IEP meetings will be held according to the following schedule:

- Yearly to review the student's progress and make any necessary changes;
- Every three years to review the results of a mandatory comprehensive reevaluation of the student's progress;
- After the student has received a formal assessment or reassessment;
- When a parent or teacher feels that the student has demonstrated significant educational growth or a lack of anticipated progress (consistent with state and federal law, IEP meetings will be held within 30 days of a parent's request);
- When an Individual Transition Plan (ITP) is required at the appropriate age;
- When Latitude seeks to suspend or remove the student for a period of 10 days or more for the same behavior, in order to determine if the student's misconduct was a manifestation of his/her disability.

IEP Reviews

The IEP team will formally review the student's IEP at least once a year to determine how the IEP is meeting his/her needs. In accordance with IDEIA regulations, the IEP team will also conduct a formal review of the IEP once every three years, in which the student is reassessed and the IEP is reviewed as part of an overall comprehensive reevaluation of the student's progress.

If a parent or faculty member feels the student's educational needs are not being met, they may request a reassessment or a review of the IEP by the IEP team at any time during the year via written notice to the school. Once the request is received, Latitude will have thirty days, not including school vacations greater than five days, to hold the IEP meeting.

Unless otherwise specified on the student's IEP, parents will be informed three times annually(which is the same frequency as progress is reported to all students and parents) of the student's progress toward meeting annual goals and whether the student is expected to meet his/her annual goals. This will serve to document the method by which the student's progress toward achieving the annual goal is measured, the student's progress during the relevant period, the extent to which it is anticipated the student will meet the annual goal prior to the next annual review, and where needed, the reasons the student did not meet the goal.

In addition, the school shall comply with the SELPA Local Master Plan and perform all corrective actions deemed necessary by the SELPA. The Director of Student Support Services at Education for Change will manage the budget and contract for appropriate services and take responsibility for meeting the special education compliance and quality requirements.

Professional Learning for Special Education Staff

The Director of Student Support Services at Education for Change and other team members will work with the SELPA team to provide regular professional development that builds the capacity of the special education staff in the areas of promising instructional practices, compliance with state and federal statutes, reporting requirements and use of instructional data. Latitude will send its Special Education staff to the Education for Change trainings in addition to strategic SELPA trainings. All staff members will be provided a personalized professional learning plan that will identify high leverage capacity-building learning activities for the teacher. In addition, Special Education teachers will receive training to ensure they have research-based instructional strategies specific to supporting Special Education students – strategies like the Slingerland method, or Lindamood Bell, Wilson Reading, Orton-Gillingham, or Davis Math. This is to ensure that all students receive the targeted academic interventions as well as the interventions specific to supporting their disabilities.

Free and Appropriate Education

Since Latitude intends to operate as an LEA of the EDCOE SELPA in accordance with Education Code section 47641(a), the District shall have no responsibility to ensure that the students who attend Latitude are provided a free appropriate public education. In accordance with state and federal law, each student eligible under the IDEIA will be provided a free and appropriate education in the least restrictive environment. The decisions regarding the specific services each student will receive are the responsibility of the Individualized Education Program Team. The team includes the involvement of parents and the decisions are formulated in a written plan (referred to as an IEP).

Section 504 of the Rehabilitation Act

Latitude recognizes its legal responsibility to ensure that no qualified person with a disability shall, on the basis of disability, be excluded from participation, be denied the benefits of, or otherwise be subjected to discrimination under any program of the School. Any student, who has an objectively identified disability, which substantially limits a major life activity including but not limited to learning, is eligible for accommodation by the School.

A 504 team will be assembled by the Principal of Latitude and includes the parent/guardian, the student (where appropriate) and other qualified persons knowledgeable about the student, the meaning of the evaluation data, placement options, and accommodations. The 504 team will review the student's existing records; including academic, social and behavioral records, and is responsible for making a determination as to whether an evaluation for 504 services is appropriate. If the student has already been evaluated under the IDEIA but found ineligible for special education instruction or related services under the IDEIA, those evaluations may be used to help determine eligibility under Section 504. The student evaluation shall be carried out by the 504 team, which will evaluate the nature of the student's disability and its effect upon the student's education. This evaluation will include consideration of any behaviors that interfere with regular participation in the educational program and/or activities. The 504 team may also consider the following information in its evaluation:

- Tests and other evaluation materials that have been validated for the specific purpose for which they are used and are administered by trained personnel
- Tests are selected and administered to ensure that when a test is administered to a student with impaired sensory, manual or speaking skills, the test results accurately reflect the

student's aptitude or achievement level, or whatever factor the test purports to measure, rather than reflecting the student's impaired sensory, manual or speaking skills

The final determination of whether the student will or will not be identified as a person with a disability is made by the 504 team in writing and notice is given in writing to the parent or guardian of the student in their primary language along with the procedural safeguards available to them. If during the evaluation, the 504 team obtains information indicating possible eligibility of the student for special education per the IDEIA, a referral for assessment under the IDEIA will be made by the 504 team.

If the student is found by the 504 team to have a disability under Section 504, the 504 team shall be responsible for determining what, if any, accommodations or services are needed to ensure that the student receives a free and appropriate public education ("FAPE"). In developing the 504 Plan, the 504 team shall consider all relevant information utilized during the evaluation of the student, drawing upon a variety of sources, including, but not limited to, assessments conducted by the School's professional staff. The 504 Plan shall describe the Section 504 disability and any program accommodations, modifications or services that may be necessary.

All 504 team participants, parents, guardians, teachers and any other participants in the student's education, including substitutes and tutors, must have a copy of each student's 504 Plan. The site administrator will ensure that teachers include 504 Plans with lesson plans for short-term substitutes and that he/she review the 504 Plan with a long-term substitute. A copy of the 504 Plan shall be maintained in the student's file. A student's 504 Plan will be reviewed at least once per year to determine the appropriateness of the plan, needed modifications to the plan, and continued eligibility.

Parents with Disabilities

Communications with parents with disabilities must be as effective as communications with other parents. Appropriate auxiliary aids and services (such as Braille materials or a sign language interpreter) will be made available whenever they are necessary to ensure equally effective communication with parents with hearing, vision, or speech disabilities.

Dispute Resolution and Complaint Procedures

The Education for Change policy is to comply with applicable federal and state laws and regulations. EFC is the local agency primarily responsible for compliance with federal and state laws and regulations governing educational programs. Pursuant to this policy, there is a board-adopted complaint policy and procedure to provide a uniform system of complaint processing for the following types of complaints:

(1) Complaints of discrimination against any protected group including actual or perceived, including discrimination on the basis of age, sex, sexual orientation, gender, ethnic group identification, race, ancestry, national origin, religion, color, or mental or physical disability, or on the basis of a person's association with a person or group with one or more of these actual or perceived characteristics in any Learning Without Limits program or activity; and

(2) Complaints of violations of state or federal law and regulations governing the following programs including but not limited to: special education, Title II, Section 504 of the Rehabilitation Act, consolidated categorical aid, No Child Left Behind, migrant education, career technical and technical education training programs, child care and development programs, child nutrition program.

Please see Appendix A36 for the Uniform Complaint Policy and Procedure.

Support for Students Who Are Academically Low-Achieving

Multi-Tiered System of Supports
Latitude has high expectations for all students and is committed to working with students who are not meeting outcomes to help them achieve at expected levels. Latitude has developed a comprehensive assessment system designed to track and monitor student growth. These are both summative and formative assessments that track student growth and monitor their mastery of grade-level standards. Teachers will use the assessment system to inform their overall planning, differentiate for specific children, and develop strategic lessons to accelerate growth.

Latitude as part of Education for Change Public Schools implements a comprehensive multi-tiered system of supports (MTSS) in partnership with the Seneca Center to provide students the academic, behavioral and social-emotional supports they need.

MTSS is a framework for providing comprehensive support to students and is not an instructional practice. It is a prevention-oriented approach to linking assessment and instruction that can inform educators' decisions about how best to teach their students. A goal of MTSS is to minimize the risk for long-term negative learning outcomes by responding quickly and efficiently to documented learning or behavioral problems and ensuring appropriate identification of students with disabilities.

A rigorous prevention system provides for the early identification of learning and behavioral challenges and timely intervention for students who are at risk for long-term learning problems. This system includes three levels of intensity or three levels of prevention, which represent a continuum of supports. Many schools use more than one intervention within a given level of prevention.

- **Primary (*Tier 1*) prevention**: high quality core instruction that meets the needs of most students
- **Secondary (*Tier 2*) prevention**: evidence-based intervention(s) of moderate intensity that addresses the learning or behavioral challenges of most at-risk students
- **Tertiary prevention (*Tier 3*)**: individualized intervention(s) of increased intensity for students who show minimal response to secondary prevention

At all levels, attention is on fidelity of implementation, with consideration for cultural and linguistic responsiveness and recognition of student strengths. See Key Element 5 above for greater detail on our multi-tiered system of supports.

How Our Support System Works

Once a student is identified as not making appropriate growth academically or a student is struggling socially or emotionally, the classroom teacher will immediately develop an in-class interventions plan that clarifies the student's current level of performance, documents areas of concern, and outlines a specific plan to differentiate, modify, and individualize instruction for that student. Modifications or accommodations could include changes in seat assignments, strategic grouping, giving fewer more targeted assignments or problems, or providing additional resources or tools to complete an assignment (manipulatives, calculator, computer, etc.). The student will be assigned strategically to different groups to support his or her learning. (S)he may be in a heterogeneous group if there is a cooperative learning assignment where children are expected to work collaboratively to solve a problem. (S)he would be assigned to a homogeneous group for mini-lessons or for guided reading to ensure (s)he is getting instruction in his or her Zone of Proximal Development. In-class supports are explained in greater detail below.

If a student makes inadequate progress in the classroom or across classrooms with Tier 1 interventions, the teacher would then refer the child to the Coordination of Services Team (COST) to access more of the school's resources for addressing the specific child's challenges. At the COST, the COST facilitator would convene all necessary stakeholders and allies in the child's learning to ensure the group has greater understanding of the whole child. This team conducts a Root Cause Analysis and incorporates data from the after-school program, from home, and from other teachers across the school. Based on the Root Cause Analysis, a COST plan is developed for that child that outlines the areas of strength, areas of concern, and a strategic plan to support that child utilizing both Tier 1 and Tier 2 interventions. Tier 2 interventions would include all potential resources outside of the classroom setting that could supplement the Tier 1 interventions taking place in the classroom.

Please see A37 for the Academic Interventions List.

If the student makes inadequate progress at Tier 2, the COST reconvenes and the team collects additional data. At this juncture, the COST may alter the COST plan by adding or subtracting interventions or recommending Tier 3 interventions, which are generally individualized intensive intervention that may supplant some of the instruction taking place in the regular education class. If the student has demonstrated that he or she may be eligible for Special Education services, the COST may refer the child for assessment by the IEP team to determine eligibility for Special Education services.

Professional Development and Data Analysis

Latitude believes not only in collecting data from a range of sources to inform its academic programs and ensure students' success - but also that professional development for teachers to effectively analyze and *use* the data is critical. Using data to inform planning and instruction will be a vital component of Latitude's success in addressing the needs of low-achieving students. We structure professional development to regularly look at the relevant competencies and a range of data to ensure all students are on track.

We have based our collaboration on the Professional Learning Community model of Richard and Rebecca DuFour. We will provide teachers with collaborative structures and clear processes for:

- Engaging in inquiry-based dialogue
- Analyzing student data together
- Sharing best instructional practices
- Strategic planning to meet the needs of underperforming students

Our professional development approach leads our teachers to:

- Analyze student data to create differentiated groups with individual instructional plans
- Employ small-group instruction throughout the curriculum to meet each student's academic needs as indicated by current data
- Utilize the strategies in John Shefellbine's *Results for English Language Learners* framework to successfully scaffold instruction, so all students can access to the core curriculum
- Collaboratively plan lessons that maximize the engagement of all students, particularly low-performing students

In August, teachers analyze SBAC data to identify students who are potentially at risk of becoming low achieving and to plan for their needs based on gap areas. Throughout the year, in approximately six-week cycles, teachers continue to engage in formal data analysis. As described above, they go through a structured process of engaging with their data to create action plans aligned to goals. During these sessions, assessments are analyzed through the lens of both whole-class and individual learning gaps.

The following are two examples of data analysis tools that teachers at Latitude may use to improve instruction, dialogue, and prioritize next steps:

- **Analysis of Practices and Results**: A reflection form and process through which teachers examine, from the previous year, grade level performance and trends, individual class performance and trends, personal professional goals and accomplishments, and individual student trends, e.g. students who gained or dropped significantly

- **ELA Interim Analysis**: A reflection for teachers to connect test questions to standards being assessed, common student misunderstandings on those questions/standards, possible sources of confusion, and next steps to address misunderstandings

As a part of Education for Change, Latitude will also benefit from shared best practices and collaboration facilitated by the network. EFC's rigorous focus on using data to inform instruction and holding all students to high academic standards both aligns with Latitude's policies and practices to date and will support Latitude in continuing to improve and achieve, taking its results to the next level.

Support for Students Who Are High-Achieving

Latitude believes that all children possess gifts and talents that are unique and precious. The high achieving students at Latitude will benefit from all the same programmatic structures that low-achieving students will. The curriculum will have multiple opportunities for the high-achieving students to expand their knowledge and skills through higher level inquiry and small group instruction. As student capabilities expand, the state content standards will be met at an ever-increasing rate and the pace of the rigorous curriculum will accelerate.

Teachers will develop proficiency level descriptors for each competency, which will define what it means to be exceeding grade level mastery. These descriptors will allow students to self-assess and give them a "road map" for the skills they need to develop to exceed grade level mastery. Teachers will use these descriptors to ensure that high achieving students are challenged with instruction that meets their distinctive needs. Attention will also be paid to high achieving students who might be sliding by without working hard, monitoring their work to make sure they are performing to their potential.

Most of the curriculum for high achieving students will be within whole class instruction. Lessons and assessments will be designed for different levels of performance with high achieving students expected to stretch and reach for the more demanding work. The major pedagogy that will serve high achieving students is inquiry learning. The inquiry model for incorporates many GATE strategies. Inquiry learning will offer students the opportunities to pursue topics to greater depth through both individual and small group work; students will have the opportunity to become experts on a particular subject. This inquiry model will also offer the element of choice, as students will be able to choose a particular focus (eg. which animal habitat to develop expertise in; which historical artifacts to recreate and interpret for their Ancient Egypt museum exhibit). Finally, inquiry learning will offer multiple opportunities for students to self-assess and make judgments about their work as they engage in project-based learning.

I. Special Populations: English Language Learners

Introduction and Vision

Latitude aims to ensure educational equity for English Language Learners, which means that each child receives what he or she needs to develop his or her full academic and social potential. In order to effectively educate ELLs, Latitude strives to create an educational program that:

- promotes the students' sociocultural integration
- cultivates their language proficiency
- holistically supports their academic achievement

Latitude's approach to supporting English Language Learners is based on the understanding that immigrant adolescents arriving with limited knowledge of English are emergent bilinguals and have a large array of abilities, knowledge, and experiences—linguistic, cognitive, artistic, social—in many other spheres. Latitude's instructional model recognizes the importance of focusing on emergent bilinguals' social, emotional, and academic development beyond that of just learning English. Building on the students' existing strengths, Latitude's approach focuses on preparing English Language Learners to succeed in college and careers in the United States and on the development of complex language practices.

Latitude will meet all state and federal requirements for English Language Learners as pertains to annual notification to parents, student identification, placement, program options, English Language Development (ELD) and core content instruction, teacher qualifications and training, re-classification to fluent English proficient status, monitoring and evaluating program effectiveness, and standardized testing requirements. English Language Learners have access to all programs, services and resources described in this document.

Identification and Reclassification of English Learners

A cornerstone of Latitude's vision for equity is our school-wide goal to reclassify each of our English Language Learners as English proficient by the end of Phase 2. Latitude utilizes multiple criteria in determining whether to reclassify a pupil as proficient in English, including but not limited to all of the following:

- **Home Language Survey**: The School will administer the home language survey upon a student's initial enrollment into the School if this is the student's first time in a California public school. Students in the country less than twelve months will be given the state's Designated Primary Language Test (currently, the Interim Standards -Based Tests in a student's first language) to determine the student's academic proficiency when tested in the home language.

- **Transcripts & Cumulative Folders**: All students transferring will be given the appropriate assessment unless the student's results from a previous school are included in the cumulative record. After receiving the cumulative records, the Director of Instruction will review the information in Latitude's student information system and CALPADs for accuracy.

- **ELPAC Testing**: All students who indicate that their home language is other than English will be given the English Language Proficiency Assessments for California (ELPAC), the successor to the CELDT. State and federal law require that local educational agencies administer a state test of English language proficiency (ELP) to eligible students in kindergarten through grade twelve. The California Department of Education (CDE) is transitioning from the CELDT to the ELPAC as the state ELP assessment by 2018. The ELPAC will be aligned with the 2012 California English Language Development Standards. It will be comprised of two separate ELP assessments: one for the initial identification of students as English Language Learners and a second for the annual summative assessment to measure a student's progress in learning English and to identify the student's level of ELP.

All students who indicate that their home language is other than English will be given the ELPAC within 30 days of enrollment to evaluate their Listening, Speaking, Reading and Writing abilities in English. This test is given at least annually between July 1 and October 31 until the student is re-designated as fluent English proficient.

Latitude will notify all parents of its responsibility for ELPAC testing and of ELPAC results within thirty days of receiving results from publisher. All parents or guardians of students classified as English Language Learners are notified in writing. The School translates materials as needed to ensure that parents of ELLs understand all communications and are involved in all processes related to the English language development of their child.

As soon as the ELPAC data is received from the state, it will be imported into Latitude's student information system.

- Parental Notification of Initial Assessment Results and Program Placement: All Parents of EL students who are administered the annual ELPAC must receive official notification within 30 calendar days, informing them of their child's:
  - Annual English language proficiency level and how it was assessed
  - Official language classification
  - Instructional program placement
  - Progress expectations for the student's program option
  - Reclassification, or program exit criteria
  - Instructional program for ELLs with a disability (with an Individualized Education Program [IEP]) and how such program will meet the objectives of the IEP

Parents of ELLs and IFEP students are informed of the above information via the school's Initial Parent Notification of Language Test Results letter and the Parent Notification of Reclassification Criteria. Parents are advised to contact the school if they should need additional information.

Latitude will utilize multiple criteria in determining whether to reclassify a pupil as proficient in English, including but not limited to:

- Assessment of language proficiency using an objective assessment instrument including, but not limited to, the ELPAC
- Student performance on the English Language Arts portion of the SBAC
- School and teacher evaluations/assessments of whether the student has mastered grade-level standards
- Parental opinion and consultation

Please see Appendix A38 for the EFC Reclassification Form.

Strategies for ELL Students
Anchored in research on adolescent English language acquisition, Latitude's strategy for supporting ELLs takes a dual pronged approach:

- Studios: Integrated English Language Development
- Workshops: Systematic/Designated English Language Development

Studios

In Studio, Latitude practices a full inclusion model for all students, including ELLs. In Latitude's Studios, teachers engage all students in deeper learning through a project-based curriculum. Embedded within this project-based learning approach are core pedagogical practices grounded in research on English language acquisition and academic literacy, so that English Language Learners receive consistent Integrated ELD strategies.

All teachers at Latitude will be trained in strategies from Susana Dutro's E.L. Achieve Constructing Meaning, an Integrated ELD approach that provides teachers with the process for identifying the language required in discipline-specific content, then designing backwards to embed this explicit language instruction into content area teaching. Based on this backward design and a gradual release of responsibility, the Constructing Meaning process prompts teachers to: understand the role language plays in content learning, decide what language knowledge students need to access content and express understanding, and provide appropriate, explicit oral and written language instruction and practice.

Our approach to integrated ELD emphasizes the following core tenants in implementation of practices to serve English Learners:

- Acquiring Reading skills in a second language is similar to the process of acquiring Reading skills in a first language
- Formative assessments are essential for gauging progress, strengths, and weaknesses and for guiding instruction
- EL students need increased opportunities to develop sophisticated academic English vocabulary
- It is important to assess students' prior knowledge and build background (content) knowledge before reading challenging text
- Academic English-Language Development (AELD) instruction cannot be separated from English Language Arts or other core content-area instruction
- Teachers need extensive professional development and support in using curriculum materials effectively to teach academic English
- Teaching academic English includes providing students with access to core curriculum, explicitly teaching them academic vocabulary and grammar, and including both content and language objectives for instructional planning and teaching
- EL students need multiple opportunities for structured, oral English-language practices about academic topics and text

Three key principles, drawn from research into adolescent language development, lie at the core of Latitude Studios' instructional design for English Language Learners:

1. Leveraging Heterogeneity & Collaboration
2. Experiential Learning
3. Language and Content Integration

Please see Appendix A39 'Pedagogies and Practices in Multilingual Classrooms: Singularities in Pluralities' and Appendix A40 'Double the Work: Challenges and Solutions to Acquiring Language and Academic Literacy for Adolescent English Language Learners'.

Leveraging Heterogeneity & Collaboration
Latitude's approach to supporting English Language Learners is based on the understanding that immigrant adolescents, who are emergent bilinguals and arriving with limited knowledge of English, still have a large array of abilities, knowledge, and experiences—linguistic, cognitive, artistic, social—in many other spheres. Latitude's Studio instructional program is designed to leverage cultural and linguistic diversity by using heterogeneous and collaborative structures that build on the strengths of every member of the school community. Students who are not proficient in English or who have low literacy skills generally do not lack cognitive or intellectual capacity and come to school with rich and varied experiences and perspectives to offer. The challenge for teachers is how to leverage this diversity for all students in the classroom.

It is for this reason that heterogeneity and collaboration are inextricably linked. Well-designed collaborative groupings enable students of different levels to access material, learn from one another, and broaden their perspectives. Heterogeneity in a classroom is not only a challenge to be overcome; it is an asset to be leveraged. If students are not organized into collaborative groupings and not working on projects that require joint effort, there is little opportunity for them to benefit from the diversity their classmates bring. In contrast, when students work on collaboratively structured projects, they have the opportunity to study a problem in depth, and to work in an environment in which variety is expected.

Collaborative structures of the classroom can also be useful for students who need native language support to grasp the content. Through small group discussions, students have the opportunity to first comprehend the content in their native language (thereby developing their native language) before needing to articulate their understanding (through discussions, projects, presentations) in English. Research indicates that content knowledge in one language transfers to another, and that developing students' native languages supports growth in English.

Studio Practices to Leverage Heterogeneity & Collaboration for ELLs:

- Students are grouped heterogeneously with respect to English proficiency level, academic background, native language, and literacy level.
- Projects are carefully structured but are also open-ended enough to provide multiple access points for different levels of students to meaningfully engage.
- Curriculum is interdisciplinary.
- Instruction is student-centered, draws on students' prior experiences, including their experience of immigration and knowledge of their native languages and countries, and provides ample room for student discussion and collaborative work.
- Native languages of students are acknowledged positively and used as a resource. Projects that require students to read and write in their native languages are incorporated into the curriculum.
- The predominant form of instruction is collaborative learning so that students have multiple opportunities to interact with one another using oral language (both English and native languages) to discuss content.
- Class times are extended and additional supports are provided to students in order to enable deep and effective learning to happen in a heterogeneous community (e.g.

smaller classes, para-professionals or co-teaching with another teacher, carefully structured peer support, homework help after or before school, writing centers, etc.).
- Teachers are organized in teams and have time on a weekly basis to collaborate to create curriculum, plan common activities, and address the academic and social needs of the same group of students.

Experiential Learning

The experiential learning at the core of Latitude's Studio model is supported by language acquisition research that indicates conceptual understanding precedes language. Accordingly, language emerges most naturally in purposeful, language-rich, interdisciplinary study. Conceptual understanding often cannot come just from reading words off of a page, especially when those words are not in students' first language. Providing students with rich experiences beyond the classroom offers an entry point into texts – (i.e., if students have an experience with a topic such as listening to a holocaust survivor speak, they are better able to access text that discusses that topic), engaging them in ideas and learning, from which language and content understanding can emerge.

External experiences provide students with the opportunity to apply and extend their developing linguistic, socio-cultural, and cognitive skills in meaningful settings. Field experiences outside the classroom (e.g. research projects about community issues, visits to local museums, interview projects with people outside the school, a lab experience in a real science lab, meeting a Holocaust survivor), enable students to see the connections between what they are learning and the outside world and to better understand the relevance of their reading.

The following language acquisition research informs the design of Latitude's experiential learning:

- Merrill Swain's work[25] highlights the importance of ***meaningful output***. According to Swain, meaningful output is central to language acquisition because it provides learners with opportunities to work with developing language in contextualized, meaningful situations. In our project-based setting, ELLs have rich context and authentic purposes for their interactions. They regularly engage in group tasks which allow them to negotiate meaning and produce meaningful output in English. In short, our students are constantly engaged in conversations with peers and teachers that foster meaningful output.

- Researcher Jim Cummins[26] underscores the importance of ***embedding academic language in context***, making academically demanding content easier for ELLs to understand. Through the hands-on learning that happens in Latitude's Studios, academic content is regularly embedded in rich context. Students frequently engage in hands-on learning, with materials, tools, and manipulatives that give ELLs context for their academic learning.

---

[25] See Swain, M. (1985), "Communicative competence: Some roles of comprehensible input and comprehensible output in its development".

[26] See Cummins, J. (1984), "Bilingualism and special education: Issues in assessment pedagogy".

- Stephen Krashen[27] asserted that learners have an ***affective filter*** that influences how much learning can take place. Students who have high learner anxiety, low self-confidence, and low motivation are said to have high affective filters that can prevent them from learning. English Language Learners are especially prone to having a high affective filter. At Latitude, our small class size, the design principle of personalization, as well as our focus on social-emotional learning, creates a school culture in which our ELLs can experience a lower affective filter, making the learning more accessible to them. The high motivation that results from engaging in PBL also reduces this filter for ELLs.

- Krashen also hypothesized that English learning requires ***comprehensible input*** -- meaningful input based on real communication that is immediately comprehensible to the language learner. His theory is represented by the formula i + 1, with the "i" representing the input and "+1" representing the next level where language is advanced just enough so that the learner is challenged but able to learn. Embedded within Latitude's Studios are ample opportunities for students to receive comprehensible input. English Language Learners are strategically grouped with peers who can provide this i + 1 input. In addition, teachers differentiate reading selections to be comprehensible to English learners. Because our teachers most often use authentic texts relevant to the project, as opposed to a monolithic textbook, they can select the appropriate texts for emerging readers. Programs such as Newsela are used to support this differentiation.

Studio Practices that Leverage Experiential Learning for ELLs:

- Strong emphasis on field work and learning outside of the classroom.
- Collaborations with community organizations and use of other resources beyond the school walls to provide additional support for students and families.
- Support for extended learning opportunities such as internships and community service activities.
- Organization of curriculum primarily around project-based activities that culminate in a product (experiment, research paper, art work, debate, presentation, exhibition, etc.)
- Use of movies, visuals, outside speakers, pictures, etc. to provide students with a shared experience to enhance access of content and multiple access points to content.
- Assessment of students through portfolios that comprise authentic tasks and/or classroom projects developed over a period of time to demonstrate understanding.

Language and Content Integration

Integrating language and content is connected to experiential learning and to collaboration. Providing ELLs with rich experiences and tangible, hands-on ways to access materials builds their knowledge of a content area and provides a need to develop the language to explain the acquired knowledge. Language in this sense is an outgrowth of content. However, when small groups negotiate the meaning of the content and clarify understanding, the language becomes a vehicle for deepening content comprehension. In order to discuss the content effectively, teachers need to provide support for students to develop the necessary vocabulary and language

[27] See Krashen, S. (1982), "Principles and practice in second language acquisition."

structures. These are acquired through multiple opportunities to apply them in conversations and activities.

Collaboration among different content teachers supports students in developing their language skills. An interdisciplinary project centered on a common theme helps to broaden students' understanding of the content, providing them with more opportunities to use language to explain that content. Moreover, the vocabulary and language structures needed to access that content are often reinforced in several classes when students are engaged in interdisciplinary study, enhancing their ability to use the language structures and vocabulary in multiple contexts.

Studio Practices that Support Language and Content Integration for ELLs:

- Every teacher teaches content, and every teacher teaches language.
- Teachers proactively seek language learning opportunities in all content (e.g. identifying language features of content and eliciting or explaining rules and providing students with opportunities to apply them in context).
- Projects/activities include clear content and language objectives.

To support the integration of Language and Content across all Studio classes, teachers at Latitude will be trained by the Internationals Network for Public Schools in the "14 Strategies for Helping ELLs Thrive in Heterogeneous Classroom."[28]

The Common Core Standards raise the expectations for all students and will require a higher level of expertise and support for our English learners. Latitude will use integrated the English Language Development Standards in tandem with the Common Core Standards and Next Generation Science Standards. Teachers will use research-based instructional strategies to support English learners in the content areas.

Please see Appendix A41 'Language Demands and Opportunities in Relation to Next Generation Science Standards for ELLs', Appendix A42 'Mathematics, the Common Core, and Language', and Appendix 43 'Realizing Opportunities for ELLs in the Common Core English Language Arts and Disciplinary Literacy Standards'.

Common Core English Language Arts
Specific strategies will be used to support English Learners as they tackle the CCSS in Language Arts and the English Language Development Standards. Teachers will provide instruction in units of study to assist students in building vocabulary. Different sources on one topic help build context and accelerate vocabulary acquisition. To support writing, students will be exposed to different types of writing, assignments will be meaningful to the student and assessment will focus on content and not only mechanics. Speaking and listening for English learners will require other conversation protocols.

Common Core Mathematics
During mathematics instruction, the overall focus will be on the mathematical thinking and not the accuracy in language. This oral discourse is key for ELs as noted in the ELA/ELD

[28] See Internationals Network for Public Schools (2012), "Great Minds Think Differently: Strategies for Helping ELLs Thrive in Heterogeneous Classrooms".

Framework. Just as teachers focus on meaningful and engaging activities designed to build content knowledge before strategically delving into specific about the language of this content, the CA ELD Standards are organized with the focus on meaning and interaction first and the focus on knowledge about the English language and how it works afterward.[29] This meaning making will take place during Number Talks and Student Led Solutions. The Mathematical vocabulary will be taught within the context and not in isolation. Finally, the software used in our blended learning program allows students to manipulate models and hear feedback orally in a differentiated way.

Next Generation Science Standards
In science integrated instruction will involve support through extensive models and diagrams. This strategy will allow learners to describe functions and relationships before acquiring the technical vocabulary. Additionally, English Learners will have extensive academic discourse to build their ability to reason orally before moving onto written. As ELs progress along the ELD continuum, teachers can adjust the level of support they provide students in the academic vocabulary of science. Finally, examples of journal, reports and other written assignments along with opportunities to revise language will support learners as they master the Next Generation Science Standards.

Social Studies
Although the California Social Science Standards have not been changed, the School will build the competence of students in ELD and content in anticipation of a rigorous set of expectations aligned with the Common Core State Standards. This preparation includes practice with academic discourse, units of study, extensive use of maps and graphic organizers.

Workshop--Systematic/Dedicated ELD & Interventions

Latitude's Workshop model provides an opportunity for teachers to support English Language Learners with Systematic/Dedicated ELD. Workshop Teachers will be trained in Susana Dutro's E.L. Achieve Systematic ELD curriculum and framework to provide differentiated targeted ELD instruction in alignment with students' English proficiency levels and areas of need.

Systematic ELD is a dedicated program focused explicitly on teaching language that English Language Learners:

- are not likely to learn outside of school or efficiently pick up on their own,
- do not explicitly learn in other subject areas, and
- need to use for effective academic learning, classroom participation, and real-life purpose

As part of systematic ELD, ELL students will receive explicit Academic English language instruction. Academic English language instruction at Latitude will include three components: cognitive tasks, academic language, and proficiency.

- Cognitive tasks include explicit teaching of language functions. Latitude Workshops will teach language functions by explicitly teaching ELLs to:

[29] See p.80, Chapter 2, California Draft ELA/ELD Framework.

- ❖ Describe
- ❖ Ask questions
- ❖ Estimate
- ❖ Infer
- ❖ Identify cause & effect
- ❖ Predict
- ❖ Compare & contrast
- ❖ Persuade
- ❖ Summarize

- Academic language includes linguistic functions. Latitude Workshops will teach linguistic elements by teaching ELLs:

  - ❖ Academic vocabulary
    - ➢ Domain-specific and general
    - ➢ Morphology
  - ❖ Syntax and grammatical features
    - ➢ Sentence structures
    - ➢ Parts of speech
    - ➢ Verb tense/mood
    - ➢ Subject/verb agreement
  - ❖ Discourse patterns

- Proficiency includes language fluency. Latitude Workshops will maximize student opportunity to practice Listening, Speaking, Reading and Writing to accelerate the development of fluency in each of these areas.

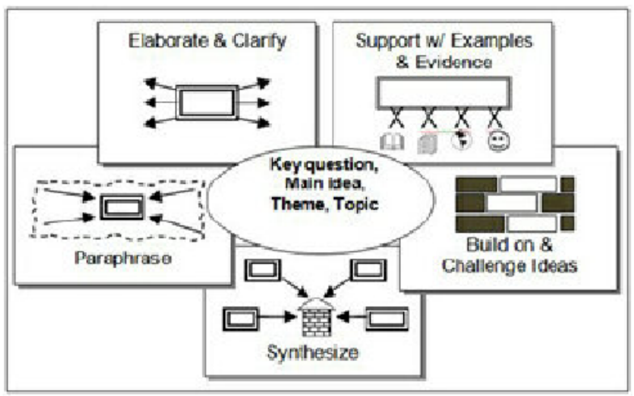
Instructional practices focus on:

- Identifying discipline-specific language
- Connecting Listening, Speaking, Reading and Writing
- Building receptive and expressive academic language

Academic language proficiency is a separate skill from everyday speech and writing. It is the language of texts, of academic discussion, and professional writing. Without it, students will not achieve long-term success in school and beyond. Formal, academic English is used to problem-solve, weigh evidence, and think critically. It is required to negotiate the dense-print paperwork associated with adult independence, such as: banking, healthcare, and property rental. Yet, once many students reach the Intermediate and Advanced levels of ELD, they no longer receive formal language instruction. When students learning English transition into core content courses, increased emphasis on subject matter knowledge allows little time for language instruction.

This shift often leaves the Intermediate English learner orally fluent, but with critical gaps in language knowledge and vocabulary. Accessing prior knowledge and assuring student motivation and interaction is critical to assure student learning, but it is not enough. Academic English must be continuously developed and explicitly taught across all subject areas. Latitude teachers will ensure ELLs are provided with Academic English language instruction so they can access core content. Latitude's Director of Instruction will work with Jeff Zwiers, a senior researcher at Stanford University Graduate School of Education and the director of the Academic Language Development Network. This network has developed a series of teaching resources to support the development of academic language and specifically, academic discourse. His approach focuses on the development of five conversation skills across disciplines. The diagram below illustrates these critical academic conversation skills. Latitude teachers will explicitly integrate these conversation skills into Workshop and receive coaching and support in using these tools to build student capacity around academic discourse.

Please see Appendix A44 for the Academic Language for Thinking Skills Chart.



ELD Interventions

EFC's MTSS system developed in partnership with Seneca Center is designed to target the root cause of a student's individual challenges. Students not making progress academically because there are specific challenges with their English language development, will receive a targeted ELD intervention at Tier 1.

Latitude teachers trained in Dutro's framework will be able to pinpoint language development gaps and provide targeted direct instruction in the gap area. Should that student not make adequate progress and require additional ongoing Tier 2 support in addition to the Tier 1 targeted ELD instruction, he or she would receive Tier 2 ELD interventions during the workshop block. The student can also receive targeted support during the summer interventions program. Latitude is also exploring other supports for newcomers such as newcomers pull-out class and leveraging strategic technology.

As a personalized learning school, we continue to research and seek strong English Language Development programs that are online and adaptive. We are considering Achieve 3000 Intervention to support English Language Learners at CELDT levels 3 and higher who are not making progress (at EFC, this is the subgroup that struggles to make continued progress). Achieve 3000 tracks student learning in ELD standards, specifically focuses on Academic

English and vocabulary development, and is adaptive to a student's reading level. In their ELL Lexile Study, English Language Learners using Achieve 3000 showed gains more than 2.5 times their expected Lexile growth. Again, because the online curriculum space is growing daily and research on effectiveness is being produced monthly, we reserve the right to continue to research this space and select the strongest program with proven results for our struggling English Language Learners.

In addition to finding a strong online adaptive program to supplement and support our interventions programming, Latitude will provide targeted Tier 2 instruction using a research-based comprehensive interventions curriculum like *Language Central*, a product EFC and Seneca have used for ELD interventions effectively over time.

Newcomers

Students brand new to the country and/or English have unique and personal needs. Research on students new to the country identifies a few important elements for their success. The way Latitude addresses those elements is listed below.

1. **Systematic Support of Students**

   All newcomer students who enter Latitude spend their initial day or half day being administered an extensive battery of assessments of language, the ELPAC or other appropriate verbal language assessments and content knowledge, Latitude's internal assessments in English and in their native language when possible and appropriate. Based on the newcomers' results, students are given a combination of a personalized plan, designated supplemental English Language Development and mainstream classes.

2. **Heterogeneous Grouping**

   Informed by best practices from the Internationals Network of Public Schools, which serve 100% newcomers, Latitude's approach to serving newcomers will be to group students heterogeneously with other students at varying levels of language acquisition. They will be supported by classroom teachers and supplemental staff, but the learning of English from peers will be a core part of their program for part of their day.

3. **Coordinated Efforts**

   Newcomer Programs, Programs for Advanced ELLs, and Mainstream Classes. This coordination and ongoing support is done by the student's advisor, classroom teacher, or the school based ELL coordinator. Our small school structure and teacher teaming allows this coordination to happen cohesively so that no student slips between the cracks.

4. **Extended Instructional Time**

   Effective newcomer support programs recognize that newcomers may not necessarily develop high levels of proficiency in English literacy and content knowledge if they are only provided with the traditional academic year of 180 six-hour days. Instead, adolescent newcomers must be immersed in language-rich environments, engaged with challenging content in English, and provided with effective instruction for more time than are their native English-speaking counterparts. Latitude will provide targeted summer school and after-school programs that are meant to supplement the instruction students receive during the regular school year. A strong research base supports the notion that, provided instruction is deemed effective, greater time on task is essential to the success of students performing below grade level, ELLs in particular. To be most successful, supplemental programs should be designed to meet individual student's' specific academic needs and be well-coordinated with the overall instructional program. In addition to increasing the overall instruction time, effective newcomer programs increase the amount of instructional time focused on language and literacy development, which Latitude will provide newcomer students through our Workshops.

Please see Appendix A45 'Research-Based Recommendations for Serving Adolescent Newcomers'.

ELEMENT 2: MEASURABLE PUPIL OUTCOMES

"The measurable pupil outcomes identified for use by the charter school. "Pupil outcomes," for purposes of this part, means the extent to which all pupils of the school demonstrate that they have attained the skills, knowledge, and attitudes specified as goals in the school's educational program. Pupil outcomes shall include outcomes that address increases in pupil academic achievement both schoolwide and for all groups of pupils served by the charter school, as that term is defined in subparagraph (B) of paragraph (3) of subdivision (a) of Section 47607. The pupil outcomes shall align with the state priorities, as described in subdivision (d) of Section 52060, that apply for the grade levels served, or the nature of the program operated, by the charter school." Ed. Code §47605(b)(5)(B).

"The method by which pupil progress in meeting those pupil outcomes is to be measured. To the extent practicable, the method for measuring pupil outcomes for state priorities shall be consistent with the way information is reported on a school accountability report card."Ed. Code §47605(b)(5)(C).

"In accordance with SB 1290, Latitude 37.8 High School pupil outcomes will be set related to increases in pupil academic achievement both schoolwide and for all groups of pupils served by the charter school, as that term is defined in subparagraph (B) of paragraph (3) of subdivision (a) of section 47607. The pupil outcomes shall align with state priorities, as described in subdivision (d) of Section 52060, that apply for the grade levels served, or the nature of the program operated, by the charter school.

Latitude's pupil outcomes, related to increases in pupil academic achievement both schoolwide and for all groups of pupils served by the charter school, as that term is defined in subparagraph (B) of paragraph (3) of subdivision (a) of section 47607, shall be aligned with state priorities, as described in subdivision (d) of Section 52060, are as follows:"

[Charter School to insert pupil outcomes in compliance with Education Code section 47607(b)(5)(B)].

"By July 1, 2018, and annually thereafter: Latitude 37.8 High School shall update the goals and actions identified in the charter to provide the following, as set forth in Education Code section 47606.5(a):

- *A review of the progress towards the goals included in the charter, an assessment of the effectiveness of specific actions toward achieving those goals, and a description of the changes to the specific actions the charter school will make as a result of the review and assessment.*
- *Listing and description of the expenditures for the fiscal year in implementing the specific actions included in the charter as a result of the reviews and assessments, classified using the California School Accounting Manual."*

"Under Education Code section 47607.3, if the charter school fails to improve outcomes for 3 or more pupil subgroups (or, if less than 3, all pupil subgroups) in 3 or 4 consecutive school years, the following shall apply:

- *The chartering authority shall provide technical assistance to the charter school using an evaluation rubric adopted by the State Board.*
- *The Superintendent may assign, at the request of the chartering authority and approval of the State Board, the California Collaborative for Educational Excellence to provide advice and assistance to the charter schools.*

The chartering authority shall consider for revocation any charter school to which the California Collaborative for Educational Excellence has provided advice and assistance, and has made findings that: 1) the charter school has failed, or is unable, to implement the recommendations of the California Collaborative for Educational Excellence; or 2) that the inadequate performance of the charter school, based upon the evaluation rubric, is so persistent or so acute so as to require revocation of the charter."

Pupil Outcomes

21st Century Learning

To be an educated person in the 21st century demands nothing less than global citizenship. Our students are entering a world undergoing technological, cultural, linguistic, climatic, economic, and social disruption. The world students will face when they graduate looks dramatically different than our world today, both in terms of challenges and opportunities; the jobs of tomorrow look different than the jobs of today. In addition, the world is increasingly global and interconnected, requiring interdisciplinary, knowledgeable global citizens who can negotiate questions of justice and morality while grappling with the most complex problems facing our world from climate change, to economic inequities, to international terrorism and conflict.

To be prepared for this evolving world, the vision for Latitude graduates exceeds common notions of educational attainment and academic outcomes for students. Our vision of the Latitude graduate is inclusive of college and career readiness. Students will leave with UC/CSU A-G transcripts, as well as experience across a broad array of potential career interests. However, we have broader aspirations in which college and career readiness serve as means to deeper life outcomes we hold for all of our students. These outcomes include being able to articulate goals for themselves and having the ability to fulfill them. It also includes the ability to have agency and influence the world around them. This broader definition of a successful young person is informed by the study, "Foundations for Young Adult Success: A Developmental Framework"[30] which details a broad range of outcomes necessary for success not just in school, but life. Informed by this research, Latitude 37.8 High School has set the following outcomes for its graduates:

- **Personal Agency**-- Latitude graduates will have the agency to make choices about their lives and the ability to take an active role in their lives' paths. Latitude graduates will be able to determine goals and plans to accomplish them while also leveraging other skills,

[30] Foundations for Young Adult Success

abilities, and mindsets to navigate challenges and make adjustments to goals and plans as needed.

- **Essential Competencies**-- Latitude graduates will demonstrate mastery of a core set of college and career readiness academic and non-cognitive competencies that allows them to perform effectively in a variety of roles and settings. These include academic competencies within traditional academic disciplines as well as non-cognitive competencies from the fields of design thinking and social emotional learning.

- **Integrated Identity**-- Latitude graduates will have a strong, consistent understanding of themselves across a variety of settings and social contexts, including a strong sense of who they are, where they have come from, and where they see themselves going.

To attain these broader outcomes for students, the Latitude High model expands and reimagines our vision of 'school' from a place to a set of experiences students have that enable their growth and mastery along academic and social emotional lines. The Latitude High experience plays an important role in leveling the playing field for all learners by ensuring all students have access to the resources and assets of the city to pursue their passions and leverage them in service of their learning.

Latitude Competency Model

The foundation of the instructional program at Latitude is our competency model. This model articulates in student friendly language the specific skills, habits, and knowledge that students must attain to be prepared for their post-secondary lives and embodies what it means to be an educated person in the 21st century. The competencies have been backwards mapped from college and career readiness expectations to ensure all students graduate from Latitude prepared for future success. There are three different domains of competencies that are relevant to be prepared for a meaningful and productive adult life, which our instructional program is designed to support:

Figure 2.1—Latitude Competency Framework:

Academic	
English Language Arts *Aligned to CCSS*	● Reading Literature ● Reading Informational Text ● Writing Evidenced Based Arguments ● Writing Informational Texts ● Writing Narrative Texts ● Engaging in Text Based Discussions ● Giving Presentations ● Conducting Research
Math *Aligned to CCSS*	● Mathematical Problem Solving ● Mathematical Argumentation and Reflection
History	● Analyzing Historical Outcomes

Aligned to C3 Framework for Social Studies	Analyzing Historical Perspectives
Science *Aligned to Next Generation Science Standards*	- Leading Scientific Investigation - Analyzing and Interpret Data - Developing and Using Models - Applying Cross-Cutting Concepts
Foreign Language	- Speaking and Listening - Reading and Writing - Engaging in Cultures
Health and Wellness	- Applying Knowledge of Health Concepts - Analyzing Health Promotion and Risk Reduction - Engaging in Health Advocacy
Design Thinking	
Design *Adapted from Stanford Design School*	- Designing Processes - Building Empathy and Learning from Others - Defining Problems - Fabricating and Crafting
Social Emotional Learning	
Non-Cognitive Skills *Aligned to SEL Standards and Big Picture Learning Model*	- Positive Self Concept and Growth Mindset - Realistic Self Appraisal - Navigating Systems and Self Advocacy - Preference for Long Term Goals - Availability and Support of Adult Mentors - High Quality Leadership Experience - Community Involvement - Knowledge Acquired in a Field Outside School

The Latitude learning experiences and course sequence will ensure that all students have sufficient opportunity to develop mastery in these areas. Additionally, these competencies are aligned to the UC/CSU A-G expectations for each content area, and all students will earn comprehensive A-G credits.

Please see **Element 1 - Educational Program, Section C - Instructional Design** for additional information on the Latitude Competency model.

Graduation Requirements
Latitude believes that students must develop Personal Agency, Essential Competencies, and Integrated Identity to pursue meaningful and productive lives. The Latitude graduation requirements are developed in alignment with this graduate profile. Essential Competencies are

defined by completion of the UC/CSU A-G Requirements, which all students must complete for graduation. These courses in turn are in alignment with the California Common Core Standards (CCCS), California State Standards (CSS), and Next Generation Science Standards (NGSS). In addition, students must demonstrate a developing sense of Personal Agency and Integrated Identity.

All students at Latitude, including students who have special needs, students who are English Language Learners, and/or students who are socioeconomically disadvantaged, will be expected to meet these outcomes, but may be provided additional support and/or accommodations as needed and/or legally required according to each student's Individual Education Plan (IEP). As a competency based school, students will have flexibility in how and when they demonstrate their readiness for graduation, and our instructional program is designed to provide all learners with the appropriate time and support to be successful. The complete Graduation Requirements are detailed in Element A of this charter.

Measurable Pupil Outcomes in Alignment with State Priorities (LCAP) and OUSD Collective MPOs

Pursuant to Education Code Section 47605(b)(5)(B), the figures below describes Latitude's outcomes that align with the state priorities and its goals and actions to achieve the state priorities, as identified in Element A of the charter.

In addition, Latitude will develop API and AYP outcomes both for participation percentages and performance thresholds upon reinstatement in their future forms (these were suspended at the time of this submission). Finally, Latitude has aligned these outcomes with the Oakland Unified School District's Collective MPOs.

Figure 2.2—Measurable Pupil Outcomes

Metric	Description	Grade Levels	Projected Subgroups	Target
CAASPP Math	By the end of the charter term, increase the proportion of students scoring level 3 or 4 by at least 5% points **OR** achieve 70% of students scoring level 3 or 4.[31]	Gr 11	All Students	5% point increase OR 70% proficient
			African-American	
CAASPP ELA			Latino	
			Economically Disadvantaged	
			English Learners	
			Special Education	

31 Latitude will only have one year of growth data at the time of renewal.

Scholastic Reading Inventory (SRI)	Each year 70% of students will increase one grade level on the Scholastic Reading Inventory or achieve proficiency.	Gr 9-12	All Students	70% progress at least one year or are proficient
			African-American	
			Latino	
			Economically Disadvantaged	
			English Learners	
			Special Education	
CELDT/ ELPAC	Each year, 40% of ELs will improve one proficiency level **OR** maintain proficiency on CELDT/ELPAC.	Gr 9-12	English Learners	40%
Chronic Absence Rate	By the end of the charter term, less than 10% percent of students will be absent more than 10% of enrolled days.	Gr 9-12	All Students	10%
			African-American	
			Latino	
			Economically Disadvantaged	
			English Learners	
			Special Education	
Graduation Rate	Each year, achieve a high school cohort graduation rate of at least 90%.	Gr 12	All Students	90%
			African-American	
			Latino	
			Economically Disadvantaged	

			English Learners	
			Special Education	
School Safety	Each year, at least 70% of students and families positively rate school safety.	Gr 9-12	Families	70%
		Gr 9-12	Students	70%
Academic Instruction	Each year, at least 70% of students and families positively rate academic instruction	Gr 9-12	Families	70%
		Gr 9-12	Students	70%
Decision - Making	Each year, at least 70% of students and families positively rate their voice in school decision-making and/or opportunity for feedback.	Gr 9-12	Families	70%
		Gr 9-12	Students	70%

*EFC is a leader in the development of an Oakland Public Schools Pledge which has initiated a working group focused on the development of a common School Performance Framework for all public schools in Oakland, both charter and district-run. This process may change the EFC MPOs moving forward.

Charter School Outcomes Aligned to State Priorities

CHARTER SCHOOL OUTCOMES ALIGNED TO STATE PRIORITIES	
State Priority #1. The degree to which teachers are appropriately assigned (E.C. §44258.9) and fully credentialed, and every pupil has sufficient access to standards-aligned instructional materials (E.C. § 60119), and school facilities are maintained in good repair (E.C. §17002(d))	
Annual Goal A. Ensure all teachers are appropriately assigned and fully credentialed to support a high-quality, broad course of study. B. Research and adopt CCSS, NGSS, and CSS aligned curricular materials proven successful for similar populations C. Ensure school facilities are maintained and in good repair	**Annual Targets** Latitude will make annual progress toward the following targets: ❖ 95% teachers meet California credentialing requirements for the subject area and grade level assigned ❖ 0% Teacher Misassignments ❖ At least 80% family satisfaction with school facilities on SCAI ❖ At least 75% staff intend to return to Latitude for the following year

	❖ 100% of requirements met on EFC facilities checklist

Annual Actions to Achieve Targets

- Implement an annual teacher retention plan that includes building ample time into schedule for planning/preparation/collaboration; conducting surveys to assess morale and needs; providing coaching and regular feedback; creating opportunities for teacher leadership; holding site leadership accountable for developing a strong professional learning culture.
- Implement an annual teacher recruitment plan that includes providing a competitive salary and benefits proposal; beginning recruitment for teachers in winter; implementing recruitment plan in fall; utilizing signing bonus incentives as needed; partnering with teacher preparation programs and teacher recruitment programs to attract teachers; incentivizing referrals within the organization; partnering with teacher preparation organizations to recruit and place teaching fellows; developing and setting aside resources for pipeline programs.
- Implement facilities walkthroughs four times annually using a walkthrough rubric; develop standards for facilities.

State Priority #2. Implementation of Common Core State Standards, including how EL students will be enabled to gain academic content knowledge and English language proficiency

State Priority #4. Pupil achievement, as measured by all of the following, as applicable:

A. Statewide assessments (CAASPP, or any subsequent assessment as certified by SBE)
B. The Academic Performance Index (API)
C. Percentage of pupils who have successfully completed courses that satisfy UC/CSU entrance requirements, or career technical education
D. Percentage of pupils who have passed an AP exam with a score of 3 or higher
E. Percentage of pupils who participate in and demonstrate college preparedness pursuant to the Early Assessment Program (E.C. §99300 *et seq.*) or any subsequent assessment of college preparedness

Annual Goals	**Annual Targets**
A. Teachers develop and implement strong CCSS, NGSS, and CSS aligned units of study and lessons that push student thinking at the higher levels of Bloom's taxonomy B. Students are spending increased time learning in their Zone of Proximal Development by implementing Guided Reading integrated with adaptive online software proven for our target population C. All teachers and students have access to 21st century technology and personalized learning opportunities. D. All teachers receive targeted, high-quality professional development aligned to high priority instructional practices that positively impacts student academic achievement and social-emotional development.	Latitude will make annual progress toward the following targets: ❖ +5% students either scoring level >= 3 or making at least one level growth OR 70% of students scoring proficient (including significant subgroups) on the ELA section of CAASPP ❖ +5% students either scoring level >= 3 or making at least one level growth OR 70% of students scoring proficient (including significant subgroups) on the Math section of CAASPP ❖ Each year, 40% of ELs will improve one proficiency level OR maintain proficiency on CELDT/ELPAC. ❖ Each year, achieve at least a 90% cohort graduation rate (including significant

E. All staff implement a rigorous Response to Intervention model to address the Tier1, Tier2, and Tier3 academic, behavioral and social needs of all students.	subgroups). ❖ Each year, achieve at least a 90% UC A-G completion rate (including significant subgroups).

Annual Actions to Achieve Targets

- Ensure all students have access to and meet UC/CSU A-G requirements.
- Identify, develop, and/or purchase curriculum materials to ensure alignment to the Common Core State Standards (CCSS), Next Generation Science Standards (NGSS), California State Standards (CSS), and the English Language Development Standards (ELDS).
- Align and leverage data management systems to track student progress toward proficiency in relation to growth targets.
- Maintain small class sizes and flexible groupings to ensure that all students are known well and are able to develop at their optimum rate.
- Identify and use a learning management system to manage individual playlists, schedules, and learning modalities for each student.
- Develop and teach high quality project based learning studios that integrate social studies and ELA and science and design, allowing students to learn deeply for authentic reasons.
- Use a benchmark assessment system (formative+summative) to allow students to demonstrate subject-area mastery, aligned to the Common Core State Standards (CCSS), Next Generation Science Standards (NGSS), California State Standards (CSS), and the English Language Development Standards (ELDS), at their optimal pace.
- Assess students using performance tasks and SBAC interim assessments.
- Implement and refine Response to Intervention (RTI) program to identify and serve all students with Tier 1, 2, and 3 academic and social-emotional interventions (including supporting students to close gaps with peers, services under 504 plans and IEPs, services for ELLs, services for Foster Youth, and services for students from low-income families).
- Partner with High Tech High and Big Picture Learning to support teachers in implementing cross-cutting practices.
- Provide all English Learners with designated ELD instruction targeted to their proficiency level, aligned to the new ELD standards, and designed to move them toward English proficiency.
- Provide students with instruction to develop their home language and/or become fluent in additional world languages.

State Priority #3. Parental involvement, including efforts to seek parent input for making decisions for schools, and how the school will promote parent participation

Annual Goals	**Annual Targets**
A. Build parent understanding of Common Core standards and overall instructional design B. Build parent capacity to monitor and guide student learning and growth C. Develop a robust parent leadership culture and body	Latitude will make annual progress toward the following targets: ❖ 90% families participate in learning team meetings. ❖ Parent leadership: Increase number of parent leaders by two leaders annually until there are 2 parent leaders representing every cohort of students ❖ Families positively rate (average of 3.5 or higher) school climate in the areas of:

	● Leadership Decisions ● Community Relations ● Attitude and Culture ● Learning/Assessment

Annual Actions to Achieve Targets

- Support Family Leadership Committee (FLC) in developing parent understanding of Latitude graduate profile, including personal agency, essential competencies, and integrated identity.
- Leverage parent leadership to promote a supportive school culture that implements restorative practices.
- Recruit Parent Reps and develop capacity to facilitate Family Leadership Committee (FLC) committee aligned to clear, defined goals.
- Provide leadership training for parent leaders.
- Expand parent communication and translation services.
- Actively recruit bilingual staff when hiring new staff members.
- Implement one home visit per family per year.
- Hold quarterly Learning Team meetings with parents, students, advisors, and mentors.
- Expand parent education opportunities.
- Provide opportunities for families to advise school through formal and informal parent leadership structures.
- Engage families in community events and capacity-building learning experiences built around parent interests, assets, and inquiries.
- Host community events, including back to school nights and celebrations of learning.

State Priority #5. Pupil engagement, as measured by all of the following, as applicable:

A. School attendance rates
B. Chronic absenteeism rates
C. Middle school dropout rates (EC §52052.1(a)(3))
D. High school dropout rates
E. High school graduation rates

State Priority #6. School climate, as measured by all of the following, as applicable:

A. Pupil suspension rates
B. Pupil expulsion rates
C. Other local measures, including surveys of pupils, parents, and teachers on the sense of safety and school connectedness

Annual Goals	**Annual Targets**
A. Family Services: Engage families as partners in student achievement, school culture and community engagement. Empower families to review data and make decisions around site investments B. Response to Interventions: Implement a rigorous Response to Intervention model to address the Tier 1, Tier 2, and Tier 3 academic, behavioral and social needs of all students.	Latitude will make annual progress toward the following targets: ❖ <10% of all students are chronically absent ❖ <= 5% of enrolled students are suspended out of school ❖ 0% of enrolled students are expelled ❖ 95% average daily attendance (P2-ADA) ❖ Each year, achieve less than a 5% dropout rate (including significant subgroups) ❖ Each year, achieve at least a 90% cohort graduation rate (including significant

	subgroups). ❖ Family average >= 3.5 on Domain 7: Attitude and Culture of the SCAI Survey ❖ Student average >= 3.5 on Domain 7: Attitude and Culture of the SCAI Survey ❖ Teacher average >= 3.5 on Domain 7: Attitude and Culture of the SCAI Survey

Annual Actions to Achieve Targets

- Use advisory to provide a small venue in which students are supported socially, emotionally, and academically.
- Facilitate professional development about cycles of inquiry to support teacher practice at Latitude and identify interventions.
- Implement an RTI program and COST process to align supports for all students.
- Provide wrap-around social-emotional support to students through case managers who support relationships among students, families, and staff.
- Provide individual and group therapy by School Counselors through the Response to Intervention (RTI) program.
- Develop and implement a safety plan prior to the first day of school.

State Priority #7. The extent to which pupils have access to, and are enrolled in, a broad course of study, including programs and services developed and provided to unduplicated students (classified as EL, FRPM-eligible, or foster youth; E.C. §42238.02) and students with exceptional needs.

"Broad course of study" includes the following, as applicable:

Grades 1-6: English, mathematics, social sciences, science, visual and performing arts, health, physical education, and other as prescribed by the governing board. (E.C. §51210)

Grades 7-12: English, social sciences, foreign language(s), physical education, science, mathematics, visual and performing arts, applied arts, and career technical education. (E.C. §51220(a)-(i))

Annual Goals	Annual Targets
D. 100% of students are enrolled in a broad course of study that includes English, Mathematics, Social Sciences, Science, Visual Arts, Health/Physical Education, and Academic Electives that meets or exceeds the UC/CSU A-G requirements	Latitude will make annual progress toward the following targets: ❖ 95% of students are receiving a broad course of study including arts and PE

Annual Actions to Achieve Targets

- Implement studio learning model.
- Develop Extended Learning Opportunities program to support personalization and access to a broad course of study.
- Facilitate health and wellness programs that support students physical health.

State Priority #8. Pupil outcomes, if available, in the subject areas described above in CA Ed Code Section 51210, as applicable.

Annual Goals	Annual Targets
A. Teachers are able to teach writing across the curricula and improve ELA outcomes B. Teachers are able to teach targeted and strategic ELD and scaffold and shelter content for EL	Latitude will make annual progress toward the following targets: ❖ CCSA Statewide Rank: +1 OR at least a 4 OR a at least a 6 for similar schools

students C. Teachers are able to design and implement units of study that are multidisciplinary - integrate the arts and technology, build student capacity to collaborate around a common goal, build student leadership and facilitation skills, and improve student academic discourse	❖ 70% percent of students increase one grade level on the Scholastic Reading Inventory or achieve proficiency.

Annual Actions to Achieve Targets

- Develop and implement portfolio assessment system.
- Assess and track portfolios and passages on a rubric to inform student progress and instruction.
- Train and coach teachers in designing High Quality Project Based Learning that includes or culminates in evidence to demonstrate Latitude competencies.
- Deliver High Quality Project Based Learning units that include or culminate in authentic products delivered to authentic audiences.
- Cultivate partnerships with local organizations and individuals and connect to resources in order to support, mentorships, apprenticeships, fieldwork, and service.
- Train and coach teachers to develop literacy rich project based learning units
- Provide professional development focusing on complex text and academic discourse.
- Facilitate professional development about cycles of inquiry to support teacher practice at Latitude and identify interventions.

Annual Update

The LCAP and any revisions necessary to implement the LCAP as part of the EFC and Latitude Strategic Planning Process, including outcomes, actions, and methods of measurement listed above, shall not be considered a material revision to the charter, and shall be maintained by the charter school at the school site.

ELEMENT 3: METHODS TO MEASURE PROGRESS

"The method by which pupil progress in meeting those pupil outcomes is to be measured. To the extent practicable, the method for measuring pupil outcomes for state priorities shall be consistent with the way information is reported on a school accountability report card."Ed. Code §47605(b)(5)(C).

"Pursuant to the transition to California's Common Core and the California Assessment of Student Performance and Progress (CAASPP) System, Latitude 37.8 High School will establish baseline performance in the first year of testing administration and will demonstrate growth in performance each year thereafter."

"If Latitude does not test with the District, Latitude hereby grants authority to the State of California to provide a copy of all test results directly to the District as well as the charter school.

Test results for the prior year, if not provided directly to the District by the State, will be provided by the charter school to the District no later than September 1 of each year."

Methods to Measure Pupil Outcomes

Theory of Action on Assessments
EFC will support teachers at Latitude in providing instruction that develops student mastery of grade-level content standards. EFC and Latitude believe that high quality instruction should yield high levels of learning and performance on multiple forms of assessments. Further, we believe that ongoing monitoring of student performance on assessments tells us what students are learning and not learning. The more we understand this process, the better we are able to adjust instruction to meet student needs and design instruction for achievement of the measurable pupil outcomes. Taken together, measurable pupil outcomes and student performance on assessments are at the heart of community accountability for student learning.

Multiple Measures/Assessments Selected
The Assessment Matrix below includes multiple forms of assessments to be used at Latitude and supported by EFC. This formal assessment system is designed to ensure all students make adequate and consistent progress toward the measurable pupil outcomes and that teachers at Latitude and administrators and staff at EFC can monitor that progress for each student.

Assessment Matrix

Figure 3.1—Latitude Assessment Matrix

Subject	Grade Levels	Assessment	Annual Frequency
ELA	Gr 9-12	Standards-based unit assessments	2 - 3x
ELA	Gr 9-12	Scholastic Reading	3 - 4x

		Inventory (SRI)	
ELA	Gr 11	SBAC	1x
ELA	Gr 9-12	Writing Performance Task	2 - 3x
Math	Gr 9-12	Standards-based unit assessments	5 - 8x
Math	Gr 11	SBAC	1x
ELD	Gr 9-12	CELDT (will transition to ELPAC)	1x
Science	Gr TBD	California Science Test (CST)	1x
Physical Fitness	Gr 9	Physical Fitness Test (PFT)	1x

The measurable pupil outcomes draw upon the California Frameworks for their subject areas and the Common Core State Standards (CCSS), Next Generation Science Standards (NGSS), California State Standards (CSS), and the English Language Development Standards (ELDS). They are specific, measureable, attainable, results-based and time-bound to ensure that school improvement efforts are concrete, motivating and realistic. Performances on these measures, taken together, will indicate each child's progress toward "meeting statewide standards," as required by law, though no one measure alone will constitute a sole indicator of satisfactory or unsatisfactory progress.

The assessment landscape is rapidly changing, with new and innovative products emerging in alignment with the CCSS, NGSS, CSS, and ELDS. As such, with the exception of assessments mandated within the California Assessment of Student Progress and Proficiency (CAASPP), assessment tools as listed are to be considered preliminary and EFC and Latitude do not commit to using the specific assessment tool listed. Rather, the School commits to using assessments that can be given frequently, allow instant reporting, are diagnostic, provide data on growth, and provide growth towards grade-level standards mastery.

Criterion-Referenced and Formative Assessments
Criterion-referenced/standards-aligned assessments and diagnostic/formative assessments are key parts of the EFC and Latitude specific assessment plan. Criterion-referenced assessments will be used to monitor whether students are mastering grade level standards, and to identify focus standards for each classroom. These assessments will also be disaggregated to identify trends, find specific areas of instructional strength and weakness, and to ensure students are making progress towards grade-level mastery of all state standards.

Formative assessments will be used not just to inform instruction but also to track and monitor student growth and learning. Latitude distinguishes between three types of formative assessments as distinct from organization-wide benchmark assessments.

- Checks for understanding will take place continuously and give teachers immediate information about student understanding to allow for immediate feedback to students.
- Common Formative Assessments are created or found during grade level collaboration time and are connected to individual learning targets deconstructed from standards and/or groups of targets.
- Interim benchmark assessments are cumulative common formative assessments that give teachers information not just about the most recent unit of study, but about all major content and skills covered in the year up to the time of administration.

Latitude teachers will regularly use checks for understanding, common formative assessments, and interim assessments. Additionally teachers will utilize blended learning data to track usage and progress on blended learning programs. Teachers will use collaborative time to analyze the results of common formative assessments and interim benchmark assessments, share best practices surfaced by the results of assessments, and make plans to intervene on behalf of students who have not yet mastered the covered material.

In addition, assessment data will be captured in student report cards. Latitude's report cards will report on student progress on the Latitude competencies. Using this report card format, teachers assign scores that are aligned to the SBAC performance bands using multiple forms of data including performance tasks, formal assessments, quizzes, classwork. Report card scores are not based on cumulative averages, but rather against the criteria of whether the student has demonstrated mastery of the competency.

State Assessments

Pursuant to California Education Code Section 47605(c), Latitude, with support from EFC, will conduct state pupil assessments, including the CAASPP, the California English Language Development Test (CELDT) or English Language Proficiency Assessments of California (ELPAC), and any other assessments as mandated by (e.g. SABE or its equivalent, California Fitness Exam). Latitude is subject to all state (API) and federal (AYP) assessment and accountability requirements.

The results of these state assessments will be an indicator of overall school wide performance, class performance, grade-level performance, and subgroup performance. These tests will be one of multiple assessment methods used to document and monitor student growth on a continuum of achievement.

State Assessment Modifications and Accommodations

Children with disabilities under the Individuals with Disabilities Improvement Act or Section 504 are included in State standardized testing and will be afforded the appropriate accommodations/ modifications where necessary and appropriate.

Promotion and Retention Policies

Education for Change has a board-approved policy called the EFC Student Intervention and Promotion Policy. It is aligned with California's Education Code Section 48070-48070.5.

Theory of Action

There is very little research to support retention as a strategy for academic acceleration should a student be academically behind. In general, Education for Change does not believe retention without a targeted and strategic acceleration program is of benefit to a struggling student. In addition, it is opposed to formulaic retention triggers that do not take into consideration individual circumstances, age of child, access to strategic programming, and the student's personal feelings.

Retention Policy

As such, EFC's retention policy is as follows:

If students have received comprehensive academic and social/emotional interventions and fail to make adequate progress, a site may consider those students for retention if all of the retention criteria are met. Final retention decisions for students meeting the indicated will be made at the site level by the COST team with Home Office final approval.

Criteria:

1. The COST team must conclude that retention is in the best interests of the student and consider emotional and social consequences.
2. Schools must have provided a retained student with a comprehensive interventions plan the year prior and followed the interventions requirements outlined in the intervention policy (including parent contact and progress reporting in the timeline outlined).
3. There must be a distinct and targeted retention plan developed for that student - one that provides a master teacher with a track record of accelerating instruction, a comprehensive interventions plan that includes summer school, before/after school programming, in-school interventions classes, and social/emotional support that academically motivates the student.
4. Identification of students at-risk of retention must take place at least eight weeks prior to the end of the school year. Parent(s)/guardian(s) of identified students must be notified in writing at least six week prior to the end of the school year. Retention plans must be developed by the COST team and approved by the Home Office at least three weeks prior to the end of the school year.

Retention decisions will be reversed in the fall if the student scores at levels 3 or 4 in either English Language Arts or Mathematics on the California state assessment.

Retention of English Language Learners

English Learners at EL levels 1, 2, or 3 who have been enrolled in schools in the United States three years or fewer may not be retained. Should a teacher or parent feel that retention would benefit a student who meets this criteria, they must make a formal request to the Home Office.

Retention of Students in the Programs for Exceptional Children

Special education students can only be retained as part of their Individualized Education Plan.

Use of Assessment Data

Integration of Technology and Assessment Systems

Education for Change uses Illuminate Education as a technology platform to house student information and assessment data. Additionally, we use Schoolzilla to create reports for teachers, coaches, and principals. All EFC standards-based benchmark assessment data, CAASPP data, and CELDT/ELPAC data is housed in Illuminate and imported into Schoolzilla for reporting. All assessments are scanned into Illuminate and the data is available instantly. In addition, teachers are able to create scan sheets for teacher-created formative assessments and create standards-based formative assessments. Via the Schoolzilla platform we create customized reports using data from Illuminate. These reports allow teachers and administrators to analyze growth, conduct detailed item analysis, and create intervention groups to monitor performance of intervention groups.

EFC is committed to the importance of data inquiry cycles and sharing data with parents and community. Data is shared regularly with the Family Leadership Council and the Staff Leadership Council and shared more broadly with all parents through newsletters released throughout the school year. In addition, schools facilitate data accountability and inquiry sessions at the classroom level.

Cycles of Inquiry

EFC will facilitate professional development about cycles of inquiry to support practice at Latitude. Teachers and administrators at Latitude will be engaged in on-going cycles of inquiry into their practice and its connection to the measurable pupil outcomes described in the matrix above. A new cycle of inquiry will begin every 6 to 8 weeks and will include review of assessment data in English Language Arts and Mathematics, and performance in Writing, Science, History-Social Studies, ELD, and social emotional learning. Teachers will be guided to examine how students performed on multiple measures during that six to eight week cycle, identify patterns of underperformance or high performance, and identify focus students who are not making adequate progress. Collaborative teams will use these opportunities to form questions that arise from the data, develop hypotheses around the questions, develop an instructional response plan, and pursue different strategies or actions to improve student outcomes. Teachers will be coached in using various inquiry protocols to ensure Latitude is building teacher capacity to facilitate and conduct cycles of inquiry both formally and informally.

Use and Reporting of Data to School Stewards and Stakeholders

It is the goal of EFC and Latitude to ensure every family has access to student performance data on a regular basis. EFC will support Latitude to communicate student progress and attainment of measurable pupil outcomes regularly with students and their families. This will include school-wide meetings for families, and learning team meetings with students, families, advisors, and mentors on a quarterly basis. Families will have constant access to student performance through the use of an online platform that tracks student progress against the competencies and archives student work.

In addition, EFC and Latitude will utilize multiple streams of data to review program effectiveness and inform programmatic decisions on a regular basis. Sources of data include, but are not limited to, CAASPP results, benchmark assessment results, unit assessment results, student reflections, portfolio evaluations, report cards, student, staff and family satisfaction surveys, discipline referrals, attendance rates, and student/family attrition rates.

EFC will provide Latitude with disaggregated data by subgroups, grade-level, individual class, and student. Data will be collected, analyzed, and disseminated in a transparent manner that promotes accountability and continuous improvement amongst members of the school community. EFC and Latitude will employ a universal inquiry cycle to review the various types of data generated about the school program.

EFC and Latitude will continuously review academic content and instruction in light of the data produced in accordance with this section, and will make improvements in curriculum, instruction and professional development as appropriate. To this end, a school improvement plan will be developed each year with input from the School's community, staff, and board.

Charged with stewardship of public school funds, the EFC Board will systematically review Latitude's data in order to monitor trends in student learning outcomes and ensure that there are sufficient and appropriate financial and human resources to properly enact the School's program and remain true to the charter. The Board will work in conjunction with the EFC and Latitude leadership and community to make necessary changes in response to identified needs as reflected in the school's data streams.

In accordance with Title III, Latitude will adhere to all mandated reporting guidelines in relation to English Learners, including notification to parents regarding CELDT results and reclassification. In accordance with IDEIA, Latitude will comply with all state and federal laws regarding reporting requirements for children with IEPs.

Reporting to Broader Community

Local Control Accountability Plan ("LCAP")

Latitude will use these multiple forms of data to assess progress toward the goals outlined in **Element 2** of this charter.

Pursuant to Education Code Section 47606.5, on or before July 1, 2018, and each year thereafter, Latitude will produce a Local Control Accountability Plan ("LCAP"), which shall update the goals and annual actions to achieve the goals identified in **Element 2** of this charter regarding the State Priorities, using the LCAP template adopted by the State Board of Education. Latitude shall submit the LCAP to OUSD annually on or before July 1, as required by Education Code Section 47604.33.

School Accountability Report Card (SARC)

Latitude will compile data each academic year to produce a School Accountability Report Card (SARC). Student achievement data will be disaggregated annually to clearly identify the academic performance of students by subgroups (e.g., by ethnicity, gender, English Learners, socioeconomically disadvantaged students, and students with disabilities). This report will include required school data for the authorizing agency, families, Board of Directors, SSC, ELAC, and the community at large.

Reporting and Accountability to Authorizer

EFC and Latitude will promptly meet all reasonable inquiries for data from the Authorizer or other authorized agency and assure timely scheduled data reporting to our Authorizer in compliance with the law; further EFC and Latitude hereby grant authority to the State of California to furnish copies of all test results directly to the Authorizer, as well as to the School.

District Visitation/Inspection

The School will comply with a District requested visitation process to enable the District to gather information needed to validate the School's performance and compliance with the terms of this charter. The School agrees to and submits to the right of the District to make random visits and inspections or observations in order to carry out its statutorily required oversight in accordance with Education Code Section 47607.

Response to Inquiries

Pursuant to Education Code Section 47604.3 the School shall promptly respond to all reasonable inquiries including, but not limited to inquiries regarding its financial records from the District Office of Education, District Board of Education, and the State Superintendent of Public Instruction.

ELEMENT 4A: GOVERNANCE STRUCTURE

"The Governing Structure of the school, including, but not limited to, the process to be followed by the school to ensure parental involvement." California Education Code Section 47605 (b)(5)(D).

Latitude 37.8 High School shall be a directly funded charter school and will be operated by the California non-profit public benefit corporation, Education for Change, pursuant to Education Code Section 47604.

As an independent charter school, Latitude, operated by its nonprofit public benefit corporation, is a separate legal entity and shall be solely responsible for the debts and obligations of Latitude.

EFC shall ensure that, at all times throughout the term of the Charter, the bylaws of its governing board and/or nonprofit corporation are and remain consistent with the provisions of this Charter. In the event that the governing board and/or nonprofit corporation operating Latitude amends the bylaws, EFC shall provide a copy of the amended bylaws to the OCS within 30 days of adoption.

EFC shall send to the OCS copies of all governing board meeting agendas at the same time that they are posted in accordance with the Brown Act. Latitude shall also send to the OCS copies of all board meeting minutes within one week of governing board approval of the minutes. Timely posting of agendas and minutes on EFC's website will satisfy this requirement.

The District reserves the right, but is not obligated, to appoint a single representative to the EFC governing board pursuant to Education Code section 47604(b).

LEGAL AND POLICY COMPLIANCE

Latitude shall comply with all applicable federal, state, and local laws and regulations, and District policy as it relates to charter schools, as they may be amended from time to time.

Latitude shall comply with all applicable federal and state reporting requirements, including but not limited to the requirements of CBEDS, CALPADS, the Public Schools Accountability Act of 1999, and Education Code section 47604.33.

EFC shall comply with the Brown Act and the Public Records Act.

NOTIFICATION OF THE DISTRICT

Latitude shall notify the OCS in writing of any citations or notices of workplace hazards, investigations by outside regulatory or investigative agencies, lawsuits, changes in corporate or legal status (e.g. loss of IRS 501(c)(3) status), or other formal complaints or notices, within one week of receipt of such notices by Latitude. Unless prohibited by law, Latitude shall notify the OCS in writing of any internal investigations within one week of commencing investigation.

Latitude shall notify the OCS within 24 hours of any dire emergency or serious threat to the health and safety of students or staff. The District will follow all privacy requirements with respect to confidential pupil and personnel data provided to the District.

STUDENT RECORDS

Upon receiving a records request from a receiving school/school district, Latitude shall transfer a copy of the student's complete cumulative record within ten (10) school days in accordance with Education Code section 49068. Latitude shall comply with the requirements of California Code of Regulations, title 5, section 3024, regarding the transfer of student special education records. In the event Latitude closes, Latitude shall comply with the student records transfer provisions in Element 16. Latitude shall comply with the requirements of Education Code section 49060 et seq., regarding rights to access student records and transfer of records for youth in foster care.

Latitude acknowledges that pursuant to Article XVI section 8.5(e) of the California Constitution, sections 2(e), 6, and 8 of Proposition 98, and sections 33126.1(b), 35256(c), and 35258 of the Education Code require schools, including Latitude to provide certain information in certain formats in certain ways to the general public and specifically to parents of students at Latitude and of the District. Latitude further acknowledges that it has the obligation to provide all of such information to the District that is required by these referenced authorities in a timely manner so that the District may meet its obligations under those authorities as well. To the extent that there is information that the District has, but that Latitude does not have that Latitude needs in order to meet its obligations, the District shall provide the same to Latitude in a reasonably timely manner upon request under Education Code section 47604.3."

Latitude will maintain sufficient staff and systems including technology, required to ensure timely reporting necessary to comply with the law and to meet all reasonable inquiries from District and other authorized reporting agencies.

Latitude in accordance with Education Code Section 47604.3, shall promptly respond to all reasonable inquiries, including but not limited to, inquiries regarding financial records, from the District and shall consult with the District regarding any such inquiries. Latitude acknowledges that it is subject to audit by OUSD if OUSD seeks an audit of Latitude it shall assume all costs of such audit. This obligation for the District to pay for an audit only applies if the audit requested is specifically requested by the District and is not otherwise required to be completed by Latitude by law or charter provisions.

Members of EFC's Governing Board, any administrators, managers or employees, and any other committees of Latitude shall at all times comply with federal and state laws, nonprofit integrity standards and OUSD's Charter School policies and regulations regarding ethics and conflicts of interest so long as such policies and regulations are not in conflict with any then-existing applicable statutes or regulations applicable to charter schools.

Latitude and/or its non-profit corporation will be solely responsible for the debts and obligations of the charter school.

To the extent that Latitude is a recipient of federal funds, including federal Title I, Part A funds, Latitude has agreed to meet all of the programmatic, fiscal and other regulatory requirements of the Every Student Succeeds Act (ESSA) and other applicable federal grant programs. Latitude agrees that it will keep and make available to the District any documentation necessary to demonstrate compliance with the requirements of ESSA and other applicable federal programs.

Latitude also understands that as part of its oversight of the school, the Office of Charter Schools may conduct program review of federal and state compliance issues."

Latitude agrees to observe and abide by the following terms and conditions as a requirement for receiving and maintaining their charter authorization:

- *Latitude is subject to District oversight.*

- *The District's statutory oversight responsibility continues throughout the life of the charter and requires that it, among other things, monitor the fiscal condition of Latitude.*

- *The District is authorized to revoke this charter for, among other reasons, the failure of Latitude] to meet generally accepted accounting principles or if it engages in fiscal mismanagement in accordance with Education Code Section 47607.*

Accordingly, the District hereby reserves the right, at District cost, pursuant to its oversight responsibility, to audit Latitude books, records, data, processes and procedures through the Office of Charter Schools or other means. The audit may include, but is not limited to, the following areas:

- *Compliance with terms and conditions prescribed in the charter,*
- *Internal controls, both financial and operational in nature,*
- *The accuracy, recording and/or reporting of school financial information,*
- *The school's debt structure,*
- *Governance policies, procedures and history,*
- *The recording and reporting of attendance data,*
- *The school's enrollment process, suspension and expulsion procedures, and parent involvement practices,*
- *Compliance with safety plans and procedures, and*
- *Compliance with applicable grant requirements.*

Latitude shall cooperate fully with such audits and to make available any and all records necessary for the performance of the audit upon 30 day's notice to Latitude. When 30 days notice may defeat the purpose of the audit, the District may conduct the audit upon 24 hour's notice.

In addition, if an allegation of waste, fraud or abuse related to Latitude operations is received by the District, Latitude] shall be expected to cooperate with any investigation undertaken by the Office of Charter Schools, at District cost. This obligation for the District to pay for an audit *only applies if the audit requested is specifically requested by the District and is not otherwise required to be completed by Latitude by law or charter provisions."*

NON-PROFIT PUBLIC BENEFIT CORPORATION

Education for Change, Inc., is a California nonprofit 501(c)(3) corporation incorporated in 2005 which manages six charter schools, each separately chartered by the Oakland Unified School District or Alameda County Office of Education. The charter applicant and holder for all Education for Change schools is the Board of Directors ("Board of Directors or Governing Board") of Education for Change, which operates in accordance with its adopted corporate bylaws, which shall be maintained to align with this charter and applicable law. The Oakland Unified School District is expected to be the chartering authority for all EFC schools with the exception of Cox Academy and Lazear Charter Academy, both chartered by the Alameda County Office of Education. Each EFC school maintains a separate budget and undergoes its own financial audit each year. EFC also creates combined financial statements annually.

EFC complies with all state, federal and local regulations and laws applicable to its operation, and will comply with the District guidelines and requirements for charter schools. It retains its own counsel as needed. It has purchased and will maintain as required general liability, workers compensation, property, errors and omissions and unemployment insurance policies.

Latitude will operate autonomously from the District, with the exception of the supervisory oversight as required by statute and other contracted services as negotiated between the District and the School. Pursuant to California Education Code Section 47604(c), the District shall not be liable for the debts and obligations of Latitude, operated by a California nonprofit benefit corporation or for claims arising from the performance of acts, errors, or omissions by Latitude as long as the District has complied with all oversight responsibilities required by law.

Members of EFC's governing board, any administrators, managers, or employees, and any other committees of the School shall at all times comply with federal and state laws, nonprofit integrity standards, and OUSD's Charter School policies and regulations regarding ethics and conflicts of interest so long as such policies and regulations are not in conflict with any existing applicable statutes or regulations applicable to charter schools.

See Appendix B1 for the EFC Articles of Incorporation and Appendix B2 for the EFC Corporate Bylaws

Education for Change will:

- Collaborate with the Oakland Unified School District (OUSD).
- Be operated as an independent 501(c)(3) tax-exempt California nonprofit public benefit corporation.
- Be governed by its Board of Directors, as defined by the California Corporations Code.
- Operate in accordance with all applicable federal, state, and local laws, the Articles of Incorporation, and Bylaws of the nonprofit corporation, which will be maintained to align with the charter.
- Operate public schools and not charge tuition.

- Encourage ethnic diversity in its programs, policies, and practices.
- Not discriminate in any programs, policies and practices based upon race, ethnicity, religion, gender, sexual orientation, or disability or any other characteristic described in Education Code Section 220.
- Be nonsectarian in its programs, admission policies, employment practices, and all other operations.

Term and Renewal

The duration of the charter will be five years, beginning July 1, 2018. Renewal of the Latitude charter shall be in accordance with the standards set forth in the Education Code Section 47605. Education for Change will submit a petition for renewal by January 31 of the year Latitude's charter is scheduled to expire.

Education For Change Governing Board

Board of Directors Responsibilities

The Board of Directors of EFC is responsible for:

- Legal and fiscal well-being of the organization and each EFC school.
- Hiring and evaluating the EFC Chief Executive Officer.
- Approving and monitoring the implementation of the organization's policies.
- Developing and monitoring an overall operational business plan that focuses on student achievement.
- Approving and monitoring the organization's annual budget and fiscal policies.
- Acting as fiscal agent. This includes the receipt and management of funds for the operation of the organization in accordance with all applicable laws and the mission statement of the organization.
- Contracting with an external auditor to produce an independent annual financial audit according to generally accepted accounting practices.
- Regularly measuring both student and staff performance.
- Encouraging active involvement of students, parents/guardians, grandparents, and the community.
- Performing all of the responsibilities provided for in the California Corporations code, the Articles of Incorporation, Bylaws, and this charter as required to ensure the proper operation of the organization and member schools.
- Oversight in hiring, evaluation, and, when necessary, termination of members of the faculty and staff, upon recommendation of CEO
- Strategic Planning
- Approving and monitoring the implementation of the organization's policies and ensuring the terms of the charter are met
- Approving admission requirements
- Overseeing school facilities and safety
- Ensuring there are policies to enable student behavior and performance including but not limited to academic achievement and mitigation, attendance, dress and decorum, maintenance of a clean campus, open campus and other privileges, participation in extracurricular activities, and discipline proceedings.

The Board may initiate and carry on any program or activity or may otherwise act in a manner that is not in conflict with or inconsistent with or preempted by any law and that is not in conflict with the purposes for which the schools are established.

The Education For Change Governing Board may execute any powers delegated by law to it and shall discharge any duty imposed by law upon it and may delegate to an employee of its schools any of those duties with the exception of budget approval or revision, approval of the fiscal audit and performance report, hiring and evaluation of the CEO, termination of employees, and the adoption of board policies. These delegated duties will focus on implementation rather than policy setting as this is the responsibility of the Board. Delegation of said duties will be in writing delineating the specific tasks to be delegated and the timeframe of these duties.

The mandate of the Governing Board and stakeholders of Education for Change is to promote the guiding mission of Latitude as articulated in this charter. In order to do so, the EFC Board is empowered to operate as the decision-making body in regard to school-wide policies. The governing structure is designed to foster participation by all stakeholders and assure the effectiveness of local school control and accountability. As such, the EFC Board will exist to affirm or reject policy recommendations and to evaluate the Chief Executive Officer.

Composition of the Education For Change Governing Board

The EFC Board of Directors will consist of at least 5 but not more than 11 voting members. EFC recruits qualified and appropriate candidates for the board from education, nonprofit, community, business, and legal organizations so that the current board is diverse in skill sets, perspectives, and backgrounds and can fully and responsibly govern the organization and schools while maintaining a unifying and passionate commitment to the vision and mission of EFC. The Board has appointed a President, a Treasurer, and a Secretary. The Education for Change board reserves the right to expand its board member seats should a law change or the need arise. Should a law change or desire for additional skill sets necessitate a change in Board composition, such change may be made by the Education for Change Governing Board in alignment with the bylaws and the articles of incorporation.

The District reserves the right, but is not obligated, to appoint a single representative to the EFC governing board pursuant to Education Code section 47604(b).

See Appendix B3 for EFC Board Directors Biographies of and Appendix B4 for a Leadership Skills Matrix outlining the skills and competencies of the board and leadership team.

All acts or decisions of the Board of Directors will be by majority vote of the directors in attendance at the Board meeting, based upon the presence of a quorum.

When necessary and applicable, OUSD is responsible for providing facilities under Proposition 39 and its implementing regulations.

The Board may include an executive committee and other special purpose committees as deemed necessary. The EFC Board has met regularly since its inception with the Chair of the Board presiding over the meetings. The EFC Board will continue to meet regularly. EFC will comply with the Brown Act.

EFC maintains in effect general liability and board errors and omissions insurance policies.

Latitude complies with the OUSD policy related to charter schools to the extent it aligns with and does not exceed the law applicable to charter schools, as it may be changed from time to time as long as Latitude has been given written notice of the policy change.

Recruitment, Selection, and Development of Education for Change Board Members

The qualifications sought in candidates interested in serving on the Board include but are not limited to:

- Dedication to furthering the vision and mission of EFC;
- Willingness to volunteer for one or more board committees and the ability to contribute appropriate time and energy necessary to follow through on assigned tasks;
- Ability to work within a team structure;
- Expectation that all children can and will realize high academic achievement; and
- Specific knowledge, experience, and/or interest in at least one element of governance for EFC.

New board members are recruited and selected based on the provisions of EFC's bylaws. The CEO of Education for Change works closely with the Board of Directors to ensure that they are in full alignment with the organization's mission, culture, and goals.

Education For Change has sought, and continues to seek, qualified and appropriate candidates for the board from education, nonprofit, community, business, and legal organizations so that the current board is diverse in skill sets, perspectives, and backgrounds and can fully and responsibly govern the organization and schools while maintaining a unifying and passionate commitment to the vision and mission of EFC. In addition, the board seeks EFC family representation through a Family Leadership Council nomination structure that has EFC parents and guardians, through the Family Leadership Council, to nominate and elect two family representatives to serve on the Board of Directors (see Family Leadership Council section below).

Development of Board Members

All board members receive an annual training on open meeting laws, conflict of interest policy, ethics, essential policies and procedures, legal and financial responsibilities, and charter school oversight. EFCPS also ensures new board members receive training on basic roles and responsibilities, committees, board recruitment, public relations and marketing, evaluating the board and CEO, running an effective meeting, expulsion policies, human resources policies, and Special Education. Training may include attending conferences whereby relevant governance training is available and additional trainings and workshops to be held at special and regularly scheduled Board meetings each year. Trainings may be provided by the EFC's legal counsel, the California Charter Schools Association, or other experts.

Board Member Terms

Each EFC Board member serves a term of three (3) years, with the opportunity to renew for an unlimited number of terms. There shall be no term limit (number of consecutive times a member may run for election).

Board members' terms will expire in accordance with the Bylaws. Terms for the current Directors shall expire as stated in the chart below. Board members shall have experience in one or more areas critical to charter schools success: education, school administration, school finance, corporate structure, accounting, legal compliance, leadership or fundraising.

Figure 4.1—Education for Change Board of Directors with Term Expiration Dates:

Member	Position	Term Expiration Date
Brian Rogers	Finance Committee	July 2019
Mike Barr	Finance Committee	July 2018
Sudhir Aggarwal	Student Outcomes Committee	July 2018
Nick Driver	Chair, Executive Committee	July 2019
Adam Smith	Finance Committee, Communications advisor	July 2019
Eva Camp	Student Outcomes Committee, Executive Committee	July 2019
Dirk Tillotson	Vice Chair Student Outcomes Committee, Executive Committee	February 2019
Roy Benford	Board Member	May 2019
Camika Robinson	Family Leadership Council Representative	February 2019
Paul Byrd	Family Leadership Council Representative, Executive Committee	February 2018

Chair of the Governing Board

Each year, the EFC Board will elect a Chair pursuant to the Bylaws. Any voting member of the Board may be eligible for this position**.** The Chair may choose to resign the Chairmanship with a letter of resignation, in which case the EFC Board will elect a new president for the remainder of that term.

Governing Board Meetings

The Education for Change Governing Board shall meet at least every other month or more often as needed.

See Appendix B5 Governing Board Meeting Schedules, 2017-2018

The Education for Change Governing Board solicits the participation of members of the community who do not have a direct stake in or accountability for Latitude's educational mission and outcomes as expressed in this charter. Members of the community are always welcome to attend board meetings consistent with open meeting requirements.

Latitude and the EFC Board shall comply with the Brown Act and the Public Records Act. All EFC Board meetings are held in accordance with the Brown Act. Regular meeting agendas are posted at least 72 hours prior to regular meetings on the EFC website, at the Education for Change headquarters, and on each EFC campus. Special meeting agendas are posted at least 24 hours prior to special meetings. Meeting minutes and Board actions are always posted within 72 hours following the meeting on the website.

Standing Committees

The EFC Board has both standing and temporary (ad hoc) committees to focus on specific tasks and/or policies such as those listed in the initial description of the Board's purview stated previously. All EFC Board committees shall be comprised with board members serving as chairs. Education for Change may appoint faculty, parents, community members or other members of the public with varying areas of expertise to its advisory committees. The purpose of a committee is to provide advice, expertise and resources as necessary related to charter schools, finances, facilities, and other areas relevant to the success of the school. All non-board member committee members will be selected by the Board of Directors upon recommendation of the CEO.

Standing committees include, but are not limited to, the following:

- Finance: all finance-related matters are handled first on this committee, as well as fundraising
- Student Outcomes: Performance, curriculum, instructional delivery, professional development, and technology
- Executive: responsible for recruiting and making recommendations for selection of new board members and leading the evaluation and selection of the CEO

Changes to standing committees (e.g., composition, purview, etc.) may be made at any time by the EFC Board and shall not be considered a material revision to the charter.

The EFC Board has clearly defined the purpose and decision-making authority of each standing committee. Consistent with legal requirements, standing committees will continue to make it a practice to seek input of the stakeholders by publishing their meeting times and agendas and by communicating with the school community on a regular basis. Meetings of the standing committees will be in accordance with the Brown Act.

The EFC Board has the option of establishing Board policy through recommendations by standing committees or Board-established ad hoc committees that can draft policy recommendations to submit to the EFC Board. In non-policy decisions, whenever possible, and appropriate, the EFC Board will seek input from standing or Board-established ad hoc committees. The EFC Board will not be required to seek input on any matter that would legally be heard in closed session pursuant to the Brown Act.

Fiscal Management

The Chief Executive Officer is responsible for all budgetary matters. On a day-to-day basis, the Chief Operating Officer (COO) operates and makes recommendations to the CEO for the Latitude budget, with input from the Principal, Instructional Leadership Team and Family Leadership Council. The COO works closely with an outside CPA for the audit of the school's end of year financial statements and for appropriate review of procedures and internal control. The EFC Board may authorize the Finance Committee to make final financial decisions regarding portions of the schools' budget.

Compensation for Board Members and Committee Leadership

Directors may not receive compensation for their services as directors or officers, only such reimbursement of expenses as the Board of Directors may establish by resolution to be just and reasonable as to the corporation at the time that the resolution is adopted.

Revocation

OUSD's right to revoke the Latitude charter shall be subject to prior appeal rights under California Education Code 47607. In accordance with Education Code Section 47607, OUSD may revoke the Latitude charter on any of the following grounds:

- Latitude, as part of EFC, commits a material violation of any of the conditions, standards, or procedures set forth in the charter.
- Latitude, as part of EFC, fails to meet or pursue any of the student outcomes identified in the charter.
- Education for Change fails to meet generally accepted accounting principles, or engages in fiscal mismanagement.
- Latitude violates any provisions of law.

Prior to revocation and in accordance with California Ed Code Section 47607(d), OUSD will notify Education for Change in writing of the specific violation. OUSD will give Education for Change a reasonable opportunity to remedy the violation.

In accordance with Education Code Section 47607, OUSD shall retain the right to revoke the charter without notice and a reasonable opportunity to remedy, if the District Board finds in writing that Education For Change, or Latitude, is engaging in or has engaged in activities that constitute a severe and imminent threat to the health and safety of the students. Dispute resolution procedures are inapplicable to revocation proceedings.

Conflict Of Interest

Education For Change has adopted a conflict of interest document that complies with the Political Reform Act. Members of Education For Change's Governing Board, any administrators, managers or employees, and any other committees of the School shall at all times comply with federal and state laws, nonprofit integrity standards and OUSD's Charter School policies and regulations regarding ethics and conflicts of interest so long as such policies and regulations are not in conflict with any then-existing applicable statutes or regulations applicable to charter schools.

See Appendix B6 for EFC Conflict of Interest Code

The terms of this charter contract are severable. In the event that any of the provisions are determined to be unenforceable or invalid under the provisions of California State Charter Schools Act or other relevant state and/or federal statutes, the remainder of the charter shall remain in effect unless mutually agreed otherwise by OUSD and the Governing Board of EFC. The District and EFC agree to meet to discuss and resolve any issue differences relating to invalidated provisions in a timely, good faith fashion in accordance with dispute resolution procedures set forth in the charter.

Amending the Governing Structure

The governing structure of Education for Change may be revised. Amendments to this charter may be proposed in writing and submitted to the Governing Board by any stakeholder. Amendments must then be approved by the Governing Board. Material revisions shall be submitted to OUSD in accordance with Education Code Section 47607.and are governed by the standards and criteria of Education Code Section 47605.

Governance Structures

Education for Change believes that we best serve our students with a distributive leadership structure that involves and includes parents, teachers and site leadership. To that end, EFC has created the following two councils.

Staff Leadership Council

The Staff Leadership Council was formed so that staff members from each school could provide information from and to the Home Office. Staff Leadership Council members are elected by their site staffs and approved by the principals, and all staff are invited to the meetings. Because the member must be able to engage in discussions and inform organization-wide issues, principals are encouraged to nominate staff who have had site leadership responsibilities. They are also encouraged to nominate at least one teacher and one operations staff person. Typically, administrators are not part of the meetings, so that staff members may feel free to discuss issues.

The Staff Leadership Council meeting notes are distributed after meetings. Any staff member can ask for clarification or comment on items discussed during the meeting. The role of the Staff Leadership Council is to:

1. To advise the Home Office leadership on instructional, operations, and budgetary issues, in order to ensure that the staff has the opportunity to consistently provide input into decision-making and collaboratively craft solutions to problems.
2. To assist the Home Office leadership in developing proposals to address issues faced by Education for Change.
3. To aid in the implementation of the new initiatives amongst the entire organization.

In addition, Staff Leadership Council members are encouraged and able to participate on EFC Governing Board Committees to help inform board policies and provide valuable input to the Board in execution of their responsibilities.

Family Leadership Council

Parent involvement is a key success factor at Latitude, and one of the foundational elements of the school. The same is true for Education for Change, which has established a Family Leadership Council to ensure ongoing, consistent involvement and training for parent leadership development. Each EFCPS school site FLC will elect two representatives to the EFC Family Leadership Council. The Family Leadership Council participates in the ongoing evaluation of the organization's programs and operations, schools and community concerns and priorities for improvement.

See Appendix B7 for the Family Leadership Council Guidebook

Education For Change has instituted a governing board structure that facilitates parent leadership on the governing board, as well as a clear pathway for the election of parents to the governing board. Two seats on the governing board shall be reserved for family representatives nominated by the Education for Change Family Leadership Council. These parent EFC board members will be recruited with the same criteria as for other board members: each parent board member shall possess one or more of the board-desired backgrounds, such as community, education, legal and finance. These members shall serve terms of one (1) year each, with no term limits.

Latitude and all other Education for Change schools shall have active school site Family Leadership Councils composed of two family members from each classroom. Latitude's school site Family Leadership Council shall have up to two for each advisory. Each year, Latitude's

Family Leadership Council shall elect two representatives to serve on the Education for Change Family Leadership Council.

In addition to the two elected formal board member seats, the school site Family Leadership Councils are expected to present feedback and information to the Education for Change governing board, giving family members two types of meaningful input on the strengths and weaknesses of all of its schools, programs and operations. The Education for Change Family Leadership Council and the school site Family Leadership Councils serve in an advisory role to the Education for Change CEO and governing board.

EFC promotes parent engagement programs at all of its schools. As enrollment at EFC is based on student and parental choice, consistent and continual communication with parents about the expectations the school has for their children is critical. Parents/guardians are expected to actively engage in their children's education by being active in school events, assisting their children at Latitude at the highest levels, scheduling specific homework time, and providing a quiet environment for their children's studies.

Relationship Between EFC and the Latitude Principal

EFC, as the nonprofit operating Latitude, is responsible for overseeing the operations of the school. Under the policies established by the Board of Directors of EFC, the school principal or director reports to EFC Leadership for day-to-day management issues. The principal coordinates with EFC Home Office support and supervision on all campus-level planning and decision-making that involves the school's professional staff, parents/guardians, and community members in establishing and reviewing the school's educational plans, goals, performance objectives, and major classroom instructional programs. This allows the principal, teachers, parents/guardians, and community members to make school-based decisions within the boundaries of the decisions and policies set by the Board of Directors. The Education for Change Home Office has numerous positions designed to support the principals in the management and operation of his/her school.

See Appendix B8 for the EFC Home Office Organization Chart

<u>School Supervision by Chief Team</u>

As specified above, the Board of Directors delegates day-to-day management responsibilities of the larger organization to the Chief Executive Officer who then delegates management of principal and school sites to the Chief Team. Different Chiefs are assigned to supervise a school in all of the aspects of its day-to-day operations, working with the other Home Office staff, the Board of Directors, the Authorizer, children, parents, and community members. The Chief Team is responsible for the orderly operation of the Education for Change schools and the supervision of all employees in that school. Our responsibilities include:

- Oversee all sites, with bottom line responsibility for both fiscal and academic performance
- Work on the implementation of annual site planning and budget development process for sites
- Develop and lead Principals and Assistant Principals in their roles as instructional leaders and site managers

- Support site leadership to ensure high quality implementation of approved instructional programs, including standards, assessments, instructional guidelines, and culture.
- Support principals in effective and efficient budget and human resource management
- Act as liaison with Home Office staff to ensure school sites receive necessary support; work closely with Home Office staff to improve systems and processes to serve the schools
- Develop and appraise site administration effectively. Take corrective action as necessary on a timely basis and in accordance with company policy. Consult with Human Resources as appropriate.
- Cultivate relationships with local district officials and community leaders to further EFC and individual school goals.
- Demonstrate knowledge of, and support, the EFC mission, vision, value statements, standards, policies and procedures, operating instructions, confidentiality standards, and the code of ethical behavior.
- Work collaboratively with the Instructional Management team to support the development of instructional leadership at the administrative, coach, and teacher leader level.

Latitude Principal

The Latitude Principal leads and manages Latitude, inspiring staff, families and community members to provide the best environment and structure for student learning. He has the freedom and flexibility to make or suggest improvements on existing practices, as well as to request financial, instructional and material supports from the Home Office.

The Latitude Principal’s primary responsibilities are:

- Lead Latitude in accordance with the EFC vision and mission
- Lead and manage the planning and implementation of Latitude’s strategic site plan
- Provide instructional leadership guidance including monitoring of the implementation of the established curriculum, identifying professional development needs for the staff, maintain high expectations and standards for all student achievement, coordinate administration of standardized testing, and monitor and support classroom instruction
- Manage and lead staff leadership teams (which includes representatives from administration, teachers, support staff)
- Facilitate communication between all school stakeholders
- Supervise, evaluate, and ensure discipline of all other employees according to the mission, philosophy, and obligations defined in the charter petition. Provide overall supervision of student teachers, interns, and other unpaid classroom and school volunteers at the school.
- Oversee the day-to-day operations of the school
- Report to the school’s stakeholders, including the CEO and the EFC Board, on the progress of the school in achieving educational success
- Oversee and support the development and implementation of all programs
- Involve parents and the larger community
- Develop a sense of community while respecting and responding appropriately to the strengths and needs of staff. Be available to staff on a consistent daily basis to help

address their individual and collective needs. Act as a liaison, when necessary and appropriate, between parents and staff. Actively seek parent, student and staff input and involvement in key decisions that affect the school.

- Be available to parents on a regular basis. Keep parents informed of and involved in policy changes at the school. Encourage parent support and cooperation and enlist their efforts to sustain well-kept school structure. Plan and conduct interesting and informative parent meetings.
- Attend EFC's administrative meetings as necessary and stay in direct contact with EFC changes, progress, etc.
- Communicate and coordinate as necessary with EFC staff on Board meeting agendas, including professional development scheduling, grant writing and fundraising, policies and procedures, documenting and sharing of best practices, and annual budgeting
- Participate in the dispute resolution procedure and the complaint procedure when necessary
- Collaborate with other EFC principals and Home Office staff

Grievance Procedure for Parents and Students

Education For Change will designate at least one employee to coordinate its efforts to comply with and carry out its responsibilities under the Title IX of the Education Amendments of 1972 (Title IX and Section 504 of the Rehabilitation Act of 1973 (Section 504 including any investigation of any complaint filed with EFC alleging its noncompliance with these laws or alleging any actions which would be prohibited by these laws.

EFC will adopt and publicize any grievance procedures providing for prompt and equitable resolution of student and employee complaints alleging any action that would be prohibited by Title IX or Section 504.

EFC will implement specific and continuing steps to notify applicants for admission and employment, students and parents of students, employees, sources of referral of applicants for admission and employment that it does not discriminate on the basis of sex or mental or physical disability in the educational program or activity that it operates and that it is required by Title IX and Section 504 not to discriminate in such a manner.

ELEMENT 4B: OPERATING PLANS & PROCEDURES

Project Plan

Latitude has developed a comprehensive project plan to support the planning year prior to the opening of Latitude August 2018. Please see below for the project plan.

Figure 4.2—August 2017-August 2018 Project Plan:

Task	Person	J	A	S	O	N	D	J	F	M	A	M	J	J	A
Instructional Program															
Finalize competencies and continua	Principal, Teachers			■	■	■									
Develop studio curriculum	Teachers				■	■	■	■	■	■					
Identify studio instructional materials	Teachers				■	■	■	■	■	■					
Finalize studio assessments	Teachers				■	■	■	■	■	■					
Develop workshops curriculum	Teachers				■	■	■	■	■	■					
Identify workshops instructional materials	Teachers				■	■	■	■	■	■					
Develop workshop assessments	Teachers				■	■	■	■	■	■					
Develop advisory curriculum	Teachers				■	■	■	■	■	■					
Identify advisory instructional materials	Teachers				■	■	■	■	■	■					
Finalize personalized learning plan template	Teachers				■	■	■	■	■	■					
Develop digital portfolio system	Teachers				■	■	■	■	■	■					
Develop Extended Learning Opportunity curriculum	ELO Coordinator				■	■	■	■	■	■					
Develop project management and documentation processes	Teachers				■	■	■	■	■	■					
Finalize SPED support plans	Principal, EFC							■	■	■	■	■	■	■	■
Develop professional development plan	Principal, Teachers						■	■	■						

Initiate professional development for founding team	Principal														
Develop master schedule and class assignments	Principal

Operations															
Finalize safety plan	Principal														

Secure food vendor	EFC														
Purchase Year 1 supplies	EFC														
Establish student information system	Principal														

Staffing Plan
Please see below for the School Staffing Model and Rollout Table:

Figure 4.3—Latitude Staffing Model:

Year	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Principal	1	1	1	1	1	1
Assistant Principal	1	1	1	1	1	1
Classroom Teachers (Core Subjects)	2	4	9	15	18	22
Classroom Teachers (RSP, ELD)		1	1	1	1	2
Community Partnership Coordinator		1	1	1	1	1
Family Engagement and Recruitment	1	1	1	1	1	1
School Operations Support Staff	1.5	1.5	1.5	1.5	3	3
Total FTEs	6.5	10.5	15.5	21.5	26	31

Transportation

The school will be located in proximity to public transportation and be readily accessible. We will not provide transportation to and from school. There will be transportation needs for students to engage in aspects of the instructional program, as detailed in Section 1. The transportation needs of all the students will be provided for by Latitude. We will rely on public transportation as much as possible and when necessary, rent a vehicle that meets the transportation and safety needs of our children. We will also be inquiring into external partnerships to support transportation. Our founding team has experience (with High Tech High in San Diego) securing transportation partnerships. We have budgeted to accommodate the transportation costs for students.

Nutrition

All students will be provided with two opportunities to eat throughout a regular school day at Latitude. Students can eat breakfast before the official school day begins. Students will all be provided lunch around noon. Latitude is committed to ensuring that all meals are nutritious and healthy and meet all Federal Nutritional guidelines. We are in the process of exploring which vendors will be best positioned to deliver nutritious, healthy, and quality meals. Education for Change currently uses San Lorenzo Unified to provide lunch for all other EFC schools.

Insurance

EFC maintains Commercial General Liability Insurance at $1,000,000 per occurrence and $2,000,000 in aggregate, Umbrella Liability Insurance at $5,000,000 per occurrence and $5,000,000 in aggregate, Workers Compensation Insurance (including employer's liability coverage) at $1,000,000 per each incident, Commercial Auto Liability Insurance (including leased, hired, and non-owned) at $1,000,000 per occurrence with a $5,000,0000 excess coverage, Educator's Legal Liability Insurance at $1,000,000 per occurrence with excess coverage included as part of the umbrella at $5,000,000 with an aggregate of $6,000,000, Cyber Liability Insurance at $1,000,000 per occurrence, Student and Volunteer Accident Insurance at $100,000 medical maximum benefit and a $250,000 aggregate limit per occurrence, a blanket limit of $6,888,710 for Personal Property is maintained and a $5,068,518 blanket limit for Business Income and Extra Expense is maintained as well, a Fidelity Bond is maintained at a $100,000 limit for employee theft, a $50,000 limit for all other theft, a $25,000 limit for for funds transfer fraud and counterfeit currency coverage.

ELEMENT 4C: BUDGETS / FINANCIAL PLAN

Budgets

Preliminary estimated budgets for the next five years and five years of cash flow for Latitude are attached.

See Appendix B9 for Preliminary Estimated Budgets and Appendix B10 for Cash Flow and FCMAT Calculator
See Appendix B11 for Budget Narrative

Fiscal Autonomy

Education for Change will maintain the highest level of integrity in fiscal management while seeking all available resources and using them effectively to support the instructional program.

The business philosophy of EFC is entrepreneurial and community-based. Every effort will be made to maximize revenue from all sources while maximizing the effectiveness of all expenditures through the utilization of a "better, faster, cheaper" and "in the best interest of the students" test.

Local Control and Accountability Plan

In accordance with California Education Code sections 47604.33 and 47606.5, Latitude shall include in its annual update a "listing and description of the expenditures for the fiscal year implementing the specific actions included in the charter as a result of the reviews and assessment required by paragraph (1)" of section 47606.5(a). These expenditures shall be "classified using the California School Accounting Manual pursuant to Section 41010." (Ed. Code § 47606.5(b).)

Budget Development/LCAP Development

Budget development will begin each year immediately following the January announcement of the governor's TK-12 State Budget Proposals and be continually refined through the May Revise to the Final State Budget Act. Budgeted resources will always be consistent with Latitude' goals as identified by the EFC Board and the annual site planning process guided by the ongoing cycles of data inquiry. A year-end estimate of actuals and interim reports will be submitted as well.

EFC has developed and is implementing a comprehensive annual site planning process across all of its schools. Data inquiry takes place every trimester following benchmarks assessments. The timeline for the site planning process begins in mid-January and continues through June when the EFC Board approves first the LCAP and then the aligned budgets. The goals for this process are as follows:

- Develop a clear vision
- Engage all stakeholders authentically

- Ensure all stakeholders have a clear and shared understanding of the instructional program, resource allocation, and priority focus moving forward
- State compliance to the LCAP
- Develop a transparent and strategic action plan and aligned budget that ensures resources (time, people, money) are prioritized to accelerate student outcomes and meet identified targets

Financial Reporting

The Chief Operating Officer in collaboration with the principal of Latitude in coordination with the CEO of EFC submits an annual budget to the EFC Board of Directors during the spring of each year. The EFC annual fiscal period runs from July 1 through June 30.

In order to ensure the necessary oversight and review of mandated reports for which the authorizer must determine fiscal health and sustainability, the following schedule of reporting deadline to the District will apply each year of the term of this charter;

- *September 1 – Final Unaudited Financial Report for Prior Year*
- *December 1 – Final Audited Financial Report for Prior Year*
- *December 1 – First Interim Financial Report for Current Year*
- *March 1 – Second Interim Financial Report for Current Year*
- *June 15 – Preliminary Budget for Subsequent Year*

EFC has developed financial planning, financial reporting systems and budgets. The school principal and Chief Operating Officer in conjunction with appropriate EFC staff are responsible for producing monthly financial reports and designing a policy of internal controls to ensure fiscal responsibility. The principal, EFC staff, and the EFC Board has also developed other policies and procedures including employee benefits, compensation, evaluations, dispute resolution, disciplinary actions, student information systems, and parental involvement.

Financial records will be regularly maintained and a financial report prepared quarterly for the EFC Board of Directors. The EFC Board Finance Committee will work closely with the COO and the Finance Team to ensure fiscal oversight.

EFC has established strict policies governing internal controls. These policies ensure that the internal control mechanisms address legal compliance, conflicts of interest, signature authorities, government access to records, accounting procedures, cash management, and budget development, financial reporting, property management and procurement.

Attendance Accounting

The school maintains contemporaneous documentation of attendance in a format acceptable to the State. Required reports regarding daily attendance will be completed and submitted to the requesting agencies.

Budget Allocation And Vendor Selection

The EFC Board is responsible for approving annual budgets, with substantial input from the Chief Operating Officer (COO) and the Chief Executive Officer (CEO). The COO and principal develop the budget proposals and have latitude in determining how funds are best used within budget categories. EFC may delegate authority to the principal to select vendors below a contract amount to be determined, but retains overall responsibility for contract approvals. EFC has created an economy of scale by creating a highly accountable internally-staffed back office business service department.

Potential Users Of Financial Information

Financial statements such as a Balance Sheet, Income Statement, and Statement of Cash Flow are prepared by the Home Office**.** Financial statements are used by the independent auditors who the EFC Board contracts each year. The financial statements are also available for review as desired by any of the school's officers, managers, or Board members who want to assess the school's financial condition. In addition, Board members use the financial statements to confirm existing policies or to create new policies. Finally, EFC submits its annual audited financial statement to the appropriate authorities within the California Department of Education**,** State Controller's Office, Alameda County Superintendent of Schools, and OUSD as described above.

Federal Funds

To the extent that Latitude is a recipient of federal funds, including federal Title I, Part A funds, Latitude has agreed to meet all of the programmatic, fiscal and other regulatory requirements of the Every Student Succeeds Act (ESSA) and other applicable federal grant programs. Latitude agrees that it will keep and make available to the District any documentation necessary to demonstrate compliance with the requirements of ESSA and other applicable federal programs, including, but not limited to, documentation related to required parental notifications, appropriate credentialing of teaching and paraprofessional staff, where applicable, or any other mandated federal program requirement. The mandated requirements of ESSA include, but are not the limited to, the following:

- Notify parents at the beginning of each school year of their "right to know" the professional qualifications of their child's classroom teacher including a timely notice to each individual parent that the parent's child has been assigned, or taught for four or more consecutive weeks by, a teacher who is not highly qualified
- Develop jointly with, and distribute to, parents of participating children, a school-parent compact
- Hold an annual Title I meeting for parents of participating Title I students
- Develop jointly with, agree on with, and distribute to, parents of participating children a written parent involvement policy

Latitude also understands that as part of its oversight of the school, the Office of Charter Schools may conduct program review of federal and state compliance issues.

Latitude shall promptly respond to all reasonable inquiries, including, but not limited to, inquiries regarding financial records, from OUSD and shall consult with OUSD regarding these inquiries.

Cash Reserves

EFC acknowledges that the recommended cash reserve is 5% of expenditures, as provided in section 15450, title 5 of the California Code of Regulations.

Third Party Contracts

EFC shall ensure that all third party contracts, whether oral or written, for supplies, equipment, goods and/or services, for the direct or indirect benefit of, or otherwise related to the operation of, Latitude, require compliance with and otherwise conform to all applicable local, state, and federal policies, regulations, laws, and guidelines, including but not limited to licensing and permit requirements as well as requirements related to protection of health and safety.

Special Education Revenue Adjustment/Payment for Services

In the event that Latitude owes funds to the District for the provision of agreed upon or fee for service or special education services or as a result of the State's adjustment to allocation of special education revenues from Latitude, Latitude authorizes the District to deduct any and all of the in lieu property taxes that Latitude otherwise would be eligible to receive under section 47635 of the Education Code to cover such owed amounts. Latitude further understands and agrees that the District shall make appropriate deductions from the in lieu property tax amounts otherwise owed to Latitude. Should this revenue stream be insufficient in any fiscal year to cover any such costs, Latitude agrees that it will reimburse the District for the additional costs within forty-five (45) business days of being notified of the amounts owed.

Programmatic Audit

EFC will compile and provide to OUSD an annual performance report on behalf of Latitude. This report will include the following data:

- Summary data showing pupil progress toward the goals and outcomes specified in Element 2
- A summary of major decisions and policies established by the EFC Board during the year
- Data regarding the number of staff working at the school
- A summary of any major changes to the school's health and safety policies
- Data regarding the numbers of pupils enrolled, the number on waiting lists, and the number of pupils suspended and/or expelled

Revenue Flow/Depository/Accounting

As a directly funded charter school, most of the school's state and federal revenue flows directly from the state to the school's account in the District Treasury, which is administered through OUSD.

Funds flowing through OUSD (payments in lieu of property taxes, supplemental instructional hours, etc.) will be transferred via cash journal in the most expeditious manner possible.

All such revenue deposits will be recorded in the financial system at OUSD. All expenditures, including payroll, will be drawn on the District Treasury, which enables the OUSD financial system to account for all revenue and expenditures. Revolving accounts with a local financial institution may be established for day-to-day expenditures from the General Fund, Food Services, and other miscellaneous accounts. All expenditures over $500.00 from local accounts will continue to require two signatures.

Attendance Accounting Procedures

Existing attendance accounting procedures that provide excellent checks and balances will continue to be used unless a more efficient system can be devised that will satisfy state requirements.

Mandated Costs Reimbursement Program

In order to meet the health, safety, and public accountability requirements of all public school children at OUSD, the school will be required to comply with the following programs and activities:

- Annual Parent Notifications II
- Behavior Intervention Plans
- California English Language Development Test
- Comprehensive School Safety Plan
- Criminal Background Check
- Emergency Procedures: Earthquake and Disasters
- Habitual Truant Conferences
- Open Meeting Act/Brown Act
- Pupil Classroom Suspension by Teacher
- Physical Performance Tests
- Pupil Exclusions
- Pupil Health Screenings
- Pupil Promotion and Retention
- Suspensions and Expulsions
- School Accountability Report Cards
- School Bus Safety I and II
- Standardized Testing and Reporting
- STRS Creditable Compensation
- Any other current or future mandates of charter schools

It is the expressed intent of EFC to comply with all of the aforementioned mandates and file directly for reimbursements. If a reimbursement claim can be filed only through OUSD, OUSD agrees to fold EFC's claim into its claim and pass through Latitude' funds when received.

Eligible expenses that OUSD incurs as a result of current charter school law, subsequent charter school legislation, or CDE interpretations of these laws are not the responsibility of Latitude and should be addressed by OUSD through the State's Mandated Cost Reimbursement Program.

Latitude in accordance with Education Code Section 47604.3, shall promptly respond to all reasonable inquiries, including but not limited to, inquiries regarding financial records, from the District and shall consult with the District regarding any such inquiries. Latitude acknowledges that it is subject to audit by OUSD if OUSD seeks an audit of Latitude it shall assume all costs of such audit. This obligation for the District to pay for an audit only applies if the audit requested is specifically requested by the District and is not otherwise required to be completed by Latitude by law or charter provisions.

Internal Fiscal Controls

EFC will develop and maintain sound internal fiscal control policies governing all financial activities.

Apportionment Eligibility for Students Over 19 Years of Age

EFC acknowledges that, in order for a pupil over nineteen (19) years of age to remain eligible for generating charter school apportionment, the pupil shall be continuously enrolled in public school and make satisfactory progress toward award of a high school diploma. (Ed. Code § 47612(b).)

Local Control and Accountability Plan

In accordance with California Education Code sections 47604.33 and 47606.5, Charter School shall include in its annual update a "listing and description of the expenditures for the fiscal year implementing the specific actions included in the charter as a result of the reviews and assessment required by paragraph (1)" of section 47606.5(a). These expenditures shall be "classified using the California School Accounting Manual pursuant to Section 41010." (Ed. Code § 47606.5(b).)

EFC shall be deemed the exclusive public school employer of the employees of Latitude for the purposes of the Educational Employment Relations Act. (Government Code section 3540 et seq.) Charter School shall comply with all applicable requirements of the EERA, and the exclusive employer shall comply with the duties and obligations of the exclusive employer under the EERA. In accordance with the EERA, employees may join and be represented by an organization of their choice for collective bargaining purposes."

The District may charge for the actual costs of supervisorial oversight of Latitude, not to exceed 1% of the charter school's revenue, or the District may charge for the actual costs of supervisorial oversight of the Latitude not to exceed 3% if Latitude is able to obtain substantially rent free facilities from the District. Notwithstanding the foregoing, the District may charge the maximum supervisorial oversight fee allowed under the law as it may change from time to time."

ELEMENT 5: EMPLOYEE QUALIFICATIONS

"The qualifications to be met by individuals to be employed by the school."—California Education Code Section 47605(b)(5)(E)

EQUAL EMPLOYMENT OPPORTUNITY

Latitude and EFC acknowledge and agree that all persons are entitled to equal employment opportunity. EFC shall not discriminate against applicants or employees on the basis of race, color, religion, sex, gender, gender expression, gender identity, sexual orientation, pregnancy, national origin, ancestry, citizenship, age, marital status, physical disability, mental disability, medical condition, genetic information, military and veteran status, or any other characteristic protected by California or federal law. Equal employment opportunity shall be extended to all aspects of the employer-employee relationship, including recruitment, selection, hiring, upgrading, training, promotion, transfer, discipline, layoff, recall, and dismissal from employment.

ESEA/ESSA AND CREDENTIALING REQUIREMENTS

Latitude shall adhere to all requirements of the Elementary and Secondary Education Act (ESEA, also known as Every Student Succeeds Act (ESSA)) that are applicable to teachers and paraprofessional employees. Latitude shall ensure that all teachers meet applicable state requirements for certificated employment, including the provisions of Education Code section 47605(l). Latitude shall maintain current copies of all teacher credentials and make them readily available for inspection.

As part of the Fall Information Update, Latitude will notify the District in writing of the application deadline and proposed lottery date. Latitude will ensure that all application materials will reference these dates as well as provide complete information regarding application procedures, key dates, and admissions preferences and requirements consistent with approved charter.

OBLIGATION TO REPORT TO CALIFORNIA COMMISSION ON TEACHER CREDENTIALING

Charter School shall comply with Education Code section 44030.5 with respect to reporting the change in employment status to the California Commission on Teacher Credentialing where the change of employment status is a result of an allegation of misconduct, or while an allegation of misconduct is pending, and with Education Code section 44939.5 regarding the re porting of egregious misconduct.

EMPLOYMENT OF FELONS

The Charter School shall comply with the provisions of Education Code section 44830.1 and 45122.1 with respect to the employment of persons convicted of violent or serious felonies.

Latitude is driven by its own mission and vision, as well as the Education For Change Mission to provide a superior public education to Oakland's most underserved children by creating a system of public schools that relentlessly focuses on the continuous refinement of high quality instruction. In order to achieve excellence and nurture diversity, Latitude and Education for Change must have a strategy and a plan to ensure the School has the human capital and talent necessary to realize its vision.

Education for Change will comply with Education Code 44237 and 45125.1 regarding the requirement to fingerprint and obtain background clearance of employees and contractors. New employees not possessing a valid California Teaching Credential must submit two sets of fingerprints to the California Department of Justice for the purpose of obtaining a criminal record summary. The EFC Chief Operating Officer (COO) shall monitor compliance with this policy and report to the Board of Directors on a regular basis. The COO will also monitor fingerprinting and background clearance of all non-teaching staff. Prior to employment, each employee must furnish an up-to- date Mantoux Tuberculosis (TB) test result and documents establishing legal employment status.

Equal Employment Opportunity

Education for Change acknowledges and agrees that all persons are entitled to equal employment opportunity. EFC shall not discriminate against applicants or employees on the basis of race, color, religion, sex, gender, gender expression, gender identity, sexual orientation, pregnancy, national origin, ancestry, citizenship, age, marital status, physical disability, mental disability, medical condition, genetic information, military and veteran status, or any other characteristic protected by California or federal law. Equal employment opportunity shall be extended to all aspects of the employer-employee relationship, including recruitment, selection, hiring, upgrading, training, promotion, transfer, discipline, layoff, recall, and dismissal from employment.

Code of Professionalism

All members recognize the magnitude of the responsibility educators accept in their chosen profession. In order to ensure the effectiveness of our programs and the success of students in meeting learning outcomes, all staff members must be committed to our collective mission and vision. Every stakeholder is accountable for the academic and social growth of our students.

Members of EFC’s Governing Board, any administrators, managers or employees, and any other committees of the EFC Board shall at all times comply with federal and state laws, nonprofit integrity standards and OUSD’s Charter School policies and regulations regarding ethics and conflicts of interest so long as such policies and regulations are not in conflict with any then-existing applicable statutes or regulations applicable to charter schools.

Employee Recruitment and Selection

Education for Change will not discriminate against any employee on the basis of race, color, creed, age, gender, national origin, disability, religion, sexual orientation, or marital status.

Education for Change will adhere to California laws, including fingerprinting and prohibitions regarding the employment of any person who has been convicted of a violent or serious felony.

Education for Change implements specific and continuing steps to notify applicants for admission and employment, students and parents of elementary and secondary school students, employees, sources of referral of applicants for admission and employment, and all unions or professional organizations holding collective bargaining or professional agreements with the recipient, that it does not discriminate on the basis of sex or mental or physical disability or any other characteristic described in Education Code Section 220 in the educational program or activity which it operates, and that it is required by Title IX and Section 504 not to discriminate in such a manner.

Criminal Background Clearances And Fingerprinting

EFC shall comply with all requirements of Education Code sections 44237 and 45125.1. EFC shall designate and maintain at all times at least one Custodian of Records duly authorized by the California Department of Justice.

EFC shall maintain on file and available for inspection evidence that (1) EFC has performed criminal background checks and cleared for employment all employees prior to employment; (2) EFC has obtained certification from each of its contracting entities/independent contractors that the entity/contractor has conducted required criminal background clearances for its employees prior to provision of school site services and/or any contact with students and has requested subsequent arrest notification service; and (3) EFC has performed criminal background checks and cleared for service all volunteers not directly supervised by staff and who may have contact with students. EFC shall also ensure that it requests and receives subsequent arrest notifications from the California Department of Justice for all employees and volunteers not directly supervised by staff. Upon request, EFC shall provide a copy of Department of Justice confirmation of Custodian of Records status for each Custodian of Records.

All employees must furnish or be able to provide:

1. Proof of negative tuberculosis (TB) testing or negative chest X-ray for TB in accordance with Education Code Section 49406
2. Fingerprinting for a criminal record check. Education for Change will process all background checks as required by Education Code Section 44237
3. Documents establishing legal employment status

Immunization And Health Screening Requirements

EFC shall require all employees, and any volunteer or vendor/contracting entity employee who may have frequent or prolonged contact with students, to undergo a risk assessment and/or be examined and determined to be free of active tuberculosis (TB) within the period of 60 days prior to employment/service, in accordance with Education Code section 49406. EFC shall maintain TB clearance records and certifications on file.

Employees’ job classification and work basis will be specified in individual employment agreements. These agreements may take the form of employment contracts, at-will employment agreements, or other agreements. All agreements not specifically stating that they are employment contracts will be deemed to be at-will employment agreements. Agreements may be renewed based on demonstration of meeting or exceeding the requirements of individual agreements and adhering to policies, procedures, and expectations. These expectations will be designed to support the mission and vision of the school and to comply with state laws.

EFC is dedicated to hiring professional and highly qualified staff. All staff to be hired at the school must demonstrate an understanding and commitment to EFC’s mission, vision, and educational philosophy. The Director of Recruitment and the Chief Talent Officer at the EFC Home Office will be responsible for staff recruitment – posting the position in strategic websites and publications; working with the principal on presenting at career fairs, conferences, and appropriate events; reaching out to and networking at events with innovative and experienced educators; and utilizing print and news media as appropriate. The Principal will be responsible for selecting all staff with support from the EFC Home Office. The Principal will establish a Selection Committee composed of site staff, students (as appropriate), and parents that will work with the Principal to select staff.

To ensure the selection of the highest quality staff, we will implement the following selection process:

1. Request resumes, cover letters and written responses to essay prompts (Home Office Recruitment team),
2. Brief screening interview (by phone) as needed (Home Office Recruitment team),
3. Follow-up interview, including a sample teaching lesson or other demonstration of job-related abilities (site level selection team),
4. Verification of credentials and past employment, state and federal background checks, and professional and personal reference checks (Home Office Human Resources Manager),
5. Finalize a selection (Home Office Recruitment team),
6. Finalize contract and extend offers of employment (Home Office Human Resources Manager).

Employee Qualifications and Job Descriptions

All EFC and school staff commit to:

- Abide by federal, state, and local laws;
- Maintain a professional relationship with all students;
- Refrain from the abuse of alcohol or drugs during the course of professional practice;
- Exemplify honor and integrity in the course of professional practice, particularly in the use of public funds and property;
- Comply with state, federal, and local laws regarding the confidentiality of student records;
- Fulfill the terms and obligations detailed in the charter;
- File necessary reports of child abuse; and

- Maintain a high level of professional conduct.

ESSA And Credentialing Requirements

EFC shall adhere to all requirements of the Elementary and Secondary Education Act (ESEA, also known as Every Student Succeeds Act (ESSA)) that are applicable to teachers and paraprofessional employees. EFC shall ensure that all teachers meet applicable state requirements for certificated employment, including the provisions of Education Code section 47605(l). EFC shall maintain current copies of all teacher credentials and make them readily available for inspection.

Founding Team

Education for Change has already hired a founding team for Latitude. This founding team includes 15 years of experience in high-performing charters.

Home Office

Education for Change as a charter management organization has an experienced Home Office team responsible for supporting Latitude and its team in implementing a quality instructional program in alignment with the charter petition.

The following positions are EFC Home Office positions that will support Latitude in its operations:

Management Team

- Chief Executive Officer – Manages the strategic direction of EFC
- Chief Strategy Officer - Manages strategic priorities
- Chief Academic Officer– Leads the Instructional Leadership Team
- Chief Talent Officer – Leads recruitment, selection, retention and development of human capital; leads human strategic initiatives
- Chief of Leadership Development - Manages and supervise all schools; leads leadership development initiatives
- Chief Operations Officer - Leads the central and site-based Operations teams

Instructional Leadership Team

- Deputy Chief of Student Support Services
- Director of Data Systems and Analysis
- Data Manager

Finance and Operations Team

- Human Resources Team
- Community Engagement Specialist

- Student Recruitment Team
- Director Internal Operations
- Finance Team
- Facilities Manager
- IT Team

See Appendix B12 for job descriptions for the CEO and Appendix B13 for the COO job description and the Appendix B14 Chief of Leadership Development job description. These are the PRIMARY Home Office leaders with respect to supporting sites. Any other Home Office job descriptions can be made available as requested.

The following job descriptions outline the school positions, including qualifications and responsibilities. They will be revised as necessary to reflect the specific needs of Latitude.

Principal

Under direction of the Chief of Schools, the Principal is responsible for the day-to- day operations of Latitude. The Principal's responsibilities include management and oversight of all instruction and operations. In collaboration with the EFC Home Office, the Principal develops and implements school level policies in compliance with EFC's organization-wide policies, administers and supervises the school and its employees, supports staff and parent leadership and a model of shared decision making, manages the implementation of the instructional program in alignment with the school's approved instructional frameworks and annual site plans, fosters a culture of positive, engaged learners, and serves as strong advocates for the school's philosophy.

See Appendix B15 for the Principal job description

Teachers

As with students and parents/guardians, teachers make a specific choice to be part of the Latitude team. EFC teachers meet the requirements for employment as stipulated by the California Education Code section 47605(l). Primary teachers of core, college preparatory subjects (English–language arts, mathematics, science, history, and special education) hold a Commission on Teacher Credentialing certificate, permit, or other document equivalent to that which a teacher in a non-charter public school would be required to hold. In the case of teachers teaching more than one subject, they hold a valid certificate, permit or other document for each subject area. These documents are maintained on file at EFC and at the school and are subject to periodic inspection by OUSD and the Alameda County Office of Education. Teachers in non-core, non–college preparatory subjects meet the requirements the State allows for a charter school.

EFC follows the development of the regulations to implement "Highly Qualified" requirements under the No Child Left Behind Act (NCLB) and ensures that the qualifications for all teachers follow the regulatory guidelines set by the state with regard to this law. This includes monitoring that the "highly qualified" teacher requirements of NCLB are met which ensure that teachers meet the following three criteria unless otherwise exempt under the law:

1. Teacher possesses appropriate state certification or license;

2. Teacher holds a bachelor's degree; and
3. Teacher passed a rigorous test, relevant major or coursework, or state evaluation demonstrating subject matter competency.

Selection of teachers is based on their teaching experience, the degree of subject matter expertise, their "fit" with the team and the organization at large, their ability to develop strong relationships with colleagues, students, and families, and their ability to demonstrate effective classroom instructional capabilities. Inexperienced or emergency credentialed teachers are hired on educational experience, work experiences deemed beneficial to education, and résumés with good references. All teaching staff must meet guidelines and standards set by the school and EFC.

Responsibilities and essential qualities for the teachers include:

- Preparing and implementing effective lesson plans and units of study that lead to student understanding of curriculum content
- Assessing and facilitating student progress in line with the student and school outcome goals
- Maintaining accurate records
- Participating in professional development activities
- Maintaining frequent communication with students and their families, colleagues, and other school stakeholders
- Maintaining regular, punctual attendance
- Consistently delivering Latitude's instructional program with a high level of student engagement and appropriate rigor
- Consistent cognitive planning with adopted curricula
- Engaging in ongoing collaborative work with colleagues to strengthen Latitude's ability to deliver high level outcomes for all students
- Aligning instruction to the needs of English Language Learners, Special Education, High and Low Achieving students
- Being self-reflective and always striving to improve at the craft of teaching
- Using data effectively to improve student, grade level, and school academic outcomes
- Consistently holding all students to high standards of work and behavior
- Maintaining open and effective lines of communication with all stakeholders
- Maintaining a positive, organized, and productive learning environment
- Developing strong and productive relationships with students

See Appendix B16 for the Teacher Job Description

Other Staff

A pool of day-to-day at-will (on-call) qualified substitutes, with appropriate background clearances, is established and a list of qualified substitutes is maintained.

At Latitude, additional staff persons include:

- Cafeteria Worker

- Custodian
- Office Manager
- School Services Assistant
- Assistant Principal
- Parent Coordinator
- IT Specialist

See Appendix B17 for the Cafeteria Worker Job description
See Appendix B18 for the Custodian Job description
See Appendix B19 for the School Services Assistant Job description
See Appendix B20 for the Office Manager Job description
See Appendix B21 for the Assistant Principal Job description
See Appendix B22 for the Parent Coordinator Job description
See Appendix B23 for the IT Specialist Job description

Evaluations

The principal and assistant principal are responsible for evaluating all teachers and support staff. School staff evaluation is performed at least annually. The principal may request support from the EFC academic support team to observe teachers in the classroom in order to determine their effectiveness as facilitators of learning and their ability to reach children using various modalities. A critical part of teacher evaluation and retention will be based on their growth as a teacher, student achievement, professionalism, and "fit" with the larger organization and school.

See Appendix B24 for Principal Evaluation Rubric, Appendix B25 for the Principal Evaluation Survey, and Appendix B26 for the Principal Evaluation Performance Assessment
See Appendix B27 for Teacher Evaluation Rubric and Appendix B28 for Teacher Evaluation Summary Form

Just as staff are expected and encouraged to grow and achieve at high levels, so are these expectations applied to the principal and the school. The EFC Home Office staff work with the sites to ensure that the mission of the school is being met, that all students are meeting high levels of achievement, that staff are well supported, and that the sites are safe learning environments.

EFC shall comply with the requirements set forth in Education Code section 44939.5 regarding the reporting of egregious misconduct committed by certificated employees.

EFC will maintain sufficient staff and systems including technology, required to ensure timely reporting necessary to comply with the law and to meet all reasonable inquiries from District and other authorized reporting agencies.

Facilities Acquisition

The Petitioners have established a facilities team to evaluate and select a suitable location for Latitude. The members of the facilities team have various levels of expertise in commercial real estate transactions, lease negotiations, and building code. The goal of the facilities team is to lease a temporary facility/space that is within budget and will be ready for classes to begin in the fall of 2018 and to build a permanent facility by fall of 2019. Education for Change currently owns property in the Fruitvale that can be used for the first hub. The team includes EFC's CEO (Hae-Sin Thomas), COO (Fabiola Harvey), Chief Strategy Officer (Sundar Chari), Director of Strategic Finance (Richard McNeel), and Pacific Charter School Development COO (John Sun).

The Education for Change team has experience in securing property and developing a brand new school facility. EFC opened Epic Charter in Fall 2014 on a property that was formerly a CalTrans warehouse. EFC worked with external partners to secure a lease to the land; as of Fall 2013, the 'school building' was a shell of a warehouse that had to be completely gutted so that a brand new school property could be designed and constructed on site. Students walked into a brand new school building in Fall of 2014. With foresight, EFC purchased property at East 12th Street and 29th Avenue, in the Fruitvale. With the support of external partners like Pacific Charter School Development, EFC is prepared to design and build a new school building to serve the Oakland community once again.

"If Latitude is using District facilities as of the date of the submittal of this charter petition, renewal petition, or request for material revision, or takes occupancy of District facilities prior to the approval of this charter petition, Latitude shall execute an agreement provided by the District for the use of the District facilities as a condition of the approval of the charter petition. If at any time after the approval of this charter petition, Latitude will occupy and use any District facilities, Latitude shall execute an agreement provided by the District for the use of the District facilities prior to occupancy and commencing use. Latitude shall implement and otherwise comply with the terms of any and all applicable facilities use agreements between Latitude and the District.

Notwithstanding any provision of any existing agreement for the use of District facilities, no agreement for the use of District facilities shall automatically renew or extend its term with the renewal of the charter petition. The circumstances of Latitude's occupancy of District facilities may change over time such as, but not limited to, enrollment, programs, and the conditions of facilities, and the District has a vested interest in having an agreement that is appropriate for the situation.

Prop. 39 Single Year Co-Location Use Agreement shall be limited to one (1) school year and expire on the date stated in said instrument, unless otherwise agreed to by the District. There is no automatic renewal.

For any other use agreement, the term shall not exceed five (5) years or shall be co-terminus with the charter petition, whichever is shorter, and may be one (1) school year in duration, at the option of the District. Latitude and the District shall negotiate any modifications of the agreement with the goal of such amendment or new agreement being considered by the OUSD Board of Education with the renewal or request for material revision of the charter petition. If Latitude and the District cannot execute an agreement in time for such to be considered by the Board of Education with the renewal or material revision of the charter petition, the approval of the renewal or request for material revision of the charter petition shall be conditioned upon

Latitude and the District executing an amendment to the existing use agreement or a new agreement no later than May 1st or within nine (9) months of the date of the Board of Education's approval of the renewal or material revision of the charter petition, whichever comes first. During such time period Latitude shall be permitted to remain in occupancy of the District facilities under the terms and conditions of the immediately preceding, executed use agreement; provided, that if Latitude and the District cannot agree upon and execute an amendment or new use agreement by said deadline, Latitude shall vacate the District facilities on or before June 30th of said school year.

Latitude agrees that occupancy and use of District facilities shall be in compliance with applicable laws and District policies for the operation and maintenance of District facilities and furnishings and equipment. All District facilities (i.e. schools) will remain subject to those laws applicable to public schools.

In the event of an emergency, all District facilities (i.e. schools) are available for use by the American Red Cross and public agencies as emergency locations, which may disrupt or prevent Latitude from conducting its educational programs. If Latitude will share the use of District facilities with other District user groups, Latitude agrees it will participate in and observe all District safety policies (e.g., emergency chain of information and participation in safety drills).

The use agreements provided by the District for District facilities shall contain terms and conditions addressing issues such as, but not limited to, the following:

- *Use: Latitude will be restricted to using the District facilities for the operation of a publischool providing educational instruction to public school students consistent with the terms of the Charter and incidental related uses. The District shall have the right to inspect District facilities upon reasonable notice to Latitude.*

- *Furnishings and Equipment: The District shall retain ownership of any furnishings and equipment, including technology, ("F&E") that it provides to Latitude for use. Latitude, at its sole cost and expense, shall provide maintenance and other services for the good and safe operation of the F&E.*

- *Leasing; Licensing: Use of the District facilities by any person or entity other than Latitude shall be administered by the District. The parties may agree to an alternative arrangement in the use agreement.*

- *Programs, Services, and Activities Outside Instructional Program; Third Party Vendors*

(i) Any program, service, or activity provided outside the instructional program shall be subject to the terms and provisions of the use agreement, and, additionally, may require a license, permit, or additional agreement issued by the District. The term "instructional program" is defined, per Education Code section 47612 and 5 CCR section 11960, as those required educational activities that generate funding based on "average daily attendance" and

includes those extracurricular programs, services, and/or activities that students are required to participate in and do not require the payment of any consideration or fee.
(ii) Any program, service, or activity requiring the payment of any consideration or fee or provided by a third party vendor (defined as any person or entity other than Latitude), whether paid or volunteer and regardless of whether such may be within the instructional program, shall be subject to the terms and provisions of the use agreement and such third party vendor shall be required to obtain a license, permit, or additional agreement from the District.

- *Minimum Payments or Charges to be Paid to District Arising From the Facilities:*

(i) Pro Rata Share: The District shall collect and Latitude shall pay a Pro Rata Share for facilities costs as provided in the Charter Schools Act of 1992 and its regulations. The parties may agree to an alternative arrangement regarding facilities costs in the use agreement; and

(ii) Taxes; Assessments: Generally, Latitude shall pay any assessment or fee imposed upon or levied on the OUSD facilities that it is occupying or Latitude's legal or equitable interest created by the use agreement.

- *Maintenance & Operations Services: In the event the District agrees to allow Latitude to perform any of the operation and maintenance services, the District shall have the right to inspect the District facilities, and the costs incurred in such inspection shall be paid by Latitude.*

(i) Co-Location: If Latitude is co-locating or sharing the District facilities with another user, the District shall provide the operations and maintenance services for the District facilities and Latitude shall pay the Pro Rata Share. The parties may agree to an alternative arrangement regarding performance of the operations and maintenance services and payment for such in the use agreement.

(ii) Sole Occupant: If Latitude is a sole occupant of District facilities, the District shall allow Latitude, at its sole cost and expense, to provide some operations and maintenance services for the District facilities in accordance with applicable laws and OUSD's policies on operations and maintenance services for facilities and F&E. NOTWITHSTANDING THE FOREGOING, the District shall provide all services for regulatory inspections which as the owner of the real property it is required to submit, and deferred maintenance, and Latitude shall pay OUSD for the cost and expense of providing those services. The parties may agree to an alternative arrangement regarding performance of the operations and maintenance services and payment for such services in the use agreement.

- *Real Property Insurance: Prior to occupancy, Latitude shall satisfy requirements to participate in OUSD's property insurance or, if Latitude is the sole occupant of OUSD facilities, obtain and maintain separate property insurance for the OUSD facilities. Latitude shall not have the option of obtaining and maintaining separate property insurance for the OUSD facility IF Latitude is co-locating or sharing the OUSD facility with another user.*

Non-District-Owned Facilities

Occupancy and Use of the Site: Prior to occupancy or use of any school site or facility, Latitude shall provide the OCS with a current Certificate of Occupancy or equivalent document issued by the applicable permitting agency that allows Latitude to use and occupy the site as a charter school. Latitude shall not exceed the operating capacity of the site and shall operate within any limitations or requirements provided by the Certificate of Occupancy and any applicable permit. Latitude may not open or operate without providing a copy of an appropriate Certificate of Occupancy to the OCS. If Latitude intends to move or expand to another facility during the term of this Charter, Latitude shall adhere to any and all District policies and procedures regarding charter material revision and non-material amendment. Prior to occupancy or use of any such additional or changed school site, Latitude shall provide an appropriate Certificate of Occupancy to the OCS for such facility. Notwithstanding any language to the contrary in this Charter, the interpretation, application, and enforcement of this provision are not subject to the Dispute Resolution Process outlined in Element 14.

Facility Compliance: Prior to occupancy or use of any school site or facility, Latitude shall provide adequate documentation to the OCS that the facility complies with all applicable building codes, standards and regulations adopted by the city and/or county agencies responsible for building and safety standards for the city in which Latitude is to be located, federal and state accessibility requirements (including the Americans with Disabilities Act (ADA) and Section 504), and all other applicable fire, health, and structural safety and access requirements. This requirement shall also apply to the construction, reconstruction, alteration of or addition to the facility. Latitude shall resolve in a timely manner any and all corrective actions, orders to comply, or notices issued by the authorized building and safety agency or the District. Latitude cannot exempt itself from applicable building and zoning codes, ordinances, and ADA/Section 504 requirements. Latitude shall maintain on file readily accessible records that document facilities compliance and provide such documentation to the OCS upon request.

Pest Management: Latitude shall comply with the Healthy Schools Act, Education Code section 17608, which details pest management requirements for schools.

Asbestos Management: Latitude shall comply with the asbestos requirement as cited in the Asbestos Hazard Emergency Response Act (AHERA), 40 C.F.R. part 763. AHERA requires that any building leased or acquired that is to be used as a school or administrative building shall maintain an asbestos management plan.

If Latitude fails to submit a certificate of occupancy or other valid documentation to the District verifying that the intended facility in which the school will operate complies with Education Code Section 47610, not less than 30 days before the school is scheduled to begin operation pursuant to the first year of this renewal term, it may not commence operations unless an exception is made by the OCS and/or the local planning department or equivalent agency. If Latitude moves or expands to another facility during the term of this charter, Latitude shall provide a certificate of occupancy or other valid documentation to the District verifying that the intended facility in which the school will operate complies with Education Code Section 47610, to the District for each facility at least 30 days before school is scheduled to begin operations in the facility or facilities. Latitude shall not begin operation in any location for which it *has failed to timely provide a certificate of occupancy to the District, unless an exception is made by the OCS and/or the local planning department or equivalent agency.*

Notwithstanding any language to the contrary in this charter, the interpretation, application, and enforcement of this provision are not subject to the Dispute Resolution Process.

ELEMENT 6: HEALTH & SAFETY PROCEDURES

"The procedures that the school will follow to ensure the health and safety of pupils and staff. These procedures shall include the requirement that each employee of the school furnish the school with a criminal record summary as described in."-- California Education Code Section 44237. 47605 (b) (5) (F)

HEALTH, SAFETY AND EMERGENCY PLAN

Latitude shall have a comprehensive site-specific Health, Safety and Emergency Plan, including but not limited to the acquisition and maintenance of adequate onsite emergency supplies, in place prior to beginning operation of Latitude each school year.

Latitude shall ensure that all staff members receive annual training on Latitude's health, safety, and emergency procedures, including but not limited to training on blood borne pathogens, and shall maintain a calendar for, and conduct, emergency response drills for students and staff.

Latitude shall provide all employees, and other persons working on behalf of Latitude who are mandated reporters, with annual training on child abuse detection and reporting, which shall occur within the first six weeks of each school year, or within the first six weeks of a person's employment if employed after the beginning of the school year, in accordance with the requirements of AB 1432 (2014).

Latitude shall stock and maintain the required number and type of emergency epinephrine auto-injectors onsite and provide training to employee volunteers in the storage and use of the epinephrine auto-injector as required by SB 1266 (2014).

Latitude shall comply with the requirements of Education Code section 49475 regarding concussions/head injuries with respect to any athletic program (as defined in Education Code § 49475) offered by or on behalf of Latitude.

Latitude shall periodically review, and update and/or modify as necessary, its Health, Safety and Emergency Plan, and keep it readily available for use and review upon CSD request.

FAMILY EDUCATIONAL RIGHTS AND PRIVACY ACT (FERPA)

Latitude, including its employees and officers, shall comply with the Family Educational Rights and Privacy Act (FERPA) and Education Code section 49060 et seq. at all times.

CRIMINAL BACKGROUND CLEARANCES AND FINGERPRINTING

Latitude shall comply with all requirements of Education Code sections 44237 and 45125.1. Latitude shall designate and maintain at all times at least one Custodian of Records duly authorized by the California Department of Justice.

EFC shall maintain on file and available for inspection evidence that (1) EFC has performed criminal background checks and cleared for employment all employees prior to employment; (2) EFC has obtained certification from each of its contracting entities/independent contractors that the entity/contractor has conducted required criminal background clearances for its employees prior to provision of school site services and/or any contact with students and has requested subsequent arrest notification service; and (3) EFC has performed criminal background checks and cleared for service all volunteers not directly supervised by staff and who may have contact with students. EFC shall also ensure that it requests and receives subsequent arrest notifications from the California Department of Justice for all employees and volunteers not directly supervised by staff. Upon request, EFC shall provide a copy of Department of Justice confirmation of Custodian of Records status for each Custodian of Records.

EFC shall comply with the requirements set forth in Education Code section 44939.5 regarding the reporting of egregious misconduct committed by certificated employees.

IMMUNIZATION AND HEALTH SCREENING REQUIREMENTS

EFC shall require all employees, and any volunteer or vendor/contracting entity employee who may have frequent or prolonged contact with students, to undergo a risk assessment and/or be examined and determined to be free of active tuberculosis (TB) within the period of 60 days prior to employment/service, in accordance with Education Code section 49406. EFC shall maintain TB clearance records and certifications on file.

EFC shall comply with all federal and state legal requirements related to student immunization, health examination, and health screening, including but not limited to screening for vision, hearing, and scoliosis, to the same extent as would be required if the students were attending a non-charter public school. EFC shall maintain student immunization, health examination, and health screening records on file.

SAFE PLACE TO LEARN ACT
EFC shall comply with all applicable requirements of the Safe Place to Learn Act, Education Code section 234 et seq.

COMPETITIVE ATHLETICS
Charter School shall comply with the requirements of Education Code section 221.9 with respect to the disclosure requirements regarding competitive athletics, and shall comply with the requirements of Education Code section 33479.1 et seq. with respect to any athletic program that if offers.

GUN-FREE SCHOOLS ACT
EFC shall comply with the federal Gun-Free Schools Act.

TOBACCO USE PREVENTION
EFC shall enact policies to prohibit the use of Tobacco near its school site in accordance with the provisions of California Health and Safety Code section 104495."

SUICIDE PREVENTION POLICY (GRADES 7-12)
Charter School shall adopt, at a regularly scheduled meeting, a policy on pupil suicide prevention in Grades 7 through 12 inclusive, pursuant to Education Code section 215.

TRANSPORTATION
The Charter School shall meet the requirements of Education Code section 39831.3 with respect to any transportation services provided to or from school or a school activity.

DATA PRIVACY
Charter School shall take the required steps to protect the data privacy of its pupils, including but not limited to complying with the requirements of Education Code section 49073.6 with respect to any maintenance of any information obtained from social media in its pupil records.

Charter School shall comply with the requirements of Education Code section 33133.5 with respect to notifying pupils of the appropriate telephone number to call to report child abuse or neglect, and Education Code section 51900.6 with respect to the age-appropriate content in sexual abuse and sexual assault awareness and prevention.

Comprehensive Sexual Harassment Policies and Procedures

Education for Change and Latitude are committed to providing a school that is free from sexual harassment, as well as any harassment based upon such factors as race, religion, creed, color, national origin, ancestry, age, medical condition, marital status, sexual orientation, or disability. Education for Change has a comprehensive policy to prevent and immediately remediate any concerns about sexual discrimination or harassment at the School (including employee to employee, employee to student, and student to employee misconduct). Misconduct of this nature is very serious and will be addressed in a sexual misconduct policy that will be developed prior to hiring any employees. All supervisors are required to participate in regular trainings around their legal responsibilities.

See Appendix B29 for the EFC Employee Handbook

Role of Staff as Mandated Child Abuse Reporters

All classified and certificated staff are mandated child abuse reporters and follow all applicable reporting laws, the same policies and procedures used by schools within the Alameda County Office of Education Service Area.

Latitude shall provide all employees, and other persons working on behalf of Latitude who are mandated reporters, with annual training on child abuse detection and reporting, which shall occur within the first six weeks of each school year, or within the first six weeks of a person's employment if employed after the beginning of the school year, in accordance with the requirements of AB 1432 (2014).

TB Testing

EFC shall require all employees, and any volunteer or vendor/contracting entity employee who may have frequent or prolonged contact with students, to undergo a risk assessment and/or be examined and determined to be free of active tuberculosis (TB) within the period of 60 days prior to employment/service, in accordance with Education Code section 49406. EFC shall maintain TB clearance records and certifications on file.

Medication in School

The school adheres to Education Code Section 49423 regarding administration of medication in school.

Latitude shall stock and maintain the required number and type of emergency epinephrine auto-injectors onsite and provide training to employee volunteers in the storage and use of the epinephrine auto-injector as required by SB 1266 (2014).

Vision/Hearing/Scoliosis

The school adheres to Education Code Section 49450 et seq. as applicable to the grade levels served.

Blood-Borne Pathogens

The principal, or designee, meets state and federal standards for dealing with blood-borne pathogens and other potentially infectious materials in the workplace. The principal, or designee, has established a written "Exposure Control Plan" designed to protect employees from possible infection due to contact with blood-borne viruses, including human immunodeficiency virus (HIV) and hepatitis B virus (HBV).

Whenever exposed to blood or other body fluids through injury or accident, students and staff should follow the latest medical protocol for disinfecting procedures.

Latitude shall ensure that all staff members receive annual training on EFC's health, safety, and emergency procedures, including but not limited to training on bloodborne pathogens, and shall maintain a calendar for, and conduct, emergency response drills for students and staff.

Facility Safety

Latitude will comply with Education Code §47610 by either utilizing facilities that are compliant with the Field Act or facilities that are compliant with the State Building Code, including provisions for seismic safety. Latitude agrees to test sprinkler systems, fire extinguishers, and fire alarms annually at its facilities to ensure that they are maintained in an operable condition at all times.

<u>Fire, Earthquake, and Evacuation Drills</u>

Students and staff will participate in earthquake drills every other month, fire drills monthly, and at least one lock-down drill annually.

Emergency Preparedness

The school adheres to an Emergency Preparedness Handbook. This handbook includes but is not limited to the following responses: fire, flood, earthquake, terrorist threats, hostage situations, and heart attacks. Education for Change requires that instructional and administrative staff receive training in emergency response, including appropriate "first responder" training or its equivalent.

Latitude shall comply with the requirements of Education Code section 49475 regarding concussions/head injuries with respect to any athletic program (as defined in Education Code § 49475) offered by or on behalf of Latitude.

Procedures

The school will have adopted procedures to implement the policy statements listed above prior to operation. The school safety plan is guided by Education Code Section 35294(a). Latitude shall periodically review, and update and/or modify as necessary, its Health, Safety and Emergency Plan, and keep it readily available for use and review upon CSD request.

See Appendix B30 for a sample EFC Safety Plan

Custodian of Record

Per California Department of Justice Requirements, Education for Change has identified LaRayne Povlsen, the Director of Human Resources and EFC Board Secretary, as the Custodian of Record.

ELEMENT 7: MEANS TO ACHIEVE RACIAL & ETHNIC BALANCE

"The means by which the school will achieve a racial and ethnic balance among its pupils that is reflective of the general population residing within the territorial jurisdiction of the school district to which the charter petition is submitted."—California Education Code Section 47605(b)(5)(G)

Latitude will start with 50 students in August of 2018. The school will maintain a waiting list to ensure the school will meet enrollment goals. It is the absolute goal of Latitude to serve the general student population of Oakland, and the school will strive to achieve a racial and ethnic balance that will reflect the general population of Oakland and to be a diverse by design school, consistent with California Education Code section 47605(d)(1).

Each fall, the principal in conjunction with the Home Office, will review the currently enrolled student demographics. If at any time a significant disparity among the racial and ethnic demographics of our students is identified, the principal will initiate dialogue and meetings with community leaders from the underrepresented racial groups. The objective of that dialogue will be to guide Latitude into creating more culturally inclusive and competent marketing strategies, and ultimately, a more culturally inclusive and competent school. The COO at the Home Office will take the lead with the Principal in developing and implementing a comprehensive recruitment and outreach strategy.

Recruitment Strategies

Earned Media
Earned Media is one of the most effective strategies for garnering widespread attention to a charter school. Latitude will utilize the experience and relationships of its founding team members to strategically get articles placed in local newspapers that focus on the innovative programs offered at the School.

Collateral Materials/Leave Behinds
Professionally designed brochures, flyers, and posters will showcase the benefits and opportunities that an education from Latitude will provide. All materials will be created with the end- reader kept in mind and will be assured to make no false claims. These collateral materials will be minimally printed in English and Spanish and will be designed to demonstrate the diversity and cultural appreciation that occur at Latitude. All marketing material samples will be provided to OUSD upon request.

Grassroots Community Outreach
The Principal and other staff will all be tasked with conducting public presentations to the community in an effort to gain awareness. Latitude leadership will annually present to rising ninth graders at the Education for Change middle schools, and with permission from Oakland Unified, Latitude will present and/or leave brochures or other collateral materials at the middle schools within the district. EFC will provide presentations or collateral materials to organizations that serve middle-school youth like other charter schools, recreation centers and after school

programs. In addition, EFC will rely on its established design partnership community to target interested families.

Latitude Open Houses
In the spring and fall of every year, Latitude will host community informational meetings, so that interested parents or community members can come and learn about the opportunities that will be provided by Latitude. EFC Home Office leadership will be invited to attend and participate in all open houses, especially should parents have specific questions that should be directed to Home Office personnel. Information for each of these open houses will be distributed to all the local daily and weekly newspapers, on radio where available, and via a concerted online and word of mouth grass roots strategy. Dates and times for the open houses have not yet been confirmed, but they will be set to maximize the number of parents that are able to attend. Proposed dates include meetings in December, February, March, and April of each year. Meetings will be held on weeknights and on weekends.

Latitude also understands that as part of its oversight of the school, OUSD may conduct program review of federal and state compliance issues.

Please see Appendix B31 for Latitude's Community Engagement and Recruitment Plan

ELEMENT 8: ADMISSION REQUIREMENTS

"Admission Requirements, if applicable."—California Education Code Section 47605(b)(5)(H)

DOCUMENTATION OF ADMISSIONS AND ENROLLMENT PROCESSES

Latitude shall maintain complete and accurate records of its annual admissions and enrollment processes, including but not limited to documentation of implementation of lottery and waitlist criteria and procedures in accordance with the terms of the Charter. These records shall be made available to the District upon request.

HOMELESS AND FOSTER YOUTH

Latitude shall adhere to the provisions of the McKinney-Vento Homeless Assistance Act and ensure that each child of a homeless individual and each homeless youth has equal access to the same free, appropriate public education as provided to other children and youths. Latitude shall provide specific information, in its outreach materials, websites, at community meetings, open forums, and regional center meetings, that notifies parents that Latitude is open to enroll and provide services for all students, and provides a standard District contact number for access to additional information regarding enrollment. Latitude shall comply with all applicable provisions of Education Code sections 48850 – 48859.

NON-DISCRIMINATION

Latitude shall not require a parent/legal guardian/student to provide information regarding a student's disability, gender, gender identity, gender expression, nationality, legal or economic status, primary language or English Learner status, race or ethnicity, religion, sexual orientation, or any other characteristic that is contained in the definition of hate crimes set forth in section 422.55 of the Penal Code, or any other information that would violate federal or state law, prior to admission, participation in any admissions or attendance lottery, or pre-enrollment event or process, or as a condition of admission or enrollment. Latitude may request, at the time of, and as part of, conducting its lottery process, the provision of information necessary to apply specific admissions preferences set forth in this Charter.

Latitude shall not request or require submission of a student's IEP, 504 Plan, or any other record or related information prior to admission, participation in any admissions or attendance lottery, or pre-enrollment event or process, or as a condition of admission or enrollment.

PARENT ENGAGEMENT

Latitude shall not require a parent or legal guardian of a prospective or enrolled student to perform volunteer service hours, or make payment of fees or other monies, goods, or services in lieu of performing volunteer service, as a condition of his/her child's admission, continued enrollment, attendance, or participation in the school's educational activities, or otherwise discriminate against a student in any manner because his/her parent cannot, has not, or will not provide volunteer service to Latitude.

As a non-sectarian, tuition-free public school, Latitude will admit all grade-level eligible pupils who wish to attend up to the school's capacity, in accordance with Education Code §47605(d)(2)(A). Latitude will be a school of choice, and in compliance with Education Code §47605(f), no student will be required to attend Latitude 37.8 High School. Admission shall not be determined based on the place of residence of the pupil or of his/her parent or guardian. However, in the event of a public random drawing, admissions preference may be granted to residents of Oakland.

In accordance with Education Code §48000(a), children must meet minimum age requirements for enrollment. Latitude will abide by any future amendments to the Education Code regarding minimum age for public schools. Proof of the child's age must be presented at the time of enrollment as described in Education code §48002.

Admission and Enrollment Process

Latitude is participating in the Oakland Common Enrollment process. In order to ensure that all students will be placed appropriately and benefit fully from Latitude, parents will be strongly encouraged to participate in a pre-admission meeting and a school tour. Upon admission, parents will be encouraged to attend a family orientation.

All students who wish to attend Latitude shall be admitted, up to capacity. Admission to Latitude shall not be determined by the place of residence of the student or his or her parent in the State, except as provided in Education Code Section 47605(d)(2). If the number of pupils who wish to attend Latitude exceeds the school's capacity, attendance, except for existing pupils of the School, shall be determined by a public random drawing ("lottery"). Students currently enrolled in the school are exempt from the lottery. Within the context of this admission process, Latitude seeks to deliver on the spirit and intent of Brown vs. Board of Education by using legally permissible means to enroll a profile of students representative of the racial, ethnic and socioeconomic diversity of the city of Oakland. In this regard, Latitude employs certain weighting mechanisms in relation to its lottery that foster diversity and that fit squarely within acceptable admissions protocols. Weightings for geography and socioeconomic status ("SES") are employed as described below. These weightings are adjusted to account for the numbers of students from a particular zipcode cluster that have been admitted from returning students, sibling preferences and employee or founding family preferences.

In the case of a public random drawing, the following will be exempt from the lottery for admission to the school:[32]

- Siblings of students currently enrolled

In the event applications for admission exceed availability, priority for admission shall be assigned in the following order:

[32] During periods of eligibility for the Public Charter Schools Grant Program ("PCSGP"), the lottery will be held as a single weighted public random drawing

1. Children of employees of Latitude[33] or founding families[34] (this priority will be capped at 10% of total enrollment).
2. Applicants residing within the boundaries of the Oakland Unified School District.
3. Applicants residing outside of Oakland..

<u>Weighting</u>

- **Geographic**—In order to meet the requirement that preference for admission be offered to students who reside in the Oakland Unified School District, Latitude will ensure that at least 85% of slots for admission will be allocated to students residing in Oakland. Latitude identifies attendance regions consisting of several contiguous zip code areas or "clusters." Using United States Census data, Latitude determines the percentage of school aged students residing within each zip code cluster and provides weighting within the lotteries designed to encourage a corresponding level of enrollment from each zip code cluster.
- **SES**—Similar to the zip code weightings, weightings are implemented to encourage SES diversity. Weightings for SES are designed to ensure that at least 50% of admitted students are eligible to receive free and reduced price meals under the NSLP.

In the event of a single weighted lottery,

- Children of Latitude employees or founding families will be given five additional entries in the lottery.
- Students residing within the boundaries of OUSD, if there is space within the applicant's zip code cluster, would be given one additional entry in the lottery.
- Students residing within the boundaries of OUSD who meet the SES criteria (qualify for free or reduced lunch) would be given one additional entry in the lottery.

All applications drawn after reaching capacity will be placed on a wait-list, in order in which they are drawn. Any applications submitted by the deadline and not accepted through the public random drawing due to capacity limitations will be placed on the wait-list in the order determined by lottery. Applications received after the deadline will be offered admission (spots on the wait-list) in the order received AFTER all applicants who submitted by the lottery deadline have been served.

Families who submitted completed application forms prior to the deadline will be notified in writing regarding the date, time, and location of the public lottery, and rules for the lottery process. Date, time, and location of the public lottery and rules for the lottery process are included in site FAQs and are posted online. Parents do not have to be present to participate in the lottery. The lottery drawing will be held on the school grounds in spring. EFC will ensure that the lottery process will be:

[33] Latitude employees must be working in at least a .5 FTE (Full Time Equivalent) role.

[34] Founding families is defined as families who contribute at least 80 hours to support the launch of the school prior to the 2018-2019 academic year.

- Public, transparent, and fair
- Held in a public space large enough to accommodate all interested
- Facilitated by an uninterested party charged with conducting the process

Results will be mailed to all applicants and follow-up phone calls will be made. Families of students who are offered admission will have three weeks to confirm in writing their intent to enroll and submit an enrollment packet including proof of age, proof of address, and immunization records. Any families who decline admission or who fail to confirm will lose their position to the next name on the waiting list. The waiting list will be kept on file at the school and will be valid for the duration of the school year. If a student leaves the school, that space will be offered to the next person on the waiting list by mail and by phone. A student who is offered a position off of the waiting list will be required to confirm in writing their intent to enroll.

Upon admission to Latitude, the registration process is comprised of the following:

- Completion of a student registration form;
- Proof of Immunization;
- Home Language Survey;
- Completion of Emergency Medical Information Form;
- Proof of minimum and maximum age requirements, e.g. birth certificate;
- Authorization for the school to request and receive from schools the student has attended or is currently attending;
- A copy of any existing Student Study Team (SST) evaluations and recommendations for the student shall be provided;
- A copy of any existing 504 or Individual Education Plan (IEP) for the student shall be provided.

Family Educational Rights And Privacy Act (FERPA)

Latitude, including its employees and officers, shall comply with the Family Educational Rights and Privacy Act (FERPA) and Education Code section 49060 et seq. at all times.

Please see Appendix B32 for the Common Enrollment Student Application (online), and Appendix B33 for 17-18 Enrollment Information Sessions Flyer.

ELEMENT 9: ANNUAL FINANCIAL AUDITS

"The manner in which annual, independent financial audits shall be conducted, which shall employ generally accepted accounting principles, and the manner in which audit exceptions and deficiencies shall be resolved to the satisfaction of the chartering authority."
- California Education Code Section 47605(b)(5)(I)

"In order to ensure the necessary oversight and review of mandated reports for which the authorizer must determine fiscal health and sustainability, the following schedule of reporting deadline to the District will apply each year of the term of this charter;

- *On or before July 1, an annual update required pursuant to Section 47606.5.*
- *September 1 – Final Unaudited Financial Report for Prior Year*
- *December 1 – Final Audited Financial Report for Prior Year*
- *December 1 – First Interim Financial Report for Current Year*
- *March 1 – Second Interim Financial Report for Current Year*
- *June 15 – Preliminary Budget for Subsequent Year"*

Audit and Inspection of Records

Charter School agrees to observe and abide by the following terms and conditions as a requirement for receiving and maintaining its charter authorization:

- *Charter School is subject to District oversight.*

- *The District's statutory oversight responsibility continues throughout the life of the Charter and requires that the District, among other things, monitors the fiscal condition of Charter School.*

- *The District is authorized to revoke this Charter for, among other reasons, the failure of Charter School to meet generally accepted accounting principles or if Charter School engages in fiscal mismanagement.*

Accordingly, the District hereby reserves the right, pursuant to its oversight responsibility, to audit Charter School books, records, data, processes and procedures through the District Office of the Inspector General or other means. The audit may include, but is not limited to, the following areas:

- *Compliance with terms and conditions prescribed in the Charter agreement,*
- *Internal controls, both financial and operational in nature,*
- *The accuracy, recording and/or reporting of Charter School's financial information,*
- *Charter School's debt structure,*
- *Governance policies, procedures and history,*
- *The recording and reporting of attendance data,*
- *Charter School's enrollment process,*
- *Compliance with safety plans and procedures, and*

- *Compliance with applicable grant requirements.*

Charter School shall cooperate fully with such audits and shall make available any and all records necessary for the performance of the audit upon 30 days notice to Charter School. When 30 days notice may defeat the purpose of the audit, the District may conduct the audit upon 24-hours notice.

Fiscal Audit

An annual independent financial audit of the books and records of EFC will be conducted as required by Education Code Sections 47605(b)(5)(I) and 47605(m). The books and records of EFC will be kept in accordance with generally accepted accounting principles, and as required by applicable law and the audit will employ generally accepted accounting procedures. The audit shall be conducted in accordance with applicable provisions within the California Code of Regulations governing audits of charter schools as published in the State Controller's K-12 Audit Guide. To the extent required under applicable federal law, the audit scope will be expanded to include items and processes specified in applicable Office of Management and Budget Circulars.

The Education for Change Board of Directors will hire an independent auditor who has, at a minimum, a CPA, experience in education finance, and is approved by the State Controller on its published list as an educational audit provider is familiar with the Audit Guide for Charter Schools. This auditor will complete an annual audit of Latitude' financial books and records. This audit will be conducted in accordance with the applicable Generally Accepted Accounting Principles and the Audit Guide for Charter Schools. It will verify the accuracy of EFC and Latitude's financial statements (including balance sheets, income statements, and cash flow statements), attendance and enrollment reporting practices, internal controls, and any other documents or systems required by law.

EFC will prepare the necessary unaudited financial reports to be submitted to OUSD. Two interim reports and a year-end report, in a format to be provided by OUSD, that will include actual and revised budget figures, projected revenues, expenditures, and fund balances will be submitted to OUSD unless a different system is agreed to by all parties. In addition, year-end financial statements audited by a Certified Public Accountant will be submitted to OUSD within four months following the close of the fiscal year. The cost of the audit will be a fixed cost in the annual budget to ensure EFC is able to comply with this requirement.

The annual audit will be completed and forwarded to the District Superintendent, the State Controller, and to the CDE by the 15th of December of each year. At the conclusion of the audit, any exceptions or deficiencies will be reviewed by the Audit Committee with the Chief Operating Officer. The Audit Committee will report the findings and recommendations to the Board of Directors. The Board will then report to the District to address how the exceptions and deficiencies have been or will be resolved to the satisfaction of the Authorizing Entity. EFC will agree to writing a timeline for resolution of audit exceptions and deficiencies. Audit appeals or requests for summary review shall be submitted to the Education Audit Appeals Panel ("EAAP") in accordance with applicable law. The independent fiscal audit of Latitude is public record to be provided to the public upon request.

EFC will be responsible for its own financial services (accounting, budgeting, and payroll) and personnel services.

EFC shall conduct all of its financial operations in a timely manner and for all programs (regular, categorical, and special education) through procedures established by the State of California and the Federal Government, as appropriate. For Federal programs, including Title I, the criteria for eligibility and fiscal guidelines will be as established by the Federal Government. In receiving this funding directly, EFC is responsible for meeting eligibility and fiscal requirements established by the Federal Government and for completing the Consolidated Application. EFC shall provide OUSD with all financial and related reports, including enrollment attendance, to enable OUSD to meet its requirements by law.

ELEMENT 10: SUSPENSION & EXPULSION PROCEDURES

"The procedures by which pupils can be suspended or expelled." —California Education Code Section 47605(b)(5)(J)

Code of Conduct

The goal of the Latitude Code of Conduct is to create conditions that foster student self-discipline in a warm, supportive school climate that is conducive to maximum learning for all students. The Code of Conduct is a general guide for behavior, not a mechanism for rigid control. The individual personalities of students or extenuating circumstances will be considered before corrective measures are prescribed. (*Reference Ed Code Sections 48900 and 48915 and Health and Safety Code 11007*)

The code of conduct will be presented in the student/parent handbook. Every family will receive a new copy of the Parent-Student handbook annually; it will be available in both English and Spanish.

Each student and his or her parent or guardian will be provided with a copy of the following discipline policies including suspension and expulsion and will be required to verify that they have reviewed and understand the policies prior to enrollment.

At Latitude, all students will dress in alignment with the Latitude dress code. The school dress code will be set by the leadership at the school site with input from the Family Leadership Council and student leadership, and the principal will be accountable for enforcing the approved dress code.

Please see Appendix B34 for a sample Student-Parent Handbook (from High Tech High).

Suspension and Expulsion

The following Pupil Suspension and Expulsion Policy has been established in order to promote learning and protect the safety and well-being of all students at Latitude. When the policy is violated, it may be necessary to suspend or expel a student from regular classroom instruction. This policy shall serve as School's policy and procedures for student suspension and expulsion, and it may be amended from time to time without the need to amend the charter so long as the amendments comport with legal requirements.

Staff shall enforce disciplinary rules and procedures fairly and consistently among all students. This Policy and its Procedures will clearly describe discipline expectations, and it will be printed and distributed as part of the Student Handbook, which is sent to each student at the beginning of the school year. The School administration shall ensure that students and their parents/guardians are notified in writing upon enrollment of all discipline policies and procedures.

Discipline includes but is not limited to advising and counseling students, conferring with parents/guardians, detention during and after school hours, use of alternative educational environments, suspension and expulsion.

Corporal punishment shall not be used as a disciplinary measure against any student. Corporal punishment includes the willful infliction of or willfully causing the infliction of physical pain on a student. For purposes of the Policy, corporal punishment does not include an employee's use of force that is reasonable and necessary to protect the employee, students, staff or other persons or to prevent damage to school property.

Suspended or expelled students shall be excluded from all school and school-related activities unless otherwise agreed during the period of suspension or expulsion.

A student identified as an individual with disabilities or for whom School has a basis of knowledge of a suspected disability pursuant to the Individuals with Disabilities Education Improvement Act of 2004 ("IDEIA") or who is qualified for services under Section 504 of the Rehabilitation Act of 1973 ("Section 504") is subject to the same grounds for suspension and expulsion and is accorded the same due process procedures applicable to regular education students except when federal and state law mandates additional or different procedures. The School will follow all applicable federal and state laws when imposing any form of discipline on a student identified as an individual with disabilities or for whom the School has a basis of knowledge of a suspected disability or who is otherwise qualified for such services or protections in according due process to such students.

Grounds for Suspension and Expulsion of Students

A student may be suspended or expelled for prohibited misconduct if the act is 1) related to school activity, 2) school attendance occurring at the School or at any other school, or 3) a School sponsored event. A pupil may be suspended or expelled for acts that are enumerated below and related to school activity or attendance that occur at any time, including, but not limited to, and of the following:

a) while on school grounds;
b) while going to or coming from school;
c) during the lunch period, whether on or off the school campus; or
d) during, going to, or coming from a school-sponsored activity.

Suspension Offenses

<u>Discretionary Suspension Offenses</u>
Students may be suspended for any of the following acts when it is determined the pupil:

1. Caused, attempted to cause, or threatened to cause physical injury to another person.
2. Willfully used force of violence upon the person of another, except self-defense.
3. Unlawfully possessed, used, sold or otherwise furnished, or was under the influence of any controlled substance, as defined in Health and Safety Code 11053-11058, alcoholic beverage, or intoxicant of any kind.

4. Unlawfully offered, arranged, or negotiated to sell any controlled substance as defined in Health and Safety Code 11053-11058, alcoholic beverage or intoxicant of any kind, and then sold, delivered or otherwise furnished to any person another liquid substance or material and represented same as controlled substance, alcoholic beverage or intoxicant.
5. Committed or attempted to commit robbery or extortion.
6. Caused or attempted to cause damage to school property or private property.
7. Stole or attempted to steal school property or private property.
8. Possessed or used tobacco or products containing tobacco or nicotine products, including but not limited to cigars, cigarettes, miniature cigars, clove cigarettes, smokeless tobacco, snuff, chew packets and betel. This section does not prohibit the use of his or her own prescription products by a pupil.
9. Committed an obscene act or engaged in habitual profanity or vulgarity.
10. Unlawfully possessed or unlawfully offered, arranged, or negotiated to sell any drug paraphernalia, as defined in Health and Safety Code 11014.5.
11. Disrupted school activities or otherwise willfully defied the valid authority of supervisors, teachers, administrators, other school officials, or other school personnel engaged in the performance of their duties.
12. Knowingly received stolen school property or private property.
13. Possessed an imitation firearm, i.e.: a replica of a firearm that is so substantially similar in physical properties to an existing firearm as to lead a reasonable person to conclude that the replica is a firearm.
14. Committed or attempted to commit a sexual assault as defined in Penal code 261, 266c, 286, 288, 288a or 289, or committed a sexual battery as defined in Penal Code 243.4.
15. Harassed, threatened, or intimidated a student who is a complaining witness or witness in a school disciplinary proceeding for the purpose of preventing that student from being a witness and/or retaliating against that student for being a witness.
16. Unlawfully offered, arranged to sell, negotiated to sell, or sold the prescription drug Soma.
17. Engaged in, or attempted to engage in hazing. For the purposes of this subdivision, "hazing" means a method of initiation or pre-initiation into a pupil organization or body, whether or not the organization or body is officially recognized by an educational institution, which is likely to cause serious bodily injury or personal degradation or disgrace resulting in physical or mental harm to a former, current, or prospective pupil. For purposes of this section, "hazing" does not include athletic events or school-sanctioned events.
18. Made terrorist threats against school officials and/or school property. For purposes of this section, "terroristic threat" shall include any statement, whether written or oral, by a person who willfully threatens to commit a crime which will result in death, great bodily injury to another person, or property damage in excess of one thousand dollars ($1,000), with the specific intent that the statement is to be taken as a threat, even if there is no intent of actually carrying it out, which, on its face and under the circumstances in which it is made, is so unequivocal, unconditional, immediate, and specific as to convey to the person threatened, a gravity of purpose and an immediate prospect of execution of the threat, and thereby causes that person reasonably to be in sustained fear for his or her own safety or for his or her immediate family's safety, or for the protection of school

property, or the personal property of the person threatened or his or her immediate family.

19. Committed sexual harassment, as defined in Education Code Section 212.5. For the purposes of this section, the conduct described in Section 212.5 must be considered by a reasonable person of the same gender as the victim to be sufficiently severe or pervasive to have a negative impact upon the individual's academic performance or to create an intimidating, hostile, or offensive educational environment. This section shall apply to pupils in any of grades 4 to 12, inclusive.
20. Caused, attempted to cause, threaten to cause or participated in an act of hate violence, as defined in subdivision (e) of Section 233 of the Education Code. This section shall apply to pupils in any of grades 4 to 12, inclusive.
21. Intentionally harassed, threatened or intimidated a student or group of students to the extent of having the actual and reasonably expected effect of materially disrupting classwork, creating substantial disorder and invading student rights by creating an intimidating or hostile educational environment. This section shall apply to pupils in any of grades 4 to 12, inclusive.
22. Engaged in an act of bullying, including, but not limited to, bullying committed by means of an electronic act, as defined in subdivisions (f) and (g) of Section 32261 of the Education Code , directed specifically toward a pupil or school personnel.
23. A pupil who aids or abets, as defined in Section 31 of the Penal Code, the infliction or attempted infliction of physical injury to another person may be subject to suspension, but not expulsion, except that a pupil who has been adjudged by a juvenile court to have committed, as an aider and abettor, a crime of physical violence in which the victim suffered great bodily injury or serious bodily injury shall be subject to discipline pursuant to subdivision (1).

Non- Discretionary Suspension Offenses

Students must be suspended and recommended for expulsion for any of the following acts when it is determined the pupil:

a) Possessed, sold, or otherwise furnished any firearm, knife, explosive, or other dangerous object unless, in the case of possession of any object of this type, the students had obtained written permission to possess the item from a certificated school employee, with the Principal or designee’s concurrence.

Suspension Procedure

Suspensions shall be initiated according to the following procedures:

1) **Conference**: Suspension shall be preceded, if possible, by a conference conducted by the Principal or the Principal’s designee with the student and his or her parent and, whenever practical, the teacher, supervisor or school employee who referred the student to the Principal. The conference may be omitted if the Principal or designee determines that an emergency situation exists. An “emergency situation” involves a clear and present danger to the lives, safety or health of students or school personnel. If a student is suspended without this conference, both the parent/guardian and student shall be notified of the student’s right to return to school for the purpose of a conference. At the conference, the pupil shall be informed of the reason for the disciplinary action and the

evidence against him or her and shall be given the opportunity to present his or her version and evidence in his or her defense. This conference shall be held within two school days, unless the pupil waives this right or is physically unable to attend for any reason including, but not limited to, incarceration or hospitalization. No penalties may be imposed on a pupil for failure of the pupil's parent or guardian to attend a conference with school officials. Reinstatement of the suspended pupil shall not be contingent upon attendance by the pupil's parent or guardian at the conference.

2) **Notice to Parents/Guardians**: At the time of suspension, the Principal or designee shall make a reasonable effort to contact the parent/guardian by telephone or in person. Whenever a student is suspended, the parent/guardian shall be notified in writing of the suspension and the date of return following suspension. This notice shall state the specific offense committed by the student. In addition, the notice may also state the date and time when the student may return to school. If school officials wish to ask the parent/guardian to confer regarding matters pertinent to the suspension, the notice may request that the parent/guardian respond to such requests without delay.

3) **Suspension Time Limits/Recommendation for Expulsion**: Suspensions, when not including a recommendation for expulsion, shall not exceed five (5) consecutive school days per suspension.

Upon a recommendation of Expulsion by the Principal or Principal's designee, the pupil and the pupil's guardian or representative will be invited to a conference to determine if the suspension for the pupil should be extended pending an expulsion hearing. This determination will be made by the Principal or designee upon either of the following determinations: 1) the pupil's presence will be disruptive to the education process; or 2) the pupil poses a threat or danger to others. Upon either determination, the pupil's suspension will be extended pending the results of an expulsion hearing.

Expellable Offenses

Discretionary Expellable Offenses:
Students may be expelled for any of the following acts when it is determined the pupil:

a) Caused, attempted to cause, or threatened to cause physical injury to another person.
b) Willfully used force of violence upon the person of another, except self-defense.
c) Unlawfully possessed, used, sold or otherwise furnished, or was under the influence of any controlled substance, as defined in Health and Safety Code 11053-11058, alcoholic beverage, or intoxicant of any kind.
d) Unlawfully offered, arranged, or negotiated to sell any controlled substance as defined in Health and Safety Code 11053-11058, alcoholic beverage or intoxicant of any kind, and then sold, delivered or otherwise furnished to any person another liquid substance or material and represented same as controlled substance, alcoholic beverage or intoxicant.
e) Committed or attempted to commit robbery or extortion.
f) Caused or attempted to cause damage to school property or private property.
g) Stole or attempted to steal school property or private property.

h) Possessed or used tobacco or products containing tobacco or nicotine products, including but not limited to cigars, cigarettes, miniature cigars, clove cigarettes, smokeless tobacco, snuff, chew packets and betel. This section does not prohibit the use of his or her own prescription products by a pupil.
i) Committed an obscene act or engaged in habitual profanity or vulgarity.
j) Unlawfully possessed or unlawfully offered, arranged, or negotiated to sell any drug paraphernalia, as defined in Health and Safety Code 11014.5.
k) Disrupted school activities or otherwise willfully defied the valid authority of supervisors, teachers, administrators, other school officials, or other school personnel engaged in the performance of their duties.
l) Knowingly received stolen school property or private property.
m) Possessed an imitation firearm, i.e.: a replica of a firearm that is so substantially similar in physical properties to an existing firearm as to lead a reasonable person to conclude that the replica is a firearm.
n) Committed or attempted to commit a sexual assault as defined in Penal code 261, 266c, 286, 288, 288a or 289, or committed a sexual battery as defined in Penal Code 243.4.
o) Harassed, threatened, or intimidated a student who is a complaining witness or witness in a school disciplinary proceeding for the purpose of preventing that student from being a witness and/or retaliating against that student for being a witness.
p) Unlawfully offered, arranged to sell, negotiated to sell, or sold the prescription drug Soma.
q) Engaged in, or attempted to engage in hazing. For the purposes of this subdivision, “hazing” means a method of initiation or pre-initiation into a pupil organization or body, whether or not the organization or body is officially recognized by an educational institution, which is likely to cause serious bodily injury or personal degradation or disgrace resulting in physical or mental harm to a former, current, or prospective pupil. For purposes of this section, “hazing” does not include athletic events or school-sanctioned events.
r) Made terrorist threats against school officials and/or school property. For purposes of this section, "terroristic threat" shall include any statement, whether written or oral, by a person who willfully threatens to commit a crime which will result in death, great bodily injury to another person, or property damage in excess of one thousand dollars ($1,000), with the specific intent that the statement is to be taken as a threat, even if there is no intent of actually carrying it out, which, on its face and under the circumstances in which it is made, is so unequivocal, unconditional, immediate, and specific as to convey to the person threatened, a gravity of purpose and an immediate prospect of execution of the threat, and thereby causes that person reasonably to be in sustained fear for his or her own safety or for his or her immediate family's safety, or for the protection of school property, or the personal property of the person threatened or his or her immediate family.
s) Committed sexual harassment, as defined in Education Code Section 212.5. For the purposes of this section, the conduct described in Section 212.5 must be considered by a reasonable person of the same gender as the victim to be sufficiently severe or pervasive to have a negative impact upon the individual's academic performance or to create an intimidating, hostile, or offensive educational environment. This section shall apply to pupils in any of grades 4 to 12, inclusive.

t) Caused, attempted to cause, threaten to cause or participated in an act of hate violence, as defined in subdivision (e) of Section 233 of the Education Code. This section shall apply to pupils in any of grades 4 to 12, inclusive.
u) Intentionally harassed, threatened or intimidated a student or group of students to the extent of having the actual and reasonably expected effect of materially disrupting classwork, creating substantial disorder and invading student rights by creating an intimidating or hostile educational environment. This section shall apply to pupils in any of grades 4 to 12, inclusive.
v) Engaged in an act of bullying, including, but not limited to, bullying committed by means of an electronic act, as defined in subdivisions (f) and (g) of Section 32261 of the Education Code, directed specifically toward a pupil or school personnel.
w) A pupil who aids or abets, as defined in Section 31 of the Penal Code, the infliction or attempted infliction of physical injury to another person may be subject to suspension, but not expulsion, except that a pupil who has been adjudged by a juvenile court to have committed, as an aider and abettor, a crime of physical violence in which the victim suffered great bodily injury or serious bodily injury shall be subject to discipline pursuant to subdivision (1).

Non -Discretionary Expellable Offenses
Students must be expelled for any of the following acts when it is determined pursuant to the procedures below that the pupil:

a) Possessed, sold, or otherwise furnished any firearm, knife, explosive, or other dangerous object unless, in the case of possession of any object of this type, the students had obtained written permission to possess the item from a certificated school employee, with the Principal or designee's concurrence.

If it is determined by the Governing Board that a student has brought a firearm or destructive device, as defined in Section 921 of Title 18 of the United States Code, onto campus or to have possessed a firearm or dangerous device on campus, the student shall be expelled for one year, pursuant to the Federal Gun Free Schools Act of 1994.

The term "firearm" means (A) any weapon (including a starter gun) which will or is designed to or may readily be converted to expel a projectile by the action of an explosive; (B) the frame or receiver of any such weapon; (C) any firearm muffler or firearm silencer; or (D) any destructive device. Such term does not include an antique firearm.

The term "destructive device" means (A) any explosive, incendiary, or poison gas, including but not limited to: (i) bomb, (ii) grenade, (iii) rocket having a propellant charge of more than four ounces, (iv) missile having an explosive or incendiary charge of more than one-quarter ounce, (v) mine, or (vi) device similar to any of the devices described in the preceding clauses.

Authority to Expel

A student may be expelled either by the Board following a hearing before it or by the Board upon the recommendation of an Administrative Panel to be assigned by the Board as needed. The Administrative Panel should consist of at least three members who are certificated and neither a teacher of the pupil or a Board member of the EFC's governing board. The Administrative Panel may recommend expulsion of any student found to have committed an expellable offense.

Expulsion Procedures

Students recommended for expulsion are entitled to a hearing to determine whether the student should be expelled. Unless postponed for good cause, the hearing shall be held within thirty (30) school days after the Principal or designee determines that the Pupil has committed an expellable offense.

In the event an administrative panel hears the case, it will make a recommendation to the Board for a final decision whether to expel. The hearing shall be held in closed session unless the pupil makes a written request for a public hearing three (3) days prior to the hearing.

Written notice of the hearing shall be forwarded to the student and the student's parent/guardian at least ten (10) calendar days before the date of the hearing. Upon mailing the notice, it shall be deemed served upon the pupil. The notice shall include:

1. The date and place of the expulsion hearing;
2. A statement of the specific facts, charges and offenses upon which the proposed expulsion is based;
3. A copy of the School's disciplinary rules which relate to the alleged violation;
4. Notification of the student's or parent/guardian's obligation to provide information about the student's status at the school to any other school district or school to which the student seeks enrollment;
5. The opportunity for the student or the student's parent/guardian to appear in person or to employ and be represented by counsel or a non-attorney advisor;
6. The right to inspect and obtain copies of all documents to be used at the hearing;
7. The opportunity to confront and question all witnesses who testify at the hearing;
8. The opportunity to question all evidence presented and to present oral and documentary evidence on the student's behalf including witnesses.

Special Procedures for Expulsion Hearings Involving Sexual Assault or Battery Offenses

The School may, upon a finding of good cause, determine that the disclosure of either the identity of the witness or the testimony of that witness at the hearing, or both, would subject the witness to an unreasonable risk of psychological or physical harm. Upon this determination, the testimony of the witness may be presented at the hearing in the form of sworn declarations, which shall be examined only by the School, Panel Chair or the hearing officer in the expulsion. Copies of these sworn declarations, edited to delete the name and identity of the witness, shall be made available to the pupil.

1. The complaining witness in any sexual assault or battery case must be provided with a copy of the applicable disciplinary rules and advised of his/her right to (a) receive five days notice of his/her scheduled testimony, (b) have up to two (2) adult support persons of his/her choosing present in the hearing at the time he/she testifies, which may include a

parent, guardian, or legal counsel, and (c) elect to have the hearing closed while testifying.

2. The School must also provide the victim a room separate from the hearing room for the complaining witness' use prior to and during breaks in testimony.

3. At the discretion of the person or panel conducting the hearing, the complaining witness shall be allowed periods of relief from examination and cross-examination during which he or she may leave the hearing room.

4. The person conducting the expulsion hearing may also arrange the seating within the hearing room to facilitate a less intimidating environment for the complaining witness.

5. The person conducting the expulsion hearing may also limit time for taking the testimony of the complaining witness to the hours he/she is normally in school, if there is no good cause to take the testimony during other hours.

6. Prior to a complaining witness testifying, the support persons must be admonished that the hearing is confidential. Nothing in the law precludes the person presiding over the hearing from removing a support person whom the presiding person finds is disrupting the hearing. The person conducting the hearing may permit any one of the support persons for the complaining witness to accompany him or her to the witness stand.

7. If one or both of the support persons is also a witness, the School must present evidence that the witness' presence is both desired by the witness and will be helpful to the School. The person presiding over the hearing shall permit the witness to stay unless it is established that there is a substantial risk that the testimony of the complaining witness would be influenced by the support person, in which case the presiding official shall admonish the support person or persons not to prompt, sway, or influence the witness in any way. Nothing shall preclude the presiding officer from exercising his or her discretion to remove a person from the hearing whom he or she believes is prompting, swaying, or influencing the witness.

8. The testimony of the support person shall be presented before the testimony of the complaining witness and the complaining witness shall be excluded from the courtroom during that testimony.

9. Especially for charges involving sexual assault or battery, if the hearing is to be conducted in the public at the request of the pupil being expelled, the complaining witness shall have the right to have his/her testimony heard in a closed session when testifying at a public meeting would threaten serious psychological harm to the complaining witness and there are no alternative procedures to avoid the threatened harm. The alternative procedures may include videotaped depositions or contemporaneous examination in another place communicated to the hearing room by means of closed-circuit television.

10. Evidence of specific instances of a complaining witness' prior sexual conduct is presumed inadmissible and shall not be heard absent a determination by the person conducting the hearing that extraordinary circumstances exist requiring the evidence be heard. Before such a determination regarding extraordinary circumstance can be made, the witness shall be provided notice and an opportunity to present opposition to the introduction of the evidence. In the hearing on the admissibility of the evidence, the complaining witness shall be entitled to be represented by a parent, legal counsel, or other support person. Reputation or opinion evidence regarding the sexual behavior of the complaining witness is not admissible for any purpose.

Students With Disabilities

A pupil identified as an individual with disabilities or for whom the School has a basis of knowledge of a suspected disability pursuant to the Individuals with Disabilities Education Improvement Act ("IDEIA") or who is qualified for services under Section 504 of the Rehabilitation Act of 1973 ("Section 504") is subject to the same grounds for disciplinary action, including suspension and expulsion, and is accorded the same due process procedures applicable to regular education pupils except when federal and state law mandates additional or different procedures. the School will follow the IDEIA, Section 504, and all applicable federal and state laws when imposing any form of discipline on a pupil identified as an individual with disabilities or for whom the School has a basis of knowledge of a suspected disability or who is otherwise qualified for such services or protections in according due process to such pupils. The following procedures shall be followed when a student with a disability is considered for suspension or expulsion. These procedures will be updated if there is a change in the law.

1) **Notification of District—**The School shall immediately notify the District and coordinate the procedures in this policy with the District the discipline of any student with a disability or student who the School or District would be deemed to have knowledge that the student had a disability.

2) **Services During Suspension—**Students suspended for more than ten (10) school days in a school year shall continue to receive services so as to enable the student to continue to participate in the general education curriculum, although in another setting, and to progress toward meeting the goals set out in the child's IEP; and receive, as appropriate, a functional behavioral assessment or functional analysis, and behavioral intervention services and modifications, that are designed to address the behavior violation so that it does not recur. These services may be provided in an interim alterative educational setting.

3) **Procedural Safeguards/Manifestation Determination—**Within ten (10) school days of a recommendation for expulsion or any decision to change the placement of a child with a disability because of a violation of a code of student conduct, the School, the parent, and relevant members of the IEP Team shall review all relevant information in the student's file, including the child's IEP, any teacher observations, and any relevant information provided by the parents to determine:

a. If the conduct in question was caused by, or had a direct and substantial relationship to, the child's disability.
b. If the conduct in question was the direct result of the local educational agency's failure to implement the IEP.

If the School, the parent, and relevant members of the IEP Team determine that either of the above is applicable for the child, the conduct shall be determined to be a manifestation of the child's disability.

If the School, the parent, and relevant members of the IEP Team make the determination that the conduct was a manifestation of the child's disability, the IEP Team shall:

1. Conduct a functional behavioral assessment or a functional analysis assessment, and implement a behavioral intervention plan for such child, provided that the School had not conducted such assessment prior to such determination before the behavior that resulted in a change in placement

2. If a behavioral intervention plan has been developed, review the behavioral intervention plan if the child already has such a behavioral intervention plan, and modify it, as necessary, to address the behavior

3. Return the child to the placement from which the child was removed, unless the parent and the School agree to a change of placement as part of the modification of the behavioral intervention plan.

If the School, the parent, and relevant members of the IEP team determine that the behavior was not a manifestation of the student's disability and that the conduct in question was not a result of the failure to implement the IEP, then the School may apply the relevant disciplinary procedures to children with disabilities in the same manner and for the same duration as the procedures would be applied to students without disabilities.

4) **Due Process Appeals**—The parent of a child with a disability who disagrees with any decision regarding placement, or the manifestation determination, or the School believes that maintaining the current placement of the child is substantially likely to result in injury to the child or to others, may request an expedited administrative hearing through the Special Education Unit of the Office of Administrative Hearings.

When an appeal relating to the placement of the student or the manifestation determination has been requested by either the parent or the School, the student shall remain in the interim alternative educational setting pending the decision of the hearing officer or until the expiration of the forty-five (45) day time period provided for in an interim alternative educational setting, whichever occurs first, unless the parent and the School agree otherwise.

5) **Special Circumstances—**Latitude personnel may consider any unique circumstances on a case-by-case basis when determining whether to order a change in placement for a child with a disability who violates a code of student conduct.

The Principal or designee may remove a student to an interim alternative educational setting for not more than forty-five (45) days without regard to whether the behavior is determined to be a manifestation of the student's disability in cases where a student:

1. Carries or possesses a weapon, as defined in 18 USC 930, to or at school, on school premises, or to or at a school function;
2. Knowingly possesses or uses illegal drugs, or sells or solicits the sale of a controlled substance, while at school, on school premises, or at a school function; or
3. Has inflicted serious bodily injury, as defined by 20 USC 1415(k)(7)(D), upon a person while at school, on school premises, or at a school function.

6) **Interim Alternative Educational Setting—**The student's interim alternative educational setting shall be determined by the student's IEP team.

7) **Procedures for Students Not Yet Eligible for Special Education Services—**A student who has not been identified as an individual with disabilities pursuant to IDEIA and who has violated the district's disciplinary procedures may assert the procedural safeguards granted under this administrative regulation only if the School had knowledge that the student was disabled before the behavior occurred.

The School shall be deemed to have knowledge that the student had a disability if one of the following conditions exists:

1. The parent/guardian has expressed concern in writing, or orally if the parent/guardian does not know how to write or has a disability that prevents a written statement, to The School's supervisory or administrative personnel, or to one of the child's teachers, that the student is in need of special education or related services.
2. The parent has requested an evaluation of the child.
3. The child's teacher, or other School personnel, has expressed specific concerns about a pattern of behavior demonstrated by the child, directly to the director of special education or to other School supervisory personnel.

If the School knew or should have known the student had a disability under any of the three (3) circumstances described above, the student may assert any of the protections available to IDEIA-eligible children with disabilities, including the right to stay-put. If the School had no basis for knowledge of the student's disability, it shall proceed with the proposed discipline. The School shall conduct an expedited evaluation if requested by the parents; however the student shall remain in the education placement determined by the School pending the results of the evaluation.

The School shall not be deemed to have knowledge of that the student had a disability if the parent has not allowed an evaluation, refused services, or if the student has been evaluated and determined to not be eligible.

Record of Hearing
A record of the hearing shall be made and may be maintained by any means, including electronic recording, as long as a reasonably accurate and complete written transcription of the proceedings can be made.

Presentation of Evidence
While technical rules of evidence do not apply to expulsion hearings, evidence may be admitted and used as proof only if it is the kind of evidence on which reasonable persons can rely in the conduct of serious affairs. A recommendation by the Administrative Panel to expel must be supported by substantial evidence that the student committed an expellable offense.

Findings of fact shall be based solely on the evidence at the hearing. While hearsay evidence is admissible, no decision to expel shall be based solely on hearsay. Sworn declarations may be admitted as testimony from witnesses of whom the Board, Panel or designee determines that disclosure of their identity or testimony at the hearing may subject them to an unreasonable risk of physical or psychological harm.

If, due to a written request by the expelled pupil, the hearing is held at a public meeting, and the charge is committing or attempting to commit a sexual assault or committing a sexual battery as defined in Education Code Section 48900, a complaining witness shall have the right to have his or her testimony heard in a session closed to the public.

The decision of the Administrative Panel shall be in the form of written findings of fact and a written recommendation to the Board who will make a final determination regarding the expulsion. The final decision by the Board shall be made within ten (10) school days following the conclusion of the hearing. The Decision of the Board is final.

If the expulsion-hearing panel decides not to recommend expulsion, the pupil shall immediately be returned to his/her educational program.

Written Notice to Expel
The Principal or designee following a decision of the Board to expel shall send written notice of the decision to expel, including the Board's adopted findings of fact, to the student or parent/guardian. This notice shall also include the following:

1. Notice of the specific offense committed by the student
2. Notice of the student's or parent/guardian's obligation to inform any new district in which the student seeks to enroll of the student's status with the School.

The Principal or designee shall send a copy of the written notice of the decision to expel to the District. This notice shall include the following:

a) The student's name
b) The specific expellable offense committed by the student

The Board’s decision to expel shall be final.

Disciplinary Records
The School shall maintain records of all student suspensions and expulsions at the School. Such records shall be made available to the District upon request.

Expelled Pupils/Alternative Education
Pupils who are expelled shall be responsible for seeking alternative education programs including, but not limited to, programs within the District or their school district of residence.

Rehabilitation Plans
Students who are expelled from the School shall be given a rehabilitation plan upon expulsion as developed by the Board at the time of the expulsion order, which may include, but is not limited to, periodic review as well as assessment at the time of review for readmission. The rehabilitation plan should include a date not later than one year from the date of expulsion when the pupil may reapply to the School for readmission.

Readmission
The decision to readmit a pupil or to admit a previously expelled pupil from another school district or charter school shall be in the sole discretion of the Board following a meeting with the Principal and the pupil and guardian or representative to determine whether the pupil has successfully completed the rehabilitation plan and to determine whether the pupil poses a threat to others or will be disruptive to the school environment. The Home Office team shall make a recommendation to the Board following the meeting regarding his or her determination. The pupil's readmission is also contingent upon the School's capacity at the time the student seeks readmission.

“Latitude shall notify, within 30 days, the superintendent of the school district of any pupil who is expelled or leaves Latitude without graduating or completing the school year for any reason. The school district notified shall be determined by the pupil’s last known address. Latitude shall, upon request, provide that school district with a copy of the cumulative record of the pupil, including a transcript of grades or report card and health information, pursuant to Education Code Section 47605(d)(3).”

“Latitude shall define any student dismissal under the Charter School’s disciplinary procedure, or termination of a student’s right to attend the Latitude under its disciplinary procedure, as an “expulsion” under the Education Code.”

“In the case of a special education student, or a student who receives 504 accommodations, Latitude will ensure that it makes the necessary adjustments to comply with the mandates of State and federal laws, including the IDEA and Section 504 of the Rehabilitation Plan of 1973,

regarding the discipline of students with disabilities. Prior to recommending expulsion for a Section 504 student or special education student, the charter administrator will convene a review committee to determine 1) if the conduct in question was caused by, or had a direct and substantial relationship to the child's disability; or 2) if the conduct in question was the direct result of the LEA's failure to implement the 504 plan or IEP. If it is determined that the student's misconduct was not caused by or had direct and substantial relationship to the child's disability or the conduct in question was not a direct result of the LEA's failure to implement the 504 plan or IEP, the student may be expelled."

ELEMENT 11: EMPLOYEE RETIREMENT SYSTEMS

"The manner by which staff members of the charter schools will be covered by the State Teachers' Retirement System, the Public Employees' Retirement System, or the federal social security."—California Education Code Section 47605(b)(5)(K)

Work Basis

Employee hours per week will be based upon individual employee work agreements. The standard work week for all staff is 40 hours per week.

Compensation

EFC provides total compensation to individual employees that is competitive with other private and public schools for comparably qualified and experienced employees, i.e., Latitude offers compensation that assures the successful recruitment of employees that enable the school to fulfill its mission and goals. Specific salaries and stipends are identified within the individual work agreements.

See Appendix B35 for the EFC Teacher Salary Schedule

Benefits

Mandatory benefits such as workers compensation, unemployment insurance, Medicare and social security (for non-STRS or non-PERS employees) are provided by EFC, as well as life, health, dental, vision, and related benefits as part of the total compensation package for each employee determined as part of the individual work agreement.

See Appendix B36 for EFC Benefits Guide

Retirement

EFC will make any contribution that is legally required of the employer including STRS, PERS, and federal social security.

Eligible certificated employees participate in State Teachers Retirement System (STRS), in which the employer and the employee each contribute the statutory amount. Eligible classified employees participate in Public Employee Retirement System (PERS), in which the employer and the employee each contribute the statutory amount. All employees, with the exception of STRS participants, participate in the Federal Social Security Program. EFC also currently provides an option to participate in a 403b retirement plan with no employer match. If the IRS decides in the future that Public Charter Schools are not eligible to participate in STRS or PERS, EFC plans to provide an employer match via a 403b retirement plan or 457 retirement plan or both, that would be competitive in the market place. Also note that certificated employees would participate in the Federal Social security program if they are ruled ineligible for STRS by the IRS. Currently, EFC eligible employees participate in PERS and STRS.

ELEMENT 12: PUBLIC SCHOOL ATTENDANCE ALTERNATIVES

"The public school attendance alternatives for pupils residing within the school district who choose not to attend charter schools."—California Education Code Section 47605(b)(5)(L)

"Pupils who choose not to attend Latitude may choose to attend other public schools in their district of residence or pursue inter-district transfers in accordance with existing enrollment and transfer policies of the District. Parents or guardians of each pupil enrolled in Latitude shall be informed that the pupil has no right to admission in a particular school of any local educational agency (LEA) (or program of any LEA) as a consequence of enrollment in the charter school, except to the extent that such a right is extended by the LEA."

No student may be required to attend Latitude. Students of Oakland Unified School District (OUSD) are free to attend other OUSD schools with available spaces rather than Latitude under its choice policy. Alternatively, students may wish to seek inter- or intradistrict attendance alternatives in accordance with OUSD policy. Parents/guardians will be informed that no student shall be granted an automatic right to enrollment in any school or program of OUSD on the basis of that student's enrollment or application to Latitude.

ELEMENT 13: RIGHTS OF DISTRICT EMPLOYEES

"A description of the rights of any employee of the school district upon leaving the employment of the school district to work in a charter school, and of any rights of return to the school district after employment at a charter school."—California Education Code Section 47605(b)(5)(M)

"Employees of the District who choose to leave the employment of the District to work at Charter School shall have no automatic rights of return to the District after employment at Charter School unless specifically granted by the District through a leave of absence or other agreement or policy of the District as aligned with the collective bargaining agreements of the District. Leave and return rights for District union-represented employees and former employees who accept employment with Charter School will be administered in accordance with applicable collective bargaining agreements and any applicable judicial rulings."

Education for Change shall be deemed the exclusive public school employer of Latitude teachers, staff and other employees of Latitude for purposes of the Educational Employment Relations Act. EFC recognizes the employees' rights under the EERA provisions to organize for collective bargaining. No employee shall be required to work at Latitude or EFC.

ELEMENT 14: MANDATORY DISPUTE RESOLUTION

"The procedures to be followed by the charter school and the entity granting the charter to resolve disputes relating to provisions of the charter."—California Education Code Section 47605(b)(5)(N)

EFC will establish complaint procedures that address both complaints alleging discrimination or violations of law and complaints regarding other areas. EFC will not, at any time, refer complaints to the District.

The complaint procedures will include the clear information with respect to the response timeline of the school, whether the school's response will be in writing, the party identified to respond to complaints, the party identified and charged with making final decisions regarding complaints, and whether the final decision will be issued in writing. The procedures will also identify an ombudsperson for situations in which the school leader is the subject of the complaint. The complaint procedures will be clearly articulated in the school's student and family handbook or distributed widely.

EFC will designate at least one employee to coordinate its efforts to comply with and carry out its responsibilities under Title IX of the Education Amendments of 1972 (Title IX) and Section 504 of the Rehabilitation Act of 1973 (Section 504) including any investigation of any complaint filed with EFC alleging its noncompliance with these laws or alleging any actions which would be prohibited by these laws. EFC will notify all its students and employees of the name, office address, and telephone number of the designated employee or employees.

EFC will adopt and publish grievance procedures providing for prompt and equitable resolution of student and employee complaints alleging any action, which would be prohibited by Title IX, or Section 504.

EFC will implement specific and continuing steps to notify applicants for admission and employment, students and parents of elementary and secondary school students, employees, sources of referral of applicants for admission and employment, and all unions or professional organizations holding collective bargaining or professional agreements with the recipient, that it does not discriminate on the basis of sex or mental or physical disability in the educational program or activity which it operates, and that it is required by Title IX and Section 504 not to discriminate in such a manner.

EFC shall comply with the requirements of Education Code section 221.61 with respect to posting information regarding the filing complaints under Title IX, including but not limited to the following: 1) the name and contact information of the Title IX coordinator; 2) the rights of the pupil and the public and the responsibilities of the Charter School under Title IX; 3) a description of how to file a complaint under Title IX, including an explanation of the statute of limitations, how the complaint will be investigated and how the complainant may further pursue the complaint; and a link to the United States Department of Education Office for Civil rights complaint form.

Disputes with the District

The staff and Governing Board members of Latitude and EFC agree to attempt to resolve all disputes between the District and Latitude regarding this charter pursuant to the terms of this section. Both will refrain from public commentary regarding any disputes until the matter has progressed through the dispute resolution process.

Any controversy or claim arising out of or relating to the charter agreement between the District and Latitude except any controversy or claim that in any way related to revocation of this charter, shall be handled first through an informal process in accordance with the procedures set forth below

(1) Any controversy or claim arising out of or relating to the charter agreement, except any controversy or claim that in any way related to revocation of this charter, must be put in writing ("Written Notification") by the party asserting the existence of such dispute. If the substance of a dispute is a matter that could result in the taking of appropriate action, including, but not limited to, revocation of the charter in accordance with Education Code section 47607(c), the matter will be addressed at the District's discretion in accordance with that provision of law and any regulations pertaining thereto. The Written Notification must identify the nature of the dispute and all supporting facts known to the party giving the Written Notification. The Written Notification may be tendered by personal delivery, by facsimile, or by certified mail. The Written Notification shall be deemed received (a) if personally delivered, upon date of delivery to the address of the person to receive such notice if delivered by 5:00 PM or otherwise on the business day following personal delivery; (b) if by facsimile, upon electronic confirmation of receipt; or (c) if by mail, two (2) business days after deposit in the U.S. Mail. All written notices shall be addressed as follows:

To EFC, c/o CEO:
Latitude
% Education for Change
333 Hegenberger Rd, Suite 600
Oakland, CA 94621

To Coordinator, Office of Charter Schools:
1000 Broadway, 6th Floor, Suite 639
Oakland, CA 94607

(2) A written response ("Written Response") shall be tendered to the party providing the Written Notification within twenty (20) business days from the date of receipt of the Written Notification. The Written Response shall state the responding party's position on all issues stated in the Written Notification and set forth all facts which the responding party believes supports its position. The Written Response may be tendered by personal delivery, by facsimile, or by certified mail. The Written Response shall be deemed received (a) if personally delivered, upon date of delivery to the address of the person to receive such notice if delivered by 5:00pm, or otherwise on the business day following personal delivery; (b) if by facsimile, upon electronic confirmation of receipt; or (c) if by mail, two (2) business days after deposit in the U.S. Mail. The parties agree to schedule a conference to discuss the claim or controversy ("Issue

Conference"). The Issue Conference shall take place within fifteen (15) business days from the date the Written Response is received by the other party.

(3) If the controversy, claim, or dispute is not resolved by mutual agreement at the Issue Conference, then either party may request that the matter be resolved by mediation. Each party shall bear its own costs and expenses associated with the mediation. The mediator's fees and the administrative fees of the mediation shall be shared equally among the parties. Mediation proceedings shall commence within 60 days from the date of the Issue Conference. The parties shall mutually agree upon the selection of a mediator to resolve the controversy or claim at dispute. If no agreement on a mediator is reached within 30 days after a request to mediate, the parties will use the processes and procedures of the American Arbitration Association ("AAA") to have an arbitrator appointed.

(4) If the mediation is not successful, the parties agree that each party has exhausted its administrative remedies and shall have any such recourse available by law.

ELEMENT 15: CHARTER SCHOOL CLOSURE PROCEDURES

"A description of the procedures to be used if the charter school closes. The procedures shall ensure a final audit of the school to determine the disposition of all assets and liabilities of the charter school, including plans for disposing of any net assets and for the maintenance and transfer of pupil records."—California Education Code Section 47605(b)(5)(p)

REVOCATION OF THE CHARTER

The District may revoke the Charter if Latitude commits a breach of any provision set forth in a policy related to charter schools adopted by the District Board of Education and/or any provisions set forth in the Charter Schools Act of 1992. The District may revoke the charter of Latitude if the District finds, through a showing of substantial evidence, that Latitude did any of the following:

- *Latitude committed a material violation of any of the conditions, standards, or procedures set forth in the Charter.*
- *Latitude failed to meet or pursue any of the pupil outcomes identified in the Charter.*
- *Latitude failed to meet generally accepted accounting principles, or engaged in fiscal mismanagement.*
- *Latitude violated any provision of law.*

Prior to revocation, and in accordance with Education Code section 47607(d) and state regulations, the OUSD Board of Education will notify Latitude in writing of the specific violation, and give Latitude a reasonable opportunity to cure the violation, unless the OUSD Board of Education determines, in writing, that the violation constitutes a severe and imminent threat to the health or safety of the pupils. Revocation proceedings are not subject to the dispute resolution clause set forth in this Charter.

Pursuant to AB 97, charter schools may be identified for assistance based on state evaluation rubrics and be subject to revocation pursuant to Education Code section 47607.3.

CLOSURE ACTION

The decision to close Latitude, either by the governing board of EFC or by the OUSD Board of Education, must be documented in a "Closure Action". A Closure Action shall be deemed to have been automatically taken when any of the following occur: the Charter is revoked (subject to the provisions of Education Code section 47607(i)) or non-renewed by the OUSD Board of Education; the governing board of Latitude votes to close Latitude; or the Charter lapses or is surrendered.

CLOSURE PROCEDURES

The procedures for charter school closure set forth below are guided by Education Code sections 47604.32, 47605, and 47607 as well as California Code of Regulations, title 5, sections 11962 and 11962.1, and are based on "Charter School Closure Requirements and Recommendations (Revised 08/2009)" posted on the California Department of Education *website. All references to "Charter School" apply to Latitude including its nonprofit corporation and governing board.*

Designation of Responsible Person(s) and Funding of Closure

Prior to or at the time of the taking of a Closure Action by either the governing board of EFC or the OUSD Board of Education, the governing board of EFC shall designate a person or persons responsible for conducting and overseeing all closure-related procedures and activities, and allocate sufficient funding for, or otherwise determine how Latitude will fund, these activities.

Notification of Closure Action

Upon the taking of a Closure Action, Latitude shall send written notice of its closure to:

1. *The OUSD OCS. Latitude shall provide the OCS with written notice of the person(s) designated to be responsible for conducting and overseeing all closure activities and the funding for such activities. If the Closure Action is an act of Latitude, Latitude shall provide the OCS with a copy of the governing board resolution or minutes that documents its Closure Action.*
2. *Parents/guardians of all students, and all majority age and emancipated minor students, currently enrolled in Latitude within 72 hours of the Closure Action. Latitude shall simultaneously provide a copy of the written parent notification to the OCS.*
3. *Alameda County Office of Education (ACOE). Latitude shall send written notification of the Closure Action to ACOE by registered mail within 72 hours of the Closure Action. Latitude shall simultaneously provide a copy of this notification to the OCS.*
4. *The Special Education Local Plan Area (SELPA) in which Latitude participates. Latitude shall send written notification of the Closure Action to the SELPA in which Latitude participates by registered mail within 72 hours of the Closure Action. Latitude shall simultaneously provide a copy of this notification to the OCS.*
5. *The retirement systems in which Latitude's employees participate. Within fourteen (14) calendar days of the Closure Action, Latitude shall notify, as applicable, the State Teachers Retirement System (STRS), Public Employees Retirement System (PERS), the Social Security Administration, and the Alameda County Office of Education of the Closure Action, and follow their respective procedures for dissolving contracts and reporting. Latitude shall provide a copy of this notification and correspondence to the OCS.*
6. *The California Department of Education (CDE). Latitude shall send written notification of the Closure Action to the CDE by registered mail within 72 hours of the Closure Action. Latitude shall provide a copy of this notification to the OCS.*
7. *Any school district that may be responsible for providing education services to the former students of Latitude. Latitude shall send written notification of the Closure Action within 72 hours of the Closure Action. This notice must include a list of potentially returning students and their home schools based on student residence. Latitude shall provide a copy of these notifications, if any, to the OCS.*
8. *All Latitude employees and vendors within 72 hours of the Closure Action. Latitude shall simultaneously provide a copy of the written employee and vendor notification to the OCS.*

Notification of all the parties above, with the exception of employees and vendors, must include but is not limited to the following information:

1. *The effective date of the closure of Latitude*
2. *The name(s) and contact information for the person(s) handling inquiries regarding the closure*
3. *The students' school districts of residence*
4. *How parents/guardians of all students, and all majority age and emancipated minor students, may obtain copies of student records and transcripts, including specific information on completed courses and credits that meet graduation requirements*

In addition to the four required items above, notification of the CDE shall also include:
1. *A description of the circumstances of the closure*
2. *The location of student and personnel records*

In addition to the four required items above, notification of parents/guardians of all students, and all majority age and emancipated minor students, shall also include:

1. *Information on how to enroll or transfer the student to an appropriate school*
2. *A certified packet of student information that includes closure notice, a copy of the student's cumulative record, which will include grade reports, discipline records, immunization records, completed coursework, credits that meet graduation requirements, a transcript, and state testing results*
3. *Information on student completion of college entrance requirements, for all high school students affected by the closure*

Notification of employees and vendors shall include:
1. *The effective date of the closure of Latitude*
2. *The name(s) and contact information for the person(s) handling inquiries regarding the closure*
3. *The date and manner, which shall be no later than 30 days from the effective date of the closure of Latitude, by which Latitude shall provide employees with written verification of employment*

Within 30 days of the effective date of closure, Latitude shall provide all employees with written verification of employment. Latitude shall send copies of such letters to the OCS.

Records Retention and Transfer

Latitude shall comply with all applicable laws as well as District policies and procedures, as they may change from time to time, regarding the transfer and maintenance of Latitude records, including student records. These requirements include:

1. *Latitude shall provide the District with original student cumulative files and behavior records, pursuant to District policy and applicable District handbook(s) regarding cumulative records for secondary and elementary schools, for all students, both active and inactive, of*

Latitude. Transfer of the complete and organized original student records to the District, in accordance with District procedures applicable at the time of closure, shall occur within seven (7) calendar days of the effective date of closure.

2. Latitude's process for transferring student records to receiving schools shall be in accordance with OUSD procedures for students moving from one school to another.

3. Latitude shall prepare and provide an electronic master list of all students to the Charter Schools Division in accordance with the District procedures applicable at the time of closure. This list shall include the student's identification number, Statewide Student Identifier (SSID), birthdate, grade, full name, address, home school/school district, enrollment date, exit code, exit date, parent/guardian name(s), and phone number(s). If the Latitude closure occurs before the end of the school year, the list also shall indicate the name of the school to which each student is transferring, if known. This electronic master list shall be delivered to the OCS in the form of a CD or otherwise in accordance with District procedures.

4. Latitude must organize the original cumulative files for delivery to the District in two categories: active students and inactive students. Latitude will coordinate with the OCS for the delivery and/or pickup of student records.

5. Latitude must update all student records in the California Longitudinal Pupil Achievement Data System (CALPADS) prior to closing.

6. Latitude must provide to the OCS a copy of student attendance records, teacher gradebooks, Latitude payroll and personnel records, and Title I records (if applicable). Personnel records must include any and all employee records including, but not limited to, records related to performance and grievance.

7. Latitude shall ensure that all records are boxed and clearly labeled by classification of documents and the required duration of storage in accordance with District procedures.

8. Latitude shall provide to the responsible person(s) designated by the governing board of Latitude to conduct all closure-related activities a list of students in each grade level and, for each student, a list of classes completed and the student's district of residence.

Financial Close-Out

After receiving notification of closure, the CDE will notify Latitude and the authorizing entity of any liabilities Latitude owes the state, which may include overpayment of apportionments, unpaid revolving fund loans or grants, and/or similar liabilities. The CDE may ask the County Office of Education to conduct an audit of the charter school if it has reason to believe that the school received state funding for which it was not eligible.

Latitude shall ensure completion of an independent final audit within six months after the closure of Latitude that includes:

1. An accounting of all financial assets. These may include cash and accounts receivable and an inventory of property, equipment, and other items of material value.
2. An accounting of all liabilities. These may include accounts payable or reduction in apportionments due to loans, unpaid staff compensation, audit findings, or other investigations.
3. An assessment of the disposition of any restricted funds received by or due to Latitude.

This audit may serve as Latitude's annual audit.

Latitude shall pay for the financial closeout audit of Latitude. This audit will be conducted by a neutral, independent licensed CPA who will employ generally accepted accounting principles. Any liability or debt incurred by Latitude will be the responsibility of Latitude and not OUSD. Latitude understands and acknowledges that Latitude will cover the outstanding debts or liabilities of Latitude. Any unused monies at the time of the audit will be returned to the appropriate funding source. Latitude understands and acknowledges that only unrestricted funds will be used to pay creditors. Any unused AB 602 funds or other special education funding will be returned to the District SELPA or the SELPA in which Latitude participates, and other categorical funds will be returned to the source of funds.

Latitude shall ensure the completion and filing of any annual reports required. These reports include but are not necessarily limited to:

1. Preliminary budgets
2. Interim financial reports
3. Second interim financial reports
4. Final unaudited reports

These reports must be submitted to the CDE and the authorizing entity in the form required. If EFC chooses to submit this information before the forms and software are available for the fiscal year, alternative forms can be used if they are approved in advance by the CDE. These reports should be submitted as soon as possible after the Closure Action, but no later than the required deadline for reporting for the fiscal year.

For apportionment of categorical programs, the CDE will count the prior year average daily attendance (ADA) or enrollment data of the closed Latitude with the data of the authorizing entity. This practice will occur in the first year after the closure and will continue until CDE data collection processes reflect ADA or enrollment adjustments for all affected LEAs due to the charter closure.

Disposition of Liabilities and Assets

The closeout audit must identify the disposition of all liabilities of Latitude. Latitude closure procedures must also ensure appropriate disposal, in accordance with Latitude's governing board bylaws, fiscal procedures, and any other applicable laws and regulations, of any net assets remaining after all liabilities of Latitude have been paid or otherwise addressed. Such disposal includes, but is not limited to:

1. Latitude, at its cost and expense, shall return to the District any and all property, furniture, equipment, supplies, and other assets provided to Latitude by or on behalf of the District. The District discloses that the California Education Code sets forth the requirements for the disposition of the District's personal property and Latitude shall bear responsibility and liability for any disposition in violation of statutory requirements.
2. The return of any donated materials and property in accordance with any terms and conditions set when the donations were accepted.
3. The return of any grant and restricted categorical funds to their sources according to the terms of the grant or state and federal law.
4. The submission of final expenditure reports for any entitlement grants and the filing of Final Expenditure Reports and Final Performance Reports, as appropriate.

If Latitude is operated by a nonprofit corporation, and if the corporation does not have any functions other than operation of Latitude, the corporation shall be dissolved according to its bylaws.

Latitude shall retain sufficient staff, as deemed appropriate by the EFC governing board to complete all necessary tasks and procedures required to close the school and transfer records in accordance with these closure procedures.

EFC's governing board shall adopt a plan for wind-up of Latitude and, if necessary, the corporation, in accordance with the requirements of the Corporations Code.

Latitude shall provide OUSD within fourteen (14) calendar days of the Closure Action with written notice of any outstanding payments due to staff and the time frame and method by which Latitude will make the payments.

Prior to final close-out, Latitude shall complete all actions required by applicable law, including but not limited to the following:

A. File all final federal, state, and local employer payroll tax returns and issue final W-2s and Form 1099s by the statutory deadlines.
B. File a Federal Notice of Discontinuance with the Department of Treasury (Treasury Form 63).
C. Make final federal tax payments (employee taxes, etc.)
D. File its final withholding tax return (Treasury Form 165).
E. File its final return with the IRS (Form 990 and Schedule).

This Element 15 shall survive the revocation, expiration, termination, cancellation of this Charter, or any other act or event that would end Latitude's authorization to operate as a charter school or cause Latitude to cease operation. Latitude agrees that, due to the nature of the property and activities that are the subject of this Charter, the District and public shall suffer irreparable harm should Latitude breach any obligation under this Element 16. The District therefore reserves the right to seek equitable relief to enforce any right arising under this Element 16 or any provision of this Element 16 or to prevent or cure any breach of any obligation undertaken, without in any way prejudicing any other legal remedy available to the

District. Such legal relief shall include, without limitation, the seeking of a temporary or permanent injunction, restraining order, or order for specific performance, and may be sought in any appropriate court.

ADDENDUM For EXISTING PROVIDERS

A. Curriculum & Instructional Design Supplement

1. Explain the organization's approach to replicating and implementing the school model, including curriculum and instructional design among multiple schools.

EFC currently operates 6 schools, 5 of them were district conversions and one was developed as a brand new start-up middle school. EFC is a place-based charter management organization. At the preK-8 level, EFC believes in providing high quality options within a neighborhood context to support neighborhood transformation. At the high-school level (with Latitude High being EFC's first high school), EFC believes that in order for students to be successful, they should be exposed to communities and experiences outside of their neighborhood and so seeks to develop a diverse by design high school.

EFC does not replicate existing schools. EFC operates a portfolio model where each school, in accordance with the needs of their school community, has the ability to design and implement unique programs (e.g. STEAM, Expeditionary Learning). Within this portfolio model, there are EFC non-negotiables, including rigor in alignment with the Common Core, a research-based instructional model, and standards-aligned benchmarks. The Home Office instructional team supports sites in developing their instructional model and supports the development of core instructional practice across all sites.

2. Describe any key educational features that will differ from the operator's or management provider's existing schools or schools proposed for replication, not already discussed above. Explain the rationale for the variation in approach and any new resources the variation would require.

Given that Latitude High will be EFC's first high school, the entire instructional model will differ from any existing EFC school. Latitude High will be a project-based competency-based high school. In order to design and implement a new model, EFC has hired an experienced and informed founding team with a strong instructional background, including a founding principal, Lillian Hsu, who was a principal for a High Tech High high school (a nationally known project-based CMO in San Diego) for six years. As described below in this addendum, the Latitude founding team will have responsibility for designing the Latitude instructional model and will rely on the existing EFC home office team for business and operational support.

B. Network Vision, Growth Plan, & Capacity

1. Describe the organization or network strategic vision, desired impact, and five-year growth plan for developing new schools within the local community, state and region, including other states if applicable. Include the following information, regardless of school location: proposed years of opening; number and types of schools (divisions, grade levels served); any pending applications; all currently targeted markets/communities and criteria for selecting them; and projected enrollments.

As indicated above, EFC is a place-based charter management neighborhood. EFC's vision is focused on serving the community, not growth. EFC is currently dedicated to serving the Fruitvale and Deep East Oakland communities. EFC does not have plans to operate outside of the Oakland, California region. In SY17-18, EFC leadership and Board will engage stakeholders in developing our next 3-year strategic plan for the SY18-19 to SY20-21 timeframe; part of this strategic visioning will including developing EFC's growth strategy. Historically, EFC has committed to developing a strong preK-12 pipeline in both the Fruitvale and Deep East Oakland communities, but at this point, EFC has not committed to a specific growth plan for the next five years. As part of the strategic planning process, EFC will determine appropriate greenlighting mechanisms around growth decisions. The development of Latitude as EFC's first high school was established as part of the vision of the existing strategic plan (SY15-16 to SY17-18). In light of the lift of the ongoing work to truly implement and excel in the implementation of Common Core and NGLC standards at our preK-8 schools and in light of the larger portfolio conversations taking place across Oakland, EFC is likely to be much more conservative in its growth strategy in the next strategic plan.

2. If the existing portfolio or growth plan includes schools in other districts, explain specifically how OUSD fits into the overall growth plan.

N/A. EFC does not plan to grow in other districts.

3. Provide evidence of organizational capacity to replicate and operate high-quality schools in OUSD and elsewhere in accordance with the overall growth plan. Include the organization's annual reports for the last two years and any current business plan for the organization or network. Outline specific timelines for building or deploying organizational capacity to support the proposed schools.

EFC intends to be intentional about growth and as indicated above, will be developing a growth plan as part of EFC's upcoming Strategic Planning work. EFC last grew in SY14-15 when it added Epic Middle School. Prior to adding Epic, EFC restructured and grew its Instructional Team, including adding a Chief Academic Officer position (responsibilities which were previously split by various staff). At the advisement of critical thought partners and consultants, over the past three years, EFC Home Office has built out a more robust and strategic Instructional Leadership Team and Business and Operations Team, iterating to build a much more robust support infrastructure for our schools. The Business and Operations Team is now focused on day-to-day operational management of sites. Strategic initiatives, strategic planning, organizational culture, and organizational accountability and data monitoring is now owned by a Chief Strategy Officer, to ensure strategic initiatives do not distract the CAO and COO from the work of supporting existing schools.

The Business and Operations team has the greatest retention at every level and continues to be our strongest department. Financial audits, our healthy financial reserves, our strength with respect to legal and operational compliance, and our high ratings with respect to operational and facilities support (as measured by staff and family surveys) speaks to a strong Business and Operations team.

We have done the most work iterating on the Instructional Leadership Team which now includes a Director of Middle Schools, a Director of Early Elementary, a Director of Upper Elementary and a Director of Assessment Data and Accountability. Most recently, EFC was selected to participate in the Achievement First Charter Network Accelerator, an intensive partnership with Achievement First to leverage national best practices around instructional improvement and organizational alignment. Learnings from the Accelerator this past year has led to significant inquiry and iteration of roles and responsibilities at the Home Office level (including the creation of the Chief Strategy Officer) and to our overall approach to planning and prioritization around instructional improvement. Greater detail around this inquiry is provided below.

We at EFC are honest about the work we have to do to ensure strong academic outcomes for all of our students, and we are honest about the fact that we are NOT there yet. We are not putting forward an argument that we should replicate any of the EFC schools at this juncture as none are performing at the levels we desire. We have obviously not managed high school programs previously. However, we do believe that the current EFC Home Office team has organizational capacity to operationally launch and support a new high school that has strong programmatic leadership on its founding team. We recruited Aaron Townsend as our high school design team leader because he has strong high school design experience. We recruited a team, including an experienced principal, from High Tech High because we knew they would bring strong high school design and implementation experience. We also recruited Jamie Marantz as our Director of Middle Schools because she comes with strong secondary experience, including high school experience. We believe this team has tremendous capacity to design and implement an incredibly high capacity high school for Oakland. We also believe that the EFC governing board is a high capacity board who can effectively govern Latitude, the business and operations team has a high level of capacity to support the business and operations needs of Latitude, the EFC leadership development team has the capacity to support the site leadership, and the Department of Student Support Services has the capacity to manage the MTSS implementation at Latitude. These areas (governance, business and operations, leadership development, and student support services have been and continue to be areas of strength at the existing EFC schools as measured by staff and parent survey data, by our financial and compliance audits, and as indicated by our authorizers.

Please see appendix C1 for EFC's current Strategic Plan. EFC does not produce annual reports but has provided data on academic outcomes in Section 1 of the petition and has provided annual audits in a later section of this addendum.

4. Discuss the results of past replication efforts and lessons learned – including particular challenges or troubles encountered; how you have addressed them; and how you will avoid or minimize such challenges for the proposed schools.

While EFC has not replicated schools, EFC has learned from past growth efforts, particularly around launching innovative models. With the experience of designing and opening Epic, EFC has learned lessons regarding timing and the resources required to start a brand new innovative school. Based on lessons learned, EFC made the following choices regarding Latitude:

1. Worked with external partners, including a dedicated and experienced consultant, to design the Latitude framework two years prior to opening.
2. Hired an experienced founding team dedicated solely to designing and developing Latitude, more than a year prior to opening.
3. Hired a founding team with tangible experience in designing and developing an innovative school model and supported the founding team by hiring a dedicated project manager.
4. Latitude intends to start small - with just 50 students. This phased approach to growth at Latitude will provide the team with more flexibility to develop and iterate on systems than if they had started with a full cohort of students. In addition, Latitude will be operating a small pilot in the year prior to opening to test and iterate on their design ideas.

5. Discuss the greatest anticipated risks and challenges to achieving the organization's desired outcomes in OUSD over the next five years and how the organization will meet these challenges and mitigate risks.

As described in the petition, while the model and idea of Latitude builds on existing high quality school models, the entirety of the Latitude model is a new concept, especially within the context of Oakland. One anticipated challenge is getting the model right; EFC is mitigating risks by hiring a quality founding team with experience in developing and implementing innovative instruction and by explicitly partnering with similarly-minded experienced organizations like Big Picture Learning for support. One additional challenge will be developing and sustaining a diverse by design school population. As described in the petition, no high school in Oakland fully reflects the diversity of Oakland. Given this context, EFC will be intentionally embarking upon a city-wide engagement plan to build support for the Latitude model and to make connections across many different groups. We are also putting forward admissions processes that facilitate maximum diversity from across the city. Like most organizations, EFC understands the critical importance of hiring quality teachers and the human capital challenge that all schools face. However, Latitude has already developed a relationship with High Tech High and their Graduate School of Education about serving as a talent pipeline. This is a resource and partnership not readily available to most Oakland schools, and we are excited to consider an Oakland partnership/pipeline with the HTH Graduate School for Latitude and other Oakland public schools. In terms of funding and political challenges that impact all schools, it is difficult to predict what those will all be, but EFC leadership is well versed in dealing with these challenges and EFC is seen as a city-wide leader in working with the entire sector to navigate these challenges.

Network Management

1. Identify the organization's leadership team and their specific roles and responsibilities.

Photo	Name	Main Responsibilities
	Adam, Larissa, Chief Talent Officer	Manage Human Capital priorities, including Recruitment, Onboarding, Retention, Performance Management / Talent Development, Compensation, & Offboarding.
	Bradley, Noah, Chief Academic Officer	Manage Instructional priorities, including Instructional Design, Curriculum and Assessment, Interventions, Teacher Development, Data Management, & Data Inquiry
	Chari, Sundar, Chief Strategy Officer	Manage cross-functional Strategic priorities, including Strategic Plan Development, Site Planning, Executive Team Functioning, Communications, Facilities Planning, & Growth
	Harvey, Fabiola, Chief Operating Officer	Manage Operations priorities, including Human Resources, Accounting & Budget Management, Technology, Student Recruitment, Site Operational Support, & Facilities Maintenance
	Nguyen, Jennifer, Chief of Leadership Development	Manage Leadership Development priorities including: Site Leader Management, Site Leader Development, Site Systems & Structures Development, & Family Engagement
	Thomas, Hae-Sin, Chief Executive Officer	Manage Executive priorities, including Strategic Plan Implementation, Student Support Services, Organizational Improvement Strategy, Development, and External Relations

2. Explain any shared or centralized support services the network organization will provide to schools in OUSD. Describe the structure, specific services to be provided, the cost of those services, how costs will be allocated among schools, and specific service goals. How will the organization measure successful delivery of these services? (In the case of a governing board *proposing to contract with a management organization, service goals should be outlined in the term sheet and draft contract.)*

The EFC Home Office provides the following services to all of our school sites:

- Financial management and planning
- Human resources - recruitment, selection, on-boarding, processing, credentials management, legal, evaluation systems, coaching, progressive discipline
- Risk management
- Special education services; student support services
- Annual site planning facilitation and progress monitoring
- Authorizer point of contact and management
- Compliance management - federal, state, authorizer
- Development of instructional frameworks
- Development and monitoring of assessments systems
- Student information systems; attendance accounting
- Family leadership
- Student recruitment, enrollment systems
- Governance - board management
- Instructional coaching, professional development support
- Leadership selection, management, and development - teacher leaders, administrators, operational leaders
- Community outreach and partnership management
- Fundraising and development
- IT, facilities planning and maintenance, custodial
- Operations support at school sites
- Contract and vendor management
- Crisis management
- Emergency planning and safety
- Nutrition services
- New teacher support and induction

Please see the Home Office org chart for detail on how EFC is structured to support sites. While EFC differentiates the support provided to sites based on level of experience of the site administration and level of overall need, EFC currently charges all existing sites a 14% Home Office fee. EFC has not prioritized having the capacity to measure the amount of differentiated support that each site receives, but this is something that EFC will be reviewing in future years. EFC provides a Home Office survey to all sites every year to measure satisfaction in specific areas of support (e.g. HR, Tech, Facilities, Coaching, etc.). Department targets are tied to the survey data.

Latitude will have a slightly modified relationship with the EFC Home Office with much greater responsibility over its instructional program, professional development for teachers, assessment systems and school culture systems since it is our only high school. As such, Latitude will have a decreased Home Office fee. To determine the appropriate fee, EFC Home Office will track the support Latitude receives in hours relative to an "average" EFC school.

3. Using the table below, summarize school- and organization-level decision-making responsibilities as they relate to key functions, including curriculum, professional development, culture, staffing, etc.

Function	**Network/Management Organization Decision-Making**	**School Decision-Making**
Performance Goals	EFC leadership will review performance goals on a regular basis and hold Latitude leadership accountable.	Latitude Leadership will define specific performance goals and measures and develop strategy to meet performance goals.
Curriculum	EFC leadership will review curricula choices on a regular basis and hold Latitude leadership accountable for alignment to the approved charter..	Latitude leadership will review, select, and support implementation of all curricula.
Professional Development	EFC operational and instructional staff regularly provide organizational-level PD. Latitude staff will be able to opt in as appropriate.	Latitude leadership will provide (either directly or via securing external support) professional development for both instructional and classified staff.
Data Management and Interim Assessments	EFC data team will support management and implementation of the EFC student information system - (e.g. demographics, attendance, behavior, state assessment data, compliance-related data)	Latitude leadership will review, select, and support implementation of all interim assessments. Latitude leadership will manage Latitude-specific data (e.g. standards mastery, student reflections, etc.). If needed, Latitude leadership will help select data management platform for specific high school data and management support would be split between Latitude and EFC.
Promotion Criteria	EFC leadership will approve promotion criteria.	Latitude leadership will define promotion criteria for HS students.

Culture	EFC leadership will review and approve cultural and behavioral	Latitude leadership will develop and define cultural and behavioral norms, systems, and consequences.
Budgeting, Finance, and Accounting	EFC finance team will create and manage Latitude's budget and expenses in alignment with EFC financial policies for all its schools. EFC will manage financial audits and ensure accountability of expenses.	Latitude leadership will determine spending priorities and decisions and manage budget during school year.
Student Recruitment	EFC leadership will approve recruitment targets.	Latitude leadership develops and implements student recruitment plan.
School Staff Recruitment and Hiring	EFC talent team will approve position control and allow Latitude to leverage existing recruitment relationships (e.g. Edjoin, LinkedIn, etc.)	Latitude leadership develops and implements Latitude staff recruitment and hiring plans.
H/R Services (payroll, benefits, etc)	EFC HR team will provide HR services to all Latitude staff.	
Development/ Fundraising	EFC leadership will support as needed.	Latitude leadership share responsibility for developing fundraising goals and meeting fundraising targets.
Community Relations	EFC leadership will support as needed.	Latitude leadership is responsible for developing community relations, including parents and external partners.
I/T	EFC IT staff will provide IT support for Latitude staff and students.	Latitude leadership will have capacity to manage low-level IT issues at site-level.
Facilities Management	EFC leadership will support facilities acquisition, development, and maintenance.	

Vendor Management / Procurement	EFC finance staff will finalize contracts and manage accounts payable and receivable.	Latitude leadership will manage all non-procurement vendor relations.
Special Education	EFC Special Ed staff will manage the special ed services that Latitude students receive.	Latitude leadership will work with EFC leadership to implement the special ed program.

*4. Provide the following **organization charts**:*
· Year 1 network as a whole (including both network management and schools within the network)
· Year 3 network as a whole
· Year 5 network as a whole
The organization charts should clearly delineate the roles and responsibilities of – and lines of authority and reporting among – the governing board, staff, any related bodies (such as advisory bodies or parent/teacher councils), and any external organizations that will play a role in managing the schools. The school-level organization charts should likewise present clear lines of authority and reporting within the school. If the school intends to contract with a charter management organization or other education management provider, clearly show the provider's role in the organizational structure of the school. Explain how the relationship between the governing board and school administration will be managed.

The EFC Board of Directors directly manages the CEO. The CEO manages the Home Office Leadership team. A member of the Leadership Team directly manages the Principal. The Principal manages site level staff, either directly or via a direct report.

Please see appendix C2 for organization charts.

Network Governance & Legal Status
1. Describe the governance structure at both the network and individual school levels and the plan for satisfying all applicable statutory and authorizer requirements for composition of charter school governing boards. Explain whether each school/campus will have an independent governing board, whether there will be a single network-level board governing multiple schools, or both a network-level board and boards at individual schools. If there will be both a network-level board and boards at each school, describe the organizational relationship between the boards, the legal status of each board, and the scope of authority of each. If each school will have an independent governing board but no network-level board, explain how the network will be governed and how decisions that affect the network as a whole will be made.

Latitude shall be a directly funded charter school and will be operated by the California non-profit public benefit corporation, Education for Change (EFC), pursuant to Education Code

Section 47604. Education for Change, Inc., is a California nonprofit 501(c)(3) corporation incorporated in 2005 which currently manages six charter schools in addition to Latitude. The charter applicant and holder for all EFC schools is the Board of Directors of EFC, which operates in accordance with its adopted corporate bylaws, which shall be maintained to align with the charter and applicable law. The EFC Board has authority to greenlight Latitude's charter, and maintains authority to approve annual Latitude plans and Latitude budgets and to evaluate Latitude performance in accordance with defined Key Performance Indicators, which shall be determined. The Board of Directors directly manages the CEO of EFC; the CEO, via a Leadership Team, manages the EFC Home Office. The EFC Home Office is responsible for directly supervising school principals and supporting all EFC schools, including Latitude. EFC provides differentiated support to its schools.

2. If the existing board will govern the proposed school(s), discuss the plan to transform that board's membership, mission and bylaws to support the charter school expansion/replication plan. Describe the plan and timeline for completing the transition and orienting the board to its new duties. If a new board will be formed, describe how and when the new board will be created and what, if anything, its ongoing relationship to the existing non-profit's board will be.

The existing board has capacity to support Latitude. Please see Element 4 in the petition for further information on the EFC Governing Board.

3. Describe plans for increasing the capacity of the governing board. How will the board expand and develop over time? How and on what timeline will new members be recruited and added, and how will vacancies be filled? What are the priorities for recruitment of additional board members? What kinds of orientation or training will new board members receive, and what kinds of ongoing development will existing board members receive? The plan for training and development should include a timetable, specific topics to be addressed, and requirements for participation. If there will be a network-level board, identify any board development requirements relative to the organization's proposed growth and governance needs.

The EFC Governing Board will continue to receive regular training. There are no current plans to increase the capacity of the governing board (see previous question). Please see Element 4 in the petition for further information on the EFC Governing Board. Numerous members of the EFC Governing Board have either board experience or senior leadership experience with charter operators who manage high performing high schools.

4. Explain how the interests of individual schools will be balanced with network interests and how key stakeholders will be represented.

EFC has various structures to support input from multiple stakeholders and to promote collective ownership and responsibility. Key structures promoting two-way communication at the organizational-level (w/ corollaries at the site-level to scaffold input) include an Admin Advisory Committee (made up of selected principals, assistant principals and deans), Staff Leadership Council (made up of at least two reps from each site - both teachers and operational staff), and a Family Leadership Council (made up of a Parent Leadership Coordinator and two parents from each site). During the annual site planning process, sites have authority to identify their priorities, practices, and plans for the upcoming year. These plans are approved by the EFC Governing Board, and site leaders often work with Home Office leadership to develop these plans, such that there is alignment between individual schools and network interests. Overall, communication and a strong working relationship are key to balancing interests.

5. Explain how this governance structure and composition will help ensure that a) the school will be an educational and operational success; and b) the board will evaluate the success of the school and school leader.

EFC believes that clear lines of accountability and support will ensure success. The lines of support were identified in the 'Decision-making' table above. Latitude will be held accountable to meeting performance targets. The EFC Governing Board regularly reviews school data (a Governing Board Student Outcomes Committee meets after each assessment window to analyze school performance) and will hold EFC leadership responsible for site performance.

Network Leadership Pipeline

1. Describe the operator's current or planned process for sourcing and training potential school leaders for schools opening in subsequent years. Explain how you have developed or plan to establish a pipeline of potential leaders for the network as a whole. If known, identify candidates already in the pipeline for future positions.

As indicated above, EFC does not currently have plans to open schools in subsequent years. EFC connects with multiple partners (e.g. New Leaders) to support identifying new school leaders and via EFC's Leadership Development priority, supports the development of internal candidates as well. EFC had 8 site leader vacancies (including new Assistant Principal positions) for the SY17-18 school year. All were filled prior to the start of SY17-18, with 7 of the 8 filled during Spring of SY16-17. 2 of the new site leaders were previously EFC Instructional Coaches or teachers. Specific to Latitude, we will be partnering with the HIgh Tech High Graduate School of Education to both train leaders and teachers and to recruit trained leaders and teachers.

Network-wide Staffing

1. Complete the following table indicating projected staffing needs for the entire network over the next five years. Include full-time staff and contract support that serve the network 50% or more. Change, add or delete functions and titles as needed to reflect organizational plans.

As indicated above, EFC will be developing a growth plan as part of upcoming Strategic Planning work. The table below reflects our current state as EFC has not committed to a specific growth plan for the next five years.

Year	**Year 1 (SY17-18)**	**Year 2**	**Year 3**	**Year 4**	**Year 5**
Number of elementary schools	5	5	5	5	5
Number of high schools	0	1	1	1	1
Number of middle schools	1	1	1	1	1

Total network FTEs	**356**	**359.5**	**363.5**	**368.5**	**374.5**

Network Performance Management

1. Describe the educational and organizational academic goals and targets and what systems will be used to monitor the academic progress – of individual students, student cohorts, each school, and the network as a whole – throughout the school year, at the end of each academic year, and for the charter term.

At the organizational level, EFC holds itself accountable to annual Key Performance Indicators. For SY17-18, these metrics are 'Average Distance from Met Standard' in ELA and Math (SBAC outcomes), ‘On-Track to 3rd Grade Reading Proficiency’ (DRA outcomes), ‘Chronic Absence Rate’, and ‘Suspension Rate’. English Language Learner Proficiency was previously another KPI (and will be in SY18-19), but in SY17-18, the State is establishing a new EL assessment. For each of these metrics, EFC sets organizational targets and targets for each school site. Where possible, EFC has aligned to the new State Accountability Framework to increase coherence across the systems. For example, a sample target for the Math KPI is for all sites to be at Green or ‘Increased Significantly’. After each trimester, each site has a ‘Data Talk’ with home leadership to analyze interim metrics and iterate on strategy as needed. For example, last year, based on interim assessment data, the focus of teacher PD at one site shifted to focus more on close reading. Besides this formal structure, sites engage in progress monitoring, throughout the year & set targets at the classroom- and student-level. The EFC Instructional team provides data and assessment tools and PD for analyzing and using data. EFC uses Schoolzilla as a tool to provide real-time data on Chronic Absences (broken out by subgroup) and Suspensions. Ultimately, EFC is accountable for outcomes for the duration of the charter term, and the Board and the EFC leadership team review key outcomes on an annual basis with that long-term outlook. Overall, EFC is accountable to student outcomes and sets up aligned structures within a review and improvement cycle to support this organizational focus.

2. Describe the organization’s approach to academic underperformance for schools that fall short of student academic achievement expectations or goals at the school-wide, classroom, or individual student level. What actions will you take if the network as a whole fails to meet these goals?

At the organizational level, EFC has shifted its approach to allocating resources, moving away from the concept of priorities to the concept of “wins.” Senior leadership recognized that while the organizational departments were working hard towards its priorities, the departments were not aligned in its foci and that scarce resources were spread thin across too many schools, too many initiatives, and too many grade levels. This year, we received our organizational data to identify gaps. We research national best practice around Common Core instruction, looking for operators and schools delivering accelerated outcomes consistently on SBAC and PARRC serving a similar demographic. Based on that research, EFC identified four strategic “wins” to drive accelerated academic outcomes in gap areas –

- TK-1 Literacy - Implementing a research-based TK-1 balanced literacy program that uses cycles of data inquiry to provide targeted and ongoing in-class interventions and leverages a more language-rich, rigorous core curriculum for reading instruction (across all sites)
- 2-5 Math Story Problems - Piloting Achievement First’s math story problems curriculum and teacher training systems at graders 2-5 at Cox and Achieve to build students’ habits around problem solving and to build teachers’ habits around facilitating problem solving
- 6-8 Math - Adopting Open Up Resources and leveraging the teacher training systems at Achievement First at Epic to to build students’ habits around problem solving and to build teachers’ habits around facilitating problem solving; partner with Leadership Public Schools to implement Navigate Math as a personalized math intervention in 8th grade
- 6-8 School Culture - Leveraging the Valor (Nashville-based middle school operator) approach to building school culture, developing and implementing a school culture

playbook that aligns teacher culture moves and clarifies Heroes' expectations; implementing a 6-week strong start that supports ALL teachers getting Real Time Coaching so all classrooms are rigor-ready by week 7

All resource allocation decisions - financial, human capital, and time - were made towards achieving victory on these targeted wins. Clear benchmarks and a dashboard were developed to track and monitor success on these wins and to ensure mitigations take place immediately should we fall short on anticipated benchmarks. Senior leadership time is driven by these initiatives, and each initiative has a seasoned and experienced project manager to ensure the wins have adequate management support. Professional learning time and human capital resources have been driven towards these wins and pilots.

In addition, as part of the school-level site planning process, all schools were required to undertake a data inquiry cycle to identify gaps and then to identify wins. Some schools adopted some of the the EFC wins because there were aligned needs/gaps, and others adopted site level wins.

3. Discuss how the organization assesses its readiness to grow and under what circumstances the organization will delay or modify its growth plan.

While the overall growth strategy will be developed as part of EFC's strategic planning process, EFC will review all growth decisions within the context of current conditions. The EFC Board worked with EFC leadership to establish a greenlighting process to assess EFC's readiness to grow. The rubric outlining the metrics on which the Board would greenlight growth is shared below. Note that Latitude met the established criteria.

Part I: Requires at least 3 out of 4 points to move forward for further consideration.

Criteria:	**Poor Fit**	**Moderate**	**Attractive**
Academic Outcomes	EFC sites are red or orange on 67% or more on the ELA and Math state performance framework dashboard indicators.	EFC sites are red or orange on 33-66% of the ELA and Math state performance framework dashboard indicators.	EFC sites are red or orange on 0-33% of the ELA and Math state performance framework dashboard indicators.
Fiscal Soundness	This school would be a long term drain on the EFC reserve target and/or 5-year projections have been rejected by the EFC Board.	This school could be a short term drain on the EFC reserve target. 5-year projections have been reviewed and approved by the EFC Board.	This school would not be a drain on the EFC reserve target. 5-year projections have been reviewed and approved by the EFC Board.

Part II: Requires at least 9 out of 12 points to be approved.

Criteria:	**Poor Fit**	**Moderate**	**Attractive**
Mission:	There is a low need for	There is moderate need	This school alternative

Student Need (0-2)	this kind of school alternative in Oakland. This school might enroll fewer than 30% F/R lunch students.	for this type of school alternative. This school alternative will attract a somewhat diverse population.	will attract a significantly diverse population. Oakland needs this type of school alternative.
Mission: Likelihood of catalyzing change (0-2)	EFC is unlikely to make significant impact on the local district and students with this school type.	EFC has the potential to make a positive impact on traditional public schools and students in Oakland.	EFC will make a significant impact on Oakland public schools and offer a new choice for Oakland students.
Contribution to facilities portfolio target (0-2)	This school would be a significant drain on EFC's facility portfolio target (greater than 12% occupancy cost). There is no facility identified or available from the district, and there are significant facility requirements for this school alternative. Prop 39 and Prop 47 funds would not be likely available.	This school could be a short term drain on the EFC facility portfolio target. This school alternative does not require a significant footprint, and there is at least one possible facility available that is both suitable and affordable.	This school would not be a drain on the EFC facility portfolio target. There are suitable and affordable facilities available.
Capacity to execute (0-2)	There is no founding leader or team identified, and there is a weak talent pool for the staff needed to execute this school alternative. The launch of the school would be a significant drain on current EFC leadership.	There is a founding leader and/or team identified. However, they will require a moderate amount of support from EFC leadership to launch the school.	There is a high capacity leader and team identified to lead the execution and launch of this school alternative. The launch of the school would require minimal time from current EFC leadership.
Availability of philanthropic funding (0-2)	There are no gifts available to fund new school startup costs. State startup funds are not available at this time. Local foundations are less interested in funding this school. Community and business leaders tend to be parsimonious in giving. This school is not likely to draw donors from outside the area.	EFC's standard funding sources would be sufficient to fund school startup costs. State startup funds will be available. Local foundations and individuals give consistently and sometimes in large amounts. The project may draw donors from outside the area.	This school would likely draw new donors to EFC, both for startup and Home Office. State startup funds are available. Local foundations and individuals would give consistently and have a history of major gifts. The project will draw national donors.

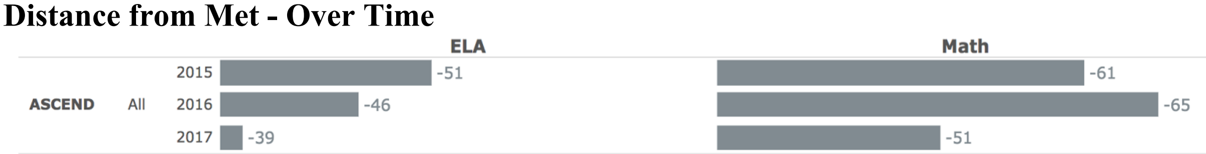
Favorable chartering environment (0-2)	Oakland and Alameda County are currently adversarial and actively anti-charter as evidenced by recent EFC charter petitions, and is likely to remain so. Charter would have to be sponsored by the state.	Oakland and Alameda County are currently generally neutral to hostile for most operators; however, EFC is likely to be approved locally or at the county. Oakland may be willing to provide transportation, food or other services for a fee if we desire.	Oakland and/or ACOE is supportive of EFC charters, and is likely to remain so over the next several years. There is significant political support. District or County is likely to provide additional services.

C. Performance Evaluation Information

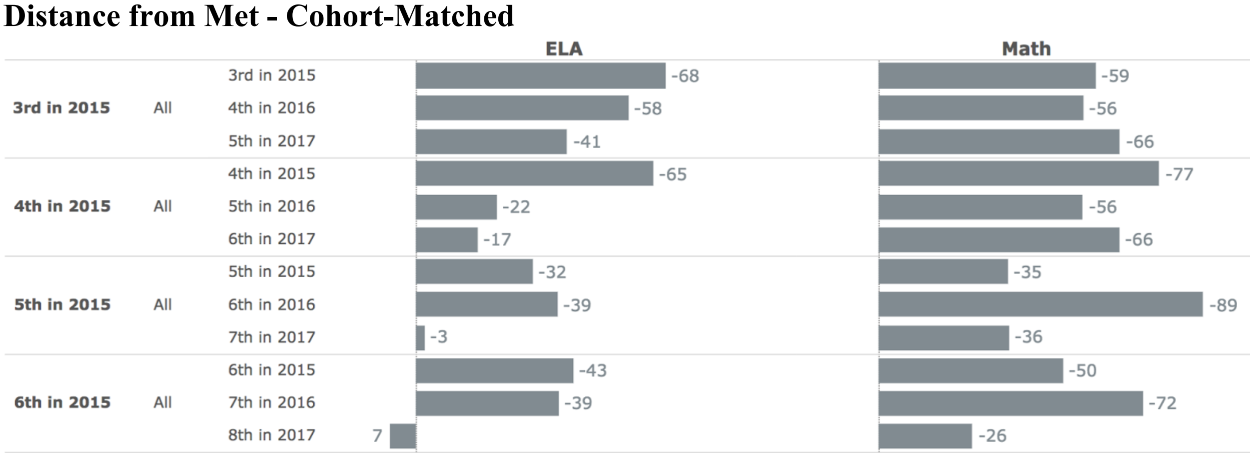
B1. Select one or more of the consistently high-performing schools that the organization operates, and discuss the school's performance. Be specific about the results on which you base your judgment that the school is high-performing. Include student achievement status, growth, absolute, and comparative academic results, as available.

For this exercise, we have selected ASCEND though we truthfully feel ASCEND has yet to earn a status of being considered "high-performing" at a statewide or national level. Locally, ASCEND students are amongst the higher performing relative to similar schools in Oakland and continue to make steady growth year after year since the launch of the Common Core standards. The data below reflects preliminary 16-17 CAASSP data and shows a generally positive trend in ELA and a positive trend emerging in Math, especially at the middle school level.

Distance from Met - Over Time



Distance from Met - Cohort-Matched



On the CAASSP ELA assessment for 2015-16, among Fruitvale elementary schools serving at least 40% English Language Learner and 85% Free and Reduced Lunch in grades 3-5, ASCEND ranks 2nd out of 10 schools in proficiency and outperforms Global Family by 4 percentage points, the OUSD school the ASCEND students would have otherwise attended.

% EL	% FRL	School Name	% Met/Exceed	Rank	Operator Name
46%	91%	Learning Without Limits	31%	1	Education for Change
63%	**90%**	**ASCEND**	**22%**	**2**	**Education for Change**
57%	94%	Aspire Eres Academy	22%	3	Aspire
59%	92%	Lazear Charter Academy	19%	4	Education for Change
43%	93%	Manzanita Community	18%	5	Oakland Unified School District
81%	**96%**	**Global Family**	**18%**	**6**	**Oakland Unified School District**
59%	87%	Think College Now	15%	7	Oakland Unified School District
82%	89%	International Community	15%	8	Oakland Unified School District
70%	96%	Achieve Academy	15%	9	Education for Change
46%	87%	Fruitvale Elementary	12%	10	Oakland Unified School District

On the CAASSP Math assessment, among Fruitvale elementary schools serving at least 40% English Language Learner and 85% Free and Reduced Lunch in grades 3-5, ASCEND ranks 2nd out of 10 schools in proficiency and overperforms Global Family by 9 percentage points, the OUSD school the ASCEND students would have otherwise attended.

% EL	% FRL	School Name	% Met/Exceed	Rank	Operator
46%	91%	Learning Without Limits	27%	1	Education for Change
63%	**90%**	**ASCEND**	**23%**	**2**	**Education for Change**

70%	96%	Achieve Academy	19%	4	Education for Change
82%	89%	International	17%	6	Oakland Unified School

		Community			District
59%	87%	Think College Now	16%	7	Oakland Unified School District
43%	93%	Manzanita Community	16%	8	Education for Change
59%	92%	Lazear Charter Academy	15%	9	Lazear Charter Academy
81%	**96%**	**Global Family**	**14%**	**10**	**Oakland Unified School District**
46%	87%	Fruitvale Elementary	6%	11	Oakland Unified School District

On the CAASSP ELA assessment, among Fruitvale middle schools serving at least 40% English Language Learner and 85% Free and Reduced Lunch, ASCEND's middle school ranks 4th out of 6 schools in proficiency and outperforms United for Success by 17 percentage points and underperforms Urban Promise Academy by 1 percentage point, the two OUSD schools the ASCEND students would have otherwise attended. Preliminary data for 16-17 has 44% of ASCEND's middle schools students performing at Met/Exceed, indicating a sizable jump in proficiency from 15-16 to 16-17.

% EL	% FRL	School Name	% Met/Exceed	Rank	Operator
57%	94%	Aspire Eres Academy	35%	1	Aspire Public Schools
46%	**95%**	**Urban Promise Academy**	**29%**	**2**	**Oakland Unified School District**
59%	92%	Lazear Charter Academy	29%	3	Education for Change

41%	90%	Epic Charter	15%	5	Education for Change
41%	**88%**	**United For Success Academy**	**11%**	**6**	**Oakland Unified School District**

On the CAASSP Math assessment, among Fruitvale schools serving at least 40% English Language Learner and 85% Free and Reduced Lunch in grades 6-8, ASCEND ranks 2nd out of 6 schools in proficiency and outperforms United for Success by 15 percentage points and outperforms Urban Promise Academy by 7 percentage points, the two OUSD schools the ASCEND students would have otherwise attended. Preliminary data for 16-17 has 31% of ASCEND's middle schools students performing at Met/Exceed, indicating a huge jump in proficiency from 15-16 to 16-17.

% EL	% FRL	School Name	% Met/Exceed	Rank	Operator
57%	94%	Aspire Eres Academy	29%	1	Aspire Public Schools
63%	**90%**	**ASCEND**	**21%**	**2**	**Education for Change**

46%	**95%**	**Urban Promise Academy**	**14%**	**4**	**Oakland Unified School District**
41%	90%	Epic Charter	8%	5	Education for Change
41%	**88%**	**United For Success Academy**	**6%**	**6**	**Oakland Unified School District**

- *Discuss the primary causes to which you attribute the school's distinctive performance.*

ASCEND has several strengths to leverage in its more rapid transition to the Common Core.

- Steady and consistent leadership or thoughtful leadership transitions
- Stable core of experienced teachers
- Innovative growth mindset that pushed them to leverage design thinking processes to revision themselves and adopt a more personalized learning approach

Over the past three years, ASCEND has engaged in a revisioning process focused on the rigor of the Common Core. Leveraging a Next Generation Learning Challenge grant, ASCEND adopted and implemented personalized learning structures across its classrooms over the past two years, including:

- Multi-aged classrooms
- Personalized learning plans
- Cross-grade small group learning structures
- Teach To One in middle school math
- Implementation of multiage CREW for advisory
- Team teaching
- Integration of technology to facilitate personalized playlists, adaptive software

ASCEND's new approach has been particularly effective at the upper grades where personalization has drive greater agency and engagement. At the lower grades, particularly in early literacy, we continue to see flat data. Thus, ASCEND is engaging with the other EFC elementary schools in the implementation of the TK-1 balanced literacy win. We believe that their focus this year on early literacy will drive a much stronger foundation from which a relatively strong upper elementary/middle school program can build.

- *Discuss any notable challenges that the school has overcome in achieving its results.*

ASCEND's greatest challenge, like many urban schools across the state, is middle school staffing. Across all of our schools, EFC has struggled with recruiting and retaining high quality single subject teachers for our middle schools, particularly in mathematics. To address this, EFC has created significant signing bonuses for math and science teachers, and we have brought on board a Director of Middle Schools to ensure teachers receive intense support. ASCEND adopted Teach To One as a mitigation of newer math teachers, believing that newer teachers needed more collaboration and a more scaffolded curriculum/model. TTO allows the ASCEND teachers to focus less on planning and more on data analysis and implementation. Math outcomes have skyrocketed this year, and we believe that TTO adoption has both enabled retention and facilitated acceleration. ASCEND has also brought on board a dedicated middle school assistant principal to ensure middle school youth and teachers receive adequate support.

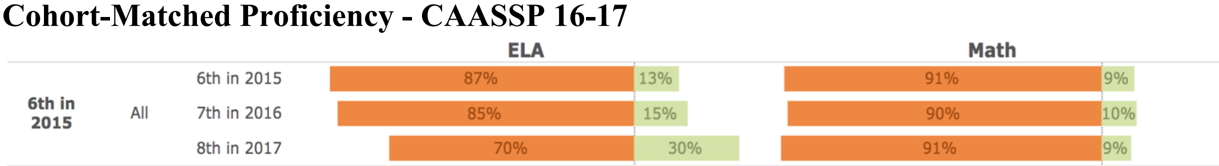
- *Identify any ways in which the school's success has informed or affected how other schools in the network operate. Explain how the effective practice or structure or strategy was identified and how it was implemented elsewhere in the network.*

It is with the 16-17 CAASP outcomes that ASCEND really starts to stand out amongst the EFC schools because it has shown accelerated growth from 14-15 to 16-17. We had looked at ASCEND's practices around personalization to inform our thinking at Lazear this past year, but again, we were in pause as ASCEND had piloted its personalization strategies in 15-16 and had gone schoolwide in 16-17. Now that ASCEND's results continue to climb, we are how analyzing where there was success and where we can learn for 18-19 planning. This is also a strategic planning year for EFC, and as part of our strategic planning, we will be doing a few targeted deep dives to better understand our current results. First, we will deeply analyze a school that has stabilized, retained leadership and teachers but has made incremental growth. Then, we will analyze classrooms, grades, or content areas across the organization that are making significant growth to analyze the practices. This analysis will inform our strategic initiatives moving forward.

2. Select one or more of the organization's lowest-performing schools and discuss the school's performance. Be specific about the results on which you base your judgment that performance is unsatisfactory. Include student status, growth, absolute, and comparative academic results, as available.

Epic Middle School is currently our underperformer. We look at cohort- matched CAASSP performance over time because Epic has been growing every year and backfilling significant numbers of students of the past three years. Epic is now going into its fourth year, and while we are seeing some growth in ELA, we are not seeing the growth in mathematics, and as indicated in the comparison data shared above, Epic is an underperformer in the Fruitvale.

Cohort-Matched Proficiency - CAASSP 16-17



Cohort-Matched Distance from Met - CAASSP 16-17

- *Describe the primary causes to which you attribute the school's underperformance.*

Epic launched with an incredibly challenging model to implement, and the design required strong and experienced leadership. While Epic had visionary leadership, our site leaders selected to launch Epic lacked experience in implementing such a complex model, and they needed much more project management support and implementation support than they received. Going into year 4, we now have a strong and experienced leader coming from Leadership Public Schools who has proven experience designing and implementing systems around personalization and data-driven student agency. We have also brought on board a Director of Middle Schools who has extensive experience in launching and turning around middle schools.

The other significant challenge at Epic was middle school staffing. What was a minor challenge for ASCEND as a known and small middle school program was an enormous challenge for Epic. Over the past three years, we have struggled to find strong math and science teachers and strong math leadership, and our math outcomes have struggled as a result.

- *Explain the specific strategies that you are employing to improve performance.*

As indicated above, EFC has adopted two wins at Epic - a mathematics win in response to the flat/declining mathematics performance and a school culture win in response to the ongoing human capital challenges.

- 6-8 Math - Adopt Open Up Resources and leveraging the teacher training systems at Achievement First at Epic to to build students' habits around problem solving and to build teachers' habits around facilitating problem solving; partner with Leadership Public Schools to implement Navigate Math as a personalized math intervention in 8th grade
- 6-8 School Culture - Leveraging the Valor (Nashville-based middle school operator) approach to building school culture, developing and implementing a school culture playbook that aligns teacher culture moves and clarifies Heroes' expectations; implementing a 6-week strong start that supports ALL teachers getting Real Time Coaching so all classrooms are rigor-ready by week 7

In addition, while this is not a formal win, the Epic ELA classes have engaged in a deep training program in partnership with Achievement First on training teachers in implementing a rigorous literature study. While Epic has worked on personalization strategies and leveraging technology, we are still seeing a need around rigorous academic discourse and response to literature using complex text. We believe that this partnership will build capacity of our middle school instructional leadership team (coaches) around how to build teacher capacity around facilitating discourse.

- *How will you know when performance is satisfactory?*
- *What are your expectations for satisfactory performance in terms of performance levels and timing?*

Strong Start Win
We have set weekly benchmarks with respect to the strong start win. Ultimately, at the end of six weeks, 90% of teachers and Heads of House should be able to demonstrate proficiency on the School Culture section of the TNTP teacher effectiveness rubric.
Playbook Win

Students and staff scores on the SCAI survey will be at least 3.6 in the areas of: student interactions, discipline, and attitude and culture. Walkthrough data will show 90% of students complying with entry/dismissal flows, transition flows, on and off journey flows, and lunch flows.

Math Win

We will be tracking student mastery data on units assessments in both Navigate Math and in Open Up Resources though that data will mostly be used for internal reflection and reteaching. On the interim CAASSP, success would show that 70% of students have made 3-5 points of growth in distance from met performance.

3. For the organization as a whole and any related business entities, provide the following:

- *The last three years of independent financial audit reports and management letters;*
- *The most recent internal financial statements, including balance sheets and income statements. Be sure that the ESP/CMO level and the overall operations are distinctly represented.*

Please see appendix C3 for Audit Reports and appendix C4 for Internal Financial Statements

4. List any and all charter revocations, non-renewals, shortened or conditional renewals, or withdrawals/non-openings of schools operated by the organization, and explain what caused these actions.

N/A. This does not apply to EFC.

5. Explain any performance deficiencies or compliance violations that have led to formal authorizer intervention with any school operated by the organization in the last three years, and explain how such deficiencies or violations were resolved.

N/A. This does not apply to EFC.

6. Identify any current or past litigation, including arbitration proceedings, by school, that has involved the organization or any charter schools it operates. If applicable, provide (1) the demand, (2) any response to the demand, and (3) the results of the arbitration or litigation.

There is only one matter that qualifies for which supporting documents are provided in the appendix. The parties entered into a confidential settlement, which EFC is barred from providing to the District.

Silke Bradford
Director, Quality Diverse Providers
OUSD, Office of Charter Schools
1000 Broadway 6th Floor, Suite 639
Oakland, CA 94607

Dear Ms. Bradford,

I am excited to submit this Letter of Intent on behalf of the Latitude 37.8 High School community and Education for Change. We look forward to working with you and your office throughout the authorization process.

Regards,

Hae-Sin Thomas

Appendix A: Letter of Intent

If you plan to submit a charter school petition to the Oakland Unified School District, it is recommended to submit the following Letter of Intent to the Office of Charter Schools in advance. This will help the Office of Charter Schools to communicate better and more effectively with petitioner groups. Thank you!

Name of proposed school	Latitude 37.8 High School
Lead Petitioner	Hae-Sin Thomas
Full mailing address (city, state, zip)	333 Hegenberger Road, Oakland CA 94621
Daytime telephone number	(510) 568-7936
E-mail address	hthomas@efcps.net
Proposed Date of Submission	August 23, 2017
Proposed date of opening	August 2018
Proposed location of school	Adjacent to EPIC Middle School at the corner of E12th St and 29th Ave.
Do you plan to request Prop 39 facilities?	No
Composition of petitioner group (e.g. parents, teachers, non-profit organization)	Parents, Teachers, Community Members
Grade levels to be served in year 1	9th
Anticipated enrollment in year 1	50
Grade levels to be served at full capacity	9-12
Anticipated enrollment at full capacity	360
Target student population (e.g. at-risk youth)	An integrated student population that reflects the demographics of Oakland as a city that is diverse by design.

Brief description of kind of school proposed (e.g. arts-, math-, or science-focused school or use a particular school/curriculum design).

Latitude 37.8 High School's approach to school mission and culture, teaching and learning, student agency and engagement, and networks and partnerships is really a single *integrated* approach that is driven by the design principles of personalization, relevance, integration and creativity. The school model leverages the experiences of nationally renown school models, High Tech High and Big Picture Learning, to create authentic student learning experiences and to allow students to pursue their interests and passions. Latitude High is a competency based school model and that will utilize design thinking to allow students to pursue personalized pathways to graduation. The program will operate in three distinct phases to allow the appropriate supports and scaffolds for students to demonstrate the agency and academic competency required to be a self directed learner prepared for a productive and meaningful adult life.

Brief explanation of proposed charter school. In one or two sentences, provide a clear statement that defines the purpose(s) and nature of your school.

Latitude High 37.8 is a high school model in Oakland, California through which students leverage the assets and resources of their city to design and secure the experiences, education and network they need to be prepared for a meaningful and productive life. We are a network of educators, designers, makers, artists, parents, students, civic leaders, and business leaders committed to designing and opening a high school that facilitates self-directed, passion-driven learning for our city's youth in which the Bay Area is their personalized learning environment.

Are you planning to work with a charter management organization (CMO) or education management organization (EMO)?

Yes X No

If Yes, please circle CMO / EMO

If Yes, please indicate name of CMO / EMO: Education for Change Public Schools

Appendix B: OUSD's 5 Pillars of Quality School Development

In the space below, please provide bullet points of aspects of your petition that align with each Pillar.

OUSD's 5 Pillars of Quality School Development	***Aspects of petition that align to Pillars.*** *(Bulleted format only)*
1. **Educator Development and Pipelines** – Successful schools will be led by effective leaders who work collaboratively to develop and nurture a cross-functional leadership team. The school will help educators develop through effective professional learning and recognize effective educators for their success.	• **Executive Summary: Latitude Founding Team** • **Element 1 C: Instructional Design: Staffing and Professional Development** • **Element 1 H: Special Populations: Professional Development** • **Element 1 I: English Language Learners: Professional Development** • **Element 5: Employee Qualifications**
2. **Strong School Culture** – The school will have a mission, vision, and values that are focused on high academic achievement for students while preparing them for college, career, and community success. The school will stress the importance of education as well as the social and emotional well-being of students. This feature must permeate all other components of the school and should include restorative practices as a part of the approach to strengthening culture.	• **Element 1 B: Philosophy and Approach to Instruction** • **Element 1 C: Instructional Design: Advisory** • **Element 1 D: School Culture** • **Element 10: Suspension and Expulsion Procedures**
3. **Increased Time on Task** – Successful schools will intentionally use time to maximize student learning. Extended school days, weeks, and years are integral components. Additionally, the school must prioritize providing teachers' time for planning, collaboration, and professional learning.	• **Executive Summary: Latitude Design Principles** • **Element 1 B: Philosophy and Approach to Instruction** • **Element 1 C: Instructional Design: Latitude Learning Experiences** • **Element 1 C: Instructional Design: Academic Calendars and Schedules**
4. **Rigorous Academics** – Effective schools ensure teachers have access to foundational documents and instructional materials needed to help students achieve high growth. This includes data-driven inquiry cycles that support regularly assessing student progress, analyzing student progress, and re-teaching skills with the expectation that students master standards.	• **Element 1 B: Philosophy and Approach to Instruction** • **Element 1 C: Instructional Design: Latitude Competency System** • **Element 1 C: Instructional Design: Latitude Learning Experiences** • **Element 1 C: Instructional Design: Staffing and Professional Development** • **Element 2 & 3: Measurable Student Outcomes and Methods of Assessing Progress**
5. **Linked/Personalized Learning** – Students will be exposed throughout a K-12 program to different educational options that go beyond the "four walls" of the school in effective schools. This will include bringing relevance to students' lives and the world of real world of work through the curriculum, allowing students to innovate and create, having them concurrently	• **Executive Summary: Latitude Design Principles** • **Element 1 B: Philosophy and Approach to Instruction** • **Element 1 C: Instructional Design:**

enrolled in college classes, engaging them in internships, using online learning, and providing students access to career pathways in our secondary schools.	**Latitude Learning Experiences** ● **Element 1 C: Instructional Design: Academic Calendars and Schedules**

Appendix E: Statement of Assurances

This form or other similar form must be signed by a duly authorized representative of the petitioner group and submitted with the petition. A petition will be considered incomplete if it is not accompanied by the Statement of Assurances or does not otherwise contain these assurances. The most up-to-date version of this form can be found on our website.

As the authorized representative of the applicant group, I hereby certify under the penalties of perjury that the information submitted in this petition for a charter for Latitude 37.8 High School, which will be located in the Fruitvale neighborhood of Oakland, CA is true to the best of my knowledge and belief; and further, I certify that, if granted a charter, the school:

1. Will not charge tuition, fees, or other mandatory payments for attendance at the charter school or for participation in programs that are required for students.

2. Will enroll any eligible student who submits a timely and complete application, unless the school receives a greater number of applications than there are spaces for students, in which case a lottery will take place in accordance with California charter laws and regulations.

3. Will be non-sectarian in its curriculum, programs, admissions, policies, governance, employment practices, and all other operations.

4. Will be open to all students, on a space available basis, and shall not discriminate on the basis of the characteristics included in Education Code section 220, including but not limited to race, color, national origin, creed, sex, ethnicity, sexual orientation, mental or physical disability, age, ancestry, athletic performance, special need, proficiency in the English language or a foreign language, or academic achievement.

5. Will not exclude admission based on the student's or parent's/guardian's place of residence, except that a conversion school shall give admission preference to students who reside within the former attendance area of the public school.

6. Will meet all statewide standards and conduct the pupil assessments required pursuant to Education Code Sections 60605 and 60851 and any other statewide standards authorized in statute or pupil assessments applicable to pupils in noncharter public schools.

7. Will comply with all applicable portions of the 2001 reauthorization of the Elementary and Secondary Act (also known as "No Child Left Behind"). (20 U.S.C. § 6319.)

8. Will consult, on a regular basis, with parents, guardians and teachers regarding its educational programs, as required by Education Code section 47605(c)(2).

9. Will offer at least the minimum amount of instructional time at each grade level as required by law, and comply with Title 5, California Code of Regulations, section 11960(b) with respect to the legally required minimum school days.

10. Will comply with the conditions of apportionment set forth in Education Code section 47612(b) that average daily attendance not be generated by a pupil who is not a California resident, and that "a pupil over 19 years of age shall be continuously enrolled in public school and make satisfactory progress towards award of a high school diploma," to remain eligible for generating charter school apportionments.

11. Will provide to the Office of Charter Schools information regarding the proposed operation and potential effects of the school, including, but not limited to, the facilities to be used by the school, including where the school intends to locate, the manner in which administrative services will be provided, and potential civil liability effects, if any, upon the school and authorizing board.

12. Will adhere to all applicable provisions of federal law relating to students with disabilities, including the Individuals with Disabilities Education Act; section 504 of the Rehabilitation Act of 1974; and Title II of the Americans with Disabilities Act of 1990.

13. Will comply with the requirement set forth in Education Code section 47605(d)(3) that "[i]f a pupil is expelled or leaves the charter school without graduating or completing the school year for any reason, the charter school shall notify the superintendent of the school district of the pupil's last known address within 30 days, and shall, upon request, provide that school district with a copy of the cumulative record of the pupil, including a transcript of grades or report card, and health information."

14. Will adhere to all applicable provisions of federal law relating to students who are English language learners, including Title VI of the Civil Rights Act of 1964; the Equal Educational Opportunities Act of 1974; MGL c. 76, §5; and MGL c. 89, 71 § (f) and (I).

15. Will comply with the Family Educational Rights and Privacy Act (20 U.S.C. § 1232g; 34 CFR Part 99).

16. Will comply with all other applicable federal and state laws and regulations, including the California Code of Regulations.

17. Will submit an annual report and annual independent audits to the OUSD Office of Charter Schools by all required deadlines.

18. Will maintain written contemporaneous records that document all pupil attendance and make these records available for audit and inspection, as required by Education Code section 47612.5(a)(2).

19. Will submit required enrollment data each March to the OUSD Office of Charter Schools by the required deadline.

20. Will comply with "[a]ll laws establishing minimum age for public school attendance," as required by Education Code section 47610(c).

21. Will operate in compliance with generally accepted government accounting principles.

22. Will maintain separate accountings of all funds received and disbursed by the school.

23. Will participate in the California State Teachers' Retirement System and other retirement systems, as applicable.

24. Will obtain, keep current, and make available for inspection all necessary permits, licenses, and certifications related to fire, health and safety within the building(s) and on school property.

25. Will obtain, keep current, and make available for inspection all necessary teacher certifications, permits or other documents as required under EC Section 47605(l).

26. Will at all times maintain all necessary and appropriate insurance coverage.

27. Will submit to the OUSD Office of Charter Schools the names, mailing addresses, and employment and educational histories of proposed new members of the Board of Trustees prior to their service.

28. Will, in the event the Board of Trustees intends to procure substantially all educational services for the charter school through a contract with another person or entity, provide for approval of such contract by the Board of Education in advance of the beginning of the contract period.

29. Will require the Charter School Board to comply with the provisions of the Ralph M. Brown Act (California Government section Code 54950 et seq.)

30. Will comply with the provisions of the California Public Records Act (California Government Code section 6250 et seq.).

31. Will provide financial statements that include a proposed first-year operational budget with start-up costs and anticipated revenues and expenditures necessary to operate the school, including special education; and cash-flow and financial projections for the first three years of operation.

32. Will provide to the Office of Charter Schools a school code of conduct, Board of Trustee bylaws, an enrollment policy, and an approved certificate of building occupancy for each facility in use by the school, according to the schedule set by the Office of Charter Schools but in any event prior to the opening of the school.

33. Will be located within the geographical boundaries of the District in locating its site, or otherwise comply with the requirements in Education Code section 47605 and 47605.1.

34. Will agree to defend, indemnify and hold harmless the District against any and all liability and claims arising out of the Charter School's acts, errors and omissions.

Appendix H: State Priorities Under LCFF

<table>
<tr><th colspan="2">CHARTER SCHOOL OUTCOMES ALIGNED TO STATE PRIORITIES</th></tr>
<tr><td colspan="2"><u>State Priority #1</u>. The degree to which teachers are appropriately assigned (E.C. §44258.9) and fully credentialed, and every pupil has sufficient access to standards-aligned instructional materials (E.C. § 60119), and school facilities are maintained in good repair (E.C. §17002(d))</td></tr>
<tr><td><u>Annual Goal</u>
A. Ensure all teachers are appropriately assigned and fully credentialed to support a high-quality, broad course of study.
B. Research and adopt CCSS, NGSS, and CSS aligned curricular materials proven successful for similar populations
C. Ensure school facilities are maintained and in good repair</td><td><u>Annual Targets</u>
Latitude will make annual progress toward the following targets:
• 95% teachers meet California credentialing requirements for the subject area and grade level assigned
• 0% Teacher Misassignments
• At least 80% family satisfaction with school facilities on SCAI
• At least 75% staff intend to return to Latitude for the following year
• 100% of requirements met on EFC facilities checklist</td></tr>
<tr><td colspan="2"><u>Annual Actions to Achieve Targets</u>
• Implement an annual teacher retention plan that includes building ample time into schedule for planning/preparation/collaboration; conducting surveys to assess morale and needs; providing coaching and regular feedback; creating opportunities for teacher leadership; holding site leadership accountable for developing a strong professional learning culture.
• Implement an annual teacher recruitment plan that includes providing a competitive salary and benefits proposal; beginning recruitment for teachers in winter; implementing recruitment plan in fall; utilizing signing bonus incentives as needed; partnering with teacher preparation programs and teacher recruitment programs to attract teachers; incentivizing referrals within the organization; partnering with teacher preparation organizations to recruit and place teaching fellows; developing and setting aside resources for pipeline programs.
• Implement facilities walkthroughs four times annually using a walkthrough rubric; develop standards for facilities.</td></tr>
<tr><td colspan="2"><u>State Priority #2</u>. Implementation of Common Core State Standards, including how EL students will be enabled to gain academic content knowledge and English language proficiency
<u>State Priority #4</u>. Pupil achievement, as measured by all of the following, as applicable:
A. Statewide assessments (CAASPP, or any subsequent assessment as certified by SBE)
B. The Academic Performance Index (API)</td></tr>
</table>

C. Percentage of pupils who have successfully completed courses that satisfy UC/CSU entrance requirements, or career technical education D. Percentage of pupils who have passed an AP exam with a score of 3 or higher E. Percentage of pupils who participate in and demonstrate college preparedness pursuant to the Early Assessment Program (E.C. §99300 *et seq.*) or any subsequent assessment of college preparedness

Annual Goals	**Annual Targets**
A. Teachers develop and implement strong CCSS, NGSS, and CSS aligned units of study and lessons that push student thinking at the higher levels of Bloom's taxonomy B. Students are spending increased time learning in their Zone of Proximal Development by implementing Guided Reading integrated with adaptive online software proven for our target population C. Technology: All teachers and students have access to 21st century technology and personalized learning opportunities. D. Professional Development: All teachers receive targeted, high-quality professional development aligned to high priority instructional practices that positively impacts student academic achievement and social-emotional development. E. Response to Interventions: Implement a rigorous Response to Intervention model to address the Tier1, Tier2, and Tier3 academic, behavioral and social needs of all students.	Latitude will make annual progress toward the following targets: • +5% students either scoring level >= 3 or making at least one level growth OR 70% of students scoring proficient (including significant subgroups) on the ELA section of CAASPP • +5% students either scoring level >= 3 or making at least one level growth OR 70% of students scoring proficient (including significant subgroups) on the Math section of CAASPP • Each year, 40% of ELs will improve one proficiency level OR maintain proficiency on CELDT/ELPAC. • Each year, achieve at least a 90% cohort graduation rate (including significant subgroups). • Each year, achieve at least a 90% UC A-G completion rate (including significant subgroups).

Annual Actions to Achieve Targets
• Ensure all students have access to and meet A-G requirements. • Identify, develop, and/or purchase curriculum materials to ensure alignment to Common Core Standards, California ELD Standards, and Next Generation Science Standards. • Align and leverage data management systems to track student progress toward proficiency in relation to growth targets. • Maintain small class sizes and flexible groupings to ensure that all students are known well and are able to develop at their optimum rate. • Identify and use a learning management system to manage individual playlists, schedules, and learning modalities for each student. • Develop and curate playlist content for Competency-based Learning ELA and Math progressions that allow students to master content at their own pace. • Leverage technology to support a Competency-based Learning program.

- Develop and teach high quality project based learning studios that integrate social studies and ELA and science and design, allowing students to learn deeply for authentic reasons.
- Use a benchmark assessment system (formative+summative) to allow students to demonstrate subject-area mastery, aligned to Common Core Standards, Next Generation Science Standards, and other relevant state standards, at their optimal pace.
- Assess students using performance tasks and SBAC interim assessments.
- Implement and refine Response to Intervention (RTI) program to identify and serve all students with Tier 1, 2, and 3 academic and social-emotional interventions (including supporting students to close gaps with peers, services under 504 plans andIEPs, services for ELLs, services for Foster Youth, and services for students from low-income families).
- Partner with High Tech High and Big Picture Learning to support teachers in implementing cross-cutting practices.
- Provide all English Learners with designated ELD instruction targeted to their proficiency level, aligned to the new ELD standards, and designed to move them toward English proficiency.
- Provide students with instruction to develop their home language and/or become fluent in additional world languages.
- Identify, adopt, socialize and use growth targets for English Language Proficiency that lead to reclassification.

State Priority #3. Parental involvement, including efforts to seek parent input for making decisions for schools, and how the school will promote parent participation

<table>
<tr>
<td>

Annual Goals

A. Build parent understanding of Common Core standards and overall instructional design

B. Build parent capacity to monitor and guide student learning and growth

C. Develop a robust parent leadership culture and body

</td>
<td>

Annual Targets

Latitude will make annual progress toward the following targets:

- 90% families participate in learning team meetings.
- Parent leadership: Increase number of parent leaders by two leaders annually until there are 2 parent leaders representing every cohort of students
- Families positively rate (average of 3.5 or higher) school climate in the areas of:
  - Leadership Decisions
  - Community Relations
  - Attitude and Culture
  - Learning/Assessment

</td>
</tr>
</table>

Annual Actions to Achieve Targets

- Support Family Leadership Committee (FLC) in developing parent understanding of Latitude graduate profile, including personal agency, essential competencies, and integrated identity.
- Leverage parent leadership to promote a supportive school culture that implements restorative practices.
- Recruit Parent Reps and develop capacity to facilitate Family Leadership Committee (FLC) committee aligned to clear, defined goals.

<table>
<tr><td colspan="2">

- Provide leadership training for parent leaders.
- Expand parent communication and translation services.
- Actively recruit bilingual staff when hiring new staff members.
- Implement one home visit per family per year.
- Hold quarterly Learning Team meetings with parents, students, advisors, and mentors.
- Expand parent education opportunities.
- Provide opportunities for families to advise school through formal and informal parent leadership structures.
- Engage families in community events and capacity-building learning experiences built around parent interests, assets, and inquiries.
- Host community events, including back to school nights and celebrations of learning.

</td></tr>
<tr><td colspan="2">

State Priority #5. Pupil engagement, as measured by all of the following, as applicable:
A. School attendance rates
B. Chronic absenteeism rates
C. Middle school dropout rates (EC §52052.1(a)(3))
D. High school dropout rates
E. High school graduation rates

State Priority #6. School climate, as measured by all of the following, as applicable:
A. Pupil suspension rates
B. Pupil expulsion rates
C. Other local measures, including surveys of pupils, parents, and teachers on the sense of safety and school connectedness

</td></tr>
<tr><td>

Annual Goals

A. Family Services: Engage families as partners in student achievement, school culture and community engagement. Empower families to review data and make decisions around site investments
B. Response to Interventions: Implement a rigorous Response to Intervention model to address the Tier 1, Tier 2, and Tier 3 academic, behavioral and social needs of all students.

</td><td>

Annual Targets

Latitude will make annual progress toward the following targets:

- <10% of all students are chronically absent
- <= 5% of enrolled students are suspended out of school
- 0% of enrolled students are expelled
- 95% average daily attendance (P2-ADA)
- Each year, achieve less than a 5% dropout rate (including significant subgroups)
- Each year, achieve at least a 90% cohort graduation rate (including significant subgroups).
- Family average >= 3.5 on Domain 7: Attitude and Culture of the SCAI Survey
- Student average >= 3.5 on Domain 7: Attitude and Culture of the SCAI Survey
- Teacher average >= 3.5 on Domain 7: Attitude and Culture of the SCAI Survey

</td></tr>
<tr><td colspan="2">

Annual Actions to Achieve Targets

</td></tr>
</table>

• Use advisory to provide a small venue in which students are supported socially, emotionally, and academically. • Implement an RTI program and COST process to align supports for all students • Provide wrap-around social-emotional support to students through case managers who support relationships among students, families, and staff. • Provide individual and group therapy by School Counselors through the Response to Intervention (RTI) program. • Develop and implement a safety plan prior to the first day of school.
<u>State Priority #7</u>. The extent to which pupils have access to, and are enrolled in, a broad course of study, including programs and services developed and provided to unduplicated students (classified as EL, FRPM-eligible, or foster youth; E.C. §42238.02) and students with exceptional needs. “Broad course of study” includes the following, as applicable: <u>Grades 1-6</u>: English, mathematics, social sciences, science, visual and performing arts, health, physical education, and other as prescribed by the governing board. (E.C. §51210) <u>Grades 7-12</u>: English, social sciences, foreign language(s), physical education, science, mathematics, visual and performing arts, applied arts, and career technical education. (E.C. §51220(a)-(i))

<u>Annual Goals</u>	**<u>Annual Targets</u>**
D. 100% of students are enrolled in a broad course of study that includes English, Mathematics, Social Sciences, Science, Visual Arts, Health/Physical Education, and Academic Electives that meets or exceeds the UC/CSU A-G requirements	Latitude will make annual progress toward the following targets: • 95% of students are receiving a broad course of study including arts and PE

<u>Annual Actions to Achieve Targets</u> • Implement studio learning model. • Develop Extended Learning Opportunities program to support personalization and access to a broad course of study. • Facilitate health and wellness programs that support students physical health.
<u>State Priority #8</u>. Pupil outcomes, if available, in the subject areas described above in CA Ed Code Section 51210, as applicable.

<u>Annual Goals</u>	**<u>Annual Targets</u>**
A. Teachers are able to teach writing across the curricula and improve ELA outcomes B. Teachers are able to teach targeted and strategic ELD and scaffold and shelter content for EL students C. Teachers are able to design and implement units of study that are multidisciplinary - integrate the arts and technology, build student capacity to collaborate around a common goal, build	Latitude will make annual progress toward the following targets: • CCSA Statewide Rank: +1 OR at least a 4 OR a at least a 6 for similar schools • 70% percent of students increase one grade level on the Scholastic Reading Inventory or achieve proficiency.

student leadership and facilitation skills, and improve student academic discourse	

Annual Actions to Achieve Targets

- Develop and implement portfolio assessment system.
- Assess and track portfolios and passages on a rubric to inform student progress and instruction.
- Train and coach teachers in designing High Quality Project Based Learning that includes or culminates in evidence to demonstrate Latitude competencies.
- Deliver High Quality Project Based Learning units that include or culminate in authentic products delivered to authentic audiences.
- Cultivate partnerships with local organizations and individuals and connect to resources in order to support, mentorships, apprenticeships, fieldwork, and service.
- Train and coach teachers to develop literacy rich project based learning units
- Provide professional development focusing on complex text and academic discourse.

Appendix L: OUSD New Charter School Petition Evaluation Criteria

Instructions:

This template is intended to guide **staff** through the Formal Quality Petition Review of new charter school petitions consistent with the California Charter Schools Act and the OUSD New Charter School Petition Application Guide for new schools to open in the 2017-2018 school year. Reviewers will score key categories within five domains (in addition to the Addendum for Existing Providers, where applicable):

- Domain 1:Educational Program (Element 1);
- Domain 2: Student Performance & Assessments (Elements 2-3);
- Domain 3: Governance Structure (Element 4);
- Domain 4: Equity, Access & Diversity (Elements 7, 8 & 10); and
- Domain 5: School Operations & Policies (all other Elements).

Evaluators will rate responses by applying the following ratings:

Rating	Characteristics
Meets or Exceeds the Standard:	The response reflects a thorough understanding of key issues. It addresses the topic with specific and accurate information that shows thorough preparation; presents a clear, realistic picture of how the school expects to operate; and inspires confidence in the applicant's capacity to carry out the plan effectively.
Partially Meets the Standard:	The response meets the criteria in some respects, but lacks detail and/or requires additional information in one or more areas.
Does Not Meet the Standard:	The response is wholly undeveloped or significantly incomplete; demonstrates lacking preparation/capacity; or otherwise raises substantial concerns about the viability of the plan or the applicant's ability to carry it out.

Domain 1: Educational Program (Element 1)

Statutory References: E.C. § 47605(b)(1)
E.C. § 47605(b)(5)(A)-(C)

The education program should tell you who the school expects to serve; what the students will achieve; how they will achieve it; and how the school will evaluate performance. It should give you a clear picture of what a student who attends the school will experience in terms of educational climate, structure, materials, schedule, assessment and outcomes.

A. Target Population & Community Need (Element 1)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Includes a coherent description of the students the school expects to serve (including demographics, educational and social-emotional needs) based on a thorough understanding of the district population and the location in which the school expects to operate.

2. Includes **Surrounding Schools Demographics & Performance Data (see Appendix F)** and demonstrates sufficient understanding of the educational needs of the target population and explains how the proposed school will meet those needs in conjunction with the schools in the surrounding area.
3. Describes meaningful, diverse outreach efforts and involvement with parents/guardians and community members in creating the charter petition as well as representation on the school's board and/or founding team.
4. Includes **Meaningfully Interested Signatures (see Appendix J)** and provides evidence of support from prospective parents, teachers, and/or students and community partners.
5. Includes a description of the manner in which community feedback impacted the contents of the charter petition.

Target Population & Community Need		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses
Questions	

B. Philosophy & Approach to Instruction (Element 1)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Specifies a clear, concise school vision and mission statements, which align with all elements and programs of the school and meet the needs of the targeted population.
2. Provides a persuasive explanation of why the philosophy and approach, grounded in research-based educational practices and high standards for student learning, are appropriate for and likely to result in improved educational performance for the target population, including any

available performance data from use of the same educational philosophy and approach to instruction with similar populations.

Philosophy & Approach to Instruction		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses
Questions	

C. Instructional Design (Element 1)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Includes a framework for instructional methods and strategies aligned with the needs of the pupils that the charter school has identified as its target student population.
2. Indicates how the curriculum is research-based, addresses CA Common Core State Standards, and meets target population needs.
3. Includes the curriculum/textbooks or other instructional resources to be used.
4. For curriculum yet to be developed, includes a thorough, persuasive plan for development including the research base to be considered. Includes a realistic, time-specific development schedule and clear objectives to be, as well as the identification of the foundational materials and individuals responsible for the curriculum development and evidence that they are well-qualified for the task.
5. Describes how the instructional program will provide and support student development of technology-related skills and how the school will ensure that students will be prepared to take computer-based state standardized assessments.
6. **For secondary schools (departmentalized middle schools and high schools),** provides a comprehensive course list or table that shows all course offerings for all grades to be served. **For High Schools only:**

7. Specifies how the instructional program will meet graduation and A-G requirements.
8. Describes the timeline that the charter school will follow for obtaining WASC accreditation.
9. Describes how charter school will inform parents about transferability of courses to other public high schools and eligibility of courses to meet college entrance requirements. (Courses that are accredited by WASC may be considered transferable, and courses meeting the A-G admissions criteria may be considered to meet college entrance requirements.)
10. **For schools offering International Baccalaureate,** or any other complex instructional framework that must be phased in over time, describes the school's plan and timeline for implementing the various phases or components of the program.
11. **For schools offering Transitional Kindergarten**, includes a description of the school's Transitional Kindergarten program.
12. **For schools offering summer school**, describes the summer school program with details including how many students are expected to attend, how they will be selected for participation, how many hours and weeks will be provided, and how it will be funded, as well as what specific student needs the summer school will address.

Academic Calendar & Schedules

1. Includes the school's academic calendar and schedules that are internally consistent.
2. Includes **Instructional Days and Minutes Calculator Chart (see Appendix G)** and a comprehensive set of sample daily schedules (regular, early dismissal, minimum day), which explain the rationale for allocation of instructional time to different subject matter areas.

Staffing & Professional Development

1. Describes how teachers will be recruited and developed to successfully deliver the proposed educational program.
2. Describes how the school will provide ongoing professional, specifying a list of topics, for the first year of the charter term.

Instructional Design		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses
Questions	

D. School Culture (Element 1)
In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Describes school cultural values that are inclusive of all students and promote a positive academic environment and reinforces student intellectual and social development.
2. Describes sound systems and practices to foster this culture, starting from the first day of school.
3. Includes a description of the extracurricular activities or programming the school will offer, how often they will occur, who will manage or oversee the activities, and how will they be funded. Activities are aligned with and support the school's mission and culture.

School Culture

Strengths	Weaknesses
Questions	

E. Student Recruitment & Enrollment (Element 1)
In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Specifies that enrollment is available to all students and includes a sound enrollment and recruitment plan, including admission requirements or priorities, or lottery policies, as well as systems for student recruitment, including activities and events.

2. Indicates that the school has conducted targeted outreach to families in poverty, academically low-achieving students, students with disabilities, linguistically diverse families and other youth at risk of academic failure, and that the enrollment system will provide equitable access.
3. Includes an ambitious target re-enrollment rate.
4. Includes sufficient plans for ongoing student enrollment once the school is open.

Student Recruitment & Enrollment		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses
Questions	

F. Student Engagement & Satisfaction (Element 1)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Describes a goal for student attendance (including tardiness and truancy) that can be expected to ensure high rates of student attendance.
2. Identifies an individual or position responsible for collecting and monitoring attendance data and describes what will be done in the event the school does not reach its attendance goals.
3. **For high schools,** describes a plan for drop-out recovery and persistence plans for students at-risk of dropping out.

Student Engagement & Satisfaction		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses

Questions

G. Community School: Ongoing Family Involvement & Satisfaction (Element 1)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Describes the partnerships the school will have with community organizations, businesses, or other educational institutions, including the nature, purposes, terms, and scope of services of any such partnerships.
2. Describes how the school will specifically engage families in the school's culture.

Community School: Ongoing Family Involvement & Satisfaction		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses
Questions	

H. Special Populations: Identification, Remediation, & Acceleration (Element 1)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

Special Education

1. Explains how the school will use bodies of evidence to identify students with disabilities and special needs.
2. Provides a sound plan -- including lead contact, funding, service and intervention arrangements -- for identifying and meeting the needs of students identified with disabilities.
3. Includes evidence of high expectations for students with special needs.
4. Identifies which staff will be responsible for identification and the process used to identify students, as well as ways in which the school will avoid misidentification.
5. Provides a clear statement regarding what petitioners expect will be the school's anticipated LEA status for purposes of special education and the implications of that status determination.

6. Describes how and when the school will provide school wide professional development to special education and general education teachers to serve the needs of special needs students.

Response to Intervention

1. Describes how the school will implement Response to Intervention (RTI) in a manner that meets the state's requirements and that includes specific research-based strategies to support students in Tiers I, II, and III, including both academic and behavioral interventions.
2. Describes specific interventions to be employed to help close achievement gaps.

Gifted/ Talented Students & Academically Advanced Students

1. Identifies which staff will be responsible for identification and explains the process used to identify gifted/talented and academically advanced students as well as the criteria that will be used to determine exceptional ability or potential.
2. Describes the research-based instructional programs and strategies the school will use to appropriately address the educational needs of gifted students and any additional instructional materials to be employed.

Special Populations: Identification, Remediation, & Acceleration		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses
Questions	

I. Special Populations: English Learners (Element 1)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Describes the school's philosophy and approach to language instruction and the components of this approach, and a sufficient research base to support it.
2. Describes how the school will ensure content-area curriculum and instruction is accessible to English Learners (ELs) of all proficiency levels and typologies, including newcomers, Students with Interrupted Formal Education (SIFE), and Long-term ELs.
3. Describes how the school will structure English Language Development and the curriculum and instructional resources to be used.
4. Describes systems of professional development and collaboration to be put in place to support teachers to meet the needs of ELs.
5. Includes an instructional schedule that addresses the needs of diverse language learners.

6. **For high schools**, describes a plan to ensure that ELs, including newcomers, receive the required A-G courses to keep them on track to graduation?
7. Includes a plan for identifying and assessing the language and literacy needs of the school's ELs and a plan for ELs who are not demonstrating adequate progress, including specialized instruction or courses to accelerate language, literacy and academic skills for these students.
8. Includes a plan for how the school will communicate to families EL students' progress.
9. Includes a plan for leveraging community partners to provide programs and services to meet the needs of newcomers/ELs and their families.
10. Explains how staff will integrate the ELs into the greater school community.
11. Includes plans to ensure adequate translation services during all school meetings.

Special Populations: English Learners		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses
Questions	

DOMAIN 2: Student Performance & Assessments (Elements 2 & 3)

Pupil outcomes are central to the school's existence. They represent the school's definition of success and should drive all aspects of the program and operation.
In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Includes **OUSD's Collective Measureable Pupil Outcomes (MPOs) available on OUSD's website www.ousdcharters.net.**
2. Includes **State Priorities Under LCFF (see Appendix H)**, as well as a description of the school's annual goals and a description of the specific annual actions the school will take to achieve each of the state's identified annual goals.
3. Identifies formative assessments to be used by the school to assess student progress on an ongoing basis and how frequently the assessments will be administered.

4. Outlines a plan for collecting, analyzing, and reporting data on pupil achievement to school staff and to pupils' parents and guardians, and for utilizing the data continuously to monitor and improve the charter school's educational program.
5. Describes how assessment data will be used to inform instruction and professional development on an ongoing basis.
6. Describes clear and fair grading, promotion/retention policies and procedures.

Student Performance & Assessments		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses
Questions	

DOMAIN 3: Governance Structure (Element 4)

The Charter Schools Act requires the authorizer to determine whether the petitioners are "demonstrably unlikely to successfully implement the program." Experience with new school development demonstrates that unless petitioners have sound plans and capacity for governance, management, employment and financial operation, they are unlikely to successfully implement the program. This section should provide a clear, convincing picture of the petitioners' capacity to operate the school successfully.

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

A. Governance Structure (Element 4)

1. Provides an organizational chart which indicates how the charter school will become and remains a viable enterprise and shows the relationship of the governing board to the leadership of the school, as well as any relevant site committees.
2. Indicates qualifications and the selection process for governing board members, including the length/rotation of service terms.
3. Specifies how often and where the governing board will meet

4. Provides by-laws for the nonprofit public benefit corporation, including a description of the decision making process, and states the manner for setting the annual calendar, posting meeting notices, distributing agendas, and recording governing board actions.
5. Includes evidence that the organizational and technical designs of the governance structure reflect a seriousness of purpose necessary to ensure that there will be active and effective representation of interested parties, including, but not limited to all staff and parents/guardians.
6. Presents a clear and fair dispute resolution process.
7. Includes evidence of the charter school's incorporation as a non-profit public benefit corporation

Governance Structure		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	**Weaknesses**
Questions	

B. Operating Plans & Procedures (Element 4)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Provides a detailed start-up plan for the school, specifying tasks, timelines, and responsible individuals.
2. Includes a completed **School Staffing Model and Rollout Table** outlining the school staffing rollout plan.
3. If the school will provide transportation, describes the transportation arrangements for prospective students and how the school plans to meet transportation needs for field trips and athletic events.
4. Describes how the school will ensure students' nutritional needs are met during the school day and includes a list of prospective vendors.
5. Includes a list of the types of insurance coverage the school will secure, including a description of the levels of coverage. Types of insurance should include workers' compensation, liability, property, indemnity, directors and officers, and automobile.

Operating Plans & Procedures		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses
Questions	

A. Budget/Financial Plan (Element 4)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Includes all completed budget spreadsheets, consisting of:
   - **Multi-Year Budget Projection Excel Sheet,** including the projected budget for the school's start-up year and the first three years of the proposed school's operation. All tabs must be completed.
   - **FCMAT LCFF Calculator**
   - **Three-Year Cash Flows Excel Sheet**
2. Presents a detailed budget narrative including all assumptions and revenue estimates as well as the basis for revenue projections, staffing levels, and costs, as well as the degree to which the school budget will rely on variable income.
3. Discusses the school's contingency plan to meet financial needs if anticipated revenues are not received or are lower than estimated.
4. Provides a compensation plan based on sound budget assumptions that reflects understanding of the prevailing market and supports the proposed educational program.
5. Describes the systems, policies and processes the school will use for financial planning, accounting, purchasing, and payroll, including a description of how it will establish and maintain strong internal controls and ensure compliance with all financial reporting requirements.
6. Describes the roles and responsibilities of the school's administration and governing board for school finances and distinguish between each.
7. Describes any services to be contracted, such as business services, payroll, and auditing services, including the anticipated costs and criteria for selecting such services.

Budget/Financial Plan		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses

Questions

DOMAIN 4: Equity, Access & Diversity (Elements 7, 8 & 10)

NOTE: Elements 5, 6, and 9 are addressed in Domain 5.

Racial & Ethnic Balance (Element 7)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Includes a completed **District & Surrounding School Racial & Ethnic Demographics Table (see Appendix I)**.
2. Describes how leaders will ensure that the proposed school enrolls children of diverse racial and ethnic backgrounds that reflect the demographics of Oakland and/or the region of the proposed school, including a thorough description of annual outreach efforts, describing what methods the school will use to advertise and recruit students, what geographic areas will be targeted in the outreach effort, and what languages will be used to do the outreach.
3. Describes how the school will recruit and reach out to students with a history of low academic performance, socio-economically disadvantaged students, ELs, and students with disabilities.

Racial & Ethnic Balance		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses

Questions

Admission Requirements (Element 8)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Describes the specific admissions and enrollment process, including admission preferences of the proposed school.
2. Describes the manner in which the school will implement a public random drawing in the event that applications for enrollment exceed school capacity. This description should address:
   - The method the school will use to communicate to all interested parties the rules to be followed during the open enrollment and lottery processes.
   - The method the school will use to verify lottery procedures are fairly executed.
   - The timelines under which the open enrollment period and lottery will occur.
   - The location where the lottery will occur and the efforts the school will undertake to ensure all interested parties may observe the lottery.
   - The date and time the lotteries will occur so interested parties will be able to attend.
   - The procedures the school will follow to determine waiting list priorities based upon lottery results.
   - The means by which the school will contact the parents/guardians of students who have been promoted off the waiting list and timelines under which parents/guardians must respond in order to secure admission.
   - The records the school shall keep on file documenting the fair execution of lottery procedures.

Admission Requirements		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**

Strengths	**Weaknesses**
Questions	

Suspension & Expulsion Procedures (Element 10)

In addition to containing all District Required Language, a petition sufficiently meets this standard if it:

1. Describes the key elements of the school discipline policy and how it will support a positive school culture, including school-wide positive behavior support and restorative practices, alternatives to suspension, and professional development.
2. Describes how the discipline strategy will be implemented in the classroom, including what teaching strategies will be used to ensure students are on task and focused on learning.

3. Describes a plan to ensure minority students and students with disabilities are not disproportionately represented in disciplinary procedures such as suspensions and expulsions. Includes a plan to track this data.
4. Outlines how detailed policies and procedures regarding suspension and expulsion will be developed and periodically reviewed, including, but not limited to, periodic review and (as necessary) modification of the lists of offenses for which students are subject to suspension or expulsion.

Grounds for Suspension and Expulsion

1. Identifies a preliminary list of the offenses for which students in the charter school must (where non-discretionary) and may (where discretionary) be suspended and, separately, the offenses for which students in the charter school must (where non-discretionary) or may (where discretionary) be expelled, providing evidence that the petitioners reviewed the offenses for which students must or may be suspended or expelled set forth in the Education Code for non-charter public schools.
2. Identifies the procedures by which pupils can be suspended or expelled.
3. Identifies the procedures by which parents, guardians, and pupils will be informed about reasons for suspension or expulsion, their due process rights, and how they may appeal the suspension.

Suspension Procedures

1. Identifies the maximum number of days a student may be suspended for any single offense and the maximum total number of days a student may be suspended within one academic year.
2. Describes how students will access education during the suspension or expulsion.
3. Provides evidence that in preparing the lists of offenses specified and procedures specified above), the petitioners reviewed the lists of offenses and procedures that apply to students attending non-charter public schools, and provides evidence that the charter petitioners believe their proposed lists of offenses and procedures provide adequate safety for students, staff, and visitors to the school and serve the best interests of the school's pupils and their families
4. Provides for due process for all pupils and demonstrates an understanding of the rights of pupils with disabilities in regard to suspension and expulsion.

Expulsion Procedures

1. Describes the school's specific rules and procedures for student expulsion and specifically addresses:

- How the school will provide to the student and parent adequate notice of the reason for potential disciplinary action and a meaningful opportunity to be heard prior to making an expulsion recommendation
- Who has the authority, and what process must be followed, to make expulsion recommendations
- Who has the authority to make expulsion decisions
- How and when the school will hear and decide expulsion recommendations, including the provision of an impartial decision-making panel, adequate notice and meaningful opportunity to be heard, reasonable timeline, reasonable accommodations and language support, special rules and procedures for incidents involving sexual assault, right to be represented by counsel or other advocate, and other due process protections and rights

- How the school will create and maintain records of the proceedings, and make records available to students/parents
- How students/parents may appeal an expulsion decision, including provision of an impartial appeals panel, adequate notice and meaningful opportunity to be heard, reasonable timeline, reasonable accommodations and language support, and other due process protections and rights
- How the school will provide post-expulsion support to facilitate access to education for expelled students/families

2. States the procedures for rehabilitation, readmission and interim placement.

Addendum for Existing Providers (if applicable)

A petition sufficiently meets this standard if it:

A. Curriculum & Instructional Design Supplement

1. Includes a clear and compelling description of the organization's approach to replicating and implementing the school model, including curriculum and instructional design among multiple schools.
2. Provides sensible rationale and identifies resources for any key educational features that would differ from the organization's current model.

Curriculum & Instructional Design Supplement		
Meets or Exceeds	**Partially Meets**	**Does Not Meet**
☐	☐	☐

Strengths	Weaknesses
Questions	

B. Network Vision, Growth Plan, & Capacity

1. Includes a well-defined, thoughtful strategic vision and five-year growth plan for developing new schools locally and elsewhere, if applicable. This should include: years of opening; number and types of schools; any pending applications; all currently targeted markets/communities and criteria for selecting them; and projected numbers of students.
2. Demonstrates organizational and management capacity to execute the school replication plan successfully – and to support and ensure the quality and long-term success of all proposed schools – as evidenced by:
    - The organization's annual report for the last two years;
    - A sound, well-developed business plan;
    - Sound description of tasks and timelines for building or deploying organizational capacity to support the proposed schools; and
    - Successful school development, management, and replication experience.

3. Demonstrates the ability to learn from past school management/replication challenges, including thoughtful discussion of specific challenges and mitigation strategies.
4. Demonstrates consideration of risks and challenges to achieving desired outcomes in OUSD over the next five years and realistic, effective strategies for addressing them.

Network Management

1. Includes evidence of a capable network leadership team with sensibly defined roles and responsibilities and demonstrated capacity to lead the short- and long-term success of the school(s) as part of the growing network.
2. Includes a sound plan and structure for any shared or centralized support services, including a description of the services, network staffing, costs (amount and allocation aligned with budget), specific service goals and how the organization will measure the successful delivery of these services.
3. Demonstrates clear, effective assignment of school- and organization-level decision-making responsibility for key functions such as curriculum, professional development, culture, staffing, etc. as evidenced by the table provided.
4. Includes clear, sensible, complete organization charts depicting the governance and management structure for:
    - The network as a whole (including both network management and schools within the network) in Years 1, 3, and 5;
    - The school model (one school) in Year 1 and at full expansion.

    The charts should delineate sound assignment of roles and responsibilities – and clear lines of authority among – (as applicable) the board, all management staff, any related bodies or councils, and any external organizations that will play a management role. The charts should also present clear lines of authority and reporting within the school.

Network Governance & Legal Status

1. Includes a clear description of an effective governance structure at both the network and individual school levels, including an explanation of whether each school/campus will have an independent governing board, whether there will be a single network-level board governing multiple schools, or both a network-level board and boards at individual schools.
2. Presents a clear description of the organizational relationship between the network-level board and boards at each school, including the legal status of each board, and the scope of authority of each.
3. Presents a clear description of an effective governance structure in the absence of a network-level board.
4. Describes governing bylaws, policies, and procedures that support the charter school expansion/replication plan.
5. Includes a sound, timely plan for increasing the capacity of the governing board to govern multiple schools, including a sound plan and timeline for board recruitment, expansion, orientation of new members, and ongoing training for members. Plan should include a thoughtful identification of desired experience and capacities beyond what the board already possesses and necessary for the governance of multiple schools.
6. Includes a plan for clear identification and plan for addressing board development needs relative to growth.

7. Explains how the interests of individual schools will be balanced with network interests and how key stakeholders will be represented.
8. Provides evidence that the proposed governing board members will contribute the wide range of knowledge, skills, and commitment needed to oversee a successful charter school including educational, financial, legal, and community experience and expertise.
9. Presents clear, appropriate plans for the board(s) to evaluate the success of the school(s) and school leader(s).

Network Leadership Pipeline

1. Includes a sound plan for sourcing and training potential leaders for future campuses and for developing a pipeline of potential leaders for the network.

Network-wide Staffing

1. Includes table outlining plans for sensible five-year network staffing that will support high-quality replication at the scale proposed, while continuing success in existing schools.

Network Performance Management

1. Describes meaningful mission-specific educational and organizational goals and targets, which are measurable or demonstrable by externally credible measures or assessments.
2. Includes effective plan (including qualified personnel) and system for measuring and evaluating academic progress – of individual students, student cohorts, each school, and the network as a whole – throughout the school year, at the end of each academic year, and for the charter term.
3. Describes thoughtful, appropriate corrective actions the school and network will take if they fall short of the authorizer's (or the operator's) goals at any level, including explanation of what would trigger such actions and who would implement them.
4. Includes a sound plan for monitoring performance of the portfolio as a whole and thoughtfully considering portfolio performance in decisions regarding continued growth and replication.

Network Vision, Growth Plan, & Capacity

Questions	

C. Performance Evaluation Information

1. Includes thoughtful discussion of a high-performing school in the network, including the evidence basis for judging the school as high-performing; causes for success; challenges overcome; and how the school's effective practices have been implemented elsewhere in the network
2. Includes thoughtful discussion one of the lowest performing schools in the network, including the evidence basis for judging the school unsatisfactory; causes of underperformance; and specific strategies and expectations (performance levels and timeframe) for improvement
3. Includes three years of independent financial audit reports and management letters; and the most recent internal financial statements, including balance sheets and income statements, with distinct representation of the CMO level and the overall operations.
4. Provides satisfactory performance records and demonstrated capacity to learn from past challenges/mistakes, as evidenced by a thoughtful, well reasoned, and evidence-based discussion of any of the following experiences: record of any charter revocations or non-renewals; shortened or conditional renewals; withdrawals or non-openings; performance deficiencies or violations that have led to formal authorizer intervention; current or past litigation involving the organization or any of its schools

We had several classes of middle school students watch the movie "Most Likely to Succeed." Students were asked to name the pros and cons of a model like High Tech High, to gauge student reaction and interest in something truly different and to learn what resonated for them. Here are a few responses.

Mr. Steve Cilono

Pros	Cons
They have collaboration between students. I always thaught that doing thas is the most important thing to have in schools. I thik if they all work together, just between themselves, they can actually feel the school work and it can help them learn and understand better and enjoy it. They get a lot of preping for tests. (SAT)	I also think that teachers should participate just a bit more.

[redacted]
7TH/T1

2/5/16

Mr. Cilono

Pros	Cons
A new way of education They do a lot of fun things. I like the classes. the Kids are focous. they work hard. No teacher in the classroom you can work with other person	they do not have homework. How will they take the kids to a good college. they pacite a lot.

Comments:

2/5/16
Cilono

[redacted]
Torres
[redacted]

Pros	Cons
• Different topics for Different people	• Not learn for a good grade
• they have to explain by building	
• to help ~~people~~ students fail forward	
• The teachers can teach what they can teach	
• the way they let them them Do a play ~~effect~~ how they want to Do it.	

Comments

2/5/16

Mr. Cilono's class 7th/Track 1 [redacted]

Pros	Cons
In the new school, students are learning how to step out of their comfort zones.	Not everyone is able to go to this school and it seems very cool and interesting.
The classes aren't like classes, they're like seminars.	Being at a new school, students would be expected to be shy or nervous.
Overall would have a great deal of education for everyone.	Parents worry how all of this will help students get into college.

Comments: Apparently, schools are just getting more and more high tech and more modern than, modern.

Cilono

2/5/16 [redacted]

7th Grade
Track 1

Pros	Cons
- Allowed the students to learn how to do something by doing it on their own without help.	- Students don't always know what to do.
- Days aren't divide into different blocks of time (No bells)	- Some students might be intimidated by the exhibition.
- Teachers teach in their own way.	
- Students can work with each other and show that work to represent how they and the teachers are doing.	
- Students can express themselves more openly in class	
- By expressing themselves the students can learn new skills needed to improve in life.	
- Students can learn how to make their own choices without help of a teacher.	
- Students learn how to apply what they learn in school life outside of passing the test.	
- Students are motivated to do better at school by showing their work of at an exhibition	

[redacted]
2-5-16
Mr. Cilono

Pros	Cons
you can callout without raising your hand.	No bells so you don't know where to go.
You can have a conversation without a teacher.	Long time periods during class 2 hours each.
[redacted]	It looks confusing where the Classrooms are because its so big.
Teachers can teach there way and how much you teach.	The students have depend on eachother they have to do things without the teacher.
Teachers care about how you feel like confiden-ce.	The teachers should spend more time with the students to get to know them more for collabaration.
They have exhibition night for parents and locals can see what students have done.	

Comments: I think the school High tech high is cool and interesting because it depends on you and its your choice.

[redacted]

2-5-16

Mr. Cilono

Pros	Cons
You can call out without raising hand just talking to eachother.	No bells so you might be confused.
You have a student to student talk without a teacher.	Long time periods during classes.
Teachers can teach whatever and however they want	It seems cofusing how and where the classrooms are set up there.
Teachers seem to care about your confidence and how you feel	The students have to depend on them and eachother to do something, not on the teacher.
They have exhibition days for students to your their projects	The teacher should spend more time with their studelts to get to know them more.

Comments: I think this school is great for students who feel that they have to depend on theirselves and want a chance to do things their way.

Notes on High Tech High 7T1

[redacted]

Mr.Cilono 2-5-16

Pros	Cons
1) You don't Need to raise your Hand.	Teachers have 1 year contract
2) No uniform	Small white boards
3) Public school	You have to do plays
4) No bells	Teachers only cover 40% or 60%
5) freedom	less time to study
6) Group conversations	They want kids to think like a computer
7) public view students work	They dont teach good enough
8) No standard test	people see what you have done so no grade.
9) The classes are students centerd	Intense argumants
10) less H.W	Kids every-where
11) 40 minute blocks	They get stressed out to much.
12) You buid things	
13) They train you to be indepdent.	
14) You gain self-confidence	
15) Parents are proud of their kids.	

Why do they have no tests.
Why dont the teachers really teach.

[redacted]
Mr Cilono
2/5/16

high tech high

Pros

- subjects are combine
- and teachers get to teach whatever they want to the students
- More freedom
- no bells
- ~~No~~ No uniform
- more collaboration
- No test?
- No report cards
- You buid things
- parents are proud of their kids!

Comments: why do they have no test's?

- Less H.W

Con's

- ~~Not her~~ not helping each other when they need help.
- Teachers have one year contracts.
- students are being shy.
- Too much noise and activity going on distract the students.
- parents are worry if their children are going to be prepared.
- working in groups is harder because you coud get in intense argument.

Nataly Bastida
2-5-16
771
Cilono

Pros

Strong pasion.
Freedoom.
To boild what they want.
work beself
not alot of lising to the teacher.
No homework.
theme to work togethere
see the finsh prodct that they have done.

Cons

~~[illegible]~~
They don't take kids qvestion.

Comments:

2/5/16

Daniela
Mr. Cilono

Pros	Cons
It will be more easy to Learn.	
They have to talk to each other.	
There no bells.	
More Classes.	
They have freedom.	
They dont have to just sit there.	
They dont use textbooks.	
They dont have alot of homework	

Yahaira
7th/T2
Mr. Cilono
02/05/2016

Pros	Cons
I like that they let the students figure it out by there selves. I also like how they say "teachers can teach the way they want". They're really good at working together. Kids there could express thereselfs. I like how the teachers ask the students that its there decision and they get to do there stuff how they want to. I like how they do great teamwork. I like how things run there	I dont like how parents are unhappy how they're kids learn. Also that they dont take questions from students because they're isnt enough time. Another thing I dont like is how in the future the students might not know what class they go to.

Comments: I think this school is very interesting and awesome.

[redacted]

2/05/2016
Alono

Pros.	Cons
• They get to build what they see in their mind.	• Don't teach like what your supposed to learn.
• Teachers do care about your education	• Cofussing what next class your going.
• Teachers trust that your going to do a great job.	
• They let you be creative	

Comments: I did like this school because It was very creative.

[redacted]

2/05/10

Eilono

Pros	Cons
• no bells • More freedom • teabher teach wat they think is best • Teachers let student figore it out for them self. • It more about skill • not as much home work • no report cards • It change a person view of them self and make a person be better	• People can see wat you learning and how it being done. • They dont even ask kid question about wat they learn. • How you know when to go to the next class

Comments: I think this school is a good school I might wana go there when I'm in highschool.

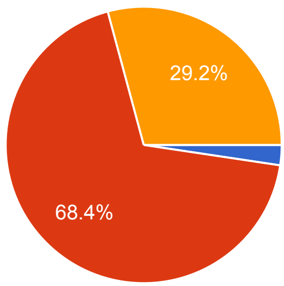
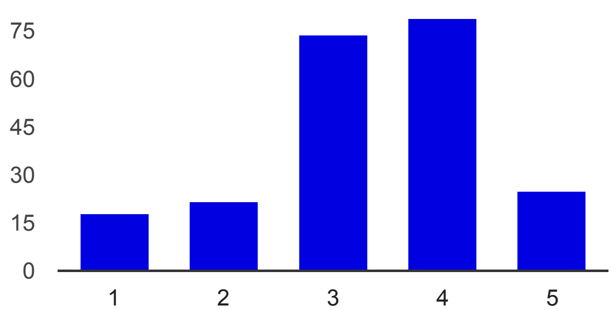
Summary

I am a...



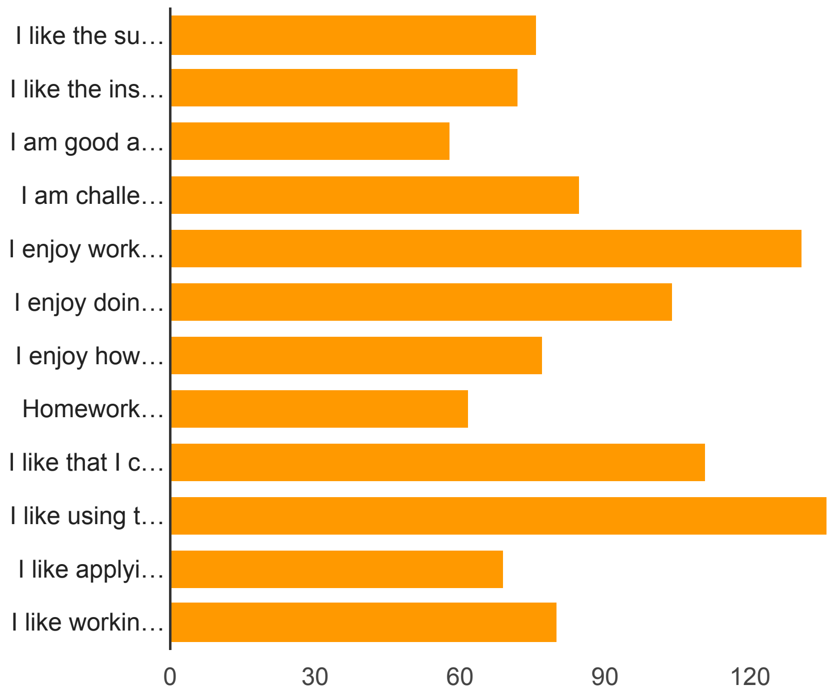
Current K-5 student	**8**	2.4%
Current middle or high school student	**232**	68.4%
Community member	**99**	29.2%

How engaged or motivated are you in your school classes right now?



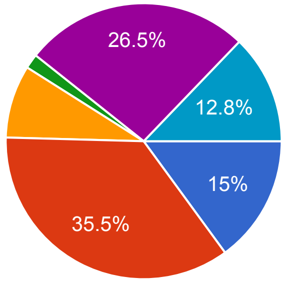
Not at all motivated or engaged.: 1	**18**	8.3%
2	**22**	10.1%
3	**74**	33.9%
4	**79**	36.2%
Super engaged & motivated: 5	**25**	11.5%

Consider your favorite, most engaging classes and subjects; what about them causes you to feel this way?



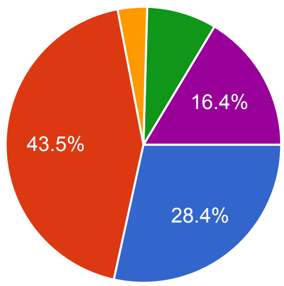
I like the subject matter	**76**	33.5%
I like the instructor	**72**	31.7%
I am good at the subject matter	**58**	25.6%
I am challenged to learn and stretch my understanding in a positive way	**85**	37.4%
I enjoy working with other students through labs, projects, and/or discussions	**131**	57.7%
I enjoy doing doing projects to investigate questions	**104**	45.8%
I enjoy how the instructor makes the subject come alive and be meaningful to me	**77**	33.9%
Homework assigned enriches my understanding of the subject	**62**	27.3%
I like that I can go at my own pace	**111**	48.9%
I like using technology resources to help learn concepts, do project research, extend my learning	**136**	59.9%
I like applying my learning to real-world situations	**69**	30.4%
I like working outside of the school and in the community	**80**	35.2%

What are your plans after high school?



2 year college	**35**	15%
4 year college	**83**	35.5%
technician, automotive, beauty, etc.)	**20**	8.5%
Straight to workforce	**4**	1.7%
Not sure	**62**	26.5%
Other	**30**	12.8%

When you think about your near future, what is your primary concern?



Getting a job	**66**	28.4%
Getting into college	**101**	43.5%
Developing positive relationships	**8**	3.4%
Staying safe & healthy	**19**	8.2%
Other	**38**	16.4%

If you could change one thing about high school that would make you a more successful student, what would it be?

teachers explaining the work good and to give us homework about what we learned for the day.
more sessions with friends or in other words friends that help you
That they get to leave class when they want
Annoying people that don't care.
homework
laptop
NO HOMEWORK and NO uniform
do whatever we want
Stop with the large portion of homework
Working in groups. Not giving up. Working hard.
brah brah idk but we shoud be able to wear awear hoodies bc im get pissed

Have advanced tech so we learn quicker and in a funner way.
To have big lockers
how rushed everything is.I would like to be able to choose my on schedule in the school reqiurements and in my own pace
i would change that i have my space and doing my work on my own and if i need help to get the help
i think that it would be like the problems and the hard challeges.
Being able to chose my own classes.
making the highschool more easy as can be
I dont know
No homework.
getting good grades for i can sucess
I would change the bully's that pick on you because of what you look like or what you wear or what you like.
my addtud
i don't know because i don't really know about high schools it depends what school it is.
To make sure i have everything i need to be a successful student.
having teachers that help you out with things and having a good amount of kids in a class because when there is a big amount of students in a class it's hard for a teacher to help you.
Easier work.
that we didn't have homework
Learning more about real world problems. Because I feel with history why cant history be about more recent things. I feel like I'm tired of learning about history. Because if you think about if we want all these thoughts about racism to end and for racism to end period. We should stop repeating history by teaching it in classes.~spenser
One thing would change about high school is having the same classes with at least on of my close friends so i can feel more comfortable to be in class.
Doing more projects and doing things outside not inside the whole time.
NO homework and less work
Probably the fact you have to get a drivers license in order to drive at the age of 16 .
One thing I can change about high school is the school's cafeteria lunch and that can make me more successful because food give us more energy and without food in our system are brain wont function well in school.
teachers that make the lessons fun for everybody
I
i would change teachers because i dont really like them all
I don't know yet
Bigger Yard and More technology.
Have an online design program to design games and websites and other online design stuff

getting less homework.

if i could change one thing about high school is there is going to be too much drama

one thing that would make me better as an highschool student also succsescful would be no homework and no tests but other than that i think there are good schools that provide everything i need to get into an good college.

The enrollment,many don't get the chance to get accepted to a good high school when they deserve to in order for that person to be successful.

I would want school to be easier and less complicated.

to it be more easy because my cusins tell me its hard to get good grades.

Take away annoying teachers and students.

I would make high schools have more programs and give us a chance to take college classes and learn more advanced subjects, if we want to.

well i would want to get help from teachers like i get help at lazear because in some high schools they don't help you at all and if you fail in a class they don't care and i would like to be a successful student by getting help on the things i don't understand.

Idk

IDK

IDN

I would change the way the homework would be.

i dont know right now

Stricter Teachers staff roaming hall ways and a soccer/football field with grass.

good teachers and friends.

I could change ingeniering class

being Happy

All teachers help all students.

idc

to walk in and out of class

learning subjecs

idk

2er4t5wyu4y4

I think what I would do is go to a high school where there's people that don't distract me.That don't foul around.

A soccer team

Better clases

To put my all to it.

N/A

No more homework because our parents pay us to learn at school not at home and it gives student stress if you did not know that.

To get less homework.

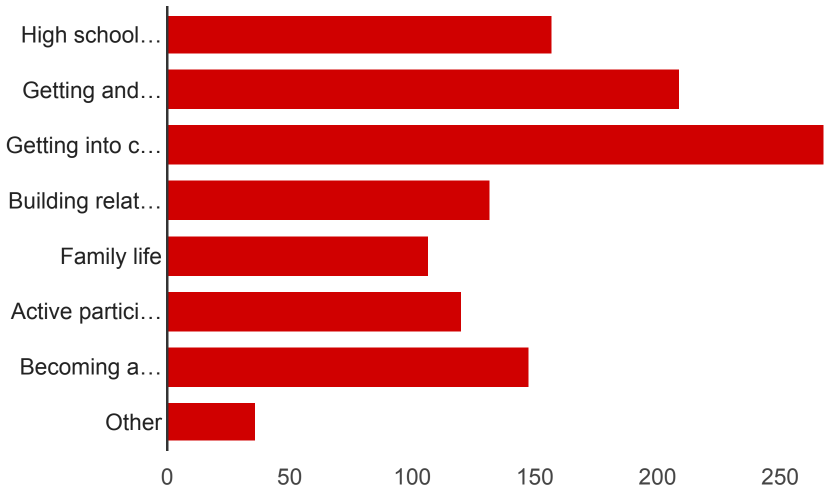
Do homework sooner and understand it better
to learn at my own pace
more classes
I really don't know
i wouldnt know because im not in high school yet
better learning
to speak to us about jobs and the real world to let us get out there
No homework
gr
teachers and principals not being strict.
our own way learning
no haverclases
Giving us more time to do work not that much work less talking
no pe
nada esta bien
To stay focus and make sure that i don't follow the wrong crowd
Im not sure
have teachers explain things well
we can get out early
I would help them so they can get better stuff because at the school that im at has a lot of cool shit and i want other schools to have them too because i want the students to have fun at school.
paying attention more
M/A
The popularity stuff. I donb't want to feel bad because I'm not "popular".
hi
I would like to get more challenges that the teachers have prepared us for.
that i can choose the high school go to
Less strict teachers
im not sure because i havent gone to high school yet .
It should be like high school Musical 2 where we just go to a summer club and Sharpay is there, and we sing and dance a lot . And we should have Mcdonalds for lunch and breakfast.
To Turn In All My Homework
I would like for more high schools to make schools more secure and lead students to college.
What i would change is that we can work at our own pace because my teachers at this middle rush to much and since for every session we have different teacher every teach teaches differently
Studying things that I actually enjoy and am good at and not have to stress for other subjects.

The one thing i want to change is to have patience with others.
go to school at 9:00 so i wont wake up at 7:00 in the morning.
Something that i will change is students drop off of high school.
to do my homework and be responsible lol lol lol lol lol lol lol
bad students or no homework
Give us more time to go to classes.
It would be to have a really fun teacher in a topic I really enjoy doing.
I think listening to music better food using electronics and more break time
nothinh
nothing
The attitude of the teachers.
learn about the subject i'm interested in
for it to be fun
Being able to choose when I want to do work
I think I would change the number of tests
Leaving School grounds to go to lunch.
be able to eat in class
not getting homework
One thing I would change is for teachers to really explain stuff and that they actually do teach students.
being more orginazed
queleobrescan megor trabago
To not have any relationship like with friends,boyfriend to consontrate.
do shorter tests and more learning,studying
listing music ,phones,better food.
que hubiera un programa de latinos
comuters progects and more free time and no stutents
be on their phone all day
make it easier
I will start to learn new thing and stuff.
I don't know what I would change but i think i would change math so it wont be so loud cause there like 1 hundred kids in a room and when we'er trying to listen its hard
to have good food and to have good technology.
Have less test so that the student is less stressed out and is more engaged in the classroom.
Make it highschool musical
I dont know im not in high school
I wouldn't change anything
nothing because i focus fine in all my classes

Better classes
being given a reward for what you do
It would be homework.
less classes
we could use our phones and eat any thing we want in and out of class
Nicer teachers
if i could change something about high school i think that i would change the fact of students being more respectful and leaning how work in a team
better food , duhhhh��
i think it would be no homework because homework is really stressful and if i dont have homework i can still think about other subject or/and have more time to think about other things
Remove a major amount of test and less homework.
not much stress and the teacher to be nice and help us.
i don't know because i am currently in middle school.
i would make there be less homework
Be more sociable
an online website were you get to make your own websites and or videogames
nothing
It would be that to make high schools funner and exciting.
not sure so don't know
getting more helpers
launch
Have all the students be divided in their own level so it will be easier for students to work and easy for me too.
I would want it to have computers n drama class
Nothing
Less and easy homewrok
I don't really know much about high school/what you do in high school, so I can't really answer.
Everyone would be nice.
understanding more
One thing that High school is doing this that kids wantt to do in there cerar
Having less tests
NO HOMEWORK
I'm not in high school so idk
more easier to understand work.
One thing I would like to change in high school is that good schools won't have a dangerous

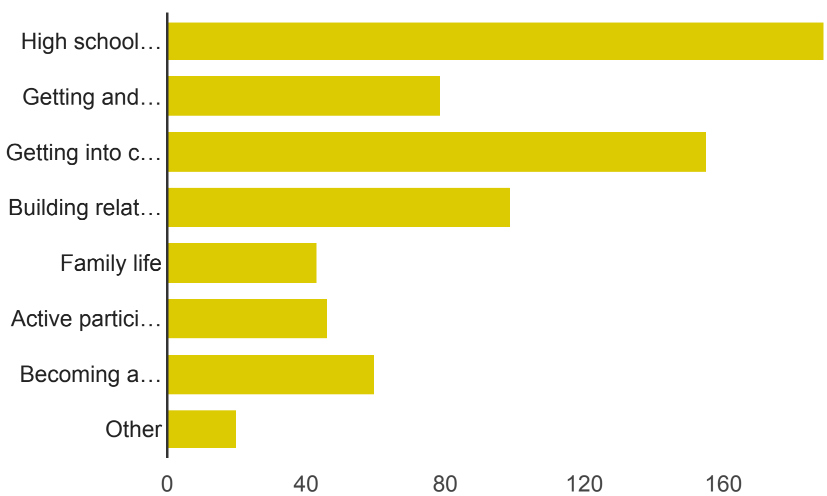
neighborhood or campus
I think i would change it by being at my grade level in everything
The technology
I would change the way the students in lagging in classes and make sure that they get the educational help they need.
It will be that kids that are older than us to not think they are better than us just because they are older
I'm not sure
i really don't know
getting better at school
less homework for nobody can say,"I did not have time and it was a lot of homework."
If i could change one thing about high school to make myself more successful is to pervent bulling from happen.
Not Sure?
I am not sure
M ake teachers help you more when you need help.
go to get food off school ground
easier intstructions
Not being bossed arrounf as if i was a slave use teclolagy like phisacly do it
More new stragies
?????
I would change how the students treat other students.
No work or No homework
non uniform
For the teachers promises to go through because they say they'll do something but they don't do it.
having help, so if i am stuck on a question someone can teach me so I understand.
make lunch longer
NO uniform and NO HOMEWORK!!!!
i do not know i am in middle scholl
Less fighting and the teacher need to worry about whose paying attention
If I could change one thing about high school it would be to have a law school there.
it would be to maybe get morework.

What do you think high school should prepare students for?



High school graduation	**157**	47.3%
Getting and holding a job	**209**	63%
Getting into college	**268**	80.7%
Building relationships with peers	**132**	39.8%
Family life	**107**	32.2%
Active participation in our democratic society	**120**	36.1%
Becoming a contributing member of the community	**148**	44.6%
Other	**36**	10.8%

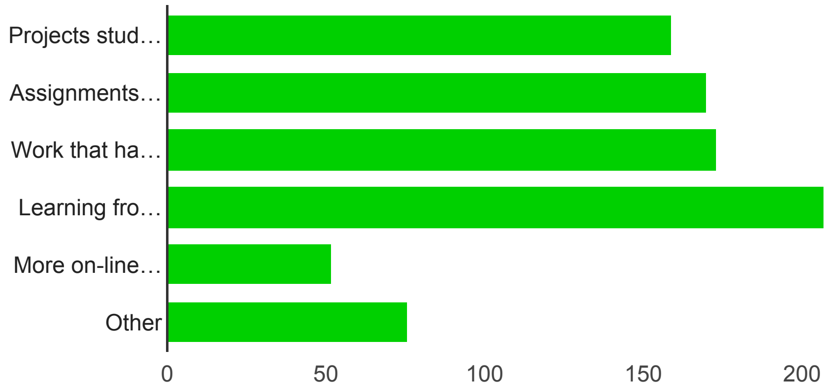
Which of the following do you think schools currently do a good job of preparing students for?



High school graduation	**189**	61.4%
Getting and holding a job	**79**	25.6%
Getting into college	**155**	50.3%
Building relationships with peers	**99**	32.1%
Family life	**43**	14%

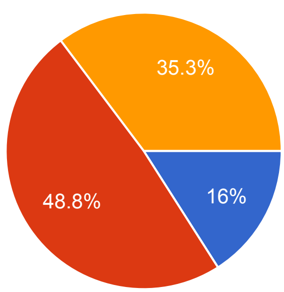
Active participation in our democratic society	**46**	14.9%
Becoming a contributing member of the community	**60**	19.5%
Other	**20**	6.5%

Which kinds of learning experiences do you hope students have more of in high school?



Projects students design themselves	**159**	49.1%
Assignments related to jobs after high school	**170**	52.5%
Work that has an impact on students' community	**173**	53.4%
Learning from real-world experts	**207**	63.9%
More on-line learning	**52**	16%
Other	**76**	23.5%

What do you think of attending a school where most learning would take place in real-world settings, outside of a school building (e.g. in businesses, libraries, etc.)?



I would prefer to mostly learn in classrooms within a school	**52**	16%
That would be exciting	**159**	48.8%
I am somewhat interested but I also like learning in a school building	**115**	35.3%

Please explain your answer above

Learning, in an academic sense, can be improved by seeing the practical application of where the theories become applied in reality. This, controlled teaching/learning should take place in a school and be supplemented by outside pursuits, I.e, 60:40 or 70:30
i would want to learn in a school and outside of school like maybe an internship, like metwest
It would help students to realize how critical their learning is to their future.
It would be exciting because we would be able to go out of school and learn about things.
it would be fun
I like the idea of learning the real world experience but i also want to learn inside the school building
i don't know i just think it'll be interesting to learn outside of schol.
This model takes applied learning as the most effective means of mastery and retention for any skillset and extends it to the learning environment as the rule, rather than the exception, i.e. occasional field trip model.
so they can get air do something interesting
because some people don't want to be a scientist and they still have to learn about science.
So that I can see other thing outside of home and school.
i will rather just not learn always in the classs i will like to learn in t6he real life not only sitting in a class room for like 1 or 2 hours long .
Because its weird learning outside.
Because sometimes it gets boring when you learn in school we wanna learn in other places.
I learn better in class
I would like to learn in the school but I will also like to learn outside of school. Because I can not learn everything inside the school like how to do outside things.
i would like to learn better at a school because that is were the hepl that you need is at.
Because if it rains then some people might get sick
That would be exciting because learning about the real world is amazing and show the kids on what to do in the real world and not to do in the real world
.
I like going to places and seeing new things but libraries and businesses are boring I would prefer hands on exhibit museums and other fun places.
To learn how to get a job as a real state agent
The holding environment was crucial for me -- and there's something about competing in and being part of a big group that is empowering. Bifurcating the experience in 'pods' takes that bigness away. The anonymity and the mass of 1800 students in 10-12 at my high school helped me find myself, and try things out and make changes. A smaller school would not have given that level of space. And b/c of my music, drama, swimming, and club activities, I got to know lots of different kids outside of classes.
it would be pretty exciting and a new experience for me.
I don't support online learning. I would like to see alternative options for students not going to

college. We need to support students not attending college in developing trade skills that can be utilized such as mechanics, craftsmanship, landscaping, electrical wiring, etc. Not everyone will be a computer programer or app designer. Well designed apprenticeships would help our students transition into a decent paying job after high school, but this takes an enormous amount of support and well planned structures for accountability.
it is cool but we cant do a lot of things like in a clasroom.
It'd be instructive to see what occurs / how people perform their jobs and lives in real life vs just reading about it
I am intrested in that but at the same time I like working in a school building.
Learning how to succeed in an academic setting is very important if the student's goal includes higher education.
I think students should be going into the community, but also have a "school" space which is theirs.
Because where are we going to do learn out of schools.
Cause then people would get different knowledge
it would be surprising if i went to a school where i did not need to go in a physical building to learn
I am liking being outside and like classrooms
It would be nice to have a home base.
I like working outside i dont like being inside a lot
I like nature so I can be outside instead of being stuck in classes for the whole day.
That would be cool because it would be preparing you for the real world so that it can be easier for you in the future.
It does sound very interesting and exciting, but in a classroom would also be okay.
I would be excited because if we work in diffrent enviorments it will affect on how we work and how we learn new things/subjects.
It would be exiting because ill be learning real world problems in real world situations.
I would need more detail on what that looks like
because i do better when i'm in my house because i don't get distracted.
I
Because you can do outside activities
I like the predictability (and resulting sense of safety/security) found inside a classroom setting. I think real-world settings can supplement time in a school building but only with the appropriate amount of preparation from students and staff.
...
because you be capable to make a school
because it could give us a chance to see what it will be when you are grown
It would be exciting because you get to see how it actually works and you get to have an incredible expirience.

Because I be more fun than rather just staying in one place.
Allowing students to self-direct their learning, without the confines of the classroom, expands a worldview and sense of agency as to what they can do post-graduation. PBL in the real-world throws in factors they'll have to contend with as they set out, from peer collaboration to community issues, hugely valuable.
Workplace learning experiences can be exciting ways to prepare students.
IDK
Idk
IDN
IDK whats going to happen in the future.
I like working outside but sometimes it's noisy and i cant concentrate
Because its more quiet sometimes.
its different and im interested in new things.
I think a combo of both would be good, ie to have a 'home base' that can act as a collection site, discussion forum, studio, etc for experiences gathered in the world at large
Connections are made in the real life with different levels of the job relating to the stress that comes with the job. They will be able to ask direct questions and interact with public they will eventually deal with. There is more I would like to say call me.
A mix of learning in real-world settings mixed with skills based direct instruction that compliments the former.
Connect students to their learning goals with experiences and skills based instruction.
becouse i have a life to get to after shcool
Because I do better learning in the classroom but other places would be more exciting.
It would be fun because you are doing hands on sometimes.
idc
i think it would give a chance for students to see what the real world is like
idk
i want to learn inside and outside
school should not be separated from the real world-it should provide a place to practice for the real world but using real-world problems. If the classroom is actually in the city, it's hard to keep it separated from real-world problems.
It would be exciting if I understand the question first....
it would be fun because you will interact with the real world society.
it would feel like i have more freedom and not just being in a classroom sitting down listening to a teacher speaking
so pepole whant think its boring
I would like to be in open rooms rather than enclosed classrooms.
because in shool you dont get to go out of the school many times
They give us a perfect time for class to learn.

i like being exited
because they can be more intelligent
The potential for a new model of schooling is exciting but transportation etc could be major factors that might be inaccessible to some. Some classroom some outside, real world experiences is a terrific idea!
I think it would provide opportunities to 'connect the dots' between lesson content and the real world.
cause i felll exciting when am in school
because we learn there and not in real life
IT would be exiting because we're in nature and we could explore and get some air except when its raining cause our work would get wet
i like to be inside
opn watzu by a fild
I'd rather go to school
People don't always want to go to diffrent places and learn.
I think there is value to both learning in your community with different real world settings but that being comfortable and learning in a classroom is also valuable. There should be a balance between the two.
It would be a nice change and it would be pretty exciting. I'm around the middle between answer 2 and 3
Community resources may be unreliable and inconsistent. Internship quality will vary. It is difficult for stressed out professionals in a fast paced real world work environment to find time to mentor high school students, even if their company has the good intention of sponsoring a program. Professionals are experts in their line of work but may not necessarily know how to speak to, involve and teach young people.
inside because then the outdoor world would destract me from the real world learning.
por queseriamegro
I would love to have learning experience in the real world but I also want to learn thing on campus.
well i like going places that just dont involve on campus
it is easier for me
While I am learning I am still having fun.
well i think it would be great
Because i was already use too classrooms also that i can be able to learn inside a classroom
Students are within classroom walls and are often discouraged to think beyond the classroom. I think it is a great idea for students to explore their communities to see what they are learning come to life. Students can be better prepared to face real world challenges when exposed to different settings and situations.
hi
It would be exciting because i want to learn about businesses

just because

i would like to it be more exiting my reason is it's way too boring.

I like being indoors but outdorrs is cool to

because i dont wanna be stuck in a classroom all day.

The answer to this question depends on the student. Different people have different learning styles - some are excellent abstract reasoners who do very well in an environment that encourages analytical thinking and academic skills, where others are real-world problem solvers who do best when challenged with a task.

I think that if we learn outside, if it wouldn't be a good weather it would not let me focus. For example, if it is too cold I would be worrying about how to stop being cold or when we are going to go back inside, and when it is too hot then I would be worrying about how to stop being hot or how to stop getting burned by the sun or when we are going to go inside again however if we work inside we would not have to worry about those things because we would have a heater or AC. Working inside would also make me feel more safe.

I am somewhat interested but i also like learning in a school building because i focus better inside

I think students need a balance of fieldwork/real world settings and classroom work--especially if we're thinking about preparing students for college, students need experience with the academic demands of classroom work. Ideally however, classroom work and work in real-world settings would be aligned and linked, so that there are connections between them.

Jobs in the real-world are not one-size fit all. High-school should not be that way either. Students who have talents that are not traditionally recognized by standardized testing or getting good grades in school should be provided the opportunity in school to see how their talents can be used to better their community and provide a stable income for themselves and their families once they become independent.

It would be nice to learn a new lesson in a new environment,especially if the lesson correlates with the surrounding environment.

I think that a balance between in class learning and on site learning would be great. I think there's something wonderful about studying literature for the sake of a love of learning that can get lost if it's all more "real world" learning. I also think most high schools don't do enough prep for real world life and so off site learning is also exciting.

its fun

i would love to work with other people and get to make new friends and thats why i would be exited.

It would be exciting to attend a school where most learning is outside because thats different instead of inside classrooms.

I love field trips and have always learned best when out in the real world.

I think structure remains important for any educational and career setting. Working in a job later on will likely have one office or building (even though remote work is becoming increasingly popular, co-working spaces and similar still provide structure for example). A mix of theory and application-based learning seems like a happy medium.

I want to learn the standard way.Like in elementary
I need to know more information about how the "outside" learning would work. When do students get to read literature? When do they learn history?
I think it's important for students to be around their peers for developmental purposes as well as to still have the opportunity to be a kid. I think it's invaluable to have a supported experience in the real world; however, I don't believe that forcing kids to grow up faster and faster is necessarily going to serve them.
it would be amazing to learn into different places
because you try new things.
I would be excited to be learning out of the school and in other places but i also want to stay learning somethings in the school building.
People learn in different ways. Just learning in schools doesn't work for all and having some learning out of the school would be beneficial for most, if not all. However, having a central base to return to to is important - a place to discuss the outside learning with peers and teachers.
like i don't really understand i want a real world experience but also learn skills .
I would enjoy it alot
I think that the exciting things can be by helping kids do things that they like.
I would be able to learn and have an understanding how I can use this knowledge throughout the real world.
instead of being in a bulding sitting why not go somewhere and take place in real world
I want to learn in a normal school like in elementary.
Interactions with peers, teams, etc is vital for diverse learning experiences.
i think that i would work better in classrooms
It sound amazing to do
because I like being outside and it's fun instead of sitting down in a classroom.
because i feel more better
I don't really feel comfortable learning outside of school grounds because the setting may be unknown to me and make me nervous.
i would be excited because it seems interesting.
idk i just put a random one
I like to go to different places rather than in just one building.
This will bring students to new environment beside the classroom. However, the setting must be associated with the lesson to be useful. From my experience, I learn better when I can associate the lesson with real world experience. Seeing how things work in a real world would make lessons easier to understand.
i don't really care where the school is located but as long as it has an engineering class, i'm cool with it
i will learn to get to college

i love to go to different places while learning or studing
i would prefer to mostly learn in classroom whihin school
I think the best learning that can happen is through mulit-generational and real life learning experiences. The learning that happens in a classroom seems to happen in a vacuum and then students don't know how to apply what ever book knowledge to the real world.
Because I could understand more.
i would learn inside a class room to get ideas of other students.
i want to learn more
i picked it because i dont know if i wanna go to collage
Some basics may be easier to teach in a classroom vs in the field. I'm think things like composition and algebra, but real world components should be mixed in to emphasize the applicability of these skills in life after HS
it would be exciting because we don't have to go to the same boring place every week day
Because we should teach more about the future.
well outside is more danger that inside a classroom and i honestly i dont feel like being outside
I think there are some things that need to be taught with pen and paper-- math concepts are great in real world but truly mastering calculus or great novels discussions ... Seems hard to do in outside world alone
I think exploring the outside world would be fun.
maybe we might learn some thing from the real world we don't learn in school
It's cool if we get to go out of school to learn but then i want things normal.
sklijre;iuhgfd/v
If we learn outside of school we are not safe and it would be harder to learn because they might be busy.
I think real-world learning is of utmost importance and is not done enough.
it would allow us students to shadow the lawyer or doctro etc. while they gave a presentation to us
Connectedness and community are important to me, so I am curious how this would look if a school were only in real-world settings. I also like learning and talking to peers as I learn, so I wonder how this could work in this new model. I love the feeling of relevance and significance and community impact this new model has the potential for. So I like some kind of hybrid.
because i get ti explore
I think that it would be very interesting to go to other places to learn.
i would like to be exciting because then it would be boring
I think there needs to be a strong balance in curriculum and the learning setting.
it will be exiting because we can learn more and it will be more better to learn.
I think a balance would be best. Some students learn better in different environments, and to create space for both learning in a classroom and in the community would create well-

rounded humans. At the end of high school, I hope for students to be well-rounded to enter into society as adults.
It would be better because I wouldn't stress out as much like being in school
my answer was kind of in between because i do like learning outside and exploring but i feel like there would be so many distractions outside and with all the sounds and noises outside the teacher wont know if kids are talking or if it's just our surroundings.
I like it where it's warm.
..
it will be fun
ese\a se meifica queestubiera bien
There would have to be a good balance of classroom learning and real life experience.
I would like to see a balance between class and real-world settings. A classroom can be a safe area for reflect, connecting and regrouping, before going out to new/different and in some cases maybe scary (for children) environmwents
That sounds interesting, but also like jumping on the bandwagon for the next "hot" idea. What is really effective? Has this practice been studied at all?
I would perfer class rooms since in outside businesses it's too busy
i think a school building is better because like the classroom are closer
I like learning in school because I can learn to interact with other people.
I think it would be very exciting but students in our current education system are not usually prepared to be independent and take charge of their learning in outside settings. I think it would be a great way to teach students but also challenging to create a successful culture in which students understand what is expected of them. Great idea however.
It depends on where the outside experience would be because it might not interest the place we are going to some people.
I mean if it's nice outside then yeah that would be fun.
because it would be great
I think learning in the "real world" would work if students still got to have social currency among their friends. If students became too isolated, then I think they would lose motivation. Otherwise, learning in the "real world" seems much more appropriate and applicable than in a traditional classroom.
It would be good doing outside and staying outside because it can get boring fat in a classroom.
ok
I choose this answer because I like learning inside the building because it is more silent.
i want to get a collage deplomot
i don't like staying in one place for a long time
A good classroom and school should have a prepared environment for learning. Most businesses and libraries don't have everything you need.
It would be fun to not just be in a classroom and be outside because you can be more

focused on the real world than just inside a classroom. Also its more of having realistic lessons and have a bigger picture of what your learning.
That would be exciting because it let's you experience what your going to go through when you get older or start working
I think that would be very helpful for hands-on things but I also value at least done traditional classroom education.
i dont know
I am used to usually learning in a classroom.But at the same time I am very energetic and like going around places
I guess out side the school is nice
it would be nice learning outside

What one thing could schools do to better prepare students for a future after high school?

Connect the promise of disciplines to the immediacy of needs students see in their day-to-day
Conduct REAL research on REAL issues. Use REAL data, where you design the data collection method, analyze data, and discuss the limitations of those data.
for collge
to get a good job and hold it
is to be helping then have more time help them giving them more instructions
Maybe start telling us what are we going to learn in highschool. How to prepare in high school and what will we need in highschool
Give ,show, allow them to research different options available to them after high school. Almost like a role playing game or choose your own adventure book. They could be given a scenario of a teen's life (hypothetical but realistic to their area) and options to assist the young adult..... student's generally like to help others....
Im not really sure.
They can help find what major we want to study in college.
NOTHING
lockers annd opn watzu by a fild
Relating school skills to job and college skills.
ask them what do they going to do in the next pass years and help them learn more about that subject
learning without computers
they need to change the tto names like menlo park and surveymonkey
In a class have different groups.
encourage them
Teach the student what they are gonna have to go threw in life.
teach us more educational things

Exposure to career options that perhaps didn't exist a few years ago - or depend on less conventional academic skill sets. On that same token, mentorship opportunities! Focus on soft skills - collaboration, empathy, character education is a focus in early grades, can't consider high schoolers "fully baked" and not in huge need of continued opportunities to test and strengthen their value systems.
Study more about the expierience
make a subject that i'm interest in
make sure students are making their way
People are different. We can't prepare everyone for a more prosperous future until we realize that university work is not for everyone. We need smart people in the trades, smart people in professions, and smart people in art. Kids should be encouraged to follow their dreams. For many this will include college preparation, for many it shouldn't.
MOtavation to get to collage
Related classroom lesson with real world experience. Make it more applicable.
Be more socially justice oriented and aware
internships and shadowing experiences are a well-planned part of units of study that connect to the real world
Help students find their curiosity and their passion, so that their internal drive and desire to learn will keep them going in college, trade school, work, etc.
have good food
to show them how the real world works
Provide more connections and internships with local businesses.
financial education entrepreneurship
prepare for colledge
Teaching them about life.
More community involvement. This would allow for local businesses/professionals and family to get more involved in the educational system while teaching students important life skills - entrepreneurial, project-based assignments, on-the-job learning et al. I think community can be the important link here.
High schools can involve students more into STEM subjects so they can get a better job in the future.
...
not be so stricked with people because they give the teens a lot of work
good jods and real life sechuations
Self advocacy, inspiring creativity and empowerment of self
Schools need to advocate for ALL students regardless of what they choose to do after college. We put a lot of emphasis on college and those who do not attend are left behind. Students need to understand how to prepare taxes, how to open bank accounts, how to save money, how to interview, and about different resources to be able to make a living.
give them more one on one time

Teach us about the future
Help them advocate for themselves, how to succeed when there are challenges, how to face culture shock when entering higher education.
Get them to ask how they want to change the world, and support them with tools to do so.
they could let us laern at our own pace
I think every think is ok
Idk
IDK
IDN
is that we could learn more and not flunk
Rigorous instruction
learn more about high
Making sure that they know where they are going and know what to do and understand better what they are learning
Community work/preparation.
Hire better teachers who know how to teach and love what they teach
To not interup classes just because a student has a hoodie on.Teachers do too much
TO TEACH US HOW TO GET A JOB AND HOW TO BUY A HOUSE AND MAYBE I'LL BE MORE INTERESTED.
idk
probably prepare us for the things ahead because if were not prepared things could go wrong
Preparing them and treating them like a high school student.
N/A
That it is ok to delay college in favor of apprenticeships, internships, mentorships so that they can learn about the world before they have to decide or refine what their place in teh world might be.
By teaching students ab out real world thing (reality check) and stop teaching the past.
Make sure they know what the student is interested in learning.
Teach them to learn to interact better with other students
having better equipments went learning new things
better learning
i cant think of any thing
Empower them to take charge of their own learning and curiosity.
maybe give them insight on taxes and other finances
talk to them about collage more get them motivated for collage maybe even bring profesionals that are doing good and are something big so the kids can get motivated and want to be like them.
more fun
geting a job

Make sure that everything possible is connected to that future.
Preparing them to communicate effectively with peers and others. Self development and learning basics around money.
To teach us how to get jobs and to apply to the right college for a student.
more working things
Teach them that life is always going to challenge them and they should persevere in spite of any failures.
Provide real world skills and foster independent thinking so that students have the tools they need to be successful in college (the number of charter students who get to college but eventually drop out is alarming).
what they could do better is treat us like big people and just talk real to us with real words and real life stuff
get them to learn and understand about college better and to also prepare them.
make a colloge and have points
Responsibility for their education.
Little less homework
education
for a job
Help us see what carres there are and what we are good at and tell us about the future.
have assignments on there owe
getting kids on track
1. More mental health counseling. 2. Dynamic courses in basic finance and home economics.
work hard
They could be nicer and more interesting and not give referrals just for talking because that's kinda stupid. I'm just being honest
they can push use there like make sufere make want to go.
Provide a well-rounded education, not just academic.
learn more
I think teaching students the importance of inclusiveness over exclusivity would solve most problems in the world.
that they need to learn to trust a students
Idk prevent problems
Impart more of a sense that the impetus for our overly complex society to exist in the first place is to serve its members. We should work to create a more humanistic global existence, and that starts by empowering every generation. We must give each child the tools and the will to constantly evolve and to change the system if it no longer serves them as a whole. Furthermore, I think emphasizing "play" in both work and leisure will help to bring us much closer to that way of life, and to a more sustainable future for our environment. Why do the stars and the galaxies and mountains even exist? What purpose does it have? To what end

does life have to even begin? The universe is inherently playful. Humans must protect the right of each other to frolic in this universe.
To teach us of what stuff we are gonna expect and not just about disapline and behavior, its not all about how they behave its mostly about what your learning in general.
Teach them some basic life skills (i.e. balance a checkbook, change a tire, apply for housing, etc). Those are things that nobody ever really teaches you too do.
teaching kids more about what they want to work.
Teach them about the real world and not sugar coat anything.
nothing
Encourage the students to find what they are interested in and what they are good at doing.
Getting them a phone,and and romate.
Prepare for college.
I think high school shoul focus more on no only prepare student get in to university but finish it succesfuly.
I think we need to start equipping kids to be problem solvers and not job seekers. A problem solver is someone who has a base set of skills that can be applied to many careers. A job seeker is someone who is aimed at one particular job. I think this approach gets folks thinking about the journey rather than the destination and gives kids a more holistic view of skills and processes needed to be successful in the world.
Tackle big, amorphous, complex problems with no right answer. Dive in. Learn to move forward with confidence and open eyes/mind. Course correct when the info they acquire suggests it's time. And at the end, tell a compelling story that appeals to both logic and emotion, and do it with passion and conviction.
To help kids during after school.
Not making college acceptance the measure of success. Retention is good.. but also, just providing other options that would help them move out of poverty.
partern work
how to live life
I think that not dong too much test and not leaving them too much work on line .
geting better at using technology
NO HOMEWORK
more time preparing for college and projects that aren't boring
Help students become better connected to their learning goals. (See Marzano)
Provide high quality training in trades Support students in planning a budget Science lab experience Job experience and training Support in finding their passion Foreign exchange programs Interactions with students from different social economic backgrounds
Focus more on how to think, how the world is designed, and self identifying unique learning pathways for optimal success on an individual basis.
They don't have to lie to us.
Getting a job.

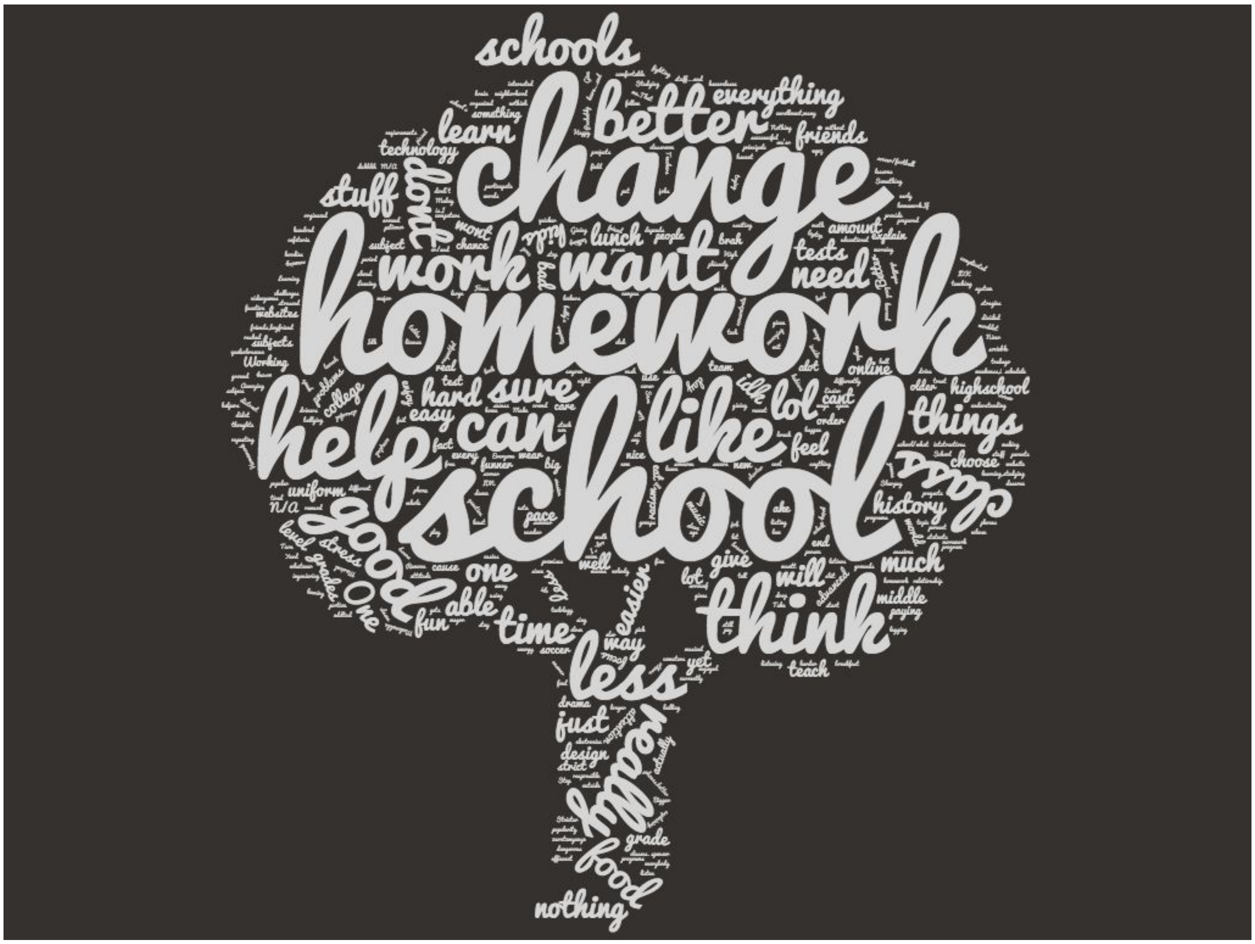
explain what you will have to do in college
get a job,getting married,having kids
teach them what there future job is about
let us use our phones and eat any type of food when we want
idk
Telling us about their own experience so that we can motivate are selves to actually go to college.
things that are in the real world
reading and lerning of what they whant to be when they grow up
Teach them about credit, house buying and retirement accounts, as well as how to save money.
Make sure that evrybody is safe
no dangerus nieghborhood
Every school community has different needs. There isn't any one thing that comes to mind.
Get better and nicer teachers because some teachers are mean and some don't teach correctly.
is trying
Create an environment where students truly believe there IS a future for them after high school and that they have the ability to achieve it.
If they teach us about taxes and how to do them and also how to pay the rent. And editing tips.
One thing that they could do to better to prepare students for a future is that they can learn about law if they have any interests in becoming a lawyer.
to do less work and harder work
quetengan trabago
Really be intentional about planning for the smallest detail. For example, when we say we want self-directed learners be intentional by funding and requiring teachers spend time planning how we will get students there. Also become a Newcomer hub.
1 year of summer
I'm not really sure, I think it's okay by itself.
More options for all type of learners. I am a fan of trade/tech schools and shop classes for kids whose path might not be college bound and even for those kids that are college bound to have exposure.
They could take us to visit colleges and do college things related. They could also help us get an internship or something.
they should prepare the students for the future
one thing they could teach so we could be prepared for high school is getting along with people. Oh and better food!!!!!!
not leave them so much work

Just study
I would make them study for something.
Give more idea on what a person is looking for when they are hiring.
Relate more to what is most relevant in students lives. Provided experiences that help them make sense of their world around them. Also, provide context as to what shaped that world in the past.
Do real life problems that adults have at some point in there lives.
Make sure that existing K-8 are equipped to prepare students to attend any high school, anywhere. It is not important for EFC to have a high school, it is important that students feel confident at any high school they may choose to attend.
I don't think schools do a good enough job preparing students for independent life. For example, many students don't know how to file taxes, buy/rent a house, apply for insurance, manage bills, etc. I think schools could do a much better job preparing students for practical needs after school.
Don't stress them out with homework just leave them live!!
Expose students to the real world.
they should get the teachers prepared with fun avtivitys and have challanges for them also.
More vocational education for those who want it
Make it meaningful.
focus on learning not GAMES and QUEST
is help going to college and getting a job
have more classes
I'm not sure
Make them feel comfortable with their classroom and have all their materials.
Teach students how to solve real life problems.
On the job training. Work in the field they are interested in. Help them plan careers and find out what it takes to be successful. They need councilors that will guide them through a system most parents don't understand. If it is a career path, help them develop the skills. If it is a college path, help them with the applications, financial aid, manage time without an adult.
Recommend jobs and colledges.
going to college and having family
Something that schools can do better to help students is by helping them get there class work.
high schools could help out students decide what they wanna be or do after high school but i think that some high schools are really good and would help students get to where the students want to.
Real-world skills (financial literacy, applying for and keeping a job, opening a bank account, applying for different types of loans, etc.)
Teach problem solving. To many of the kids I see in the workforce can't solve problems. The can write, they can add, but they can't figure things out on their own.

Not interrupting the class about the hoodies and kids who have a hoodie jacket and are not wearing them. Teachers do too much then they start taking the hoodies away. Like what if its cold and then you guys don't want people coming to school sick ,but yet you still take their jackets away.
Cultivate a love of learning and tools to figure things out (tools to learn).
How to be able to have job and hows it like.What do you have to do to get in or what do you have to have.
Help students who don't want to go to college get on a path for a career.
NOT LIE TON THEM ABOUT THERE HISTORY LIKE OTHER TEACHERS IN THE PAST
????
I think schools can prepare them for real-world problems and educate them about the real-world.
I think to Have meetings or make a business
They should give the students a list of jobs so they can have an idea of what they can work on.
Show them the real world and its challenges!
i dont know
not have that much talking like you have 10 minutes to talk then we move on the project or group work or whatever you have to do
use chromebooks
More project-based learning, internships, electives outside of math and science, life skills such as budgeting, health education, nutrition, the arts, and music.
- personal finance and civics classes for all students, and a crew that continues to teach SEL and communication-related topics as students begin to navigate young adult life - giving high school students the opportunity to mentor younger students (elem or middle) at other EFC schools - this would build leadership skills and sense of purpose in high school students, give younger students the opportunity to be mentored, and likely encourage more students from our communities to actually go into teaching - more meaningful community service and career exposure
Time management skills with focus on organization.
Make sure they get all the help like any other human being gets
One thing schools can do to prepare students for after high school life is to have a project about it or to talk about possible collages after high school.
teach them about it.
One thing would be to encourage students to generous things in life instead of being greedy and cheap.
Tell students so they can think about that and convince them to have a future even tho they might not want to.
One thing schools could do better is offer a greater diversity of opportunities that respond to the varying needs of varying learners. There is no single "best" way to learn that works for

everyone. It all depends on the learner and his or her strengths, preferences, and learning style. By the time kids reach high school most already have a pretty good idea of where they fit. One thing a new high school could do is offer alternative learning opportunities for kids for whom the traditional classroom hasn't worked.
This is purely based on my own high school experience, but I left with a very naive impression of what working life and career path options were. Kids leaving high school should be aware that they will have to invent their own career path, and that the world they will live in as adults will likely be completely different from the one they grew up in.
learning helping and being part of there community

Student Responses to '*If you could change one thing about high school that would make you a more successful student, what would it be?*'



XQ Super School Student Focus Group Project

Key responses from ASCEND focus group 1/14/16

Seven 7th grade students (3 girls, 4 boys)

Prompts:

- If you got a chance to create a new high school What would it be like?
- What kind of things would you learn about? Who would decide what you learn?
- Where would you learn, in classrooms, field trips, workplaces…?
- What would the teachers do? How would they act, what kind of help would you get from staff?
- What would the school look like?
- Think of a time you learned something, in school or out of school, it can be anything, tell me about it, what did you learn, who helped, what did you do to learn it?
- What do you want to do after HS
- How can school help you achieve those goals?

Responses:

- **What would the perfect HS be like?**
  - o The new school would have music
  - o Multiple people would be the teachers so you could learn lots of instruments because not one person can play all of the instruments
  - o You would get to just try to play the instruments like guitar, or a bass and ukulele…
  - o The teachers would be good and could help you learn how to play the instruments
  - o You could go to different classes that you pick, with experts
  - o Have like special classes we sign up for and then we go to the classes on certain days, Like, in order to have more choices you would have to have grades that are a little higher, better grades would get you more choices
- **Where would you learn?**
  - o Tatooing and graphic art, artist could teach you to do designs and different things
  - o Like blood or nerves and where they are (tell me more) like for tattoo you need to know where the veins are and not hit nerves
  - o There would be a lot of field trips
  - o Like for music you could go to museums or somebody could come in and teach you
  - o Experts would be there to teach you
  - o You could go to different places to learn different things on different days
- **What about teachers?**
  - o The teachers would make things fun, like we hate science because the teacher talks too much, it is really boring and in Mrs. Z we all do our work because she makes it more fun…

  - IF students want this teacher to go, like Mr. Sailer, the students said they were not learning but it was the students, he was a really nice teacher
  - A good high school has good rules
    - Like here I don't really like the rules, you can't really do anything
    - Like this year they made more rules like we can't leave the cafeteria
    - You can't wear your hood in class
  - What kind of rules would you like to have?
    - Like you could go off campus after school, they don't let us do that anymore
    - Free dress so you could express yourself
- **What do you want to do after HS**
  - College, I want to go to college, like for football I could go to college.
  - If I don't do tattoo I could go to college.
  - You need more than good grades to
- **What else?**
    - Technology
    - Good technology that is not so expensive but so that it works
    - Students could bring tech home, like if you have internet you could take a chromebook home and then have to return it
    - It would have nice tutors who could help you
    - Yeah nice tutors who were there to help all the time
    - Clubs, fun clubs for things students like to do, like gaming or RPG or LARPing
- **Tell me about a great learning experience you have had, something you learned and how you learned it. It can be at school or something you learned outside of school. Anything you have learned is OK**
    - NO RESPONSES, (this was the first question that student had no answer for!)

YOUR SCHOOL IN BRIEF

Drawing on everything you did in Discover and Design, as well as any work you did with the optional Jumpstart Guide, please provide an integrated summary of your school design, including a brief overview, a description of the student population you will serve, and clear statements on your planned approach to school mission culture, teaching and learning, student agency and engagement, and networks and partnerships.

Latitude High 37.8 is a high school model in Oakland, California through which students leverage the assets and resources of their city to design and secure the experiences, education and network they need to be prepared for a meaningful and productive life. We are a network of educators, designers, makers, artists, parents, students, civic leaders, and business leaders committed to designing and opening a high school that facilitates self-directed, passion-driven learning for our city's youth in which the Bay Area is their personalized learning environment.

Impact

By integrating educational relevance, the personal growth of students and community connectedness, our student-designed, community-based school will drive our students' and city's success both now and into the future.

Theory of Change

Students thrive when they have close relationships with adults who believe in their potential, hold them to high expectations, *and mentor them through the steps necessary to achieve success. Latitude expands the definition of teacher to include members of the community with knowledge and skills to share and who can provide applied learning opportunities that align with the students' academic and life goals. Latitude transforms "high school" into a series of experiences that create confident, connected young adults with a strong supportive citywide network.*

Design Principles

Personalization
Students' needs and interests drive their educational paths. We will understand where a student is and where they hope to go and build each student a personalized educational plan accordingly.

Relevance
Real-life challenges are our coursework at Latitude. By removing the walls of a high school the community is our classroom and students focus on the issues that matter to them.

Integration
Studies at Latitude are always interdisciplinary. And, because learning takes place outside of a neighborhood-bound building, students work with people of all socioeconomic, ethnic and racial backgrounds. Latitude students, as a result, are comfortable with complex concepts and varied populations.

Creativity
Latitude students, nurtured by makers and designers, entrepreneurs and artists, acquire the creative confidence they need to navigate the knowledge economy with ease and inspiration.

Our Student Population

Latitude will serve a student population that is representative of the socioeconomic, racial, cultural, and geographic diversity of Oakland, California. Oakland is one of the most linguistically and racially diverse cities in the United States - 25.4% Hispanic or Latino, 25.9% White, 27.3% Black or African-American, .3% American Indian and Alaska Native, 16.7% Asian, 0.5% Native Hawaiian and other Pacific Islander, .3% other, and 3.6% two or *more races. We believe that the diversity of Oakland is a tremendous asset in preparing children for success in life in the 21st Century. We will work actively to recruit a diverse student population and to build cultural norms, rituals, and structures to facilitate the empathy, thoughtfulness, openness, and global awareness that bring people together across difference to build relationship and community.*

The Latitude Learning Experience

Latitude's planned approaches to school mission and culture, teaching and learning, student agency and engagement, and to networks and partnerships is really a single integrated approach that is driven by the design principles of personalization, relevance, integration and creativity which in turn become the four pillars of the Latitude student learning experience.

Personalization

At the foundation of the student experience at Latitude is a personalized pathway that is driven by the student's passions and structured through a competency-based evaluation system. Personalized learning has become an educational buzzword for many things. However, at Latitude, a truly personalized education begins with knowing the students deeply:
What are their interests?
What motivates and drives them?
How do they best learn?
What are their cultural norms and expectations with respect to learning and school?
Who is their family and community that surrounds them?
What are their past experiences that impact their learning?
What are their goals?
What are their worries?

Personalized learning requires that we understand a student's needs so we can help craft a program that meets those needs and builds on his or her assets to achieve the goals. Personalized learning without clearly explicated competencies can lead to low rigor and expectations that too often follow patterns of poverty and a lack of power. Therefore, our personalized learning model is based in rigorous competencies, identified by most current research on college and career readiness, that are designed to ensure success in the 21s Century. All students will be supported *as they work to achieve mastery of those rigorous competencies, and all students will be supported as they design the personalized pathway through which they will utilize to achieve mastery. Finally, personalization at the secondary level requires that students have a deep commitment and agency with respect to their goals, and have the self-management, resilience, and perseverance to achieve those goals. Ours is a gradual release model in which we initially provide a certain level of structure and support to students and then release them to a completely self-directed approach in the later years while staying alongside them with the support them as needed.*

Integration

Integration is the second pillar of Latitude's educational experience, both with respect to the actual learning and with respect to the cultural experience. Too often, school learning is siloed by content or by period, and too often, students do not understand how what they learn in these silos apply to their life experiences. Our goal is to create an integrated and interdisciplinary curriculum that teaches math in the service of science and engineering, language arts in the service of science and social science, and the arts in the service of all. The competencies will require the application of an integration of all content areas towards interdisciplinary performance tasks.

Integration is also at the heart of the cultural experience at Latitude. In 9th grade, students will be organized into an integrated advisory (or home group) that will meet daily. This group will also be the foundational humanities class that comes together to discuss relevant current events and read compelling contemporary works, have difficult conversations about race, class, and power in the context of book study in seminar sessions that guided by Socratic methodology. The entire community will regularly come together around cultural celebrations and more informal talks. We plan to expose our students to some of the greatest artists, poets, historians, writers, and leaders in Oakland to help them expand their perspectives. Also, the larger network of adult allies that we will build for our students and all of the citywide partnership will enable students to interact with adults from all backgrounds and fields, further building their confidence in diverse settings.

Integration is deeply intertwined with our approach to *personalization. Only when a student is known, respected and cared for as an individual, is he or she able to have the confidence and security to actively engage in what is increasingly a segregated and unjust society.*

Relevance

Relevance is our third pillar, and intersects with integration and personalization throughout. Too many students today express that they do not know why they are learning what they are learning or how it matters to them as individuals. Students become disengaged in the learning experiences, and agency declines. At Latitude, we hope to leverage the rich assets throughout the city of Oakland to facilitate learning experiences in authentic settings in partnership with actual practitioners. Our plan is to see students learning civics in City Hall, research skills in the Oakland Public Library, ceramics at the Crucible, drama with actors in local theaters, art, history and design in the museums, conservation in the Bay with the Port of Oakland, and world language in cultural settings in which those languages are used. Connecting learning experiences to adults who are passionate builds engagement and facilitating the learning in real settings builds relevance and deeper understanding.

The competency-based evaluation system that guides all of the learning at Latitude will be intentional in demanding students perform, present, create, integrate, and debate. The evaluations will require students demonstrate aptitude in a range of ways to ensure students are building capacity in presenting their learning for a variety of audiences and settings.

Creativity

Our fourth pillar is creativity, and our focus is less on the hard or technical skills and more on building a student's creative confidence in multiple settings and content areas. Students will be supported to meet their creative confidence competencies by identifying where they have passion for innovation and creativity. Their creativity will be enhanced by learning experienced in the arts. The citywide networks will provide students opportunities to develop their creative agency through internships at startup companies, gaming companies, music studios, or learn from *entrepreneurs, scientists, authors, Makers and artists. Students will be required to take a foundational design course in 9th grade and then supported to find a creative confidence pathway.*

Please enter a zip code that best approximates the location of your proposed school:

94601

Among the students you intend to serve, please enter the estimated percentage of students that would fall into the following categories (Optional):

60 % that would qualify for free or reduced school lunches

30 % English language learners

20 % special education

10 % disconnected youth (neither working nor in school prior to enrollment in your proposed school)

Race/ethnicity:

2 % American Indian/Alaska Native

15 % Asian

25 % Hispanic or Latino

25 % Black or African American

15 % White

3 % Hawaiian Native/Pacific Islander

15 % Two or more races

Our proposed school will be a:

Charter school

Our proposed school is a:

New school

TALENT & TRAINING

A MODULE TO INSPIRE YOU

Recruiting the right educators is essential to the success of any super school.

READ MODULE >

Staffing your school is one of the most important steps in ensuring that your mission for learning is delivered upon. Recruiting a capable staff, coordinating their roles, and planning for their ongoing learning are all critical.

THINGS TO THINK ABOUT

What roles will teachers, leaders, and other adults play in your school? What specialized knowledge and skills will they need?

What are your plans for staff recruitment? What sources will you explore?

How will you enlist nontraditional educators to optimize your school design?

How will you foster a strong professional learning community and promote continuous learning and improvement?

What barriers do you anticipate, and how will you overcome them?

APPLICATION QUESTION

How will you staff your school? How will you bring together traditional educators, non-traditional educators, and other adults to provide a full array of exciting, rigorous learning experiences for your students? How will you foster a vibrant professional learning community?

At Latitude High our focus is on building staffing capacity to provide students with quality integrative learning experiences that will empower them with the knowledge and skills to design and lead their own deep and meaningful learning experiences.

Our staffing model is a seamless weave of traditional academic resources and community assets to achieve educational experiences for our students that meets both their academic goals and meets their socioemotional needs. Student learning at Latitude High is not limited by the walls of a school building or the skillsets of classroom teachers because students will also learn from the best and most engaging experiences available in the community. In order to accomplish this we will tap the skills of both traditional and non-traditional educators.

In the planning year our team is designed to effectively develop partnerships, establish systems and structures, and to curate high quality education experiences for our future students. Our experience with innovative school models has taught us the importance of effective and efficient preparation and planning in year zero. This is why our founding team includes a project manager, a project lead, operations support and academic staff. The project manager is tasked with ensuring that ALL of the pieces come together on schedule. Because our model does not limit student learning to one physical location, operations support is vital to ensure both access to learning resources, and, student safety.

True personalization of the learning experience is at the heart of the Latitude High model and that personalization is dependent on strong relationships between adults and students. Advisories are the backbone of these relationships and identifying the right people to staff these positions is critical. Therefore, we have integrated the best aspects of the Expeditionary Learning "Crew" and the Big Picture Learning School's "Advisories" into our model to serve as guides in developing the criteria for hiring advisory teachers.

The current teacher shortage in California means that we need to be proactive in our recruitment efforts. This involves developing partnerships with schools of education in the region. We also actively recruit from amongst the best in the traditional teacher credentialing space by cultivating student teacher relationships in our network schools and then courting the most successful candidates. Our network hosts job fairs and teacher credentialing events to connect with and establish long-term relationships with prospective teachers.

Our model also requires recruiting individuals with non-traditional educator skills. Teach for America Alumni is one source for experienced and effective teacher talent. The STEM focus of our model means that we need people with extensive real world science and engineering skills. EnCorps trains these types of people for a second career in education. We recognize that schools are not always equipped to teach certain specific skills, so we will connect our students with the right people and organizations to learn those skills. We have teamed with Gyroscope Inc. and will have students learning the design process along with display and presentation skills from their experts in the field. We will also contract with outside providers to access a wide range of diverse and engaging learning experiences for our students. There is no student interest we cannot serve because learning is not tied to a building or a static set of staff.

We recognize that with such an innovative model there currently is an insufficient number of people being trained for all of the roles we need. For this reason we will also build pathways to teaching for our entry level talent. Promising employees will have access to ongoing training and development opportunities within and outside our organization. Programs for teacher residencies such as The Reach Institute and Teach Tomorrow in Oakland will be partners in developing our teacher talent.

Identifying and recruiting talent are the first steps to staffing Latitude High but the real power comes from the structures for ongoing learning and improvement that we will bake into the model. Through the creative use of time and space we will ensure educator learning through intensive professional learning communities. Professional development and ongoing analysis of student performance data to inform instructional practices will be a core piece of our improvement strategy. We hold a growth mindset and are intentional about developing our staff skills and dispositions to best serve our students. We will also use Slack and other social media and communication platforms to ensure *effective and efficient communications. Our plan also includes identifying appropriate technology solutions to address logistics challenges and safety concerns.*

PERFORMANCE MANAGEMENT & EVALUATION

A MODULE TO INSPIRE YOU

Performance measurement allows you to be transparent about your progress and fosters a culture of collaboration.

READ MODULE >

Good schools build a culture of performance, in which everyone is accountable for student success and uses information to assess progress, flag problem areas, and identify opportunities and solutions.

THINGS TO THINK ABOUT

How will you measure growth in every student's learning? How will you identify problems, challenges, and opportunities? What tools and procedures will you use to gather this information, and how often?

How will you collect feedback on your instructional program, the overall experience of students, and the effectiveness of school leadership? How will you understand and improve performance based on this feedback?

How can you use standard data sources differently to rethink student assessment from the bottom up? What data aren't being collected through existing systems?

What do you need to know about your students' academic competencies, social-emotional development, and real-world interests in order to guide their journeys to adulthood?

APPLICATION QUESTION

How will you know if your school is doing a great job—that students are learning and teachers are teaching? How will you recognize if students are, or are not, gaining the full range of knowledge and competencies they need as XQ learners? What measures and metrics will you use, and how will you obtain and use that information?

How do we know that Latitude is doing a good job? Education for Change proactively maintains a culture of evidence in assessing the effectiveness of its schools and educational initiatives. This is not only true for assessing student and teacher learning at Latitude but also for measuring the effectiveness of the other components that are part of the student learning experience.

To better visualize our answer, imagine a wheel with the student at its center. The spokes that come out from the center are the component parts of our model: student learning, the teachers, the hub, the advisors, integrative learning in the community, school leadership and the school itself. Evaluation at Latitude is multi-tiered, formative and summative, and includes all the component parts of the school.

Rubrics-based systems with clearly defined metrics measure student performance in academics and student agency. Competencies are assessed by multi-disciplinary high stakes performance tasks (3x/year), including self-assessment, peer assessment and panel assessment. Content specific competencies in text analysis, argumentation and writing will be measured through peer, self and teacher perspective and artifacts in Humanities seminars. Student growth will be measured utilizing competency rubrics that include domains such as agency, goal setting, communication, perseverance, time management, mindset, character traits, etc. Rubric-based performance tasks are paired with growth measures on standards-based assessments: Scholastic Aptitude Test (SAT), Smarter Balanced Assessment Consortium (SBAC), Northwest Evaluation Association (NWEA), Measures of Academic Progress (MAP). Online learning will be assessed through measures of student engagement, completion rates and student satisfaction.

Teacher effectiveness will be assessed through multiple visits by an evaluator and teacher peers who will score the teacher using a student centered rubric developed by The New Teacher Project (TNTP). Student input will be gathered utilizing a student survey instrument developed by Tripod.

During the initial development of the hub, measures of student connectedness, and, student agency in helping design the learning environment of the hub, will be assessed through student surveys and one-on-one interviews. The data will be used to maintain the student-centeredness of the hub's role in Latitude model.

Advisors will be evaluated through multiple metrics including average *number of advisory meetings per student, student surveys measuring student perception of efficacy of advisor, parent survey data of student's learning experience and academic success, and the percentage of student learning goals met.*

Community partnerships will be evaluated through one formative and two summative metrics. As a formative assessment, school leadership will conduct regular partnership walkthroughs to gather formative measures on the quality of the program, based on the Latitude Partner Rubric. This data is used to provide partnership interventions as needed. The first summative assessment will measure the student's competency in successfully completing a performance task. The second summative assessment is the measure of student perception of the quality of their experience with the integrative learning experiences at the partner's site.

The effectiveness of school leadership will be assessed utilizing multiple measures including a 360 survey by a range of stakeholders aligned to leadership competencies, student outcome metrics, student perception on quality of school, and a family perception survey.

There are frequently administered process metrics in place to formatively evaluate and respond to health of the school which include: 1) weekly student survey to be analyzed by Advisory team, 2) end of cycle review in which community of students and adults review multiple metrics on the quality of the program and determine strategies for improvement; 3) Bi-weekly partner visitations measured against framework; and, 4) Advisors summarize overall student growth every 3 weeks.

Outcome "Vital Sign" Metrics that will be also examined are the number of students who graduate, completing their high school program within six (six years), the number and quality (A-G; GPA; University of California, California State University or community college eligible) of college eligibility, college application to acceptance rate. For non-college goers, the summative measure will be the career pathways plan written by the student. Proficiency across of multiple core competencies will also be used as a measure of college and career readiness. A long-term that will be implemented with the maturation of the school is the college matriculation to completion rate.

Data is only valuable if it is analyzed and interpreted in a systematic way and then fed back through into the Latitude system as part of continuous improvement for achieving student learning and agency. Education for Change has a strong established inquiry process and the Latitude leadership team will use this to ensure a systematic assessment and program improvement approach is in place and operating effectively.

LATITUDE_PERFORMANCEMANAGEGMENT_DASHBOARDS.PDF

TIME, SPACE, & TECHNOLOGY

A MODULE TO INSPIRE YOU
To create a groundbreaking school, you need to rethink how you organize time, use space, and embrace new learning technologies.

READ MODULE >

Creative use of time, technology integration, and purposeful design of your facilities are all crucial elements in developing the right type of learning environment.

THINGS TO THINK ABOUT

How can your school use time, space, and technology in innovative ways that enhance opportunities for students to learn and grow and for teachers to thrive and succeed?

How will your students spend their time during the day and throughout the school year?

How might you use spaces inside and beyond your school to enhance learning? How will you develop or get access to those spaces?

What technologies will help you create the best possible learning experiences for your students?

APPLICATION QUESTIONS

How will you use time as an asset to enable rigorous student learning? How will you organize the school day and calendar?

A core principle of the Latitude model is that learning can happen anywhere, anytime. In most schools, time and space are treated as parameters within which to schedule learning. At Latitude, time is an asset that drives student agency. Students will have the opportunity to think about how they can maximize their time and have the flexibility to develop schedules that align with their individual needs. It is the goal of Latitude to serve all students, including students with varying needs. This *includes emancipated youth who, due to family circumstances, may need to work during the day, to elite athletes that may need to train during the day and could benefit from a more flexible schedule. The time flexibility of the Latitude model combines with other aspects of the model such as creative space use, mentors and advisors to ensure that students maintain a rigorous instructional program which adheres to their goals.*

Latitude students will be required to set their own schedule. From experience, we know that students do not enter high school with this capability. There would be scaffolded support to build this capacity. This rigorous level of executive functioning is more akin to a University model in which students must understand their goals, develop a game plan to achieve their goals and schedule the steps necessary to complete the game plan and thus achieve their long-term goals.

At Latitude, time is an asset that will provide flexibility for students to maximize their learning time. On a day-to-day basis, hubs would stay open late and on weekends so that they are available to both students and to the community. Students would be able to collaborate with their peers and access technology resources in the hub to engage in anytime, anywhere learning. Latitude would operate on a quarter system and be open year-round.

A student's school day would include a combination of self-directed academics, solo project time and/or an enrichment activity, collaborative project time, collaborative discussion time, and time with an advisor. A student would work with an advisor to develop their individual schedule, both the daily schedule and eventually a quarterly schedule with milestones.

Over the course of a school week, there would be dedicated time for humanities seminars and project time that students would have to schedule (much like fitting in a particular class in a University schedule). As in the real world, students will have to deal with constraints, but their schedule would not be fixed nor standardized on a daily basis; it would reflect their goals & needs.

Freshmen students would have more of a fixed schedule, one that meets regularly in the hubs for advisory and seminars. There would be structured time slots in which students learn to manage their own time and decide what it is that they will work on, and there will also be planned time periods for working on projects in the community.

As seniors, students will have more of an open schedule - one that they have developed - where they work with project team members to find collaboration times that work and where they have identified quarter-long projects that meet their learning goals. There will still be humanities seminar times in the hub that students have to schedule around and students will be expected to have regular advisor time to review and iterate on work plans and goals.

Finally, time is an asset that will strengthen the relevance of student learning. Students can use time to go deep on a subject, especially in their junior and senior years. At Latitude High School, students will be encouraged to identify subjects they are passionate about. Site leadership and advisors would then support students in identifying academic resources, partnerships and opportunities that allow them to pursue those passions within the context of mastering competencies such as inquiry, analysis, and presentations.

Overall, through a combination of scaffolded structure and support, students will develop the agency to use time as a flexible asset that brings relevance to their learning and allows them to make the most of their educational experience.

How will you make the most of conventional and unconventional spaces to realize your school model?

Latitude High School is designed to incorporate unconventional spaces. Latitude students will have the opportunity to understand that learning takes place in all types of settings, and not just (or even, mostly) in traditional school settings. Space is key to bringing real-world relevance to students' educational journey as they engage in learning experiences in spaces provided by community partners.

In addition to applied learning settings, the Latitude space is structured around a series of community-based hubs. There will be a central hub fully dedicated to Latitude students that serves as a home base and as a safe space for students. Additionally, there are dedicated co-working spaces across Oakland such as public libraries and space with partners' organizations where Latitude students can gather and work on projects. Based on conversations with existing partners, we know that there is unused space that can be leveraged for this purpose.

The hub will serve as a center point for navigation to learning experiences throughout the city. Students will play a large part in designing the look of this hub. They may, for example, design workspaces from reclaimed wood in partnership with STEAM Factory. Students will begin to understand how they can shape their environment through their interactions with the central hub space. This is an invaluable a lesson in building student agency that will continually be reinforced as they navigate the larger Latitude ecosystem.

In addition to a hubs, the Latitude ecosystem will include multiple learning partner organizations that provide host space and real-world applied learning projects for students. Some partners would have dedicated spaces; for example, students would have access to conventional classroom space through partnerships with the Oakland Unified School District and the Port of Oakland would have a dedicated Latitude shipping container classroom. One strength of the Latitude model is that potential partners can engage at multiple levels. Some smaller businesses, for example, may have a Latitude sticker on their front door/website - showing students they are welcome to come in and ask them questions as part of a career readiness project.

One of the main goals of Latitude is to broaden students' perspective, and an understanding of space and its creative use is one key to that. Many students may come to Latitude unaware of the broader city landscape beyond their neighborhood. Space will be one conduit through which students examine their role in the world. Students will be regularly exposed to different types of spaces - from corporate boardrooms to industrial warehouses - and understand what it means to operate within different contexts and understand the dynamics of unique spatial contexts as it impacts human interaction. In this way, Latitude students will build their level of social capital. Students will also have the opportunity to broaden their perspective via studying abroad and taking courses on college campuses.

Another key tenet of Latitude is that students will give back to the broader community and thereby strengthen the Latitude network of community partners. There will be service learning opportunities in spaces around the city and students will have opportunities to share their work in public exhibit space like partner *storefronts and public libraries. In addition, the use of the city as a learning space allows for more than that - public space becomes an avenue for students to actively bring learning to others. Students can use geocaching to design learning modules for other students and creatively design learning opportunities in public space. This will build on the notion of operating across various contexts. Overall, the flexibility of the Latitude ecosystem will provide continually expanding learning opportunities.*

From the hubs to the city landscape, students will be purposely exposed to space at different levels of complexity and scale. However, beyond understanding the various physical spaces, it is important to note that students will also be developing their own personal spaces, via curated e-portfolios and project-based social media accounts. This will be an opportunity for students to define themselves and to think about how they want to present themselves in a manner that supports future opportunities and their personal development. The lessons that students will learn from navigating the Latitude ecosystem - from understanding spatial context to learning how to maximize the use of space for learning - will prove useful for supporting students in developing their personal space and their sense of agency.

How will you use technology innovatively to enable every student to achieve mastery in key areas, including but not limited to science, math, English language arts, and history/social studies?

Latitude students will be digital citizens and savvy users of technology with access to the technology necessary to succeed in today's world. The Latitude model has a built-in level of flexibility and asynchronicity, given that students will have the capacity to set their own schedules to develop core competencies and will be engaging in multi-week projects in applied work settings through the city. Technology is a tool that will support connection and alignment across Latitude's various components, and bring real-world relevance to learning while also supporting student agency and creativity.

Latitude will be a 1:1 school and students will have both phones and laptops. Latitude takes seriously the responsibility that comes with the level of freedom that students will have; digital citizenship will be imbedded in the culture, and technology will serve as a common connection point for all students, parents, and staff. We know that feeling safe is an important component of learning, especially for many of our students in under-resourced communities. Technology will support safety by enabling students to navigate the city and allowing Latitude to monitor student movement across the city and to keep in contact with parents. Further, students will always be able to contact an advisor for support and guidance.

One way in which technology will support student agency is by enabling students to manage and track their own learning path - both in the spatial and academic sense. Spatially, students will map their journey and see a visual representation of their increasing sense of agency over time as the borders they navigate expand. Academically, as indicated in the 'Performance Management' section, students will have access to real-time dashboards that illustrate their progress and their goals. Advisors and school leadership will also be using the dashboards to identify the type of support individual students need, and there will be an environment that supports data transparency so that students can identify potential tutors and learning partners among their peers, further developing connection and agency.

Technology has been a key lever in supporting anytime, anywhere learning. Historically, this has usually meant students being able to access online programs when they are away from school. At Latitude, that will continue to be a role that technology plays. Students will be able to access a broad spectrum of courses and adaptive coursework online and working at their own pace so they could, for example, complete Calculus by
10th grade. In addition, with support, Latitude students will be expected to engage with online work a bit deeper and to use technology to explore their learning passions and develop their own learning pathway based on their interests and an understanding of what competencies they need to master. For example, to fulfill science competencies, a student interested in the conservation of endangered animals could research the World Wildlife Fund, virtually experience a safari in Kenya and then connect with a local school in that country and arrange for an opportunity to study abroad. The student's advisor would keep track of how the student is progressing and provide necessary support, but technology would allow this student the agency to take their own initiative.

A key differentiator of the Latitude experience is that students will also have regular access to applied technology that is used in the field, enhancing the relevance of student learning. Students will be working on applied projects with such Latitude partners as the Port of Oakland to, for example, monitor air pollution via detection units that they built. With a partner like Steam Factory, students interested in artificial intelligence would develop and program their own interactive machines with micro-controllers. This exposure to real technology will provide students with a strong foundation for problem solving and developing their own technology. Students will be experiencing applied technology at multiple levels, from the cutting edge to the everyday. They will directly see how the nature of work has changed and how it is imperative to not just prepare for the jobs that exist but to continue to challenge themselves for whatever the future brings.

As technology has transformed the workplace, so too does the Latitude model aim to transform high school. Overall, technology at Latitude is a key tool to support students facilitating their learning experiences to develop mastery in ways that are meaningful and impactful to them.

FINANCIAL MODEL & SUSTAINABILITY

A MODULE TO INSPIRE YOU

Thoughtful budgetary planning will allow your vision to flourish.

READ MODULE >

A good financial model is essential for a school's sustainability. A fiscally responsible budget makes the most of available resources and keeps the focus of everything you do squarely on students.

THINGS TO THINK ABOUT

What is the current school finance situation in the community you wish to serve? What funding streams for youth and education are available to you? How flexible are they, and are there any rules and constraints for these funds?

What is the total cost of implementing your school model? How will you use resources creatively to fulfill your mission?

How do you expect to use money strategically during the development year prior to opening your school? How about for the first five years of operations?

How will you ensure that your school is financially sustainable? What funds—beyond per-pupil allocations—do you anticipate needing over the long term? How will you secure them?

Who has the financial expertise to make your innovations real? Are they willing to help or be a part of your team?

APPLICATION QUESTIONS

How will your budget support the innovative characteristics of your school and prioritize student learning? How will you advocate for policies that will enable you to use public and private dollars efficiently and wisely? How will you garner the additional resources you may need to make your school a reality?

Latitude High's innovative model partners internal staff, education systems, and community resources to provide quality, integrative learning experiences to students. This means that Education for Change (EFC) will need to re-imagine how it allocates its resources so that they are spent more strategically, meaningfully, and efficiently on student learning. This innovative non-traditional design will have significant implications for the current staffing and resourcing model. For example, Latitude expects to realize savings on facilities costs including rent, utilities, and maintenance. Staffing costs would also be reduced as credentialed teachers could be more strategically deployed. In addition to classroom teaching, faculty would serve as mentors and advisors to students as the students learn through projects with our partners. From these savings, Latitude will spend more dollars on partnerships, online and/or differentiated learning, educational experiences, curriculum, and technology. Additionally, as we scale and garner more community partners, we expect to gain efficiencies in our partnerships through more effective student management and better pricing.

Based on our financial model, Latitude will become public-dollar sustainable in its third year of operation. In year zero (or the startup year), EFC's home office will invest $100K to fund a project leader for the whole year. In addition to a project manager, these first employees will become Latitude's principal and assistant principal team. Because EFC is a financially healthy and prudent organization, EFC has dollars to invest in growth and expansion, especially to properly design and build an innovative high school. After the startup year, EFC expects that Latitude will need to deficit spend just under $1M over two years to implement *our programming. In the third year, based on conservative enrollment numbers, Latitude will be self-sustaining through federal and state dollars.*

With additional funding, EFC believes we can do more--both faster and thoughtfully. The additional dollars will partially be spent on our startup costs, but they will primarily be spent on bringing the innovative model to a larger number of students and developing more community partnerships. Our plan is to develop two hubs by year five, and consistently increase the number of hubs. This will lead to access to a diverse set of neighborhoods and communities, establishing a presence with different community partners, and ultimately, creating more learning space for students. Furthermore, the additional dollars can be used to fund and test different and innovative projects and internships throughout the city. Lastly, EFC is constantly thinking about codification. The additional dollars will be spent on developing a "playbook," so that the model can be replicated.

EFC's core financial goal is that all its schools be self-sustaining on publicly funded dollars. We strongly believe that requesting additional public dollars to fund our non-traditional school above what traditional schools would receive is a non-starter. However, we can acquire additional resources to spend on student learning through private dollars (or in-kind contributions) and cost reduction. There are many technology companies working in Oakland and through partnerships with these technology companies, we can garner space, mentorship and internship opportunities, and other forms of student growth. Additionally, we will find similar opportunities with architects, lawyers, accountants, artists, restaurants, etc. As we continue to scale, we expect additional cost reductions as we coordinate and manage students' time with partners more thoughtfully.

EFC has been an advocate for quality and thoughtful spending of education resources in Oakland in both charter school and school district systems. Currently, the State of California has restrictions on how resources are distributed, accessed, and utilized that tend to push charter schools and school districts to utilize the "safer" traditional schooling model. In technology and business, California is often at the forefront of innovation; the way we educate our children should be no different. EFC plans to highlight and share our innovative high school model with the larger community, so that others can thoughtfully implement *non-traditional models as well. We will demonstrate that many of California's "traditional-biased" guidelines are not necessarily aligned to student needs and growth.*

Since much of your revenue will be driven by student enrollment, how do you expect the number of students served by your school to grow in your early years of operations? When do you expect to reach full enrollment?

In the first year, our enrollment will be approximately 50 students. The founding class will be half the size of a normal class, which will provide us time to refine our model, develop community partnerships, and implement structures and systems. In subsequent years, our enrollment will be 100 students per grade so that our enrollment will grow from 50 in year one to 400 in year five.

We expect there to be sufficient and significant demand for our new high school model as EFC currently has no high school. Within the Fruitvale neighborhood, EFC manages three schools totaling graduating eighth grade classes of 250 students (150 from Epic, 50 from Lazear, 50 from ASCEND). Outside of EFC, in 2014-15, there were 7,369 students in OUSD and 3,579 students in OUSD-authorized charters in the 6-8th grade classes, or approximately ~3,600 students per year (source: "OUSD Fast Facts 2014-15"). Initially, as Latitude's first hub will be in Fruitvale, we expect the majority of
our ninth grade classes to be from the Fruitvale and/or EFC middle schools. However, in subsequent years, and especially after a second hub, we expect to draw enrollment from different neighborhoods in Oakland.

Because of our hub-based model, Latitude can continue to expand enrollment and build or rent facilities ("hubs") to meet enrollment needs. The student enrollment cap will be tied to the number of high quality community partnerships that are working with Latitude to support its innovative educational model.

Please download and complete the Estimated Expenses Worksheet (**Word**, **Excel**, **PDF**) or provide comparable information about your anticipated expenses.

The attached model reflects a full accounting of estimated costs and revenues, given current assumptions. The uploaded expenses worksheet is in pdf format. A link to a Google *spreadsheet version of the model (with underlying formulas) is attached below as Attachment 2.*

LATITUDE_FINANCIALMODEL_SPREADSHEET.PDF

GOVERNANCE

A MODULE TO INSPIRE YOU

A dedicated board helps a school achieve its mission, and advocates on its behalf. The board you need will depend on the form of governance you choose.

READ MODULE >

Good governance provides financial and legal stewardship for your school, helps you stay true to your mission, and offers opportunities for participation and voice by members of the school's community.

THINGS TO THINK ABOUT

What form of governance will your school take? Will your school be an independent charter school, a school within a charter network, or a school within a district? What are the pros and cons of each?

How will you ensure fair and effective policies regarding student enrollment, calendar, hiring, procurement and purchasing, curriculum, and other matters? How much discretion will you need in these matters to enact your innovation?

Which champions will you need to provide your school with guidance and support, and to ensure accountability for legal requirements, sound fiscal practices, and high expectations for student learning?

APPLICATION QUESTION

What governance model have you selected for your school, and why? If your school will be an independent charter, what role will your board play, and how will you recruit and train its members? If your school will operate within a district or charter network, how will you work with the existing board, and in what specific areas will you have decision-making authority?

Latitude will operate as a high school managed by the largest charter operator in Oakland, Education for Change Public Schools (EFC). EFC is currently a preK-8 operator focused primarily in East Oakland. Latitude will be our first high school and designed to ensure our rising 9th graders have a high school option that facilitates a powerful student-directed pathway that leverages their agency and personal goals.

As a high school within a larger CMO, the governing board of Latitude will be the governing board of EFC. The board's primary responsibilities include selecting and managing a CEO and holding the CMO accountable for achieving our academic targets, implementing the approved charters, managing fiscal and legal compliance, ensuring financial sustainability, and passing policies that facilitate effective management. The Board recruits new members based on maintaining a diverse set of backgrounds (including EFC parent members) and necessary competencies (such as financial oversight) and has an onboarding sub-committee dedicated to bringing new members up to speed.

The Board's primary interaction is with the CEO. The CEO manages a leadership team that supervises and takes responsibility for each charter school within our organization. EFC employs a Chief of Schools who will be directly responsible for supervising Latitude, but there is also a Home Office team who provides intensive coaching, resources, and guidance to all our schools.

With respect to decision-making authority, EFC is a unique CMO comprised of a fairly diverse portfolio of schools with respect to grade spans and educational programs. We have preK-5, K-8, and 6-8 schools that include a Expeditionary Learning Outward Bound arts-integration school, a community school, a gaming Maker school, a STEAM school, and others that appear more *traditional in focus. EFC gives schools guided autonomy in their instructional models in return for strict adherence to key "non-negotiables" including:*

A) Instructional Model
Coherent, research-based standards-aligned instructional model
Participation in EFC assessment system
School-level coherence: instructional goals, content, instructional strategies
Structures that support high levels of student engagement
Rigor: a focus on higher levels of Bloom's taxonomy

B) Teacher Development
Structures that enable coaching, modeling, training, feedback for teachers
Data-based inquiry - using data to inform decision-making and facilitate reflection
Teacher collaboration and planning time built into schedule
Teacher leadership/decision making structure

C) Support for the Whole Child
Site-level Family Leadership Council that participates in EFC-wide FLC
Research-based interventions as part of a tiered interventions model
School-wide culture policy with clearly communicated values and expectations and an aligned curriculum to support social-emotional development
Structures and practices to promote physically healthy kids.

What is consistent and required across all of our schools is participation in EFC-led school design, planning and iteration processes. This process results in fairly comprehensive charter petitions that outline programs that adhere to our non-negotiables but can be unique in their offerings. We hold our schools accountable for implementing those charters with fidelity. Our Home Office team facilitates annual strategic planning processes, quarterly data talks to facilitate ongoing iteration, monthly site-level walkthroughs for data collection and reflection, and ongoing site-by-site level support to ensure schools are on track. These consistent accountability and support systems facilitate effective management of more diverse programs.

Our rationale for allowing some guided autonomy is rooted in our belief that public education has many more questions than answers. We want our educators to be inquiry-oriented, to test *their hypotheses, and to leverage improvement science to become more impactful. To create that kind of iterative, problem-solving culture we need to provide structured ways for schools to iterate and evolve. All of our schools have the opportunity to put forward unique and new practices that have the potential to facilitate improvement of learning, and our charter development and site planning process is the means through which a school can put forward new changes. All site plans must be approved by the CAO and the Finance team and then recommended for final approval by the governing board. All charter petitions must also be approved by the CAO and CEO and then recommended for final approval by the governing board.*

Operationally, we do not facilitate autonomy. We have found that there is little to be gained from allowing autonomy around back office systems specific to facilities management, financial management, human resources, or legal. We manage all of those systems centrally.

We hope as a CMO to find that fine balance between managing schools and facilitating innovation at every level, between maximizing efficiency through economies of scale and pushing outside the box. Like our schools, we as a CMO are also a work in progress, iterating on our management approach to find that perfect balance. We have developed common processes for planning, iteration, resource allocation, and accountability that have facilitated more effective management and support of a diverse portfolio of schools.

IMPLEMENTATION CAPACITY

A MODULE TO INSPIRE YOU

Getting to the first day of school will require strong leadership, hard work, and great attention to detail.

READ MODULE >

Planning and managing an effective school requires leadership, an ability to recognize and address barriers, and people who have the skills and commitment to get things done in service of a mission.

THINGS TO THINK ABOUT

What do you need to do in order to evolve from concept to implementation? Who needs to be involved, at what level of commitment, and in what roles?

Organizations develop habits very early in their operations. What mission critical practices can you build in from the beginning?

What gaps, barriers, and threats could hamper your ability to fully implement your design? How will you address them?

How will you stay flexible to differences in the way your team members view processes and priorities? How will you adapt when your expectations don't match reality?

APPLICATION QUESTIONS

What key milestones will you need to achieve as you prepare to open your school, and by what dates? What constituencies will you need to involve, and how will you engage them? Who will be responsible for keeping the process on track?

As detailed in the Team Profile section, the Latitude design team has a strong record of knowledge and experience in both school development and innovative thinking. Latitude will benefit both from a strong CMO that has previously developed innovative school models from scratch, as well as a set of partners that already engage students in deep and real learning outside of school boundaries. The first key milestone in opening the school is to hire the project lead and project manager, both a year prior to opening. This founding team would be provided with a set of core design anchors and an initial project plan that lays out some key milestones. The project manager would be responsible for fleshing out the project plans and for ensuring that it stays on track. The project lead would have primary responsibility for fleshing out the design anchors to implement the year 1 model, including developing partnerships and engaging the community.

Key high-level milestones (Deadline - Milestone - Owner) in year zero include:

Human Capital:
August - Hire project leader (PL) and project manager (PM) - CMO
March - Hire advisors - PL
Jan - Hire site operations manager - PM
July - Develop advisor rubric - CMO
June - Design summer professional development framework - PL

Community Engagement:
Mar - Finalize student recruitment - CMO
June - Finalize student / family on-boarding plan - PM

Curriculum & Assessment:
May - Develop curricular frameworks - PL
June - Develop assessment plan - PL
July - Develop data platform - PM
May - Develop Year 1 partnerships and project experiences - PL
June - Finalize interventions, ELL and special education plans - CMO

Culture & Routines:
May - Develop 9th grade schedule - PM
June - Develop initial space & routines plan - PM
July - Develop behavior framework - PM

Operations:
May - Finalize Year 1 budget - PL
July - Develop technology roll-out plan - Operation Manager (OM)

July - Finalize operational systems - OM

While the project lead and project manager take core responsibility for the work, we know from experience that no founding team can do it all. The founding team would be able to rely on the CMO for operational support and thought-partnership. In particular, the Latitude team would rely on existing structures and expertise for staff and student recruitment, as well as receive thought-partnership around data collection, assessments, and interventions support.

A key tenet of the Latitude model is leveraging the existing assets in the community, and this is where the broader design team comes in. Latitude aims to bring in a diverse student body from across the city. To this end, Latitude will engage community partners like Urban Montessori and Go Public Schools that serve broad sets of parent communities. Additionally, recruitment efforts will include the parent communities with which Education for Change has deep connections. The Latitude school model is dependent upon a roster of strong community partners. Our broad design team has already begun the process of building a larger extended network and the Latitude project lead will build on this engagement to identify and solidify learning partners that will provide engaging real-world project opportunities.

From experience, we know that starting a school - especially one with considerable innovations - is a challenge. This is one key reason that Latitude aims to start relatively small and then scale up; it is imperative to provide space for thoughtful implementation and iteration. Overall, with the benefit of a strong team, organization and partner networks, we believe that Latitude will be well-positioned for success.

Do you expect to encounter opposition to your school, or pressure to compromise on key elements of your design? How will you maintain the integrity of your model and hold yourselves accountable for achieving the goals you have set?

Whenever you design a truly innovative school, there is tremendous pressure to default back to a traditional approach. Parents, teachers, students, and the larger funding and legal environment will struggle under confusing changes and push back against unknown and occasionally uncomfortable transitions.

Education for Change (EFC) has a significant experience with startup schools and innovation in schools. Hae-Sin Thomas, our CEO, led the OUSD new school incubator and supported the development of over 20 new schools in Oakland. Most recently, EFC designed and opened Epic, nationally recognized as one of the most innovative middle school learning models by Next Generation Learning Challenge.

We as an organization have learned a lot from opening so many schools:

1. Minor iterations of the current traditional model will not result in major changes to a
child's experience. In the end, the overall experience of children in many "new" and "innovative" schools remains the same because all that was added was some technology or a different grading system. We believe that dramatic re-thinks are required for dramatically different experiences and student performance outcomes. Embracing such a re-think makes it much harder to default back to traditional approaches. To ensure that Latitude remains true to its vision, we will be intentional about creating a radically different experience for children and adults. Our goal is for everyone not to experience Latitude as "school" but as a "learning adventure."

2. It is human nature to default back to what you know, so it is critical that you build accountability systems that do not facilitate defaulting. This can look like implementation rubrics, observation forms, evaluation processes, stakeholder surveys, and fidelity checks. To ensure a high degree of fidelity to the developed model, it's critical to develop the charter petition and the accompanying implementation documentation with a relatively high level of specificity, forcing the staff to implement the school as designed. This must of course be balanced against the ability to iterate and evolve the model as challenges arise.

3. Ultimately, we must evolve not just the structures, systems, and procedures but the actual interactions between people within the school. Learning is highly interactive and it therefore requires structured and unstructured ways for students and adults to work together. Our images of teaching and learning look like adults talking at kids while kids write down and memorize what adults say. We must develop a specific plan to build a culture oriented around adult and students as partners in the learning experience. This culture must come to life in our rituals, procedures, accountability tools and our day to day implementation.

4. There are tremendous pressures outside of the school that are designed to push us back to a more status quo standardized high school model. The demands around A-G, WASC accreditation, classroom-based versus non-classroom-based funding, AP courses, the grading and credit system, teacher credentials, and NCLB (to name just a few) are all enormous barriers to innovation. Our strategy is to design the school to push against these constraints, getting creative but not risking funding or legal compliance, while simultaneously working with allies to change the policies that limit high school innovation. Our CEO is the Member Council Representative for California Charter Schools Association, the primary lobbying and *advocacy group for charters across the state. She has already engaged CCSA leadership around the need to rethink some of these design barriers.*

The status quo is a persistent enemy. At its most benign, it comes as a weak policy environment, a lack of resilience around change, or not understanding the big picture. But we can't forget that these benign barriers are rooted in pervasive racism and classism at the individual and systems levels. In opening Epic we learned that it's hard to implement something truly different, that most do not have an appetite for innovation, and to many individuals are hard-wired to command and control urban children. The Latitude design team is not naive about the challenge of implementing a truly different experience for kids and adults and understand that this will take persistence over many years and require ongoing reflection and iteration. In order to hold ourselves accountable to implementing the innovation we design, we will have to design a radically different experience (from facilities to classes to teachers to grading); build the systems, structures and procedures that will facilitate the implementation of that experience; ensure accountability systems to pressure the implementation; and work with allies to challenge the policies that restrict even deeper innovation.

TEAM PROFILE

INTRODUCTIO
SECTION 1: TEAM COMPOSITI ON
SECTION 2: TEAM DYNAMICS
SECT N 3: TIME ACTIVITY

SECTION 1: TEAM COMPOSITION

What motivated your team's members to start or join this team?

Who is part of the core team and why? What roles do non-core team members play?

What qualities does your team possess that will contribute to success in creating a Super School?

The Latitude HS Team is motivated by a love of learning and a strong commitment to the underserved youth of Oakland. We are teachers, administrators, philanthropists, journalists, parents, designers, makers and entrepreneurial innovators who recognize that our current school system is outdated and woefully inadequate in terms of its ability to prepare Oakland youth with the 21st century skills they need to thrive. The quotes below provide a sample of the passion and commitment the team brings to this important work.

"I joined this team because I love to learn and I'm passionate about providing opportunities for young people to learn while fueling curiosity and creating a culture of inquiry. Creating a school has been a dream of mine since I was in high school myself (a long time ago!). As a business owner committed to providing people with opportunities to succeed in the workforce, I am also interested in how our schools can best provide our kids with the skills they will need for the 21st century workforce." (Lauren)

“Rogers Family Foundation has a strong track record of supporting innovative public school models in Oakland for students furthest from opportunity. I'm thrilled to be on the Latitude Team and bring my experience as an educator, a funder, and a parent.” (Greg)

“As the first person to attend college in my family, I am interested in what factors and school environments can support students from diverse backgrounds to succeed and grow as college freshmen, informed individuals, and ultimately as productive citizens.” (Stanley)

“I am excited to create a new paradigm that bridges the gap between formal education and social innovation. “(Louise)

“I am interested in exploring alternative models to brick and mortar schools that connect students directly to authentic, community-based learning that matters.” (Randall)

“Having been a long-term educator (high school and university) and high school athletic coach in the urban flatland of Oakland, I've encountered the reality that young people of color in our city desperately need an innovative approach to help them realize their higher education goals.” (Abe)

“What excites me about this project is the fundamental question we are trying to answer: ‘What if we can design an innovative learning experience that deeply connects the learner to her passions, his community, and their world?’ ” (Noah)

While our team comes from all walks of life and from diverse sectors in our local community, we have established a core team that is intimately involved in all aspects of the design and build process. This core team is made up of educators, parents, community partners and funders who not only have the time and energy to do the work but also the knowledge, skills and experience to do it well. This core team understands the life cycle of a startup and has experience in building schools from the ground up. We have been strategic in making sure to engage folks with a wide range of skill sets, experiences and connections so as to have in-house expertise in all areas needed. This core team digs in to apply their skills to bring to life the concepts and ideas shared by the organization-wide team and then goes back to the whole group to refine and iterate until we have it right. The result of combining input from both experts and lay people is a design that is driven by what the experts think can work as well as by the hopes and dreams of the people it will serve.

Even more important than the skills and experience of the team is the commitment and passion with which we engage in the work. This team is driven by a dissatisfaction with the status quo and an *unmitigated determination to do better because our youth and our community deserve it!*

LATITUDE_TEAMPROFILE_SKILLSMATRIX.PDF

LATITUDE_TEAMPROFILE_PARTNERSHIPS.PDF

TEAM PROFILE

SECTION 2: TEAM DYNAMICS

Tell us about an inflection point — a particularly challenging time or an Aha! moment — that your team experienced as you developed your Super School proposal. How did it affect your team, change your perspective, or shape your application?

A core value for our team is learning guided by reflection and inquiry - listening, gathering data, and assessing data patterns. These processes have helped facilitate a team culture of questioning and probing which has proven invaluable in the many iterations of our model.

In an early planning meeting, some of our team questioned if and how the Latitude model would be able serve ALL children. One leader was concerned that many children coming from Oakland's rigid middle schools would lack the agency this model required, and that Latitude might be more attractive to more privileged communities while EFC children might not opt in. This concern was echoed by a Latina mom who felt many Latino families would think it was too different. A Black leader argued that there had to be real intention around preparing Black and Brown children to interact with privileged and potentially racist adults and that facilitating success for our most underserved children had to be a priority.

This conversation pushed us to think deeply about how and why integrated schools struggle and how and why schools became re-segregated. It forced us to think about why high poverty parents might reject the model while affluent families might flock to it. It *pushed us to think deeply about and engage youth who might benefit from this type of model the most: emancipated youth, homeless youth, teen parents, and foster care youth.*

Additionally, we have thought deeply about how we can leverage personalization, flexibility in time and space, a competency-based approach, and relevance, to address the needs of the full range of students from high achieving to at-risk high school students. What additional partnerships are need to increase the capacity to our team?

We have initiated a parent engagement campaign within EFC that addresses both what happening in secondary education nationally and why an XQ Project might even exist in order to better understand their concerns.

These concerns also pushed us to rethink our 9th grade program and design a more scaffolded first year focused on facilitating agency, building confidence, deepening understanding of equity issues, and building community.

TEAM PROFILE

TIMED ACTIVITY SUBMITTED

INTRODUCTIO | SECTION 1: TEAM COMPOSITI ON | SECTION 2: TEAM DYNAMICS | SECT N 3: TIME ACTIVITY

SECTION 3: TIMED SCENARIO ACTIVITY

This is a timed exercise designed to challenge your team—and give us a window into how you approach problems together in real time. Here's how it will work:

1. This portion of the challenge will open at 6:00am PT on Monday, May 2 and will close at 11:59pm PT on Friday, May 20.

2. Each team will have four (4) hours to complete the two-part, timed exercise. Please note that, although each team will have up to four (4) hours to complete the two-part exercise, we estimate that the entire timed activity will take a total of about three (3) hours to complete.

3. Once your team is ready to begin the timed exercise, one member of your team must click the START button below to activate the timed activity for the team.

4. When you click the START button, you will be prompted to confirm that you are ready to start the scenario. You will then be directed to the Timed Scenario Activity page, where you will see your team's scenario and all associated questions, as well as forms to submit your responses. At the top of the Timed Scenario Activity page, you will see the exact time by which you will need to submit your responses.

5. Responses **must** be submitted within the four-hour time allowance to be accepted and scored. Your team's response may be submitted as text, video file (max. 5 minutes), or audio file (max. 5 minutes); you may also submit up to three charts, tables, or images that illustrate your answer.

* If you have any concerns about not being able to complete this activity online, please contact **support@xqsuperschool.org** .

THE SCENARIO

Your Super School has launched well, and you're halfway through the first academic year. Your team believes you've been successful in implementing your school design. Yet mid-year measures of student learning reveal some troubling results. Approximately a quarter of your ninth graders are struggling academically and not meeting the learning goals you've set. Many are students who entered high school performing below grade level. You had expected that, by now, your school would be helping them to bridge their learning gaps; instead, the gaps are growing.

Scenario Response Part 1: The Challenge
What actions will your team take immediately (within the next 7 days)? In the next 2-3 months?

As you prepare for the next school year?

Whose advice, help, and cooperation will you need as you analyze and respond to the situation?

How will you know if your actions are effective?

Whenever a school is not on track to meeting their KPI (Key Performance Indicators) targets, the Education for Change team focuses on analyzing for patterns, conducting root cause analysis, and collecting additional data to inform the initial findings. Specific to Latitude, we would ask and research the following questions within the first seven days:

1. Was there a problem with the progress monitoring tools (rubrics, student reflections on work, exit tickets, online program progress reports, formative assessments, formal assessments)?
a. Was there insufficient progress monitoring data collected?
b. Were the tools not calibrated with the midyear assessment? Are the tools sufficiently rigorous?

2. Was there appropriate response to the data? Advisors should be reviewing progress data.
a. Did the advisors understand the implications of the data and/or know the appropriate mitigations?
b. Were students setting non-rigorous goals?

3. What student-specific data do we need to identify the root cause for the lack of progress?
a. Student engagement data - discipline, attendance, student agency data, work completion, guide reports, teacher notes
b. Student interviews
c. Parent interviews

4. Are there any other non-performance patterns with this particular group?
a. Demographic - Race, SES, gender, ELL, SPED
b. Class/program assignments
c. Social patterns

Once we have completed a root cause analysis for each child's lack of progress, individualized action plans and a school-wide action plan would be developed. The plan(s) would be implemented over the course of 2-3 months with monitoring of clear milestones at a bimonthly rate, led by the principal.

After 2-3 months of implementation, we would review the effectiveness of the mitigations as part of our thinking for the next school year. Specifically, we would ask:

1. Are the mitigations scaleable as the school grows?
2. Do we need stronger summer orientation?
3. Do we need to rethink/revise how we either select or train talent?
4. Do we need to build out better systems for progress monitoring or student intervention?

The support team always starts with the Advisor, the student, and the family. We then bring in the student's peer and adult allies, if appropriate. If it's a school-wide issue, we engage the entire school *team and the students as part of the design-build team. Because EFC is a CMO, we have a deep support team that can be brought in for specific challenges including the Director of Secondary Education, the Chief of Schools, the Director of ELA/ELD, and the Director of Student Support Services.*

We know we are effective if the ongoing progress monitoring shows these students are achieving their KPI targets. We also want this experience to build a continuous learning culture. Failure is a learning tool and an opportunity for improvement. Going through this process as a community will build a sense of collective responsibility and organizational efficacy. This process should also be used as a powerful engagement opportunity - to build deeper connections with these students and to message care and love. We will survey students and staff on their experience to access our process.

LATITUDE SCENARIO ATTACHMENT_DRIVER MAP.PDF

Scenario Response Part 2: Self-Reflection

Now that you have decided on a course of action, take a moment to step back and reflect on how your team responded:

- How did you decide what actions to take? What factors influenced your decision? What assumptions did you make? What tradeoffs did you consider? How did you settle on key priorities?

- What did you learn about how you function as a team? Is there anything you could do to strengthen the capacity of your team to respond to challenging situations?

As long-time educators, we have had experiences like the scenario outlined in this activity. After reading the prompt, we agreed not to make any assumptions about what any particular data set might indicate. All too often, educators look at data with narrow lenses that reflect their biases and make non-strategic decisions that don't use resources well.

Our team discussed the prompt with these following questions: What was the process for data collection? What is the quality of the data, and what does it say? What is the root cause of the issue, and how do we know this? What is the action plan, and what is appropriate for each individual child? Finally, how do we assess and monitor the effectiveness of the action plan?

From our experiences as school operators, we have found that it is very rare for interim (or midyear) data to surprise us because we would have had systems or KPIs in place that would have predicted this event. Therefore, we thought about the progress monitoring tools that led us to this scenario and how we could improve on that process. A plan for defining and collecting more current, accurate, and actionable data should be implemented in the future.

To focus our work, we outlined how the scenario would occur within our school. We reviewed our first year model which would have four employees (two administrators and two teachers) and 50 students. From there, collectively, we answered each of questions in the prompt at a high-level together. We then agreed on the priorities based on the answers. Next, we broke out into teams of two to answer each of the questions and develop the individual attachments. And finally, we collectively reviewed each document.

Moving forward, to strengthen our team, we would continue to refine our processes for working together. Although we developed an action plan, our team has a diverse set of talents and strong conviction for the topic, which led to a lot of in-depth work and discussion. Because of our team's collective expertise, we struggled to narrow our responses within the limits of the format.

We learned a lot about how we work as a team. First, we have a large set of common experiences, but we each interpret from those experiences differently. This allowed us to have a healthy discussion for the first 30 minutes as we answered the questions together. Second, our team divided into work groups based on our competencies. Some members worked on the writing and others worked on process mapping, action plans, etc. Third, we found that the culture of EFC in how we gather, interpret, and act on data, was evident in the room. We have built this muscle thoughtfully, and it was exciting that the team exercised and executed this so efficiently. Finally, we have a culture of caring. As individuals worked at different paces, the individuals that were closer to completion helped the other teams to finish.

THE TIMED SCENARIO ACTIVITY IS NOW CLOSED.

Timed activity submitted by Sundar Chari on 05/19/2016 at 05:36PM PDT

LILLIAN L. HSU

333 Hegenberger Rd., Oakland, CA 94621
(510) 910-4138 • lillian@latitudehigh.org

EXPERIENCE

Rudsdale Continuation High School (2017-present)
Big Picture Learning Coach
- Design bi-weekly professional development for teaching staff around core elements of Project-Based Learning. Support teachers in design and implementation of pilot projects for spring and fall 2017.
- Worked with teacher leaders to organize and facilitate Rudsdale's first annual exhibition of student work.

Beyond High School, Pivot Learning (2016-2017)
Linked Learning Coach
- Supported Marina High School in developing wall-to wall Linked Learning pathways. Coached school leadership towards Linked Learning certification, with a focus on equitable access and outcomes.
- Co-designed and co-facilitated monthly Design Team and sub-design team meetings to facilitate authentic stakeholder engagement from families, students, teachers, and community partners.
- Supported the Hospitality, Tourism, and Business Pathway in designing its first interdisciplinary project.

Stanford d School, Palo Alto, CA (2016-2017)
School Retool Coach
- Co-facilitated the Oakland cohort of School Retool, a professional development fellowship that helps school leaders redesign school culture and curriculum through hacks towards Deeper Learning.
- Conducted coaching cycles with principals working on implementing hacks.
- Led summer "Hacktivation Nation" training on Deeper Learning for nationwide veteran cohort, with a focus on high quality implementation of advisory.

Educate78, Oakland, CA (2016-2017)
School Design Lab Coach
- Provided ongoing coaching support to school design teams seeking to grow their leadership capacity as they developed innovative, quality public schools for the kids and families of Oakland.
- Supported the launch of Oakland SOL, the first dual language middle school in OUSD opening in Fall 2017.
- Supported the redesign of Melrose Leadership Academy.
- Designed Jam Sessions and instructional rounds to support the professional learning of Educate78 fellows.

Deeper Learning Equity Fellowship (2015-present)
Equity Fellow
- Selected by Big Picture Schools and the Internationals Network as one of ten equity fellows for a 24-month cohort-based leadership program seeking to impact the policies and practices that expand access to Deeper Learning in public education. Documented implementation of project-based learning in Juvenile Court and Community Schools across San Diego County serving some of the most vulnerable students in the state.

High Tech High Chula Vista, Chula Vista, CA (2011-2016)
School Director
Served as principal of an innovative, project-based school serving 600 students from across South San Diego County. High Tech High is a "diverse by design" public school drawing students through a zip code-based lottery. In 2015-2016, over 4,000 visitors from around the world visited High Tech High to learn about its PBL model.
- Coached staff of 40 teachers to design and facilitate interdisciplinary Project-Based Learning. Supported teachers in planning and executing ambitious projects such as:

    - *Beyond the Crossfire* – eleventh graders traveled to Newtown, Chicago, El Paso, and Los Angeles to produce a feature length documentary investigating what young people can do to reduce gun violence in the United States.
    - *Otay Valley Field Guide* – eleventh graders published a field guide to 200+ species of plants and animals native to the chaparral ecosystem of Chula Vista.
    - *A Tiny Home is Where the He(art) is* – ninth graders designed and built affordable live/work units for San Diego artist collaborative Space 4 Art.
- Created innovative professional development practices now adopted across the High Tech High organization. Designed annual Project Slice PBL immersion experience that has impacted over 500 HTH teachers.
- Built school's network of community partners through Community Power Lunches, Teacher Internships, and Spotlight Visits to local non-profits. Expanded the number of projects with authentic community collaborations from two in 2011-2012 to twelve in 2015-2016.
- Strengthened college counseling program through strategic hiring, building out college advising curriculum, and coordinating staff efforts. Increased number of students accepted to a four-year university from 69% in 2012 to 80% in 2016.
- Established leadership practices crucial to fostering teacher collaboration, student achievement, and innovation, including: classroom observation cycles, collegial coaching, dilemma consultancy protocols, and examining data with an equity lens.

High Tech High Graduate School of Education, San Diego, CA (2010-2016)
Adjunct Faculty
- Designed and taught graduate level courses on Leading Progressive Schools; Equity, Diversity & School Design Principles; Facilitating Adult Learning; and the Leadership Practicum for aspiring school leaders.

Oakland Unity High School, Oakland, CA (2003-2008)
Founding Teacher
- Participated in the design and development of a charter school serving first generation college bound students. Taught 9th-12th grade English, journalism, and advisory.
- Co-planned interdisciplinary projects with science, history, and art teachers.
- Successfully applied for three educational grants to fund innovative projects.
- Traveled with journalism students to New Orleans to document stories of migrant workers cleaning up the Ninth Ward post Hurricane Katrina.
- Served on the hiring committee and WASC leadership team.
- Led college trips to Boston, New York City, and over a dozen California colleges.

Education Week: Teacher Magazine, Bethesda, MD (Summer 2003)
Editorial Intern
- Interned at an independent, national publication that covers K-12 education.
- Wrote articles and sidebars on the teaching profession, school policy, and influential educators.

Tri-state Consortium, Stamford, CT (Spring 2003)
Researcher
- Participated in meetings with district superintendents, principals, and school board members from public school districts in New York, Connecticut, and New Jersey.
- Examined ways schools could use data from student portfolios and performances of learning to develop a rigorous framework for systemic planning, assessment, accreditation, and continuous improvement.

Sesame Workshop, New York, NY (Summer 2000)
International Education Intern
- Participated in brainstorming for new Sesame Street productions in China and Taiwan.
- Conducted studies with pre-school aged children to assess newly produced Sesame Street segments.
- Interviewed high school students to support concept development and planning of an educational television program targeted at Latina girls.

EXPERIENCE

High Tech High- Chula Vista, Chula Vista, CA — August 2015-July 2017 and 2009-2013

Humanities Teacher

- Current project with my students can be seen at revisionproject.com. The team is run as an architecture, product and service design studio that utilizes human-centered design to solve community problems.
- Leader of Student Intervention Team and developed a school-wide system to support students in their academic and social growth.
- Developed and implemented a four week internship immersion program for eleventh grade students and a program for senior project.
- Member of the Professional Development Committee: planned staff retreat, semester long Professional Development calendar, and facilitated full staff professional development.
- Presented at numerous residencies and institutes hosted by the High Tech High Graduate School of Education.
- Led trainings on project-based learning, protocols, collegial coaching, and critique with visitors and as a consultant to schools.
- Served on the additional following committees: Hiring, WASC, Summer School Planning, New Student Orientation.
- Mentor to new teachers and leader in collegial coaching.
- Taught American History, American Literature, Senior English, World History and Literature, Film Studies, Theater, Sociology, and Government through a project based curriculum.
- Student work selected as Astonishing Achievement by Write OutLoud San Diego 2012.

- Produced and directed five plays with high school students.
- MOOC Designer and Instructor through High Tech High Graduate School of Education and Coursera.

The Innovation Unit Ltd, London, UK August 2013- July 2015

Professional Development Lead: Learning through REAL Projects
Project Based Learning Team Coach (Expert Mentor and Coach)
www.real-projects.org

- Led the professional development and team implementing a nationwide randomized control trial on the impact of project based learning.
- Supervised and coordinated school level support for 35 schools in the United Kingdom.
- Project lead on multiple projects including strategic development of REAL Projects in the UK, new school development in Sierra Leone, and new school development in the UK.
- Coordinated the business development of Learning through REAL Projects and other projects within the education portfolio.
- Worked as advisor and strategic management consultant to senior leaders in new primary and secondary free schools in the United Kingdom.
- Facilitated and planned school transformation, re-design, and change management in schools to facilitate project-based learning.
- Mentor to teachers and leaders through co-design of curriculum and coaching through implementation of work at both primary and secondary level.
- Lead and manage the team of eight classroom coaches and leadership coaches in REAL Projects.
- Developed and managed strategic communication strategy for REAL Projects.
- Presented and organized numerous conferences, workshops and webinars.
- Supervised the design, launch, and generation of content for www.real-projects.org

Timberlane Regional High School, Plaistow, NH 2008-2009

Social Studies Teacher

- Taught eleventh grade American Studies and twelfth grade psychology.
- Served on the District Technology Committee and the District Social Studies Committee.
- Received the Timberlane Technology Mini-Grant.
- Advised Gay-Straight Alliance and Model United Nations.

Oyster River High School, Durham NH 2007-2008

Graduate Intern

- Served as primary classroom teacher to ninth grade World Cultures and eleventh grade U.S. History, also taught twelfth grade Sociology and Philosophy.

Upward Bound, Durham, NH 2005-2008

Residential Supervisor and Academic Advisor

- Supervised the residential portion of the summer program for 90 high school students and 12 residential staff.
- Worked closely with the core professional staff on training, planning, logistics, discipline, and supervision of the entire program. Supervised teachers and academic support staff.
- During the academic year, provided college counseling to five first-generation college bound students.

State Referee Committee, Manchester, NH 2003-2009

Instructor and State Referee

- Taught entry-level soccer referee courses and recertification.
- Served as the instructor for NH State Cup Tournament, Open Cup Tournament, and the new Referee Academy. Mentor to new referees and advanced referees. Attended regional and national tournaments as a referee and northeast professional referee clinic.

Education

High Tech High Graduate School of Education (Masters in Education) **August 2016-June 2017**

UC Berkeley (Bachelors of Science, Electrical Engineering & Computer Science) **Class of 2014**

Education Experience

School Resident, High Tech High Chula Vista **August 2016-August 2017**

Spending the year embedded at High Tech High Chula Vista (HTHCV), during which I have:

- Shadowed our school director Tim McNamara during student, teacher & parent meetings and supported him in day-to-day operations.
- Co-led a project with school director to increase the number of students who qualify to earn the Cal Grant scholarship.
- Designed and co-taught a semester-long project with a 12th grade humanities teacher Tere Ceseña and engineering teacher Phil Rowland in which students used the design process to investigate problems of their choice and design research-based, human-centered solutions.
- Co-led a daily advisory of 17 9th graders, including planning and facilitation of community-building & socioemotional learning activities.
- Did research around sense of purpose and its intersections with students' mental health and executive functioning skills–leading to the design of classroom- and advisory-based interventions to foster sense of purpose amongst students.
- Redesigned a web platform (http://lilbitsofmagic.com/) through which teachers at HTHCV share best practices with each other.

Self-Guided Education Research (http://www.understanding.education/) **September 2015-August 2016**

Conducted a series of school visits, interviews, and self-guided research to build a deeper understanding of the education system and the role I wanted to play in it. Led me to my current program at the High Tech High's Graduate School of Education.

Instructor and Teaching Assistant, Computer Science 10 **September 2011-May 2013**

Served as a student instructor and teaching assistant for UC Berkeley's official introductory computer science course. Prepared lesson plans, held office hours, and taught 12 hours of class per week to 60 students who had never programmed a computer before.

Engineering Experience

Growth Engineer, I Will Teach You To Be Rich, Inc. **August 2014-September 2015**

- Worked as the sole engineer on the growth & marketing team for the business run by bestselling author Ramit Sethi.
- Designed web applications, such as an interactive financial debt calculator, to drive new traffic to the web site.
- Ran A/B tests and other growth experiments to increase traffic & conversation rates at various stages in the customer funnel.
- Implemented the analytics architecture that allowed the company to track the effectiveness of various marketing campaigns.

Software Engineering Intern, Khan Academy **May 2013-August 2013**

- Worked on the growth team to develop an user re-engagement email marketing plan, and worked closely with community development team to craft and emails (and track the results) as part of a new welcome and retention campaign.
- Created the technical infrastructure for Khan Academy to send emails to its 6 million person user base, including newsletters, news announcements, and transactional emails, by integrating Khan Academy's backend with a 3rd party email service provider.

Software Engineering Intern, Google **May 2012-August 2012**

- Developed in Javascript for the front-end for Youtube Mixer, the official Youtube application for Google+ Hangouts.
- Created multiple user interface designs for new application features, approved by full-time UI designers. My design for inline video recommendations was later implemented by the full-time engineering team.
- Implemented a custom analytics dashboard to track highly customized statistics about the app's usage patterns.

Leadership

LeaderShape Institute **January 2012**

- Selected to attend the LeaderShape Institute, an intensive national six-day leadership development program focused on developing skills related to community building, identifying and communicating a vision, goal setting, leading with ethics and integrity, inclusive leadership, team dynamics, behavioral styles, emotional intelligence, and group decision making.

Creative & Technical Skills

Creative: 12+ years of experience doing videography and video editing with the Apple Final Cut suite and doing desktop publishing and graphic design with Adobe Creative Suite.

Technology: Software Development, Web Development, Mobile app development, Web Design, Content Management, IT Management

Education Technology: Blended learning, online learning tools, digital tools for the classroom, student information systems

Joi Ward

1919 Springfield Center Rd. Akron, OH 44306
joiward6@gmail.com
401-578-7973

EDUCATION

Scripps College *Claremont, CA* 2009 - 2013
Bachelor of Arts in Sociology, Minor in Music

University of Sussex: IFSA Butler Semester Abroad Exchange *Brighton, England* Jan-Aug, 2012
School for International Training (SIT): Culture and Development *Ecuador* Sept-Dec, 2011

PROFESSIONAL EXPERIENCE

Health, Wellness and Counseling Fellow Aug 2015 - present
Public Allies at Eagle Rock School and Professional Development Center *Estes Park, CO*

Low-level Counseling
- Developed positive mentoring relationships and facilitated over 10 weekly one-on-one meetings to support residential high school students' personal growth and cultural competencies
- Mediated student conflict and communicated concerns with instructional staff, student services team
- Coordinated student therapy appointments and provided transportation
- Supported students dealing with anxiety/panic attacks through breathing exercises, weekly check-ins

Personal Growth Project
- Took initiative outside my responsibilities to organize and coordinate Personal Growth Projects
- Assessed 40 student papers and presentations, gave feedback
- Advised students during one-on-one meetings
- Changed requirements so that students are completing project during their 3rd/4th trimester
- Developed rubrics and organizational tools to support student engagement and self-assessment
- Increased correspondence between myself,students and advisors to have better overall support

Restorative Justice Key Adult
- Advised 4 students weekly in restorative justice process, from start to contract completion
- Generated multiple ideas to repair individual and collective harm in collaboration with students
- Communicated expectations with students' stakeholders

Graduate Wilderness Trip
- Expanded my comfort zone through co-leading weekend wilderness experiences for 30 students
- Coordinated meal prep and student medication
- Facilitated student discussions around self reflection and preparing for graduation

Women Support Group
- Developed space for women-identifying individuals and allies to discuss politics, culture, experiences
- Mentored student leaders to organize weekly meetings and 3 community events with 30-50 students

Advisor
- Advised 7 students and provided weekly individual academic and personal growth support

Team Service Project - Sexual Health and Safety
- Designed different methods of facilitating community discussions around sexual health and safety
- Supported weekly student-led discussions of sexual health and services
- Updated posters about available health services and distributed across campus
- Developed and implemented a student human sexuality independent study project

Medication Distribution and Tracking

- Developed system to coordinate meds with providers, pharmacy, student services, house parent team

2nd Year fellowship

- After accomplishments of 1st year, was 1 of 7 fellows in 13 years selected for 2nd-year fellowship

Fulbright, English Teaching Assistantship in Malaysia Jan - Nov, 2014
U.S Department of State *Malaysia*

- Developed lessons for 20+ hours of weekly teaching
- Designed lessons for students in grades 1 through 6 with varying English proficiency
- Implemented positive and effective teaching strategies to manage class sizes of 20-30 students
- Consulted/negotiated with Malaysian teachers on implementing new teaching strategies and activities
- Designed and led 3 English Camps to improve language proficiency and confidence for >300 students
- Contributed ideas and support for 5 secondary school English Camps
- Conducted after-school English workshops 3 hours a week for 60 students
- Motivated groups of 20-30 secondary school students to practice English by tailoring activities, games and discussion to their interests - utilized music, videos, creative writing, cooking in lesson plans

Office Intern Sept 2012 - June 2013
Scripps College Off-Campus Study *Claremont, CA*

- Developed and hosted a series of informational talks for prospective study abroad students
- Maintained contact with students who participated in programs
- Facilitated meetings between prospective and previous study abroad students
- Catalogued student information and information regarding various available programs
- Assisted students in application process, provided e-mail support for student questions and concerns
- Participated in study abroad panels for prospective Scripps College students and parents
- Provided personal experience and advice for various study abroad programs

Head Counselor Summers 2011, 2012, 2013
Camp Timberlake *Shandaken, NY*

- Coordinated activities and supervised forty campers ranging from ages 7-9
- Collaborated with Head Staff to assist counselors in creating engaging activities and implementing appropriate discipline if/when necessary
- Supervised and motivated general counselors in creating safe, supportive, positive environments and relationships with campers
- Conducted periodic evaluations for counselors throughout the summer
- Developed a program with Head Staff to assist a child with serious emotional and behavioral concerns
- Maintained open communication with Head Staff, parents and child psychologist
- Formulated various methods to encourage positive and self-reflective behavior for campers
- Led camp tours for prospective campers
- Fostered a sense of community amongst counselors and provided emotional and professional support

Wanawake Weusi Peer Mentor Sept 2010 - June 2011
Scripps College *Claremont, CA*

- Provided emotional and academic support for new college students of African descent
- Designed/executed mentor activities that aided in providing students with a sense of a community, safe space in which to share their experiences and concerns
- Participated in student-led discussions about personal, academic and professional development

Aaron L. Townsend

3844 Glen Park Rd., Oakland CA 94602

aaron.l.townsend@gmail.com; (510) 368-8253

Consultant, High School Redesign Initiative, *Pivot Learning Partners,* Oakland CA, 2016-Present

Develop the product offerings and programmatic capacity for Pivot Learning Partners to provide high quality services to districts and schools seeking to implement Linked Learning. Establish a pilot cohort of districts and manage the client relationships to successfully launch the project. Collaborate with the Linked Learning Alliance, Schools by Design, and Amplify to integrate their new platforms to the Pivot service model.

Project Manager, *Education for Change,* Oakland CA, 2016-Present

Lead the design process to launch Latitude 37.8 High School, an innovative new school based on personalization, mastery based learning, and leveraging community assets. Facilitate the development of all instructional and operational systems. Hire founding team and recruit inaugural class. Establish systems for year 0 pilot and codifying the school practices for dissemination.

Deputy Chief, **Talent Management,** *Talent Division, Oakland Unified* Oakland CA, 2014-2016

Transformed the human resources department into a Talent Division capable of finding, keeping and growing extraordinary educators. Built talent management systems to support the district's strategic plan, Pathways to Excellence. Established district-wide educator effectiveness systems, including the development of teacher and leader effectiveness frameworks, new evaluation systems, and aligned educator support programs. Increased the diversity and volume of teacher and leader applicants by focusing on local sourcing and by modernizing our recruitment strategy and web presence. Initiated the development of a career and compensation pathway model. Served as an Executive Cabinet member.

Director, **Strategic School Support***,* *Human Resources, Oakland Unified*, Oakland CA, 2012-2014

Developed talent management systems as leader of the School Support Team. Managed systems for employee hiring, retention, recognition, evaluation, and discipline. Led Educator Effectiveness initiatives. Facilitated the Effective Teaching and Leadership Task Forces. Managed teacher and leader evaluation pilots in partnership with labor partners. Partnered with New Leaders for New Schools and other organizations to establish a leadership pipeline.

Coordinator, *Office of School Transformation, Oakland Unified*, Oakland CA, 2011-2012

Led the transformation process for four middle schools designated as "Persistently Low Achieving." Facilitated strategic planning and resource allocation process to support reform efforts. Developed pilot teacher and leader evaluation systems. Initiated district initiatives for transforming low-performing schools, including a flexible staffing initiative.

Principal, *Coliseum College Prep Academy, Oakland Unified*, Oakland CA, 2006-2011

Transformed low-achieving middle school into a new, small secondary school. Achieved the highest A-G completion rate in the district by first graduating class. Rated second highest quality school in the entire district. Improved Academic Performance Index score by 100 points. Increased the attendance rate to 95 percent and decreased suspension rates by 30 percent. Consistently achieved parent satisfaction rates of over 90 percent.

Founded innovative school design that featured: linked learning, extended day programming, and strong family partnerships. Secured nearly one million dollars of programming and resources from local and national partners. Oversaw the development of a Family Resource Center, College and Career information Center, and school-based health clinic. Collaborated with district leadership to improve innovative district budgeting system as a member of the Results Based Budgeting Work Group and Reallocation Committee.

Design Team Leader, *New School Development Group, Oakland Unified*, Oakland CA, 2005-2006

Led the development of a new, small secondary school through a yearlong community engagement process. Engaged parents, students, and teachers to establish a 10 member design team. Facilitated team for a year to create a school proposal approved by the board.

Assistant Principal, *Claremont Middle School, Oakland Unified*, Oakland CA, 2005-2006

Established a comprehensive services program at the site to provide students with mental health counseling and other services. Managed the after school program. Supervised the Special Education Department.

Data Inquiry Coach, *Department of Research and Assessment, Oakland Unified*, Oakland CA, 2004-2005

Coached eight schools to effectively use data to inform instruction and school management. Collaborated with principals to assess school needs and develop action plans. Promoted the development of professional learning communities at each site. Trained staff in cycle of inquiry practices. Organized a district-wide conference on sharing best practices in the use of data to close the achievement gap.

Lead Teacher, *Far West School*, *Oakland Unified*, Oakland CA, 2002-2004

Facilitated the school planning process for a newly reconstituted small school. Assisted in the administration of middle school program. Developed the middle school instructional program and school master schedule. Lead a school inquiry group. Assisted in budget and site plan development.

Project Consultant, *Big Picture Company*, Providence RI, 2001-2002

Advised on organization's program to launch 16 new public high schools nationally. Completed case studies of Oakland, CA and Brattleboro, VT sites.

Service Learning Coordinator, *Auburn School Department*, Auburn ME, 2000-2001

Secured over $30,000 for initiatives in the district. Consulted on curriculum for 4 projects by teachers within the district. Participated in Maine Department of Education local assessment project.

Social Studies Teacher, *Auburn Middle School, Auburn School District*, Auburn ME, 1999-2001
English Teacher, *United States Peace Corps*, Karasu, Kazakhstan, 1996-1998
Teacher Outreach Program Director, *United States Peace Corps*, Karasu, Kazakhstan, 1996-1998

EDUCATION

Master of Education in School Leadership, *Harvard Graduate School of Education*, 2001-2002

Concentrated on issues of school design and instructional leadership. Served as the Director of Harvard Experiential Educators Network. Presented at the National Student Research Council.

Bachelor of Arts in Policy Studies, *Syracuse University*, 1992-1996

Graduated Magna Cum Laude from Honors Program with a focus in Education Policy. Received the Chancellor's Award for Public Service.

CREDENTIALS

School Leadership Program, *Cal State University-East Bay*, 2008-2009

Earned Tier 2 California administrative credential.

Leading for Equity, Achievement, and Democracy, *BayCES and Cal State University-Hayward*, 2003-2004

Focused on equity issues, small school design, instructional leadership, and adult learning communities. Earned Tier 1 California administrative credential.

Outdoor Educator*, National Outdoor Leadership School*, 2000

Awarded highest rating as an expedition leader. Completed 28 day backpacking and rock climbing leadership course.

Current clients include -

YOUTH EMPOWERMENT SCHOOL, INTERNATIONAL COMMUNITY SCHOOL
• Facilitating a revisioning/alignment process

OAKLAND UNIFIED SCHOOL DISTRICT
• Designing/implementing an on-line central-site communications system to manage how principals receive communications and prioritize deliverables
• Designing/implementing an on-line instructional guidebook for OUSD teachers - pacing charts of prioritized standards, linked unit and lesson plans, linked assessments and rubrics, and student examplars

UNIVERSITY OF CHICAGO
• Doing walkthroughs of Chicago public schools restructured or re-opened by the University of Chicago's Center for Urban School Improvement; providing feedback to leadership teams

Network Executive Officer New School Network
Oakland Unified School District
Jul 2005 – Jun 2007 • 2 yrs

• Coached and supported new small schools and their principals in implementing their school programs during their critical first year
• Supervised network of first year principals and schools to ensure all schools are prepared to sustain excellent and accelerated results
• Participated as member of district Educational Leadership Organization, group responsible for overseeing and evaluating districtwide strategic projects part of the Expect Success reform initiative
• Key participant/architect in the development of district's Multiyear Academic Acceleration Plan, principal recruitment and selection process, tiered interventions process (internal accountability system), and site planning process

Director, New School Development
Oakland Unified School District
Jul 2004 – Jun 2006 • 2 yrs

• Developed and implemented a "New School Incubator" – a yearlong curriculum that enables community-based design teams to vision, design, and make operational innovative and powerful school programs; 24 successfully opened in the last two years.
• Recruited and selected leaders from across the country and support and coach these leaders in incubating new schools to replace failing schools
• Developed and implemented a rigorous leadership selection process
• Worked with community leaders, families, and educators across Oakland in supporting the visioning of the new schools as part of OUSD's plan for powerful school choices
• Part of the OUSD central redesign team, specifically working on development and implementation of OUSD systems and policies with respect to school accountability, curricular flexibility, No Child Left Behind, school closures and openings, district leadership organization and structure, and community outreach

Founding Principal
School Reform
Jan 2001 – Jan 2004 • 3 yrs 1 mo

Led a design team comprised of teachers and parents in developing a proposal for a new k-8 school as part of the Oakland Unified School District's New Small Autonomous Schools movement. Led as founding principal an innovative, nationally-recognized k-8 school with demonstrated excellence in student achievement, parent participation, teacher leadership and satisfaction and community integration. School significantly outperforms neighborhood schools students would have attended prior to ASCEND opening.
Over two years, increased API from 632 to 701. Great majority of students came from an elementary school performing at 467API and a middle school performing at 454 API the year ASCEND opened.

Community Experience

Full Circle Fund, Board Member — 2003 – Present

Full Circle Fund is an alliance of emerging business leaders who address public problems in the Bay Area through engaged philanthropy and public policy advocacy.

Head-Royce School, Parents Association President, Board Member, Auction Chair — 2010-2012

National Equity Project, Board Member — 2008-2011

Work Experience

Microsoft Corporation — 1991 - 2001

Director of Market Planning and Analysis, Home Products Division — **Oct '99- Oct '01**

Identified, assessed and prioritized market and customer information needs for Microsoft's line of consumer products. Developed a research plan and managed a team to execute it.

Contributed to strategic planning and analysis for Microsoft's Home Products Division. Worked with different functions across the division, including finance, product management, sales and corporate communications.

Director of Channel Marketing — **Jan '98 – Sept '99**

Created and managed Microsoft's retail channel marketing organization. Responsible for developing channel promotions, the group played a critical role in balancing conflicting priorities between the sales organization and product marketing organization.

Group Marketing Manager, Far East Headquarters (based in Tokyo) — **Jan '95 – Dec '97**

Responsible for strategic planning and marketing consulting for Microsoft's consumer businesses in Japan, Korea, Hong Kong, Taiwan and China subsidiaries, reporting to the regional Vice President.

In particular, drove regional efforts to win the word processing market against entrenched local competitors. Helped persuade subsidiary management to focus on Microsoft Word when they thought it was futile. Facilitated extra funding to support aggressive marketing, established measurements in each country to identify areas of strength and weaknesses as well as to provide benchmarks for measuring progress. These efforts resulted in Microsoft Word becoming the #1 word processor in the company's biggest market, Japan.

Group Product Manager, Microsoft Office — **June '94 - Dec '94**

Managed team of product managers to develop and execute competitive response strategies, demand-generating marketing activities such as channel promotions, manufacturing, sales tools and events.

International Product Manager, Microsoft Office — **Aug '92 - May '94**

Led first worldwide launch of Office in over 25 languages. Established worldwide sales and marketing training and SKU naming strategy. Pioneered communication infrastructure to work more closely with subsidiaries and incorporated their requirements, many of which are used today.

Analyzed worldwide business and established rational localization strategy for Microsoft Office.

Product Manager, Microsoft Word — **Apr '91 - July '92**

Managed Word's end-user marketing activities including end-user satisfaction programs, switcher seminar efforts and customer-focused market research plan.

Procter & Gamble

Assistant Brand Manager, Paper Division **Oct '90 - Mar '91**

Defined market opportunity and developed positioning and marketing plans for a new toilet tissue product, including advertising, pricing, packaging and promotions — for test market and national expansion.

Repositioned a premium niche product for mass market.

Brand Assistant, Paper Division **Sept '89 - Sept '90**

Contributed to 20% growth in market share by developing and implementing successful promotion plan involving coupons, direct mail, samples and pricing controls such as pre-priced packages.

Initiated Brand entrance into warehouse clubs, the fastest growing segment of the supermarket industry. Negotiated pricing strategy and designed product format.

Led multi-functional teams to rapidly execute package changes that saved the brand over $3 million.

Education

Harvard University Sept '85 – June '89

Bachelor of Arts degree with Honors in History of Science, June 1989. Specialization in Computer Science and Asian history. Elected President of Asian American Association, a 500-member group. Awarded 4-year Grumman Science and Engineering Scholarship (which covered 25% of college tuition) based on academic achievement and leadership qualities.

Other Interests

Travel, cooking, my three children.

DVD Authorizing done with DVD Studio Pro. Some 3d with Cinema 4d for 3D Logo Design and modeling.
EXPERIENCE	D.P.W Cleaner greener campaign, D.P.W Pick it up campaign 06/ 14/01 to 07/10/01 and 03/ 06/02 to 04/12/02 The objective to both of these projects were to create print ads that show a cleaner city thru character design mixed with images of schools and landmarks located in San Francisco. The main goal for the designs were to create fun looking but eco conscious characters that will pull junior highand high school students into a program to help keep the streets of San Francisco clean. This project comprised of various print work from bookmarks, Book covers, D.P.W card, posters, banners, bus ads and billboard layouts. My role in this project was to create concepts for characters also handle all print aspects such as design layout and typography. Methods used

Technical Qualifications:

Skilled	Proficient
Adobe CC	Photoshop CC / Illustrator CC
Apple Final Cut Studio / X	Adobe After Effects CC
Microsoft Word / IWorks	Final Cut Pro / Adobe Premiere CC

for both projects were a combination of hand illustration, Adobe Photoshop, Adobe Illustrator and Adobe Indesign.

Def Con 3 Energy Drink
06/ 04/02 to 11/01/02

Def Con 3 is an energy drink created by Russell Simmons Beverages; the project consisted of design and print work. The first part was to create labels for the packaging of the beverage Logo was created with Adobe Illustrator and packaging design was done in Adobe Photoshop and Adobe Indesign. For the project I had to make Ads that went into magazines,
Different Print materials and in store displays.

Def Jam and the Hip Hop Summit
02/ 11/03 to 03/11/03

Main responsibility was to create and design concepts for logo and do print work for the hip-hop summit. The programs used were Adobe Illustrator and Adobe Photoshop.

San Francisco All About The Arts Campaign
09/ 07/03 to 09/14/03

The main objectives for this project was to take images provided by the team and graphically enhance them with effects and color correction for ad spaces and television spots.

P.H.A.T Promoting Healthy Activities together Campaign for CANFit Organization.
02/ 01/04 to 03/10/04

Main goal was to create characters to identify with demographics in area to promote healthy eating. I had to create character concepts and then once approved do poster, mailers, cards and package design for video.

Team X
03/ 12/04 to 05/12/04
Responsibilities for Team X were to come up with a logo and do print material for the project. The logo was done in freehand Illustration and then traced and cleaned up in Adobe Illustrator. Once done in Illustrator I
took it into Cinema 4d to make it into 3d.

U.S.G Clothing
05/ 20/04 to Present
My goals were to first design the logos for the clothing brand and then come up with concept designs that would be used for merchandise. My other task consisted of doing all print and web work from flyers, web
banners to in store ads.

Pursuit of Equality
06/ 12/04 to 10/20/06

Background

Summary

Living and working in the San Francisco Bay Area since 1970 has provided Roy with a broad perspective on lifestyles and demographics of the most desirable communities in which to buy and sell real estate. His enthusiasm for his work as a real estate professional and his civic activities have made him a favorite son in his East Bay community. Roy is widely known and respected by his colleagues and clients alike for his calm demeanor, his win-win negotiating and keen problem solving skills.

Roy's involvement in community issues affecting his community is well known. He is often seen at city council meetings, or conversing with joggers walking around Lake Merritt. His quality of character and cooperative energy gives his clients assurance that their transaction will close successfully.

Roy knows real estate! He has sold properties from San Leandro in the East Bay to San Anselmo in Marin County, and just about every city in between. Whether it’s a hard-to-sell listing, or a hard-to-find jewel of a dream home, let Roy be your first choice for knowledgeable representation.©2013 Benford & Associates, LLC

He is founder and CEO of Benford & Associates LLC, a real estate consulting company located in Oakland, California. He has worked as a full-time real estate professional since 1990. He ranked in the top 10 percent of the 11,000 RE/MAX Sales Associates in the California/Hawaii Region in 2004, 2005 and 2006. He was the top listing agent in September 2006 in an office of 110 agents at RE/MAX In Motion, Castro Valley California. Roy has two sons and 4 grandsons. They motivate him to rise and shine each and every day to help others reach their goals and objectives.

Experience

Realtor/CEO
Benford & Associates LLC
August 2007 – Present (9 years 5 months) I 2070 Mountain Blvd, Oakland CA

Duties and responsibilities include actively listening to buyers and sellers to determine their goals and objectives for purchasing, selling or managing residential and commercial property, pre-qualifying buyers to help them determine their affordable price range. Answering questions and finding solutions to real estate problems. Generate Comparative Market Analysis to determine a property's value. Show homes that are currently for sale to prospective buyers. Negotiate purchase prices, and Listing Agreements. Prepare disclosures and net sheets.

Confer with title and escrow companies, lenders, attorneys, home inspectors, contractors, other agents, and pest control companies. Establish and maintain good communications between all parties to a transaction. Coordinate escrow closings. Keep in contact with past clients. Prospect for new buyers and sellers. Preview homes that are newly listed for sale by other agents to see if any of them meet my clients' needs and wants. Participate in office meetings, workshops and coaching sessions.

Founder and President of Burbank PTA

2001 – 2003

This opportunity came about when an issue arose on the playground at Burbank where my grandson attended Elementary school. I suggested to the principal that we take the issue to the PTA (Parent Teacher Association), and was surprised to learn that there was no PTA at the school. My first thought was to enroll my grandson in another school where there was a PTA. And then this thought occured to me:... **more**

MICHAEL P. BARR, CMA

4046 Waterhouse Road ♦ Oakland, California 94602 ♦ Cell: (415) 613-2277 ♦ barr.mike@gmail.com

Finance executive with over 25 years of increasingly responsible positions leading financial teams to partner with key stakeholders in achieving successful and rapid growth. Experience includes leadership roles in companies ranging from multi-national to start-ups in both the private and public sectors. Executed key transactions including IPO, secondary offering, mergers & acquisitions, debt restructuring and public bond issuance.

PROFESSIONAL EXPERIENCE

Reading Partners, Oakland, CA — April 2014 - Present

Chief Financial Officer

Nation-wide non-profit focused on addressing childhood literacy by engaging community volunteers to provide one-on-one tutoring to elementary school students.

- *Reported to*: CEO; *Revenue*: $23m; *Managing Team of*: 10.
- Oversaw completion of FY15 budget.
- Oversaw completion of FY14 tax returns.
- Negotiating lines of credit to support expansion.
- Overseeing FY14 year-end close and working with external auditors to address previous year audit issues.

Independent Consultant — July 2011 – May 2014

Providing executive-level Finance consulting to early-stage and high-growth clients, with a focus on planning for successful and predictable growth. Selected engagements include:

College Track, Oakland, CA (Interim CFO) — April 2013 – May 2014

- Upon departure of former CFO, overseeing a seamless transition to a new organizational structure that consists of a COO and a Director of Finance
- Completely revamped monthly reporting tools to increase the value of the data while dramatically decreasing the effort required to prepare
- Completely revamped monthly cash flow tool to better project future balances
- Oversaw complete overhaul of organization's benefits plans, yielding $150k in annual savings
- Overseeing implementation of online timesheet tool that will dramatically improve accuracy while dramatically decreasing the level of effort required

Envision Education, Oakland, CA (Interim CFO) — April 2013 – December 2013

- Upon departure of former CFO, oversaw a seamless transition to a new organizational structure that consists of a COO and a Controller
- Revised monthly forecasting tool to better meet needs of schools and departments
- Created monthly cash flow tool to better project borrowing needs
- Re-negotiated line of credit to ensure access to cash for organizational needs
- Oversaw successful completion of annual audit

Great Oakland Public Schools, Oakland, CA — February 2013 - Present

- Worked with the Executive Director and Managing Director to implement a new financial structure
- Providing high-level strategic financial guidance, including board communications
- Revamped monthly forecast tool to meet needs of organization
- Currently covering for Director of Finance & Operations who is on maternity leave
- Identifying process improvements within the finance, accounting, and operations areas

Oakland Schools Foundation, Oakland, CA (Interim VP of Finance & Ops) June 2012 – March 2013

- Brought in by Board of Directors to serve in a turnaround role as Vice President of Finance and Operations and Co-Executive Director overseeing all finance, administrative and operations functions
- Identified and implemented multiple efficiency in tools and processes, including:
  - Revised budget reports to clients to provide accurate and timely information
  - Redesigned internal documents and processes to ensure sufficient controls are in place for all transactions
  - Revamped HR processes and employee handbook to ensure compliance with regulations
  - Converted from outdated, inefficient email solution to a true corporate email solution
- Oversaw annual audit and tax return for 2011-12 fiscal year

Learning Matters Educational Group, Glendale, AZ April 2012 – August 2013

- Provided deep financial analysis of affiliated school in San Bernardino for client's founder
- Negotiated settlement of disputed contractual amounts with affiliated school in San Bernardino, generating over $500k of upside to client
- Created budgets for charter petitions for two new affiliated schools in California
- Providing ongoing updates on charter funding in California

Fortune Schools, Sacramento, CA January 2012 – March 2012

- Designed and conducted 2-day retreat of Cabinet-level staff retreat to plan for future growth.
- Provided insight into a road map for the organization's growth plans as they expand from 2 schools to 10 or more over the next few years.
- Working with staff to prepare a 3-year organizational budget that will serve as a model for affordability of home office staffing costs.

StudentsFirst, Sacramento, CA (Interim CFO) September 2011 – March 2012

- Served as organization's first CFO on an interim capacity during length of project
- Established policies and practices to meet the organization's complex 501c3 and 501c4 reporting requirements.
- Implemented fully automated solutions for Payroll and Time & Attendance (using ADP)
- Implemented fully automated, paperless expense reporting solution using Concur
- Selected and developed implementation plan for financial and accounting system.
- Oversaw completion of organization's first audit and first tax returns.

Harlem Village Academies, New York, NY August 2011 – February 2012

- Established matrix of responsibilities and job definitions for HVA's Finance team to support organization's two current schools and expansion to four schools.
- Assisted with interviewing of senior-level Finance position.
- Provide guidance to senior staff about best practices for a growing charter organization.
- Assisted with long-term financial modeling.

***Aspire Public Schools*,** Oakland, CA March 2004 – June 2011

Chief Financial Officer / Treasurer

Aspire is a non-profit that is widely recognized as one of the leading Charter Management Organizations in the country, providing educational choice to underserved communities. Responsible for all Finance, Accounting, Payroll and Treasury and Legal functions.

- *Reported to*: CEO; *Revenue Growth*: $22m to $90m; *Managed Team of*: 7 to 15
- Oversaw growth from 10 schools serving 3,000 students to 30 schools serving over 9,800 students.

- In April 2010, led a $93m tax-exempt bond issuance to finance permanent homes for 10 Aspire schools. This deal is the largest charter school bond issuance to date in the U.S. and was rated investment grade.
- Worked closely with banks and other lenders on loans and lines of credit to navigate through significant cash deferrals implemented by the state of California. In August 2010, Aspire became the first statewide charter operator in California to issue Revenue Anticipation Notes, commercial paper with the flexibility of a revolving loan.
- Conservative approach to budgeting at the school site level helped avoid staff layoffs during the state financial crisis which led to a 17% reduction in per-student funding over 3 years.
- In conjunction with Aspire's Facilities staff, oversaw the on-time and on-budget construction of 10 schools.
- In 2005, refinanced tax-exempt bonds, resulting in lowered interest rate from 7.25% to 4.64%.
- Led implementation of MIP Fund Accounting (G/L Software) and Payroll.
- Led efforts to revamp and improve forecasting, budgeting and reporting tools.
- Board Activity (service was in conjunction with my role at Aspire)
    - Served as member of the Board of the **California Charters Schools Association's Insurance Joint Powers Authority** from January 2007 to June 2011; served as Board Chairman from November 2007 June 2011.
    - Served on the board of **St. HOPE Public Schools** in Sacramento from December 2006 to September 2009

NightFire Software, Oakland, CA Jan 2001–Oct 2003

Vice President, Finance and Administration / Controller / Treasurer

Responsible for all Finance, Accounting, Treasury, Legal, Administration and Human Resources functions for a venture-backed telecommunications software company.

- *Reported to*: CFO, then President/CEO; *Revenue Growth*: $6m to $20m; *Managed Team of*: 4 to 6
- Supported revenue growth of 68% in 2001 and 158% in 2002; profitability was reached temporarily in early 2002 and on a sustained basis in 2003.
- Completed sale of NightFire's assets to NeuStar, Inc., in August 2003.
- Simultaneously closed a restructuring of a long-term loan facility ($3.6m), senior credit arrangement ($5.0m), and Series D funding ($11.7m).
- Implemented a cash management system that provided an early-warning system that led to pro-active cost reductions.
- Reduced close process from 25 days to 7 days and audit process from 9 months in 2001 to 4 months in 2003.
- Moved the HR function beyond start up mode by revamping internal performance review process, providing NightFire's first management training classes, and publishing first employee handbook.
- Structured deal pricing in to align with corporate objectives and ensure compliance with Revenue Recognition guidelines (SOP 97-2).

Scient Corporation, San Francisco, CA

Apr 1998 – Dec 2000

Global Systems Controller / Controller

As first member of finance team, established: all Finance and Accounting policies and procedures; Banking, Insurance, and Audit relationships; internal budgeting, reporting, and analysis procedures; and vendor selection for Payroll, Relocation, Stock Transfer, and Travel.

Reported to: CFO, then SVP-Finance; *Revenue Growth*: $0 to $400m run-rate; *Managed Team of*: 8

Built and led an F&A team to support Scient's growth from 40 to 1,900 employees.

Led the hands-on work to complete Scient's IPO (May 1999) and secondary offering (December 1999), including SEC documentation and reporting, S-1 preparation, and interface with auditor and bankers.

Managed ongoing SEC reporting, including 10-Q and 10-K filings, financial press releases, and preparation for analyst calls.

Implemented Leadership Team Dashboard, which was used by executive management to manage the business on a daily basis and was used as an early-warning reporting system.

Led implementation of PeopleSoft financials and two subsequent upgrades to the software, including the integration of new Scient entities in UK, Singapore, France, Hong Kong, and Japan.

Electronic Data Systems, Inc. Pleasanton, CA and Dallas, TX — Sep 1985 – Feb 1998

Business Unit Controller, Pleasanton, CA — Aug 1991 – Feb 1998

Helped launch the Hi Tech Business Unit, which became one of the fastest growing and highest margin units within EDS.

- *Reported to*: Business Unit President (dotted line) & Group Controller (direct line); *Revenue Growth*: $40m to $440m; *Managed Team of*: 13
- Worked closely with Sales, Business Development, Marketing and Operations managers to ensure Business Unit goals were set, measured, and achieved.
- Managed team of New Business Analysts who were responsible for building detailed 5- to 10-year cost projections. Closed business with total contract value over $2.5b; 95% of deals performed at or above cost model projections.
- Managed team of Financial Analysts who were responsible for all budgeting, monthly close, invoicing, collections, and reporting functions for the accounts they supported.
- Managed team that was responsible for all FP&A functions for the Business Unit and ensured integration with up-stream consolidations.

Financial Manager/Financial Supervisor/Financial Analyst, Dallas, TX — Sep 1985 – Jul 1991

Held a series of increasingly responsible positions, moving up the management chain within EDS's financial organization.

Provided financial support for two subsidiaries and two joint ventures in the telecom business unit; led team of five Financial Analysts.

Led due diligence and financial integration of two acquisitions.

Provided competitive analysis within EDS's International, Commercial, and Consumer Services Group, leading a team of two Financial Analysts.

Served as group lead during implementation and integration of new corporate-wide budgeting system, and led corporate-wide budgeting process for two years.

Other major projects included FP&A, Account Support, Stock Tracking, and development of automated invoicing procedure.

Latitude 37.8 High
Engagement and Enrollment Plan

Goal:
By January 2018, we will have collected at least 100 applications from a diverse community for our charter petition as measured by applicant zip code.

To meet this goal, we will…

1) Participate in at least 20 community engagements to present or share about Latitude to generate diverse interest.
2) Hold at least 3 Latitude Open Houses to build community and deepen commitment to attending Latitude by learning more about our approach.
3) Complete at least 25 home visits with interested families focusing on underrepresented groups
4) Develop professional marketing collateral in multiple languages to communicate the Latitude vision, mission, and program to diverse communities

Community Engagement Mapping

District 1	• NOCCS • Aspire BMA • Yu Ming Charter School • Hillcrest
District 2	• Roosevelt • La Escuelita • Community School for Creative Education
District 3	• KIPP • Vincent Academy
District 4	• Bret Harte
District 5	• Brewer • Lazear

	• EPIC • ASCEND • UPA
District 6	• UMCS • Greenleaf • Roots • Carl B Munck • Unity Middle
District 7	• Parker • ECP • Burkhalter • East Oakland Boxing Association
City-Wide	• Julia Morgan School for Girls • East Bay School for Boys • Covenant House • Montclair Swim Club • Girls Garage • Galileo • Homeschool Communities • St. Paul's • Boys and Girls Club • Ile Omede • Park Day School • Redwood Day School • Various farmers markets and community fairs

Calendar:
August

- Finalize marketing collateral
- Initiate contact of schools and organizations

September

- Continue communication with schools and organizations
- Begin community engagements
- Attend community fairs and farmers markets

October

- Continue communication with schools and organizations
- Continue community engagements
- Attend community fairs and farmers markets
- Hold first Latitude Open House

November

- Continue communication with schools and organizations
- Continue community engagements
- Attend community fairs and farmers markets
- Hold second Latitude Open House
- Begin home visits with underrepresented groups

December

- Continue communication with schools and organizations
- Continue community engagements
- Attend community fairs and farmers markets
- Hold third Latitude Open House

Can Racial and Socioeconomic Integration Promote Better Outcomes for Students?

Richard D. Kahlenberg and Halley Potter

May 2012

Published by

PRRAC
Poverty & Race Research Action Council

The Century Foundation

ABOUT THE POVERTY & RACE RESEARCH ACTION COUNCIL

The Poverty & Race Research Action Council (PRRAC) is a civil rights policy organization convened by major civil rights, civil liberties, and anti-poverty groups in 1989–90. PRRAC's primary mission is to help connect advocates with social scientists working on race and poverty issues, and to promote a research-based advocacy strategy on structural inequality issues. PRRAC sponsors social science research, provides technical assistance, and convenes advocates and researchers around particular race and poverty issues. PRRAC also supports public education efforts, including the bimonthly newsletter/journal *Poverty & Race*, and the award-winning civil rights history curriculum guide, *Putting the Movement Back Into Civil Rights Teaching* (co-published with Teaching for Change). At the present time, PRRAC is pursuing project-specific work in the areas of housing, education, and health, focusing on the importance of "place" and the continuing consequences of historical patterns of housing segregation and development for low income families in the areas of health, education, employment, and incarceration. PRRAC's work is informed by an extensive national network of researchers, organizers, attorneys, educators, and public health and housing professionals.

ABOUT THE CENTURY FOUNDATION

The Century Foundation is a progressive nonpartisan think tank. Originally known as the Twentieth Century Fund, it was founded in 1919 and initially endowed by Edward Filene, a leading Republican businessman and champion of fair workplaces and employee ownership strategies, all with an eye to ensuring that economic opportunity is available to all. Today, TCF issues analyses and convenes and promotes the best thinkers and thinking across a range of public policy questions. Its work today focuses on issues of equity and opportunity in the United States, and how American values can be best sustained and advanced in a world of more diffuse power.

CONTENTS

EXECUTIVE SUMMARY

The education policy and philanthropy communities to date have placed a premium on funding charter schools that have high concentrations of poverty and large numbers of minority students. This report asks: Might it make more sense for foundations and policymakers to embrace a variety of approaches, including efforts to demonstrate the feasibility and value of racially and economically integrated charter schools?

I. The Current Priority on High-Poverty, Racially Isolated Schools

As a result of the current focus of public policies and philanthropic priorities, the nation's charter schools are more likely than traditional public schools to be high poverty (51–100 percent of students receiving free and reduced-price lunch), extremely high poverty (76–100 percent free and reduced-price lunch), or racially isolated for minorities (90–100 percent of students are racial minorities).

- In theory, charter schools, as schools of choice, could be far more integrated than traditional neighborhood public schools and could achieve this integration through voluntary parent choice.
- Public policy, however, generally does not encourage the creation of socioeconomically and racially diverse schools. In fact, to the contrary, many state charter laws provide an incentive to create high-poverty charter schools. Plus, current federal law requires charters to use blind lotteries for admissions in order to qualify for start-up funds; this takes away some tools (such as income-based lotteries and geographic weighting) that could aid the creation of racially diverse and mixed-income schools.

II. Rationales for Creating Socioeconomically Diverse Charter Schools as Well

While focusing charter school efforts on high-needs students has merit, there is strong evidence to suggest that the current tilt in the policy and philanthropic communities toward supporting charter schools that educate low-income and at-risk children in high-poverty settings results in an overly narrow approach. Widening the focus so that it also supports charter schools that provide high-needs students with a racially and economically diverse educational setting makes sense for a number of reasons:

- *Civic, Social, and Cognitive Benefits for All Students.* Socioeconomically and racially integrated schools are beneficial to all students who attend them, because integration in public schools is important to fostering tolerant adults and good citizens. Students educated in diverse settings have been shown to develop higher-level critical thinking and cognitive skills. And when low-income students graduate and search for jobs, those in economically mixed schools have access to valuable networks that facilitate employment.
- *Resources for Improving Academic Performance.* Integrated charter schools hold particular promise for students currently in low-performing schools. Data show that many of the nation's charter schools, which on the whole are disproportionately high-poverty and racially isolated, still struggle to post significant academic gains for students. Numerous studies have shown that low-income students generally perform better in middle-class schools. Investing more heavily in socioeconomically and

racially integrated charter schools would provide low-income students with the documented benefits of peer-to-peer contact with a more diverse group of students, along with other resources related to school quality that, at least in the traditional public school context, are associated with increased school diversity.

- *A Chance to Experiment and Broaden the Base.* Socioeconomically and racially diverse charter schools would foster experimentation with new pedagogical approaches for addressing the needs of diverse groups of students under a single roof. For charter school supporters, socioeconomically integrated schools would broaden the political constituency for charters to include middle-class suburban parents.

III. Successful Examples of Integrated Charter Schools

Today, some innovative charter schools already have pursued efforts consciously to integrate students from different racial and economic backgrounds. This report highlights the experiences of seven academically successful charter schools that educate substantial numbers of low-income students and students of color in diverse student bodies, revealing a variety of approaches to making racial and economic integration work.

- *Intentional Location.* Some charter schools we studied increased their chances of attracting a diverse student population by locating in an area accessible to parents of different incomes and races.

- *Targeted Student Recruitment.* In order to create racially and economically diverse student bodies, most of the schools that we identified use recruitment strategically, targeting underrepresented populations.

- *Weighted Admissions.* Most of the charter schools we studied use weighted lotteries based on family income or geography to ensure diverse enrollment.

- *Thoughtful Pedagogies and Academic Success.* The schools that we studied employ a variety of curricula and pedagogies, showing that diverse schools are not limited to one educational model. Common among them, however, is a focus on academic quality.

- *School Cultures That Embrace Diversity.* The charter schools we identified instituted community programs, classroom practices, and staff training to ensure that all students have equitable educational opportunities and all cultures or backgrounds are respected.

IV. Proposed Policy and Funding Changes

To expand the presence of integrated charter schools, we need to explore the possibility of stronger federal and state policies, as well as increased private funding.

- *Federal Policy.* Federal policy could do more to encourage diversity in charter schools. Possible policy changes include creating incentives for locating charter schools strategically to combat racial and socioeconomic isolation, increasing the funding priority in the U.S. Department of Education's Charter Schools Program for schools that promote diversity, and making federal start-up funds, which currently are limited to charters that use a blind lottery, available to schools that use a variety of methods (such as income-based lotteries) to create diverse student bodies.

- *State and Local Policy*. A number of states currently have laws that make it more difficult to form integrated charter schools because they provide priority for schools with high concentrations of low-income or at-risk students. Proposed changes to state laws that could encourage diversity include allowing for regional or inter-district charter schools in states that currently restrict charters to a single district, and creating incentives for racially and economically integrated schools comparable to the priority currently given in some states to schools with concentrations of at-risk or low-income students.

- *Foundation Support*. Foundations should consider supporting a diverse portfolio of charter schools, including not only those that serve only high-poverty student populations, but also those that serve low-income children by educating them in socioeconomically and racially integrated student bodies.

INTRODUCTION

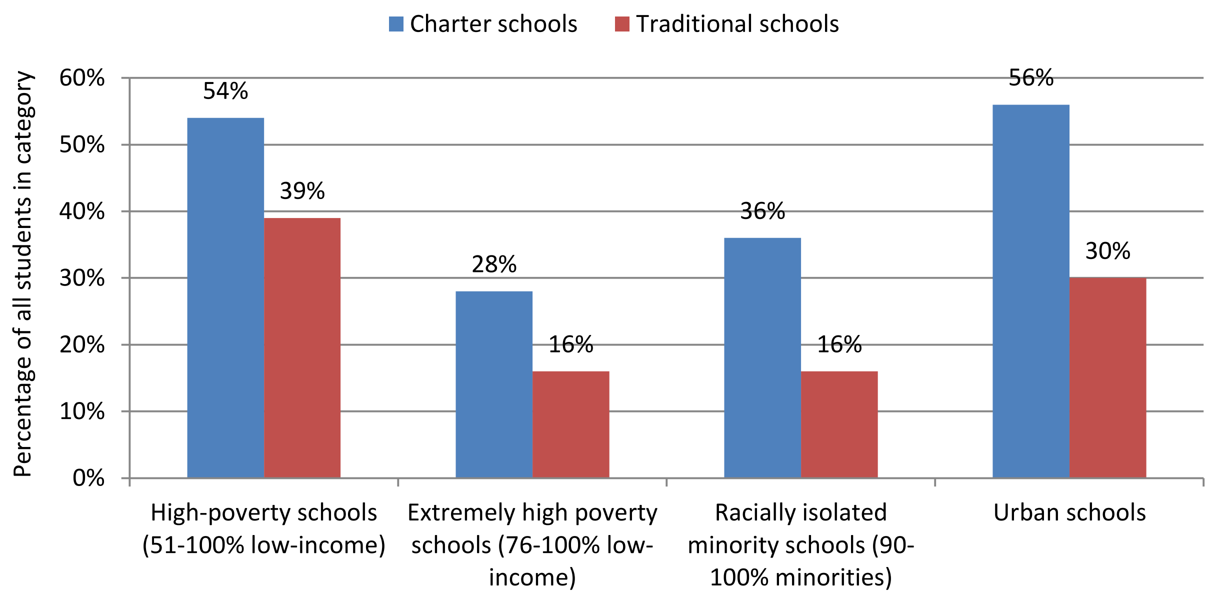
The education policy and philanthropy communities, to date, have placed a premium on funding charter schools that have high concentrations of poverty and large numbers of minority students. On one level, this is understandable. Focusing on efforts to maximize the number of at-risk children served in charter schools would seem to yield the greatest bang for the buck. And yet, questions about the educational effects of concentrated poverty and racial isolation remain. High-performing, high-poverty charter schools demonstrate beyond a doubt that low-income children, given the right environment, can learn at high levels. However, many other high-poverty charter schools still struggle academically.

This report starts with the premise that racial and economic diversity is an important value in education, and that traditional public schools have largely failed to achieve this goal, for a variety of reasons. The charter school movement is uniquely positioned to lead innovation in this area and demonstrate both the feasibility and benefit of an integrated learning model—even in areas where public schools are constrained by residential segregation. At the same time, we believe there is value in trying different approaches to innovation in charter schools, rather than pursuing a one-size-fits-all approach. This report (1) outlines the current priority given to high-poverty charter schools in public policy and among funders; (2) considers rationales for adding to this approach charter schools that explicitly seek diversity; (3) provides examples of successful integrated charter schools; and (4) sketches some proposed policy and funding changes.

I. THE CURRENT PRIORITY ON HIGH-POVERTY, RACIALLY ISOLATED SCHOOLS

As a result of a combination of public policies and philanthropic priorities, the nation's charter schools are more likely than traditional public schools to be urban, high poverty (51–100 percent of students receiving free and reduced-price lunch), extremely high poverty (76–100 percent free and reduced-price lunch), or racially isolated for minorities (90–100 percent of students are racial minorities). A majority (56 percent) of the nation's charter school students attend schools that are located in cities, compared to 30 percent of traditional public school students. Using the above definitions, 54 percent of charter school students are in high-poverty schools compared with 39 percent of public school students. Meanwhile, 28 percent of charter school students are in extremely high poverty schools, compared with 16 percent of traditional public school students. Similarly, 36 percent of charter school students are enrolled in schools where at least 90 percent of students are racial minorities, compared to 16 percent of traditional public school students. (See Figure 1.)

Figure 1. Concentration of Poverty in Charter Schools, 2007–08



Source: Erica Frankenberg, Genevieve Siegel-Hawley, and Jia Wang, ***Choice without Equity: Charter School Segregation and the Need for Civil Rights Standards*** (Los Angeles, Calif.: The Civil Rights Project at UCLA, January 2010), Table 20, p. 58, Table 22, p. 62, and Table 30, p. 72. Data are from the 2007–08 National Center for Education Statistics Common Core of Data.

The data on poverty and race cited in Figure 1 are not without controversy. Some argue that the proper comparison should be between charter schools and urban public schools, which also have relatively high concentrations of school poverty and racial isolation.[1] Indeed, as Figure 1 shows, charter school students are almost twice as likely as traditional public schools to attend schools located in cities. But this begs the larger point: policymakers could allow charter schools to be located anywhere; it is a choice to favor those in urban areas, prioritizing what turns out to be a concentration of at-risk students. In theory, charter schools, as schools of choice, could be far more integrated than traditional neighborhood public schools and could achieve this integration through voluntary parent choice rather than compulsory measures that involve mandatory assignment. They consciously could be placed in economically and racially mixed neighborhoods. Inter-district charters could draw upon urban and suburban students at once. Oversubscribed schools could recruit and provide an admissions priority to students from geographic areas that are likely to enhance diversity.[2] These are all options not available to traditional neighborhood schools.

Public policy, however, generally does not encourage the creation of socioeconomically and racially diverse schools. Laws in roughly a dozen states, including Illinois, North Carolina, and Virginia, prioritize charter school funding for at-risk or low-income students or, in Connecticut's case, students in districts in which members of racial or ethnic minorities constitute 75 percent or more of enrolled students.[3] If these laws were coupled with an emphasis on diversity, they could encourage charter schools that would provide low-income students with high-quality education in a racially and socioeconomically diverse setting. However, without special consideration of diversity, state laws are likely to continue to favor funding for high-poverty charter schools over charter schools serving diverse student bodies.

Similarly, the recently proposed All-STAR Act, sponsored by Senators Dick Durbin (D-IL) and Mark Kirk (R-IL) along with Representatives Jared Polis (D-CO) and Erik Paulsen (R-MN), would prioritize federal charter school funding for low-income students currently enrolled in underperforming schools. Prioritizing resources for low-income children is an admirable goal that need not be incompatible with promoting diversity; however, the All-STAR ACT would explicitly favor applications from schools that, among other criteria, serve a greater percentage of low-income students, making it unlikely that charters serving low-income students as part of diverse student bodies would receive funding.[4]

Other state laws restrict attendance zones for charter schools, making it more difficult for charters to attract a diverse population from a wide geographic area. New Jersey law, for example, encourages the formation of charter schools in urban areas, and New York requires charter schools to grant a lottery preference to students living within the district lines already in place for traditional public schools.[5] Current federal law requires charters to use blind lotteries for admissions in order to qualify for start-up funds, which takes away some other tools (such as income-based lotteries and geographic weighting) that could aid the creation of racially diverse and mixed-income schools. In addition, the Obama administration has not supported positive incentives to encourage integration in charter schools (other than allowing for a small competitive funding preference—up to 4 points added to a base maximum of 100—for schools that promote diversity).[6]

Finally, philanthropists often prioritize funding for education projects in high-poverty locations, providing incentives for charter school creators to maximize the proportion of low-income students in a school in order to gain funding. The Walton Family Foundation, for example, focuses specifically on selected "Market Share Demonstration Sites," which are all districts with high concentrations of low-income students, and the Broad Foundation focuses generally on urban school districts.[7] Some of the charter school chains that have received the most generous philanthropic support pride themselves on their ability to educate pupils in schools with high concentrations of low-income and/or minority students. KIPP schools, for example, boast that "Eighty percent of our students are from low-income families and eligible for the federal free and reduced price meals program, and 90 percent are African American or Latino."[8]

This focus by policymakers and philanthropists on high-poverty and sometimes racially isolated charter schools seems to stem from the belief that such a strategy is the best way to help at-risk students and close the achievement gap. Given scarce federal, state, and philanthropic dollars, funding a racially and economically mixed school that includes not only substantial numbers of low-income and minority students but also substantial numbers of middle-class and white students may be seen as diluting funding for at-risk students. Based on similar logic, charter school authorizers may choose to prioritize applications for schools located in the areas with fewest high-quality educational opportunities, which are often communities with concentrated poverty.

Those who advocate keeping low-income students isolated may believe that many of these students need a different set of pedagogical approaches than middle-class students. If that is true, it might be more efficient to educate them in separate environments from middle-class students. Highly routinized, "no excuses" schools set rigorous academic standards but also emphasize "non-cognitive skills," such as self-discipline, and seek to develop an all-encompassing school climate to combat the culture of poverty and the streets from which their students come. Paul Tough, author of a book about the Harlem Children's Zone, describes the philosophy behind "no excuses" secondary schools that target at-risk students: "The schools reject the notion that all that these struggling students need are high expectations; they do need those, of course, but they also need specific types and amounts of instruction, both in academics and attitude, to compensate for everything they did not receive in their first decade of life."[9]

It makes sense that charter schools began with a focus on improving the prospects of high-needs students. However, thus far, this focus has resulted in prioritizing high-poverty charter schools over all others, which research suggests may not be the most effective way of serving all at-risk students. Educating low-income students in high-poverty settings may provide the opportunity to implement pedagogies and structures specifically designed for at-risk students, but there are reasons to be concerned about the effects of concentrated poverty on student outcomes. It may be time to broaden our approach to consider other models that have proven to work in educating low-income children.

II. RATIONALES FOR CREATING SOCIOECONOMICALLY AND RACIALLY DIVERSE CHARTER SCHOOLS AS WELL[10]

There is strong evidence to suggest that the current tilt in the policy and philanthropic communities toward charter schools that educate low-income and at-risk children in high-poverty settings results in an overly narrow approach. Part of the rationale for charter schools has always been to explore different ways to address educational challenges. There is a large body of research suggesting that socioeconomic and racial integration provide educational benefits for all students—especially at-risk students—that are worth pursuing.

Civic, Social, and Cognitive Benefits for All Students

It is essential to emphasize that all students—middle class and poor, of all races and ethnicities—benefit from diversity. Numerous studies have shown that integration in public schools is important for fostering tolerant adults and good citizens.[11] Children are at risk of developing stereotypes about racial groups if they live in and are educated in racially isolated settings. Diverse schools, however, can help prevent bias and counter stereotypes.[12] When school settings contain students from multiple racial groups, students become more comfortable with people of other races, which leads to a dramatic decrease in discriminatory attitudes and prejudices.[13] Research also has shown that students who attend racially diverse high schools are more likely to live in diverse neighborhoods five years after graduation.[14] As Justice Thurgood Marshall noted in one desegregation case, "unless our children begin to learn together, then there is little hope that our people will ever learn to live together."[15]

Racial isolation in American schools extends beyond charter schools, and it includes concentrations of students from racial minorities as well as concentrations of white students. Not only do 36 percent of charter school students (and 16 percent of traditional public school students) attend schools at which 90–100 percent of students are racial minorities, 21 percent of traditional public school students (and 7 percent of charter school students) attend schools at which 90–100 percent of students are white.[16] However, charter schools could play a large part in the effort to break up this isolation and create diverse communities, given some flexibility in where they locate and which students they recruit.

Integrated schools also can help position students to succeed in a twenty-first-century economy. At the college level, students educated in diverse settings have been shown to develop higher-level critical thinking and cognitive skills.[17] Recent studies also have confirmed academic achievement gains associated with racial and economic integration in K–12 settings.[18]

In addition, when low-income students graduate and search for jobs, those in economically mixed schools have access to valuable networks that facilitate employment. Research confirms the adage that who you know matters as much as what you know, and studies find that one of the greatest benefits to blacks of attending desegregated schools came when seeking employment.[19] Indeed, University of California–Berkeley researcher Claude Fischer and colleagues found that, even after controlling for individual ability and family home environment, attending a middle-class school reduced the chances of adult poverty by more than two-thirds (4 percent versus 14 percent).[20]

RESOURCES FOR IMPROVING ACADEMIC PERFORMANCE

In addition to offering these benefits for all students, socioeconomic and racial integration hold particular promise for students in low-performing schools. Data show that many of the nation's charter schools, which on the whole are disproportionately high-poverty and racially isolated, still struggle to post significant academic gains for students.[21] Investing more heavily in socioeconomically and racially integrated charter schools would provide low-income students with resources even more important than money that have been shown to increase achievement: academically engaged peers, an actively involved parental community, and strong teachers with high expectations.

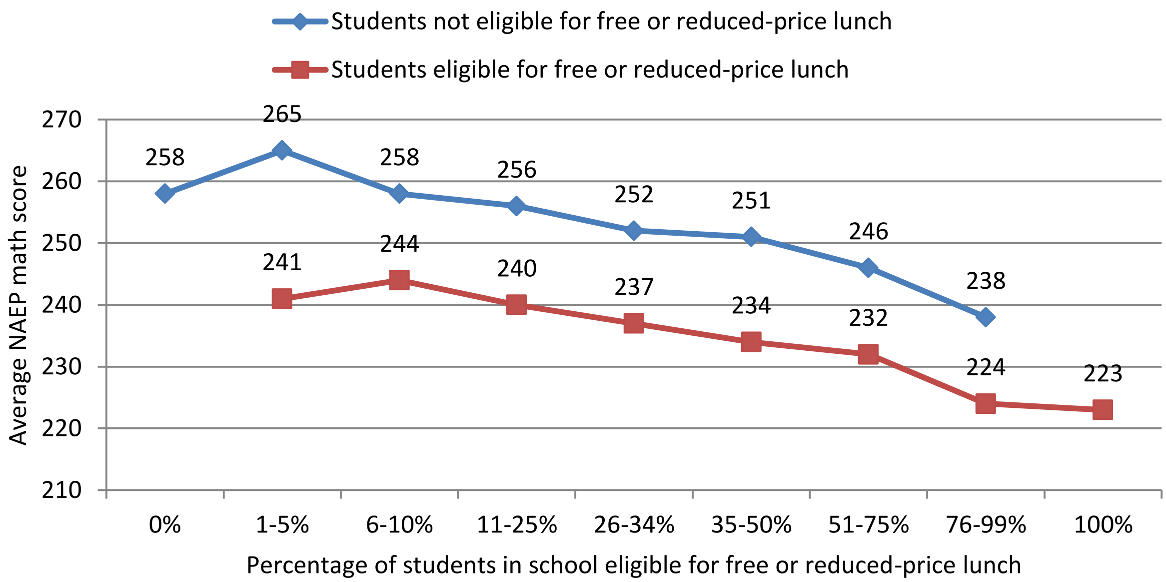
Research suggests that students learn a great deal from their peers, so it is an advantage to have classmates who are academically engaged and aspire to go on to college. Peers in middle-income schools are more likely to do homework, attend class regularly, and graduate—all of which have been found to influence the behavior of classmates. Middle-class schools report disorder problems half as often as low-income schools, so more learning goes on. Students at lower-poverty schools also are more likely on average to have the advantage of learning alongside high-achieving peers, whose knowledge is shared informally with classmates all day long. Middle-class peers come to schools with twice the vocabulary of low-income children, for example, so any given child is more likely to expand his vocabulary in a middle-class school through informal interaction.[22]

Parents are also an important part of the school community. Research shows that when parents are actively involved, volunteer in the classroom, and hold school officials accountable, the average achievement of all students in the school increases, regardless of their own parents' level of involvement. There is some evidence that charter schools have greater levels of parental involvement than traditional public schools with similar demographics, due to both institutional differences—such as smaller sizes—and a selection bias for parents with above-average participation.[23] However, numerous studies have shown that socioeconomic status is a main predictor of parental involvement. Middle-class parents are less likely to face some of the challenges that make school involvement difficult, such as inflexible work schedules, lack of transportation, or unreliable phone and Internet access. Middle-class parents are four times as likely to be members of the PTA. As a result, having a sizable population of middle-class parents can produce positive effects for all students in the school.[24] Thus, high-poverty charter schools—even those with greater parental involvement than demographically similar traditional public schools—might be able to further improve parental involvement and increase achievement for students of all income levels by expanding to serve a socioeconomically mixed population.

Likewise, while high-achieving charters have placed a premium on attracting excellent teachers with high expectations and have had considerable success in doing so, many charters continue to struggle in attracting and retaining high-quality teachers in high-poverty environments.[25] Research finds that the best teachers, at least as measured by traditional criteria, tend to be attracted to schools with a significant number of middle-class students. Teachers in schools without high concentrations of poverty are more likely to be licensed, to be teaching in their field of expertise, to have high teacher test scores, to have more teaching experience, and to have more formal education. Moreover, teachers in schools with lower levels of poverty are more likely to have high expectations. Research has found that the grade of *C* in a low-poverty school is the same as a grade of *A* in a high-poverty school, as measured by standardized test results. Economically mixed schools are also more likely to offer AP classes and high-level math.[26] Those charter schools that currently struggle to attract high-quality teachers might have more success if they were to serve a socioeconomically mixed student body.

It is possible to create an environment with academically engaged peers, involved parents, and strong teachers in a high-poverty school, but high-poverty schools that achieve these goals—and the ultimate goal of high academic achievement—are the exception rather than the rule. Data show that low-income students generally perform better in middle-class schools. On the 2011 National Assessment of Educational Progress (NAEP) given to fourth graders in math, for example, low-income students attending more-affluent schools scored substantially higher (244) than low-income students in high-poverty schools (224). This twenty-point difference is the equivalent of roughly two years' learning. Indeed, low-income students given a chance to attend more-affluent schools performed more than half a year better, on average, than middle-income students who attend high-poverty schools (238).[27] (See Figure 2.)

Figure 2. National Assessment of Educational Progress 2011, Fourth Grade Math Results



Source: **U.S. Department of Education, Institute of Education Sciences, National Center for Education Statistics, National Assessments of Educational Progress (NAEP), 2011 Math Assessment, Grade 4.**

Of course, the NAEP results may in part reflect self-selection (motivated low-income parents may find ways to have their children enrolled in middle-class schools), but studies seeking to control for this phenomenon still show favorable outcomes. For example, in 2005, University of California professor Russell Rumberger and his colleague Gregory J. Palardy found that a school's socioeconomic status had as much impact on the achievement growth over time of high school students as a student's individual economic status.[28] In addition, a 2010 Century Foundation study of public schools in Montgomery County, Maryland, found that low-income elementary students randomly assigned to public housing units in lower-poverty neighborhoods and who attend low-poverty schools perform far better than those assigned to higher-poverty neighborhoods and schools, despite extra investments in the latter for smaller class sizes, extended learning time, and better professional development for teachers.[29]

A Chance to Experiment and Broaden the Base

Socioeconomically and racially diverse charter schools also would foster experimentation with new pedagogical approaches for addressing the needs of diverse groups of students under a single roof. They could provide important lessons for public schools on how to make diverse schools work, without degenerating into rigid tracks for different ethnic, racial, or socioeconomic groups.

For charter school supporters, socioeconomically integrated schools also would broaden the political constituency for charters to include middle-class suburban parents.

III. SUCCESSFUL EXAMPLES OF INTEGRATED CHARTER SCHOOLS

While it is true that creating socioeconomically and racially integrated charter schools is logistically and politically challenging, it is not impossible to do. For one thing, the old stereotype of low-income urban areas surrounded by middle-class suburbs is giving way to a new reality: more poor people now live in suburbs than in cities.[30]

Moreover, charter schools, like public magnet schools, are uniquely suited to create integrated student bodies. As schools of choice, they are not as constrained by residential segregation as are most public schools. And as schools created from scratch, with particular visions, they have the potential to draw interest from diverse income, racial, and ethnic groups. Indeed, charter schools could draw upon the experience of magnet schools, which have learned to successfully recruit parents across a wide range of communities and create schools that meet the demands of diverse consumers.[31]

Today, some innovative charter schools have pursued efforts to consciously integrate students from different racial and economic backgrounds. The examples that we highlight in this report include elementary, middle, and high schools, schools from the east coast, the west coast, and in between.

Each of these schools is striving to serve diverse student bodies that include large numbers of low-income students and students of color. Their racial/ethnic and socioeconomic demographics vary considerably, but all of the schools we studied avoid the extremes of very low poverty, very high poverty, or racial isolation. For example, all of the flagship campuses are within plus or minus 20 percentage points of a 50 percent low-income, 50 percent middle-class mix, and four of the seven flagships have over 40 percent of students receiving free or reduced price lunch. Six of the seven flagships we studied are over 50 percent nonwhite, and no single racial/ethnic group at any of the seven exceeds 51 percent of the student body.

Furthermore, we specifically chose schools that are high-achieving. DSST: Stapleton High School, for example, was selected as one of three top finalists from a pool of over one thousand schools in the 2010 national Race to the Top Commencement Challenge. E. L. Haynes has won three EPIC awards, granted by the New Leaders' Effective Practice Incentive Community (EPIC) to urban schools showing the greatest student achievement gains. High Tech High boasts a 100 percent college admittance rate for their graduates and 99 percent college enrollment rate during the fall after graduation.

The experiences of these academically successful charter schools with diverse student bodies reveal a variety of approaches to making racial and economic integration work.[32] (Additional data on each of the schools are available in the school profiles in the Appendix at the end of the report.)

Intentional Location

Some of the charter schools we studied laid the foundations for diversity in the locations they chose. By locating in an area accessible to parents of different incomes and races, charter schools can increase their chances of attracting a diverse student population. Capital City Public Charter School in Washington, D.C., and Community Roots Charter School in Brooklyn, N.Y., were both intentionally planned for mixed-income neighborhoods. Capital City's current campuses lie at the nexus of three Washington, D.C., neighborhoods—Adams Morgan, Mt. Pleasant, and Columbia Heights—with diverse socioeconomic and racial makeup. In order to serve all grades in one campus, Capital City will move in fall 2012 to a new location near the neighborhoods of Brightwood and Takoma, which also is a racially and economically diverse area. Similarly, founders of Community Roots Charter School specifically pitched their charter proposal for Fort Greene, a mixed-income neighborhood in Brooklyn, because of its economic and racial diversity.

High school students at DSST Public Schools: Green Valley Ranch in Denver, Colorado. Photo by Megan Helseth, 2011.

Blackstone Valley Prep Mayoral Academy—the flagship network of the Rhode Island Mayoral Academies, a nonprofit organization that designs socioeconomically diverse charter schools—offers another example of how intentional location can facilitate diversity. Rather than targeting a particular neighborhood, founders of Blackstone Valley Prep planned their location on a broader scale, choosing an attendance zone with considerable socioeconomic and racial diversity. As a regional charter school network, Blackstone Valley Prep serves students from four Rhode Island communities: two higher-income suburban communities (Cumberland and Lincoln) and two lower-income urban communities (Pawtucket and Central Falls). Blackstone Valley Prep's three schools are currently located in Cumberland, but each one offers seats evenly to urban and suburban students, resulting in diverse student bodies. Executive Director Jeremy Chiappetta said that he expects Rhode Island Mayoral Academies to add additional urban locations as they expand. Achievement First Mayoral Academy has been approved to open in fall 2013.

Targeted Student Recruitment

In order to create racially and economically diverse student bodies, most of the schools that we identified use recruitment strategically, targeting underrepresented populations.

Since its founding, E. L. Haynes Public Charter School in Washington, D.C., has conducted extensive recruitment drives at a variety of neighborhood locations. "When we first got started, we recruited from in front of grocery stores, to coffee shops, to preschools," said Jennifer Niles, the school's founder and head of school. "If there was a community organization that I could find, I would go to it." Now that E. L. Haynes is a top-ranked charter school in the city and receives many applications from families who hear about the school through its reputation, E. L. Haynes focuses all of its recruitment efforts on low-income and non-English-speaking families, who may have less access to information about local schools.

Karen Dresden, head of school at Capital City Public Charter School, described her school's successful efforts to increase the number of Latino families, a demographic that was underrepresented during the school's first few years. Capital City partnered with community organizations that provide other services, such as health care or after-school programs, and capitalized on the trust that these organizations had already built with members of the Latino community.

At the Larchmont Charter Schools, a pair of schools in Los Angeles, school leaders adjust their recruitment strategies on a monthly basis. With two schools and campuses in three neighborhoods—Hollywood, Koreatown, and West Hollywood—the Larchmont Schools are located in some of the most diverse communities in Los Angeles. But despite the diversity of these communities, few schools in the area serve diverse student bodies, according to Larchmont Schools' senior academic officer, Brian Johnson. A group of parents from Hollywood started the first Larchmont School in 2005, with the hope of making a public school that was as diverse as their community at large. School leaders at each school look at census and Nielsen data for the school's surrounding neighborhood and set the goal of having their student bodies mirror that diversity. Students are not chosen based on their individual race or ethnicity. Rather, each school designs a recruitment plan at the beginning of the year outlining their strategies and the community groups with which they plan to partner. Every month, school leaders look at the racial, ethnic, and socioeconomic breakdown of the lottery pool to measure their progress and adjust strategies if needed.

Weighted Admissions

In addition to targeted recruitment, most of the charter schools we studied use weighted lotteries to ensure diverse enrollment. This strategy of achieving diversity is complicated by a number of factors. The 2007 Supreme Court ruling in *Parents Involved in Community Schools v. Seattle School District No. 1* raised questions about individualized admissions policies targeting race. Recently released federal guidelines from the U.S. Department of Justice and the U.S. Department of Education outline ways in which schools may consider race in student assignments in order to promote diversity and avoid racial isolation; however, the guidelines also state that "school districts should consider approaches that do not rely on the race of individual students before adopting approaches that do."[33] As a result, lotteries that rely on an individual student's race or ethnicity may not be an option for charter schools. Furthermore, some states prohibit charter schools from using weighted lotteries, and even in states where they are permitted, charter schools using weighted lotteries are not eligible for federal startup funds, an important funding source for many charter schools during their first three years of operation.[34] Still, lotteries not based on individual race—that weight students based on family income, geography, parents' educational status, or the racial makeup of a neighborhood, for example—can be a powerful tool for creating a diverse student body.

Several of the charter schools we studied have lottery preferences based on family income. Blackstone Valley Prep simply reserves the first 60 percent of seats in their lottery for low-income students. At Larchmont Charter School, the lottery mechanism is more complicated, but the outcome is similar. School leaders use a carefully designed algorithm that is updated each year, depending on what percentage of that year's lottery pool qualifies for free and reduced-price lunch. The algorithm adjusts the weight given to qualifying students in order to help reach the school's target of 42 percent free and reduced-price lunch students.[35]

Other charter schools use geographic markers in their lottery to ensure diversity. High Tech High, a network of eleven elementary, middle, and high schools in San Diego, California, uses a lottery that weights only by zip code, seeking an even distribution of students from across the area. Because of the residential segregation in the area, the result of the zip code lottery is a socioeconomically and racially diverse student body. Community Roots Charter School also recently added an address-based preference in the school's lottery. As the popularity of the school has grown, Community Roots has seen a decrease in the percentage of low-income students. In particular, students living in three large public housing complexes near the school have had a slimmer chance of getting into the school as the lottery pool has grown. Starting with enrollment for 2012–13, Community Roots will reserve 40 percent of the spaces in their incoming kindergarten class for students living in public housing.

DSST Public Schools, a network of charter middle and high schools in Denver, Colorado, uses a hybrid of income- and geography-based preferences. DSST works with the school district to determine the enrollment preference at each campus based on the communities in which the schools are located and with the goal of having diverse student bodies at each school. Some DSST schools then hold a separate lottery for students who are eligible for free and reduced-price lunch or who reside in a particular geographic region.

THOUGHTFUL PEDAGOGIES AND ACADEMIC SUCCESS

Although targeted recruitment and lottery preferences can help create diverse student bodies, in a system of school choice, successful recruitment ultimately relies on having a high-quality school that attracts parents' attention. The schools that we studied employ a variety of curricula and pedagogies, showing that diverse schools are not limited to one educational model. Common among them, however, is a focus on academic quality and in-demand content specialties.

Third grade students at E. L. Haynes Public Charter School in Washington, D.C. Photo by James Roy.

Capital City Public Charter School, for example, uses a model called Expeditionary Learning—for which they were recently named as a mentor school—that engages students through in-depth investigations in science and social studies topics. In addition, the school emphasizes its social curriculum and has strong arts and fitness programs. "Our school values a whole child approach and offers a broad range of programs and supports for students, and that is valued by families of all demographics," said Karen Dresden, describing the school's decision to offer a variety of arts and physical education classes as well as an array of after-school activities. In 2009, Capital City was named the top charter school in Washington, D.C., by the Fight for Children Quality Schools Initiative, a nonprofit organization dedicated to improving education in Washington, D.C.

DSST Public Schools and High Tech High each focus on STEM (science, technology, engineering, and math) and offer project-based, applied learning. Larry Rosenstock, CEO and founding principal of High Tech High, describes his network's method as "bringing the pedagogy of voc ed [vocational education] to academics." High Tech High students create projects covering a wide range of subjects—from an alphabet book about ancient Egypt written by sixth graders to essays by high school juniors reflecting on internship experiences—that they publish on websites and in books. DSST Public Schools has also been extremely successful with its own variety of project-based, STEM-focused learning. DSST: Stapleton High School, the first DSST school to open, was the only high school to receive a "Distinguished" rating from Denver Public Schools in 2011 and was selected as one of three top finalists from a pool of over one thousand schools in the 2010 national Race to the Top Commencement Challenge.

E. L. Haynes Public Charter School offers a rigorous curriculum that Jennifer Niles describes as "a combination of curricular resources and instructional methods drawn from outstanding schools to provide our students with a rigorous, joyful, engaging program typically found only in schools serving our America's wealthiest families. We're not tied to a specific philosophy or approach—we use whatever works for our students." The school uses an "AP for All" model that requires students to complete eleven AP courses in order to graduate. E. L. Haynes operates with a year-round calendar and year-round programming. Through optional intersession programs that occur during the breaks in the regular academic calendar, students can attend educational programs at the school for 47 out of 52 weeks in the year. Like Capital City, E. L. Haynes was a winner of the Fight for Children Quality Schools Initiative. For three years in a row, E. L. Haynes has also earned EPIC awards, granted by the New Leaders' Effective Practice Incentive Community (EPIC) to urban schools showing the greatest student achievement gains.

School Cultures That Embrace Diversity

Creating a successful diverse charter school requires more than ensuring diversity of students who walk through the front door. In order to reap the academic, social, and cognitive benefits of diversity, schools must ensure that all students have equitable educational opportunities and all cultures or backgrounds are respected. As Larry Rosenstock explained, "It's not just diversity in admissions. It's also integration in practice once they've arrived." In order to make sure that the school is integrated at the classroom level, High Tech High uses a full immersion special education model, supporting special education students in regular classroom settings and only pulling them out for specialized instruction during non-academic times. In addition, rather than separating honors students and regular students, High Tech High offers classes with a two-tiered syllabus: all students take the class together, and those opting for honors complete extra assignments.

Leaders at the Larchmont Schools use data to monitor how well they are serving all segments of their student body. The administration looks at data on academic achievement as well as a variety of other measures—retention of families, satisfaction survey results, and volunteerism rates, for example. For each of these datasets, the school breaks down data into racial, ethnic, and socioeconomic subgroups. "Everything that we do, we are constantly breaking it down and saying, are we serving all kids of all backgrounds equally well and are we serving all families equally well?" said Brian Johnson, senior academic officer at Larchmont Schools. "That's just been an overall obsession."

Creating a school culture that fosters respect for all voices requires getting teachers and parents involved. E. L. Haynes Public Charter School requires all new staff to participate in race and equity training seminars. At Blackstone Valley Prep, the Family Leadership Council (similar to a PTO) is co-led by one urban and one suburban parent to help ensure that voices from across the community are heard and to encourage parents of different backgrounds to interact. "I believe that a lot of our cross-cultural family conversations and connections that happen are the beginning of what could be a really great positive social influence," said Jeremy Chiappetta.

Community Roots Charter School hired a director of community development who is specifically charged with making sure that the school is serving all parts of the school community. Co-director Allison Keil said that failing to put someone in charge of making sure that all voices in the school community are heard is a "common pitfall" in diverse schools. "We can bring people together, and it can look like a really nice picture, and then when you don't push on it, certain parts of the population feel like they have more access or less access," Keil said. "We have lots of programming here specific to pushing on that." The school also offers a number of programs designed to facilitate interaction between students and parents of all backgrounds outside of school hours. For example, PALS (Play and Learning Squads) organizes small, teacher-selected groups of Community Roots students and parents to go on weekend or afternoon excursions.

Middle school students at E. L. Haynes Public Charter School in Washington, D.C., collaborate on a computer-based project. Photo by James Roy.

Expansion

Many of the schools on our list have expanded significantly since their founding. Their growth suggests that there is strong demand for high-quality, diverse charter schools and that expanding this model is possible.

After starting with a single campus in 2000, Capital City now has two campuses that together serve grades Pre-K–12 and will increase enrollment at a new campus starting in fall 2012. Likewise, the success of the original Larchmont Charter School inspired a second school, Larchmont Charter School–West Hollywood, to open in 2008, three years after the opening of the first school.

DSST Public Schools and High Tech High are even further along in the process of expanding. After starting with one school in 2000, the High Tech High network now includes eleven elementary, middle, and high schools across San Diego as well as an in-house teacher certification program and a new Graduate School of Education.

The original Denver School of Science and Technology (now DSST: Stapleton) opened in 2004. DSST Public Schools now contains five middle and high schools, with plans to expand to ten schools on five campuses. Most recently, DSST took on a new challenge by opening a school in a building formerly occupied by a public school that was notorious for its low performance. In fall 2011, DSST: Cole Middle School opened in the old Cole Middle School building, enrolling students from the low-income, high-crime neighborhood surrounding the school as well as additional students from across Denver. “It’s one thing to open a school in a middle-upper-income neighborhood that low-income kids come to. It’s another to open it in a really challenging neighborhood that then middle- and upper-income families come to," said Bill Kurtz, CEO of DSST Public Schools. Kurtz sees the school's success thus far as a testament to the strength of DSST's model. "I think it demonstrates the brand that we've been able to establish and that people want what we have to offer and are willing to do things they may not otherwise have done because of the promise of great education and the promise of a really vibrant learning community."

The schools we studied all provide an intriguing alternative to the charter school model that seeks to make only high-poverty schools work. Diverse schools provide the opportunity, as E. L. Haynes' Jennifer Niles phrased it, "to demonstrate that all students can achieve at high levels all together." And, as American society becomes increasingly diverse and globally connected, the experience of learning in a diverse school setting is more important than ever. In the words of Brian Johnson of Larchmont Schools, "In order to prepare our kids to participate and lead in the twenty-first century diverse society, we've got to be giving them opportunities to learn from and with children who have different experiences than they do, from the very beginning." We think the playing field should be leveled so that diverse charter schools attract the support of the policy and philanthropic communities alongside high-poverty charters.

IV. PROPOSED POLICY AND FUNDING CHANGES

Some charter schools are already succeeding in educating diverse student bodies, but we need to explore the possibility of stronger federal and state policies, as well as increased private funding, that would help expand the presence of integrated charter schools.

Federal Policy

Current federal law does little to encourage diversity in charter schools or prevent charter schools from increasing socioeconomic and racial isolation. Starting in FY2011, the U.S. Department of Education's Charter Schools Program application includes a competitive preference for schools that "promote student diversity, including racial and ethnic diversity, or avoid racial isolation."[36] While this is a step in the right direction, federal policy could do more to encourage socioeconomically and racially diverse charter schools. The following proposed changes are drawn largely from recommendations by the National Coalition on School Diversity:[37]

- Any new federal law should provide incentives for locating charter schools strategically to combat racial and socioeconomic isolation and incentives for charter schools, regardless of location, to recruit a racially and economically diverse student body.

- The Charter Schools Program of the Elementary and Secondary Education Act of 1965 (ESEA) should include among the criteria for determining which charter schools are "high-quality" consideration of whether the school promotes diversity.

- The competitive preference priority in the Charter Schools Program for schools that promote diversity, currently up to 4 points out of 100, should be increased to equal the weight of the priority given to schools serving a low-income demographic, which is currently 9 points out of 100.

- Federal start-up funds, which are currently limited to charters that use a blind lottery, should be made available to schools that use income- or geography-based lotteries to create socioeconomically and racially diverse student bodies.

- The U.S. Department of Education should remind charter schools that they fall under the "Guidance on the Voluntary Use of Race to Achieve Diversity and Avoid Racial Isolation in Elementary and Secondary Schools," released jointly by the U.S. Departments of Education and Justice in December 2011. This guidance emphasizes that socioeconomic options are legal and that the careful consideration of race is also permitted.

State and Local Policy

A number of states currently have laws that make it more difficult to form integrated charter schools because they provide priority for schools with concentrations of low-income or at-risk students. The following changes to state laws could encourage diversity in charter schools:

- States with laws that currently require charter schools to operate within a district could create provisions for regional or inter-district charter schools.

- States could create incentives for racially and economically integrated schools comparable to the priority currently given in some states to schools with concentrations of at-risk or low-income students.

- Charter school authorizers could work to close failing high-poverty charter schools and apply heightened scrutiny to applications for new charter schools from operators of high-poverty schools that struggle academically.

Foundation Support

Foundations should consider supporting a diverse portfolio of charter schools, including not only those with pedagogies targeted specifically at low-income students, but also those that serve low-income children in socioeconomically and racially integrated student bodies.

- A consortium of foundations might consider supporting a pilot initiative to fund applications for charter schools committed to socioeconomic and racial diversity coupled with a rigorous evaluation component to study the outcomes for low-income students.

APPENDIX: PROFILES OF DIVERSE CHARTER SCHOOLS

NOTES ON METHODOLOGY

The sources for demographic and achievement data and the most recent year of data available vary depending on the charter school and state in which it is located. We have preserved the demographic classifications used in the original data sources, including minor variations in the labeling of groups.

In cases where charter school operators run more than one school or campus, we have chosen to highlight the original school/campus in our data, with the rationale that these flagship campuses have been operating for the longest time and thus have the best data available.

We have provided achievement data that factor in as many grade levels as possible. When composite results across grade levels were not available, we have chosen data from the highest grade level available, with the rationale that, usually, students in upper grades have spent more time at that school than those in the lower grades.

BLACKSTONE VALLEY PREP MAYORAL ACADEMY

Cumberland, Rhode Island
http://www.blackstonevalleyprep.org/

The flagship of the Rhode Island Mayoral Academies, a nonprofit organization that designs socioeconomically diverse charter schools, Blackstone Valley Prep is a regional network of charter elementary and middle schools. Blackstone Valley Prep uses a "high expectations" educational model. The schools in the network implement a strict discipline system, have a longer school day and longer school year, offer summer and Saturday school programs, and label student cohorts for their projected college graduation year (for example, current kindergartners are the class of 2028). Blackstone Valley Prep also has strong fine arts and music programs. In 2011, 100 percent of Blackstone Valley Prep's kindergarten and first grade students met the benchmark for proficiency on the Developmental Reading Assessment—a test required for a subset of elementary schools in Rhode Island—which was unprecedented in the state.

Blackstone Valley Prep's lottery is open to students from four communities in Rhode Island that span both urban and suburban districts. The school enrolls equal numbers of urban and suburban students, and the first 60 percent of seats in the lottery are reserved for low-income students. As a result, Blackstone Valley Prep serves a socioeconomically and racially diverse group of students. In addition, 40 percent of students speak a language other than English at home.

Enrollment

For the 2011–12 school year, Blackstone Valley Prep enrolled 522 students in three schools: Elementary School 1 consists of kindergarten through second grade, Elementary School 2 has kindergarten, and Middle School 1 serves fifth and sixth graders. Each of these schools is in the process of expanding, and the network plans eventually to grow into a feeding pattern of two elementary schools, two middle schools, and one high school.

CAPITAL CITY PUBLIC CHARTER SCHOOL

Washington, D.C.

http://www.ccpcs.org/

A charter school serving Pre-K through twelfth grade students, Capital City uses the project-based Expeditionary Learning model, offers strong art and fitness programs, and emphasizes the importance of both social and academic curricula. Capital City was recently named an Expeditionary Learning "Mentor School," an honor that recognizes the school as one of the highest performing Expeditionary Learning schools and gives it the chance to showcase best practices to other Expeditionary Learning schools. In 2009, President Obama, along with Mrs. Obama, visited Capital City and called the school "an example of how all schools should be." That same year, the school won the Fight for Children Quality Schools Initiative award, granted each year to outstanding schools in Washington, D.C. In 2011, the District of Columbia Public Charter School Board ranked Capital City as a "Tier 1" (highest performance) charter school.

The student body at Capital City is remarkably diverse. As the first parent-founded charter school in Washington, D.C., Capital City was strategically located between the Adams Morgan, Mt. Pleasant, and Columbia Heights neighborhoods as a way of producing racial and economic diversity. The school has a long waiting list and makes aggressive efforts to recruit a diverse applicant pool, including reaching out to Spanish-speaking families. Capital City will move to a new location in fall 2012 in order to house all grades in one campus and expand enrollment in the elementary grades. The school's new campus, near the neighborhoods of Brightwood and Takoma, is also in a racially and economically diverse area.

ENROLLMENT

Capital City has a Lower Campus, which was founded in 2000, as well as an Upper Campus, which opened in 2008. In 2010–11, the Lower Campus served 244 students in grades PreK–8, while the Upper Campus served 294 students in grades 6–11. As of 2011–12, the Upper Campus has expanded through grade 12.

COMMUNITY ROOTS CHARTER SCHOOL

Brooklyn, New York
http://www.communityroots.org/

Strategically located in the mixed-income neighborhood of Fort Greene and drawing students from across Brooklyn, Community Roots is a racially and socioeconomically diverse K–5 charter school. Community Roots uses an integrated studies approach to instruction, placing social studies at the center of the curriculum and offering rich arts and music programs. Community Roots also considers students with special needs an important part of their diversity and uses an inclusive model for delivering special education services, pairing a general-education teacher and a special-education teacher in each classroom.

Community Roots targets recruitment efforts on Head Start, public housing, and special needs preschool programs. As popularity of the school has grown, Community Roots has seen a decrease in the percentage of low-income students. In particular, students living in three large public housing complexes near the school have had a slimmer chance of getting into the school as the lottery pool has grown. Starting with enrollment for 2012–13, Community Roots will reserve 40 percent of the spaces in their incoming kindergarten class for students living in public housing.

ENROLLMENT

Community Roots enrolled 250 students in grades K–4 in 2009–10. The school has now expanded through fifth grade and has plans to add a middle school. The first class of sixth graders will enroll in fall 2012.

Source: Common Core of Data, 2009–10 school year, Community Roots Charter School, National Center for Education Statistics, http://nces.ed.gov/ccd/schoolsearch/school_detail.asp?Search=1&InstName=community+roots&SchoolType=1&SchoolType=2&SchoolType=3&SchoolType=4&SpecificSchlTypes=all&IncGrade=-1&LoGrade=-1&HiGrade=-1&ID=360015905898.

DSST PUBLIC SCHOOLS

Denver, Colorado

http://dsstpublicschools.org/

A network of five public charter middle and high schools, DSST Public Schools educates over 1,500 students in a values-driven environment with a focus on STEM (science, technology, engineering, and math). Thus far, 100 percent of DSST graduates have been accepted to four-year colleges. DSST: Stapleton High School, the first DSST school to open, was the only high school to receive a "Distinguished" rating from Denver Public Schools in 2011 and was selected as one of three top finalists from a pool of over 1,000 schools in the 2010 national Race to the Top Commencement Challenge.

Integration and diversity have been part of the guiding philosophy at DSST Public Schools since its founding. DSST Public Schools has been very successful attracting families of all economic backgrounds to its lottery and has a goal that at least 50 percent of students be eligible for free or reduced-price lunch. DSST works with the school district to determine the enrollment preference at each campus based on the communities in which the schools are located and with the goal of having diverse student bodies at each school. Some DSST schools then hold a separate lottery for students who are eligible for free and reduced-price lunch or who reside in a particular geographic region. Currently, over 50 percent of students across five schools are economically disadvantaged. DSST Public Schools is planning to expand to ten schools on five campuses with the socioeconomic integration model intact.

ENROLLMENT

In 2011–12, DSST Public Schools operated two middle schools and three high schools. DSST: Stapleton includes a high school, opened in 2004 as the Denver School of Science and Technology, and a middle school, added in 2008. The Stapleton campus enrolled 874 students in grades 6–12 in 2010–11.

E. L. HAYNES PUBLIC CHARTER SCHOOL

Washington, D.C.

http://www.elhaynes.org/

Located in the Petworth neighborhood in Washington, D.C., E. L. Haynes Public Charter School offers a rigorous, standards-based curriculum to students in preschool through grade 9 (with plans to expand through grade 12). Through the school's "AP for All" program, all students must complete eleven AP courses in order to graduate. E. L. Haynes uses a year-round calendar, spacing breaks throughout the year rather than having one long summer break. During the intersession weeks, E. L. Haynes offers optional enrichment programming—which charges tuition on a sliding scale that is free for students who qualify for free and reduced-price lunch—on topics ranging from ancient Egypt to filmmaking. In 2008, E. L. Haynes was the first-ever charter school winner of the Fight for Children Quality Schools Initiative, and in 2010 it won the inaugural Strong Schools Award from the CityBridge Foundation. Both awards are granted each year to outstanding schools in Washington, D.C. For three years in a row, E. L. Haynes also earned EPIC awards, granted by the New Leaders' Effective Practice Incentive Community (EPIC) to urban schools showing the greatest student achievement gains. According to Jennifer Niles, the school's founder and head of school, E. L. Haynes has increased student achievement on the D.C. Comprehensive Assessment System by 47 percentage points in math and 23 percentage points in reading over six years. In 2010–11, 75 percent of the school's eighth graders scored proficient or advanced in reading and 90 percent scored proficient or advanced in math. In 2011, the District of Columbia Public Charter School Board ranked E. L. Haynes as a "Tier 1" (highest performance) charter school.

Diversity has been central to E. L. Haynes since its founding. Niles said that one of the school's goals is "to demonstrate that all students can achieve at high levels all together." The student body at E. L. Haynes is extremely diverse in terms of race, income, and home language. Since E. L. Haynes is a top-ranked charter school in the city and receives many applications from families who hear about the school through its reputation, E. L. Haynes focuses all of its recruitment efforts on low-income and non-English-speaking families, who may have less access to information about local schools.

Enrollment

In 2009–10, E. L. Haynes served 460 students in grades Pre-K through 7. In 2011–12, the school has expanded through grade 9 and nearly doubled in enrollment. It will continue expanding by one grade each year through grade 12, reaching an enrollment of 1,100 students.

Source: **Common Core of Data, 2009–10 school year, E. L. Haynes PCS, National Center for Education Statistics, http://nces.ed.gov/ccd/schoolsearch/school_detail.asp?Search=1&InstName=e.l.+haynes&SchoolType=1&SchoolType=2&SchoolType=3&SchoolType=4&SpecificSchlTypes=all&IncGrade=-1&LoGrade=-1&HiGrade=-1&ID=110004300274.**

Demographic and Achievement Data

Note: The most recent whole-school demographic data available for E. L. Haynes from the Common Core of Data is from 2009–10. Because E. L. Haynes' student body has grown significantly since that year, we have used demographic data provided by the school in their Annual Report.

HIGH TECH HIGH

San Diego, California
http://www.hightechhigh.org/

A network of eleven elementary, middle, and high schools, High Tech High serves an ethnically and socioeconomically diverse population. Focusing on math, science, and engineering, the school teaches through an experiential method employing expeditionary, applied, group learning. One hundred percent of High Tech High's graduates have been admitted to college, and 99 percent of students attend college in the fall after graduation. About 35 percent of these graduates are first-generation college students. In 2007, High Tech High was the first California public school organization to open its own Graduate School of Education to train and credential teachers.

Larry Rosenstock, CEO and founding principal of High Tech High and dean of the High Tech High Graduate School of Education, says that integration is the network's "number one objective." High Tech High schools use a lottery that weights only by zip code, seeking an even distribution of students from across the area. Because of the residential segregation in the area, the result of the zip code lottery is a socioeconomically and racially diverse student body. In order to make sure that the school is integrated at the classroom level, High Tech High uses a full immersion special education model, supporting special education students in regular classroom settings and only pulling them out for specialized instruction during non-academic portions of the daily schedule. In addition, rather than separating honors students and regular students, High Tech High offers classes with a two-tiered syllabus: all students take the class together, and those opting for honors complete extra assignments.

ENROLLMENT

The High Tech High network includes eleven elementary, middle, and high schools. The Gary and Jerri-Ann Jacobs High Tech High, the first High Tech High school, enrolled 549 students in grades 9–12 in 2009–10.

Source: Common Core of Data, 2009–10 school year, High Tech High, National Center for Education Statistics, http://nces.ed.gov/ccd/schoolsearch/school_detail.asp?Search=1&InstName=high+tech+high&City=san+diego&SchoolType=1&SchoolType=2&SchoolType=3&SchoolType=4&SpecificSchlTypes=all&IncGrade=-1&LoGrade=-1&HiGrade=-1&ID=063432008599.

DEMOGRAPHIC AND ACHIEVEMENT DATA

Note: The data below is for The Gary and Jerri-Ann Jacobs High Tech High only, since that is the original High Tech High school.

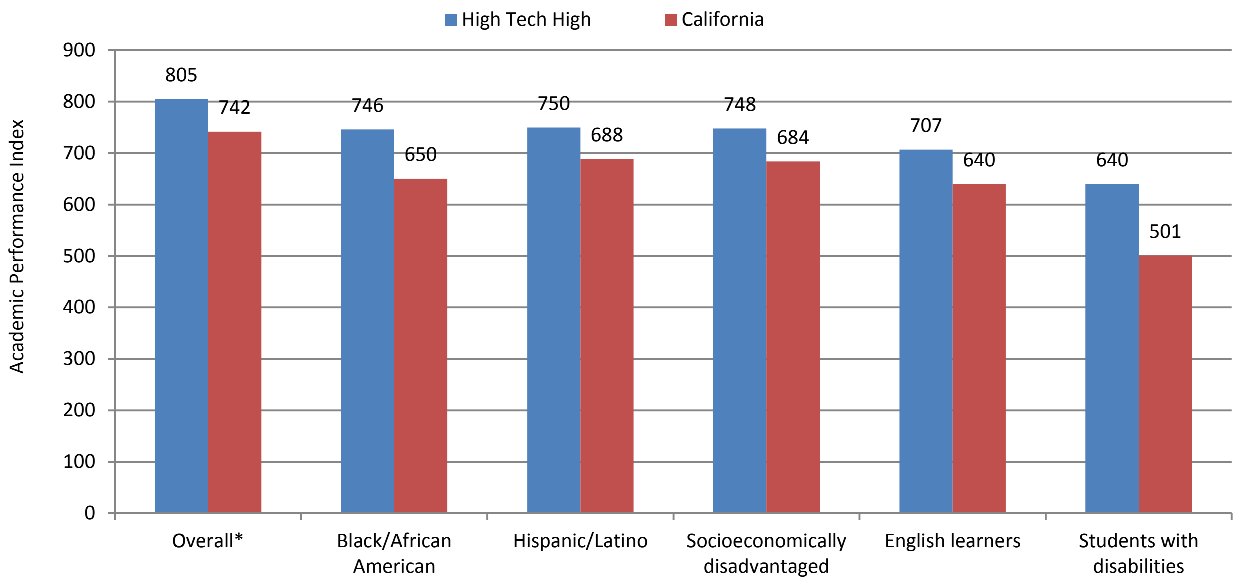
Source: "2011 High Tech High School Report – API Growth and Targets Met," 2010–11 Accountability Progress Reporting, State of California Department of Education, http://api.cde.ca.gov/Acnt2011/2011GrowthSch.aspx?allcds=37683383731247 (data is for grades 9–11 in 2010–11).

Figure A-25. Grades 9–11, Academic Performance Index (API), 2010–11



*34 percent of students included in the 2010–11 API score for High Tech High were socioeconomically disadvantaged, compared to 53 percent of students included in the grades 9–11 API score for the state of California.

Note: The State of California assigns each school, Local Education Agency, and subgroup an Academic Performance Index (API) from 200 to 1000 to reflect the overall academic performance and growth of that group. The API is calculated using student performance data from statewide assessments across different subjects. The state uses the API to measure improvement as well as to rank schools. In 2010, The Gary and Jerri-Ann Jacobs High Tech High ranked in the eighth decile (seventy-first to eightieth percentiles) out of all high schools in California and the third decile (twenty-first through thirtieth percentiles) out of a group of 100 schools with similar student demographics, teacher credentials, and organizational characteristics.

LARCHMONT SCHOOLS

Los Angeles, California
http://www.larchmontcharter.org/ and http://www.larchmontcharterweho.org

The Larchmont Schools family includes two successful charter schools in Los Angeles, California: Larchmont Charter School (LCS) and Larchmont Charter School–West Hollywood (LCW). The Larchmont Schools use constructivist teaching methods, providing children with highly differentiated instruction, small class sizes, and project-based learning. Both schools are among the thirty highest-performing public schools in the Los Angeles Unified School District (out of over 800). In 2009, Larchmont Schools was handpicked by Chez Panisse restaurateur Alice Waters to be one of the founding sites for the new Edible Schoolyard Program. In 2010, one of LCS's teachers was a winner of the "Teacher of the Year" award from the Los Angeles Unified School District.

With two schools and campuses in three neighborhoods—Hollywood, Koreatown, and West Hollywood—the Larchmont Schools are located in some of the most diverse communities in Los Angeles. But despite the diversity of these communities, few schools in the area serve diverse student bodies, according to Larchmont Schools' senior academic officer, Brian Johnson. A group of parents from Hollywood started the first school, LCS, in 2005 with the hope of making a public school that was as diverse as their community at large. School leaders at each school look at census and Nielsen data for the school's surrounding neighborhood and set the goal of having their student bodies mirror that socioeconomic and racial/ethnic diversity. Each school designs a recruitment plan and weights the admissions lottery using a carefully designed algorithm that adjusts the weight given to low-income students in order to help reach the school's target percentage of free and reduced-price lunch. At LCS, for example, school leaders estimated that 42 percent of families in the area earn an income that would qualify for free or reduced-price lunch, so they set that as their school's target.

Enrollment

Founded in 2005, LCS served 448 students in grades K–6 in 2009–10 and expanded through eighth grade for the 2011–12 school year. LCW opened in 2008 and enrolled 114 students in grades K–2 in 2009–10. It has grown to serve students through fifth grade in 2011–12 and plans to continue expanding into a full K–8 school.

Source: **Common Core of Data, 2009–10 school year, Larchmont Schools, National Center for Education Statistics, http://nces.ed.gov/ccd/schoolsearch/school_detail.asp?Search=1&InstName=larchmont+charter&SchoolType=1&SchoolType=2&SchoolType=3&SchoolType=4&SpecificSchlTypes=all&IncGrade=-1&LoGrade=-1&HiGrade=-1&ID=062271010870 and http://nces.ed.gov/ccd/schoolsearch/school_detail.asp?Search=1&InstName=larchmont+charter&SchoolType=1&SchoolType=2&SchoolType=3&SchoolType=4&SpecificSchlTypes=all&IncGrade=-1&LoGrade=-1&HiGrade=-1&ID=062271012307.**

Demographic and Achievement Data

Note: The data below is for Larchmont Charter School only, since that was the first school in the Larchmont Schools family. Because the student demographics of Larchmont Charter School have changed significantly since 2009–10, the most recent year available from the Common Core of Data, we have used demographic data provided by school administrators.

NOTES

[1] Gary Ritter, Nathan Jensen, Brian Kisida, and Joshua McGee, "A Closer Look at Charter Schools and Segregation," *Education Next*, Summer 2010.

[2] *Parents Involved in Community Schools v. Seattle School District #1*, 551 U.S. 701 (2007), endorsed a variety of constitutionally permissible approaches to achieve the "compelling government interest" in creating school diversity and reducing racial isolation. See also The National Coalition on School Diversity, "Federally Funded Charter Schools Should Foster Diversity," Issue Brief 2, March 2010, http://www.school-diversity.org/pdf/DiversityIssueBriefNo2.pdf.

[3] The Education Commission of the States, "School or Student Preference" database, 2010, http://mb2.ecs.org/reports/Report.aspx?id=79. States that prioritize charter school funding for at-risk, low-income, or minority students include:

- Arkansas—"The state board of education must give preference to applications for charters schools: (1) Located in school districts where the percentage of students who qualify for free or reduced price lunches is above the state average."
- California—"Priority in the approval process must be given to schools designed to serve low-achieving students."
- Colorado—"Greater consideration must be given to charter school applications designed to increase the educational opportunities of at-risk pupils."
- Connecticut—"The state board of education must give preference to applicants that will serve students who reside in a priority district or in a district in which 75% or more of the enrolled students are members of racial or ethnic minorities."
- Illinois—"In evaluating submitted charter school proposals, the local school board is required to give perverse to proposals that: . . . (3) Are designed to enroll and serve a substantial proportion of at-risk children."
- Missouri—"Priority must be given to charter school applicants proposing a school oriented to high-risk students and to the re-entry of dropouts into the school system."
- New York—"Applications that demonstrate the capability to provide comprehensive learning experiences to students identified by the applicants as at risk of academic failure may be given preference in the application process."
- North Carolina—"The state law encourages chartering entities to give preference to applications focused on serving students at risk of academic failure."
- Rhode Island—"Charter schools designed to serve at-risk students must be given preference in the application process."
- Tennessee—"Charter schools may only serve students who . . . (2) Were assigned to, or previously enrolled in a school failing to make adequate yearly progress (AYP), as defined by the state's accountability system, giving priority to at-risk students."
- Virginia—"Local school boards must give priority to charter school applications designed to increase the educational opportunities of at-risk students, and at least 1/2 of the charter schools per division must be for at-risk students."
- Wisconsin—"Charter school authorizers must give preference in awarding charters to charter schools that serve children at risk."

(Quotations are taken from the Education Commission of the States database, paraphrasing state laws.) Without added consideration of whether or not a school encourages diversity, these laws are likely to prioritize funding for high-poverty charter schools.

[4] *All-STAR Act of 2011*, S. 809, 112th Cong., 1st sess., introduced April 13, 2011. See section (e)(1)(D)(ii)(II)(aa), prioritizing funding for schools serving a greater percentage of low-income children.

[32] Some of the examples are drawn from Michael J. Petrilli, *The Progressive Parents' Dilemma* (forthcoming). Additional information on the charter schools highlighted in this paper comes from interviews with the schools' leaders: Jeremy Chiappetta (executive director of Blackstone Valley Prep, a Rhode Island Mayoral Academy), e-mail to Halley Potter, November 26, 2011, and phone interview with Halley Potter, November 30, 2011; Karen Dresden (head of school at Capital City Public Charter School), phone interview with Halley Potter, November 16, 2011; Brian C. Johnson (senior academic officer at Larchmont Schools), phone interview with Halley Potter, November 23, 2011; Allison Keil (co-director of Community Roots Charter School), phone interview with Halley Potter, December 15, 2011; Bill Kurtz (chief executive officer of DSST Public Schools), phone interview with Halley Potter, December 13, 2011; Jennifer Niles (founder and head of school at E.L. Haynes Public Charter School), phone interview with Halley Potter, December 19, 2011; and Larry Rosenstock (chief executive officer and founding principal of High Tech High and dean of the High Tech High Graduate School of Education), phone interview with Halley Potter, December 5, 2011.

[33] *Parents Involved in Community Schools v. Seattle School District #1*, and U.S. Department of Justice, Civil Rights Division, and U.S. Department of Education, Office for Civil Rights, "Guidance on the Voluntary Use of Race to Achieve Diversity and Avoid Racial Isolation in Elementary and Secondary Schools," December 2, 2011, http://www.justice.gov/crt/about/edu/documents/guidanceelem.pdf. Like the *Parents Involved* decision on which it

is based, in addition to generally discouraging the use of individual student race as a factor in assignment, the Guidance also lists a number of different approaches that can be used to achieve racial and economic diversity without using the race of individual students. In discussing these approaches, the guidance goes slightly beyond the *Parents Involved* plurality, by suggesting that districts model or test race-neutral policies (such as purely socioeconomic factors) to see if they would achieve racial diversity, before moving on to use more race-conscious measures (like geographic weighting of neighborhoods based on their racial demographics, and so on).

[34] For example, Georgia prohibits the use of weighted lotteries in charter schools. “Frequently Asked Questions about Charter Schools,” State of Georgia Department of Education, http://www.doe.k12.ga.us/pea_charter.aspx?PageReq=CIIAPCharterFAQS. The federal Charter Schools Program does not allow charter schools to use weighted lotteries except “when they are necessary to comply with title VI of the Civil Rights Act of 1964, title IX of the Education Amendments of 1972, section 504 of the Rehabilitation Act of 1973, the equal protection clause of the Constitution, or applicable State law” or when used to give preference to “students seeking to change schools under the public school choice provisions of title I, part A of the ESEA for the limited purpose of providing greater choice to students covered by those provisions.” Charter Schools Program, Title V, Part B of the ESEA, Nonregulatory Guidance, U.S. Department of Education, April 2011, section E-3, http://www2.ed.gov/programs/charter/nonregulatory-guidance.doc.

[35] See the school profiles at the end of the report for information on how leaders at Larchmont Charter School set 42 percent as the school’s target.

[36] “Application for New Awards; Charter School Program (CSP); Grants for Replication and Expansion of High-Quality Charter Schools,” *Federal Register* 76, no. 133 (July 12, 2011): 40890–98, http://federalregister.gov/a/2011-17490.

Latitude
HIGH SCHOOL

Starts with the Student

Latitude High School 37.8 is a high school model in which students leverage the assets and resources in their city to design and secure the experiences, education and network they need to be prepared for a meaningful and productive life.

Vision

Latitude High School 37.8 graduates have the personal agency, essential competencies, and integrated identity necessary to be prepared for a meaningful and productive life.

Mission

Latitude High School 37.8 facilitates self-directed, passion driven learning that leverages the assets and resources of the city to provide students a personalized and authentic learning experience.

www.galileo-camps.com

August 15, 2017

To Whom It May Concern:

Galileo Learning (Galileo) is pleased to provide a letter of support for Latitude 37.8° High School.

Headquartered in Oakland, Galileo creates and operates innovation camps for kids with the mission “to develop innovators who envision and create a better world.” This mission comes to life each summer at nearly 70 imagination-sparking locations (42 in the Bay Area (including 2 programs in Oakland), 21 in SoCal and 8 in Chicagoland) where Galileo delivers over 50,000 weeks of camp annually to preK-8th grade campers. Galileo also trains and employs approximately 2,000 educators and aspiring educators as summer staff.

In Galileo’s programs, the culture, curricula and instructional practices center around the Galileo Innovation Approach, a pedagogical framework for developing innovators. With this approach, Galileo programs aim to create a world of fearless innovators—those who will be the changemakers of tomorrow, innovating on the world stage and taking control of their own lives to make their visions reality.

Each year, thrilled with their camp experience and the impact this type of education has on their children, countless parents and staff reach out to our team and encourage us to start a school or ask what they can do to make their schools more like our camps. While Galileo has neither the capacity nor the motivation to start a school, we are ecstatic to support the creation of Latitude High School, a model that is aligned with Galileo’s project-based learning approach and practices innovation with its visionary charter while aiming to instill an innovator’s mindset and 21st century skills in its students. Further, Latitude’s commitment to diversity by design will ensure that it’s unique offering is accessible to a student population that represents the city of Oakland across all vectors.

As partners in the work to develop innovators (or in Latitude’s terms, “create graduates with the personal agency, essential competencies, and integrated identity necessary to be prepared for a meaningful and productive life”) and as co-denizens of Oakland, Galileo is ready to support Latitude’s teachers and students. Whether this means creating authentic internships for students or collaborating with staff on innovation education practices or curriculum, Galileo is excited to work with Latitude to support the educational program, to help build an innovation education ecosystem in Oakland and to create more opportunities for Oakland’s youth to build the skills and identity they’ll need to lead productive, fulfilling lives. Further, Galileo looks forward to growing as an organization by learning from and with the high functioning and inspiring Latitude Leadership Team.

Oakland (and our country) need more examples of schools that are not only successful in providing students with the academic capacity to succeed in life, but that support each student to discover their own identity and purpose, and then help them to unlock their city’s resources and assets to pursue their passions

On behalf of Galileo, I urge the Oakland School Board members to support Latitude High School’s charter petition. Please do not hesitate to contact me if you require further information.

In innovation,

Pamela Briskman
Director of Curriculum

GYROSCOPE INC
283 4th Street Suite 201 Oakland, CA 94607
510.986.0111 www.gyroscopeinc.com

August 14, 2017

To Whom It May Concern:

We are honored to write this letter of support for Latitude High School. Gyroscope has been on the design team for this new Oakland High School since the beginning of the design process. We firmly believe that Latitude will offer a much needed and exceptional model of learning for Oakland High School Students.

Gyroscope is an Oakland based, international design firm, with a focus on informal learning environments. In the past few years we have been involved in four of the most talked about new Children's Museums in the country. The most recent museum we opened in February was ranked by Fodors among the top ten new museums in the world. We are very proud of this recognition and also to call Oakland our home.

We believe in the power of new models of learning and especially those in our own home town that aspire to connect businesses like Gyroscope to our local community.

Please consider this an official letter of support for Latitude's charter petition.
Please do not hesitate to contact me at 510 986 0111 for further information or any questions.

Yours truly,

Maeryta Medrano, AIA LEED®AP
President & Founder
Gyroscope, INC.

August 4, 2017

To Whom It May Concern:

We are proud to partner with Latitude High School as the founding team works to provide a new educational opportunity for the students in Oakland. Big Picture Learning will partner with and support the Latitude leadership and staff to provide an engaging curriculum with real-world, interest-based learning opportunities for it's students.

Big Picture Learning will work with the school leadership and staff by providing access to high-quality professional development and materials customized for Big Picture Learning Schools. The Latitude High School staff will join a vibrant network of over 60 schools in the United States, and more than 70 schools internationally, implementing the Big Picture design elements. We are excited about moving forward to assisting the school leadership and faculty as they embark on this new project to develop Latitude High School in Oakland.

Please consider this our official letter of support, with a formal Memorandum of Understanding to be completed in the next few months.

If you require any further information, please do not hesitate to contact me at at 401.378.1808 or via email at carlos@bigpicturelearning.org.

KQED

August 11, 2017

To Whom it May Concern:

KQED is pleased to support the visionary work of Latitude High School as a community partner on the school design team and resource provider to bring Latitude's vision to life.

At KQED, public media in the San Francisco Bay Area, we are committed to using the tools of journalism and media production to serve up free and open educational resources for public schools in service to our mission. KQED provides citizens with the knowledge they need to make informed decisions; convenes community dialogue; brings the arts to everyone; and engages audiences to share their stories. We help students and teachers thrive in 21st century classrooms, and take people of all ages on journeys of exploration—exposing them to new people, places and ideas.

Aligned with the mission and vision of Latitude High School, KQED will enhance the school's inquiry-based real-world learning model. Through media-rich curriculum and tools developed by us and our colleagues throughout the PBS network, we will support the school in inspiring their students to delve into civic issues relevant to their own lives, connect them to their peers outside of their own communities, and amplify their voices.

We look forward to the next steps of our partnership as Latitude High School moves from design to implementation.

Sincerely,

Robin Mencher

Graduate School of EDUCATION

August 10, 2017

To Whom it May Concern:

It is with immense pleasure that I write this letter of unequivocal and enthusiastic support for Latitude High School. When I first met the founding director Lillian Hsu eight years ago, she had moved to San Diego to embed herself in a High Tech High high school, learning to lead through apprenticeship to a director while earning her M.Ed. in School Leadership. Her dream was to take her learning from this experience, and those to come, to return to Oakland and open a school that would provide transformational learning experiences for underserved students and disrupt inequitable opportunity gaps for this community.

As director of High Tech High Chula Vista following the program, she was hands down the most inspiring, innovative, and equity-focused leader I have ever had the honor to work with. Her passion and relentless drive to reach every student was grounded in relationships, authentic learning and relevance to both the students and the community. The model she and her team have designed for Latitude High School draws from their collective and deep experience with project-based learning at High Tech High and pushes the boundaries by integrating further opportunities for fieldwork, internships and community-based learning. As alumni from the program, the founding team members are well situated to implement this vision, integrating theory and practice with artful facilitation of learning for both students and the adults.

As a school leader, Lillian was known across the 13 High Tech High schools for her intellectual curiosity, instructional leadership, equity lens and focus on continuous improvement. While many school leaders get sucked into putting out fires and reacting to all that comes up in a day through this role, Lillian intentionally carved out time to be in classrooms and set up deliberate coaching cycles with all of her teachers. She also created conditions that built deep collegial relationships between her teachers, where difficult questions and issues were explored, teachers were supported in cycles of inquiry, action and reflection regarding important problems of practice and safety and trust allowed for deeper equity-focused work to occur.

Lillian and her team have the collective knowledge, experience, skills, habits and dispositions needed to realize the vision of Latitude High School if given the opportunity. While they will draw on their deep experience at High Tech High and receive continued support, their innovations and iterations in response to the needs of the local context will make a difference not only for the lives of these students, but also the broader community. Please do not hesitate to reach out if you have further questions about my deep and committed support for the school.

NATIONAL EQUITY PROJECT

March 15, 2014

Tom Malarkey
Director of Design and Northwest Region
National Equity Project
1720 Broadway, 4th Floor
Oakland, CA 94612

We are honored to write this letter in support of Latitude 37.8 High School. We have high regard for the school's leadership, their aspirations for Oakland youth and families, and for the educational model (High Tech High in San Diego) that the school is based upon. As an organization committed to educational equity, we believe the Oakland community will benefit tremendously from the presence of Latitude in Oakland.

We will be supporting the school's leadership in the design and implementation of their model school in Oakland.

The National Equity Project has a long history in Oakland, based on our organization's 20 years of experience supporting school, district, and community partners to develop conditions, culture, and competencies among leaders at all levels to meet the needs of every student. Our mission is to transform the achievement, experiences and life trajectory of students who have been historically underserved. We focus on transforming the ways adults work together to create education systems where every child can succeed. Our coaching, leadership development, and design approach helps leaders and educators align their everyday practices with their values and intentions. We support leaders to design creative and transformative solutions to their own equity challenges, and implement those solutions in ways that empower and liberate their communities.

We strongly recommend approval of Latitude and full endorse Lillian Hsu's leadership of the school. We are happy to talk further about our support of Latitude.

Sincerely,

Tom Malarkey
Director, National Equity Project

ACKNOWLEDGEMENTS

This project would not have been possible without the support and expertise of numerous people. We would like to thank all of the experts who graciously shared their time and knowledge with us to help shape this work. In particular, we are grateful for the feedback we received on this report from Abigail Baird, Ron Berger, Jiffy Lansing, and Jane Quinn. We would also like to thank our Steering Committee readers, Kim Zalent and Erin Unander for their insightful comments and feedback. Liz Duffrin conducted interviews with youth, parents, and program providers, resulting in the profiles presented in this report. Many colleagues supported us throughout this work. Thank you to David Stevens helping us create engaging and meaningful conversations at our convenings; to Elaine Allensworth, Emily Krone, Jessica Puller, Melissa Roderick, and Sue Sporte for numerous readings and feedback as we progressed through our conceptualizations; and to Bronwyn McDaniel, who helped manage all aspects of communication and outreach related to this project. This project has been generously funded by the Wallace Foundation. We are extremely grateful for the ongoing support, flexibility, and positive guidance of Hilary Rhodes, Senior Research and Evaluation Officer at The Wallace Foundation. Finally, we also acknowledge the Spencer Foundation and the Lewis-Sebring Family Foundation, whose operating grants support the work of UChicago CCSR.

Foundations for Young Adult Success: A Developmental Framework

Download the full report at ccsr.uchicago.edu and wallacefoundation.org

This framework synthesizes decades of research evidence, practice wisdom, and theory to capture a holistic view of children's developmental needs from early childhood to young adulthood. Whether at home or school, in an afterschool program, or out in their community, young people are always developing. Broader societal contexts, systems, and institutions shape youth development—often creating big disparities in opportunities and outcomes. Adults also play a pivotal role, and can give young people a better chance at successful lives by understanding and intentionally nurturing their development.

Developmental Experiences Can Happen in All Settings

Children are shaped by their interactions with the world, the adults around them, and how they make meaning of their experiences no matter where they are.

Developmental Experiences Require Action and Reflection

*Children learn through developmental experiences that combine **Action** and **Reflection**, ideally within the context of trusting relationships with adults.*

Developmental Experiences Build Components and Key Factors of Success

Over time, through developmental experiences, children build four foundational components, which underlie three "key factors" to success.

Foundational Components

Self-Regulation includes awareness of oneself and one's surroundings, and managing one's attention, emotions, and behaviors in goal-directed ways.

Knowledge is sets of facts, information, or understanding about self, others, and the world. **Skills** are the learned ability to carry out a task with intended results or goals, and can be either general or domain-specific.

Mindsets are beliefs and attitudes about oneself, the world, and the interaction between the two. They are the lenses we use to process everyday experience.

Values are enduring, often culturally-defined, beliefs about what is good or bad and what is important in life. Values serve as broad guidelines for living and provide an orientation for one's desired future.

Key Factors

Being successful means having the **Agency** to make active choices about one's life path, possessing the **Competencies** to adapt to the demands of different contexts, and incorporating different aspects of oneself into an **Integrated Identity**.

Continued on reverse.

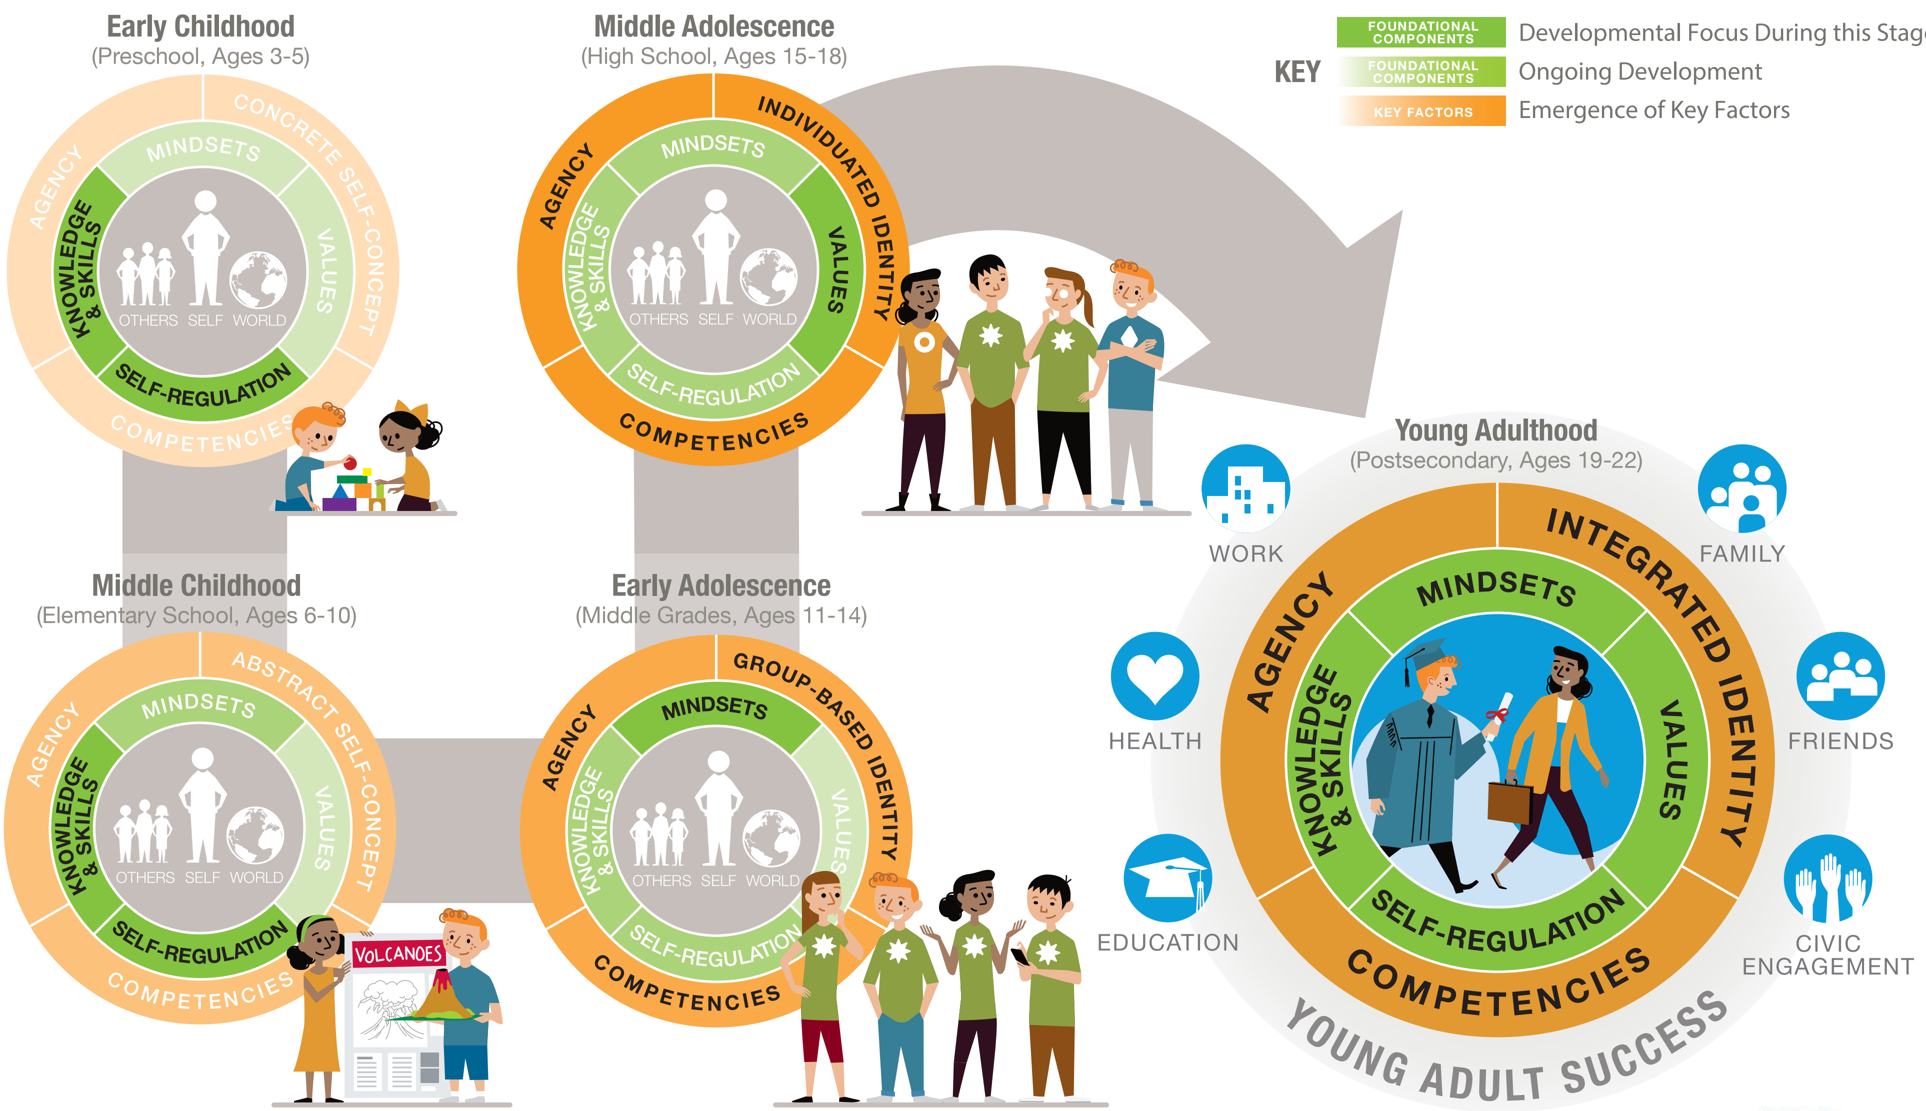
Funded by The Wallace Foundation®

UCHICAGO CCSR

Focus of Development Changes as Children Grow Older

Download the full report at ccsr.uchicago.edu and wallacefoundation.org

Providing the right experiences for growth requires knowledge of child and youth development. The development of the four foundational components, along with agency, integrated identity, and competencies, occurs at different stages throughout childhood and adolescence. Development into a successful young adult entails growth of the *self* and one's abilities to interact with *others* and navigate the broader *world*. We define success beyond education and employment to include healthy relationships, a meaningful place within a community, and contributing to a larger good.



Funded by The Wallace Foundation®

Executive Summary

Every society in every age needs to grapple with the question of what outcomes it hopes to produce in raising its young. What exactly do we hope our children will be able to accomplish as adults? What vision guides our work? How do we make that vision a reality for all children? How do we better harness what is known in the research, practice, and policy arenas to ensure that all youth have what they need to successfully meet the complex challenges of young adulthood? Preparing all youth for meaningful, productive futures requires coordinated efforts and intentional practices by adults across all the settings youth inhabit on a daily basis.

To address these questions, this report aims to build a common understanding of young people's developmental needs from early childhood through young adulthood and proposes a developmental framework of the Foundations for Young Adult Success. The framework is the result of synthesizing research, theory, and practice knowledge from a range of disciplines and approaches. This work is influenced by ideas spanning the last century, from Dewey's theory of learning from nearly a century ago to cutting-edge findings in neuroscience on how the brain works. It integrates these perspectives into an accessible framework designed to guide the efforts of all adults who are responsible for raising, educating, or otherwise working with children and youth.

In the past several years, a large number of frameworks and standards have been created to provide guidance on what young people need to learn. The Foundations for Young Adult Success developmental framework describes how to enact these frameworks and standards across the settings in school, out of school, and at home. It characterizes the experiences and relationships youth need to develop into young adults who have agency, an integrated identity, and the requisite competencies to successfully meet the complex challenges of young adulthood and become thriving, contributing members of their communities. The approach described in this report: (1) identifies three key factors of young adult success (agency, an integrated identity, and competencies) and four foundational components (self-regulation, knowledge and skills, mindsets, and values) that underlie them, (2) takes into account what we know about how children develop, (3) considers how the backgrounds of and contexts in which young people live affect their development, and (4) makes the intentional provision of opportunities for young people to experience, interact, and make meaning of their experiences the central vehicle for learning and development.

What Do We Mean by "Success" in Young Adulthood?

Most policy efforts attempt to address socioeconomic gaps in youth outcomes by focusing on educational attainment as the central investment in preparing youth for adulthood. However, while building an educated workforce is one of the core goals of our investments in young people, it is far from the only goal. Success also means that young people can fulfill individual goals and have the agency and competencies to influence the world around them. This broader definition of success is based on the synthesis of literature from various fields, as well as interviews with practice experts and youth service providers (**see box entitled *Project Overview and Methodology* p.3**), who articulated their larger role as helping young people develop an awareness of themselves and of the wide range of options before them, competencies to pursue those options, and the ability to make good future choices for their lives as engaged citizens in the world. This larger focus is inseparable from goals related to college and career.

Context Plays a Crucial Role in Providing Equal Opportunities to All Youth

The picture of young people as self-actualized masters of destiny is complicated by persuasive research on the role of context in shaping youth outcomes, specifically, structural forces that govern socioeconomic life in the United States (e.g., segregation, discrimination, joblessness).[1] From this perspective, a young person is fundamentally the product of experiences and social interactions, within and across a range of contexts, from the immediate setting to larger institutions to cultural norms, all of which collectively shape the developing individual.[2] Larger contextual factors of society, the economy, and institutions (such as schools) play a central role in the inequitable opportunities afforded to young people, as well as in their ability to see opportunities as viable options and take advantage of them. The obstacles to following a successful path to adulthood and the opportunities available to young adults vary greatly by the contexts they inhabit. Thus, there is a fundamental tension between preparing children to live in the world that is often cast as a tacit acceptance of a profoundly unjust status quo and equipping them to face, navigate, and challenge the inequitable distributions of resources and access that so often limit their opportunities and constrain their potential. It is within these tensions that we explore broad multidisciplinary evidence from research and practice about the underlying constructs that support a successful transition into young adulthood.

Ingredients of "Success" that Comprise the Developmental Framework for Young Adult Success

What are the ingredients necessary for young adults to succeed? Building a common set of objectives and having a clear understanding of how to foster development is a critical step in eliminating the silos that adults working with young people often operate within. To this end, the report provides a framework of foundational components and key factors for success in young adulthood. The report organizes the definition of young adult success around three **key factors**; these are *agency, integrated identity,* and *competencies.* These factors capture how a young adult poised for success interacts with the world (agency), the internal compass that a young adult uses to make decisions consistent with her values, beliefs, and goals (an integrated identity), and how she is able to be effective in different tasks (competencies). The three key factors allow a young adult to manage and adapt to changing demands and successfully navigate various settings with different cultures and expectations. However, a person can have strong agency, identity, and competencies in one setting without being able to automatically transfer those to a new setting; having an *integrated identity* means that a person has consistency and coherence across different roles in different settings.

The Three Key Factors

Agency is the ability to make choices about and take an active role in one's life path, rather than solely being the product of one's circumstances. Agency requires the intentionality and forethought to derive a course of action and adjust course as needed to reflect one's identity, competencies, knowledge and skills, mindsets, and values.

Integrated Identity is a sense of internal consistency of who one is across time and across multiple social identities (e.g., race/ethnicity, profession, culture, gender, religion). An integrated identity serves as an internal framework for making choices and provides a stable base from which one can act in the world.

Competencies are the abilities that enable people to effectively perform roles, complete complex tasks, or achieve specific objectives. Successful young adults have sets of competencies (e.g., critical thinking, responsible decision-making, ability to collaborate) that allow them to be productive and engaged, navigate

1 Bowles & Gintis (1976, 2002); Duncan & Murnane (2011); Lewis (2011); Massey & Denton (1993); Putnam (2015); Wilson (1990, 2012).

2 Neal & Neal (2013); Bronfenbrenner (1977, 1979, 1986).

Project Overview and Methodology

In November 2013, the University of Chicago Consortium on Chicago School Research (UChicago CCSR) was awarded a competitive grant from the Wallace Foundation to build a conceptual framework that articulates what is needed to guide children and youth to become successful young adults. The charge was to analyze and synthesize the best of research evidence, theory, expert opinion, and practice wisdom in the service of identifying the broad range of factors critical for young adult success. We consolidated current understanding of how these factors can be fostered in schools, communities, and homes from early childhood to young adulthood. In addition to a thorough grounding in published research, the project included interviewing and holding convenings and meetings with experts in research, policy, and practice across a range of fields and disciplines. To further ground the synthesis in real-world problems, we also interviewed a diverse selection of nine youth and the adults who work with them in schools, community programs, and agencies in Chicago and developed youth profiles. We sought to find the points of agreement across disparate perspectives, raise the points of contention, and leverage the collective wisdom to best understand the full scope of factors essential to young adult success and how to develop them.

The Three Phases of the Project

To achieve a cohesive and comprehensive framework, the project team undertook three phases of information-gathering. Each successive phase built upon the work of the previous phase, and each phase was defined by a different goal and set of questions:

- **Phase I:** We focused on defining *"success"* and identifying the factors that are critical for success in young adulthood, particularly in college and at the beginning of a career.
- **Phase II:** Building on the critical factors identified in Phase I, we sought to understand how each factor developed over the course of early life, from the preschool years through young adulthood. We focused on the identification of leverage points for best supporting children's holistic development, keeping in mind that child and youth development occurs in multiple settings.
- **Phase III:** We aimed to consolidate current understanding of how critical factors of young adult success can be fostered in a holistic, coordinated way across schools, community organizations, and homes, from early childhood to young adulthood. We focused on a ground-level, practitioner perspective in considering how to best organize adult efforts to promote the development of children and youth.

Each phase of work culminated in internal working documents to help us consolidate our progress and thinking. The white paper that resulted from Phase I, *A Framework for Developing Young Adult Success in the 21st Century: Defining Young Adult Success*, is available at **http://ccsr.uchicago.edu/sites/default/files/publications/Wallace%20Framework%20White%20Paper.pdf**. The current report is a culmination of the three phases of work outlined above, with an emphasis on our learnings from Phases I and II. Findings from Phase III will be explored in future work.

across contexts, perform effectively in different settings, and adapt to different task and setting demands.

The Four Foundational Components

Underlying the capacity for the three key factors are four **foundational components** that span both cognitive and noncognitive factors. These four foundational components are *self-regulation, knowledge and skills, mindsets,* and *values.* The foundational components are developed and expressed in multiple spheres—within the self, in relation to others, and in the broader world(s) one inhabits.[3] The role of each component is threefold. First, when young people have experiences and make meaning of those experiences, each component interacts to promote the development of the other foundational components and the three key factors. Second, they enable healthy and productive functioning at every stage of life. Finally, they directly contribute to young adult

3 The notion that positive youth development requires skills in both the interpersonal (or social) and intrapersonal (or self) domains has been put forth by other models and frameworks of skills necessary for success in the 21st century (e.g., Pellegrino & Hilton, 2012; Weissberg & Cascarino, 2013).

success. The foundational components were chosen because they are malleable; that is, they can be changed by experiences and the efforts of and interactions with other people, in both positive and negative ways, and then be internalized. As young people engage in ongoing experiences that help them develop the foundational components, these components can become internalized as automatic responses (or habits) that become a core part of their identity; this automatic behavior allows them to then be transferred across contexts. While all of the foundational components develop throughout every stage of a young person's life, the development of specific components is more salient during some stages than others. Young people develop the foundational components and key factors through experiences and relationships, and these are always embedded within larger societal, economic, and institutional contexts that influence how youth perceive the opportunities and obstacles posed by their environments.

Self-Regulation is the awareness of oneself and one's surroundings, and the ability to manage one's attention, emotions, and behaviors in goal-directed ways. Self-regulation has numerous forms, including cognitive, emotional, behavioral, and attentional regulation. Self-regulation is a key developmental task during early and middle childhood.

Knowledge is the sets of facts, information, or understanding about oneself, others, and the world. Skills are the learned abilities to carry out a task with intended results or goals. Building academic knowledge and skills is a key developmental task during early and middle childhood, although it occurs through all stages of development.

Mindsets are beliefs and attitudes about oneself, the external world, and the interaction between the two. They are the default lenses that individuals use to process everyday experiences. Mindsets reflect a person's unconscious biases, natural tendencies, and past experiences. Though mindsets are malleable, they tend to persist until disrupted and replaced with a different belief or attitude.

Values are enduring, often culturally defined beliefs about what is good or bad, and what is important in life. Values include both the moral code of conduct one uses in daily activities (e.g., being kind, being truthful) and long-term *"outcomes"* of importance (e.g., getting an education, having a family, contributing to the community) that may not necessarily have a right or wrong valence. Values develop through a process of exploration and experimentation, where young people make sense of their experiences and refine what they believe in. Values are a key developmental task during middle adolescence and young adulthood.

Developmental Experiences and Relationships Support Success

Development is a natural, ongoing process that happens as young people observe the world, interact with others, and make meaning of their experiences. Regardless of the degree of adult guidance, children will still *"develop"* in some way, learning how to do things and coming to conclusions about themselves, their prospects, and their paths forward. They will develop some skills and preferences, and they will likely figure out what they need to know to get by. And yet, the developmental benefit of children's experiences can be enhanced and directed by others to help youth best formulate and internalize the developmental *"lessons"* from these experiences.[4] However, the nature and number of children's opportunities for development vary significantly by race and socioeconomic class.

The foundational components and key factors of young adult success are mutually reinforcing, helping young people to both learn from and proactively shape their worlds. The core question for practice is how these foundational components and key factors can be intentionally developed. How do children learn knowledge, skills, values, mindsets, and the complex processes of self-regulation, as well as develop competencies essential to success in the 21st century? The essential social context for this process is what we term **developmental experiences.** Developmental experiences are most supportive of youth's needs when they occur within what the Search Institute calls **developmental**

4 Vygotsky (1978).

relationships.[5] Development is nurtured in the context of strong, supportive, and sustained developmental relationships with adults and peers. Developmental experiences offer opportunities for young people to engage in various forms of *action* and *reflection*. It is through ongoing cycles of age-appropriate action and reflection experiences that young people build the four foundational components (self-regulation; knowledge and skills; mindsets; and values), and develop agency, an integrated identity, and competencies.

Developmental Experiences

Developmental experiences are opportunities for action and reflection that help young people build self-regulation, knowledge and skills, mindsets, and values, and develop agency, an integrated identity, and competencies. These experiences are *"maximized"* in the context of social interactions with others. Experience must be assigned meaning and be integrated into one's emerging sense of identity if it is to have lasting or transferrable benefit. Mediating young people's thinking about their experience is one important way that adults aid in learning and development.

When young people have the opportunity to make contributions that are valued by others, they gain self-confidence and come to see themselves as capable and able to effect change in their own lives and in the larger world. What matters most for development is not the intentions of adults, but their actual enactment of practices in relation to young people, how young people experience those practices, and the meaning young people make of those experiences. This has training and professional development implications for teachers, parents, childcare providers, and youth workers.

Developmental Relationships

Critical to the process of making meaning out of developmental experiences are strong, supportive, and sustained relationships with caring adults who can encourage young people to reflect on their experiences and help them to interpret those experiences in ways that expand their sense of themselves and their horizons. The iterative and fundamentally relational processes of experiencing, interacting, and reflecting represent a critical engine for children's development and as such are the core of the conceptual model linking experiences and relationships with outcomes.

Strong, supported, and sustained relationships with caring adults provide an important space for youth to experiment, try out roles and behaviors, and receive feedback that helps to build an integrated identity. However, in order to provide the best experiences for youth, it is imperative to understand where youth are *developmentally* throughout their young lives. This understanding allows for more appropriate interactions between adults and youth. A contextual understanding of children's development offers guidance on how to design direct experiences in ways that provide the right kinds of support and challenges to growth at various stages of early life. Each component develops at different rates over the life course. So when is the most crucial time to be focusing on supporting the maturation of each of our four components? Do they all hold equal weight at different stages of development?

Developmental Progression toward Young Adulthood

Development is multifaceted (social, emotional, attitudinal, behavioral, cognitive, physical) and each aspect of development is inextricably connected to the others. This report takes a developmental perspective because, in order to design and deliver the most effective experiences for youth, it is imperative to understand where youth are developmentally throughout their young lives. This understanding makes it possible for adults to match more appropriate experiences and interactions to the developmental needs of young people.

The practices of adults are more effective when they are intentional, are focused on the foundational components and key factors that support the ability to transition successfully into young adulthood, and are based on an understanding of where youth are developmentally. The development of the key factors of young adult success (competencies, identity, and agency) and

5 Search Institute (2014).

the four foundational components that underlie them (self-regulation, knowledge and skills, mindsets, and values) occurs at different rates from early childhood through young adulthood. Consistent and supportive interactions with caregivers provide the greatest opportunity for cognitive stimulation, and in ways that can have long-lasting impacts on children's development. Whereas appropriate stimulation supports continuing development, a lack of stimulation can create barriers to later development, potentially requiring more intensive intervention later.

Different factors develop at different rates over the course of life. So when is the most crucial time to be focusing on supporting the maturation of each of the four components or three key factors? Do they all hold equal weight at different stages of development? Below, we highlight the most salient areas of growth during each stage of development, with an eye toward **(1)** which foundational components or key factors are most influenced by input, experiences, and interactions with others; and **(2)** which components or key factors need to be developed during the earlier stages to facilitate positive development at later stages. However, it is crucial that adults not exclude other areas of development when engaging with children and youth; nearly every aspect of the foundational components and key factors is forming, or is at least being influenced by the experiences youth encounter, at every stage of life.

In brief, the key developmental tasks during early stages of development are:

- Early childhood (ages 3 to 5): Self-regulation; interpersonal (social-emotional) knowledge and skills
- Middle childhood (ages 6 to 10): Self-regulation (self-awareness and self-control); learning-related skills and knowledge; interpersonal skills
- Early adolescence (ages 11 to 14): Group-based identity; emerging mindsets
- Middle adolescence (ages 15 to 18): Sense of values; individuated identity
- Young adulthood (ages 19 to 22): Integrated identity

What happens as adolescents transition into young adulthood is strongly shaped by the ways in which and degrees to which earlier developmental tasks were met. They draw upon the foundation laid in each preceding stage or the interventions that have successfully compensated for prior developmental lapses. To meet the development tasks as one embarks on young adulthood, a young person should be able to draw upon strong relationships with adults and peers; the foundational components of self-regulation, knowledge and skills, mindsets, and values; and the agency, an integrated identity, and competencies to take an active role in shaping their life course.

Implications for Practice, Policy, and Research

The vision behind the Foundations for Young Adult Success developmental framework is about building a society where all children grow up to reach their full potential, regardless of which side of the economic divide they were born. Currently, opportunities for rich and varied developmental experiences through K-12 schooling and informal education are largely determined by family resources; to address these inequities, it will not be enough to simply expand options by adding more well-run programs, providing a few more resources, or reforming a subset of schools. It will take a transformation of adult beliefs and practices within the existing institutions and structures that shape children's learning and development. It will mean building a collective sense of responsibility for expanding the possibilities for all young people, not just for our own children. It means integrating afterschool providers' lens of youth development with educators' knowledge of learning theory with families' deep understanding of the unique needs and circumstances of their children. By drawing from the knowledge, approaches, and experience of many different adults from many different settings, we can give the next generation of young people the opportunities they need to meet their full potential.

The Foundations for Young Adult Success developmental framework has clear implications for schools, youth organizations, and families; but without larger transformations in the policy landscape and larger societal and economic context, there are limits to what can be achieved. Many questions remain about how to more effectively support the development of young people and what policies and structural changes are needed; these form the basis for the research agenda needed to guide these transformations. Along with parents and families, the world we envision for the next generation of young people will require the joint efforts of educators and youth practitioners, policymakers, and researchers. Below we provide implications for teachers, youth practitioners, parents and families, policymakers, and researchers.

Implications for Educators, Youth Practitioners, and Parents and Families

1. A narrow focus on content knowledge in isolation from the other foundational components undermines learning and development. Learning and development are holistic processes dependent on interactions among all of the foundational components (self-regulation, knowledge and skills, mindsets, and values). There may be conceptual reasons for distinguishing between *"cognitive"* and *"noncognitive"* factors, but this distinction has no functional meaning. Cognition, emotion, affect, and behavior are reflexive, mutually reinforcing, and inextricably associated with one another as a part of development and learning. Adults will make little headway if they target only one particular component or subcomponent in isolation.

2. Taking a developmental lens is essential to ensuring that structures and practices meet the developmental needs of the young people being served. Although a lot is known about development, too often, there is a mismatch between the structures or practices in a youth setting and the developmental needs of the young people being served. Schools, youth programs, and even families are too often oriented to adult needs and goals (e.g., maintaining classroom discipline) instead of taking a youth-centered approach.

3. Ensuring all young people have access to a multitude of rich developmental experiences is imperative to their success. Growing up in marginalized communities adds to the complexity of developing into a young adult who is poised for success. While having agency equips young people to make choices and take action, their ability to successfully pursue a desired path also depends on social relationships, financial resources, and countless other external factors that are inequitably distributed. Further, the task of *"integrating"* one's identity is vastly more complicated for low-income youth and youth of color than it is for children who grow up within the social and behavioral norms of the dominant white, middle-class culture.[6] Responding to this reality requires a careful balance of pragmatism and aspiration. The Foundations for Young Adult Success developmental framework is designed to strike a balance between helping youth thrive in the world as it is, and develop the skills and dispositions they need to challenge a profoundly unjust status quo.[7]

Implications for Education and Youth Policy

1. The current policy emphasis on content knowledge and test-based accountability undermines practitioners' ability to provide developmental experiences. Content knowledge is an essential part of what young people need to learn for the future, whether in school, at home, or in afterschool programs, but it is far from the only thing that matters. Policies that put too great an emphasis on content knowledge and standardized tests create incentives for practitioners to see the teaching of content knowledge as the sole outcome of interest. As this report has shown, the other foundational components not only facilitate engagement and learning of content knowledge, but they also are important developmental outcomes in and of themselves. Policies that promote these other foundational components would help to create conditions that foster both the learning of academic content and the development of young people more holistically.

6 Deutsch (2008); Fedelina Chávez & Guido-DiBrito (1999); Phinney (1989); Phinney & Rosenthal (1992).

7 This report does not directly address how development of the key factors and foundational components may play out differently for different groups (e.g., by gender, sexual orientation, immigrant status, involvement in the juvenile justice system) and what specific barriers, assets, and needs each subgroup may have. This is a critical area of investigation that should be pursued.

2. Proceed carefully with incorporating *"noncognitive"* measures into accountability systems. The policy window for a more holistic approach to the development and learning of young people is opening; there is growing discontent over standardized testing. Recently, a movement to integrate alternative measures of student success into school accountability systems has gained some momentum, exemplified by the California *"CORE"* districts that have received No Child Left Behind waivers allowing them to include social-emotional factors and school climate measures in place of test scores as accountability metrics. This holistic approach to evaluating students is in alignment with the Foundations for Young Adult Success developmental framework; however, some caution is necessary when using these new measures for accountability purposes. Many important questions remain about measuring noncognitive or social-emotional factors and about their suitability for an accountability system that was developed around standardized tests.[8]

3. Policy needs to provide the *"safe space"* for schools and out-of-school programs to become learning organizations. The ambitious vision given in the Foundations for Young Adult Success developmental framework does not provide a clear roadmap of specific practices, strategies, or programs to implement. Moving from the current approach to schooling to a more holistic and developmentally aligned approach will require trial and error. Just as young people need opportunities to tinker and practice in order to learn, practitioners also need opportunities for tinkering and practicing, as well as making mistakes, as they learn new ways of teaching and working with young people. In an age when accountability is a dominant way of managing schools, and increasingly out-of-school programs as well, the space to make mistakes is very small. For real shifts to happen in practice, schools and out-of-school programs need to become learning organizations that provide opportunities for adults to learn, and policy needs to provide the *"safe space"* to do so.

Gaps in the Research

1. What practices and strategies promote the development of identity and agency? While researchers have learned a tremendous amount about development in the last several decades, many questions remain unanswered. In this report, we provided a developmental trajectory for the key factors for young adult success—agency, an integrated identity, and competencies. However, this relied on piecing together a number of existing theories; rarely if ever has the development of agency, for example, been studied longitudinally from early childhood through young adulthood. Theory has provided guidance on how an early sense of *"self"* underlies later identity formation, but this area is understudied in empirical research. While there is converging evidence that supports each of the developmental experiences we identify in this report, as well as the importance of developmental relationships, we do not know which specific combination of experiences would best promote the formation of an integrated identity and agency. We also still lack a strong understanding of how all of the foundational components outlined here link directly to the development of agency, an integrated identity, and competencies.

2. What can be done to intervene with young people after developmental windows close? The Foundations for Young Adult Success developmental framework includes four foundational components—self-regulation, knowledge and skills, mindsets, and values—which are all crucial factors in a person's development toward optimal capacity. What happens if youth do not grow each of these foundational components in the developmental period during which they are most malleable? What types of interventions should we invest in—and for whom and at what period in their lives—if children seem to be falling behind? And for the youngest children, how can we even be sure that a child is falling outside of *"normative"* development, given how very wide the range of development is during the early years?

8 See Duckworth & Yeager (2015) for a discussion of the uses and limitations of existing measures.

3. What is the interaction of experiences in different settings? This report also raises a number of questions about the experiences youth encounter in the various settings they inhabit on a daily basis. We know quite well that what youth experience in school often varies from their experiences with friends, at home, or even in other educational settings. What we do not know is the extent to which those experiences need to be coordinated and supportive of each other, even if they are not teaching the same skills. How much do practices at home support or inhibit what teachers, youth workers, and others aim to do with youth? How aligned do those practices need to be? And can effective practices in one setting ameliorate negative experiences in another setting?

4. How can the key factors and foundational components best be measured for different purposes? Measurement is a core part of evaluating needs and gauging progress in any field. With the growing interest in factors other than academic content knowledge and skills, the number of assessments created to measure these factors has also grown. As discussed in the policy implications section, a number of questions about these factors and the assessments complicate their immediate implementation into practice. Some key questions include: Is this factor best conceived as an individual characteristic that can be cultivated over time or as a situational response to particular settings, opportunities, or expectations? How can we disentangle young people's prior capacities from changes induced by setting factors such as adult practice, opportunities for developmental relationships and developmental experiences, or the culture and climate of the place? What is the developmental trajectory on these measures and what are thresholds for what young people need?

In short, the demand for measures of noncognitive or social-emotional factors has far outpaced the state of the field of measurement for these same constructs. In a case such as this, there is great potential for measurement instruments to be misused, to produce faulty data, to conflate statistical significance with meaningfulness, or to otherwise lead practitioners down a fruitless path. We strongly urge caution in the use of measurement tools until the science of measuring these important constructs catches up with the interest in and demand for them.

Conclusion

The Foundations for Young Adult Success developmental framework is a first step in guiding practitioners, policymakers, parents, and researchers in working together around a vision of building a society where all children grow up to reach their full potential regardless of differences in their backgrounds. Ensuring that young people grow into successful young adults requires investments in their learning and development from birth to young adulthood so that all of them have ongoing opportunities to truly reach their potential.

Making this vision a reality will require a collective responsibility for all young people. It means asking practitioners to question their own beliefs about what is possible and rethink how they work with young people on a day-to-day basis. It means asking policymakers to focus on a bigger picture and broader set of outcomes and to consider policies that would support the efforts of practitioners in developing young people. It means asking researchers to provide accessible, meaningful, and actionable answers to core questions of policy and practice. It means asking families to understand the needs of their children and work with the institutions they cross everyday so that these needs are met. It means asking for change within existing institutions and structures while also asking what new institutions and structures might better serve our vision. Addressing the inequities of opportunities facing young adults will require more than equipping young people with the capacity to navigate the world as it exists now, it will mean that they are also able to envision and create a better world for future generations.

INTRODUCTION

Defining Success in Young Adulthood

Every society in every age needs to grapple with the question of what outcomes it hopes to produce in raising its young. This seems particularly critical for adults who devote their lives to improving children's education and development. What exactly do we hope our children will be able to accomplish as adults? What vision guides our work? How do we make that vision a reality for all children?

As a nation we make enormous investments in our youth. But for many young people, inequities in the distribution of resources and social and economic barriers mean that they will not reach their full potential. How do we better harness what is known in the research, practice, and policy arenas to ensure that all youth have what they need to successfully meet the complex challenges of young adulthood and become thriving, contributing members of their communities?

To address these questions, this report aims to build a common understanding of young people's developmental needs from early childhood through young adulthood. Preparing *all* youth for meaningful, productive futures requires coordinated efforts and intentional practices by adults across the many settings youth inhabit on a daily basis—whether in school, at home, or in organized community programs.[9] Building off of previous frameworks and literature reviews,[10] this report provides a new synthesis of knowledge gathered through a review of the literature and interviews of experts from youth development, psychology, sociology, pediatrics, economics, education, and the cognitive sciences to generate the Foundations for Young Adult Success developmental framework (**see Figure 1**), which depicts what youth need to be prepared for adulthood. It utilizes ideas from well-established theorists such as John Dewey and Erik Erikson to cutting-edge findings from neuroscience about how people learn. This report incorporates a wide array of evidence to highlight the types of experiences adults should provide for youth to help them in developing to their full potential.

In this report we focus on the key role that developmental experiences and developmental relationships play in supporting a child's long-term success, while keeping in mind variations in children's individual development over time. Young people's needs and capabilities change as they grow up, and attending to their ongoing development is an essential part of supporting youth. In bringing all of these pieces together, this report recognizes that young people inhabit a multitude of settings on a daily basis where they develop, grow, and learn, and that broader societal contexts, systems, and institutions also shape youth development—often creating big disparities in opportunities and outcomes. Our focus here is on the experience of children growing up in the United States in the early 21st century.[11] We

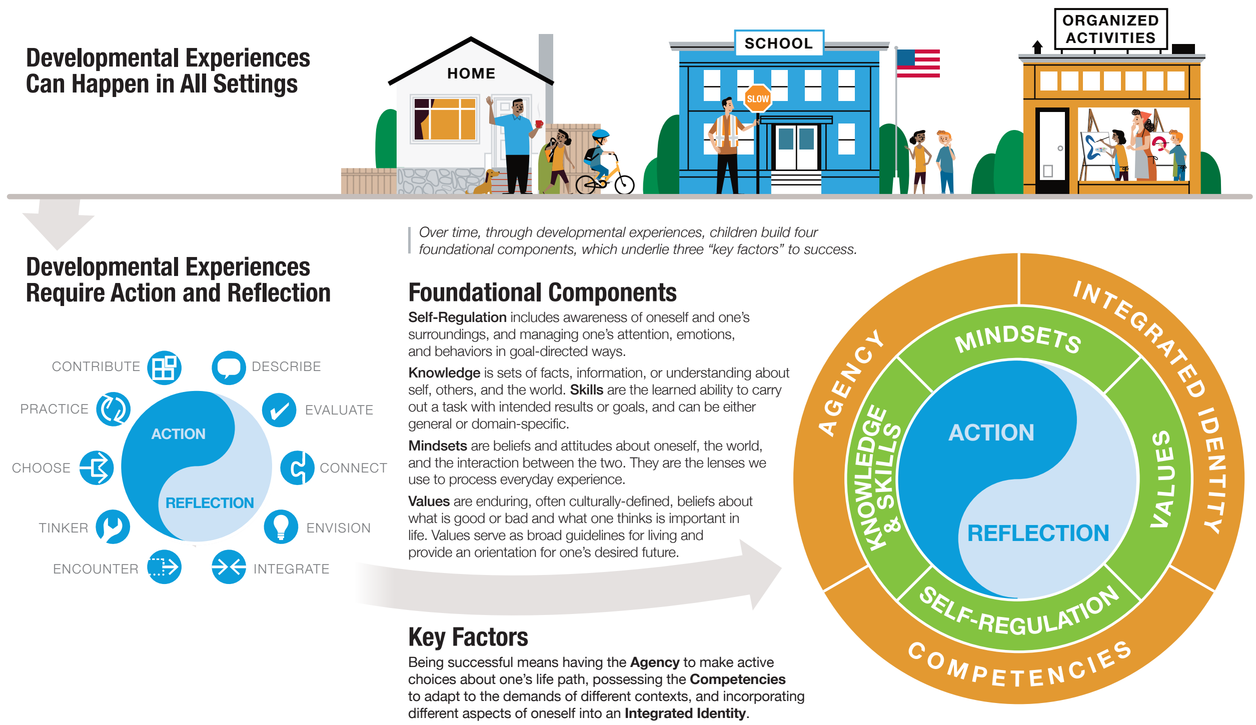
9 Hill, Campbell, & Harvey (2000); Irby, Pittman, & Tolman (2003).

10 For example, Farrington et al. (2012); National Research Council and Institute of Medicine (2002); Pellegrino & Hinton (2012).

11 While some aspects of child and adolescent development may be common across different countries, cultures, or time periods, we are not making claims that the findings or framework apply outside of the experience of young people in the United States in the early 21st century.

FIGURE 1

UChicago CCSR Framework for What Youth Need to Make a Successful Transition to Adulthood



hope that a common understanding of the needs and strengths of young people will encourage coordinated efforts and intentional practices by adults across settings, enabling a more cohesive system of supports for healthy development, better preparing young people from all walks of life for productive futures.

Defining "Success" in Young Adulthood

With rising income inequality, the gap in the investments that families of differing income levels are able to make in their children has widened.[12] As a result, the experiences and opportunities young people have to grow and develop vary greatly by the circumstances they are born into. Most policy efforts attempt to address socioeconomic gaps in outcomes by focusing on educational attainment as the central investment in preparing youth for adulthood. This approach has yielded some gains; national high school completion rates have risen to 80 percent, but there continue to be gaps by race/ethnicity and income. Eighty-six percent of white students complete high school compared to 73 percent and 69 percent, for Latinos and African Americans, respectively, and 72 percent for economically disadvantaged students.[13] Furthermore, having a high school diploma does not ensure employment, and the economic prospects are dim for those without a post-secondary degree or training. Disparities in higher education, combined with the effects of economic inequality, disadvantaged neighborhoods, unstable labor markets, and troubled K-12 schools, mean that a large percentage of youth—particularly those in low-income and racial/ethnic minority communities—face a future with starkly diminished economic opportunities.[14]

Given the harsh economic prospects facing youth with limited education, school reformers and policymakers have argued that it is not enough for American students to earn a high school diploma; they must be prepared to continue their education to and through college.[15] College completion has become the marker not just for individual success, but for the country as a whole. In the context of waning American advantage in a competitive global marketplace, the education policy narrative is

12 Chetty et al. (2014a), Chetty et al. (2014b); Reardon (2011).
13 Stetser & Stillwell (2014).
14 Bureau of Labor Statistics (2013); Duncan & Murnane (2011).
15 Achieve, Inc. (2012); Education Trust (2012).

often framed in terms of developing workers for 21st century jobs. In President Obama's words, *"America cannot lead in the 21st century unless we have the best educated, most competitive workforce in the world."* [16]

Building an educated workforce is one of the core goals of our investments in young people, but it is far from the only goal. Our investments shape the contributions future adults can make to their families and communities, their ability to engage in civic life, and how they view their role in society. Particularly when we move from the perspective of the policymaker to that of a parent, we would define success for our children beyond just college and career. We want our children to be happy, healthy, and confident in themselves, and to have whatever preparation they need to become caring adults with meaningful work, family and friends who love them, and a strong connection to the community. This broader developmental perspective is often shared by teachers, counselors, afterschool providers, coaches, ministers, scout leaders, arts educators, and other youth workers. We interviewed many of these practice experts as part of this report (**see box entitled *Project Overview and Methodology* on p.17**), and found that people in these professions generally value the unique gifts that youth bring to the world and want to help children and teenagers realize their own potential across multiple spheres. This belief was articulated by many of the experts we talked with as we began this project:

> Our ultimate goal for the students we serve is simple. By age 25, we expect [them] to be capable of making real choices to pursue the life and career they want to lead. In other words, the end goal is agency. It's what I—as a parent—want for my daughter. We want the same exact thing for the students we work with today. We don't care if our alumni choose to be doctors, or teachers, or politicians, but we do intend to ensure they have the capacity to do what they independently want to do. —Jeff Nelson, CEO, OneGoal[17]

Educators and youth service providers recognize that getting an education and a job are critically important outcomes; however, they generally have a much broader conception of the goals of their work—and what the measures of success ought to be. Regardless of the specific mission of the organization in which they work, these adults often articulated their larger role as helping young people develop an awareness of themselves and of the wide range of options before them, competencies to pursue those options, and the ability to make good future choices for their lives as engaged citizens in the world. This larger focus is inseparable from goals related to college and career. Thus, young adult success potentially encompasses different meanings for different people and background, culture, values, and geography shape an individual's definition of a successful life.

Going to college or other post-secondary training, particularly for students with no other access to well-paying work, has a core role in young adult success for many people, but self-advancement is only part of the story of young adult success. *"Success"* goes beyond fulfilling individual goals and extends to having the agency and competencies to influence the world. We need to develop facile thinkers, inventors, and problem-solvers with not only deep content knowledge, but also the creativity and flexibility to apply their knowledge to novel situations.[18] We need to prepare young people to address global challenges and alleviate human suffering.[19] So too do we want to develop thoughtful and informed citizens who can continue to pursue the ideals of democracy that have led our country for almost 250 years. From this perspective, preparing adolescents for adulthood means cultivating young people's critical thinking skills, building their knowledge of democratic institutions and processes, and nurturing in them a sense of service to their communities and engagement in the political process.[20] The conception of success we use in this report thus has both an individual and a societal element. It is not simply about meeting one's own goals; success is also about contributing to a larger good, having a meaningful place within a community, and working toward a positive change in the world.

What Leads to Adult Success?

A Set of Key Factors and Foundational Components is Necessary for Youth to be Poised for a Successful Transition into Adulthood

To fulfill this broader definition of success, the question is not only what courses students should take in school, what test scores they need, or what facts or formulas they ought to know, but also what kinds of experiences young people need to prepare them to meet both inward-looking goals for creating a meaningful life and more outward-facing goals such as getting a good job or contributing to their communities.

In this report, we define a person who is ready to make a successful transition into young adulthood as having three key factors: the **agency** to take an active role in shaping one's path, the ability to incorporate different aspects of oneself into an **integrated identity**, and the **competencies** needed to effectively navigate a range of social contexts. Having agency means having the ability to make choices and take an active role in managing one's life path, rather than being solely the product of one's circumstances. This definition of agency acknowledges that external factors form very real constraints, and also that people have the will and the power to influence external factors and can make choices about how to respond to constraints. Having an integrated identity means having a core sense of who one is, including a sense of continuity with one's past and future possibilities. Competencies are the abilities that enable people to effectively perform roles, complete complex tasks, or achieve specific objectives to achieve success. Young adults require competencies in order to adapt to the demands of different settings and be productive and effective within them.

Developing the three key factors of agency, an integrated identity, and competencies in multiple contexts is likely to be a lifelong endeavor, but their foundations lie in childhood and adolescence. Adolescence is the last stage of major developmental growth and is often the time of the last interaction with the education system; as young people enter young adulthood they begin to navigate the larger world and meet milestones such as entering the workforce, getting married, having children, or moving to a new community. Thus the development of these three key factors is the central task of raising and educating young people to prepare them for the life changes that can begin in young adulthood.

What are the components that underlie the development of agency, integrated identity, and competencies? Through a review of the literature and interviews with experts, we have identified four foundational components that are precursors to the key factors of young adult success. We have included both cognitive and noncognitive factors in the foundational components. James Heckman's initial conceptualization of the role of noncognitive factors in adult outcomes greatly furthered our understanding of what contributes to young adult success.[21] However, emphasizing a separation between cognitive and noncognitive factors does little to illuminate *how* to effectively prepare young people for future success; cognitive and noncognitive factors interact with each other to contribute to learning and growth.

Many frameworks of competencies and cognitive and noncognitive factors have been put forth in recent years. The foundational components presented here provide broad categories that organize and underlie the elements of these existing frameworks. Thus, the Foundations for Young Adult Success developmental framework is designed to help translate these different elements into an action plan for development, rather than to supplant other frameworks.

The four foundational components are: **self-regulation, knowledge and skills, mindsets, and values.** Self-regulation includes awareness of oneself and one's surroundings, and the management of one's attention, emotions, and behaviors in goal-directed ways. Knowledge comprises sets of facts, information, or understandings about the self, others, and the world. Skills are the learned ability to carry out a task with intended results or goals, and can be either general or domain-specific. Mindsets are beliefs and attitudes about oneself and the external world; they are the default lenses we use to process everyday experience. Values are lasting

21 Heckman & Rubinstein (2001).

ideas or principles, often culturally defined, about what is good or bad and what one considers important in life. Values serve as broad guidelines for living and provide an orientation for one's desired future.

Each of the foundational components plays an important role in the development and enactment of an integrated identity, agency, and competencies.

Context Plays a Crucial Role in Providing Equal Opportunities to All Youth

The inspiring picture of young people as self-actualized masters of destiny is complicated by persuasive research on the role of context in shaping youth outcomes, specifically, structural forces that govern socioeconomic life in the United States (e.g., segregation, discrimination, joblessness).[22] From this perspective, a young person is fundamentally the product of his experiences and social interactions; he is subject to cultural norms, within and across a range of contexts, from the immediate setting to larger institutions, all of which collectively shape the developing individual and the options before him.[23] These larger contextual factors of society, the economy, and institutions (such as schools) play a central role in the inequitable opportunities afforded to young people, as well as in their ability to see opportunities as viable options and to take advantage of them. While having agency equips young adults to make choices and take action, the ability to pursue a desired path also depends on social relationships, financial resources, and countless other external factors that are inequitably distributed. Thus, youth growing up in marginalized communities have grossly different opportunities to build skills and competence, and their options for the future may be severely constrained. Further, the task of *"integrating"* one's identity is vastly more complicated for low-income youth and youth of color as they interact with the cultural and behavioral norms of a dominant white, middle-class culture than it is for children who grow up within that culture.[24] The obstacles to following a successful path to adulthood and the opportunities available to young adults vary greatly by the contexts they inhabit; these limitations are a critical part of the story of education and development.

Thus, there is a fundamental tension between preparing children to live in the world that is—which is often cast as a tacit acceptance of a profoundly unjust status quo—and equipping them to face, navigate, and challenge the inequitable distributions of resources and access that so often limit their opportunities and constrain their potential. While adults need to be pragmatic in their work with kids and acknowledge the inequities in opportunities afforded youth, they should also be aspirational. How can we design and enact practices with schools, youth organizations, families, and communities that not only prepare young people for the *"real world,"* but that also inspire and equip them to create a better world? How can we ensure that *all* youth develop a repertoire of competencies that would enable them to confront injustice and work toward a more inclusive society? At the heart of this project has been the vision of young adults with an integrated identity, with the agency to actively shape their life path, and the competencies that allow them to pursue both individual and larger social goals, and who have developed deep relationships with friends, family, and the community. While teachers, parents, and other youth workers must recognize and prepare young people for the real constraints they will face in society, we should not be content to merely prepare youth to fill a slot in the world that is.

It is within these tensions that we explore a rich theoretical tradition and broad multidisciplinary evidence from research and practice about the underlying constructs that support a successful transition into young adulthood. We approach this by considering how well the key factors for young adult success would equip young people from under-resourced communities to navigate complex institutional environments and confront structural inequalities.

To that end, Chapter 1 provides an extensive overview of the key factors for young adult success and the foundational components underlying them. The

22 Bowles & Gintis (1976, 2002); Duncan & Murnane (2011); Lewis (2011); Massey & Denton (1993); Putnam (2015); Wilson (1990, 2012).

23 Neal & Neal (2013); Bronfenbrenner (1977, 1979, 1986).

24 Deutsch (2008); Fedelina Chávez & Guido-DiBrito (1999); Phinney (1989); Phinney & Rosenthal (1992).

chapter starts with an in-depth discussion of *agency, integrated identity,* and *competencies*, and addresses *why* these factors are crucial to creating and maintaining a productive and satisfying adult life; these three factors serve as our *"north star"* throughout the report. We then describe and review each of foundational component that underlies these key factors, making a case for why each component is considered foundational in the development of agency and integrated identity as well as in supporting competency development. In Chapter 2, we focus on *how* these foundational components can be nurtured in childhood and adolescence, with an emphasis on *developmental experiences* set within the context of *developmental relationships*. Chapter 3 addresses the question of *when* the foundational components and key factors develop, as we look at key developmental tasks from early childhood to young adulthood (ages 3 to 22). In the final chapter, we summarize the implications of this framework for practice, policy, and research. Throughout the remainder of this report, we open each chapter with the key points of the chapter.

Project Overview and Methodology

In November 2013, the University of Chicago Consortium on Chicago School Research (UChicago CCSR) was awarded a competitive grant from the Wallace Foundation to build a conceptual framework that articulates what is needed to guide children and youth to become successful young adults. The charge was to analyze and synthesize the best of research evidence, theory, expert opinion, and practice wisdom in the service of identifying the broad range of factors critical for young adult success. We were to consolidate current understanding of how these factors can be fostered in schools, communities, and homes from early childhood to young adulthood. In addition to a thorough grounding in published research, our work involved talking to experts in research and practice across a range of fields and disciplines. We sought to find the points of agreement across disparate perspectives, raise the points of contention, and leverage the collective wisdom of diverse lines of research, practice, and theory to best understand the full scope of factors essential to young adult success.

The Three Phases of the Project

To achieve a cohesive and comprehensive framework, the project team undertook three phases of information-gathering, with each successive phase built upon the work of the previous one. Each phase was defined by a different goal and set of questions:

- **Phase I:** We focused on defining "success" and identifying the factors that are critical for success in young adulthood, particularly in college and at the beginning of a career. Questions included:

  1. What does a successful young adult look like?

  2. What characteristics, attitudes, skills, and behaviors help people succeed in typical young adult settings?

  3. What institutional, societal, and economic forces should we consider as we develop a framework for the critical factors needed to promote young adult success?

- **Phase II:** Building on the critical factors identified in Phase I, we sought to understand how each factor developed over the course of early life, from the preschool years through young adulthood. We focused on the identification of leverage points for best supporting children's holistic development, keeping in mind that child and youth development occurs in multiple settings. Questions included:

  1. How do the critical factors identified in Phase I develop from early childhood through young adulthood?

  2. What are the most salient areas of development during each stage of early life based on research and practice knowledge of *"normative"* development?

  3. What do we know about the roles that youth's environments and important others (including caregivers and other adults) play in supporting successful development during each stage of development?

- **Phase III:** We aimed to consolidate current understanding of how critical factors of young adult success can be fostered in a holistic, coordinated way across schools, community organizations, and homes, from early childhood to young adulthood. We focused on a ground-level, practitioner perspective in considering how to best organize adult efforts to promote the development of children and youth. Our work during this phase focused on the following key questions:

  1. What are the key setting components and experiences youth need to support the development of each factor in each stage of life?

  2. What should adults consider as they are designing effective practice with developing youth?

  3. How do intentional practices interact with youth experiences to lead to positive development and learning?

Methods

During each phase, the team used several modes of information-gathering. First, we analyzed and synthesized the best theory and empirical evidence, focusing on highly-cited research and recommended publications. As part of this work, we reviewed over 20 existing models and frameworks that focus on *"noncognitive"* factors, inter- and intra-personal competencies, and social-emotional skills in adolescence and young adulthood. Second, we interviewed and held meetings with research and practice experts with specific knowledge in areas related to each phase of our work (**see Appendix** for a list of names). These experts included researchers from different fields and disciplines (e.g., psychology, business, education, sociology, economics) as well as policymakers and practitioners from a range of organizations (e.g., programs and providers focusing on college access and support, workforce development, K-12 education, after-school and extended learning time, community connections with schools, early childhood, and family support services). These experts were identified through our literature review, as well as through our professional networks in academia and the practice realm. We also interviewed experts who were recommended to us by our original interviewees. Third, we continuously synthesized research and interview data in weekly group meetings to determine the points of agreement and points of contention across disparate perspectives. Fourth, we held a number of meetings throughout the project, including two larger convenings of research and practice experts to evaluate and offer feedback to advance our work. We incorporated this feedback to improve the framework and our synthesis. Fifth, we interviewed nine diverse youth and the adults who work with them in schools, community programs, and agencies in Chicago. We used these interviews to highlight developmental experiences and surface real-life challenges young people are facing as they navigate across contexts. We also wrote biographical profiles from these interviews to illustrate how youth create narratives about their experiences. The youth profiles further informed our model.

Each phase of work culminated in internal working documents to help us consolidate our progress and thinking. The white paper that resulted from Phase I, *A Framework for Developing Young Adult Success in the 21st Century: Defining Young Adult Success*, is available at **http://ccsr.uchicago.edu/sites/default/files/publications/Wallace%20Framework%20White%20Paper.pdf**

The current report is a culmination of the three phases of work outlined above, with an emphasis on our learnings from Phases I and II. Findings from Phase III will be more fully explored in future work. We present here our conceptualization of *"success"* in young adulthood, our resultant conceptual framework of foundational components and key factors for success in young adulthood, implications for practice in a range of settings in which children and youth spend their time, gaps in the existing knowledge and literature, and future directions for research. We designed this final report as an actionable document that can organize and guide the strategic direction and inform the daily work of practitioners and policymakers.

CHAPTER 1

What are the Ingredients of "Success"?

Key Points

- Success in young adulthood depends on more than *"college and career"* success; a definition of success should include the multi-faceted ways individuals may seek meaning in life and contribute to the world.
- We organize the definition of young adult success around three **key factors**; these are *agency, integrated identity,* and *competencies*—and four **foundational components** that underlie them: *self-regulation, knowledge and skills, mindsets,* and *values.*
- The role of the foundational components is threefold: when young people have experiences and make meaning of those experiences, each component interacts to promote the development of the other foundational components and the three key factors; they enable healthy and productive functioning at every stage of life; and they directly contribute to young adult success.
- The four foundational components and three key factors are closely interrelated in supporting how young people act in the world and make meaning of an experience. Understanding this interrelationship can help adults provide integrative opportunities for youth to act and reflect in ways that make the most of developmental experiences, rather than targeting only one particular component or factor in isolation.
- Noncognitive and cognitive factors should not be considered independently; they interact with each other to promote and mutually reinforce development and learning. Both are a core part of how students learn.
- The experiences that youth encounter are always embedded within larger societal, economic, and institutional contexts that influence how youth perceive the opportunities and obstacles posed by their environments.

What are the ingredients necessary for young adults to succeed? Building a common set of objectives and having a clear understanding of how to foster development is a critical step in eliminating the silos that adults working with young people often operate within. This project proposes a framework of foundational components and key factors for success in young adulthood. Drawing from a review of the literature, both empirical and theoretical, and the knowledge of a wide range of expert contributors, this report organizes the definition of young adult success around three **key factors**; these are *agency, integrated identity,* and *competencies*. These factors capture how a young adult poised for success interacts with the world (agency), the internal compass that a young adult uses to make decisions consistent with her values, beliefs, and goals (integrated identity), and how she is able to be effective in different tasks (competencies). The three key factors allow a young adult to manage and adapt to changing demands and successfully navigate various settings with different cultures and expectations. While recognizing the economic imperative of going to college, particularly for youth with no other access to well-paying work, we define success in young adulthood beyond the more narrow notion of *"college and career"* success to acknowledge and embrace the multi-faceted ways individuals may seek meaning in life and contribute to the world. Adolescent psychiatrists Hazen, Schlozman, and Beresin have described the successful culmination of adolescence as resulting in *"a biologically mature individual equipped with a sense of an independent self, the capacity to form close peer and group relationships, and the cognitive and psychological resources to face the challenges of adult life."* [25]

25 Hazen, Scholzman, & Beresin (2008, p. 167).

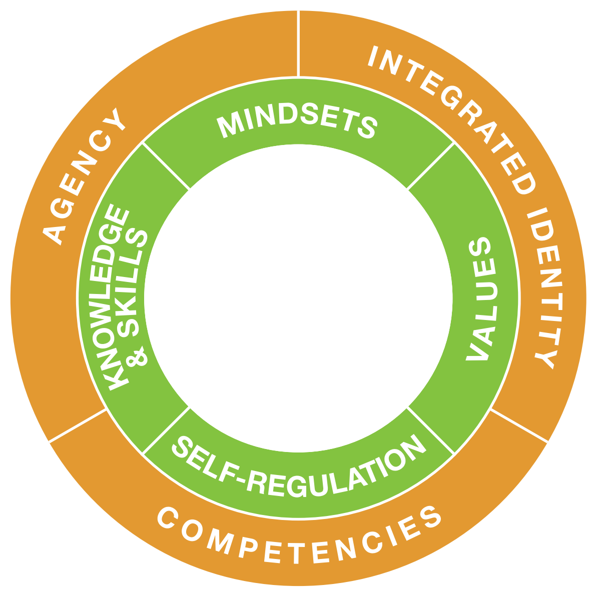
At the core of this project is a vision of young adults who, regardless of where they grow up, meet the challenges and joys of life with agency, possess an integrated identity that gives them a core sense of who they are, and have the competencies that allow them to pursue both individual and larger social goals. These three key factors allow a young adult to accomplish a wide range of goals, including achieving success in school or work, maintaining a physically and psychologically healthy lifestyle, and having deep relationships with friends, family, and other community members. In this chapter, we focus on the transition from adolescence into young adulthood. We explore both these key factors of young adult success and the foundational components that underlie them, which are the outcomes of interest in our Foundations for Young Adult Success developmental framework (**see Figure 2**).

As this chapter will articulate, a successful transition into young adulthood will be supported by the three key factors outlined above. We want to clarify, however, that a person can have agency, integrated identity, and competencies in one setting without being able to automatically transfer those to a new setting. A young woman might enter young adulthood with a strong identity and a set of competencies that allow her to act with agency in one role or setting (for example, as a songwriter who performs at regular open-mics), but lack the identity and competencies to act with agency in another role or setting (for example, as a college student). High school students might likewise exhibit persistence and strong academic performance in a high school setting and then essentially fall apart when they go off to college. Indeed, educators in successful urban high schools have often expressed frustration at the difficulty of getting students' confidence and good habits developed in high school to transfer to post-secondary settings. Ultimately, then, the task at hand for adults who work with youth is to help young people not only build their agency, identity, and competencies in specific domains, but also help them to leverage these strengths from one arena and transfer them to tackle challenges in new contexts.

Underlying the capacity for the three key factors are four **foundational components**—a set of both cognitive and noncognitive factors. The four foundational components are *self-regulation, knowledge and skills, mindsets,* and *values*. The role of each of these foundational components is threefold. First, when young people have experiences and make meaning of those experiences, each component interacts to promote the development of the other foundational components and the three key factors. Second, they enable healthy and productive functioning at every stage of life. Finally, they directly contribute to young adult success. The foundational components develop as they are used. Over time, self-regulation, knowledge and skills, mindsets, and values can become internalized as lenses for seeing the world or as automatic responses (or habits) that become a core part of one's identity; this automatic behavior supports the transfer of these foundational components across contexts. We elaborate on the four foundational components later in this chapter.

FIGURE 2

Key Factors and Foundational Components for Young Adult Success



Key Factors

Agency

At the heart of successful young adulthood is the concept of agency. **Agency** means taking an active and intentional role in making choices and shaping and managing the course of one's life rather than being at the mercy of external forces. Agency is reliant on having an internal locus of control—the belief that you have control over what happens to you in life.[26] Having agency also requires having the competencies to be able to manage one's environment, a sense of what one values, the ability to manage one's emotions and behavior, as well as a belief that conscious self-directed action is possible. Philosopher Isaiah Berlin further elucidated this concept:

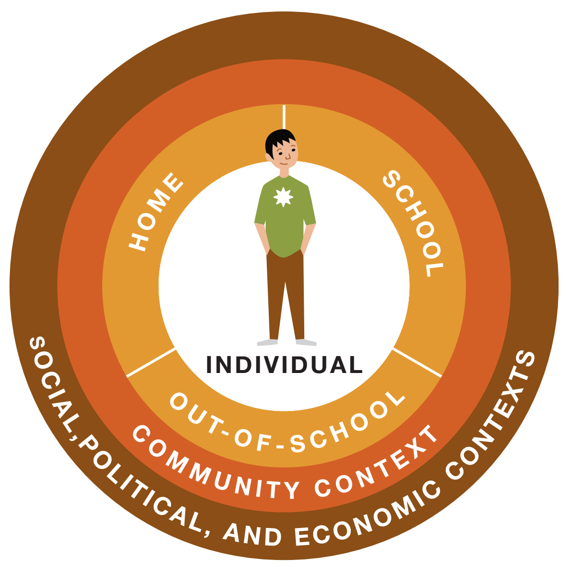
> [To be a rational agent is] to be a subject, not an object; to be moved by reasons, by conscious purposes, which are my own, not by causes which affect me, as it were, from outside. I wish to be somebody, not nobody; a doer—deciding, not being decided for, self-directed and not acted upon by external nature or by other men as if I were a thing, or an animal, or a slave incapable of playing a human role, that is, of conceiving goals and policies of my own and realizing them.... I wish, above all, to be conscious of myself as a thinking, willing, active being, bearing responsibility for my choices and able to explain them by reference to my own ideas and purposes.[27]

When young people, particularly those from marginalized communities, engage with the world, their capacity to act with agency is constrained and shaped by a number of factors, from the opportunities that are presented to them, to how others react to them, to their own competencies. Agency allows one to confront the challenges and barriers that are encountered in life, not as fixed limits to what is possible, but as obstacles that can be overcome.

The individual expression of agency is shaped by cultural background and personal experiences.[28] In particular, the strong valuing of independence in the United States emphasizes the importance of personal agency and self-determination. This is not necessarily the case in non-Western cultures.[29] Beyond varying cultural interpretations of agency, a wide range of cultural traditions, values, and expectations can play a constraining or enabling role to the development of agency. Young people's experiences are always embedded within larger societal, economic, and institutional contexts (**see Figure 3**), which influence how they perceive the opportunities and obstacles posed by their environment.[30] Many young people in the United States face significant, very real challenges to developing agency because of a range of factors stemming from these broader structures and contexts; for example, exposure to violence and high levels of stress, or limited access to experiences and opportunities that allow children and adolescents to explore, learn, and try on different roles and identities.[31] This means that for adults working with young people—many of whom are facing obstacles to developing agency—being intentional about the development of agency takes on greater significance in helping youth reach their maximum potential as young adults.

FIGURE 3

Development Occurs Within and Is Influenced by Various Settings and Contexts



26 Rotter (1990).
27 Berlin (1969, p. 131) cited in Moshman (2005, p. 92).
28 Heron (2008); Markus & Kitayama (1991).
29 Hernandez & Iyengar (2001). Agency can have a different focus in different cultures. In cultures that stress interdependence, people tend to define agency in terms of their relationships and perceive their behavior as being contingent on others.
30 Bronfenbrenner (1979); Markus & Kitayama (1991).
31 Emirbayer & Mische (1998).

Psychologist Albert Bandura expands our understanding of agency by defining four things it is comprised of: (1) intentionality that includes having an action plan and strategies for realizing it; (2) forethought to set goals and anticipate likely outcomes in order to guide and motivate actions; (3) self-reactiveness so that one has the self-regulation, skills, and knowledge to carry out a course of action; and (4) self-reflectiveness so that individuals are able to reflect on their personal efficacy, examine the effectiveness and meaning of a course of action, and make adjustments if necessary.[32] Agency thus depends on a range of self-regulatory processes (awareness of the self, metacognition, self-control) as well as knowledge and skills across multiple domains, mindsets such as self-efficacy, and a set of values to guide decision-making. Each of these is included as foundational components in the Foundations for Young Adult Success developmental framework, described in more detail later in this chapter. Agency also depends on having a set of competencies that allow one to navigate and make informed choices in a complex world, a concept we explore below. Finally, agency is aided by having a strong sense of identity across time and multiple social identities. We turn to this idea next.

Integrated Identity

The process of coming to know oneself starts early in life and continues throughout adulthood. Figuring out who one is and developing one's identity is a process of internally integrating various aspects of the self (e.g., beliefs, values, goals, roles, experiences) to create a stable and consistent sense of one's *"wholeness."* This integration process aims toward a sense of continuity with what one has experienced in the past and future possibilities for who one may grow to be.[33] The most active years for identity development fall during adolescence and the transition into young adulthood.[34] Erik Erikson, a developmental psychologist and psychoanalyst who developed one of the most widely applied theories of child and adolescent personality development, described identity formation in adolescence and commitment to an identity in young adulthood as central tasks of development. It is the process of an individual linking childhood with adulthood in a way that situates choice and agency within the individual.[35] Ultimately, a person with a strong identity is able to commit to all facets of the self. Identity, then, is *"not just an attempt to* describe *one's typical behavior; an identity is an account of the core beliefs and purposes that one construes as* explaining *that behavior."*[36]

There is much disagreement among identity theorists as to whether identity formation is a process of discovery, construction, or creation. That is, to what extent is there is a true, innate self to be discovered vs. identity being forged from external forces of environment, experience, and culture vs. the extent to which we actively create our own identities through conscious action and interpretation.[37] A reasonable read of the literature is that it is some of each, and we see this process unfolding through the stages of adolescence and young adulthood, when identity is both a matter of determining who one is and a matter of deciding who one will be.

Much about the formation of identity appears to have changed over the last several decades, as the available options for the person one will become have increased significantly. Historically, youth transitioned directly from adolescence into full adulthood as a function of how society was organized, reaching milestones such as entrance to the full-time workforce and entrance into marriage and starting a family by one's early 20s. As described by James Côté, a sociologist who studies identity formation, young people were expected to enter ready-made roles in adult society; the transition to adulthood was highly normatively structured by gender roles, religious beliefs, and socioeconomic status.[38] Career pathways were more defined and decisions about and the timing of marriage and childbearing were more

32 Bandura (2006).
33 McAdams and Adler (2010) refer to this as a narrative identity or authorship.
34 In this paper, we use the term *"young adulthood"* to refer to young people in the transitional *"post-secondary"* period, roughly ages 19 to 22—while acknowledging that, for many, adulthood is still emerging at this age.
35 Erikson (1950/1963, 1968).
36 Moshman (2005, p. 86).
37 Moshman (2005).
38 Côté (1996); Schwartz, Côté, & Arnett (2005).

constrained than they currently are. Thus, previously, the identity challenge for young adults was to find ways to adapt to fixed roles. However, changes in Western industrialized societies have delayed young people's entrance into many of the markers of adulthood that helped to define the self. Researchers studying this new phase of *"emerging adulthood"* (from the late teens into the 20s) have argued that the delay into adulthood has led to greater role ambiguity.[39] In the absence of clear adult roles and social guidelines, making choices about relationships, education, work, values, and commitments is now viewed as a set of individual decisions rather than expected progressions into pre-defined adult roles.[40] This ambiguity surrounding the transition to adulthood adds to the difficulty young people experience in developing a coherent and stable identity.

Adult identity has multiple antecedents across time and context. Children and youth develop many *"selves"* as they grow. They may take on different behaviors, linguistic styles, interests, styles of dress, and even sets of values and self-perceptions in different settings. This is a very normal and important part of growing up. Background characteristics such as race/ethnicity, sexual orientation, gender, and social class also are critical dimensions of identity formation, particularly for young people from marginalized communities.[41] Eventually, however, these different selves can become reconciled into a more coherent identity.

We refer to this process as developing an **integrated identity**—that is, having a sense of internal consistency of who one is across time, across place, and across multiple social realms. An integrated identity provides an internal framework for making sense of how one's choices and actions are related to one's past, one's current social identities, and one's desired future. An integrated identity provides a stable base from which a young person can act in the world. If adolescents *"do not form a coherent sense of self and values, they will lack a consistent sense of identity as they progress into adulthood,"*[42] making the task of navigating multiple contexts particularly complex. Identity development is a lifelong process, but the transition to adulthood is a critical juncture that positions young people for their future; being able to draw one's various strengths and experiences into a more integrated sense of self helps focus skills and efforts more effectively toward setting clear goals, pursuing opportunities, and achieving aims that one sets. As young people are entering into new environments and settings, an integrated identity helps to make this transition more successfully.

Addressing conflicts that may exist between various identities can be a critical struggle for youth throughout adolescence and young adulthood. Context plays a critical role through every stage of this story.[43] In some cases, the contexts in which youth live may vary from the contexts in which they strive to succeed.[44] While developing an integrated identity is a complex process for anyone, for young people growing up in marginalized communities, the task of reconciling different aspects of the self across multiple contexts may be particularly challenging. For example, a youth can have a well-developed identity and set of competencies to navigate difficult terrain with peers in the neighborhood (for example, acting tough or avoiding eye contact), but those strategies may be in direct conflict with expectations in the workplace. One youth profiled in this project, Jermaine, a 20-year-old senior at an alternative high school, has struggled to keep a job because of conflicts with supervisors (see box ***Youth Profile: Jermaine*** on p.24). Being a worker under someone else's rules did not fit with the identity he had developed on the streets. Through an experience at a local community center, he began to forge an alternative identity. He has been playing the drums for pay at local churches for years, but until recently this was not something he shared with peers. His mentor at this community center invited him to play at a spoken word poetry event, and he found himself thriving when interacting with kids his age who shared his artistic talents.

YOUTH PROFILE

Jermaine

Jermaine, 20, has been kicked out of three Chicago public high schools for fighting. The most recent time was a year ago when another youth came up behind him in the lunchroom.

"He balled up his face and got too close," Jermaine recalls. *"I felt threatened."* Jermaine hit him, explaining that if he hadn't, the other guy would have got him first. *"If you don't do it, then they will get you. That's how the streets go."*

Now a senior at an alternative school, he is trying to turn his life around. Seeing some of his friends and relatives head off to college made him want to go, too. So he began doing his homework, going to class, and raising his hand to ask for help when he needed it. Where his prior grades were Cs and Ds, in the fall semester of his senior year he earned a 4.0.

Unfortunately, he is undermining his school success by using strategies for handling conflict with authority figures similar to those he uses to maintain his safety and status on the streets.

For instance, when a teacher recently reprimanded him for talking in class, he cursed her out. *"I'm older now, so I don't take the disrespect,"* he explained. *"If you disrespect me, I'm going to disrespect you back."*

Jermaine, a tall, African American youth, can be disarmingly polite, even charming, when he chooses. But a mentor at the community center in the housing development where Jermaine lives observes, *"Like most teenagers that I run across, Jermaine looks at any form of authority initially as a threat to his manhood or to his perception of what being a man is. So a lot of time when he is in new situations, he rebels."*

That attitude toward authority has gotten him fired from two of the three jobs he's held so far. In one, a summer grounds-keeping job at his housing development, the crew was directed to climb ladders and clean gutters. Jermaine objected to the strenuous work in the hot weather, especially since he hadn't dressed for it that day. He seems to have interpreted the directions to perform the unwanted task as an attempt to dominate him. *"I was like, 'I'm not you-all slave.'"*

Jermaine has at least one aspect of his identity that he keeps separate from his street persona. Since the age of five, he's played the drums and now performs at local church services for pay. *"He's the type of guy [that] would never want any of the other guys from the neighborhood to know he goes to church,"* his mentor notes, *"let alone plays the drums at church."*

His mentor recently invited him to a spoken word poetry event organized by two community youth groups. *"Can I bring my drums? Can I play?"* Jermaine wanted to know. As his mentor explained, the experience of performing with his peers *"made it easier for him to say 'this is what I do.' He is coming into his own identity and being comfortable with it."*

Competencies

The third key factor for young adult success is competencies. **Competencies** are abilities that enable people to successfully perform roles, complete complex tasks, or achieve specific objectives. Young adults require sets of competencies in order to be productive and effective in different settings and adapt to various demands. The last decade has seen an abundance of literature, models, and frameworks (e.g., CASEL, Four Keys for College and Career Success, 4C's) identifying sets of core competencies that are crucial for adolescents transitioning into their young adult lives.[45] Since the start of the new millennium, scholars, youth advocates, and others have been calling attention to the skills demanded by the globalized economy in the 21st century, emphasizing that youth need a broader set of K-12 learning outcomes than content knowledge. Others have noted the need for schools and other youth-serving institutions and programs to develop social-emotional competencies[46] or creativity and innovation[47] as a complement to academic knowledge and skills. There is much evidence to support these calls. Interpersonal skills have been associated with positive academic and developmental outcomes, as seen in the literature on high school engagement[48] and on cooperative studying and student integration in college.[49] Collaboration and positive communication are also highly valued in the workplace, as employers consistently state that communication is one of the most valued traits in workers.[50] Other types of behaviors, such as help-seeking, taking initiative, and getting involved in activities, can also play crucial roles in supporting youth's attainment of their goals.[51]

Across the myriad frameworks identifying the competencies youth need for a successful transition into college or the workplace, there is a great deal of overlap conceptually (even if the terminology is not always consistent). And while some competencies vary across educational, professional, and personal arenas, others are similarly valued across settings.[52] Depending on the paths a young adult chooses to pursue, different competencies will have different saliency, though many such competencies (e.g., the ability to communicate, interact, and think critically) are likely to be necessary for most everyone.

What is the difference between competencies and skills? In the current report, we distinguish these in the following way: Skills refer to the discrete, learned ability to carry out a task with pre-determined results or goals. Competencies, on the other hand, are the abilities to adapt and enact skills in an applied way while drawing on foundational components (self-regulation, knowledge, mindsets, and values) to carry out a task. For example, under our definition, being able to write is a skill. However, being able to write a persuasive letter to the editor about a contentious issue is a competency—it draws on knowledge about the topic, an understanding of one's values and the message one wants to convey, an awareness of the audience, and a belief that one can persuade others. It requires organizing these various components in a particular combination and applying them to meet the demands of a specific task for a specific purpose, making it a competency rather than a skill.

While existing frameworks have value for identifying particular competencies necessary for various settings, they largely overlook the set of foundational components that these competencies rely upon. This is an important gap, as these underlying skills and beliefs need to be attended to and recognized for their critical role in youth development. To take one example, the Partnership for 21st Century Skills created an influential framework focused on the competencies needed to engage in a post-industrial knowledge economy, centering on the 4C's: Communication, Collaboration, Critical Thinking, and Creativity.[53] The term *"21st century skills"* has indeed become shorthand for what young people need in order to succeed in today's world and serves as new end goals in education and youth development. What the 4C's framework does not describe, however, is what underlies and enables these competencies.

The many available frameworks and models that focus on core competencies for college and career often skip over the basic foundational components introduced in this report—components that will be described in detail in the next section. This represents a major distinction between the Foundations for Young Adult Success developmental framework and other frameworks; our focus is on the basic ingredients other competencies depend upon. For example, collaboration—one of the 4C's—consists of working with others effectively and respectfully toward a common goal. Being able to interact with others in a productive manner requires social awareness to be able to read and interpret social cues, strategies to communicate appropriately, and the ability to self-regulate in order to collaborate despite possibly disagreeing with others' viewpoints. Collaboration requires both the flexibility to make compromises as well as the ability to share responsibility for tasks and recognize the value of others' contributions. In these respects, collaboration builds upon a set of skills around working with others, but also requires particular mindsets—such as openness—that allow for an acceptance of ideas that are not self-generated and a valuing of others' contributions. The 4C's heavily rely on knowledge, mindsets, and self-regulation for skills to be implemented appropriately and effectively—all of which are articulated as foundational components in our framework.

The remainder of this chapter expands upon these foundational components that underlie a range of competencies. The Foundations for Young Adult Success developmental framework can be used in conjunction with other existing frameworks to help practitioners better understand not only the higher-level competencies necessary for success, but also the foundational skills and beliefs that are critical to supporting growth and learning in children and youth over the first two decades of life.

Foundational Components

As described above, what lies at the core of the Foundations for Young Adult Success developmental framework is the task of helping youth develop agency, an integrated identity, and competencies that allow a young adult to navigate across multiple contexts in life. Acting with agency requires competencies to manage one's environment, as well as the mindset that this is possible. Building an integrated identity positions young adults for success and supports the utilization of their knowledge and skills toward their tangible goals that reflect their values. All three key factors rely on the strong development of four foundational components described here: self-regulation, knowledge and skills, mindsets, and values.

These foundational components were derived from an extensive review of literature and ongoing conversations with researchers and practitioners from a range of fields. The focus was on both cognitive and noncognitive factors; as pointed out in the earlier UChicago CCSR report, *Teaching Adolescents to Become Learners*,[54] the division between cognitive and noncognitive is extremely fluid, and each category of factors is dependent on the other.[55] For example, being able to collaborate with co-workers to plan an effective meeting is considered a *"noncognitive"* competency, but it relies on a range of factors from having the social skills to get along with others in the planning process and the knowledge of the culture of one's co-workers and workplace (*"cognitive"* capacities).

In addition, the foundational components were chosen because they are malleable. In other words, the foundational components in this framework can be changed by experiences and the efforts of and interactions with other people, in both positive and negative ways and then be internalized. This attention to malleability was

54 Farrington et al. (2012).

55 The Foundations for Young Adult Success developmental framework similarly aligns with UChicago CCSR's Noncognitive Framework for Academic Success (Farrington et al., 2012). The 2012 report focuses on foundational skills and beliefs that are critical to supporting growth and learning in the classroom setting. The new framework presented in this report shows how the noncognitive factors highlighted in 2012 fit into a broader set of factors and a broader definition of success. This broader Foundations for Young Adult Success developmental framework also provides more detailed guidance on how adults and contexts can support youth in achieving their goals.

intentional; ultimately, the goal of this work is to help practitioners, parents, program leaders, and other adults who work with children better understand how they can best support development. The process of being changed by experiences and interactions, and internalizing them is core to identity development. We excluded factors such as temperament that, while influential on children's experiences and identity development, are believed to be biologically based and relatively stable over time.[56]

By clearly defining the malleable foundational components that underlie agency, an integrated identity, and competencies, the current framework is intended to be used in conjunction with other work focused on social-emotional learning, deeper learning competencies, noncognitive factors, and 21st century skills. The foundational components are developed and expressed in multiple spheres—within the self, in relation to others, and in the broader world(s) one inhabits.[57] The definitions of each are provided in **Table 1** as a quick reference. We also describe how each foundational component supports the key factors for success, and present evidence of the links between each component and later outcomes in young adulthood. Each foundational component enhances a young person's ability to perceive experiences in ways that encourage positive meaning-making and hence learning.

Self-Regulation

Self-regulation is a set of internal processes that enable one to manage one's own behavior, emotions, attention, and cognition while engaging with the world toward a goal. One comprehensive definition in the literature describes self-regulation as *"the ability to flexibly activate, monitor, inhibit, persevere, and/or adapt one's behavior, attention, emotions, and cognitive strategies in response to direction from internal cues, environmental stimuli, and feedback from others, in an attempt to attain personally relevant goals."*[58] For young adults, this means being aware of oneself and one's surroundings and managing one's own emotions and behaviors in ways that help move a young person closer to her goals. Various forms of self-regulation include cognitive (including attentional), emotional, social, behavioral, and physiological regulation.[59] There is a growing consensus that these various forms of self-regulation are central to adaptive development[60] —development that allows for adjustment as one proceeds through life—and necessary for both social and cognitive success.[61] Self-regulation allows a person to manage his focus toward an objective, a core part of being able to act with agency.[62] Because of the central role self-regulation plays in almost everything a person does, it not only underlies agency but also supports the ability to develop competencies that can be applied to various settings. Achieving any goal a person sets for himself, successfully interacting with others, and ultimately being able to manage the integration of multiple selves involves self-regulatory processes.

The process of self-regulation requires a multitude of skills; some are more physiological or cognitive in nature (requiring the development of particular areas of the brain), while others are more intentional. Literature suggests that there are two aspects of self-regulation that support successful interactions with others and the world: *self-control*, which is cognitively controlled by executive function (EF) skills, and *awareness*—of oneself, other people, and one's surroundings.

Elements of Self-Regulation

Self-control and the role of executive function skills.

Self-regulatory processes *"include the ability to delay gratification, control impulses, pay attention, and stay on task."*[63] In particular, a set of cognitive functions called EF skills—attentional control, response inhibition,

56 Although these are not things that adults directly change easily, this does not mean that adults should not attend to these traits and consider them as they interact with youth. While temperament is biologically based—something you are born with, rather than something that develops over time—some aspects of temperament are more apt to interact with environments to lead to personality traits (Chess & Thomas, 1977; Goldsmith et al., 1987).

57 The notion that positive youth development requires skills in both the interpersonal (or social) and intrapersonal (or self) domains has been put forth by other models and frameworks of skills necessary for success in the 21st century (e.g., Pellegrino & Hilton, 2012; Weissberg & Cascarino, 2013).

TABLE 1

Definitions of Key Factors and Foundational Components of Young Adult Success

Key Factors		
These three factors support a successful transition into young adulthood and capture how one interacts with the world, sees and understands oneself, and is able to apply one's capabilities to effect change.		
Agency is the ability to make choices about and take an active role in one's life path, rather than solely being the product of one's circumstances. Agency requires the intentionality and forethought to derive a course of action and adjust course as needed to reflect one's identity, competencies, knowledge and skills, mindsets, and values.	**Integrated Identity** is a sense of internal consistency of who one is across time and across multiple social identities (e.g., race/ethnicity, profession, culture, gender, religion). An integrated identity serves as an internal framework for making choices and provides a stable base from which one can act in the world.	**Competencies** are the abilities that enable people to effectively perform roles, complete complex tasks, or achieve specific objectives. Successful young adults have sets of competencies (e.g., critical thinking, responsible decision-making, collaboration) that allow them to be productive and engaged, navigate across contexts, perform effectively in different settings, and adapt to different task and setting demands.

Foundational Components			
These are a set of cognitive and noncognitive components that underlie the three key factors. Each of the four components directly fosters learning and growth, while also reinforcing and enhancing the other foundational components. Each component and subcomponent has corollaries that apply to self, others, or the world.			
Self-Regulation is a set of internal processes that enable one to manage one's behavior, emotions, attention, and cognition while engaging with the world toward a goal. Self-regulation has numerous forms, including cognitive, emotional, behavioral, and attentional regulation. Literature suggests that there are two aspects of self-regulation that support successful interactions with others and the world: *self-control*, which is cognitively controlled by executive function skills, and *awareness*—of oneself, other people, and one's surroundings.	**Knowledge** is sets of facts, information, or understanding about oneself, others, and the world. **Skills** are the learned abilities to carry out a task with intended results or goals. Skills can be general or domain specific, and can be academic, technical, professional, cultural, or institutional in nature. **Knowledge and Skills** are developed over a lifetime, and individuals draw on them in everyday experiences, which help sustain other foundational components and build key factors.	**Mindsets** are beliefs and attitudes about oneself, the external world, and the interaction between the two. They are the default lenses that individuals use to process everyday experiences. Mindsets reflect a person's unconscious biases, natural tendencies, and past experiences. Though mindsets are malleable, they tend to persist until disrupted and replaced with a different belief or attitude.	**Values** are ideals or beliefs about what is good or bad and what is desirable or undesirable. They are important, enduring, and often culturally defined. Values develop through a process of exploration and experimentation, where young people make sense of their experiences and refine what they hold as important ideals. Values serve as broad guidelines for roles and relationships, and provide an orientation for one's desired future.

cognitive flexibility, and working memory—are important for all types of self-regulation.[64] In fact, self-regulation can be thought of as the enactment of EF skills through behaviors.[65] Take, for example, two young men in a verbal disagreement. In an effort to end the disagreement, it takes a great amount of emotional and behavioral regulation for one of those young men to hold back from responding in an angry way. As observers, we are able to see self-regulation play out through his (restrained) behaviors. But what underlies his ability to enact those behaviors is his self-control—the cognitive ability to suppress his natural response, in this case, the strong desire to continue arguing with someone. In the moment, he is capitalizing on his

64 Jones & Bailey (2012); Ponitz, McClelland, Matthews, & Morrison (2009).

65 Howse, Calkins, Anastopoulos, Keane, & Shelton (2003).

underlying executive function skills—his ability to inhibit automatic responses and think flexibly about ways to improve the situation at hand. Without strong EF skills, it is nearly impossible to self-regulate, leading to a host of struggles for children, adolescents, or adults trying to develop agency, integrated identity, or competencies.

Awareness. Awareness is the conscious focusing of attention. Awareness can be directed toward different objects, resulting in a greater understanding of oneself, one's interactions with others, and one's environment. Awareness is the first step in the ability to self-regulate; to conduct appropriate, positive, and productive behaviors; and ultimately to help bridge the gap between identity building and goal completion. In situations where a young person is intentionally working toward a goal, self-regulation requires *self-awareness* so that she can self-monitor and constantly reassess where she is in relation to that goal.[66] Not only does self-regulation require that we focus our attention on some aspect of either ourselves or our environment, but it also requires *reflecting* on what we are attending to. The absence of reflection results in lost opportunities to understand one's experiences and integrate them into a larger (meta) understanding of oneself in multiple contexts—a topic that is discussed in greater detail in Chapter 2. In these ways, developing the ability to objectively attend to one's actions and reflect on them supports agency; it gives people the insight to adapt their efforts and ultimately achieve their goals.

Metacognition is one specific type of self-awareness that seems to be particularly critical for academic success. Metacognition consists of the ability to be aware of or control one's thinking and understanding so that one can develop strategies to direct thinking toward appropriate goals.[67] For example, a high school student who is studying for a test needs to be able to monitor her level of understanding to know when she has studied enough, or to recognize which parts of the material she needs to spend more time with.

In social contexts, self-regulation requires being *aware of others* (other people and their emotions, other settings/contexts and their social rules); this awareness helps individuals determine appropriate behaviors for the particular social situation they are in (e.g., being empathetic toward someone who is struggling), and supporting the ongoing development of interpersonal competencies. As a person takes stock of his actions and the influence they have on others, it also helps him to consider the type of person he is—both in specific situations and more globally—feeding into an ongoing development of identity. Self-regulation, as a process, is key to identity development among young people because it forms a critical link between thinking about oneself and one's goals and preferences, thinking about one's interaction with others, seeking out and reflecting on feedback, and making choices about one's current and future behavior.

Self-Regulation and Its Relationship to Young Adult Outcomes

It is important to note that in the literature and in existing frameworks, there are many terms used interchangeably with *"self-regulation."* Some refer to constructs similar to the ones described above (e.g., *"emotional competency,"* which includes awareness and identification of one's own emotions[68]), some refer to cognitive capabilities that underlie self-regulation (e.g., executive function abilities such as inhibitory control), and still others combine our notion of self-regulation with other skills and dispositions (e.g., *"self-management"*).[69] Regardless of the various terms used, there is evidence that better self-regulation skills are related to a host of learning and development outcomes from early childhood through young adulthood.

In UChicago CCSR's earlier monograph, *Teaching Adolescents to Become Learners,* the authors noted that in adolescence, self-regulated learners *"monitor the process of their learning, ascertain how effectively they are addressing a given learning task, and adjust their efforts accordingly."*[70] For these older students, self-regulated learning is a goal-oriented process in which adolescents focus awareness on their understanding and select strategies and environments that promote their learning.[71] Indeed, researchers find that

70 Farrington et al. (2012, p. 39).
71 Zimmerman (2002).

students of all ages who are more self-regulated display more positive academic outcomes, including grade promotion, higher test scores, and better course grades.[72]

Self-regulation is also related to many social and behavioral outcomes. In one study, college students who had higher levels of self-control (defined by the researchers as a key aspect of self-regulation) exhibited or indicated fewer problems with impulse control, more secure (*"good and stable"*) relationships, better perspective-taking or empathy, and more constructive responses to anger.[73] In other research, those with higher levels of self-control reported being in more satisfying relationships, exhibited lower levels of juvenile delinquency and alcohol abuse, and were more successful supervisors in their jobs.[74]

Most of the current evidence has established *correlations* and *not causality* between self-regulation skills and outcomes. In other words, it has been demonstrated that self-regulation is related to these outcomes (e.g., more self-regulation coincides with better outcomes), but it is not known whether young people's ability to self-regulate actually causes these better outcomes. However, there is early evidence that interventions focusing on self-regulation with adolescents do lead to decreases in violence and crime and increases in academic outcomes.[75] This emerging evidence has important implications for practice. Regardless of the direction of causality, if intentional practices that influence self-regulation also lead to changes in outcomes that matter for youth success, this should be an area of focus for interventions and ongoing supports for youth.

Knowledge and Skills

The role of knowledge and skills for success in young adulthood is commonly recognized. Different types of knowledge and skills play a central role in many of the influential frameworks of core competencies that have emerged in recent years.[76] Broadly speaking, knowledge is the possession of a certain set of facts, information, or understanding. Skills can be defined as having the learned ability to carry out a task with pre-determined results or goals, which can be general or domain-specific. Most of the knowledge and skills that someone has—those that relate to oneself and to interacting with others—are more transferable across contexts; once you have them, you are likely to adapt them to new settings. Knowledge and skills that are related to a person's interaction with *"the world"* are often more specific to a given setting (e.g., having the skill to operate a fork lift).

Academic content and skills are the most obvious set, as they are the primary focus of education in the United States.[77] Indeed, they also are one basis for higher-order competencies that are required for the types of jobs available in the 21st century (for example, science knowledge or computer skills in STEM fields). However, there are a range of other types of knowledge and skills that are crucial for supporting success in young adulthood, yet are generally not an explicit part of formal education. For example, as youth are preparing to enter into the variety of new and different settings that come with the entrance to adulthood, having an understanding of various cultures, contexts, and institutions becomes critical. This includes gaining institutional knowledge—an understanding of how institutions such as universities, workplaces, or communities function and what the norms are for participating in those institutions. Specific institutional knowledge may include knowledge of how to dress appropriately (e.g., a suit for a business job) or of the set of expectations for behavior (e.g., not showing up late for a work meeting), which often vary across different institutions. This type of knowledge and skills are essential to navigate across institutions and allow young adults to act with agency to successfully overcome obstacles and accomplish goals within those institutions.[78]

All children learn the knowledge and skills needed to navigate their cultural environments. However, because institutional knowledge and skills tend to mirror the

78 Stanton-Salazar (2011).

cultural norms of the dominant culture, this poses an additional set of skills and knowledge that low-income and minority youth need to learn in order to more easily navigate schools, workplaces, and other institutions. People from low-income and minority backgrounds are often expected to *"code-switch"* so that their behaviors match the norms of a given institution (e.g., a college classroom), rather than their own cultural norms. This requires having an additional set of knowledge and skills, as well as other foundational components such as self-regulation.

Interpersonal knowledge and skills represent another important subset of this foundational component. Interpersonal knowledge is specific to knowing the norms for interacting with other people in a given setting or from a particular culture. Having the skills to implement this well is evidenced by the ability to act according to those norms. For example, interpersonal knowledge may help a person to understand the appropriate topics to raise with work colleagues versus close friends, and interpersonal skills allow a person to enact those rules in the applicable situations. Often, enacting interpersonal skills according to social rules also relies on emotional or behavioral self-regulation—an example of how the foundational components support each other while also underlying the key factors for success and later young adult outcomes.

Knowledge and skills and their relationship to young adult outcomes. A 2012 National Research Council (NRC) report argued that there are three domains of knowledge, skills, and dispositions that are necessary for success in education, work, and other areas of adult responsibility: the cognitive domain (cognitive processes and strategies, creativity, and knowledge), the intrapersonal domain (intellectual openness, work ethic and conscientiousness, and positive core self-evaluation), and the interpersonal domain (teamwork and collaboration and leadership).[79] In their report, the NRC committee provided an overview of the existing literature on the links between all of these types of knowledge and skills and more successful outcomes for young adults. As with self-regulation, they note that most of the evidence is correlational rather than causal. Nonetheless, there is ample correlational evidence that academic achievement is related to a host of positive outcomes. The NRC committee found that there are modest associations between early achievement (related to knowledge) and later outcomes; interestingly, the strongest relationships exist when looking at youth who have *"persistent deficits"* in their knowledge and skills. Those with achievement deficits have a much lower likelihood of graduating from high school and attending college than those without achievement deficits.[80]

The NRC committee also found that greater levels of knowledge and skills are related to outcomes once out of school. Investments in education (which primarily focus on the acquisition of content knowledge and skills) produce the largest returns through higher levels of income. The more years a person is in school, the greater the benefits and satisfaction a person receives through her job. It is important to note that some research suggests that this relationship occurs because of better ongoing educational opportunities that are afforded to higher-scoring students, and is not due to a direct link between knowledge and income. Nonetheless, greater acquisition of knowledge and skills begets better opportunities for an individual over time, regardless of socioeconomic status.[81]

Mindsets

Mindsets are psycho-social beliefs and attitudes about oneself, the external world, and the interaction between the two. Mindsets are the brain's way of efficiently organizing our interpretation of the world. They are the default lenses we use to process everyday experience. Mindsets are malleable, but unless something challenges them—or challenges a conclusion we arrived

79 Pellegrino & Hilton (2012).
80 Duncan & Magnuson (2011).
81 Currie & Thomas (1999).

at because of them—we will continue to use these interpretive lenses as a shortcut method of attributing motives, construing cause and effect, interpreting how we fit in, anticipating likely consequences, and approaching new experiences, among other things. Mindsets are mutually reinforced by one's knowledge and awareness, as people use what they already think to make sense of new experience. As one recognizes and interprets new experiences and information through one's default mindsets, this new, interpreted knowledge in turn *"justifies"* the existing mindsets. In essence, people see what they are looking for. Mindsets also interact with self-regulation by coloring one's awareness, which in turn guides one's selection of strategies and behaviors. It is crucial that in practice, adults attend to the developing mindsets of youth. There is a danger that if positive mindsets are not intentionally supported, negative or otherwise detrimental or maladaptive mindsets may arise. Youth may then be susceptible to ongoing, reinforcing negative interpretations of themselves and the world, ultimately interfering with their achievement of positive outcomes. For illustrative purposes only, we briefly examine three mindsets—self-efficacy, openness, and a growth mindset—to demonstrate how mindsets operate across contexts to support young adult success.[82]

Self-efficacy is the belief that one is able to succeed at a given task.[83] As Bandura wrote, *"Among the mechanisms of agency, none is more central or pervasive than people's beliefs about their capabilities to exercise control over their own level of functioning and over events that affect their lives. Efficacy beliefs influence how people feel, think, motivate themselves, and behave."*[84] Self-efficacy seems to play a particularly important role in supporting the key factor of agency in young adulthood. The research on self-efficacy consistently finds that individuals are more likely to engage in tasks they feel confident they can successfully complete and to withdraw from tasks for which they lack such confidence.[85] The belief that one will succeed at a task is associated with the level of effort one expends as well as one's likelihood to persist in the face of challenges.[86] Most of the literature agrees that self-efficacy is domain specific and even task specific, meaning that the belief one can succeed is limited to specific cases (e.g., the belief that one can complete a particular set of difficult math problems) rather than being broadly generalized, even within a domain. It is unclear whether self-efficacy might spread over time or *"spill over"* to become a more generalized expectation about one's performance in life. Another open question is how the development or importance of self-efficacy might vary for different subgroups in different contexts. These remain areas in need of further research.[87]

Openness is a broad set of attitudes that encompass an individual's receptiveness to new and unfamiliar ideas, feelings, and experiences as well as interest in new people and places.[88] Though openness is counted as one of the *"Big Five"* personality traits, which are viewed as relatively fixed characteristics of a person, there is a general understanding that openness can be developed through exposure to new experiences, particularly in the context of a secure base from which to venture forth. Individual openness increases over childhood through young adulthood[89] and is associated with a general flexibility in thinking.[90] Openness is more than a passive psychological trait, but rather also includes the motivation and actions to seek out new experiences and the ability to adapt to new experiences, whether or not they have been sought out.[91]

82 This list of mindsets differs slightly from the four academic mindsets we reviewed in our earlier report, *Teaching Adolescents to Become Learners* (Farrington et al., 2012). From that earlier list, we could just as easily have included relevance and belonging here, as these mindsets could also provide strong supports for success in young adulthood. Because we have broadened our focus in this report to outcomes beyond academic performance and are considering multiple contexts beyond the classroom (e.g., family, community, out-of-school programs), we add here the mindset of openness, which has evidence of playing a particularly important role in supporting young adult success.

83 Bandura (1986).
84 Bandura (1993, p. 118).
85 Bandura (1986).
86 Bandura & Schunk (1981); Bouffard-Bouchard (1990); Pajares (1996); Schunk & Mullen (2012).
87 Lennon (2010); Schunk & Meece (2006).
88 Dignan (1990); McCrae & Sutin (2009).
89 McCrae et al. (2002).
90 McCrae & Sutin (2009).
91 McCrae & Costa (1997).

A **growth mindset** is the belief that ability and skill are malleable and will increase in response to one's effort rather than being fixed and outside of one's control. Similar to self-efficacy beliefs, having a growth mindset is advantageous because it affects how one interprets and responds to struggle and failure and makes a person more likely to persevere in the face of challenge.[92] People with growth mindsets are more self-motivating and persistent than people with fixed mindsets, and they expend effort to build their competence rather than withdrawing from difficult tasks.[93]

Mindsets are inextricably related to the other foundational pieces of the framework—self-regulation, knowledge and skills, and values. The extent to which individuals are aware of themselves and others and able to harness that awareness to propel themselves forward may be closely associated with their beliefs and attitudes. Likewise, we expect mindsets to be recursively influenced by other aspects of the framework.[94] For example, being able to engage in effective behaviors or to self-regulate may affect one's sense of self-efficacy, openness, and belief in one's ability to grow. Further, maintaining a sense of purpose and a belief that *"I matter"* is only possible if the world one apprehends feels within one's control and responsive to one's actions. Mindsets such as openness, growth, and self-efficacy are likely to support young people in cultivating a larger sense of purpose and taking action to achieve that purpose. Given the roles mindsets play in perseverance, they are also intricately related to agency. Adaptive mindsets can provide the positive beliefs a person needs to go after her ambitions and push through obstacles that may stand in her way.

Mindsets and Their Relationship to Young Adult Outcomes

All three mindsets illustrated here (as well as those reviewed in our 2012 report) have been linked to higher levels of achievement and other outcomes for young adult success. High self-efficacy has been linked to greater commitment to goals, use of more effective strategies, and a better response to negative feedback.[95] As summarized by Lennon (2010), students with high academic self-efficacy set academic goals, commit to those goals, and view problems as challenges to be mastered. When they experience failure or receive critical feedback, they redouble their efforts to improve their performance rather than interpreting failure as diagnostic of their capabilities. Because strong self-efficacy beliefs affect how one construes and responds to setbacks, self-efficacy increases one's likelihood for success, regardless of actual ability level;[96] thus, self-efficacy is an important ingredient for young adult success.

Due to its diffuse and multi-faceted nature, researchers have historically had more difficulty isolating the beneficial effects of openness.[97] Despite these limitations, openness has been associated with a number of important outcomes, including healthy relationships,[98] academic test scores,[99] and job performance.[100] The role of openness (or its mechanism of association) in other psychological or social outcomes has yet to be thoroughly explored. It is possible, for example, that openness might allow individuals to be more flexible in coping with difficult situations, or that being open to and seeking new experiences might allow an individual to take better advantage of resources and opportunities. As will be shown in Chapter 3, openness to a range of new adult roles (rather than prematurely narrowing one's options) seems to have long-term benefits for young adults.

Growth mindsets have been found to be influential for success in school as well as across a variety of other contexts.[101] Interventions designed to build growth mindsets have tended either to use explicit instruction on neuroplasticity—teaching students that the brain is *"like a muscle"* that gets stronger with use—or to focus on giving process-oriented feedback that emphasizes student effort or strategy use rather than innate ability, e.g., *"You did very well; you must have worked hard on that"* rather than *"You did very well; you must be really smart at this."* Interestingly, even brief, targeted comments such as these can be enough to *"switch off"* a more fixed mindset and *"switch on"* a more growth-oriented mindset, at least temporarily—and experimental studies show that students who receive *"growth-mindset feedback"* tend to perform better than control subjects on subsequent experimental tasks.[102] The belief that hard work pays off seems to have obvious benefits across a variety of domains, beginning most notably in early adolescence when young people begin to differentiate between ability and effort and begin forming a stronger sense of their own competencies.[103]

Although most of the literature focuses on relationships between mindsets and academic outcomes, the extrapolation to other sectors of a person's life is not difficult. Believing that new opportunities are worth pursuing, that one has the capabilities to be successful at something, and that more effort will result in growth are likely to serve a young adult well. Such an adaptive belief can be directed toward one's home life, work life, college life, or other interests.

Values

One of the major influences on how young adults approach their life path and interact with others and the world is based on their *values*, the fourth foundational component of our framework. Values are lasting beliefs, often culturally defined, about what is good or bad and what is important in life, which serve as broad guidelines for living and provide an orientation for the future.[104] Values include both the moral code of conduct one uses in daily activities (e.g., being kind, being truthful) and long-term *"outcomes"* of importance (e.g., getting an education, having the respect of friends, contributing to the community) that may not necessarily have a right or wrong valence.[105] Having a sense of one's values is one of the core components of identity formation and can be used to guide the commitments young adults make to roles, beliefs, and relationships as they try to find a place in the larger society.[106] Values motivate how one engages with the world, whether it is with a specific behavior or something broader such as an occupation or role.

As youth develop, the internalization of experiences and relationships shapes their values, consciously and unconsciously. The development of agency and identity is shaped by whether youth have a clear *sense* of their values, whatever those values are. Being able to articulate those and focus on aligning their efforts with those values helps youth and young adults to go after a set of cohesive goals that align with the person they want to be. Having a sense of values also helps a person distinguish between something that is morally right or wrong, or between something that would have a positive or a negative effect on one's community. As young children mature, there is a realization that morality is not black and white, and one's values tend to provide some shading for those morals.

Values and Their Relationship to Young Adult Outcomes

Values, such as caring about whether something has social value, shape how young adults engage in roles. For example, observational studies of individuals in low-status occupations found that motivation and performance are strongly connected to the perception of that work as having larger social value.[107] Individuals in a wide range of occupations and professional settings, including hospital orderlies, prison guards, telemarket-

ers,[108] and medical professionals,[109] all demonstrate greater commitment to performing their jobs at a high level when that work is explicitly linked to serving a larger social purpose, such as helping the poor or eliminating disease and improving others' health.[110] One's values and commitments also *"provide resources for emerging adults to counteract the anomie and lack of collective support associated with identity formation and the transition to adulthood in the United States."* [111]

Implications

The foundational components include having the self-regulation to plan, manage, and follow through on a given set of actions; knowledge and skills to navigate various situations; positive mindsets about the opportunities available and the ability to capitalize on those opportunities; and a strong sense of values. Together, these make an individual more likely to attain her goals. However, these foundational components do not *directly* lead to young adult success. It is through the development of the foundational components that young adults are able to effectively act with agency, build an integrated identity, and have strong competencies.

Additionally, it is important to note that although the foundational components are depicted here as four separate components, they are intricately interrelated and mutually reinforcing (much like agency, integrated identity, and competencies). By the time an individual reaches adolescence, these components have developed alongside one another *and* influenced the development of each other. Having strength in any one component is likely to strengthen the other components, and deficits in one component can hinder the development of other components. Ultimately, strong connections among these four foundational components make possible a wide range of competencies and processes, including critical thinking, problem-solving, collaborating, responsible decision-making, network-building, constructing an integrated identity that brings together one's past and future, and having the agency to navigate fearlessly through different social worlds. In turn, it is experiences and relationships within a person's social worlds that reciprocally develop these foundational components. It is these very developmental experiences and developmental relationships that we address next.

CHAPTER 2

The Importance of Developmental Experiences and Relationships

Key Points

- Developmental experiences are opportunities for *action and reflection* that help young people build self-regulation, knowledge and skills, mindsets, and values, and develop agency, integrated identity, and competencies.
- Developmental experiences are *"maximized"* in the context of social interactions with others.
- Experience must be assigned meaning and be integrated into one's emerging sense of identity if it is to have lasting or transferrable benefit. Mediating young people's thinking about their experience is one important way that adults aid in learning and development.
- When young people have the opportunity to make contributions that are valued by others, they gain self-confidence and come to see themselves as capable and able to effect change in their own lives and in the larger world.
- Strong, supported, and sustained relationships with caring adults provide an important space for youth to experiment, try out roles and behaviors, and receive feedback that helps to shape how they ultimately construct an integrated identity.
- Educators, parents, childcare providers, and youth workers need opportunities and support to develop the knowledge and skills to create meaningful experiences for youth.
- Children's opportunities for development vary significantly by race and socioeconomic class. Providing more equitable opportunities is critical to achieving a just society and realizing the potential of young people in the United States.

In the introduction and Chapter 1, we presented a set of key factors (agency, integrated identity, and competencies) and the foundational components that underlie them (self-regulation, knowledge and skills, mindsets, and values) that would be emblematic of a young person who is able to succeed in the educational, economic, social, and civic tasks of young adulthood. We touched briefly upon the way these foundational components and key factors are mutually reinforcing, helping young people to both learn from and proactively shape their worlds. We turn now to the question of *how* these foundational components and key factors can be intentionally developed. How do children learn knowledge, skills, values, mindsets, and the complex processes of self-regulation? How do they develop agency, an integrated identity, and competencies essential to success in the 21st century? In this chapter, we focus on what is known about the transformation of children's daily experience into *learning and becoming*. We explore how adults might help youth develop a set of navigational tools for exploring the world, an adaptive orientation toward life, and the habitual positive behaviors associated with *"good character."* We begin with a focus on what we are terming **developmental experiences**, drawing from key principles of how youth learn, and then turn to the importance of **developmental relationships** as essential social contexts for these experiences.

Development is a natural, ongoing process as young people observe the world, interact with others, and make meaning of their experiences. Regardless of the degree of adult guidance, children will still *"develop"* in some way, learning how to do things and coming to conclusions about themselves, what they value, their prospects, and their paths forward. They will develop some skills and preferences, and they will likely figure out much they need to know. And yet, the developmental benefit of children's experiences can be enhanced and directed by others to help youth best formulate and internalize the developmental *"lessons"* from these experiences.[112] Participating on a Little League team can simply be the experience of having fun playing baseball (perhaps an important goal in itself), but it can also be a rich opportunity for children to build social skills for interacting with adults and peers, learn to regulate behavior in line with shared rules, visit other communities and gain cultural awareness, develop athletic competencies and habits of physical fitness, learn strategies for dealing with setbacks, or figure out how to do batting practice even when friends want to play video games.

Young people's daily lives are a continual stream of experiences and social interactions; intentional adult practices can alter the nature and substance of these experiences and interactions to guide them toward important developmental goals. As young people grow, adults should give them increasing responsibility for making choices about and ascribing meaning to the experiences and relationships they pursue.

Developmental Experiences

We define developmental experiences as those activities that provide children and youth with the necessary conditions and stimuli to advance their development as appropriate to their age. Developmental experiences provide rich opportunities for youth to build the foundational components of self-regulation, knowledge and skills, mindsets, and values; to practice competencies; and to foster the capabilities to have agency and an integrated identity in young adulthood. As will be clear throughout this chapter, developmental experiences are *"maximized"* in the context of social interactions with others—in strong, supported, and sustained relationships with adults and peers that are set within caring communities. For developmental experiences to have a lasting and transferrable impact, the insights, developing skills, or other lessons generated by these experiences must be integrated into one's larger sense of self in a way that expands a young person's competencies and agency in the world. We describe developmental experiences in full before moving to a discussion of developmental relationships, but it should be emphasized that, in practice, development flourishes in the context of social relationships and community.

How Humans Learn and Develop

Our understanding of human learning has significantly improved over the past several decades, fueled in part by technological advances that enable much more intricate observations of the human brain at work. Learning is no longer understood as amassing facts in card-catalog fashion, or as trained behavioral responses to stimuli, but rather as changes in the complex neural interconnections in the brain; these neural connections are then *"felt"* as changes in our sense of understanding, or in our subjective experience of ourselves in the world. We focus here on broad lines of work that depict learning as experiential and social, as well as work that examines the underlying neurological components of learning. Though there are still many unanswered questions in the human cognitive sciences, existing research suggests compelling courses of action for adults working with and on behalf of children and youth.

Drawing from research on how children learn and how habits are developed,[113] we offer a model for developmental experiences as including both *active ("building")* and *reflective ("meaning-making")* aspects. As depicted in the Foundations for Young Adult Success developmental framework (see Figure 1), these experiences help strengthen the foundational components and key factors as youth grow up. The active aspects provide opportunities for children and youth to become more sophisticated in their self-regulation and to build knowledge and skills, mindsets, values, and to foster agency, an integrated identity and competencies. Building the foundational components and key factors for success in young adulthood depends on active opportunities to *encounter, tinker, practice, choose,* and *contribute.* Youth cannot build their capacities or develop expertise without these opportunities. However, though these active aspects of developmental experiences are necessary, they are not sufficient for learning.

112 Vygotsky (1978).

113 Bransford, Brown, & Cocking (2000); Ericsson & Charness (1994); Lally, Van Jaarsveld, Potts, & Wardle (2010).

Young people also require opportunities to make meaning of their active participation and of the competencies they are building. The reflective aspects of developmental experiences provide opportunities to *describe* one's growing understanding of the world and *evaluate* various aspects of one's performance or one's choices; to *connect* experiences to other things youth know, experience, and care about; and to *envision* possibilities for the future. Over time, a key part of reflective activities is to *integrate* developmental experiences into one's self-concept and the *"story"* of oneself; this is the path to building agency and an integrated identity. Below, we describe in more detail the dual aspects of developmental experiences—acting and reflecting. In Chapter 3, we consider how knowledge of child and adolescent development can be used to best tailor developmental experiences for young people at various developmental stages, from early childhood through young adulthood.

The Action Reflection Cycle

The Active Aspects of Developmental Experiences

A long tradition of work in philosophy, psychology, and education emphasizes the critical role of experience in learning.[114] Educational theorist David Kolb defined learning as *"the process whereby knowledge is created through the transformation of experience."*[115] This kind of direct experience—*"the concrete, tangible, felt qualities of the world, relying on our senses, and immersing ourselves in concrete reality"*—is one of the primary ways children perceive new information and develop an understanding of the world.[116] But certain types of experiences provide richer opportunities for development than others (**see Figure 4**). Generally speaking, children need active opportunities to observe models, to tinker, to practice, to make choices, and ultimately to contribute work of value to others. Rich developmental experiences include those that put children in interaction with peers and adults; build strong and supportive relationships; and provide opportunities to play and explore, try on new roles and perspectives, publicly demonstrate new skills and competencies, and contribute to endeavors that are personally and socially meaningful. Below, we examine each of these experiences further.

Encountering. For children to develop awareness of themselves, others, and the world, they need access to new people, new ideas, new roles, and new places. To develop self-regulation, skills, and competencies, they need clear models of behavior, of skilled performance, and of high-quality products. Many of the practitioners we interviewed for this project emphasized the importance of exposing children to novel things and situations. Crystal Elliott-O'Connor, associate director of early childhood development at Family Focus, emphasized that the educators she worked with were *"really making sure that children have very, very rich and very many experiences...to just play in novel ways, with materials and supplies and equipment that maybe they would not normally get or see outside of the classroom."*[117] Another interviewee, Blair Root, the director of a neighborhood club that serves school-aged children, noted that it is important to offer *"different hands-on learning activities...to introduce [children] to activities they may not have had the opportunity to [try], whether just playing football, doing some science with them, or art, or a fencing program."*[118] For older youth to develop a sense of who

they want to be and the kind of work they want to do when they enter adulthood, they need opportunities *"to learn about (and more selectively, to experience) the range of adult roles—the kinds of technical, scientific, artistic, social, and civic tasks that adults devote themselves to, and the range of roles in particular vocational arenas."*[119]

Encountering also means watching others and examining models or exemplars. Many young people engage in *"reflective observation"* as their primary means for taking in information about the world.[120] They carefully watch adults or other youth and incorporate their behaviors, their speech patterns, and their preferences. Young people also look to others to learn new skills and influence their values. Healthy relationships with adults are critical for youth development, as it is from adults that young people learn *"how one listens, thinks, relates to other people, responds, formulates questions, handles conflict, provides feedback, and reconciles differences in perspective."*[121] Vygotsky pointed to the role of *"more capable peers"* and adult guides in demonstrating how to do things children cannot figure out or execute alone.[122] Role models can demonstrate behaviors and language appropriate to a given situation or setting—for example, how to engage with adults in a professional workplace, how to advocate for oneself at a doctor's office, or how to chop logs into firewood. As Halpern, Heckman, and Larson write in their report on adolescent learning, young people learn best when they are immersed in a *"community of practice"* that *"allows its newest members to watch, listen to, and emulate...more experienced members. It provides models of action. It gives less experienced learners opportunity to see all the steps in addressing a problem before they are ready to accomplish these steps independently."*[123]

Encountering models is essential in situations where youth are expected to deliver some kind of performance or create a final product, whether writing a research paper, playing a sonata, preparing a lasagna dinner, or changing the tire on the family car. Without clear models of what they are working toward (i.e., what it would look, feel, sound, or taste like if it were done well), young people have a difficult time directing their efforts. Seeing both the final product and the process for creating it aids in developing competencies and potential identities. Not only can adults act as role models who demonstrate appropriate behaviors for specific situations, but they can also provide youth with clear examples of quality work.[124] Ron Berger, chief academic officer for the Expeditionary Learning (EL) network of schools, is a particularly strong advocate of the importance of high-quality models. He wrote,

> Models are important in all ways for youth: models of the kinds of work they need to do, but equally models of how to act in different situations, models of what they could become, models of communities they can aspire to join or create. Adults are often telling adolescents what is possible, what they can become, but unless those kids see models of what [that] actually looks like—other young adults or adults who are successful examples—it's hard to have a vision of what they are aiming for or believe it is possible. When new students enter successful EL schools, I think the power of models is what transforms them. Everywhere they look, there is student work on the walls that is a model of the quality of what is expected, there are older students who are taking their academic success seriously, treating others well and showing academic courage, there are adults who are modeling respectful communication and integrity.
> —Ron Berger, chief academic officer, Expeditionary Learning[125]

Encountering new ideas, new places, and models of what is possible is one of the most important developmental experiences young people can have.

Tinkering. Providing opportunities for children and youth to actively discover, design, puzzle, build, experiment, create, play, imagine, test, and generally jump in and *do* is essential to their developing knowledge about the physical world and how things work. Participating in activities together also gives young people opportunities to negotiate ideas with others, take on different perspectives, and practice self-regulatory skills (e.g., focusing attention, inhibiting impulses, taking turns). Physical engagement also helps children test (and learn) their limits and challenges them to stretch past the edge of their comfort and existing abilities to expand their capabilities.

Many practitioners emphasized the importance of providing children with rich exploratory opportunities, particularly when we were talking with out-of-school providers or educators working with young children. Vanessa Schwartz, a program supervisor, explained that a goal of the home-visiting and other early childhood programs that she oversees is to *"let the child direct the play, and not have the adult try to direct how a child does things…to help develop that child's creativity and problem-solving skills, instead of being told"* how things should be done.[126] Melinda Berry, senior family support specialist with Educare Chicago, echoed this perspective even for the very youngest of children, noting the importance of balancing safety for infants and toddlers with *"enough freedom to explore and learn on their own."*[127] Providing extended and uninterrupted periods of time for children to explore their environments has been a central tenet of the Montessori approach to education for over a hundred years. Likewise, the now-widespread philosophy of early childhood education developed in Reggio Emilia, Italy, also sees children's exploration and experimentation as essential for healthy development. Both of these approaches emphasize the creation of richly stimulating environments as settings for children's exploration and imaginative play, and indeed, this is accepted practice in early childhood environments around the country.

Unfortunately, much of the emphasis on play and exploration seems to disappear as soon as children enter formal schooling. As Expeditionary Learning's Ron Berger noted about traditional school transitions, preschoolers and kindergartners get *"play areas and block areas and toys and drama centers and dress up centers. And then the kids go into first grade, and they're just a few months older, where there are just desks in rows, and no way to be active and creative."*[128] There is little opportunity to tinker in formal K-12 settings. This is a mistake, because opportunities to be creative are indispensable to children's learning. In a 21st century economy that prizes creativity and innovation, youth need repeated opportunities to engage in challenging, open-ended tasks that require them to think *"outside of the box"* and grapple with difficult problems. They also need opportunities for imaginative play. UC Berkeley psychology professor Alison Gopnik notes:

> Conventional wisdom suggests that knowledge and imagination, science and fantasy, are deeply different from one another—even opposites. But…the same abilities that let children learn so much about the world also allow them to change the world—to bring new worlds into existence—and to imagine alternative worlds that may never exist at all. Children's brains create causal theories of the world, maps of how the world works. And these theories allow children to envisage new possibilities, and to imagine and pretend that the world is different.[129]

126 UChicago CCSR interview with Vanessa Schwartz, program supervisor, Metropolitan Family Services (October 3, 2014).
127 UChicago CCSR interview with Melinda Berry, senior family support specialist, Educare Chicago (September 18, 2014).
128 UChicago CCSR interview with Ron Berger, Chief Academic Officer, Expeditionary Learning (September 19, 2014).
129 Gopnik (2009, p. 21).

Gopnik and her colleagues believe that imaginative play helps prepare children for serious adult activities, such as setting goals, anticipating challenges, and planning for contingencies. They argue that *"counter-factual reasoning,"* the ability to imagine an alternative representation of reality, *"is a crucial tool that children need to plan for the future and learn about the world."* This is a basic component of *"design thinking,"* an approach to creating solutions that is increasingly valued in business, engineering, architecture, urban planning, and education. As design science theorist John Chris Jones wrote, designers *"are forever bound to treat as real that which exists only in an imagined future and have to specify ways in which the foreseen thing can be made to exist."* [130] While school may provide fewer opportunities for tinkering and creative play as children get older, young people continue to need exploratory experiences to lay the tracks for handling adult responsibilities[131] and developing competencies for the 21st century.

For older adolescents, tinkering often takes the form of a more grown-up version of early childhood role play. Teenagers try on different personas as a way of test-driving potential adult roles. Older adolescents who are presented with and encouraged to explore a wide variety of opportunities, roles, and life possibilities before prematurely deciding on one course have more agency and are better able to achieve an integrated identity in young adulthood.[132] Continuing to provide opportunities to play, explore, and tinker for children and youth of all ages, across all contexts, strongly supports the development of the foundational components and the key factors of young adult success.

Practicing. While children learn by encountering and tinkering, they also need opportunities to practice in order to build competencies over time. There is strong empirical support for practice as a major factor in developing expertise.[133] However, just doing something repetitively does not lead to improvement.[134] In fact, repeated practice can reinforce bad habits or incorrect approaches if one doesn't have a way to recognize what one is doing wrong. Instead, *"deliberate practice"* emphasizes the importance of motivation, adequate strategies, and accurate feedback, as well as repeated and focused effort over time to push oneself and develop expertise.[135] Comparing one's performance against an explicit outcome or a mental model[136] is an essential component of effective practice. Knowledgeable teachers, coaches, or tutors who observe young people's practice and provide immediate feedback ensure that errors are caught early and corrected before they become engrained. Repeated physical or mental actions established through practice can strengthen neural pathways across the parts of the brain that are engaged in the repeated activity. Advances in neuroscience support the benefits of motivated, deliberate practice—and point to the inextricable connections between emotion and learning. Neuroscientists *"now know that in order for practice to induce learning-dependent brain changes it must be meaningful, motivating, skillful, challenging, and rewarding."* [137]

Practice not only builds expertise over time, but also reinforces motivation for continued learning. Intrinsic motivation develops as youth *"learn more about a topic, experience competence in it, and connect with others who share this interest"* and gain practice applying *"the tools of a discipline in creative and generative ways...[and] make them their own."* [138] As young people practice their skills in a community that values expertise in a given area, they become better able to manage the tedious parts of practice and to sustain their interest in improving their craft.[139] For example, in the popular *"School of Rock"* music schools that have sprung up around the country, children and youth engage in a performance-based approach to learning music that has them almost immediately practicing in a band with their peers. Youth who are experienced musicians play together

with newcomers as they prepare for a live performance in an established music venue. Ultimately, whether in music, sports, academics, or any number of other endeavors, practice prepares children and youth to be successful in future performances. Opportunities for practice take on particular importance in the teenage years. *"If development is 'rehearsals' for becoming an adult,"* says developmental psychologist Abigail Baird, *"then adolescence is the final 'dress rehearsal' before you have to take the stage, and you need as much experience—with both success and failure—as possible."* [140]

Choosing. As children learn and grow, an important developmental experience involves the opportunity to make choices for themselves. Psychologists have long noted that human beings need to feel in control of their own destiny; many see autonomy as a basic psychological need.[141] But how do young people achieve autonomy in a world that necessarily imposes all kinds of restrictions on their actions? One psychological theory, called self-determination theory, defines *"autonomous acts"* as those that are consciously chosen by a coherent self. This does not imply that autonomous choices are not constrained by outside circumstance, but rather that the human actor recognizes those constraints or influences and makes a conscious choice within them.[142]

At every age, making choices fosters cognitive, moral, and social development.[143] For very young children, choices are likely to be highly structured and posed by adults—*"Would you rather play outside on the swings or stay inside and read books this morning?"*—while older youth often have to figure out for themselves what their options are in a given situation before choosing what to do. For adolescents, choosing may involve complex decision-making about how to act with integrity amidst competing social pressures or how to act morally by weighing conflicting values. Young people need to experience increasing autonomy over their lives in order to build toward agency in young adulthood. This means being increasingly able to choose their activities, their companions, how they spend their time, the ways they present themselves, and decisions that will affect their future.

The importance of choosing is reflected in the inclusion of *"responsible decision making"* in CASEL's model of social-emotional learning core competencies. CASEL defines responsible decision-making as *"the ability to make constructive and respectful choices about personal behavior and social interactions based on consideration of ethical standards, safety concerns, social norms, the realistic evaluation of consequences of various actions, and the well-being of self and others."* [144] Taken together, there is a wide range of evidence that providing opportunities for children and youth to make increasingly meaningful choices is critical to the development of self-regulation, values, and agency.[145]

Contributing. Ultimately, developmental experiences enable young people to contribute—to solve problems or bring into the world works of value to the self and others. Contributing is not only important because of its altruistic aspects and its value to a community. Contributing is also important developmentally. When young people have the opportunity to make meaningful contributions that are valued by others, they gain self-confidence and come to see themselves as capable.[146] Contributing to others gives our lives meaning. In a study of meaningfulness and happiness, researchers found that *"meaningfulness is associated with doing things for others,"* and that people who rated themselves as *"givers"* rather than *"takers"* had more meaningful lives.[147] Further, creating and contributing give young people the opportunity to practice agency. Contributing requires one to act with purpose, or to borrow John Dewey's words, to translate an *"original impulse and desire…into a plan and method of action"* to achieve one's desired end, based on *"observation, information, and judgment."* [148]

Contributing also makes clear that young people are not merely passive recipients of experience, nor are they powerless in the face of external forces that affect their lives. Schools and youth programs across the country are providing opportunities for young people to make genuine contributions that change material conditions in the world, for themselves and others. For example, youth leaders on Mikva Challenge's Juvenile Justice Council in Chicago saw the devastating effects that past arrest records had on young people's opportunities, particularly in communities of color. They learned that fewer than one-tenth of 1 percent of juvenile offenders got their records expunged when they became adults.[149] The Mikva youth leaders created an app—Expunge.io—that links youth who have juvenile records to pro bono lawyers who help them through the legal process to get their records erased at age 18. In another example, sixth-graders at Genesee Community Charter School in Rochester, New York, engaged in a year of research about the economic impacts that revitalized waterways had in four U.S. cities. They then successfully lobbied for a bond measure to restore the dry Erie Canal waterway that runs through downtown Rochester, based on their policy argument that the revitalized waterway would support restoration of a vibrant commercial district.[150] In yet another example, youth from Kids First! Oakland organized a multi-year campaign to win free or reduced-fare transit vouchers for low-income students so they could get to and from school.[151] The contributions of young people not only improve the lives of others, but also build critical competencies and develop agency for the young people themselves. Providing opportunities for these experiences is essential for youth development and learning.

The Reflective Aspect of Developmental Experiences: Making Meaning

John Dewey said, *"We do not learn from experience. We learn from reflecting on experience."*[152] As they move through their daily lives, children and youth engage in an ongoing process of interpretation and meaning-making, learning from a complex array of ideas, experiences, and interactions with others, and incorporating new information into their existing understanding of the world. It is through experience that youth develop the foundational components for success and a set of competencies. But if experience is to have lasting benefit, it must be assigned meaning and be integrated into one's emerging sense of identity. Psychologists as far back as William James in 1890 have noted that we can enhance learning by focusing our attention and reflecting on our experience. Research has consistently shown that learning is accelerated and more readily transferred to other situations when people reflect on what happened, what worked, and what needs improving.[153]

Critical to this process are strong, supportive, and sustained relationships with caring adults who can encourage young people to reflect on their experiences and help them to interpret those experiences in ways that expand their sense of themselves and their horizons. In this way, making sense of experience is an *"unrelentingly social"* process.[154] Mediating young people's thinking about their experience is one of the important ways that adults aid in learning and development.[155] Researchers have found that even young children are able to engage in metacognitive reflection and strategic thinking,[156] and benefit from adults and others who can help them reflect on their experience. In our conception of developmental experiences, we identify five particular types of reflection and meaning-making that support youth development: *describing, evaluating, connecting, envisioning,* and *integrating.*

Describing and Evaluating. Providing opportunities for young people to talk about and assess their lives, feelings, thoughts, and experiences is crucial to their overall development. Talking about an event or activity helps children to *"own"* the experience and define

it for themselves. By putting words to experience, they can examine, categorize, evaluate, and decide what the experience means to them.

From the moment babies are born, adults facilitate language development by putting words to children's experience. We put names to things in the outside world (puppy, dump truck, pine tree) and to internal sensations and emotions (hungry, frustrated, silly). Adults' ongoing narration of the world has clear neurological and educational consequences for children. Differences in the variety and complexity of early caregivers' speech predict young children's future language development,[157] which in turn predicts self-regulatory ability and later academic achievement.[158] The richer the language children have to describe their experience, the more control they are able to exercise over themselves and the better able they are to articulate their needs and aspirations. Ultimately, *"we all make sense of the world with the discourses we have access to,"* [159] and this starts with infants' very first exposure to language.

As children get older, they play a more active role in narrating their experience. A practitioner in the Afterschool All-Stars program, William "BJ" Lohr, made this point when talking about the kids he works with. Beyond creating a physically and emotionally safe environment that invites children to participate, the next step is *"finding ways for [youth] to share their voice and engage and interact with the program in a meaningful way."* [160] Talking about the world is also how children build knowledge—and the more knowledge they build, the more able they are to participate in discussions about how things work. Describing the world and developing knowledge and awareness are reciprocal activities in a virtuous cycle.

Describing and evaluating one's experience also has important implications for developing mindsets. Social and developmental psychologists have studied the role of *"self-talk"* and attributions in shaping young people's attitudes about learning. If children conclude from their early experiences that life is erratic and outside of their control, they can develop a mindset of *"learned helplessness"* [161] and refrain from exerting effort to improve their situation. If children conclude from their experiences that they are not smart enough to do well in school (what Carol Dweck and colleagues have called a *"fixed mindset"*), they will seek to avoid risk and withdraw effort, thus creating a self-fulfilling prophecy of poor performance.[162] Helping children and adolescents to reframe such experiences is critical for their long-term achievement in school, as mindsets tend to become self-reinforcing,[163] thus shaping young people's interpretations of their subsequent experiences.

Older youth have a particular need to talk about their ideas and feelings as they encounter more diverse points of view and develop abilities for more complex thought. Adolescents can begin to decipher better and worse options and to evaluate their own behaviors or performance. Dialogue not only fosters close social relationships and helps youth figure out their values and perspectives, it also creates the conditions for making change and exercising agency. This is at the heart of Paulo Freire's pedagogical philosophy. He pushed against the idea of simply narrating the world for young people (as happens in the traditional model of education), insisting instead that people *"achieve significance as human beings"* by *"naming the world [for themselves].... Dialogue is thus an existential necessity."* [164]

Connecting. One of the key insights to emerge from the last few decades of research in cognitive science is that the human brain thinks in terms of *relationships*. To really understand something, young people have to see how it connects to other things they know. By *"relating a new item to an already known piece of knowledge, or otherwise...making an association with it,"* children make a *"major advance"* in their ability to commit information to memory.[165] This has important implications for developing knowledge—one of the foundational com-

ponents in the present framework. As children learn to group similar things together and organize information in larger conceptual frameworks, they also increase their ability to retrieve facts when needed. In a comprehensive review of *How People Learn,* John Bransford and his colleagues noted that a key distinction between experts and novices is that experts see patterns and relationships among the ideas in a field that the novice cannot see.[166] Understanding how things are connected allows experts to amass a huge volume of knowledge and quickly retrieve relevant information. Not only do novices know fewer facts, but they have more difficulty locating them when needed. Providing children with opportunities to connect new experiences and new ideas to things they already know is critical for building usable knowledge.

Creating connections not only helps to build cognitive understanding, but it also allows youth to direct their attention. As children grow, their developing brains utilize a complex network of synaptic connections linking cognition, emotion, and behavior. Perhaps out of self-preservation in a world that bombards us with continual stimuli, the brain only pays attention to things we see as interesting, relevant, or important. Researchers have found that the value individuals perceive in a given activity is directly related to their motivation to engage in and their ability to focus on that activity. For instance, the degree to which students perceive an academic task as having value is strongly linked to their choice, persistence, and performance of the task.[167] In an experiment in ninth-grade science classes, students completed monthly writing assignments about the science topics they were studying. One group was asked to write about how the science topic related to something they valued, and the control group was asked to write a summary of the science topic. At the end of the year, researchers compared the grades of the two groups. Among students who had low expectations for success at the beginning of the year, those in the group that connected science to something they valued earned almost a full letter grade higher (0.8 grade points) than low-expectation students who wrote summaries.[168] The importance of connecting work to things people care about holds true in the workplace as well. A number of studies find that individuals are not only more motivated, but also more disciplined when their work is connected to pursuing personally meaningful goals.[169]

The opportunities that young people have to discover and develop a sense of the connection between their own interests and a larger social purpose reinforce related processes of motivation and self-regulation. Individuals who see tasks or activities as being connected to a larger social purpose are likely to engage with increased discipline, diligence, and persistence in pursuit of their objectives. Young people who are motivated and engaged in this way are more likely to succeed at the tasks and activities they undertake, perhaps underscoring a sense of self-efficacy as well as reinforcing the underlying value of what is accomplished. The recursive links between interest, purpose, value, motivation, self-regulation, and accomplishment are a potential basis for developing a durable, integrated identity over time. In the absence of connection to something they value, young people's commitments become brittle and difficult to sustain, particularly in the face of challenges, setbacks, or failures.

Envisioning. One of the most critical reflective experiences for young people is the act of envisioning themselves in the future. The precursor to this process can be seen in very young children engaged in imaginative play as they don a firefighter's hat, push a miniature grocery cart, care for dolls, or build with wooden hammers. Though young children may talk of being an astronaut or a veterinarian when they grow up, they have yet to develop the capacity for abstract thought that underlies the notion of *"becoming"* an adult. Toddlers are aware of daily routines, and by the age of four or five, typically developing children will

understand that time is a continuum, that some events have happened in the past and others will happen in the future.[170] But it is later in childhood and into early adolescence that a young person develops the ability to reflect on his or her thoughts, feelings, goals, and experiences in the past, present, and future—and recognize that there is the same and yet changing *"self"* across time. This awareness of the continuity of the self is key to understanding that actions at one point in time have consequences at another point in time.

Creating developmental opportunities for youth to envision their futures requires adults to understand the psychological processes underlying identity development. Human beings have a need for a sense of consistency and predictability that leads us to experience the self as relatively stable, but in fact psychological research shows self-concept to be changeable and sensitive to external cues.[171] In essence, we have many *"selves"* that develop in different contexts, with different social groups. Each of a young person's important social groups may have its own explanatory paradigm for making sense of the world and assigning one's place within it. Social groups act powerfully on young people's ability to envision their future and their sense of *"how high to aim."*[172] Berger and Luckmann refer to social groups as *"subuniverses of meaning"* because of their power to cue particular frames of reference, ideas of normative behavior, and an understanding of who one is and who one might become.[173] Psychologically speaking, particularly in early and middle adolescence, *"we can become the kind of person that people of our group can become [and] we fear disappointing important groups by failing to attain group norms and standards."*[174]

Research on "possible selves" suggests that, by itself, envisioning a positive future image of oneself is not enough to motivate behavior. Psychology professor Daphna Oyserman and her colleagues argue that particular conditions must be in place in order for envisioning to lead to improved outcomes for youth. First, young people not only need positive images of what they want to become, but also negative visions of what they want to avoid becoming.[175] Second, these positive and negative *"future possible selves"* must be linked to specific behaviors or strategies that will either bring about or prevent the realization of such selves in the future.[176] Young people are most likely to regulate their current behavior when they know what is likely to move them toward their positive future vision and what kinds of behaviors are likely to derail them. In order for adolescents to embark on positive paths toward their envisioned future, possible selves and the behaviors that lead to them need to be reconciled with young people's important social identities.[177] Social inequalities and stereotypes can create significant hurdles for low-income minority youth, making it difficult to picture themselves as academically successful or to engage in behaviors that would bring about such success.[178] Adults can play a critical developmental role by helping young people to envision a concrete, positive future that *embraces* their important social identities.

Two additional notes are important in helping young people to envision and pursue positive futures. First, the multiple social identities that youth maintain (e.g., daughter, point guard on the girls' basketball team, future pediatrician, younger sister, good science student, retail sales clerk at the mall, friend in a group of outspoken girls) and the associated norms of thought and behavior associated with each identity make it impossible to keep all of this autobiographical information *"on line"* simultaneously. Oyserman explains that what is present in one's working memory at any given point is likely to be what is *"cued"* or called forth by the present context.[179] The self-concept a girl experiences on the basketball court may be very different from her self-concept when encountering her big brother's friends in the neighborhood. Second, across contexts, humans seek to maintain a sense of positive regard for the self.[180] This means that youth will interpret situations in a way that allows them to feel

competent and keep their self-esteem intact. When they find themselves in a context in which they are performing poorly (e.g., in a school setting in which they are not being academically successful), children and youth are likely to *"subvert"* that setting in some way to restore a positive sense of themselves, creating *"counter-definitions of reality and identity."*[181] For example, a poorly performing student may discount the importance of academic success or of the particular task at hand (*"This is a stupid assignment anyway!"*) to protect his self-concept. Alternatively, he may reframe the classroom not as an academic setting in which he performs poorly, but as a social setting in which he is popular and has desirable status.

If an envisioning activity is conducted in a context that does not cue the kinds of self-conceptions that would lead to positive behaviors—for example, in a high school classroom where teenagers have imposed their own social reality—then the envisioning activity is likely to be unsuccessful. For envisioning to be a productive developmental experience, adults need to pay attention to creating a supportive context that will embrace young people's important social identities and integrate those identities with positive future visions.

Integrating. Ultimately the goal of any developmental experience is to integrate the insights, developing skills, or other lessons the experience generates into one's larger sense of self in a way that expands a young person's competencies and agency in the world. This is particularly important throughout adolescence, as young people engage with the task of constructing a cohesive identity. While younger children can make connections to feelings, experiences, or potential roles, adolescents can integrate these into a sense of themselves. For example, as teenagers experience success in one arena, particularly after some amount of struggle, integration means applying that success to inform a larger sense of who they are and what they are capable of. Integration moves a young person from a stance of *"I did that"* to embrace a larger implication for one's identity: *"I'm the kind of person who can..."* Again, adults play an important role in helping young people incorporate their experiences and accomplishments into a cohesive vision of themselves.

Integration of one's social identities can have specific performance advantages. When different social identities are not integrated, a person might not have access to bodies of knowledge or modes of behavior that she possesses, if such knowledge and behavior are associated with a social identity that is not being cued in the present situation. For example, researchers found that the performance of Asian women on academic tests depended on whether their gender identity or their cultural identity was cued at the time of the test. Activating their gender identity resulted in lower math scores and higher verbal scores, while activating their Asian identity resulted in higher math scores and lower verbal scores.[182] This line of research suggests that *"even though one might theoretically possess the expertise or know-how to solve a problem, certain knowledge systems may not be accessible at a given time because the relevant social identity is not activated."*[183] Some researchers theorize that individuals with higher levels of identity integration should be better at activating multiple social identities simultaneously, which should then give them simultaneous access to the different knowledge systems associated with each social identity.[184] Following this line of thought, young people who are able to integrate various experiences and the lessons learned from those experiences into an integrated sense of self should be better able to draw on the full range of their experience to inform their actions in a wide range of settings.

The box entitled *Youth Profile: Ana* illustrates what the process of developmental experiences, including the processes of meaning-making, can look like for a high-school aged youth. In a youth theater group, Ana encountered new ways of being in the world, was able to connect her own life experience with larger social issues, had opportunities to tinker and practice as part of preparing a theater production, and came to envision new possibilities for herself.

YOUTH PROFILE

Ana

At age 13, Ana was a studious and sensitive girl, talkative around people she knew well, but not a natural performer. But the summer before her eighth-grade year, encouraged by a friend, she walked to a nearby park field house and signed up for a series of free workshops led by Chicago Youth Theater.

Right from the start, she encountered new ways of interacting with other people. At first, the physical contact required by many of the theater exercises intimidated Ana. She recalls one that required pairs to sit back-to-back on the floor with their arms hooked and try to stand up. But she observed how uninhibited the older students who were long-time ensemble members seemed. *"Everyone seemed OK with holding hands or locking arms and stuff,"* she says. *"Everyone seemed comfortable with each other."*

In school, she was shy. She says, *"I just wasn't good at working with people. I just kind of kept to myself a lot."*

But the theater workshops gave her a chance to experiment with new ways of expressing herself through her body and voice and to collaborate with peers in improvising a scene.

As she observed and experimented, the daring of the ensemble members began to rub off on her. She says, *"It was a lot of putting yourself out there, being yourself, and being really goofy. In school people hold themselves back a lot, and people here just let themselves go. It was weird but comforting at the same time."*

The company creates original productions based on true stories gathered from cast members, their families, and neighbors in the multi-ethnic community. She joined when she was a freshman in high school, and the theme for that year's production was immigration.

As a first step, the company members sat in a circle and shared their own knowledge of the topic.

Ana's parents are Mexican immigrants and her father is in danger of deportation, which is a constant source of stress in her own life. But as the company shared their stories, interviewed neighbors, and then traveled around the city to hear other stories from immigration activists, Ana realized that she was not alone. She was able to reflect on her experience and connect her family's situation to larger social and public policy issues. With the directors, she and other students attended rallies as participants, like one to stop a deportation center from being built.

During the rallies and the interviews, she listened to adults who were immigrants or activists describe and evaluate their own experiences with immigration.

She integrated what she learned into her own belief system. *"You slowly find out what you believe in and what you don't,"* she says. *"Immigration is an issue I'm always going to be passionate about. If it wasn't for Chicago Youth Theater, I wouldn't know how strongly I feel about it."*

As the interviews progressed, the directors selected the most compelling material from the transcripts for the company to read through and discuss. Next came improvisation assignments based on the transcripts. Company members tinkered for months with staging, characters, movement, and sound. The improvisations were video recorded and later incorporated by the directors into a final script.

Mounting a full-scale production required a tremendous amount of practice with feedback from the directors, continuing even after opening night. This was especially true for Ana as her tenure in the company grew and she took on more demanding roles.

At the end of her junior year, she played a woman who, with her husband, rescues a niece from an abusive home. The role was a pivotal one, as the aunt and uncle's love is what transforms the young girl's life.

"I've never been one who exposes my feelings," Ana explains. *"It was hard. I just had to strip away that shell and be open."*

A sense of a higher purpose motivated her to persevere, despite her frustration with the challenging emotional content, until she finally broke through. *"It was for the story,"* she says, *"not how comfortable I felt hugging people or looking in people's eyes showing emotions. It was for the audience members to really get this."* Ana's desire to contribute to the audience's understanding allowed her to transcend her own discomfort.

Beginning her sophomore year, the directors began to encourage Ana to think about college. Although a strong student, Ana, whose parents left school at a young age, had never considered it. But her encounters with college through college tours with the company, college counseling with the directors, and talking with ensemble members who were becoming first generation college students, she began to envision a different future for herself. *"When you're in a group of friends and they get all excited for college and they're ready for it, it influences you,"* says Ana, who applied to college this fall. *"It assured me I'm capable of doing it."*

Summary of Developmental Experiences

In summary, developmental experiences that provide young people with opportunities to act and reflect constitute the raw material from which the foundational components and key factors of young adult success are built. Developmental experiences are those that expose young people to new ideas, people, and perspectives; provide opportunities to engage in hands-on learning; include demonstrations of expert performance and models of high quality work to emulate; offer extended time to practice and develop competencies; and ultimately allow young people to contribute their unique gifts to the world. Further, developmental experiences offer opportunities to reflect upon one's learning, to *"name the world,"* to evaluate ideas, and to make connections between one's actions and other things one cares about. Finally, developmental experiences support young people in integrating disparate occurrences into a larger sense of themselves in a way that propels them forward. Developmental experiences thus set the stage for acting with agency in the world in an ongoing cycle.

Importantly, although each type of experience has been presented one-by-one in this chapter, in reality, youth often engage in numerous types of experiences simultaneously and there is no hierarchy of complexity or suggested ordering for the types of experiences. **The box entitled *Developmental Experiences Align with the Connected Learning Approach*** illustrates an alignment between the framework of Connected Learning and the concept of developmental experiences.[185] Indeed, *"when a concrete experience is enriched by reflection, given meaning by thinking, and transformed by action, the new experience created becomes richer, broader, and deeper."*[186] Developmental experiences often occur in the context of youth's interactions with adults and other children, and these social relationships are the instruments through which adults can guide and shape development.

Developmental Experiences Align with the Connected Learning Approach

This chapter discusses a range of action and reflection opportunities that help youth feel connected to their experiences and make meaning of them. Although each of these opportunities has been presented as distinct (e.g., opportunities to encounter, and then to tinker, and then to practice, and then to choose), in practice, high-quality experiences for youth entail combinations of actions and reflections every day. Youth programs and school-based interactions should be built around providing multiple, ongoing opportunities for such experiences.

One approach that supports this idea is called *"connected learning."*[187] Connected learning brings together adolescents' learning experiences across in-school and out-of-school spaces, purporting that youth learn best when learning is *"socially embedded, interest-driven, and oriented towards education, economic, or political opportunity."*[188] Ito and her colleagues argue that youth are engaged in their own learning only when it is driven by their interests. Such experiences and learning can then be connected to educational or career opportunities or civic engagement.

The connected learning approach suggests that youth need spaces to make contributions and share their work with peers; to be driven in their work by their individual interests and build expertise in areas they value as significant to themselves; and to have people around them who can make the necessary connections between their interests and academic domains/institutions. Connected learning *"seeks to integrate three spheres of learning that are often disconnected and at war with each other in young people's lives: peer culture, interests, and academic content".*[189] These experiences can help make youth's experiences hold more meaning and relevance for them, and connect these interests and experiences with future-orientated images of themselves.

The design principles identified in a recent report on Connected Learning align closely with the notion of developmental experiences for youth. They highlight the need for active participation by youth; learning by being given the opportunity to *do* (or practice); having adults who provide appropriate challenges to push youth in areas in which they have deep interest; and support in making connections between what youth are experiencing within their interest-driven activities and other external academic and cultural experiences.

Developmental Relationships as Critical Contexts for Learning

Cutting across the literature on child and youth development is a consistent emphasis on the importance of social relationships. Social interactions provide children with opportunities to enact behaviors, elicit feedback, and reflect on what happens. To the degree that activity and reflection are consistently guided in strong, supportive, and sustained relationships with adults, they provide critical opportunities for children to experiment, learn, and grow within and across the various contexts they inhabit every day. Where those opportunities are lacking—where children have few chances to interact or experience the world, where feedback is poor, where reflection is hampered in one fashion or another—children's ability to integrate novel experiences and increasingly complex learning into their identities is often blocked. The iterative and fundamentally relational processes of experiencing, interacting, and reflecting represent a critical engine for children's development and as such are the core of the conceptual model linking experiences and relationships with young adult success.

Developmental experiences offer multiple opportunities for adults to play important supportive roles in building youth's self-regulation, knowledge and skills, mindsets, and values. Social relationships are important not only in supplying broader access to opportunity, but also as a means through which young people learn about themselves and their place in the wider world. One well-adopted theory, called situated learning theory, argues that learning does not happen in an abstract sense; rather, it always emerges as part of a transaction between a young person and his or her social environment.[190] In this way, knowledge does not so much reside *"in the head"* of an individual, but rather within a *"community of practice"* into which young people can be apprenticed. This notion of apprenticeship provides a helpful metaphor for thinking about developmental relationships.

The developmental role of social relationships starts from the earliest moments of life. Interactions between infants and early caregivers form the basis for infants' emotional experiences and set the stage for future relationships. The level of attachment security set in infancy (secure versus insecure attachments) remains largely stable through adolescence.[191] A stable and responsive caregiver strengthens an infant's developing agency and self-efficacy by allowing for exploration in a stable and safe environment.[192] Learning how to manage brief and moderate stress, such as hunger or discomfort, is a part of healthy development, and attachment to stable and responsive adults ameliorates the distress a young child experiences with such stressors.[193] As children mature, relationships grow in sophistication and variety, becoming both more important and more complex. The centrality of family relationships gives way somewhat as children enter school and spend increasing amounts of time with peers. Non-familial adults also become increasingly important. The character and quality of relationships can vary substantially across the life course as young people's inclination and capacity to engage socially with others deepen and become more central to their growing sense of self.

Drawing from Bronfenbrenner's[194] description of optimal relationships, Li and Julian define four criteria for *developmental relationships*—attachment, reciprocity, progressive complexity, and balance of power—that they argue *"consistently promote positive development*

191 Center on the Developing Child (2004); Hamilton (2000); National Research Council and Institute for Medicine (2000); Thompson (2008).
192 National Research Council and Institute for Medicine (2000).
193 In the absence of secure attachments with stable and responsive adults, strong, frequent, or prolonged exposure to stress in the early years can have damaging effects on learning, behavior, and health for years to come (Center on the Developing Child, 2012; Fox, Almas, Degnan, Nelson, & Zeanah, 2011; Shonkoff, 2011). Neural circuits for responding to stress and threats are particularly susceptible to early experiences (Davis et al., 2007; Huizink, Robles de Medina, Mulder, Visser, & Buitelaar, 2003; Weinstock, 2005). Prenatal experiences and early exposure to stress can result in a person being overly reactive or completely shutting down in reaction to stressful situations throughout the lifespan (Loman & Gunnar, 2010; Shonkoff, 2011). These long-term consequences also have important implications for executive functioning and working memory in older children and adolescents (Shonkoff, 2011; Evans & Schamberg, 2009).
194 Bronfenbrenner (1979).

for children and youth across diverse developmental settings." [195] Building upon this work, researchers at the Search Institute have laid out a framework describing developmental relationships as a locus not only for communicating and providing care and support to youth as they grow, but also as a critical site for expressing challenge and expanding opportunities.[196]

The Search Institute framework highlights five elements of developmental relationships to serve as guideposts for adults in schools and other youth-serving organizations—and that dovetail with the key components of developmental experiences outlined above. First, developmental relationships create opportunities for adults to **express care**—to be present, warm, invested, interested, and dependable. Second, developmental relationships are a key site in which to **challenge growth**—to inspire, to express clear expectations, to stretch thinking, and to set and enforce appropriate boundaries and limits. Third, developmental relationships provide a space in which to communicate and **provide support**—to encourage, to guide, to model, and to advocate on youths' behalf. Fourth, developmental relationships represent an important venue in which to **share power**—to demonstrate respect, to give voice and listen carefully, to respond thoughtfully, and to collaborate openly with youth. Finally, developmental relationships provide a key avenue through which to **expand possibilitie**s—to explore new ideas and experiences, to connect youth to helpful others, and to navigate challenging experiences or barriers that deflect youth from their goals.

Blair Root, the director of a youth neighborhood club, emphasized the importance of children having developmental relationships with multiple adults that provide opportunities to act and reflect. *"I think it's important that kids have different role models in their lives for different reasons. Maybe they think their art teacher is so cool because she introduced them to so many neat things, and their dad at home, maybe he's a cool engineer and they're able to share different experiences together."*

Connected to this view of developmental relationships is a vision of those relationships as being reciprocal. In being so, youth not only passively receive or access the various kinds of resources and opportunities created by virtue of their social relationships, but also have opportunities to participate actively in the larger contexts within which those relationships occur and to contribute positively to them. UChicago CCSR's review of noncognitive factors in school performance noted that the belief that one is recognized and valued as a member of an academic community is key to engaging and succeeding in that context.[197] This sense of *"belonging"* has been associated with success in school,[198] while feeling unwelcome or threatened has been associated with poorer performance, as seen in the literature on stereotype threat[199] and bullying.[200]

Research by Scales, Benson, and Roehlkepartain addresses how the reciprocal path of developmental relationships relates to the concept of thriving.[201] Thriving, particularly during adolescence, focuses attention on young people's self-identified *"sparks"*—passions, interests, skills—and creates opportunities to support, develop, and nurture them over time.[202] The nurturing of one's passions is key to the development of a *"confident and secure idealized personhood,"* [203] similar in many respects to our concept of integrated identity. The focus on thriving illustrates the reciprocal nature of developmental relationships, with an emphasis on nurture and support, on the one hand, and on the creation of opportunities for participation and contribution, on the other. Reciprocal relation-

ships may be especially critical during developmental transitions, such as the transition from middle grades into high school, when the task of negotiating the shifting boundaries between connection and autonomy can leave youth more vulnerable.[204]

Social relationships provide important opportunities for youth to sharpen their awareness of themselves, others, and the larger environment. Strong, supported, and sustained relationships with caring adults provide an important space for youth to experiment, try out roles and behaviors, and receive feedback that helps to shape how they ultimately construct an integrated identity. As youth work toward an understanding and articulation of their goals and values, the feedback and opportunities for reflection provided by social relationships with adults provide a key avenue for the development and integration of identity, as well as the formation and support of mindsets, the development of competencies, and the building of agency. Creating a social context that supports the development of the foundational components and key factors for young adult success requires not only careful and intentional planning by adults, but also long-term commitment to young people in their care.

Enactment of Developmental Practices

The cumulative theory and evidence on developmental experiences and developmental relationships means that educators, mentors, and program staff would do well to extend their attention beyond design and planning, and to focus on understanding youth experience. Within any given setting that children and youth inhabit, adults generally have positive intentions and want to act in the best interests of the young people with whom they work. In formal settings such as schools and youth-serving organizations, adult practices are largely planned in order to effect positive change in kids' lives. Despite these intentions, a key consideration is how practices actually get delivered by the teachers, program staff, parents, or other caregivers—in other words, the *enactment* of the plans and intentions via the practices of adults in the setting. What actually occurs in the moments when adults and youth interact may or may not align with either best intentions or the description of practices as set forth by planners.

Any time an adult puts a practice in place, it is influenced by a plethora of adult-, youth-, and situation-specific characteristics. How an adult actually enacts a practice can be shaped by the adult's personal orientations, how well the adult is able to interact with particular youth, and even the adult's *own* development of the foundational components we highlight for youth (e.g., self-regulation, knowledge and skills, mindsets, or values). Enactment can also be shaped by the training, experience, assumptions, capacities, and *"working theories"* that adults in a setting bring individually to their work. For example, some teachers might believe that young people in urban environments will benefit most from a *"tough love"* approach that prepares them for the harsh realities of the outside world, so they are particularly strict in enforcing policies around attendance or late work. Other teachers in the same school might believe that these same young people most need nurturance and warm relationships with trusted adults, so they enforce school-wide tardy and late work policies much more leniently. Some parents might believe that young children benefit most from unstructured play and opportunities to be creative, while other parents believe it is critical to take a strict, disciplined approach to academics as soon as possible with young children. Sometimes conflicting beliefs are held by caregivers within the same organization or the same family, and these individual biases or preferences come through regardless of the pedagogical or childrearing approach the caregivers might have mutually agreed to.

The *"official"* orientations and practices endorsed by a school, a youth program, or even a family may have less influence on a child's development than the ways practices are actually enacted "in the moment" by the adults in those settings and experienced by the child. A daycare program may endorse the practice of modeling positive

204 Scales, Benson, & Roehlkepartain (2011, p. 265); Collins & Steinberg (2006).

problem-solving for young children, but the daycare provider may (unintentionally) raise her voice and become harsh when she feels stressed. A harried father might put great value on punctuality, but in practice he might often be late to pick up his child from school. It is therefore critical that adults pay close attention to how intended practices are actually enacted within a given setting. Ultimately, it is not the intention but the enactment that influences the experiences young people have and the meaning they make of those experiences.

Differences in Developmental Opportunities and Needs

Daily life provides no end of experiences that help children exercise self-regulation, develop knowledge and skills, shape their mindsets, and build their values. But we know that *"daily life"* can vary substantially for young people across race and class. Children in the United States are afforded different access to experiences and opportunities in their homes, schools, and communities, depending in large part on differences in financial resources. An extensive body of prior research documents the negative effects of child poverty, which extend well beyond low socioeconomic status and include a wide array of associated conditions, including heightened social isolation, greater levels of parental and child stress, limited parental investment (of both money and time) in children's development, less access to health care, higher exposure to environmental toxins, and lower academic achievement.[205] As of 2012, one out of five children ages 5 to 17 in the United States was living in poverty. Roughly one-third of all African American, Latino, and Native American children grow up in poor households.[206] While families in poverty are often rich in other developmental assets (e.g., strong familial ties, dual languages, strong narrative traditions, entrepreneurial skills, and other valuable *"funds of knowledge"*[207]), we know that differences by income in parental investment in children's informal education—for example, through sports clubs, summer camp, travel, and computers and books in the home—show evidence of contributing to gaps in academic achievement that are observed upon entry to formal schooling and widen as students advance through school.[208]

Children who grow up in more affluent families do not necessarily have *"better"* developmental experiences, just more of them. It is important to emphasize that *"high culture"* activities that are more readily available to the children of upper-middle-class families may not be developmentally superior to activities more easily accessed by low-income urban or rural children. Looking for frogs in a drainage ditch can meet a child's need for exploration, discovery, and knowledge-building just as well as a trip to the science museum. Still, compounded differences in the availability of high-quality early childhood programs, effective and engaging K-12 schools, books in the home, after school activities, libraries, music and arts programs, sports and recreational activities, and museums and other cultural institutions end up significantly favoring children from wealthier families.[209] Ensuring that *all* young people have access to a multitude of rich developmental experiences—from early childhood through adolescence—is imperative to helping youth develop the key factors for success in young adulthood and the foundational components that underlie those factors.

A further advantage that accrues to the children of wealthier families has to do with their early acculturation into dominant cultural norms and settings. All children grow up learning cultural navigation skills that allow them to move with relative ease around their own neighborhoods and communities,[210] but those skills do not always readily transfer to new contexts. A white child from the wealthy Chicago suburb of Winnetka would be just as out of place and ill-equipped to make his way through the violence-plagued streets of Chicago's Roseland neighborhood as would the Roseland native in Winnetka. The difference is that the child from Winnetka can go his whole life without having to learn how to navigate Roseland, but the child from Roseland cannot gain access to *"cultures of power"* in American life[211] without figuring out how to navigate Winnetka.

205 Berliner (2009); Yoshikawa, Aber, & Beardslee (2012).

209 Lareau (2003).
210 Lareau (2003); Patton (2013).
211 Delpit (1988, 1995).

Children who grow up learning dominant conventions and behavioral norms that are also in operation in schools and workplaces have more ready access to these institutions. In this way, low-income and minority youth have to learn additional skills—the ability to navigate other social contexts—and have to integrate more disparate identities to be on equal footing with children who were born into the dominant social culture.

In light of children and youth's differing needs and developmental opportunities, adults are challenged to figure out how best to support the development of each child and coordinate this development across settings. Critical to achieving this goal is providing teachers, parents, childcare workers, program providers, and other caregivers with both knowledge about *what matters* at each developmental stage and strategies for creating thoughtful and intentional developmental experiences. Though experiences are the fields within which children develop, they aren't enough to ensure that children are building the foundational components for future success. One of the objectives of this project is to help program developers, practitioners, and caregivers think more intentionally about how the practices they are implementing are, or can be, aligned with the developmental outcomes they are trying to support in children and youth, given their individual needs. It is in the context of strong and supportive social relationships with adults and peers that children learn to make meaning of their experience, come to understand themselves in relation to others, and situate themselves in the world.

CHAPTER 3

Developmental Progression Toward Young Adulthood

Key Points

- Development is multifaceted (social, emotional, attitudinal, behavioral, cognitive, physical), and each aspect of development is inextricably connected to the others.
- To provide the most appropriate and supportive developmental experiences for youth, adults need to understand development itself as well as how to match the right supports and sets of challenges for growth to the particular developmental stage of the youth they work with.
- The practices of adults are more effective when they are intentional, are focused on the foundational components and key factors that support the ability to transition successfully into young adulthood, and take a developmental perspective. The development of the key factors of young adult success (agency, integrated identity, and competencies) and the four foundational components that underlie them (self-regulation, knowledge and skills, mindsets, and values) occur at different rates for different individuals from early childhood through young adulthood.
- Consistent and supportive interactions with caregivers provide the greatest opportunity for cognitive stimulation in ways that can have long-lasting impacts on children's development. Whereas appropriate stimulation supports continuing development, a lack of stimulation can create barriers to subsequent development, potentially requiring more intensive intervention later.
- Key tasks of each developmental stage are listed below. However, it is crucial that adults not *exclude* other areas of development when engaging with children and youth; nearly every aspect of the foundational components and key factors is forming, or is at least being influenced by the experiences youth encounter, at every stage of life.
- In brief, the key developmental tasks during early-life stages of development are:
  - Early childhood (ages 3 to 5): Self-regulation; interpersonal (social-emotional) knowledge and skills
  - Middle childhood (ages 6 to 10): Self-regulation (self-awareness and self-control); learning-related skills and knowledge; interpersonal skills
  - Early adolescence (ages 11 to 14): Group-based identity; emerging mindsets
  - Middle adolescence (ages 15 to 18): Sense of values; individuated identity
  - Young adulthood (ages 19 to 22): Integrated identity
- A successful transition into young adulthood relies on a firm footing of the foundational components: an awareness of self and others to support self-regulation and planning; knowledge and skills about self and the world, developed at home and through school and other learning activities; mindsets that project a self-belief and support one's agency to achieve goals; the values a person holds for self and society; and the identity choices one makes, hopefully based on a broad sampling of possibilities.

The Foundations for Young Adult Success developmental framework includes four components (self-regulation, knowledge and skills, mindsets, and values) that provide the foundation for three key factors in young adulthood (agency, integrated identity, and competencies). The framework highlights the crucial role played by developmental experiences and developmental relationships within the larger contexts that young people inhabit. It is important to note that development is *always* occurring, whether with intentional support and carefully constructed opportunities for positive growth or not. Individual, contextual, and larger structural forces continually interact to shape the course of one's development across all stages of childhood and adolescence.[212]

Developmental relationships help stretch young

212 Bronfenbrenner (1979).

people to be the best versions of themselves. When interactions between caregivers and children are intentional and informed, as well as organized to provide experiential opportunities for growth, they are more likely to support positive learning and development and lead to a young adulthood with agency, an integrated identity, and a set of competencies that enable success. However, in order to design and deliver the most effective experiences for youth, it is imperative to understand where youth are *developmentally* throughout their young lives. This understanding makes it possible for adults to match experiences and interactions to the developmental needs of young people.

In considering what we know about how children develop, this chapter focuses on how each of the foundational components and key factors matures over time. As documented in the literature, different skills develop at different rates over the life course. Below, we highlight the most prevalent areas of growth during each stage of development, with an eye toward **(1)** which foundational components or key factors are most influenced by input, experiences, and interactions with others at each stage; and **(2)** which components or key factors need to be developed during the earlier stages to facilitate positive development at later stages. The chapter provides an overview of current knowledge based on a review of the literature and discussions with experts from a range of backgrounds.[213] This overview is not meant to be a comprehensive or exhaustive discussion of development. Rather, the goal is to provide practitioners with access to a common description of how the foundational components and key factors develop over time and which ones are the primary foci during each stage of development.[214]

We start our examination of development at the preschool years, at age three, when children begin to be exposed to institutions outside their families and homes. We then present the most salient and malleable areas of development during four life stages leading up to young adulthood: early childhood (ages 3 to 5), middle childhood (ages 6 to 10), early adolescence (ages 11 to 14), and middle adolescence (ages 15 to 18). For each stage, we ask four questions:

1. What internal or external changes are taking place that influence development in this stage?
2. What are the primary areas of development in this stage?
3. How do experiences shape development in this stage?
4. How is development in this stage related to development in other stages?

We conclude by discussing how development in these four stages culminates in preparing youth for a successful transition into young adulthood (between the ages of 19 to 22), highlighting how effective supports throughout the years increase the likelihood of a youth having agency, an integrated identity, and strong competencies. We pay particular attention to identity development and integration. This chapter specifically touches on how identity matures from one stage to the next, even if it is not a *key* developmental task during a particular stage. As a preview, the serious development of identity does not begin to take place until adolescence, but the antecedents are there from the earliest days of life:

> A mature understanding of identity requires being able to connect and find patterns in one's actions and beliefs across time and situations, actively associating with these underlying traits, and viewing the self as purposefully creating such continuity in behavior. Given the complex nature of these cognitions, identity development disproportionately takes place during adolescence. However children begin to form concepts of the self and agency much earlier in life, and these serve as precursors to identity.[215]

213 A more extensive discussion of the key areas of development across stages of early life can be found in a memo drafted by UChicago CCSR, which can be obtained from the authors by request.

214 Admittedly, the quantity and quality of evidence around each of these life stages is uneven; one of the main tasks in reviewing the research evidence to date has been to identify areas in which broad understanding is yet incomplete.

215 Rote & Smetana (2014, p. 438).

Each of the following sections describes the primary developmental tasks as they relate to the foundational components and key factors, and explores the implications of those tasks for supporting youth development. Although we highlight key tasks in each developmental stage, it is crucial that adults not *exclude* other areas of development when engaging with children and youth; nearly every aspect of the foundational components is forming, or is at least being influenced, at every stage of life.

Early Childhood

(Preschool-Aged Children; Ages 3 to 5)

Early childhood—roughly ages 3 to 5—is a stage of tremendous growth and development. It is during this period that young children build upon their earliest interactions with parents and other caregivers and begin to feel a sense of independence, while learning how to identify and regulate their emotions and behaviors. According to Erikson's stages of psychosocial development, young children struggle with initiative vs. guilt.[216] In other words, children want to start setting their own goals and deciding their own actions. When adults around them give support and guidance, young children likely achieve a sense of purpose and some degree of agency, at least within the small sphere of their influence. However, when adults do not allow children to develop their own initiative, children may have a deep sense of guilt about their desires to act.

Key Questions

What Internal or External Changes Are Taking Place that Influence Development in Early Childhood?

The grounding for children's expansion of abilities lies within the brain as it changes and develops in response to children's experiences. The growth and molding of young children's brains are responsible for the more basic elements of coordination, movement, and alertness, as well as higher-order activities such as abstraction, inhibition, and planning.[217] Because of the neurological advances taking place during early childhood, including rapid development of the prefrontal cortex, preschool-aged children often experience newfound capabilities in writing, physical coordination, memory, regulation and inhibition, and even metacognition; they become able to explain why they took a series of actions, for example.[218] Though the prefrontal cortex does not fully develop until an individual's mid-20s, the foundation created in early childhood is critical for ongoing development.[219]

In addition to the development of cognition, young children are learning about emotions and how to interact with other people. Crucial to later identity development, preschool-aged children are developing a sense of self; they understand that they are different from others and are able to define themselves as such in increasingly concrete terms. In addition to an increasingly concrete sense of self, young children also develop gross and fine motor skills during this period. Often in parallel with an emerging sense of identity, children manifest an increasingly sophisticated sense of their own agency, which began in infancy. They know that they can invoke actions that will lead to something else happening, particularly around using objects. As we will see, the *"world"* in which a child exercises agency will continue to broaden as he or she gets older.

What Are the Primary Areas of Development in Early Childhood?

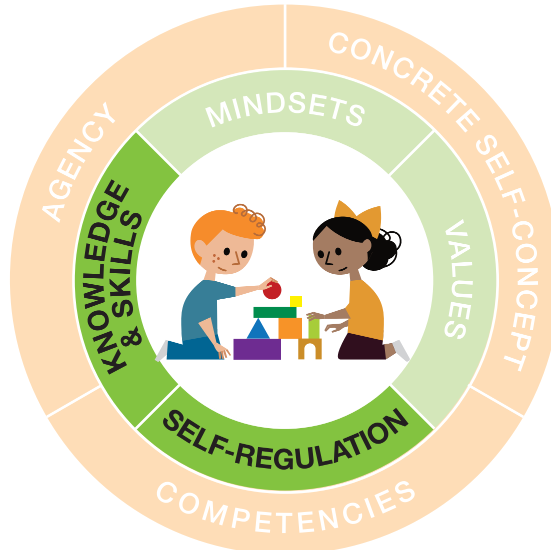
Researchers and practitioners who work with young children suggest that there are two key areas of development on which to focus support during the early childhood years: self-regulation and social-emotional skills—or the ability to interact well with other children (overlapping with our notion of interpersonal skills). (**See Figure 5**). Barbara Abel, a curriculum manager for Educare Chicago, an early education program, highlights how focusing on these areas is crucial, as young children can only begin to learn content once their social and emotional needs have been addressed:

216 Erikson (1950/1963).
217 Berk (2007).
218 Diamond (2000).
219 Diamond & Lee (2011).

For me, the main thing I've been working on is children's capacities to self-regulate. And when I say self-regulation I mean self-regulation in terms of emotional regulation, behavioral regulation, and attention regulation...I lead with the emphasis on the social-emotional in order to get to the point of being able to access the cognitive processes. —Barbara Abel, curriculum manager, Educare Chicago[220]

FIGURE 5

Early Childhood (Preschool, Ages 3-5)



Self-Regulation. Early childhood represents an important opportunity to help children develop self-regulation, including behavioral, attentional, and emotional regulation.[221] Self-regulation enables a young child to begin acting independently within her personal and social context and to have greater success with learning.[222] Underlying the development of self-regulation is an improvement in executive function (EF) skills (see section in Chapter 1 entitled *Self-Regulation* for further description). The emergence and early development of EF skills correlate closely with the early development of the prefrontal cortex, described in the previous section; the brain continues to refine these new neural connections and EF skills into adolescence.[223]

Developing control over emotions, behaviors, and attention early in life is the basis for engaging in increasingly complex thinking and more multifaceted interactions as children develop. Among young children, self-regulation—particularly emotion regulation—is related to a more successful transition into schooling,[224] an early indicator for later academic success. Children who are able to monitor and manage their emotions and behaviors are better able to follow directions, cooperate with other children, and attend to what they are learning. Research also links early EF skills to later success in the workforce, in health, and in social relationships.[225] Conversely, the lack of early emotion and behavior regulation is linked to adult crime, violence, and other negative behaviors.[226]

Interpersonal Knowledge and Skills. The other key developmental task during early childhood is the development of knowledge and skills that support young children's abilities to relate to, cooperate with, and form relationships with other people, particularly other children. During the preschool years, children further develop their earlier understanding that there is a *"self"* and can distinguish their own from others' emotions. Children begin to understand that others can have

220 UChicago CCSR interview with Barbara Abel, curriculum manager, Educare, Chicago (April 21, 2014).

221 Alternatively, in our conversations with several experts, they suggested that the focus on self-regulation and executive function skills may actually be overstated. They argue that the attention these developmental skills receive in practice may simply be due to the research attention it has received in more recent years. However, much of the literature does suggests that self-regulation is central to school achievement and is a marker of adaptive development (e.g., Blair, 2002; Blair & Razza, 2007; Morrison, Ponitz, & McClelland, 2010), a perspective that was supported by interviews with early childhood practitioners and research on the perspectives of kindergarten teachers (Foulks & Morrow, 1989; McClelland, Morrison, & Holmes, 2000; Rimm-Kaufman, Pianta, & Cox, 2000).

different thoughts, beliefs, and feelings than the self does, and that those beliefs and desires lead people toward particular actions.[227] As children's general understanding of other people advances, so does their relationship with other children. They acquire the ability to interact with multiple peers, often while engaging in pretend play.

The social interactions that preschool children have with peers lay the groundwork for learning an array of skills that will be necessary for successful social interactions when they are older. For example, play not only requires but also helps to support all kinds of critical aspects of self-regulation, including attentional, behavioral, social, emotional, and cognitive regulation.[228] The back-and-forth communications that young children engage in during play help children learn how to take turns and listen (inhibiting their own desire to interrupt), begin to understand their own feelings and beliefs and those of others, and understand that those different feelings and beliefs influence the behaviors of each individual. Early interactions with peers (and the support young children get from adults in successfully negotiating these interactions) help to shape how children interpret the world (e.g., thinking that people are pleasant or hostile).[229] And as children get better at understanding their peers, they begin to develop a sense of self-efficacy about their ability to be socially engaged.[230] Thus, the origins of some of the mindsets (e.g., openness, self-efficacy) that are crucial during the transition from adolescence into young adulthood seem to first emerge in young children's interactions with peers. Early social and emotional development, accompanied by supportive interactions with adults, produces the earliest signs that children can distinguish *"right"* from *"wrong"*; having these emotional and cognitive abilities to distinguish between the two and act on that knowledge can be considered some of the earliest foundations of morality—an important component of the values that a young adult will ultimately embrace.

How Do Experiences Shape Development in Early Childhood?

Nothing about early childhood development can be thought of as existing in a vacuum. A reciprocal influential nature exists between the rapid neurological development that infants and young children experience and their opportunities for interactions. These opportunities are in turn shaped by several layers of children's ecosystem,[231] including the immediate environment in which they interact and learn (their parents, peers, early education program) and larger ecosystems that may include local politics, social services, and even larger attitudes, values, and beliefs of the culture they live within.

The most crucial way adults provide supports for a young child is by being consistently responsive to that child's needs.[232] This enables children to feel secure so that they can comfortably explore new facets of their world. Children with secure attachments will reference the adults around them during their preschool years to gain feedback on whether their emotional or behavioral reactions are appropriate in a given context. One aspect of adult-child interactions that are especially important in the early years is language. Being exposed to linguistically-rich interactions helps support the development of a child's own language and ultimately their overall development. However, there are great disparities in how much language young children hear from their caregivers.[233] Children from low-income families hear as many as 30 million words fewer than their higher-income peers[234] and these differences are related to differences in early language development.[235]

227 Wellman, Cross, & Watson (2001).
228 Berk, Mann, & Ogan (2006); Bodrova, Germeroth, & Leong (2013).
229 National Research Council and Institute of Medicine (2000).
230 Harter (1982); Ladd and Price (1986).
231 Bronfenbrenner (1979).
232 Bowlby (1982).
233 Hart & Risley (1995).
234 Hart & Risley (1995).
235 Hoff (2003); Huttenlocher, Waterfall, Vasilyeva, Vevea, & Hedges (2010); Rowe (2008).

Children's own language development, in turn, influences a variety of other areas of development, including children's ability to recognize, understand, and manage emotions and behaviors. Between the ages of two and five, several lines of research suggest that language development is a critical component of developing and understanding thought and emotions[236] and self-regulation of emotions.[237] Recent work suggests that targeted interventions with parents can help create a more language-rich environment for their young children.[238]

Conditions created by poverty and inequality—particularly neglect and toxic stress—have an especially large impact on early neurological development, potentially producing lasting challenges to be overcome, such as a child's later ability to succeed in educational or learning activities.[239] Specifically, traumatic experiences in childhood can lead to an over-development of the midbrain and brainstem, producing hyper-reactive and aggressive behaviors.[240] Alternatively, neglect can lead to an under-development of the limbic and cortical regions, which can cause difficulty in cognitive processing.[241] Together, trauma and neglect represent a toxic combination for young people, associated with lower levels of self-regulation and social-emotional skills in later years. Especially when working with underserved children, adults need to create spaces and experiences that are both safe and cognitively stimulating.

Adults best meet children's needs when these contextual factors are taken into account. Barbara Abel, the early childhood curriculum manager at Educare Chicago introduced earlier in the report, describes this nuance in working on self-regulatory processes with young children, many of whom come from very impoverished backgrounds:

> You know that day when you oversleep and you wake up and you're an hour late for an important meeting or it's your first day at work on a new job and you realize that you've overslept? What do you feel like? Dysregulated kids feel like that much of the time. So imagine, with your adrenaline constantly flowing, your cortisol levels elevated, with your heart beating a little too fast, not knowing which way to turn—how do you expect someone to learn? And so if some children have all these factors that can compromise their capacity to self-regulate, then we have to look at classrooms and we have to say, 'How do we create a place that makes all the children feel safe so that they can attend?'—Barbara Abel, curriculum manager, Educare Chicago[242]

Indeed, laying the groundwork for positive development in future years requires careful and intentional support from adults, but also recognition that young children have a great number of capabilities. Decades of research in developmental psychology support the notion that even children as young as three years old benefit from the types of developmental experiences and developmental relationships laid out in Chapter 2. Adults can provide children with varied experiences and options for how they would like to spend their time, which encourages children's love for exploration and learning. Providing limits to opportunities, likewise, helps young children grow to respect boundaries and exercise self-regulation. They need experiences that allow them to *"tinker"* or experiment and they benefit from positive role models. Young children flourish when they have adults in their lives who help them put

language to their experiences and link what they are learning to things they already know (*"connecting"*). For example, high quality preschool classrooms are structured in ways that allow children to make many of their own choices, such as which center they want to spend their time in during free play. They can feed the interest they are having in the moment and, with support from teachers, can *"tinker"* with all sorts of objects. Effective teachers do not tell children explicitly how to make something work; rather they let children explore, experiment, and fail, and then help them make sense out of that failure so they can try something again, ultimately achieving what they set out to do.

How Is Development in Early Childhood Related to Development in Other Stages?

The benefits of investing in early development have become increasingly clear in recent decades; long-term studies following high-risk children who attended high-quality early education programs show great advantages for them compared to similar children who did not attend such programs.[243] Economic models estimating returns on investment show that early childhood programs (birth through preschool) have a larger rate of return than programs implemented at any other point during the life cycle.[244] James Heckman and his colleagues have attempted to understand the ways in which early interventions lead to greater adult outcomes; they find that it is not an increase in IQ, but rather the development of noncognitive factors that accounts for most of the positive effects.[245] Children who attended the Perry Preschool, who were the basis for this analysis, spent a considerable amount of time learning social skills and self-control (i.e., interpersonal knowledge and skills, and self-regulation)—the two primary developmental tasks highlighted here.

The links between early development and later development suggest that a focus on early interpersonal skills and self-regulation can help set children on a positive course of development, whether it is in an academic setting, in their social lives, or at home. Through the use of scaffolding—or supporting children in their current stage of development in preparation for the next stage—adults can help structure the environment for young children so they can gradually learn how to plan, focus their attention, and achieve goals with fewer and fewer supports.[246, 247]

Middle Childhood

(Elementary School-Aged Children; Ages 6 to 10)

Children in elementary school, ages 6 to 10, are in the developmental stage known as *"middle childhood."* This represents a period during which children establish a growing sense of competence, independence, and self-awareness upon which later identity development will build.[248] The changes children experience during this stage are driven by three factors: increased cognitive advances that allow for greater and more abstract thinking, self-regulation, and reflection; social changes that reflect an expanding set of relationships with both adults and peers; and institutional changes that expose children to comparison and competition across multiple domains (e.g., social relationships and academic achievement).[249] These cognitive, social, and institutional changes define the substantial, if often underappreciated, challenge of middle childhood: learning how to navigate multiple contexts in transition while establishing a more stable sense of self.

243 For example, Schweinhart, Montie, Xiang, Barnett, Belfield, & Nores (2005); Campbell & Ramey (1995).
244 Heckman (2008).
245 Heckman, Pinto, & Savelyey (2013).
246 While early childhood is a critical period of development, it is also a difficult time in which to identify those who may need intervention. Children develop at very different rates, and because so much of what is changing in the early childhood years requires maturation of the brain, it is easy to misdiagnose a child as having behavior problems when he is simply physiologically behind. This is an especially precarious time to make strong statements about which children will need severe interventions and which ones just need a bit more scaffolding in early stages of regulatory development (National Research Council and Institute of Medicine, 2000; K. Magnuson, personal communication, June 4, 2014).

Key Questions

What Internal or External Changes Are Taking Place that Influence Development in Middle Childhood?

Cognitively, children in middle childhood develop and refine the ability to think in increasingly abstract ways, including the capacity for systematically handling more complex representational ideas.[250] In early childhood, children may be able to perform simple tasks that require the coordination of one or two discrete ideas; the ability to think abstractly and systematically about things that are not immediately present begins to develop around ages 6 to 7, culminating in children's ability to understand the logic of concrete objects and events.[251] This ability to understand concepts more theoretically helps to grow children's understanding of themselves; during this stage, they expand the ways in which they understand who they are to include more psychological aspects of themselves, including their capabilities and emotional states.[252]

Children frequently make multiple institutional transitions during middle childhood, including the entry into formal education (elementary school) around age six. This transition presents children of this age range with a new challenge: the need to regulate their behavior *across different settings*. As they enter a formal school setting for the first time, children face new expectations that they adapt their behavior appropriately for this new setting—a setting that could be very unlike other places they have experienced. One of our interviewees, Sara Rimm-Kaufman, a researcher at the University of Virginia who focuses on applied work, describes the kinds of changes children face in this new setting:

> We asked over 3,000 kindergarten teachers from around the country about what they, as teachers, see as the most critical skills for students to have when they make the transition into school. Our initial hunch was that teachers would talk about the importance of early reading skills or other academic competencies. Instead, most teachers deemed following directions as the skill that they believed was the most important. Consider the nature of activities in kindergarten—students need to listen to their teachers, engage in self-directed and small group work, get into line, make transitions between activities. Engaging in any of these activities successfully requires self-regulatory abilities. —Sara Rimm-Kaufman, professor of education, Curry School of Education, University of Virginia[253]

As Rimm-Kaufman describes, children are challenged in many new ways as they enter formal schooling environments, and are expected to exhibit extensive self-regulation in ways they were never expected to before. At the same time, children have increasing exposure to peers and other (nonfamilial) adults, and decreased time spent with families. Thus, while children in the elementary grades are learning to manage their behaviors, they are also using interpersonal skills to negotiate new friendships and managing increasingly independent interactions with peers.

What Are the Primary Areas of Development in Middle Childhood?

As with younger children, those in middle childhood are continuing to develop their self-regulation and interpersonal knowledge and skills. On top of that, there is a large emphasis on developing learning-related, or academic, knowledge and skills (**see Figure 6**).

Self-Regulation: Self-awareness and self-control.

Children's cognitive development is evident not only in advances in their formal reasoning, but also in their capacity for self-reflection—in both academic and social settings. During these years, brain development allows children to hold onto more information at a single point in time and to

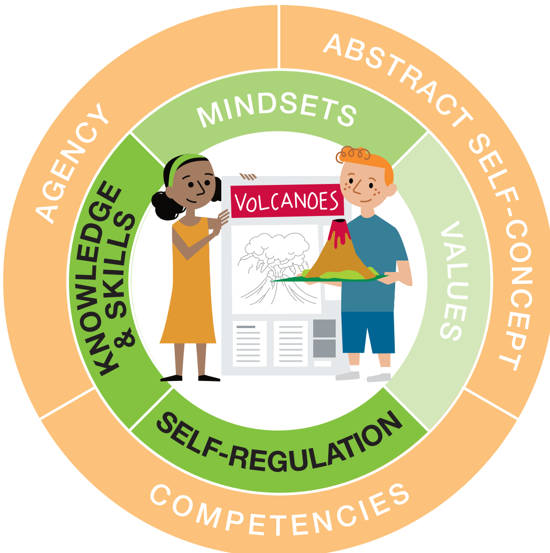
FIGURE 6

Middle Childhood (Elementary School, Ages 6-10)



reflect on internal and external stimuli as they become less egocentric.[254, 255] In fact, children's abilities to engage in all aspects of self-regulation expand—in perceiving stimuli, planning, managing, and reflecting. The further development of executive function skills and more abstract thinking enables greater awareness and meaning-making in the increasingly social settings in which they spend time.

General cognitive developments also support another type of awareness during middle childhood: metacognitive awareness—that is, thinking about one's own thought processes. Metacognition allows children to reflect on and adapt their use of concrete, specific learning skills and strategies (e.g., study habits).[256] With the start of formal education, middle childhood is an especially important time for parents and educators to be thinking about ways to develop children's self-regulatory skills, including various types of awareness; these skills underlie many of the behaviors and attributes that are associated with successful school adjustment,[257] a predecessor to continued success in school.

Learning-related skills and content knowledge. The aforementioned growth in self-regulation and metacognitive abilities has ramifications for strengthening learning-related skills. When children enact learning-related skills, they exhibit behaviors like self-control, staying on task, organizing work materials, working independently, listening and following directions, and participating appropriately in groups.[258] As children progress through middle childhood, the ability to plan, evaluate, and modify their use of strategic learning behaviors develops further. This improvement in learning-related skills helps to support the influx of new knowledge obtained during these years. And indeed, a primary focus within elementary schools—particularly in the earlier grades—is on the acquisition of the content knowledge needed to succeed academically in future years. There are good reasons for this emphasis. First, this is a time period when children's cognitive abilities expand and allow for more effective learning and increased understanding of more complex concepts. Second, when children do not acquire early content knowledge, they are likely to fall behind their peers academically; this follows children throughout the elementary school years and beyond.[259]

Interpersonal skills. Middle childhood is a time when children spend increasing amounts of time with other children, and their growing cognitive capabilities combine with these new experiences to help strengthen their interpersonal skills. Children's growing capacity for self-reflection also manifests in increasingly complex perspective-taking, whereby children become able to handle others' perspectives and to coordinate multiple social categories.[260] Adult support is vital to helping children build healthy peer relationships and negotiating these new tasks; the ability to develop positive friendships with peers through the use of interpersonal skills and behaviors will facilitate positive outcomes later in life. Conversely, the devel-

254 The term *"egocentric"* is commonly used in the development literature, as it marks a transition from children seeing the world and themselves from their own perspective to seeing them from multiple perspectives.

260 Flavell (1977); Watson (1981).

opment of poor relationships during this period puts children at risk for emotional and behavioral issues in adolescence and in adulthood.[261] For those children who struggle with peer acceptance, there is also an increased likelihood in adolescence of dropping out of school and encounters with police.[262]

How Do Experiences Shape Development in Middle Childhood?

As the increase in cognitive function facilitates an increase in self-reflection and perspective-taking, children begin making sophisticated social comparisons, including comparing and contrasting their own behavior with that of their peers.[263] A supportive environment is vital to the development of a child's self-concept, and in middle childhood, a child's sense of self becomes both more stable and more abstract.[264] There is a great emphasis on the need for developing a strong sense of oneself as capable and independent. As children gain the capacity to compare themselves to others, it is notable that children are likely to think about themselves in a manner that highlights the way they are different or how they stand out from others.[265] They use this information to evaluate themselves as being good at something or not; as such, they begin to develop early mindsets related to self-efficacy and the roles that ability and intelligence play in performing well.[266] While middle childhood remains an important period for developing greater independence, children still rely substantially on adults and institutional settings to provide consistent structure and feedback on their performance, thereby exerting substantial influence on the judgments children reach about themselves, their peers, and their developing identity.

Many of the components articulated in the Foundations for Young Adult Success developmental framework begin or continue to develop in middle childhood, laying the foundation for later success. Our review of the literature indicates a heavy emphasis on cognitive development during these years; indeed, practice—especially in schools—often hones in on cognitive development and content knowledge. However, a deeper look expands this perspective and highlights that several other foundational components are maturing during this stage of life as well. These include self-regulatory processes; knowledge and skills beyond content knowledge, including learning and social skills; and early mindsets about a person's capabilities to accomplish their aspirations. As adults consider the range of developmental experiences and interactions they provide for elementary school-aged children, it would behoove them to consider the varied needs of youth in this age group.

While the current literature on this developmental stage does examine children in new social situations, the focus is primarily on children in the context of the classroom. In particular, researchers have made great strides recently in identifying the ways self-regulation in middle childhood is associated with adaptive classroom behaviors, the ways and means by which children form friendships based in the classroom during middle childhood, and the ways in which middle childhood is a time of cognitive development. However, less research has focused on children in family and community contexts; the goal of very little research has been to understand how the cognitive, social, emotional, and physical development that occurs during middle childhood happens in the multiple domains of the child's life. Such research is undoubtedly needed, since middle childhood is a time where many different aspects of a child's development must fall into place to support the rapid growth and development that will occur in adolescence.

How Is Development In Middle Childhood Related to Development in Other Stages?

Development in middle childhood builds directly off of the advances children make in early childhood. As children transition from early childhood into middle childhood, their cognitive capabilities continue to expand greatly. The general cognitive changes that take place enable children to think more abstractly, rather

266 Gecas (2003); Stipek & Gralinski (1996); Zimmerman & Ringle (1981).

than in very concrete ways. This includes a child's sense of self. For example, most children in middle childhood view their self-identity as stable, and do not believe they can become a completely different person.[267] Although frequently conceptualized as a developmental plateau by earlier theorists (e.g., Freud, Piaget), middle childhood represents a critical transitional period during which children establish a growing sense of competence, independence, and self-awareness upon which later identity development during adolescence builds.[268]

A reliance on self-regulation also continues to be crucial in the middle childhood years. As children get older, however, the manifestations of self-regulation begin to change from what they once were. In early childhood, self-regulation largely focuses on the management of emotions and of interactions with peers. As children progress through middle childhood, the goals of self-regulation become broader. They expand to include how to set goals and develop organizational skills, such as remembering to bring a textbook home from school to complete homework. This transition into more advanced types of self-regulation sets the stage for early adolescence when more responsibilities are placed on youth.

Early Adolescence

(Middle School-Aged Children; Ages 11 to 14)

The middle grades roughly overlap with the period of development known as *"early adolescence,"* between ages 11 to 14. This developmental phase is a time of great physiological, psychological, and social change, including entrance into puberty. Also occurring during this period are drastic changes and reorganization in the brain, particularly in the prefrontal cortex, resulting in significant cognitive developments.[269] Early adolescents begin to capitalize on their previous knowledge, skills, and self-regulatory abilities to build toward high-level thinking and more coordinated social activities. They show marked improvements in their deductive reasoning, cognitive flexibility, efficiency and capacity for information processing, and expertise in a variety of domains,[270] including *"improvements in various aspects of executive functioning, including long-term planning, metacognition, self-evaluation, self-regulation, and the co-ordination of affect and cognition."*[271] Kelly Dwyer, chief knowledge officer of Spark, an out-of-school program for middle school students, describes the plethora of changes taking place for youth of this age:

> Middle school is such an intense time period for kids; they're growing older in every way you could possibly grow, and they bring that to everything they do...First of all, in their prefrontal cortex all these synapses from childhood get pruned away—things that they're not really using as much—and the synapses that are in their brain start to become more solid...And then also in their limbic system, their hormones are basically like lighting that up, right? And that system is in charge of how a person assesses risk and how willing they are to take risk...The other big thing is, from a personality development standpoint, they're thinking about who they are in the world for the first time. —Kelly Dwyer, chief knowledge officer, Spark[272]

Amidst these changes, literature has identified the major developmental task during adolescence as the search for identity.[273]

Key Questions

What Internal or External Changes Are Taking Place that Influence Development in Early Adolescence?

Since the foundational components and the key factors for young adult success can only be developed through interactions with others, or psychological reciprocity, young people in this stage will seek a peer group to help advance their development.[274] In particular, early adolescents are using peers to explore some sort of identity.

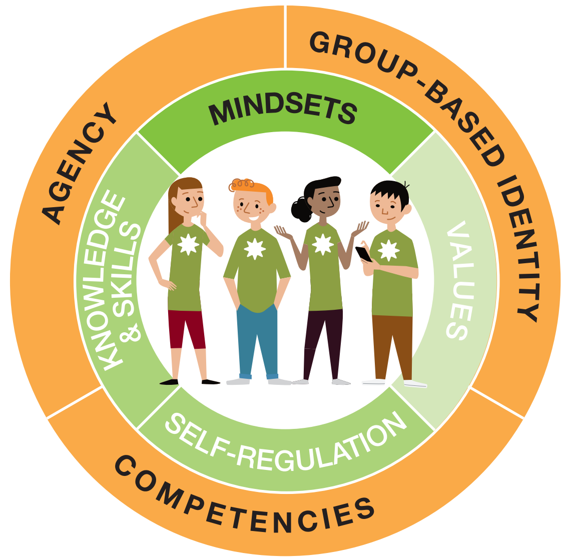
274 Erikson (1950/1963).

The peer social context becomes much more influential during this stage of life, and young adolescents are preoccupied with trying to find where they fit. The increased executive function skills and awareness also enable an acute attention to social status among peers.

As with youth in middle childhood, early adolescents enter a very different institutional environment as they move from elementary school into middle school and/or the start of high school. Overall, early adolescence represents a great time of change, and young people's experiences during this period can set them on a trajectory that will continue to influence their development through middle adolescence and young adulthood.

FIGURE 7

Early Adolescence (Middle Grades, Ages 11-14)



What Are the Primary Areas of Development in Early Adolescence?

Youth in early adolescence continue to develop their self-regulation and interpersonal knowledge and skills, but the most salient areas of development during these years are group-based identity development and a number of mindsets (**see Figure 7**).

Group-based identity development. As young teens enter the middle grades, they are very concerned with *"developing a sense of group cohesion"* with peers,[275] much more so than in previous stages. The peer group affiliation drives development of foundational components such as mindsets and an awareness of self, as well as values derived from their peer group. Teens *"look to their peers for acceptance, importance, and unity. Within the context of building peer relations, adolescents learn loyalty, empathy, criticism, and rejection."*[276] The sense of belonging they seek shapes adolescents' early identity, particularly their social identity as being autonomous from their parents and family. During this time, youth are learning to establish more intimate friendships and staking out some degree of independence from their parents and families by identifying with a crowd. This identification provides clear developmental benefits and influences on early adolescents: crowds contribute to identity development by connecting teens to a social network and establishing norms of behavior for their members.[277] These changes help adolescents build narratives of themselves separate from their family unit, and apply agency toward new interests outside of the home.

Emerging mindsets. As young teens seek out peers who dress, look, and behave like they do to find acceptance in a peer group[278] (and simultaneously change their dress, look, and behavior to fit in), a number of mindsets are being developed. Here, the onset of puberty and the development of sexuality during early adolescence add complexity to social bonds with same-age peers. Any physical features that seem to differentiate one from the crowd have a considerable impact on a middle school student's view of self, and even a negative psychological impact.[279] In particular, the focus on peer acceptance affects young adolescents' self-efficacy and self-esteem.[280] As they enter early adolescence,

275 Hazen, Scholzman, & Beresin (2008, p. 163).
276 Gutgesell & Payne (2004, p. 80).
277 Susman et al. (1994).
278 Akers, Jones, & Coyl (1998); Gutgesell & Payne (2004); Hogue & Steinberg (1995).
279 Gutgesell & Payne (2004); Hazen, Scholzman, & Beresin (2008).
280 Self-esteem refers to the general valuing of one's worth. Whereas self-concept describes the content of the self, self-esteem places a value on that content and is thus associated with positive (pride) or negative (shame, disgust) emotions that coincide with a positive or negative judgment.

teens experience more day-by-day fluctuations in self-esteem than they did in childhood, though these eventually stabilize over time.[281] Important influences on self-esteem in adolescence include parental approval, peer support, adjustment, and success in school.[282] When early adolescents have greater self-esteem, they are more likely to feel a sense of self-efficacy about different activities and relationships they are engaged in.

As youth transition into the middle grades in early adolescence, a change in academic attributions also occurs. Recall that in middle childhood, children begin to sense that they are *"good"* or *"not good"* at something; in early adolescence, this materializes into a more articulated distinction between ability and effort, or *"not working hard enough"* and *"not being smart enough."*[283] Over time, young teens begin to develop a *"fixed"* mindset (as opposed to a growth mindset); that is, they tend to attribute performance increasingly to ability, or at least to see ability as a more formidable constraint on their performance.[284] These emerging mindsets have implications for students' success as they navigate the transition into high school. For a significant number of students, their performance attributions, coupled with their doubts about the malleability of intelligence, cause them to withdraw effort just when the academic context requires both more effort and better use of appropriate strategies for learning. The emphasis on social comparison in the middle grades also sets up a context in which less prepared or lower performing students do not want to call attention to their learning struggles and *"may adopt behaviors and strategies to avoid failures—devaluing challenging tasks, self-handicapping, and withdrawing effort altogether."*[285]

How Do Experiences Shape Development in Early Adolescence?

The fact that early adolescents are grappling with these new ways of seeing themselves—in terms of both identity and self-efficacy—has implications for how they react to the school settings in which they spend much of their time. Jacqueline Eccles and her colleagues have shown how cognitive and social behavior changes in early adolescence collided with school environments and instructional practices in a way that undermined students' engagement and performance; in essence, they described a lack of *"fit"* between early adolescents' developmental stage and the middle school environment.[286] These findings are summarized in an earlier UChicago CCSR report:

> Paradoxically, at a time when adolescents are becoming developmentally ready to assert increasing personal autonomy and assume greater responsibility for their learning, middle grades classrooms become more (not less) restrictive, placing greater emphasis on teacher control and diminishing opportunities for student choice and independence. Second, at a time when early adolescents become increasingly sensitive to social comparison, instructional practices in middle grades classrooms tend to reward ability over effort and highlight social comparison. Third, at a time when adolescents develop the ability to engage in more complex, abstract forms of problem-solving, the academic demand of class assignments declines during the middle grades—schoolwork often becomes less (not more) challenging.[287]

281 Alasker & Olweus (1992).
282 DuBois, Bull, Sherman, & Roberts (1998); Luster & McAdoo (1995); Steinberg & Morris (2001),
283 Nicholls & Miller (1984).
284 Covington (1984); Dweck & Leggett (1988); Nicholls & Miller (1984).
285 Farrington et al. (2012, p. 56).
286 Eccles, Lord, & Midgley (1991); Eccles & Midgley (1989); Eccles, Midgley, & Adler (1984).
287 Farrington et al. (2012, p. 57).

Creating successful contexts for early adolescents—whether inside or outside of schools—would require that we meet their developmental needs for increasing independence from adult control, extended interaction with peers, exploration with things they have interest in, and opportunities to engage in increasingly complex forms of thinking, communicating, and problem-solving. It also calls for attending to the various foundational components that are in play during every experience an adolescent has. One example of a program that is helping to support youth in these ways is Spark, an out-of-school apprenticeship program that works with middle grade students to address the issue of disengagement that occurs in middle school. Their executive director of Spark, Chicago describes:

> Students in middle grades don't find a direct link between what they're doing in school and their life. Classroom learning is not tied to their personal interests and it's not hands-on. So they're bored by the way they're learning... Spark is trying to make those connections for students. One example is a student, Jeffrey, who was struggling in math but loves to skateboard. We paired him with a mentor at an architecture firm for his apprenticeship. For his Spark project, he actually got to build a skate park because, of course, that ties to his interests, and he was super excited. But then, Jeffrey starts to understand why geometry is important and how he might relate math to something that he likes and is interested in. —Kathleen St. Louis Caliento, executive director, Spark, Chicago[288]

This example highlights how developmental experiences—in this case, in-school learning vs. an apprenticeship aligned to Jeffrey's interests—can either hinder or facilitate youth engagement with exploration and learning. Indeed, scholars have argued that the more rigid structure, decreased individual attention, and evaluative environment of middle and high schools constitute a mismatch between developmental stage and the environment, which exacerbates many problem behaviors.[289] By attending to Jeffrey's interests and adapting his experiences to those interests that he holds (a key aspect of developmental relationships), Jeffrey is more likely to engage in learning; the experiences presented to him support a higher level of connection between his apprenticeship and school, and thus an expansion of his existing skills.

How Is Development in Early Adolescence Related to Development in Other Stages?

As the focus moves from middle childhood to early adolescence, there is a distinct shift in the literature from an emphasis on the development of self-regulation and early social interactions toward the development of identities—particularly adolescents' social and academic identities. During these early adolescent ages, youth are continuing to develop abstract thinking and focusing more on the comparison of the self to others. These developments allow for further refinement of self-awareness and executive function skills, including self-regulation, metacognition, setting goals for oneself, and the application of learned strategies, all of which support the achievement of academic, social, and personal success. Youth in early adolescence are also laying the groundwork for later identity development, particularly the various identities and opportunities for agency that will emerge in different parts of their lives as they move into their later teen years.

In short, the middle grades may be best understood as a time of intense transition as young teens begin to pull away from family and seek to establish themselves in the world of their peers, grappling with the meaning of the self in relation to others. As researchers Gutgesell and Payne observe, *"the teen is finding self-expression and forming moral thought while struggling with an emerging image of self in society."*[290] Peers clearly have a powerful, ongoing influence on early adolescents' conceptions of themselves, their psychological development, and their daily behaviors, all of which contribute to their emerging senses of identities.

Middle Adolescence

(High School-Aged Youth; Ages 15 to 18)

Youth in high school, roughly ages 15 to 18, are in what is known as middle adolescence, the developmental stage that follows the drastic physical and neurological changes of puberty. Middle adolescence brings more physiological stability and better adjustment—psychological and social—to the changes that occurred during the previous stage of adolescence. However, this is also a time associated with greater risk-taking and experimentation as adolescents advance their various senses of identity and agency. In fact, the fundamental developmental task in this stage is for teenagers to sample widely the broad range of roles and experiences available to them, while not jeopardizing long-term health and safety.

Key Questions

What Internal or External Changes Are Taking Place that Influence Development in Middle Adolescence?

Several factors support greater identity formation in the high school years, including continued increases in cognitive capacity and changes in adolescents' social relationships. Entrance to high school brings with it a wide variety of new opportunities and experiences, as well as increased academic demands. Though not all teens engage in or have opportunities for all experiences, it is during this developmental stage that young people generally begin dating and entering into sexual relationships, driving a car (opening up new opportunities for independence), working in paid employment, and experimenting with drugs and alcohol; each of these experiences contributes to further development of various identities in the multiple facets of their lives (e.g., as a romantic partner, as an employee). Middle adolescents also begin having to make decisions with both high-stakes and long-term consequences.

Cognitive developments during this phase support teenagers' ability to appreciate, learn from, and value different viewpoints. The thinking of teens in the high school years is less confined to absolutes (black and white), giving them a higher level of comfort with ambiguity. This corresponds with a greater acceptance of others' individuality and less emphasis on conformity to group norms that characterized their social relationships in early adolescence.[291] Their cliques expand to include peers of the opposite sex, and they spend increasing amounts of time in mixed-sex groups.[292] High school-aged adolescents also tend to have somewhat broader and/or more numerous social groups than they had in the middle grades, and they are more willing to step out of their comfort zone to experiment with different aspects of the self.

What Are the Primary Areas of Development in Middle Adolescence?

During the high school years, the major developmental tasks include discovering a sense of values and an individuated identity (**see Figure 8**). These rely on developing positive mindsets and knowledge of the self that is differentiated from others.

Values. In contrast to earlier stages, having a sense of personal values emerges as a self-defining characteristic for middle adolescents. Whereas young children define themselves in terms of concrete attributes and middle-schoolers define themselves by a peer group, high school-aged youth form a much more independent sense of the things they place value in. Teenagers in this age range experience a higher level of cognitive functioning, which gives them greater capacity to identify and reflect on what they value about themselves, their peers and family members, and the world writ-large. They *"begin to view themselves in terms of personal beliefs and standards, and less in terms of social comparisons."*[293] This is important for future endeavors because when an individual determines what holds value, he is more motivated to harness his knowledge and skills toward that end; in this way, values play a crucial role in exercising agency toward realizing one's potential. Additionally,

291 Shulman, Laursen, Kalman, & Karpovsky (1997).
292 Brown (1990).
293 Steinberg & Morris (2001, p. 91), with additional reference to Harter (1998).

establishing a clear set of individual values can help link past experiences with current and future motivations and behaviors, and thus will be central in forming an integrated identity.[294]

Individuated identity. In contrast with early adolescence, when youth define themselves by the norms and interests of their peer groups, middle adolescents begin asking *"big questions"* about themselves, their values, and their place in the world.[295] They are seeking an individuated identity—a sense of who they are independent of others around them. Young people in this age range *"are beginning to find their own voice, beliefs, and values; and they are beginning to set and act on personal goals. They are learning to invest in their own learning experiences, productivity, and creativity; and they are forging the enduring motivational structures that will carry them into adulthood."*[296] These developments play a crucial role in how youth begin to define their individuated identities, and ultimately how well they are able to consolidate their various *"selves"* into an integrated identity.

FIGURE 8

Middle Adolescence (High School, Ages 15-18)

How Do Experiences Shape Development in Middle Adolescence?

Neurological changes during middle adolescence lead to lower levels of self-regulation, resulting in a time of increased risk-taking. Some adolescents are wired to seek pleasure and excitement without the benefit of adequate compensatory regulatory control. As Lawrence Steinberg described it, there is a mismatch between *"the gas pedal and the brake."* Particularly in the early years of high school, there is an increase in the activity and development of the areas of the brain associated with pleasure-seeking and rewards, while development in the areas of the brain associated with behavior regulation is not complete until later in life.[297] Combine this developmental mismatch with adolescents' search for individuated identity and this stage of life becomes a time when many teens experiment and put themselves in new situations to try out various potential *"selves."* These experiences provide the essential raw material from which they will be able to form a more mature integrated identity. In all these cases, the experience of trying on new roles, exploring the self, and considering one's place amongst others drives identity integration. Lila Leff, founder of Umoja Student Development Corporation, encapsulates how natural it is for adolescents to tinker, practice, and choose different roles:

> I think one important part of building out an identity is that you practice and play around in things and think about who you want to be in them. And you try on different roles. Think about all the different personalities you can take on when you're babysitting, or you're working at the movie theater with kids you don't go to school with, or you're doing whatever. Kids need time and room to do that and to figure out: How do I see myself? Can I still be true to myself and

talk differently in different situations? It's practicing code switching; not because somebody told it to you, but because you really experienced it. —Lila Leff, founder, Umoja Student Development Corporation[298]

As a practitioner, it can sometimes be difficult to distinguish between harmless experimentation and *"enduring patterns of dangerous and troublesome behavior."*[299] Many adolescents exhibit a pattern of problem behaviors that are adolescence-limited and developmentally normative.[300] It turns out that most serious problems observed in middle adolescence actually had their start at an earlier age. Accordingly, predicting long-term behavioral problems is best assessed by looking at behaviors *before* entry to adolescence, which places additional importance on monitoring social-emotional behaviors in middle childhood. Most problems that present themselves for the first time in adolescence are *"relatively transitory in nature and are resolved by the beginning of adulthood, with few long-term repercussions."*[301]

Like the mismatch between early adolescents and middle schools described in the previous section, we see evidence of a similar lack of fit between the developmental needs of older adolescents and many high schools. Studies often find that adolescent students exhibit decreased interest and motivation to learn and seem unwilling to take on the challenging academic tasks of high school.[302] Researchers Halpern, Heckman, and Larson argue that this is largely because high schools afford young people *"little opportunity to experience a sense of ownership [or] deepening participation in a goal-oriented community"*[303] aligned with their developing capacities and interests. When students enter high school, they experience a decline in emotional support for learning from teachers and peers,[304] along with a high-stakes assessment environment that amounts to a *"motivational framework based on fear,"* often resulting in young people's *"intellectual and psychological withdrawal."*[305]

Despite this misalignment, the high school context is one setting that drives the development or reinforcement of foundational components during this period. The knowledge students gain through high school education—particularly the knowledge they gain relative to their peers—will affect future success, both by directly affecting the acquisition of further knowledge and through changes in self-efficacy caused by self-awareness of their relative academic standing. Their ability to overcome self-regulation challenges will inform the extent to which they are able to develop and exhibit important competencies, and high school performance will inform mindsets about the self and the self as a student. In the process of identity development, adolescents need to experiment with new roles and responsibilities and try on new images of the self. They need to be exposed to and explore *"future possible selves"* that they might not have previously imagined for themselves,[306] and these opportunities will be fostered or constrained by the school context they are in.

Middle adolescents need opportunities to generate data about the self in response to the questions that most motivate them: *"Who am I?" "What do I have to offer to others?"* and *"What can I do in the world?"* Without support for this kind of exploration, adolescents in the high school years are not able to fulfill the developmental tasks before them. The challenge is in finding productive outlets and opportunities for their developing capacities, such as opportunities in out-of-school activities, work, and community settings.

How Is Development in Middle Adolescence Related to Development in Other Stages?

Early development of mindsets continues to influence how youth in this stage interact with others and respond to their experiences. It remains crucial that as middle adolescents seek out an understanding of their values and identity, adults encourage youth to be open to new experiences. When adolescents engage with a

wide array of experiences, it lays the groundwork for future decisions post-high school.

High school adolescents recognize seeming discrepancies in the self, and may describe themselves in terms of behavior that can differ according to differing social contexts (for example, being shy at school, gregarious with friends, and respectful toward parents). As teenagers continue to mature, they report fewer such discrepancies and a more consistent view of themselves across contexts.[307] Studies also show that *"adolescents evaluate themselves both globally and along several distinct dimensions—academics, athletics, appearance, social relations, and moral conduct."*[308] The ability to recognize these various *"selves,"* and understand that they can both be distinct from one another and still contribute to a single identity, is the basis for what happens in the next stage of development: developing an integrated identity.

Transitioning into Young Adulthood (Ages 19 to 22)

Late adolescence is a culmination of all the growth and development that has transpired from birth to this stage. Youth ages 19 to 22 are transitioning from adolescence into young adulthood—a time when individuals begin to make their own decisions about the path they will take as an independent adult. The primary developmental task of young adulthood is integrating different social roles into a coherent identity with a stable set of commitments to roles, values, and beliefs. Compared with early and middle adolescence, young adults show increasing maturity in their selection of and participation in social groups. Whereas early adolescents had a strong drive to belong to same-age social groups to foster their evolving identity, for young adults *"the goal of independence dominates thinking; vocational, educational, and personal issues are major decisions."*[309] Belonging to a *"crowd"* grows continually less important as young people display *"increasing comfort with [their] capacity to choose among many different groups and to endorse selectively the values that have particular relevance"* to them.[310] Sexual orientation and gender identity become consolidated in middle and young adulthood. The primary social development in young adulthood is the entry into romantic and longer-term sexual relationships. Sexual experimentation is normal and expected.[311]

Throughout the adolescent years, youth are working toward their own notions of identity. By young adulthood, a person with an integrated identity has *"an explicit theory of oneself as a person,"*[312] what Northwestern University professor Dan McAdams calls a *"narrative identity,"* with explanatory power to make the many plot twists of one's life cohere around an organized, singular, and agentic sense of self.[313] To achieve this notion of rational agency requires a process of holistic development: integrating the various domains of one's personhood into one integrated sense of self, with all the parts working in conjunction to achieve one's individual and social purposes.

Primary Area of Development in the Post-High School Years: Integrated Identity

Erik Erikson postulated that the key task of adolescence was to develop a viable sense of identity that links childhood with adulthood and that situates choice and agency within the individual.[314] Adolescents who *"do not form a coherent sense of self and values…will lack a consistent sense of identity as they progress into adulthood."*[315] According to a further articulation of Erikson's theory of identity development espoused by James Marcia, as adolescents get closer to adulthood, they experience more pressure to make choices about their future. Individuals are either able to make commitments to particular values and beliefs and integrate their multiple social roles into their identity, or they adopt a ready-made identity handed to them by others without really considering a wider range of options, or they simply give up on making such commitments and return to a state of identity diffusion.[316]

FIGURE 9

Young Adulthood (Post-Secondary, Ages 19-22)

Young adulthood is a critical time period in determining the future of one's life. The process of integrating identity is best supported by exposing young people to a variety of opportunities and possibilities—of roles, perspectives, educational and career paths, and future possible selves—and encouraging them to explore these options, rather than constraining their choices or pushing them to quickly choose a long-term path. Success in the developmental task of this stage rests on the foundation built in earlier stages of life, but it is fundamentally determined by the approach older adolescents take to making choices and commitments for their future. In young adulthood, many youth are continuing to build upon the foundational components depicted in the Developmental Framework for Young Adult Success (**see Figure 9**); they possess stronger reasoning capacities and the ability to anticipate long-term outcomes. They have the ability to set goals with a narrative that helps support their planfulness and select strategies to achieve them. Their cognitive growth also enables young adults to overcome the risk-taking behavior of middle adolescence, and enact better self-regulation over their emotions and behaviors. All of this depends on a firm footing of the foundational components shown previously: awareness of self and others and self-regulatory control, the knowledge and skills one has developed through school and other learning activities, the mindsets one has cultivated, and the values one is committed to. Finally, though, they depend on the identity choices one makes, and the extent to which those choices are based on a broad sampling of possibilities.

With positive and varied experiences throughout early development, young adults are bound to have the physiological and cognitive capacities they will need to embark on a life that is both independent yet connected to important others. If all has gone well up to that point, or if adults intervened at key points when help was needed, the young adult will most likely be able to integrate her various life experiences, roles, and group memberships into a coherent and autonomous sense of self. The ultimate goal of positive youth development is to support children, adolescents, and young adults to set their own aspirations and have the agency and competencies to attain their goals. As so clearly stated by one of our interviewees who works with adolescents and young adults, Leslie Beller, the goal is to develop youth into individuals who exhibit the following:

> The ability to make active choices over their own future, and make legitimate choices grounded in an understanding of who they are, grounded in an understanding of the social realities which they face, understanding how to actually overcome those barriers if desired, and to feel confident that the choices they make are grounded in their own understanding of themselves and their understanding of their own context, which would allow systems to not manipulate them as [they do] often based on the economic needs. —Leslie Beller, Chicago Public Schools, and director and founder, MHA Labs[317]

317 UChicago CCSR interview with Leslie Beller, director and founder, MHA Labs (January 29, 2014).

What happens as adolescents transition into young adulthood is strongly shaped by the ways in which and degrees to which earlier developmental tasks were met. They draw upon the foundation laid in each preceding stage or the interventions that have successfully compensated for prior developmental lapses. To meet the development tasks as one embarks on young adulthood, a young person should be able to draw upon a basis of secure attachment/trust; the core components of self-regulation, including awareness and reflection; a sense of their own agency and ability to take initiative; and a robust sense of possibility based on exploration. An integrated identity is best achieved when youth are presented with and encouraged to explore a wide variety of opportunities and life possibilities and develop key competencies before prematurely deciding on one course or inadvertently limiting their options by failing to act. Integrated identity draws on experiences and opportunities, incorporating them into memory to shape future behavior patterns and self-concept.

CHAPTER 4

Conclusion and Implications for Practice, Policy, and Research

In the United States today, youth are coming of age amidst substantial and widening economic inequality, coupled with diminishing access to opportunity for huge segments of the population.

This delivers a *"one-two"* punch for far too many children: they experience the extra burdens of being on the wrong side of the economic divide—food insecurity, unstable housing, exposure to community violence, toxic stress—compounded by stark differences by income, race/ethnicity, and geography in access to high-quality educational opportunities, access to preventative health care, and parental and community investments in experiences that foster learning and growth. Inequality is reproduced in part by limiting young people's opportunities to develop assets that are valued in society. The stark reality is that, whether we think in terms of traditional domains of academic knowledge and skills, *"21st century"* competencies (e.g., problem-solving, critical thinking, and communication), or individual artistic or intellectual passions, young people face clear and significant gaps in opportunity to reach their full potential. This plays out in a number of ways. For example, as payoffs to advanced education are rising,[318] post-secondary opportunities that can lay the groundwork for successful young adulthood are increasingly constrained by gaps in earlier opportunities to develop basic knowledge and skills from early childhood through high school. The sad fact is that, in the United States today, large swaths of the population are denied the opportunities to develop the competencies, knowledge, skills, and self-regulatory capacities that are essential for productive adult functioning, or the mindsets, values, agency, and integrated identity that would enable them to set and achieve goals of personal importance and direct their own lives.

The good news is that there is a strong convergence of evidence about how young people develop and learn, with a growing number of examples of this knowledge applied in practice. This report draws upon the research, theory, and practice knowledge base from a range of disciplines and approaches, spanning Dewey's theory of learning from nearly a century ago to recent findings from neuroscience on how the brain works, and synthesizes it into an accessible framework designed to guide the efforts of all adults who are responsible for raising, educating, or otherwise working with children and youth. In the past several years, a large number of frameworks and standards have been created to provide guidance on *what* young people need to learn. The Foundations for Young Adult Success developmental framework describes *how* to enact these frameworks and standards. It characterizes the experiences and relationships youth need to develop into young adults who have agency, an integrated identity, and the requisite competencies to successfully meet the complex challenges of young adulthood and become

318 Goldin & Katz (2008, 2009).

thriving, contributing members of their communities.

The vision behind the Foundations for Young Adult Success developmental framework is about building a society where all children grow up to reach their full potential regardless of which side of the economic divide they are born on. Currently, opportunities for rich and varied developmental experiences through K-12 schooling and informal education are largely determined by family resources; to address these inequities, it will not be enough to simply expand options by adding more well-run programs, providing a few more resources, or reforming a subset of schools. Expanding and improving options only improves access for the subset of young people who are more motivated or fortunate enough to live nearby; it still leaves many young people behind. More systematic change will be necessary to address the underlying inequities that shape the life chances of young people. It will mean building a collective sense of responsibility for expanding the possibilities for all young people, not just for our own biological children.

It will also take a transformation of adult beliefs and practices within the existing institutions and structures that shape children's learning and development. It means integrating afterschool providers' lens of youth development with educators' knowledge of learning theory with families' deep understanding of the unique needs and circumstances of their children. By drawing from the knowledge, approaches, and experience of many different adults from many different settings, we can give the next generation of young people the opportunities they need to meet their full potential.

The approach described in this report **(1)** identifies key factors and foundational components of young adult success, **(2)** considers how the backgrounds of and contexts in which young people live affect their development, **(3)** uses a developmental lens, and **(4)** makes the intentional provision of opportunities for young people to experience, interact, and make meaning of their experiences the central vehicle for learning and development. The Foundations for Young Adult Success developmental framework has clear implications for schools, youth organizations, and families, but without larger transformations in the policy landscape and larger societal and economic context, there are limits to what can be achieved. Many questions remain about how to more effectively support the development of young people and what policies and structural changes are needed; these form the basis for the research agenda needed to guide these transformations. The world we envision for the next generation of young people will require the joint efforts of educators, youth practitioners, parents and families, policymakers, and researchers. In this concluding chapter, we highlight implications for each group.

Implications for Educators, Youth Practitioners, and Parents and Families

A Narrow Focus on Content Knowledge in Isolation from the Other Foundational Components Undermines Learning and Development

Learning and development are holistic processes dependent on interactions among all of the foundational components (self-regulation, knowledge and skills, mindsets, and values). There may be conceptual reasons for distinguishing between *"cognitive"* and *"noncognitive"* factors, but this distinction has no functional meaning. Cognition, emotion, affect, and behavior are reflexive, mutually reinforcing, and inextricably associated with one another as a part of development and learning. Adults will make little headway if they target only one particular component or subcomponent in isolation. A lesson or activity might focus on a particular foundational component or key factor—be it content knowledge, emotion regulation, a growth mindset, interpersonal skills, or self-awareness—but creating an effective developmental experience rests on being intentional about the contributions each component makes to the learning experience and the ways young people are making meaning of that experience. In schools, for example, teachers are not effectively supporting optimal growth and understanding if they attend solely to teaching content knowledge. If the directions in an algebra lesson are unclear, a student may make meaning of this experience by believing that he cannot do algebra, thus undermining his self-efficacy in the class. The student may also decide that algebra does not matter and is not worth any effort, preferring this interpretation to believing he is not capable of doing algebra. In addition, if the teacher does not establish clear routines and expectations for students, the process of self-regulation necessary for learning becomes more complicated. If there are unresolved interpersonal issues among kids in a classroom, their minds might be on their peers rather than on quadratic equations. In short, the task of ensuring that students learn algebra is dependent on every other dimension of learning.

Teachers, youth workers, and parents can ask themselves questions to ensure they are taking a holistic approach to learning. Am I making sure that failure is not punished and that my child is encouraged to take risks and is open to trying new skills? Do youth have multiple chances to improve so they can develop a growth mindset? Am I helping my students develop metacognitive strategies by giving them time to reflect on the steps they took to do a lesson and consider how to improve their performance? Have I provided an opportunity for young people to think about how they might apply this content to things they care about in the world? By intentionally attending to the foundational components, teachers and other adults can guide how young people make meaning and internalize learning experiences.

Taking a Developmental Lens Is Essential to Ensuring That Structures and Practices Meet the Developmental Needs of the Young People Being Served

Although a lot is known about development, too often, there is a mismatch between the structures or practices in a youth setting and the developmental needs of the young people being served. Schools, youth programs, and even families are too often oriented to adult needs and goals (e.g., maintaining classroom discipline) instead of taking a youth-centered approach. For example, during the early and middle adolescent years, school settings become increasingly structured, less social, and less reflective at a time when youth need ample opportunities to engage with each other, explore their varied interests, and have support in evaluating events in relation to who they are and who they want to become.

Adults should have a solid understanding of the developmental needs of the young people they work with and should tailor the developmental experiences and supports they provide to the age of the youth. Although all aspects of the developmental experiences described in this report are relevant at all stages of childhood and adolescence, they vary considerably in practice depending on children's age and their cognitive and emotional development. For example, a reflective experience might consist of helping a young child understand a hurtful interaction that occurred during free play. By helping that child remember a time when she was in a similar situation, adults can play a crucial role in supporting that child's understanding of others' feelings. For an adolescent, developmental experiences would look more sophisticated and be more closely aligned with a youth's ongoing formation of her identity and vision for who she could be in the future. For example, a teacher might debrief a disciplinary incident with a student, reflecting on how others have solved a similar disagreement, and how the student's actions may or may not align with her values and identity. In either case, the most effective developmental experiences will focus on the foundational components and key factors most malleable and salient in that individual's developmental stage. Taking into consideration differences across age ranges and across individual children is crucial for creating experiences that are developmentally appropriate.[319]

Ensuring All Young People Have Access to a Multitude of Rich Developmental Experiences Is Imperative to Their Success

Growing up in marginalized communities adds to the complexity of developing into a young adult who is poised for success. While having agency equips young people to make choices and take action, their ability to successfully pursue a desired path also depends on social relationships, financial resources, and countless other external factors that are inequitably distributed. Further, the task of *"integrating"* one's identity is vastly more complicated for low-income youth and youth of color than it is for children who grow up within the social and behavioral norms of the dominant white, middle-class culture.[320]

319 Bredekamp (1987); Copple & Bredekamp (2009).

320 Deutsch (2008); Fedelina Chávez & Guido-DiBrito (1999); Phinney (1989); Phinney & Rosenthal (1992).

Responding to this reality requires a careful balance of pragmatism and aspiration. The Foundations for Young Adult Success developmental framework is designed to strike a balance between helping youth thrive in the world as it is, and developing the skills and dispositions they need to challenge a profoundly unjust status quo.[321] On one hand, school-based educators, staff in youth development organizations, and parents must prepare children to succeed in the current economy. For example, in addition to good grades and good test scores, young people from marginalized groups often need to learn to decipher and navigate unfamiliar social and institutional norms to access post-secondary opportunities. Adults do a disservice, particularly to underserved youth, if they do not recognize such realities. On the other hand, educators, practitioners, and parents can equip youth with the skills to challenge cultural norms and inequitable distributions of resources that can limit their opportunities and constrain their potential. In addition to laying out how to prepare young people for the world that is, the report provides guidance on some core questions about the world that could be: How can we design and enact practices within schools, youth organizations, families, and communities that inspire young people to not only reach their own potential, but also to create a better world? How can we help youth develop the knowledge, skills, mindsets, competencies, and agency that would enable them to confront injustice and work toward a more inclusive society?

Young people experience events, interact with others, and undergo a constant process of making observations and connections to their prior experiences to help them make meaning. They develop preferences, figure out strategies for managing relationships and determine whether an experience is something they would like to repeat. But if we hope to direct the development of young people toward positive mindsets and values and having self-regulation and skills and knowledge, adults need to structure experiences to enhance positive development and help young people internalize the lessons from these experiences. Ensuring that all young people have access to a multitude of rich developmental experiences—from early childhood through adolescence—is imperative to helping youth develop the key factors for success in young adulthood and the foundational components that underlie those factors.

Implications for Education and Youth Policy

The Foundations for Young Adult Success developmental framework provides an ambitious vision of how youth-serving adults could think holistically about development and provide rich experiences that allow young people to grow into successful young adults. This is not an endeavor that can be undertaken by heroic adults acting alone; it will require parallel efforts to rethink what policies and structures are needed to provide opportunities to children and youth; support adults who raise, teach, or care for young people; and facilitate coordination and learning across sectors. An understanding of the need for collaboration across settings and agencies to support holistic development of young people has been gaining traction; efforts such as the Strive Network and the Harlem Children's Zone have been spreading across the nation. However, one big obstacle to holistic youth development resides in the focus of current policy in the United States. To become more aligned with knowledge about youth development and learning, policy should: **(1)** shift away from a policy focus on content knowledge and standardized tests to a broader set of outcomes and measures, **(2)** proceed carefully with incorporating new measures into school accountability systems, and **(3)** provide the *"safe space"* for schools to become learning organizations.

The Current Policy Emphasis on Content Knowledge and Test-Based Accountability Undermines Practitioners' Ability to Provide Developmental Experiences

Policymakers have long been concerned about what preparation young people need for the future to become productive members of society. *"College and career readiness"* is the current mantra of the education policy

321 This report does not directly address how development of the key factors and foundational components may play out differently for different groups (e.g., by gender, sexual orientation, immigrant status, involvement in the juvenile justice system) and what specific barriers, assets, and needs each subgroup may have. This is a critical area of investigation that should be pursued.

world, where making students *"college ready"* is often narrowly defined as building their content knowledge and academic skills. The broad adoption of the Common Core State Standards is a testament to how widespread this view is; 43 states and the District of Columbia have signed on to replace their previous state standards with the new Common Core to better prepare students for college. The prevailing narrative is one of *"gaps"* between what students know—particularly what low-income youth of color know—and what they need to know in the new economy. Within this narrative, preparing adolescents for young adulthood depends on broadening access to advanced coursework and implementing rigorous academic standards to ensure that all students graduate ready for college.

Because content knowledge and skills are seen as the pathway to a college degree and productive work, test scores that purport to measure such knowledge and skills have taken on an outsized importance in the educational landscape. Teachers are increasingly evaluated on their ability to produce high test scores, a metric that has become synonymous with *"effectiveness."* Even out-of-school programs are pressured to prove their worth by demonstrating impact on school achievement tests. Test scores have become the measure against which almost all educational interventions, pedagogical approaches, and curricular programs are currently judged. The emphasis on academic content knowledge, coupled with an expansion of accountability metrics based on standardized test scores, has led to a narrowing of the types of experiences practitioners are providing to young people. Arts, music, physical education, and other *"non-core"* subjects are eliminated to make instructional minutes for more math and reading, for example. Afterschool programs are asked to have a more academic focus to better prepare students for college and career. Teachers are reluctant to devote time to relationship-building in the classroom or otherwise addressing students' psycho-social needs because of the intense pressure to stay focused on content delivery.

Content knowledge is an essential part of what young people need to learn for the future, whether in school, at home, or in afterschool programs, but it is far from the only thing that matters. Policies that put too great an emphasis on content knowledge and standardized tests create incentives for practitioners to see the teaching of content knowledge as the sole outcome of interest. As this report has shown, the other foundational components not only facilitate engagement and learning of content knowledge, but they are also important developmental outcomes in and of themselves. Policies that promote these other foundational components would help to create conditions that foster both the learning of academic content and the development of young people more holistically.

Proceed Carefully with Incorporating *"Noncognitive"* Measures into Accountability Systems

The policy window for a more holistic approach to the development and learning of young people is opening; there is growing discontent over standardized testing. Recently, a movement to integrate alternative measures of student success into school accountability systems has gained some momentum, exemplified by the California *"CORE"* districts that have received No Child Left Behind waivers allowing them to include social-emotional factors and school climate measures in place of test scores as accountability metrics. This holistic approach to evaluating students is in alignment with the Foundations for Young Adult Success developmental framework; however, some caution is necessary when using these new measures for accountability purposes.

Many important questions remain about measuring noncognitive or social-emotional factors and about their suitability for an accountability system that was developed around standardized tests. When measuring a particular construct—for example, student self-efficacy—it is difficult to disentangle a student's prior level of self-efficacy from their gain or loss of self-efficacy as a result of being in a particular school or classroom or being taught by one teacher or another. Students make judgements about their self-efficacy based on their prior experiences and may have a different baseline sense of what their efficacy is. Further, self-efficacy seems to vary considerably from one task or content area to another. Likewise, there is much murkiness as to whether measured changes in noncognitive or social-emotional factors in a school context will be transferable to other contexts. Standards for the developmental trajectory on measures of noncognitive performance do not exist; also, it is not clear what constitutes a strong vs. weak performance. The development of innovative and more traditional measures of noncognitive factors is a growing field, but further studies validating and better understanding the properties of these measures and how they are related to their intended use are needed before consolidating them into school accountability systems.

Policy Needs to Provide the *"Safe Space"* for Schools and Out-Of-School Programs to Become Learning Organizations

The ambitious vision given in the Foundations for Young Adult Success developmental framework does not provide a clear roadmap of specific practices, strategies, or programs to implement. Moving from the current approach to schooling to a more holistic and developmentally aligned approach will require trial and error. Just as young people need opportunities to tinker and practice in order to learn, practitioners also need opportunities for tinkering and practicing, as well as making mistakes, as they learn new ways of teaching and working with young people. In an age when accountability is a dominant way of managing schools, the space to make mistakes is very small. For real shifts to happen in educational practice, schools need to become learning organizations that provide opportunities for adults to learn, and policy needs to provide the *"safe space"* to do so.

For the Foundations for Young Adult Success developmental framework to become a guide for parents, caregivers, educators, and youth workers, we will need an equivalent effort to support these adults in building their capacity to create quality developmental experiences for youth, a strong identity as experts in supporting the growth of young people, and the agency to enact the framework in their daily work. To make this a reality, we need a policy focus on high-quality professional development that utilizes the developmental experiences outlined in the report. Parents and families can also benefit from having the opportunity to learn more about development and how children learn. Like the youth whom they serve, adults need opportunities to encounter, tinker, practice, choose, and contribute, and to make meaning through describing, evaluating, connecting, envisioning, and integrating. This means providing the resources and time needed to support deep professional communities and foster developmental relationships that promote good practice. It also means breaking down the siloes that exist between practitioners who work in the school and out-of-school settings so that learning can be shared.

Gaps in the Research

This report has drawn on the rich body of research evidence, theory, and practice wisdom and synthesized it into the Foundations for Young Adult Success developmental framework. Through this process we have identified knowledge gaps in what is needed to promote more effective policies and practices. One is in identifying specific developmental tasks that might have a *"critical window,"* after which it would be very difficult to achieve optimal development. Other gaps in knowledge surround the types of positive supports youth need for optimal development from early childhood through adolescence, or the *"dosage"* of particular kinds of experiences necessary to produce lasting and transferrable results.

What Practices and Strategies Promote the Development of Identity and Agency?

While researchers have learned a tremendous amount about development in the last several decades, many questions remain unanswered. In this report, we provided a developmental trajectory for the key factors for young adult success—competencies, agency, and an integrated identity. However, this relied on piecing together a number of existing theories; rarely if ever has the development of agency, for example, been studied longitudinally from early childhood through young adulthood. Theory has provided guidance on how an early sense of *"self"* underlies later identity formation, but this area is understudied in empirical research. While there is converging evidence that supports each of the developmental experiences we identify in this report, as well as the importance of developmental relationships, we do not know which specific combination of experiences would best promote the formation of integrated identity and agency. We also still lack a strong understanding of how all of the foundational components outlined here link directly to the development of competencies, integrated identity, and agency.

What Can Be Done to Intervene with Young People After Developmental Windows Close?

The Foundations for Young Adult Success developmental framework includes four foundational components—self-regulation, knowledge and skills, mindsets, and values—which are all crucial factors in a person's development toward optimal capacity. What happens if youth do not grow each of these foundational components in the developmental period during which they are most malleable? What types of interventions should we invest in—and for whom and at what period in their lives—if children seem to be falling behind? And for the youngest children, how can we even be sure that a child is falling outside of *"normative"* development, given how very wide the range of development is during the early years?

What Is the Interaction of Experiences in Different Settings?

This report also raises a number of questions about the experiences youth encounter in the various settings they inhabit on a daily basis. We know quite well that what youth experience in school often varies from their experiences with friends, at home, or even in other educational settings. What we do not know is the extent to which those experiences need to be coordinated and supportive of each other, even if they are not teaching the same skills. How much do practices at home support or inhibit what teachers, youth workers, and others aim to do with youth? How aligned do those practices need to be? And can effective practices in one setting ameliorate negative experiences in another setting?

How Can the Key Factors and Foundational Components Best Be Measured for Different Purposes?

Measurement is a core part of evaluating needs and gauging progress in any field. With the growing interest in factors other than academic content knowledge and skills, the number of assessments created to measure these factors has also grown. As discussed in the policy implications section, a number of questions about these factors and the assessments complicate their immediate implementation into practice. For example, it is very unclear whether a particular factor is best conceived as an individual characteristic that can be cultivated over time (analogous to a skill), or as a situational response to particular settings, opportunities, or expectations (similar to the concept of *"engagement,"* which can wax and wane from one moment to the next). Where it might make sense to measure growth over time in the first case, a different approach to measurement might be called for in the latter case. Further, it can be difficult to disentangle young people's prior capacities—what they walked into a setting with—from changes induced by the setting itself related to adult practice, opportunities for developmental relationships and developmental experiences, or the culture and climate of the place. In addition, neither are there standards for the developmental trajectory on these measures, nor are there thresholds for what young people need to have in order to attain a college degree, hold a family-sustaining job, or achieve any other markers of success in young adulthood.

Finally it will be important to clarify how these different assessments will be used and whether they are appropriate for the intended use.[322] Practitioners may want to be able to assess young people diagnostically prior to the beginning of the school year or program to determine how to best structure their practice in response to individual needs. They may also want assessments to measure progress in a formative way throughout their interactions with young people and adjust their practice as needed, in response to individual students and for the whole classroom or program. Finally, for both the student and classroom or program level, practitioners, administrators, and policymakers will want to have some means of making a summative judgment about performance and progress. Each of these uses will require a different type of assessment, and research has an important role to play in better understanding these assessments and shaping the discussion around their use.

In short, the demand for measures of noncognitive or social-emotional factors has far outpaced the state of the field of measurement for these same constructs.

322 See Duckworth & Yeager (2015) for a discussion of measures and their suitability for different purposes.

In a case such as this, there is great potential for measurement instruments to be misused, to produce faulty data, to conflate statistical significance with meaningfulness, or to otherwise lead practitioners down a fruitless path. We strongly urge caution in the use of measurement tools until the science of measuring these important constructs catches up with the interest in and demand for them.

Conclusion

We began this report by asking: What exactly do we hope our children will be able to accomplish as adults? What vision guides our work? How do we make that vision a reality for all children? The Foundations for Young Adult Success developmental framework is a first step in guiding practitioners, policymakers, parents, and researchers in working together around this vision, whether in reimagining how to coach a basketball team, reshaping policies in a local school district, selecting an afterschool program for one's child, or developing a study on measuring agency. Ensuring that young people grow into successful young adults requires investments in their learning and development from birth to young adulthood so that all of them have ongoing opportunities to truly reach their potential.

Making this vision a reality will require a collective responsibility for all young people. It means asking practitioners to question their own beliefs about what is possible and rethink how they work with young people on a day-to-day basis. It means asking policymakers to focus on a bigger picture and broader set of outcomes and to consider policies that would support the efforts of practitioners in developing young people. It means asking researchers to provide accessible, meaningful, and actionable answers to core questions of policy and practice. It means asking families to understand the needs of their children and work with the institutions they cross everyday so that these needs are met. It means asking for change both within existing institutions and structures while also asking what new institutions and structures might better serve our vision. Addressing the inequities of opportunities facing young adults will require more than equipping young people with the capacity to navigate the world as it exists now, it will mean that they are also able to envision and create a better world for future generations.

Appendix

TABLE A.1

List of Experts Who Provided Input and Feedback Throughout This Project

Name	Organization	Title
Barbara Abel	Educare of Chicago/Ounce of Prevention Fund	Birth to Five Curriculum Specialist
Rashida Abuwala	Boys Clubs of NYC	Chief Program Officer
Stephanie Alyward	University of Chicago	Child Assessor
Dana Ansel		Research and Evaluation Consultant
Melissa Authement	Polaris Charter Academy	Founding Teacher; Instructional Guide
Abigail Baird	Vasser College	Associate Professor of Psychology
Sara Bartolino	Transforming Education	Co-Founder and Executive Director
Rhonda Bell	Gary Comer Youth Center	Director
Sanee Bell	Katy (TX) Independent School District	Principal
Leslie Beller	MHA Labs	Director and Founder (MHA)
Ron Berger	Expeditionary Learning	Chief Academic Officer
Harry Berman	Illinois Board of Higher Education	Executive Director
Melinda Berry	Educare of Chicago/Ounce of Prevention Fund	Senior Family Support Specialist
Jessica Besser-Rosenberg	One Million Degrees	Director, Research and Communications
Suzanne Bouffard	Harvard Graduate School of Education	Researcher
Sarah Bowie	SGA Youth and Family Services	Check & Connect Manager
Daniela Boykin	CUNY ASAP	Deputy Director
Betsy Brand	American Youth Policy Forum	Executive Director
Chris Broughton	Cristo Rey Network	Senior Director of College Initiatives
Chris Brown	Elev8 Chicago	Director of Education and Engagement
Kat Bryant	Capitol Hill Day School	Middle School Teacher
Amanda Cage	Chicago Cook Workforce Partnership	Director of Strategic Initiatives and Policy
Dan Cardinali	Communities in Schools	President
Barbara Cervone	What Kids Can Do	Founder and President
Sandra Christenson	University of Minnesota	Professor
Tonya Cody-Robinson	Chicago Cook Workforce Partnership	Project Coordinator
Deloria Collins	SGA Youth and Family Services	Check & Connect Monitor
Lauren Collins	The Lab School, University of Chicago	Early Childhood Education Administrator
Denise Conkright	PACT	Executive Director
David Conley	University of Oregon, College of Education	Professor; Director, Center for Educational Policy Research
James Côté	University of Western Ontario	Professor, Department of Sociology
Philip Courtney	Urban Arts Partnership	Founder
Rachel Cytron	Harlem RBI	Associate Executive Director
Greg Darnieder	U.S. Department of Education	Senior Advisor
Joyce Debrah-Sheppard	Chicago Public Schools	Social and Emotional Learning Specialist
Regina Deil-Amen	University of Arizona	Associate Professor, Center for the Study of Higher Education

Name	Organization	Title
Aarti Dhupelia	Chicago Public Schools	Chief Officer, College and Career Success
Angela Diaz	Mount Sinai Hospital	Jean C. and James W. Crystal Professor, Departments of Pediatrics and Preventive Medicine; Director, Adolescent Health Center
Larry Dieringer	Engaging Schools	Executive Director
Jessica Donner	Every Hour Counts	Director
Michael Driscoll	Changing Worlds	Manager of After-School and Community Outreach Programs
Mark Duhon	HighSight	Founder and Executive Director
Kelly Dwyer	Spark	Chief Knowledge Officer
Jacquelynne Eccles	University of California-Irvine	Distinguished Professor of Education
Brenda Eiland-Williford	Ounce of Prevention Fund	Director of Program and Curricula
Crystal Elliott-O'Connor	Family Focus, Inc.	Associate Director, Early Childhood Development Programs
Sandra Escamilla	Youth Development Institute	Executive Director
Susan Farrugia	University of Illinois at Chicago	Assistant Vice Provost, Undergraduate Affairs
Ron Ferguson	Harvard Graduate School of Education	Senior Lecturer in Education and Public Policy
Connie Flanagan	University of Wisconsin-Madison	Professor, School of Human Ecology
Ernestine Fleming-Jones	Kenwood Academy	Attendance Coordinator
Nilda Flores-Gonzalez	University of Illinois at Chicago	Associate Professor, Department of Sociology
Ellen Galinsky	Families and Work Institute	President and Co-Founder
Kathleen Gallagher	University of North Carolina at Chapel Hill	Clinical Assistant Professor
Ruth Genn	Bottom Line	Executive Director, NYC Office
Fakelia Guyton	Family Focus, Evanston	Program Manager
Reginald Halbert	Dunbar High School	Teacher
Lucy Hall	Jumpstart	Site Coordinator
Robert Halpern	Erikson Institute	Professor
Bridget Hamre	University of Virginia, Curry School of Education	Associate Director and Research Associate Professor, Center for Advanced Study of Teaching and Learning
Marcia Hanlon	Associated Colleges of Illinois	Director, College Readiness & Completion
Colleen Harvey	Playworks	Program Director
Keith Hefner	Youth Communication	Executive Director
Carrie Heller	Circus Arts Institute	Founder and Executive Director
Mary Louise Hemmeter	Vanderbilt University	Professor, Department of Special Education; Faculty Director of the Susan Gray School for Children
Lucy Herz	Student Success Network	Program Director
Lori Hill	University of Michigan	Assistant Professor
Harry Holzer	Georgetown University	Professor, Public Policy
Stephanie Jones	Harvard Graduate School of Education	Marie and Max Kargman Associate Professor in Human Development and Urban Education
Kasumi Kato	CircEsteem	Coordinator
Leeandra Khan	Bronzeville Scholastic Institute	Principal
Michael Kristovic	University of Chicago School of Social Service Administration, Network for College Success	Adjunct Lecturer and Social and Academic Supports Facilitator
Jiffy Lansing	Chapin Hall	Researcher
Lila Leff	UMOJA Student Development Corporation	Founder

Name	Organization	Title
Frank Levy	MIT/Harvard Medical School	Rose Professor Emeritus/Lecturer, Department of Health Care Policy
Laura Lippman	Child Trends	Director for Education and Senior Research Scientist
Lori Littleton	63rd St. Corridor Center for Working Families, Metropolitan Family Services Calumet	Program Supervisor
Amy Lloyd	Jobs for the Future	Program Director, Pathways to Prosperity Network
William "BJ" Lohr	After-School All Stars Chicago	Program Manager
Katherine Magnuson	University of Wisconsin-Madison	Professor, School of Social Work
Dan McAdams	Northwestern University	Professor of Psychology; Department Chair
Michael McPherson	The Spencer Foundation	President
Beth Miller	Expeditionary Learning	Managing Director of Research and Communications
Patrick Milton	Chicago Public Schools	Senior Manager, GEAR UP
Melissa Mitchell	Illinois Federation for Community Schools	Executive Director
Alex Molina	Providence After School Alliance (PASA)	Deputy Director
Amanda Moreno	Erikson Institute	Assistant Professor
Fernando Moreno	BUILD, Inc.	Special Projects Manager
Lauri Morrison-Frichtl	Illinois Head Start Association	Executive Director
Richard Murnane	Harvard Graduate School of Education	Juliana W. and William Foss Thompson Professor of Education and Society
Jeff Nelson	OneGoal	Chief Executive Officer
Gil Noam	Harvard University, Program in Education, Afterschool and Resiliency (PEAR)	Associate Professor and Director
Jeannie Oakes	Ford Foundation	Director of Educational Equity and Scholarship programs
Daphna Oyserman	University of Southern California	Dean's Professor, Department of Psychology: Professor of Education and Communications
Kune Park		Former Middle School Teacher
Elizabeth Partoyan	Forum for Youth Investment	Senior Fellow
Desmond Patton	Columbia University	Assistant Professor, School of Social Work
Rosha Pearson	Carter G. Woodson Elementary School	Teacher
Jim Pellegrino	University of Illinois at Chicago	Co-Director, Learning Sciences Research Institute
Carla Peterson	Iowa State University	Professor and Dean
Jan Phlegar	Former Executive Director of Learning Innovations at WestEd	Education Consultant
Paige Ponder	One Million Degrees	Chief Executive Officer
Jane Quinn	Children's Aid Society	Vice President for Community Schools
Leticia Ramirez	SGA Youth and Family Services	Director of Early Childhood Services
Darryl Rattray	Beacon, Cornerstone & Service Learning Programs, NYC Department of Youth & Community Development	Assistant Commissioner
Cybele Raver	New York University	Vice Provost for Research and Faculty Affairs; Former Director, Institute of Human Development and Social Change
John Rico	Rico Enterprises	Founder, President, and CEO
Sara Rimm-Kaufman	University of Virginia, Curry School of Education	Professor of Education
Magen Rodriguez	Brooklyn School for Collaborative Studies	Teacher

Name	Organization	Title
Lori Roggman	Utah State University	Professor
Blair Root	Hyde Park Neighborhood Club	Director
Michael Rothman	Eskolta	Executive Director
Jessica Ruiz	Educare West Dupage Project	Site Coordinator
Sheila Rutter	SGA Youth & Family Services	Program Coordinator
Mandy Savitz-Romer	Harvard Graduate School of Education	Senior Lecturer on Education; Director, Prevention Science and Practice Program
Sara Sayigh	DuSable High School	Librarian
Vanessa Schwartz	Metropolitan Family Services	Program Supervisor
Robert Sherman	Former Program Officer at Novo Foundation	Independent Consultant
Chris Smith	Boston Afterschool and Beyond	President and Executive Director
Andrea Soonachan	New York City Department of Education, Office of Postsecondary Readiness	Associate Director, College and Career Planning
Brian Spittle	DePaul University	Assistant Vice President, Center for Access and Attainment
Kathleen St. Louis Caliento	Spark, Chicago	Executive Director
Wendy Stack	Chicago GEAR UP	Director
Erin Starkey	SGA Youth and Family Services	Clinical Social Worker
James R. Stone III	University of Louisville	Professor and Director, National Research Center for Career and Technical Education
Wonju Suvatne	Alexander Graham Bell Elementary School	Teacher
Vincent Tinto	Syracuse University	Distinguished Professor Emeritus
Timothy Turner	100 Black Men of Chicago	Volunteer Coordinator
Joanna Vena	Changing Worlds	Program Director
Alexandria Walton-Radford	RTI International	Associate Program Director, Postsecondary Education
Sarah Watamura	University of Denver	Associate Professor
Carolyn Webster-Stratton	University of Washington	Professor Emeritus and Founder of the Incredible Years Series
Chris Whipple	The After School Corporation	Vice President of Programs
Michael Wiggins	Urban Arts	Director of Education
Phoebe Williams	Year Up	Director of Special Projects, National
Alicia Wilson-Ahlstrom	Forum for Youth Investment	Senior Program Manager, Research and Development
Alfonso Wyatt	Fund for the City of New York	Vice President
Noreen Yazejian	Frank Porter Graham Child Development Institute	Research Scientist
Shoshanah Yehudah	Elev8 Coordinator	Southwest Organizing Project

adidas
CHEERLEADING

ABOUT THE AUTHORS

JENNY NAGAOKA is the Deputy Director of the University of Chicago Consortium on Chicago School Research, where she has conducted research for over 15 years. Her research interests focus on policy and practice in urban education reform, particularly using data to connect research and practice and examining the school environments and instructional practices that promote college readiness and success. She has co-authored numerous journal articles and reports, including studies of college readiness, noncognitive factors, the transition from high school to post-secondary education, and authentic intellectual instruction. Nagaoka is currently leading a project that is building a framework that seeks to create a common understanding of young people's developmental needs from early childhood through late adolescence and how they can be supported through developmental experiences and relationships. Her current work includes examining how networks of schools can be used to develop the capacity of practitioners to effectively use data to address issues in their schools. Nagaoka received her BA from Macalester College and her master's of public policy degree from the Irving B. Harris School of Public Policy at the University of Chicago.

CAMILLE A. FARRINGTON is a Senior Research Associate at the University of Chicago Consortium on Chicago School Research (UChicago CCSR). Her work focuses on policy and practice in urban high school reform, particularly classroom instruction and assessment, academic rigor, and academic failure. Dr. Farrington is a national expert on the role of *"noncognitive"* factors in academic performance and the role of *"developmental experiences"* in child/youth development. She is the lead author of *Teaching Adolescents to Become Learners: The Role of Noncognitive Factors in Shaping School Performance* (2012), a comprehensive research review that illustrates how noncognitive factors interact with school and classroom contexts to affect students' academic achievement. She is Principal Investigator on three studies, the national *Becoming Effective Learners (BEL)* Survey Development Project, the Chicago 8/9 Teacher Network, and the *BEL* Partner Project, all focused on better understanding the relationship between teacher practice, student noncognitive factors, and school success. The latter project involves deep work with school and district partners around the country in using surveys and other data to support teacher practice for noncognitive development and improve students' opportunities for learning. Her 2014 book, *Failing at School: Lessons for Redesigning Urban High Schools* (Teachers College Press), documents how high schools systematically construct widespread student failure for the most socially vulnerable students, and offers practical recommendations for restructuring secondary education to serve goals of equity and excellence rather than selection and stratification. Dr. Farrington received a BA from the University of California at Santa Cruz, teacher certification from Mills College, and a PhD in Policy Studies in Urban Education from the University of Illinois at Chicago.

STACY B. EHRLICH is a Senior Research Analyst at UChicago Consortium on Chicago School Research. She is a developmental psychologist with expertise in the areas of children's early conceptual development. Ehrlich has led the development of the early childhood education research agenda at UChicago CCSR. Her work at UChicago CCSR focuses on a range of topics affecting students in Chicago including studying the reasons for, and impacts of, early chronic absenteeism; developing a deeper understanding of how noncognitive factors develop over childhood and adolescence across a variety of contexts; and partnering with the Ounce of Prevention Fund to develop surveys that capture the strengths of organizational supports and structures for effective teaching and learning in early education settings. Prior to joining UChicago CCSR, Ehrlich worked at Education Development Center, Inc. as a research associate with the IES-funded Regional Education Laboratory-Northeast and Islands, where she examined questions that responded to states' educational policy concerns. Ehrlich holds a PhD in developmental psychology from the University of Chicago and a BS from the University of Wisconsin-Madison.

RYAN D. HEATH is a research assistant at University of Chicago Consortium on Chicago School Research, and a doctoral student in the School of Social Service Administration (SSA) at the University of Chicago. Previously, Heath facilitated a variety of school and community-based youth development and experiential education programs. He is also a clinical social worker with experience in cognitive-behavioral therapies, mindfulness-based approaches, adventure therapy, and anti-oppressive practices. His general areas of study include adolescent development, school experience, youth development programs, and organized out-of-school activities. His current research and dissertation examine the association of out-of-school organized activities with noncognitive factors and academic outcomes. Heath earned his BS from Brown University and an MA in clinical social work from SSA.

This report reflects the interpretation of the authors. Although UChicago CCSR's Steering Committee provided technical advice, no formal endorsement by these individuals, organizations, or the full Consortium should be assumed.

OUR MISSION The University of Chicago Consortium on Chicago School Research (UChicago CCSR) conducts research of high technical quality that can inform and assess policy and practice in the Chicago Public Schools. We seek to expand communication among researchers, policymakers, and practitioners as we support the search for solutions to the problems of school reform. UChicago CCSR encourages the use of research in policy action and improvement of practice, but does not argue for particular policies or programs. Rather, we help to build capacity for school reform by identifying what matters for student success and school improvement, creating critical indicators to chart progress, and conducting theory-driven evaluation to identify how programs and policies are working.

Code	Type	Descriptor	Guiding Question	Statement
ELA.1	Competency	Reading Literature		Read and comprehend appropriately complex literary texts independently and proficiently.
ELA.1.1	Skill	Cite evidence	How well do I use evidence to support my interpretation of the text?	I can read closely to determine what the text says explicitly and to make logical inferences from it; cite specific textual evidence when writing or spea
ELA.1.2	Skill	Choose and apply reading strategies	How well can I apply reading strategies to make meaning of texts?	I can apply reading strategies independently to make meaning of texts.
ELA.1.3	Skill	Identify central theme	How well can I analyze the central theme?	I can determine central ideas or themes of a text and analyze their development; summarize the key supporting details and ideas
ELA.1.4	Skill	Analyze word and phrases	How well can I analyze the words and phrases used by the author?	I can interpret words and phrases as they are used in a text, including determining technical, connotative, and figurative meanings, and I can analyz
ELA.1.5	Skill	Analyze purpose and point of view	How well do I account for point of view and its role in shaping the text?	I can read closely to determine what the text says explicitly and to make logical inferences from it; cite specific textual evidence when writing or spee
ELA.1.6	Skill	Analyze developments	How well do I analyze the ways in which people, events, and ideas develop in the text?	I can analyze how and why individuals, events, or ideas develop and interact over the course of a text.
ELA.1.7	Skill	Analyze text structure	How well can I analyze the way that the author structures the text and connects each part to the whole?	
ELA.2	Competency	Reading Informational Texts		Read and comprehend appropriately complex informational texts independently and proficiently.
ELA.2.1	Skill	Cite evidence	How well do I use evidence to support my interpretation of the text?	I can read closely to determine what the text says explicitly and to make logical inferences from it; cite specific textual evidence when writing or spea
ELA.2.2	Skill	Choose and apply reading strategies	How well can I apply reading strategies to make meaning of texts?	I can apply reading strategies independently to make meaning of texts.
ELA.2.3	Skill	Identify central idea	How well can I analyze the central idea of a text?	I can determine central ideas or themes of a text and analyze their development; summarize the key supporting details and ideas
ELA.2.4	Skill	Analyze words and phrases	How well can I analyze the words and phrases used by the author?	I can interpret words and phrases as they are used in a text, including determining technical, connotative, and figurative meanings, and I can analyz
ELA.2.5	Skill	Analyze purpose and point of view	How well do I account for point of view and its role in shaping the text?	I can assess how point of view or purpose shapes the content and style of a text.
ELA.2.6	Skill	Analyze developments	How well do I analyze the ways in which people, events, and ideas develop in the text?	I can analyze how and why individuals, events, or ideas develop and interact over the course of a text.
ELA.2.7	Skill	Analyze text structure	How well can I analyze the way that the author structures the text and connects each part to the whc	I can analyze the structure of texts, including how specific sentences, paragraphs, and larger portions of the text (e.g., a section, chapter, scene, or
ELA.2.8	Skill	Evaluate arguments and claims	How well do I evaluate an author's argument?	I can delineate and evaluate the argument and specific claims in a text, including the validity of the reasoning as well as the relevance and sufficienc
ELA.2.9	Skill	Compare and contrast topics and texts	How do I make sense of how different authors address the same topic in different ways?	
ELA.3	Competency	Writing Evidence-based Arguments		Write evidence-based arguments to support claims in an analysis of substantive topics or texts using valid reasoning and relevant and su
ELA.3.1	Skill	Introduce claims	How well do I introduce my claim?	I can introduce precise, knowledgeable claim(s), establish the significance of the claim(s), distinguish the claim(s) from alternate or opposing claims,
ELA.3.2	Skill	Use evidence to develop claims and counterclaims	How well do I develop my claim and counterclaims?	I can develop claim(s) and critique counterclaims fairly and thoroughly, supplying the most relevant evidence for each while pointing out the strength
ELA.3.3	Skill	Use words and transitions to create cohesion	How well do I use transitions to connect my ideas?	I can use words, phrases, and clauses as well as varied syntax to link the major sections of the text, create cohesion, and clarify the relationships be
ELA.3.4	Skill	Use a formal style, objective tone, and advanced vocabulary	How well do I use vocabulary and maintain a formal style and objective tone?	I can establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing
ELA.3.5	Skill	Provide a compelling conclusion	How effectively do I conclude my argument?	I can provide a concluding statement or section that follows from and supports the argument presented.
ELA.3.6	Skill	Strengthen writing through revision	How well do I strengthen my writing through a revision process?	I can develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is m
ELA.4	Competency	Writing Informational Texts		Write informative/explanatory texts to examine and convey complex ideas and information clearly and accurately through the effective se
ELA.4.1	Skill	Introduce the topic	How well do I introduce my topic?	I can introduce a topic; organize complex ideas, concepts, and information so that each new element builds on that which precedes it to create a un
ELA.4.2	Skill	Develop the subtopics with facts	How well do I develop my subtopic with facts?	I can develop the topic thoroughly by selecting the most significant and relevant facts, extended definitions, concrete details, quotations, or other inf
ELA.4.3	Skill	Use words and transitions to create cohesion	How well do I use words and transitions to create cohesion?	I can use appropriate and varied transitions and syntax to link the major sections of the text, create cohesion, and clarify the relationships among co
ELA.4.4	Skill	Use a formal style, objective tone, and advanced vocabulary	How well do I use vocabulary and maintain a formal style and objective tone?	I can establish and maintain a formal style and objective tone while attending to the norms and conventions of the discipline in which they are writing
ELA.4.5	Skill	Provide a compelling conclusion	How effective is my conclusion?	I can provide a concluding statement or section that follows from and supports the information or explanation presented (e.g., articulating implication
ELA.4.6	Skill	Strengthen writing through revision	How well do I strengthen my writing through a revision process?	I can develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is m
ELA.5	Competency	Writing Narrative Texts		Write narratives to develop real or imagined experiences or events using effective technique, well-chosen details and well-structured eve
ELA.5.1	Skill	Engage and orient the reader in the opening	How well do I engage and orient my reader in my opening?	I can engage and orient the reader by setting out a problem, situation, or observation and its significance, establishing one or multiple point(s) of vie
ELA.5.2	Skill	Develop the story and characters	How well do I develop my story and characters?	I can use narrative techniques to develop experiences, events, and/or characters and to sequence events so that they build toward a particular tone
ELA.5.3	Skill	Use words and phrases, details, and sensory language	How well do I use words to "paint a picture" for my audience?	I can use precise words and phrases, telling details, and sensory language to convey a vivid picture of the experiences, events, setting, and/or chara
ELA.5.4	Skill	Use words and transitions to create cohesion	How well do I use words, phrases, and transitions to create cohesion?	I can use appropriate and varied transitions and syntax to link the major sections of the text, create cohesion, and clarify the relationships among co
ELA.5.5	Skill	Provide a compelling conclusion	How well does my conclusion flow from the story?	I can provide a conclusion that follows from and reflects on what is experienced, observed, or resolved over the course of the narrative.
ELA.5.6	Skill	Strengthen writing through revision	How well do I strengthen my writing through a revision process?	I can develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on addressing what is m
ELA.6	Competency	Engaging in Text-based Discussions		Initiate and participate in collaborative discussions, listen critically, and respond appropriately as individuals or in a group setting.
ELA.6.1	Skill	Demonstrate preparedness	How well do I participate in the discussion?	I can come to discussions prepared, having read and researched the topic of discussion, and I can refer to evidence from research on the topic or is
ELA.6.2	Skill	Pose and respond to questions	How well do I pose and respond to questions?	I can propel conversations by posing and responding to questions that challenge all participants to use sound reasoning and evidence in order to cla
ELA.6.3	Skill	Integrate evidence from sources	How well can I reflect on the content of the discussion?	I can integrate multiple sources of information presented in diverse formats and media in order to make informed decisions and solve problems, eva
ELA.7	Competency	Giving Presentations		Give effective presentations in formal settings, making purposeful decisions about content, language use, and discourse style based on t
ELA.7.1	Skill	Introduce presentation	How well do I introduce my presentation?	I can hook the audience using a powerful story, provocative question, or interesting reference that engages the audience both emotionally and intell
ELA.7.2	Skill	Present findings and supporting evidence	How well do I organize, present, and support my ideas?	I can present a central message that is compelling, precisely stated, and memorable, using transition words effectively and integrating strong suppo
ELA.7.3	Skill	Customize the presentation for the specific purpose, context, a	How effectively do I customize my presentation for my specific purpose, context, and audience?	I can adapt my presentation by anticipating audience interests, perspectives, and background knowledge and making purposeful choices about lang
ELA.7.4	Skill	Use presentation aids	How effectively do I use different media to communicate my ideas?	I can strategically use digital media in my presentations to enhance my audience's understanding, illustrate my most important points, and keep my
ELA.7.5	Skill	Use language and body movement effectively	How well do I use my words, voice and body language to engage my audience?	I can demonstrate command of formal English and present myself in a poised and confident manner, making eye contact with the audience, using g
ELA.7.6	Skill	Give an effective conclusion	How well do I conclude my presentation?	I can provide a succinct and compelling synthesis of my central message(s) or claim(s) and supporting ideas or evidence, and I can explain the con
ELA.8	Competency	Conducting Research		Frame and advance an inquiry to investigate topics, build knowledge, and analyze and integrate information.
ELA.8.1	Skill	Construct a research question	How well do I construct my primary question?	I can define a compelling, knowledgeable, and focused research question that reflects an enduring issue in the field and that requires challenging ar
ELA.8.2	Skill	Identify and select credible, diverse sources	How well can I identify and select credible, diverse sources?	I can identify and evaluate diverse sources, assessing the credibility and accuracy of each source by considering a broad range of important factors
ELA.8.3	Skill	Use systems to organize information gathered	How well do I organize information from my sources?	I have a specific and efficient system for note-taking, citing sources, and organizing all of my research materials.
ELA.8.4	Skill	Evaluate findings and draw conclusions	Evaluate findings and draw conclusions	I can synthesize my research findings and draw logical, evidence-based conclusions about my primary research question drawing on multiple, diver

Health.1	Competer	Apply Knowledge of Health Concepts	Apply knowledge of concepts related to health promotion and disease prevention to enhance health.
Health.1.1	Skill	Analyze the four dimensions of health	I can analyze the interrelationships of physical, mental/ intellectual, emotional and social health.
Health.1.2	Skill	Explain causes of health problems and solutions for prevention and reduction	I can explain causes of common diseases, disorders, and other health problems and propose ways to reduce, prevent or treat them.
Health.1.3	Skill	Analyze key factors that impact health	I can analyze and describe how the environment, genetics, family history, and access to health care, are interrelated and can impact personal health.
Health.1.4	Skill	Analyze developmental stages of life	I can describe and analyze the characteristics of human growth and development through the various stages of life.
Health.2	Competer	Analyze Health Promotion and Risk Reduction	Demonstrate the ability to practice health-enhancing behaviors and avoid or reduce health risks.
Health.2.1	Skill	Evaluate health information, products, and services	I can identify and evaluate the validity and accessibility of health information, products and services.
Health.2.2	Skill	Demonstrate healthy practices and behaviors	I can demonstrate healthy practices/behaviors to maintain or improve the health of self and others in each of the following areas: healthy eating; physical activity; tobacco, alcohol and other drug use prevention; and prevention of STDs, HIV and unintended pregnancy.
Health.2.3	Skill	Demonstrate health risk reduction practices and behaviors	I can demonstrate a variety of behaviors to avoid or reduce health risks to self and others including first aid for personal, family and community health.
Health.2.4	Skill	Evaluate the impact of cultural norms, public policy, and government regulatior	I can analyze and evaluate how multiple factors such as norms, culture and values influence health and health behaviors, and investigate how public health policies and government regulations can influence health promotion and disease prevention.
Health.2.5	Skill	Evaluate the impact of technology on health	I can evaluate the impact of technology, including medical technology, on personal, family, and community health.
Health.3	Competer	Engage in Health Advocacy	Demonstrate the ability to use interpersonal communication and advocacy skills; make decisions; and set goals to enhance personal, family and community health.
Health.3.1	Skill	Demonstrate effective communication skills to promote health	I can utilize effective communication skills with family, peers and others to enhance health.
Health.3.2	Skill	Influence and support others in healthy decision-making	I can demonstrate the ability to influence and support others to make positive health choices.
Health.3.3	Skill	Enhance personal health through positive decision-making	I can apply effective decision-making processes to enhance health.
Health.3.4	Skill	Develop and analyze a personal health plan	I can develop and analyze a plan to attain a personal health goal.

Code	Type	Descriptor	Guiding Statements	Statement
HIS.1	Compete	Analyze Historical Outcomes		I can apply historical literacy to demonstrate knowledge of major eras, enduring themes, turning points, and historic influences by analyzing the causes and effects of events and developments in the modern world.
HIS.1.1	Skill	Evaluate historical outcomes in context	How well can I evaluate historical outcomes in context?	I can evaluate how historical events and developments were shaped by unique circumstances of time and place as well as broader historical contexts.
HIS.1.2	Skill	Analyze causes and triggering events	How well can I analyze long-term causes and triggering events?	I can analyze complex causes and effects of events in the past and distinguish between long-term causes and triggering events.
HIS.1.3	Skill	Analyze effects of historical events	How well can I analyze the short and long term effects of a historical event?	I can analyze the short and long term effects of a historical events and distinguish between intended and unintended conseq
HIS.1.4	Skill	Evaluate the importance of people's actions in shaping outcomes	How well can I evaluate the importance of people's actions in shaping historical events?	I can assess the impact of individual and group actions in shaping historical events and outcomes.
HIS.1.5	Skill	Analyze outcomes as either change, continuity, or both	How well can I make sense of the outcome as either change, continuity, or both?	I can evaluate historical outcomes as either change, continuity, or both.
HIS.2	Compete	Analyze Historical Perspectives		I can analyze the motives, actions, values, and attitudes of individuals and groups in order to understand the significance of events and developments from a range of perspectives, using diverse historical sources.
HIS.2.1	Skill	Analyze factors that shaped perspectives of people in the past	How well can I analyze factors that shaped perspectives of p	I can analyze complex and interacting factors that influenced the perspectives of people during different historical eras.
HIS.2.2	Skill	Analyze historical sources	How well can I analyze historical sources?	I can analyze primary source documents to evaluate secondary interpretations of the past.

Code	Type	Descriptor	Guiding Question	Statement
MATH.1	Competency Statem	Mathematical Problem Solving		I can apply mathematical problem solving strategies to create efficient and high quality solutions to challenging problems.
MATH.1.1	Skill	Gather and organize information	How well can I gather and organize information when solving a problem?	I can gather, extract, and organize important information to formulate the main problem to solve.
MATH.1.2	Skill	Model the problem	How well can I model the problem?	I can visualize and translate a situation or context into an appropriate mathematical framework or model
MATH.1.3	Skill	Choose and apply strategies	How well can I choose and apply one or more problem-solving strategies?	I can choose and apply appropriate mathematical problem solving strategies
MATH.1.4	Skill	Test possible solutions	How well can I test my solution to determine whether it makes sense and is free from errors?	I can identify, analyze, and implement one or more possible solutions to the problem with the goal of achieving the most efficient and effective combination of steps and processes.
MATH.2	Competency Statem	Mathematical Argumentation and Reflection		I can build, defend, and critique mathematical arguments while reflecting on my own problem-solving processes and solutions.
MATH.2.1	Skill	State my solution	How well can I state my solution to the problem?	I can state my solution and explain my process using mathematical language and correct mathematical notation.
MATH.2.2	Skill	Defend my solution	How well can I defend my solution and explain my process?	I can build a logical progression of statements that draw on mathematical ideas, definitions, adn assumptions in order to justify my solution.
MATH.2.3	Skill	Critique mathematical reasoning	How well can I critique my mathematical reasoning and the reasoning of others?	I can critique mathematical reasoning – that of mine or others – by identifying incorrect assumptions or variables and computational errors, and by distinguishing correct logic or reasoning from that which is flawed
MATH.2.4	Skill	Reflect on my process and solution	How well can I reflect on what I learned through the problem-solving process?	I can evaluate my problem-solving process and come up with ideas for how I might use more efficient or effective processes in the future.

Code	Type	Descriptor	Guiding Questions	Statement
SCI.1	**Competency Statement**	**Lead Scientific Investigation**		**Plan and carry out a scientific investigation.**
SCI.1.1	Skill	Ask a scientific question	How well can I ask a scientific question?	I can pose a testable scientific question.
SCI.1.2	Skill	Formulate a hypothesis	How well can I formulate a hypothesis?	I can frame my question as a hypothesis based on a model or theory, with an accurate and specific explanation of the relationship between variables.
SCI.1.3	Skill	Define and analyze variables	How well can I define the variables?	I can identify independent and dependent variables, and I can intentionally manipulate variables in different ways to collect data about their individual effects on the outcome.
SCI.1.4	Skill	Plan and organize an investigation	How well can I plan an investigation?	I can plan an investigation independently and collaboratively to produce data to serve as the basis for evidence as a part of building and revising models, supporting explanations for phenomena, or testing solutions for problems.
SCI.1.5	Skill	Organize & strengthen plan	How well can I strengthen my plan using feedback?	I can effectively organize my research plan and integrate feedback to strengthen its design.
SCI.1.6	Skill	Test the prediction	How well can I test my prediction by carrying out my plan?	I can carry out an investigation in order to test my prediction by making observations or performing na experiment that relates to my prediction.
SCI.1.7	Skill	Iterate using results	How well can I reflect on my findings and think about next steps?	I can reflect on my results and use them to guide my next steps.
SCI.2	**Competency Statement**	**Analyze and Interpret Data**		**Analyze and interpret data to construct evidence-based explanations.**
SCI.2.1	Skill	Make meaning of data	How well do I identify relationships and patterns?	I can make meaning from my data by using appropriate and systematic methods to identify and explain patterns and outliers, and by determining the significance of my findings as it relates to my initial hypothesis and to relevant scien
SCI.2.2	Skill	Explain and represent relationships between variables	How well do I use mathematics to represent relationships between variables	I can make quantitative and/or qualitative claims about the relationships between independent and dependent variables, and I can use mathematics to represent the relationships between variables with accuracy.
SCI.2.3	Skill	Construct evidence-based explanations	How well do I communicate my findings and use data to support my claims?	I can construct an explanation based on valid and reliable evidence obtained from a variety of sources, and I can use multiple representations - such as words, tables, diagrams, graphs, and/or mathematical expressions - to communic
SCI.2.4	Skill	Follow writing conventions	How well did I follow writing conventions?	I can consistently follow the norms and conventions of scientific writing, including accurate use of scientific and technical terms, proper formatting of text, tables, and graphics, and proper citing of my sources and relevant research the
SCI.3	**Competency Statement**	**Develop and Use Models**		**Develop and use models to make predictions about phenomena, analyze systems, and communicate ideas.**
SCI.3.1	Skill	Create a model to represent a system	How well can I create a model to represent an event or system?	I can develop, use, and synthesize models of natural and designed systems that are based on empirical evidence and that accurately represent the scale of the system I am modeling.
SCI.3.2	Skill	Use the model to communicate ideas	How well can I use a model to predict outcomes or test a hypothesis?	I can provide a detailed explanation for how my model illustrates three or more applications of scientific principles or concepts and how they are related, using scientific vocabulary, clear and concise language, and substantial evidenc
SCI.3.3	Skill	Evaluate and refine models	How well can I use my understanding of the limitations of the model to make	I can select or refine a model in light of empirical evidence or critique/feedback in order to improve the quality and explanatory power of the model.
SCI.4	**CONCEPTS**	**Apply Cross-cutting Concepts**		**Apply knowledge of cross-cutting concepts in science and engineering to investigate, model, and explain observations of the world**
SCI.4.1	Concept	Identify & analyze patterns	How well can I identify and analyze patterns?	I can identify, analyze, and construct explanations for observed patterns and for the similarity and diversity within them.
SCI.4.2	Concept	Evaluate cause & effect	How well can I evaluate cause and effect?	I can use knowledge of cause and effect to differentiate between causation and correlation and predict behaviors in complex natural and designed systems.
SCI.4.3	Concept	Apply knowledge of scale, proportion, and quantity	How well do I understand the significance of scale, proportion, quantity?	I can apply knowledge of scale, proportion, and quantity analyze relationships between quantities, develop mathematical and statistical models to represent relationships, and apply algebraic thinking to examine data and predict the c
SCI.4.4	Concept	Model transfers & cycles of energy and matter	How well do I understand the principles of energy and matter?	I can examine, characterize, and model transfers and cycles of matter and energy.
SCI.4.5	Concept	Apply knowledge of structure & function	How well can I apply my knowledge of the relationships between structure a	I can apply knowledge of structure and function to lead investigations that build knowledge and understanding.
SCI.4.6	Concept	Analyze stability & change	How well do I understand principles of stability and change?	I can use my knowledge of stability and change to analyze how systems function and change over time, identify factors that impact stability, and model changes in systems over short and long periods of time.

NOTES:

**Competency statements are based on the NGSS "cross-cutting concepts" and "scientific & engineering practices"*

**Revisions for SCI.1 skills are drawn from Khan Academy's Intro to Scientific Method curriculum*

BIG PICTURE LEARNING

The Role of Noncognitive Skills for Student Success

Building and Implementing Noncognitive Competencies in School Design

Acknowledgements

We wish to thank the Stuart Foundation based in San Francisco, California for its generosity and support in making this work possible. We also thank Professor William Sedlacek for pioneering work that allows us to look at individual students in a more holistic way. The Big Picture Learning model of Noncognitive student development is based on Dr. Sedlacek's decades of research and development. Along with a wide range of higher education institutions and programs, we use his eight noncognitive variables labeled by us as "Noncognitive competencies." In addition to acknowledging the framer of the theoretical base of our model, we want to thank Bonnie Lathram and Loren Demeroutis whose work at Highline Big Picture High School in Burien, Washington serves as the foundation for implementing the eight competencies in our schools. Most importantly, we thank our students. They are the cornerstone of our work and our constant reminder of the breadth of human qualities that contribute to individual success and collective flourishing.

Why "Noncognitive?": Purpose and Terminology

How we think and what we know are essential elements for success in school and beyond. Intellectual functioning and content knowledge are far from the only determinants of achievement in education, work, and relationships, however. The term "noncognitive" describes the vital skills, strategies, and mindsets that play a role in student success. Researchers continue to study these qualities under the label "Noncognitive Factors." Employers and the media refer to them as "soft skills" that students need in order to be successful in college or the workplace. "Soft" skills, the term implies are different, less real, or less important than the "hard" skills that presumably have to do with direct cognition.

A 2012 literature review by the University of Chicago Consortium for Chicago School Research (CCSR) titled "Teaching Adolescents to Become Learners: The Role of Noncognitive Factors in Shaping School Performance," argues that "noncognitive" is an "unfortunate" term, "[reinforcing] a false dichotomy between what comes to be perceived as weightier, more academic 'cognitive' factors and what by comparison becomes perceived as a separate category of fluffier 'noncognitive' or 'soft' skills (p. 4)." Ultimately, the CCSR opted reluctantly to use the term "noncognitive" because it was so pervasive in other research.

David Conley, a professor at the University of Oregon and an expert in the field of college and career readiness provided one possible alternative that we explored. In A 2013 article in EdWeek "Rethinking the Notion of 'Noncognitive'," Conley argued that we should instead call these skills, conditions, and mindsets "Metacognition." In the initial pilots and drafts of this work, we referred to Metacognitive Variables (MCVs) but after further research, analysis and reflection, we come to a similar conclusion as CCSR and have decided to use the terminology of Noncognitive Competencies (NCCs).

Our definition of noncognitive in this context includes all learning processes and behaviors involving any degree of reflection, learning-strategy selection, and intentional mental processing that can result in a student's improved ability to learn." We apply it here to describe a subset of all its facets, just as cognitive content knowledge represents a subset of cognition. We use the word "competencies" because it elucidates the way in which we hope to develop them in our students. However, we also refer to the 8 interchangeably as skills, variables, factors, elements, or qualities. In any case, as the word "competency" suggests, we emphasize that they are not static personality traits. On the contrary, NCCs are mutable characteristics that individuals can develop and strengthen over time through reflection and awareness of their own language, learning processes, academic and personal mindsets in the presence of supportive adults and intentional learning environments.

As described above, researchers and practitioners employ several labels to the Noncognitive Competencies. CASEL refers to their set of competencies as social-emotional skills, while Conley prefers metacognitive, and the i3 program literature and Sedlacek refer to them as noncognitive abilities. Others, such as Duckworth, label them as dispositions. In BPL's just-completed development project supported by the Stuart Foundation, we employed a combination of the CASEL and Sedlacek competencies, and were influenced by Conley's metacognitive development strategies. We intend to use our learning from the Stuart Project in this proposed study. For this project, we will use the label Noncognitive Competencies to emphasize the combination of knowledge, skills, and dispositions that is needed for actually implementing the NCCs in real-world settings and contexts.

Overview

As educators deeply invested in the effectiveness of public education, we often find ourselves measured against outcomes determined by political, media, and social influences. Public policy, large businesses, federal and state mandates, and district and school leaders influence what "students need to know" and how to measure these outcomes. A stream of buzzwords surrounds this discourse: 21st Century Skills, academic mindsets, critical thinking skills, Common Core Standards, noncognitive variables, social-emotional intelligence, STEM, STEAM, character development. Each of these terms carries political and social implications, different understandings of the purpose of public education, and an array of implications for what we do in the classroom and how the public holds teachers, schools, and districts accountable to student outcomes. We have seen too many reform efforts focus more on the alignment and accountability components of student outcomes and less on the ways in which we make these outcomes relevant to our students and educators. Further, many reform initiatives fail to make research-based connections between the outcomes they propose and how students perform after high school.

This guidebook serves as an attempt to share our experiences at clarifying and developing a focused set of Noncognitive Competencies (NCCs) as school-wide outcomes, designed to make learning more relevant to student and educators and grounded in research tying these outcomes to student success in post-secondary education and career. In Big Picture Learning (BPL)[1] tradition and practices, we view the NCCs discussed in this guide as another vehicle for connecting learning taking place in the classroom to real world learning that takes place outside of school. Young people worldwide are engaging in deep learning and achieving great success outside of school. We've all heard the stories of exceptional endeavors that occur entirely outside of formal schooling: The young Dutch girl who sets sail across the Atlantic on her own; the young high school student who assists in multiple animal surgeries as an intern at the local veterinary hospital; the first-generation student who serves as an interpreter for his non English speaking parents. Abundant and varied, self-motivated, out-of-school experiences contribute to the healthy social and emotional development of young people by helping them build confidence, awareness, and real-life skills. Yet, they are neither recognized nor validated in school. Through our work on the Noncognitive Competencies, we argue for the importance of supporting students in their social and emotional development, at the same time as we call for school reform that enriches the lives of students by aligning learning in and out of school. Each student brings a set of interests, passions, and skills that we must honor and validate in the classroom. Each student desires to incorporate these personal qualities into success after high school.
For students across categories of race, gender, socioeconomic status, and ability/special needs, we believe that this educational and life success is largely attributable to the supports that have helped them develop a core set of Noncognitive skills, conditions, and mindsets. The eight essential Noncognitive Competencies, (described in greater detail in section one) are: positive self-concept, realistic self-appraisal, navigating systems, preference for long term goal setting, availability of a strong support person, community involvement, leadership experience, and knowledge acquired in a field.

The implementation of instruction related to these competencies is the focus of this guidebook. As described in this guide, Noncognitive factors are more powerful predictors of high school, post high school, and career success than the traditionally measured standardized test scores and grade point averages. Sections three and four outline teacher and school leader implementation strategies while the rest of the guidebook gives examples of assessments and case studies. Appendix B includes additional resources such as sample action plans and agendas, examples of NCC use in other schools, community organizations, colleges and universities, as well as a call for ways to further our collective understanding.

We do not claim that this guidebook represents the only or the best way to implement this work. Nor do we intend Noncognitive factors to replace the myriad of other important outcomes. Rather, this is

1. Big Picture Learning (BPL) is a not-for-profit organization dedicated to a fundamental redesign of schools and schooling in the United States. Big Picture's mission is to catalyze vital changes in American education by generating and sustaining innovative, personalized practices in schools that work in tandem with the real world of their greater community. At the core of Big Picture's mission is a commitment to equity for underserved students, and the expectation that these students can achieve college success. Big Picture designs innovative public schools, researches and replicates new models for learning, and trains educators to serve as leaders in their schools and communities (www.bigpicture.org). For more information about BPL, please see Appendix A.

a guide to inform educators working to bring more relevance to the classroom by helping them to develop Noncognitive strengths in their students and by demonstrating the use of NCCs as a set of outcomes that can work alongside of federal, state, and local measures to specify the connection between educational practices, secondary school outcomes, and post high school success. Throughout this work, it is important that we honor each student's individual experiences as unique to him or her in applying and addressing the Noncognitive Competencies.

Beyond their use as powerful predictors of post-school success, NCCs are as much a reflective tool in the lives of adults as they are in the lives of students. If something is not going well for one of us, it could be because one of these 8 conditions, mindsets, or skills needs to be honed or cultivated further. These NCCs are not only a great tool for students, but, as they are related to success in life, for all of us. We know our students learn through adult modeling. The NCCs are not a rite of passage that ends with high school and they certainly do not apply only to high school students. The NCCs certainly apply to adult experiences such as sustaining thriving and loving relationships, contributing our workplace and communities, participating in ongoing education, taking care of our own parents, rearing our children, or dealing with divorce, illness, or other losses and setbacks. We hope this guide is a helpful tool for guiding and measuring our success and quality of life as adults.
The guide's main emphasis, however, is on our primary duty as educators preparing students for success after high school. We strongly believe that our work on developing student Noncognitive qualities serves this end. Along with informing others, we hope to expand our own understanding and us of these competencies by articulating and sharing our experiences with other schools and educators.

1

Descriptions of Noncognitive Competencies

Descriptions of Noncognitive Competencies

Overview

In our work with the NCCs we have found that students and educators describe NCCs in a different way than the competencies are discussed in the research literature. Our goal is not to require staff and students to memorize and regurgitate definitions of the eight competencies. Instead, we have spent considerable time observing staff and students, listening to the language they use, and articulating the competencies in the vernacular of the schools. In this way, we have worked toward our primary goal of embedding the Noncognitive Competencies in the culture of our work. We are not trying to use the NCCs as traditional schools might use externally imposed standards. Instead, we are trying to integrate the NCCs so deeply into the work and culture that students and staff refer to the 8 NCCs in the same way somebody might refer to a deeply held and shared set of beliefs or norms. In the same way a student might hold another student accountable to a norm about respecting somebody else's property, we hope students and staff hold themselves and each other accountable to the NCCs. This section outlines general descriptions of each competency and provides a quick overview of lessons we've learned thus far in our journey.

Case Studies

As this section is intended to illustrate, we believe the NCCs must be learned through a student's work and reflections rather than as isolated lessons. For example, it is hard for us to imagine teaching an isolated lesson on one of the NCCs in which the lesson fails to connect to a student's other project or content work. We doubt the efficacy of "stand alone" lessons unconnected to student's other work. Students are less likely to learn deeply and make developmental change in such a decontextualized approach. An example of a more thoughtful integration of NCCs is combining NCC assessment with project assessment, which we will discuss in further chapters. Authentic assessment is another arena for embedding NCCs. At BPL schools, students typically present their work in student-led exhibitions three to four times a year. The exhibitions and ensuing reflections are a excellent time to discuss the NCCs. Just as noncognitive factors are learned most deeply when learned within authentic contexts, they are best understood when embedded in student examples. We have therefore chosen to include case studies with student work at the end of the description of each competency. You can find a full listing of all case studies as well as a tool for utilizing case studies in professional development and with students in Chapter 7.

While we hope our community could describe each competency when prompted, we believe that better evidence for successful implementation occurs in the ways that students embed the NCCs into their project work, reflections, conversations, and choices. Each of these descriptors is explored further in this guide, along with recommended activities. In the process of honing our practice, we continually refine our descriptions, add to our growing list of lessons learned, and produce an increasingly robust database of activities.

Finally, we cannot emphasize enough the need to take these competencies "out of the black box" of learning. We encourage you to share these descriptions, lessons learned, and activities with your staff, students, and families.

General Description of the Eight Noncognitive Competencies

As described earlier, these eight competencies are a research-backed and powerful set of learning characteristics that have been shown to predict a student's performance in high school, college, and career. We think of these competencies as a web of important experiences and ways of thinking. Each competency is vitally important to integrate into our work with students and into our school culture and community. What we talk about, think about, measure, and pay attention to becomes a part of our conversations and choices. We encourage you to think about as many ways to integrate these eight competencies into your instruction, from posters and literature promoting the competencies to deeper conversations about realistic self-appraisal (competency #2) or navigating systems of discrimination (competency #3) in our society.

See the table below for a quick overview of the 8 NCCs and their descriptions. This information is adapted from William Sedlacek (see www.williamsedlacek.info and Chapter 2: Research and FAQs for more information).

From Sedlacek, William. Beyond the Big Test. (2004). San Francisco: Jossey-Bass.

Competency #1: Positive Self Concept
A Positive Self Concept refers to an individual's level of confidence, strength of character, determination, and independence. We think about this competency in terms of how students refer to and think about themselves in the past, present, and future. While these temporal domains are related, we think it is essential for students to see themselves positively in each of these areas. Further, while a student may come across as upholding a positive self concept, probing into how the student speaks of or writes about him/herself in the past or future may reveal deeper connections that the student is making in the development of his or her own self concept.
Competency #2: Realistic Self-Appraisal
A Realistic Self-Appraisal refers to an individual's ability to recognize and accept his or her strengths and deficiencies, especially academic, and the individual's determination to work hard at self-development. In addition, it looks at how well an individual recognizes the need to broaden his/her individuality. This competency extends to a student's understanding of his/herself with regard to patterns of choice, recognizing and approaching struggles within and beyond the student's control, as well as how the student connects his/her learning to realistic goals and long-term vision.
Competency #3: Skills at Navigating Systems and Understanding and Dealing with Discrimination
Navigating Systems and Understanding and Dealing with Discrimination refer to how well the individual understand the "system" based upon personal experience and how committed he/she is to improving the existing system. The individual takes an assertive and active approach to dealing with existing wrongs, but is not hostile to society, nor is a "cop-out." Skills related to this competency include self-advocacy, social reasoning, and skills related to ethical development.
Competency #4: Preference for Long-Range Goals over Short-Term or Immediate Needs
Preference for Long-Range Goals over Short-Term or Immediate Needs refers to how well an individual is able to respond to deferred gratification, while planning ahead and setting goals. This can include quarterly or yearly learning goals, daily work goals, and post high school goals and long-term vision.
Competency #5: Availability of a Strong Support Person
Availability of a Strong Support Person refers to how well an individual seeks and takes advantage of a strong support network or has someone to turn to in a crisis or for encouragement. This extends to a student's definition of strong support.
Competency #6: Successful Leadership Experience
Successful Leadership Experience refers to how well an individual demonstrates strong leadership in any area of his/her life (e.g. church, sport, non-educational groups, family, community, etc.). Leadership has many definitions and not limited to traditional definitions based on roles, hierarchy, or in-school leadership. Leadership includes out-of-school involvement at home or in the community. This competency extends to understanding of successful leadership.
Competency #7: Demonstrated Community Service and Involvement
Demonstrated Community Service and Involvement refers to an individual's participation and commitment to his/her communities. This includes in-school and out-of-school communities. This competency extends to the students cultural community.
Competency #8: Knowledge Acquired in or about a Field
Knowledge Acquired in or about a Field refers to an individual's ability to learn from experiences outside of the classroom, using less traditional methods that are outside of the education system. Examples include internships and career and interest exploration.

Competency #1: Positive Self Concept

Lessons Learned

Put simply, the best way to promote a positive self-concept is through “mastery activities” or experiences that allow the students to see that they can demonstrate and learn strong skill sets. Like all of the 8 NCCs, we encourage you to embed activities in the work that is relevant to the students. Workshops or teacher-led activities on the importance of self-concept may help a few students but the learning is much more powerful when it is connected to an experience relevant to students. Whenever we hear a student saying things like “I’m not good at math” or, even worse, “I’m stupid” we must stop what we are doing and use these moments as opportunities for the student to reflect and deepen his/her sense of awareness. We become what we tell ourselves we are. For young people who are still in a very vulnerable period in their physical, physiological, and emotional development, constructive or self-deprecating language can have a lasting psychological effect. We constantly promote growth mindset ways of thinking by focusing on effort rather than labels of “good at” or “bad at.”

Competency #2: Realistic Self-Appraisal

Lessons Learned

We think it is vitally important that a staff member never tell a student what is “realistic” for two reasons: 1) this practice is one of the most often student-cited killers of dreams and, as research suggests, discouraging words from a teacher are far more powerful than words of encouragement, and 2) we cannot know precisely what skills are necessary for the student to develop based on their life goals. We strongly maintain that it is important for a student to discover—rather than be told--what skills they need. Even if we do have a good sense of what is “realistic,” we need to be extremely careful how we communicate this to students.

Another powerful learning regarding realistic self-appraisal relates to students who seem over-confident or arrogant about their skills. We hear students say things like “I got this,” or “I’ll be fine,” or who try to hide their deficiencies through smoke and mirror exhibitions[2] or a projected cloud of over-confidence. Numerous one-on-one interviews have led us to believe that the students who most often say, “I got this” are the ones who may indeed have a fairly realistic self-appraisal but have a relatively under-developed positive self-concept. Observations of teacher/student interactions have led us to believe the realistic self-appraisal and positive self-concept are often confused. Many times we have observed a teacher perceiving a student to have an overly positive self-concept and an unrealistic self-appraisal when it is, in fact, the

[2]Oral presentations where students demonstrate what and how they have learned and mastered established core objectives.

opposite. When this is the case, as tends to be the case with some particularly 'showy' male students, engaging in power struggles or trying to surface the student's conceptions of self-appraisal in front of other students will nearly always distance the student from the teacher. Instead we encourage teachers to take students for individual walk-and-talks out of the classroom or to connect the student with an upperclassman they respect. We have found powerful results from this approach. Specifying the behavioral evidence of achievement for any of the Noncognitive Competencies offers guidance for structuring educational experiences and assessing development. For this competency, ways in which students could show evidence of realistic self-appraisal include:

Student evaluates personal and academic skills, abilities, and interests and uses this appraisal to establish appropriate educational plans

Student makes decisions and acts in congruence with personal values and other personal and life demands

Student focuses on areas of academic ability and interest and mitigates academic weaknesses

Student seeks opportunities for involvement in co-curricular activities

Student seeks feedback from teachers and staff

Student learns from past experiences

Student seeks services for personal needs (e.g. writing labs and counseling)

Student opens up about life and learning outside of school

Competency #3: Skills at Navigating Systems and Understanding and Dealing with Discrimination

Lessons Learned

It is difficult for some adults and students to talk about oppression, privilege, classism/racism, and other forms of discrimination. Opportunities for learning present themselves all the time, but this is often an uncomfortable area for adults to talk about. Discussion about discrimination, power, and privilege need to be embedded in adult conversations. This kind of conversation is risky but incredibly rewarding. School leaders invite discussions about discrimination and oppression to take place in classrooms and all-school settings. We also encourage students and staff to carry these conversations to their peers and community. Opportunities to consider ethical dilemmas and Socratic seminars around race and privilege can be a good start. One of the most surefire ways to turn a student off, in contrast, is to claim that we "understand his or her situation." We cannot fully understand a student's experience or what it is like to be a member of a different group, race, sexual identity, or class. We can understand other's situations better, however, through close, respectful listening. The most powerful means to help students understand themselves within systems of privilege and oppression is to give them opportunities to self-advocate. Students tend to feel empowered when they are able to articulate their needs and find adults (and/or peers) who can advocate for them. This skill is strongly associated both with success in college and also with helping students learn that they have the power to change and influence their surroundings and communities.

Competency #4: Preference for Long-Range Goals over Short-Term or Immediate Needs

Lessons Learned

This is difficult, especially in a YOLO (You Only Live Once!) era where there is immense focus on immediate gratification. Socratic seminar discussions around delayed gratification, the "marshmallow test,"[3] daily goal setting, and reflections are tools for helping students build their ability to set long-range goals and make the immediate choices that promote their best interests. Even if a student doesn't achieve a goal, it is important to reflect on the choices and circumstances that led to that result. Perhaps a better goal arose or maybe the student can identify unhelpful or self-sabotaging patterns and consider different ways of responding. Goals that connect to post high school planning and internships/career are vital.

Competency #5: Availability of a Strong Support Person

Lessons Learned

We need to help students understand and develop their own definitions of friend, advocate, and mentor. A strong support person helps guide the student's social, emotional, and intellectual growth. It is not our responsibility as educators to act as the "strong support person" for each student who crosses our path—we would only be setting ourselves up for failure. Rather, it is our responsibility to help ensure that every student has someone who can help steer him/her and to whom the student can turn to during difficult times. In our Big Picture schools, this is often an advisor or a mentor who has earned the student's trust. As important as it is for the student to have a strong support person or network, it is important for the student to also learn how to manage these relationships effectively to ensure that they continue to evolve in healthy and mutually beneficial ways.

[4]The "marshmallow test" refers to a Stanford University psychology experiment in which researchers determined that ability to delay gratification is associated with success later on in life. There are some excellent TED talks online at www.ted.com about the marshmallow tests which we've showed in professional development settings and with students.

We also work to strengthen the capacity of family members as strong support figures for their students, including talking to our families about the NCCs. All families want their children to do well, and sharing this kind of research can help families to be a better support. Just make sure you don't do so in a "we are the experts way" but instead as a partnership. At our school, students are involved in Learning Through Internships (LTIs), so this involves students having a mentor or some adult support outside of school. Even if that's not the case at your school, you can help students identify and understand the difference between friends, buddies, advocates, and mentors.

Competency #6: Successful Leadership Experience

Lessons Learned

It is important that students are seen as authentic leaders in school. Give them leadership opportunities such as peer mentoring and restorative justice. We have found that involving students in peer and staff recruiting, hiring, and interviewing to be ripe areas for developing leadership. This cannot include only students who have already stood out and are clearly "ready" for leadership. We need to provide all students with opportunities to learn about leadership by active doing. These opportunities extend to experiences and learning outside of school, and include non-traditional leadership roles at home and in the community. For instance, translating for non English speaking parents, taking care of younger siblings, and completing an internship are powerful out-of-school arenas for the development of leadership capacities. It is important to create a school environment and culture where all leadership roles, both in-school and out-of-school, are recognized and validated in school.

- Ways students show leadership include:
- Student articulates leadership philosophy or style
- Student serves in a leadership position in student, community, or professional organizations
- Student comprehends the dynamics of a group
- Student exhibits democratic principles as a leader
- Student exhibits ability to visualize a group purpose and desired outcome

Competency #7: Demonstrated Community Service and Involvement

Lessons Learned

Our students and staff all belong to multiple communities defined by different interests, background experiences, race, ethnicity, sexuality, gender, national and linguistic commonalities, political orientation, ways of thinking about the world, and diverse skills and abilities. Promote these communities in your school. In BPL schools, advisories are our strongest communities, but we also foster student groups based on the identities listed above, particularly at all-school meetings. We do not embrace gangs or drug subcultures, which often exist in a pervasive way in the communities in which students live. But it is important to openly discuss these aspects of our broader community so as to civically engage students. We want students to have a deep awareness and understanding of their communities in order for them to become actively engaged in creating better communities. The NCCs are as much about the self as they are about community.

Competency #8: Knowledge Acquired in or about a Field

Lessons Learned

As mentioned previously, the Learning Through Internships (LTI) curriculum is a central element of Big Picture Schools. Students conduct informational interviews, develop interests, and explore these interests in the real world. Beginning in the 9th grade in high school, our students have internships two days a week in their community. We occasionally hear that a particular student "isn't ready for an internship." We question the term "ready" in that sentence. What does it mean to be internship ready? We have found that our students who may "slack" at school really "up their game" when they are at their internship. We have many examples of students who may not have been living up to their potential at school but, after finding an internship that connects to the student's interests and passions, we find that the student becomes more deeply engaged in and out of school. If a student truly isn't "ready," we look at what other conditions might be behind the judgment. Is it student apprehension or adult-based fear about how the student might do out in the real world? Sometimes a student might not want to take the bus to a faraway place, try something new, or leave his or her comfort zone. In that case, we might partner the student with an adult to scaffold the process. This is where peer shadowing at internships and adult/student field trips can help assist in building a student's confidence to get out of his/her comfort zone. We have found that when the adult mentor is in place and when the internship is clearly and genuinely related to a student's interest or passion, the internship becomes a very powerful learning experience for the student. In fact, research on Big Picture students shows that students consistently point to their series of internships as representing their most important learning and best preparation for success in their post-high school life.

2

Research and Background

Research and Background

Frequently Asked Questions

Over the past year, we have talked to many educators, business people, college admissions directors, families, and students about NCCs. We developed this list of FAQs as we are often asked these questions about NCCs. In addressing these questions, we have identified research that deepens our understanding of the NCCs.

Why are the Noncognitive Competencies important? Why should we invest time developing them?

As educators, we are aware of the grim statistics around college completion. Across all racial and ethnic groups, just over half of students who enroll in college actually graduate (CCSR, p. 67). This number varies by institution, but this means that many of our young people start college, likely incurring debt, only to never graduate with a college degree. Many others simply never even make it out of high school, let alone start college. Asian American and white students graduate from high school and attend college at much higher rates than African American and Latino students. Girls graduate from high school and attend college at higher rates than males (CCSR, p.102). There are large and persistent gaps in educational attainment by students' race, ethnicity, and gender.

William Sedlacek, an education professor at the University of Maryland, partnered with the Gates Millennium Scholars (GMS) program, a program that provides students of color from low-income households with a comprehensive financial, leadership, and academic support system. In the Institute of Higher Education Policy's report on noncognitive factors and the GMS program, the author writes, "One way to better understand how such measures can prove effective is to examine their use in a specific context. Since its inception, the GMS program has used noncognitive criteria to select students who demonstrate great promise for academic success and leadership ability. In the few years [now more than 10 years] since GMS began, the noncognitive measures used have shown signs of being strong predictors of student success (Ramsey, p. 3)."

Further, the case of the GMS program suggests the importance of these factors for students of color and first-generation college students. "Noncognitive measures evaluate such characteristics as adjustment, motivation, and student perceptions, which are not measurable using typical standardized tests. These measures are viewed as strong predictors of success for students who are not traditionally represented in higher education. These students often need to work during high school, which restricts time spent on academic and extracurricular pursuits, and they may also have parents with lower levels of education and less involvement in their children's educational plans. Noncognitive assessment helps account for the different experiences of such students rather than treating all students as though they come from similar environments (Ramsey, p.2)."

Focusing on Noncognitive Competencies actually helps students in two specific ways. First, when students are actively building Noncognition, they are working on the skills, conditions, and mindsets that will support them in college. Second, by focusing on the NCCs, we can actually increase the engagement of students in their work, thus making it more likely that they will graduate from high school.

Because the structure and design of our school supports students taking on leadership roles, obtaining internships, and pursuing their passions, students can and do build NCCs. For example, we have a student who is a leader of a student-led elective class, has an internship working with drug-impacted babies at a local non-profit, and has actively worked on her own self-esteem through teaching others about cyber bullying. This student has not only developed significantly in the area of NCCs, she understands and can articulate her learning in terms of the competencies. In the past two years, we have focused on informing students explicitly when they are working on NCCs and teaching them to self-reflect about how they are doing in their own lives.

By investing in explicit structures to implement and build NCCs with your students, you are not only better preparing your students for college and college degree completion, you are also successfully increasing the engagement level of your students. You are also teaching your students how to be more self-reflective and more aware of their mindsets, skills, and the conditions that are around them, empowering them to make positive choices and be more mindful about how they learn, what they want to do, and who they want to become.

How are Noncognitive Competencies connected to 21st century skills?

Because the term "21st century skills" can mean different things to different people, we generally avoid using it. We've talked to other educators who feel the same way. The difficulties in defining the term are apparent in consulting www.edglossary.org, which is an online tool for education writers that provides definitions and quick summaries of "edu-speak" terms. When we looked up "21st century skills," a list of over 40 different skills was represented! Different non-profit organizations, schools, school districts, and researchers certainly have different lists of what 21st century skills are and how to define them. Generally speaking, they are the skills that students need in order to be prepared for college, work, and life in the 21st century.

If you want to look at several well-developed "21st century skills" lists, we recommend the work of David Conley and the Educational Policy Improvement Center, and the work of the Partnership for 21st Century Skills (see Appendix G for additional resources). We believe that by focusing on the 8 NCCs, we are also focusing on many skills needed for success in the 21st century.

The Noncognitive Competencies are much clearer constructs and have a strong research base than the loose "21st century skills" idea. The two are not mutually exclusive: the 8 NCCs actually embed in them many of the other 21st century skills. For example, a student is working at an internship (knowledge acquired in a field) at a large Seattle-based corporation. That student has to prepare a presentation on his or her work utilizing technology and present it in front of mentors and the CEO. Through the internship, the student has incorporated many of the 21st century career skills by demonstrating acquired knowledge acquired and navigating system in the workplace.

How will focusing on the NCCs going to close the achievement gap?

The achievement gap can generally be defined as the disparity between different racial groups on measures of achievement. There are significant gaps between white students and African-American and Hispanic students in virtually every measure of achievement including test scores, high school completion rates, college enrollment, and college completion.[4]

We would argue that there is also what we would call a "relevance" gap. The K-12 curriculum is not relevant to students' lives. In our experience this gap is particularly pronounced at the middle and high school levels, resulting in sharply diminished student engagement. We want schools that mirror the kind of world we live in. How does a school's design promote educational activities and learning that are relevant to the student's own passions and interests?

The 8 NCCs represent one way to think about eradicating the achievement gap and the relevance gap that we are currently experiencing in education. Focusing on students' interests in the real world and creating a curriculum in which the 8 NCCs are the foundation for the positive student outcomes you are seeking can yield positive and exceptional results. If the 8 NCCs are embedded into the design of the school, we can address the "relevance" gap and create a much higher level of engagement. Across the BPL network, there is a graduation rate of 92%, which cuts across all racial and socio-economic groups. We credit this success to the robust learning environment in BPL schools that allows students to connect learning that happens in the classroom to the real world through internships, flexibility in allowing students to pursue and explore

[4]This data is from the Achievement Gap Initiative which can be found online at www.agi.harvard.edu

their own interests, and mentors and advisors that help guide the student through self and career exploration. As more attention is given to the holistically integrated academic and personal development of students through the use of NCCs and other similar approaches, we are beginning to see an impact in the number of first-generation and low-income youth who are enrolling in college. However, there is still much work to be done in expanding access and increasing retention. Focusing on the NCCs and other approaches is only one part of the equation. Colleges and universities also have to step up to make learning more engaging and relevant for all students.

How do the NCCs connect to other research?

We have read other research that is related to William Sedlacek's work with the Gates Millennium Scholars program. We encourage you to dig deeper and read the additional resources available in Appendix G of this guide. The research studying NCCs and skills associated with college degree attainment and labor market success is ongoing, and many people within education are now working to determine how to build these NCCs with students. It is easy to remain up-to-date as new research is published.

The University of Chicago Consortium on Chicago School Research (CCSR)

The University of Chicago Consortium on Chicago School Research (CCSR) published a comprehensive literature review of research about noncognitive factors. The report, published in 2012 and titled *Teaching Adolescents To Become Learners: The Role of Noncognitive Factors in Shaping School Performance: A Critical Literature Review*, concluded that cognitive factors alone do not predict a student's likelihood for success in college, the labor market, or social-emotional wellness. The authors challenge the belief that "students' readiness for high school or college depends almost entirely on the mastery of content knowledge and academic skills through the courses they take (p. 4)." The CCSR authors maintain that students with an academic mindset are more likely to earn a college degree than those who do not have an academic mindset.

The CCSR authors define academic mindsets as "the psycho-social attitudes or beliefs one has about oneself in relation to academic work" (p. 9). The researchers found that having an academic mindset can have a significant impact on academic performance and learning. These academic behaviors include positive study habits, attending class, managing time effectively, asking for help, and participating in class.

The CCSR group identified four key components to academic mindsets. They are:

1) "I belong in this community." In a school setting, this is the degree to which a student feels connected and engaged with peers, teachers, and school-based staff.
2) "I can succeed at this." This refers to the degree to which a student feels like they are capable of succeeding at a specific task.
3) "My ability and my competence grow with my effort." This refers to the degree to which students believe that intelligence is malleable and hard work produces effort.
4) "This work has value for me." There is a strong association between a student's perception of value in doing the work and persistence in completing the work.

The CCSR authors summarized this by writing, "When a student feels a sense of belonging in a classroom community, believes that effort will increase ability and competence, believes that success is possible and within his or her control, and sees school work as interesting or relevant to his or her life, the student is much more likely to persist at academic tasks despite setbacks and to exhibit the kinds of academic behaviors that lead to learning and school success. Conversely, when students feel as though they do not belong, are not smart enough, will not be able to succeed, or cannot find relevance in the work at hand, they are much more likely to give up and withdraw from academic work, demonstrating poor academic behaviors which result in low grades (p. 10)."

Researchers have identified academic mindsets as important contributors to academic outcomes. Educators can help develop academic behaviors by teaching students to understand that it is possible to improve academically if they work hard. Carol Dweck's work on developing growth mindsets has become widely recognized among educators and the general public. Her work underlines the growing consensus that academic performance in many ways has to do with how students view their own intelligence and capabilities.

A psychologist and author, Carol Dweck's research demonstrating that students can move from a fixed to a more malleable mindset appears in her book *Mindset: The New Psychology of Success (2007).* Teaching growth mindset theories to students and making sure they attribute their success to factors that can be changed can be influential, according to Dweck. For example, a teacher can praise a student for trying really hard or comment about the student's process in completing an assignment. This allows the student to recognize behaviors that contribute to academic and personal success.

Another leading researcher in this field, Angela Duckworth, is a psychologist and researcher at the University of Pennsylvania. Her research on why some students succeed and others do not was motivated by her work in underperforming schools throughout her 20s. In Paul Tough's (2012) book *How Children Succeed: Grit, Curiosity, and the Hidden Power of Character,* Duckworth as saying that, "True, learning is fun, exhilarating and gratifying- but it is also often daunting, exhausting and sometimes discouraging. To help chronically low-performing but intelligent students, educators and parents must first recognize that character is at least as important as intellect (p. 61)."

Duckworth has found that both motivation and volition play an important role in achievement. As Tough writes, "Most of us are familiar with the experience of possessing motivation but lacking volition: You can be extremely motivated to lose weight, but unless you have the volition-the willpower, the self-control- to put down the cherry Danish and pick up the weights, you are not going to succeed (p.64)." Duckworth developed something she called a Grit Test, a self-assessment tool with statements such as "New ideas and projects sometimes distract me from previous ones"; "Setbacks don't discourage me;" "I am a hard worker"; and "I finish whatever I begin." (Tough, 74-75).

Duckworth found that the Grit Test was a strong predictor of success. For example, at University of Pennsylvania, "high grit scores allowed students who had entered college with relatively low college-board scores to nonetheless achieve high GPAs. At the National Spelling Bee, Duckworth found that children with high grit scores were more likely to survive to the later rounds (p. 75)."

Underlining the implication of mindset research findings, CCSR authors conclude their study with this call to action: "Teaching adolescents to become learners requires more than improving test scores; it means transforming classrooms into places alive with ideas that engage students' natural curiosity and desire to learn in preparation for college, career, and meaningful adult lives. This requires schools to build not only students' skills and knowledge, but also their sense of what is possible for themselves as they develop the strategies, behaviors, and attitudes that allow them to bring their aspirations to fruition." (p. 77)

CCSR's, Dweck's, and Duckworth's findings support the NCC's emphasis on looking at students in a holistic approach in order to reinforce positive behaviors and mindsets, while pushing for more relevance and engagement in schools. The typical way we do school in the United States public education system doesn't strongly support collaboration, problem solving skills, and other social skills. As a result, schools don't measure these skills. In an era where what is measured is what matters, we certainly don't spend time trying to build them in our students since they aren't being measured.

The CCSR Report notes, "In our model of noncognitive factors, social skills have the weakest evidence of a direct relationship with grades, in part because measures of social skills or social-emotional competencies overlap extensively with other noncognitive factors. Without more concise boundaries delineating the concept of social skills, the existing evidence cannot distinguish the effects of social skills from other effects. Social skills are important for adolescents as they prepare for future work and interacting in the "real world," but social skills are less utilized in the way classrooms are currently structured where independent tasks and assignments largely determine a student's individual grade. The exception to this may be when the context of the classroom focuses on collaboration and group work; in this situation, stronger social skills may prevail as having a stronger, direct relationship with grades. More research is needed which takes school and classroom context into consideration in examining how social skills may contribute to grades and learning for adolescents across a variety of school settings (p.52-53)." Within our current "traditional" public education school structure, a student doesn't really need "social skills" to do well in school even though they are "important for adolescents as they prepare for future work and interacting in the 'real world.' (p. 53)."

With new research demonstrating our education system's deficiencies in preparing students for the real world, it is becoming increasingly clear that working with students to help them develop effective social and personal skills needs to be an important part of education.

As you read through the guide, we ask that you keep these basic questions in mind:

- What skills do students need to prepare for future work in the real world?
- How can these skills be reflected inside the classroom, in the school structure, and as a part of the culture of the school?
- How do we communicate this to stakeholder groups, including students, parents, mentors, and educators?

In conclusion, there is significant overlap between the work conducted by other researchers and the 8 NCCs identified by William Sedlacek. As we continue to do this work with our students, we will stay up to date on research. We are particularly interested in outcome measures of success beyond grade point average: college degree attainment, labor market success, civic engagement, and adult happiness indicators.

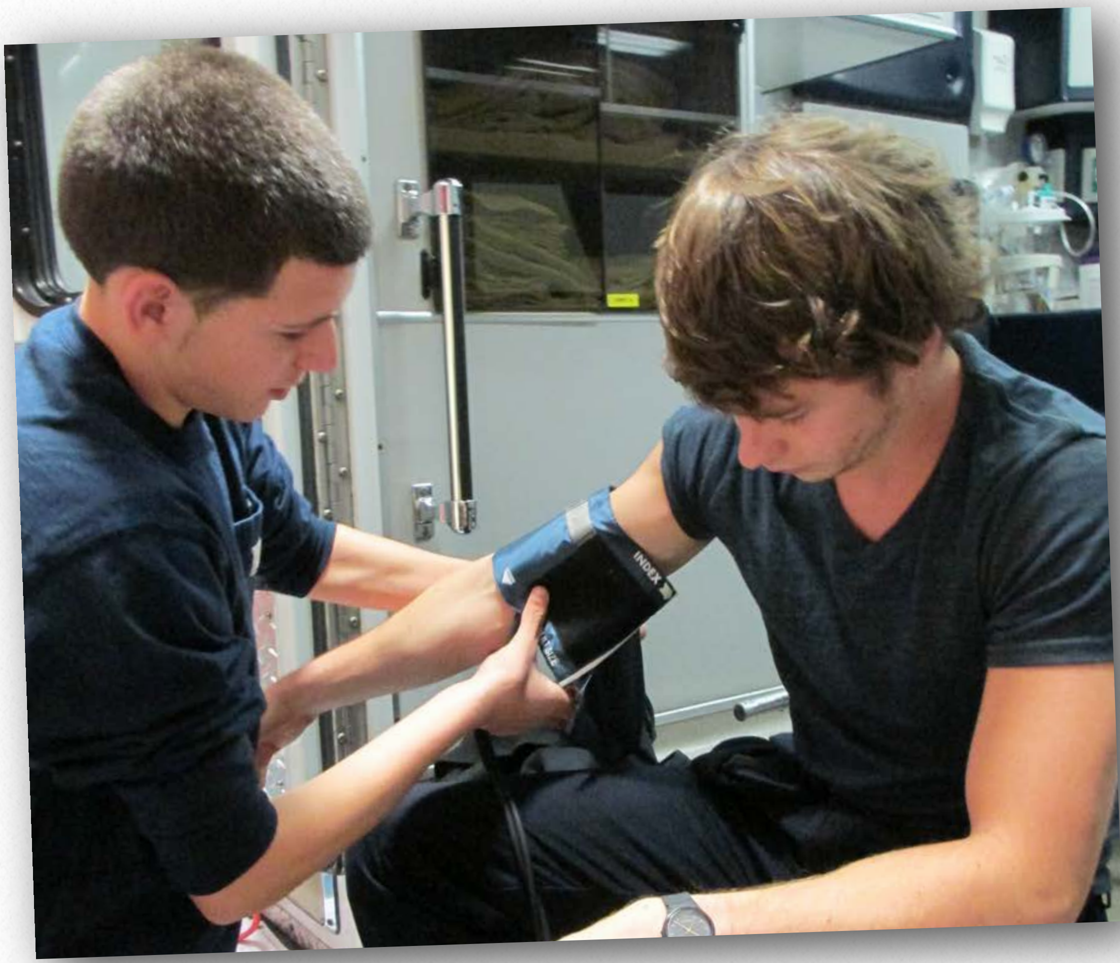
What's missing from what's out there?

While conducting research, we read hundreds of pages of briefs, research papers, books, and white papers by education thought leaders, scholars, doctoral candidates, authors, and journalists. We found unequivocal, robust support for the main contention of this guide: NCCs are incredibly important for student success in college and career. Throughout our research, however, we were unable to find specific strategies for implementing educational practices to build Noncognitive qualities. In other words, we read a lot about the "why" and very little about "how" to actually build these conditions, mindsets, and skills with students. One of the reasons that the "how" piece may not be as easy to find is that researchers are working on determining exactly what educators can do to help build these competencies, and also how to measure effectiveness. Ultimately, we are focused on student outcomes, so the other question in our mind pertains to assessing how the NCCs improve student outcomes.

This guide is a template to how NCCs are currently being implemented in BPL schools. It is not intended to establish a set of prescribed experiences that are directly tied to each NCC. It is important to take a personalized approach to working with individual students, while allowing for each individual to have a genuine and unique response to personal experiences that can potentially lead to a deeper awareness and understanding of how the student connects the experience to an NCC. It is not the scope of this guide to provide specific lesson plans, although that could be the focus of future materials. In the meantime, this guidebook represents all of our best thinking, so far, around the development, implementation, and assessment of NCCs in working with middle and high school students.

3

School Wide Implementation of NCCs



School Wide Implementation of NCCs

Real-World Learning

The NCCs emphasize real-world learning and experiences, something we have come to value as the single most important part of our curriculum in preparing students for life after high school. We know this because in longitudinal studies, our students cite their LTIs as important in preparing them for life after high school. In a study conducted by MPR Associates, Inc. in 2012 that looked at BPL graduates from 2006 to 2010, nearly all respondents reported that working with adults at their internships (94%) and building self-confidence through work-based learning (95%) were important or very important. For more information about the study, please visit http://www.bigpicture.org/wp-content/uploads/2013/05/BPL-Report-Final-Jan-2013_2.28.13.pdf.

We also strongly affirm student experiences outside of school that demonstrate NCC growth. Think of the high school student who goes home after school and cares for her aging grandmother. Picture the student who is homeless, lives in a homeless shelter alone, and is able to reach out and seek help, embraces having a wrap-around team, and then moves in with a foster family, all while staying in school. Imagine the 9th grade student who has a baby, comes back to school after the baby is born, and writes a book about her reflections on life as a teenage mom and dedicates that book to her baby in the 10th grade. These are real examples of the NCCs in action. As educators, we value (and give credit for) those as experiences that help our students as they progress through their lives.

Leading School Change

Overview

Focusing on strategies designed to increase the development of NCCs across a school, this section presents an overview of a multi-year change effort specifically focusing on a three-year action plan (see Appendix B). Adapted from the frameworks of Patterson et al (2008) in *Influencer: The New Science of Leading Change* we discuss our effort in terms of three categories of change: 1) supportive structures, 2) cultural supports, and 3) personal development. For the purposes of this guidebook we have oversimplified the vast research of Patterson et al. and highly recommend investing in a copy of their book to develop a more sophisticated understanding of how their research has influenced measurable and significant global and organizational change. A key finding from their work suggests successful leadership must specifically address each of the three categories mentioned above. Further, to influence behavior, leadership must both *motivate* stakeholders and provide the supports necessary to ensure the development of effective *skills* related to the change goals. Without both motivation and skill, behavioral change is not possible.

As a side-note, in well-intentioned attempts to generate change, we have found ourselves creating complex lists and rubrics, meeting about meetings, endlessly word-smithing plans, and designing complicated frameworks while often losing sight of the real work. Patterson et al encourage leaders to narrow focus through the three categories mentioned above (structures, culture, and personal supports) to 2-3 vital behaviors necessary for change to occur. In this light, Appendix B includes a sample three-year action plan, which represents nearly a decade of work and input from students, staff, and families. Despite our efforts to narrow our focus to 2-3 vital behaviors, we continue to struggle with overly complex planning processes and implementation strategies. We constantly remind ourselves not to let the plan overshadow or become the work and encourage others to do the same. Additionally, we continue to tailor our plan to our emerging contexts, attempt to individualize our work to the unique strengths, interest, and struggles of our stakeholders, and push ourselves to build from our collective strengths rather than focus on our struggles.

Category I: Designing and Implementing Structures for Change

Role of the principal/leader: In short, we recommend the principal or leadership team focus on the following structures for change:

1) the plan

2) professional development and collaboration

3) the monitoring of progress

Ideally, all three of these structures serve to motivate behavior and increase the skills necessary to implement change.

1) **The plan.** The plan should include a clear vision connected to the school mission, describe a set of measurable outcomes, clearly define the who/what/when/where of the projects and next actions related to the outcomes, and articulate vital behaviors for successful implementation. This plan needs to stay at the front of the work, publicized to important stakeholders, and central staff and leadership decisions.
2) **Professional development.** Professional development includes staff meetings, leadership letters, collaborative time, feedback and observation, reflective practice, and formal and informal conversations. The principal or leadership team needs to ensure professional development opportunities are well planned, clearly aligned with the vision and goals, and differentiated according to the needs of the staff. We recommend spending some time in the beginning of the implementation process arriving at a shared language around NCCs or the "what" of the work and then moving quickly into the "how." With a clear and measurable plan, we have found well-facilitated discussions or protocols tend to generate ideas from within the staff more efficiently and effectively than outside presentations. Occasionally, however, outside presentations/facilitation and literature can help move staff through difficult conversations or roadblocks.
3) **The monitoring of progress.** The principal plays an important role through the monitoring of progress. Just like any data-informed leadership practice, NCC development can be measured, reflected upon, and used to inform next actions and as a way to hold the staff and school accountable to the work. We recommend using the rubrics (found in Chapter 5 of this guidebook), in part or whole, as a framework for observations, to generate self-reflection, as part of professional development to generate ideas for next actions, and for the principal to assess the strengths and struggles across the school. Additionally, we are using an inquiry process to test hypotheses about NCCs. We are currently digging into our school's data to determine if NCC growth can predict attendance rates, gains in test scores, and discipline data. Last year we found NCC growth was a strong predictor of student exhibition (student-led conferences) scores. Not only did this serve to bolster interest in NCCs, but it also helped us generate opportunities to reflect on adult practice contributing to growth.

Category II: Implementing Cultural Supports for Change

Role of the principal/leader:

To influence the culture of a school in relation to a change effort, the principal needs to: 1) constantly communicate the importance of the work, 2) target key early adopters, and 3) create opportunities for positive experiences related to the work.

Messages surrounding the work should maintain consistency, be shared across stakeholder groups (families, community, students, mentors, and staff), connect to multiple forms of communication including newsletters, classroom posters, and one-to-one conversations, and should work toward creating a shared language around NCCs. Effective communication will keep NCCs at the front of the school's work.

In our initial work with the NCCs, we identified and targeted a group of students and staff who seemed likely to be early adopters for the work. This included students and staff who were already integrating NCCs (intentionally or not) into their practice, staff members who were asking for leadership opportunities, and stakeholders with whom we had already developed close and trusting relationships. By identifying early adopters we were able to pilot different iterations of tools such as the rubrics, tune our language and understanding of NCCs, and create the foundation for cultural change when we brought the work to the entire school.

We are in the process of ramping up our efforts to share positive NCC experiences with the school. We have already shared video interviews with students, planned classroom NCC retreats, and included students and staff in our presentations about NCC work outside of the school. As this work moves forward, we plan to recognize NCC growth at school assemblies, publicly post our data, and celebrate NCC development in the same way we would honor exemplary projects or achievement such as perfect attendance or the attainment of college scholarships.

Category III: Personal Development for Change

Role of the principal/leader:

This work focuses primarily on creating the conditions both to motivate and to provide skills for individuals to enact desired change. To do this, the principal or leader needs to take into account the individual strengths, struggles, and attitudes of the stakeholder group, in this case, teachers. We are still engaging this effort, primarily through the use of feedback and observation cycles, professional growth plans, and individual conversations with staff members. By sorting the work into motivation and skills, we are able to target individual teachers accordingly. For some teachers this means troubleshooting about a particular student or lesson plan, and for other teachers it means helping students prioritize NCC work. Each teacher is on his/her own learning curve and while professional development should benefit the development of NCCs, successful implementation also needs to happen on a personal level. Data from the NCC rubric can surface trends in a classroom or particular growth areas, but the real work (once a teacher is motivated to effect change) is helping the teacher develop the skills to take action. This requires patience, trusting relationships, and individualized approach. We recommend assessing the motivation and skills of each teacher in relation to NCCs and then creating individual or group action plans.

4

Teacher, Advisor, and Counselor Implementation

Teacher, Advisor, and Counselor Implementation

A Note on Wellness

The NCCs encompass competencies that not only are related to academic success, but that also promote whole student wellness. We know our students will continue to face obstacles in their lives, and we want them to have the skills to overcome those challenges, long after they have graduated from our school. We care about our students' well-being. We love when we hear from former students that they are doing well, feel happy, sustain healthy connections to their families and communities, and still enjoy learning.

As educators, we must not only focus on academic skills, but on a student's own sense of self and healing. Often a student's family life, stress, and previous or current trauma stand in the way of reaching his or her academic potential. The NCCs show us that although academics are important, being "smart" or "doing well in school" doesn't always show the whole picture. Academic labels or grades might result from wellness rather than precede it. Regardless, we want wellness for all of our students. The NCCs certainly matter for students from disadvantaged backgrounds: however, we strongly want to make the point that they are important for students (and adults) from all walks of life.

Overview

This section includes each of the 8 NCCs, with a list of activities, school structures, questions, and what to look for when helping your students build each competency. The implementation ideas here are not meant to be inclusive of all the activities, questions, or school structures that can and do support NCC development. As you read this, you will likely come up with your own ideas in addition to these below. In many cases, activities and lesson plan ideas are suggested without a descriptor of each activity. Appendix G of this guidebook includes links to resources that can help with implementation. Additionally, we encourage you to look online, as there are a vast array of free lesson plans and activities that can foster and support NCCs. Finally, part of your work could be holding meetings with other staff members to share innovative ideas as the work grows within your school.

Giving students feedback

Giving students positive feedback about their NCCs can certainly help to foster and build NCCs. It is also clear that at times, we need to give our students critical feedback. Our own experience suggests that it can be challenging to give students critical feedback about any of the NCCs without a strong relationship. We recommend that you ask students for permission before giving any critical feedback. You can simply say, "Can I give you some critical feedback right now?" Students often will say yes if they have formed a trusting and strong relationship with you, and also if you yourself have already modeled a sense of vulnerability with your students. By talking to your students about some of your challenges, and by modeling the NCCs and your own growth in them, you are more likely to be truly heard by your students when giving critical or positive feedback about each of the competencies.

Student Language

As we've developed a school culture around the NCCs, we've tried to capture examples of what students actually say about themselves, their work, and their choices related to the NCCs. When applicable, we include examples of student language that we have heard with regard to particular competencies. We encourage you to listen for student language that showcases students using the NCCs in ways that demonstrate growth or reflect the need for further work.

Competency#1: Positive Self-Concept

Activities Reflective Journaling Teambuilding activities that promote positive self-identity such as Appreciation Taps, Compliment Circles, and Crossing the Line (these are community building exercises/activities that can be utilized in advisories or classrooms) Socratic seminars topics including "Fixed vs. Growth Mindset," You Are What You Tell Yourself, and The Brain that Changes Itself (these are text-based topics that are based on articles that can be found about growth mindset; we recommend checking out the work of Carol Dweck in particular for texts regarding growth mindset) Writing an autobiography- many students say how it helped them make sense of self and identify patterns of behavior, good and bad **School structures** Identity-based student groups (Example: Gay-Straight Alliance) No tolerance norms for self-bullying (Example: A student says, "I am just stupid.") Autobiography and reflective journaling as grade level and graduation requirements Professional development around fixed vs. growth mindset, effective journaling, and autobiography instruction
Questions to ask students Describe an experience, project, or situation that left you feeling accomplished. Describe an experience, project, or situation that you would have done differently. How are you making sense of that now? Describe a time you have failed. How do you feel about where your life is heading? How has that changed since the beginning of the year? Since last year? Explain. What set of skills are you most proud of? How did you develop those skills? What is your best work? Why is this your best work? Where do you see yourself in 5-10 years? What is going to contribute to the likelihood of that vision? What are some of your struggles? How could you lessen the struggle? What has contributed to the struggle? How would you lessen the struggle?
Helpful hints Teach students about self-bullying and how to recognize when they are making self-deprecating statements. Have zero tolerance for it. For example, if a student says, "I am not smart," you could say, "I'm not going to let you insult yourself around me." Encourage students to use language indicative of a growth mindset ("I can with effort") instead of fixed mindset ("I'm smart" or "I'm dumb" or "I'm just not good at that."). Encourage students to be comfortable talking about their strengths and growth areas. You can model this by talking about your own strengths and growth areas too. Teach students that failure is part of learning. Encourage students to be reflective about their work. Ask students about their best work. Encourage them to see that their best work often reflects the amount of interest and effort they put into the work. Instead of making generalizations about their work ("I have never been good at math") encourage students to be more specific. They could say, "I'm not good at linear equations yet but I'm working hard to get better." Feedback statements could include: • You've demonstrated growth in ______. You must've put a lot of effort into this, • Don't tell me you're not good at _______. Let's talk about how you can get better. • Failing is a part of learning. What kind of choice can you make differently next time?

Competency#2: Realistic Self-Appraisal

Activities
Discussions about healthy ways of thinking about standardized testing
Activities related to career pathways and essential knowledge
Socratic seminar topics including college knowledge, the value of self-appraisal
Student-created rubrics

School structures
Authentic assessment such as exhibitions with "expert" panelists such as alumni, mentors, and outside panelists
Mentor training on how to give students effective feedback
Professional development around giving effective feedback
Professional development around effective use of rubrics (resources include Project Based Learning through Buck Institute)

Statements and questions to pose to students
Tell me about some of your strengths and explain why you see this as a strength.
Tell me about some of your weaknesses and explain why you see this is a weakness.
Tell me about a time somebody believed you were more skilled in something than you actually were. How did you respond to this?
Tell me about a time somebody believed you were less skilled in something than you actually were. How did you respond to this?
What are some of the most important skills you would like to develop before you leave high school?
What parts of yourself, your learning, or your habits have you worked at overcoming in your life?
What are you currently working at improving in order to grow into a better person?
What kind of skills do your mentors think you need to develop?
How do you measure the quality of your work? How do you measure the quality of your academic skills? Who could you ask for opinions about your work?

Helpful hints
Make time for students to self-reflect and use those self-reflections to guide future goals.
Help students to formulate goals and work toward goals that will prepare them for what they want to do after high school.
Encourage students to ask for feedback from peers and adults, especially mentors. Encourage students to use that feedback for further growth.
Create time for students to reflect and then check in with students to see that they are learning from past experiences.
Encourage students to seek services for personal needs, such as counseling, tutoring and peer help.
Teach students that it is important they learn to self-advocate and ask for help in areas of academic weakness.

Competency#3: Navigating systems and understanding and dealing with discrimination

Activities

Reflections on self-advocacy and dealing with discrimination

Data digs into demographics and census data, classism, proportional representation of different groups in politics, business, or prison, relative to demographics of region

Socratic Seminars on topics such as privilege, racism, classism, homophobia, sexism, discrimination, oppression, and ethical dilemmas

Allowing for choice in classroom activities and grade level requirements

School structures

Student groups based on identities and interests

Learning through Internships or interest exploration activities as an opportunity for self-advocacy and learning adult systems

Professional development and school framework around undoing oppression and racism

Robust college preparation and career curriculum that encourages students to navigate systems

Questions to ask students

What systems are we a part of, and how do you navigate those systems (school, work, family, church, community, government, financial aid, military, police)?

When you have a strong opinion about something, how do you ensure that your own voice is heard?

What experiences have you had dealing with discrimination (e.g. racial, gender, religious, sexual orientation, class structure, or other)?

How did you approach discrimination when you experienced it?

Have you witnessed others being discriminated against, and what did you do about it?

What role do you play in improving the existing system and standing up for the rights of all individuals?

What is an example of a time when you navigated a system successfully? Unsuccessfully?

Helpful hints

Look for opportunities to congratulate students when they successfully navigate a system.

Encourage students to bring their own identities, cultures, race, gender, class, religious affiliation, and/or sexual orientation to their work.

Create time for students to share with one another, and ensure that the classroom environment is safe.

Have zero tolerance for bullying or discrimination in the classroom, and when you hear it, talk with students about it. Don't avoid it.

Competency#4: Preference for Long-Range Goals over Short-Term or Immediate Needs

Activities
Peer mentoring
Hosting college and alumni panels
Interest exploration and development
Informational interviews, shadow days, and internship process
Student designed goals through learning plans
Vision boards
SMART goals (See Additional Resources for SMART Goal Template)
Socratic Seminars on topics such as "What color is your parachute?," the "Marshmallow test" (see Appendix G), the "Grit Scale" (see Additional Resources) and delayed gratification

School Structure
Learning plans connected to exhibitions, students held accountable to goals
Professional development around SMART goals (See Additional Resources for SMART Goal Template)
Staff learning plans with staff vision, SMART goals, and task lists

Questions to ask students
What are your academic, personal, and career goals? Why are these important to you?
What steps are you currently taking to achieve these goals?
Describe a situation in which you had to forgo an immediate pleasure in order to achieve a goal?
How are your goals tied to your internship, interests, academics, and personal life?
How often do you reevaluate and reassess your goals?
Have you wavered in any of your goals? Why?

Helpful hints
Foster opportunities for one-on-one time to talk with students about their long-term goals.
Share with students some of your own goals and how you achieved them. Invite speakers and mentors to share their own stories of goal setting and attainment paths.
Check in to see if students are able to defer gratification and focus on longer term goals that last over multiple months (i.e. "I plan to take the SAT in November, so I will take a prep course over the summer to help me prepare.")
Help students take on increasingly greater challenges that are developmentally appropriate and academically challenging.

Competency#5: Availability of a Strong Support Person

Activities Defining advocate, friend, buddy, and positive role models Peer mentoring programs across grade levels Modeling vulnerability with students Team building with adult participation Socratic Seminars on the power of mentors, building relationships with adults, and self-advocacy Guest adult speakers Bringing community-based organizations into the classroom or to work with students on specific projects as “expert mentors”
School structures Mentor training Professional development around mentor support Professional development around mentor recruitment and retention Adults sharing how mentor relationships were powerful
Questions to ask students Who are the adults that you turn to for guidance and support in life? Describe your relationship and the type of guidance and support that these adults provide you with? What value do you see in having a strong support person or network? What characteristics and personal qualities do you look for in a support person?
Helpful hints Be aware that students need different support people and systems for different aspects of their work. Be conscious of your own ability to be a support person. Ask yourself if you are the best support person for this student at the school. If not, is there someone else at the school or outside of the school that could work with this student? Encourage students to contact potential mentors to support authentic project work. Help students identify supports they might need and help them seek those out in the community. Work with your school administrator and staff to build capacity for wellness supports (counseling, social workers, etc.) as needed. Utilize your own connections and friendships to build more involved adult mentors at the school.

Competency#6: Successful Leadership Experience

Activities
Definitions of leadership
Youth Engaged in Leadership and Learning (YELL!) Curriculum on leadership (see Additional Resources)
Advisory or classroom-based leadership roles
Leadership style inventories
Socratic Seminar topics including leaders we admire, definitions/styles of leadership, student voice, examples of what students can do
Authentic projects with community value

School Structures
Student-led clubs and electives
Student leadership organizations (such as Student Council and Student Leadership Forum)
Family leadership
Shared staff leadership
Students involved in hiring, recruiting, and real work of school leadership
Professional development around increasing student voice
Restorative Justice practices
Student groups with opportunities for leadership
Student facilitated workshops and teaching opportunities
Peer mediation work

Questions to ask students
Who is a leader you admire and why?
What are the personal qualities of a leader?
What leadership skills do you have? How do you know?
What is a time when you wanted to take on a leadership role? Did you? Why or why not?
In what ways are you showing leadership at school? Home? Church? In your neighborhood?

Helpful hints
Look for ways to incorporate leadership into daily routines with students.
Encourage students to think about their experiences at home, with siblings or other family, as leadership experience.
Help students expand their view of leadership by reading and learning about different types of leaders across a variety of interests/careers.
Create opportunities for older students to lead younger students in authentic activities (peer mentoring groups, student led clubs and electives).
Create opportunities for students to present their work to one another and teach something of value to their peers.

Competency#7: Demonstrated Community Service and Involvement

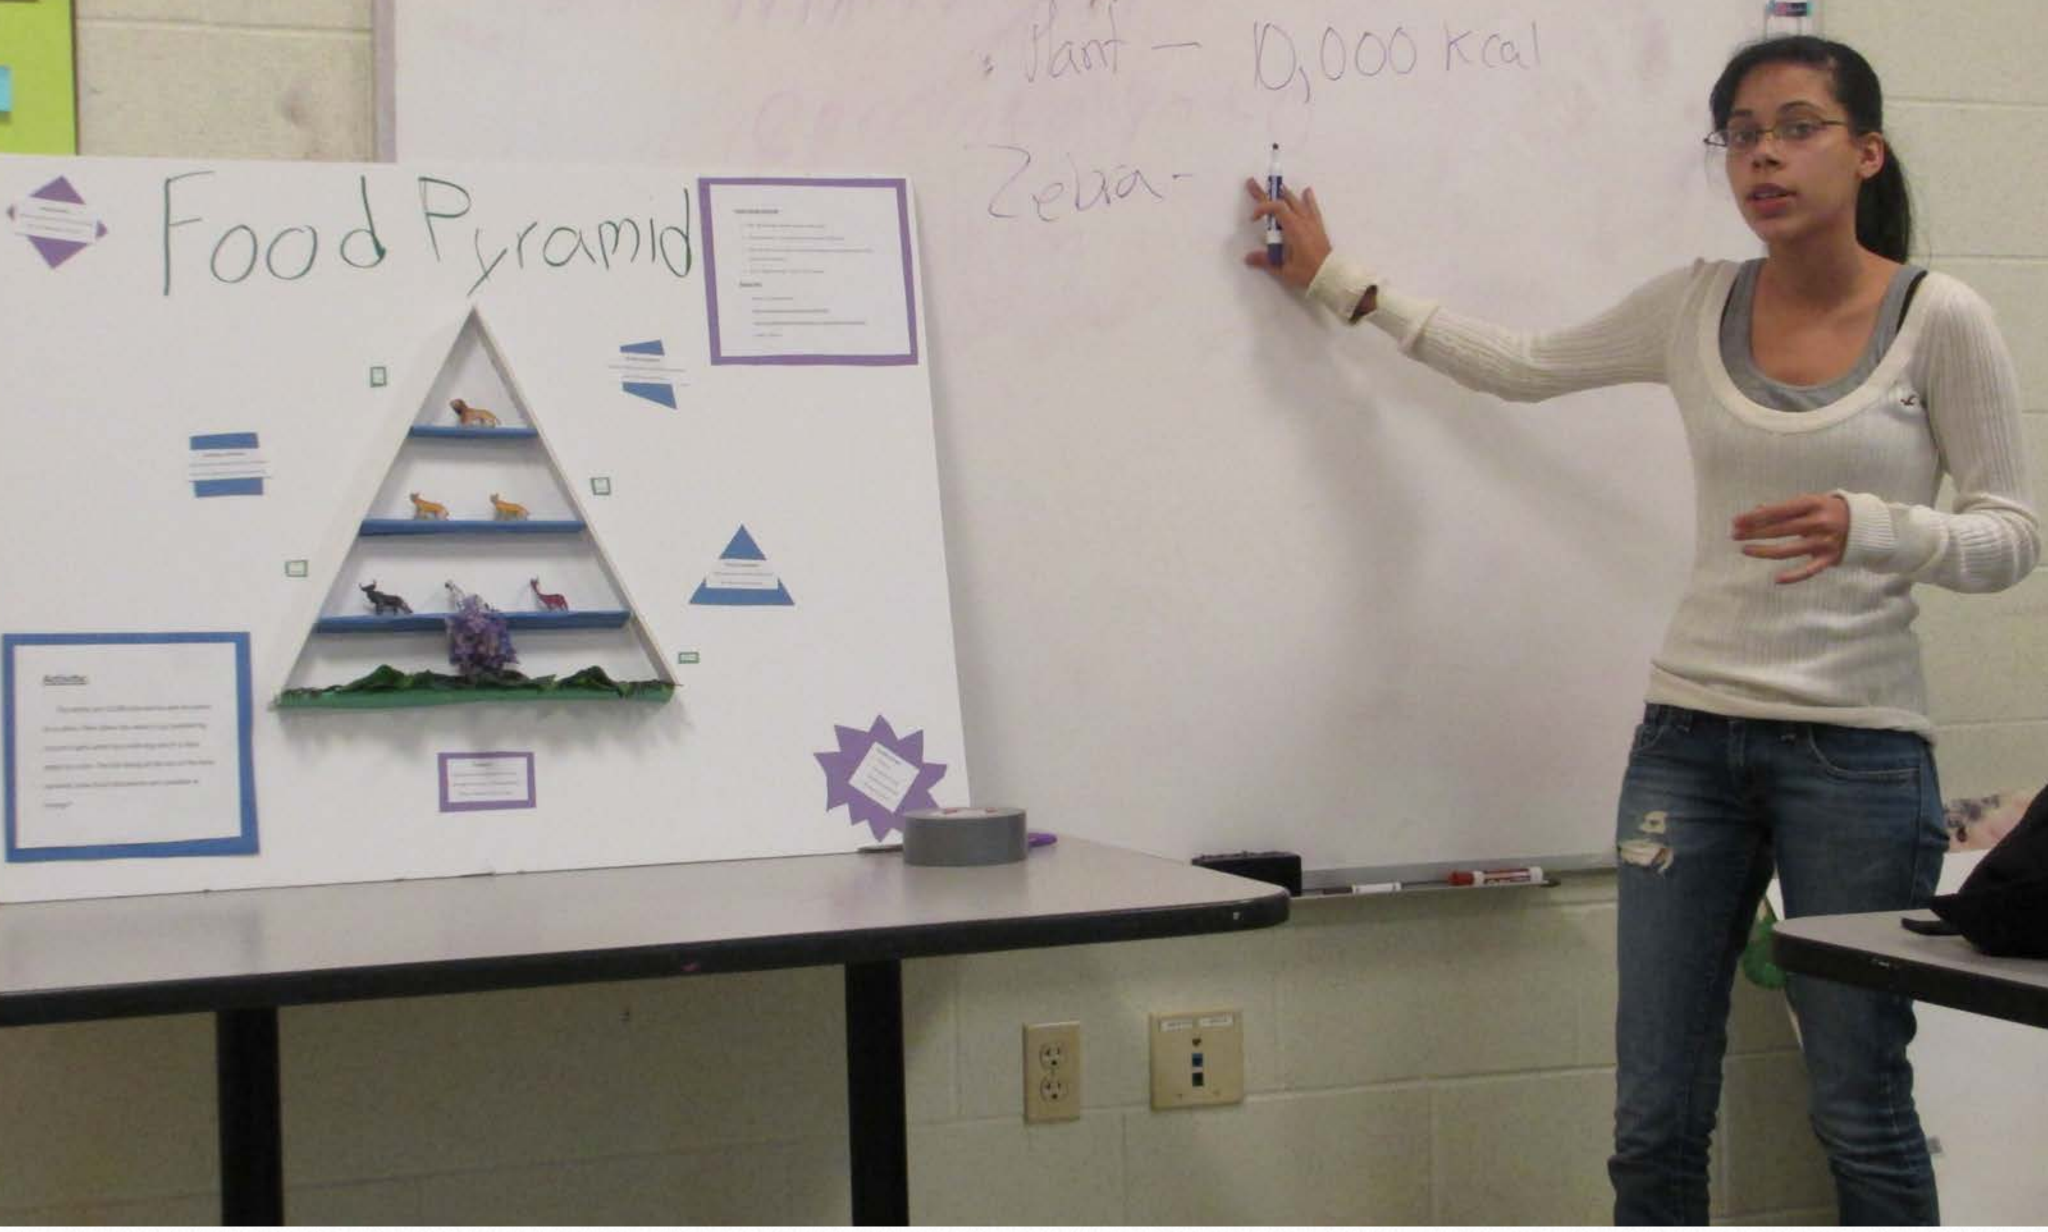
Activities Home visits as funds of knowledge (See Appendix G for more information on Moll's "Funds of Knowledge" work) Defining community Discussions around which communities we belong to, and whether these are chosen or forced upon us School credit for work outside of school School improvement projects in classroom Community improvement projects in classroom Youth Engaged in Leadership and Learning (YELL!) curriculum on community issues and assets Socratic Seminars on local community issues, articles based on student groups and interests, and "What is your third place?" (See Appendix G for more information on "Third Place") Linking student learning to families and communities
School Structures Professional development around parent education and training to increase parent and community members' involvement in school Regular parent contact and communication beyond calling home or writing notes (i.e. home visits and student-led conferences and exhibitions with parent attendance) School-wide celebrations and/or meetings (Pick Me Ups/Send Me Offs) Partnerships with outside organizations to spark student interests Interest cluster groupings Field days Internships Mentor training Professional development on recognizing "funds of knowledge" (see Appendix G)
Questions to ask students How do you define community? Why is it important for you to be engaged in your community? What communities are you a part of? What communities do you feel like you belong to? What communities have been forced on you? Where do you feel most at home? What communities are the most accepting of who you are?
Helpful hints Create opportunities for real world learning experiences when possible. Bring in adult mentors from outside of the community. Build a strong classroom or advisory community, and encourage students to support one another and form supportive bonds. Recognize and give credit for student work being done outside of school, in their neighborhoods, at home, and with other community organizations.

Competency#8: Knowledge Acquired in or about a Field

Activities Internship process (informational interviews, shadow days, and internships) Sharing and publicizing student work Guided field trips Show-and-tell activities Socratic Seminar topics include "What can kids do?" and *Leaving to Learn* (See Additional Resources for both)
School Structures Mentor training Professional development around authentic projects Professional development around mentor support
Questions to ask students Describe experiences outside of the classroom where you acquired knowledge about a specific topic or field of study. If you could study something over multiple days that we have discussed in class/advisory, what would it be? How have you used knowledge you gained in a field setting (i.e. outside of school) to teach others?
Helpful hints Encourage students to pursue something of interest in an in-depth way. Create opportunities for students to teach what they have learned from their field-based experiences. Share student project work visually in classrooms, advisories, and hallways of the school, or in online websites or blogs.

5

Assessments



Assessments

In its first two years, our work has relied on rubrics, seminar style retreats, and interviews to gauge progress students and staff are making towards building a culture around the NCCs.

NCC STUDENT/INDIVIDUAL RUBRIC (see Appendix C)

Directions: As a formative assessment, we ask that the student complete the rubric by him/herself with feedback from an advisor/teacher/mentor to reflect upon NCC growth in relation to project work and personal growth. This rubric can be used during a project to influence next steps, for reflection after a project completion, or periodically throughout the year to assess NCC growth and facilitate growth/learning plans. The questions listed in the top row can help facilitate the reflective and learning plan process.

The rubric can be used in a variety of ways, including student self-assessment and peer-to-peer assessment. The rubric can also be used in one-on-one meetings and as a way for adults to have a conversation with students to push students to go deeper into their work. We find this works best when a strong relationship has been established between the adult and the student.

NCC TEACHER/ADVISOR RUBRIC (See Appendix D)

Directions: As a formative assessment of instructional practice, we ask that teachers complete the rubric by him/herself with feedback from a colleague/coach/administrator to reflect upon NCC growth in relation to instruction. This rubric can be used after an observation, for reflection after a unit or lesson plan, or periodically throughout the year to assess evidence of NCC instruction and facilitate growth/learning plans. The questions listed in the top row can help facilitate the reflective and learning plan process. While this rubric addresses some "look-fors" in teacher practice, the reflections, conversations, professional development, or coaching it generates should address the effectiveness of implementation. We suggest using the "NCC Student/Individual Rubric" to measure classroom trends and student outcomes. Together, these two rubrics can inform professional development.

NCC Retreat (See Appendix E)

The purpose of the NCC Retreat is to immerse students and staff in an event where we could include activities, conversation, and reflection so that we could build a stronger culture at the school around the NCCs. In this appendix, you will find our specific NCC Retreat Agenda and Objectives.

Our major objectives were to hold the space for deep reflection and conversation about each of the NCCs and their connections to one another. We also wanted students to reflect on how the NCCs are embedded in personal and academic work. The final objective was connecting students with staff and peers in meaningful ways in order to give one another feedback about the NCCs. The following is a case study of an NCC retreat hosted by Highline Big Picture in Washington:

We began planning for the NCC Retreat a month before it was held. There were three staff members and five students on the planning committee. The students helped in all aspects of the planning and structure of the retreat, including the setting of objectives and goals, planning the agenda, obtaining lunch and snacks, booking the location at a nearby community center, and planning activities while there. The eight people on the planning committee also each chose one video that highlighted one of the NCCs. We showed all eight videos throughout the course of the day and then held discussions about each of the videos.

At the retreat, the largest time allotted was spent on NCC Interviews. Students interviewed one another utilizing the NCC Interview questions (described in more detail in the next section). The students then gave one another feedback on the NCCs. After students completed interviews, the school principal led a debriefing session in which students shared what they learned about one another and themselves through the interview process. Students then created a visual presentation to illustrate the individual 8 NCCs and their interconnections.

At the end of the retreat, the participants debriefed and reflected on what we had discussed about the NCCs. Specifically, we wanted to know if we were successful in embedding the NCCs more thoroughly into the culture at our school. During the debriefing and reflection time, one staff member captured student quotes about the day. One student said that the NCCs gave her a chance to "know where my strengths and weaknesses are and how to better myself." When asked what they took away from the retreat, one student said, "The NCCs have given us a chance to reflect on ourselves and our advisors." Another student replied, "A mentor is important because they provide feedback." As mentioned previously, during the retreat, students worked in partners to interview each other about the NCCs. At the debriefing session, one student said, "When people struggle in their personal life, they sometimes quit their obligations. But my partner did not and was able to keep doing stuff in her community. It is key to be a part of a positive community." Finally, one student summed up the day speaking about how the NCCs related to research about post high school outcomes. He said, "Research has been done to show that the NCCs are related to life contentment, positive life outcomes, college and other post high school settings." The NCC Retreat or similar events are one way to help students and staff reflect more deeply about the NCCs and embed them further into the culture of the school.

NCC Interview Process (See Appendix F)

NCC interviews can be conducted by staff interviewing students, students interviewing other students, students interviewing staff, or staff interviewing staff.

Staff interviewing students:
Staff from Highline Big Picture school have been interviewing students about NCCs for the past two years. The purpose of these interviews is to learn directly from students about their experiences at school, at their internships, at home, and in their communities and the impact those experiences have on developing the NCCs. For example, if we as a school can identify high leverage activities that we know are helping students in building the NCCs, how can we work more deeply to ensure all students have similar access to those same high leverage activities or experiences? We have learned a lot about our students and their experiences from listening to them. There is much truth to the expression, "If you want to learn something, shut up and listen." Sometimes staff might think they know and understand what is leading to positive and/or negative behavior in students, but when a staff member begins to probe and ask, without judgment, and simply listens, amazing things can happen. From listening to our students and capturing their experiences, we have learned about the value that adult relationships can have on student outcomes, and also the importance of real world learning experiences and validating non-traditional forms of learning. Listening to students without judgment and hearing their stories is very powerful.

In Appendix F you will find a page dedicated to each NCC with reflection questions for each competency. Staff members conducting interviews used these questions to learn more about each of the NCCs. Some of the interviews were video recorded, which means that students need to sign a release form in advance. Make sure to obtain an informed consent form if you plan to record any interviews.

Typically, interviews take between 15 and 20 minutes and focus on just one NCC. At our school, we chose to interview a wide range of students at random to learn more about their experiences in and outside of school and understand more clearly what structures we have in place to help support and build NCCs in our students. In some cases, the videos were used in professional development settings so that educators could hear from students about the NCCs.

Students interviewing students:
Students between 7th and 12th grade have participated in activities where they interviewed one another about the NCCs. The purpose of this activity is to have students sharing more deeply with one another about their own experiences, building a stronger community, and providing a mechanism for students to give one another feedback about NCCs. Typically, one student will interview another student for approximately twenty minutes, and then provide feedback based on the simple rubric at the bottom of the NCC Interview page. Then the students switch roles, with the one who was recently interviewed now in the role of interviewee. The total process takes approximately 45 minutes. After the activity is complete, the advisor or teacher can lead a debriefing conversation with the larger group about the interview process, asking questions to prompt students to think about what they learned about one another and themselves through the process.

Some scaffolding may be needed for students to conduct other student interviews, which could include interview practice and trust and community building activities. As always, you know your students and your class/school environment, so you can decide ways that student-to-student interviews could work well in your context and what sort of scaffolding may be needed in order to make this successful. Our students have enjoyed the opportunity to talk about their own experiences, share more deeply with someone that they trust, and obtain honest feedback from their peers.

Staff interviewing staff:
The NCC interview process can be completed in a professional development setting. In this case, the purpose is to help staff become more familiar with the NCCs and also to reflect on their own experiences with the NCCs. It is also important that staff be able to give each other feedback about the NCCs. Typically, the staff members take approximately 45 minutes to interview each other and provide feedback. This also models an activity that staff can conduct with students.

Students interviewing staff:
In order to model vulnerability and build a stronger relationship with students, a staff member may be willing to be interviewed by students about his/her NCCs. This could be a fun way to model the interview process and give a staff member the opportunity to receive feedback from his/her students. How adults model receiving feedback is really powerful for students to see. If an adult is open and receptive to both positive and constructive feedback, students will see that it is safe to also receive both positive and constructive feedback. Trust is developed, and students are more willing to receive the constructive

feedback from adult that they trust and that has modeled that it is safe to be in an environment in which all people are challenged to be their best selves. Being interviewed by an individual student or a group of students can be a great way for a staff member and students to get to know one another better, a reflective process for both the staff and the students, and an opportunity for both staff and students to reflect more deeply about feedback mechanisms specifically and the NCCs in general.

6

Education, Training, and Support

Education, Training, and Support

Structure

The learning system has three components: education, training, and support. The components are based on an understanding that simple conceptualizations of training are inadequate to support ongoing learning and its application to significant work. Often training (i.e., skills development) is provided before participants have had an adequate opportunity to form clear images of what specific changes the new behaviors require in their current practice. These images help participants to determine what competencies they need to develop.

Once these images and a clear understanding of the gap between their vision and reality are established, attention can be given to developing new competencies and building new knowledge, skills, and dispositions. Moreover, research and experience indicate that transfer of the learning to actual work practices does not take place unless there are structured, guided opportunities for practice and feedback.

> The **education component** is devoted to building a shared foundation of knowledge and understanding about the use of the competencies in authentic work contexts. The education component helps learners form individual and collective images of the ways that the competencies can enhance effectiveness and productivity. It helps learners get ready for more formal skills development (i.e., training) and includes such activities as readings, discussions, visits to exemplary organizations, and viewing and discussing videotapes and presentations by experts and expert practitioners.
>
> The **training component** is devoted to developing skills in using the competencies in a wide variety of work contexts. Special attention is given to modeling the effective use of the skills. The training component includes such activities as workshops, seminars, hands-on practice addressing specific competencies, and self-study.
>
> The **support component** includes a variety of assistance activities to provide ongoing help to learners as they apply their new knowledge and skills. This component includes such activities as demonstrations and modeling, coaching, peer feedback, action research, peer tutoring, and informal exchanges.

Process

The learning support system provides a variety of learning opportunities within each component to accommodate differing learning styles and interests. Figure 1 provides an illustration of these opportunities. During the “education” phase, each staff member will prepare a personal learning plan.

Figure 1: Examples of Learning Opportunities

Education	Training	Support
Visits to organizations with exemplary programs and practices	Introduction to and practice of specific skills in workshops	Opportunities for networking and sharing with others working on similar programs or practices
Forums for staff discussion and presentation of staff projects and action research	Establishment of quality performance criteria	Structured and open-ended feedback about performance in practice
Access to electronic networks to learn about successful approaches	Modeling and demonstration of skills	Coaching for application of specific skills, using “critical friends” as well as experts
Viewing and discussing videos of exemplary practice	Opportunities for guided practice of new skills and behaviors in simulated settings	Peer teaching and assistance
Demonstration and critique of new approaches and applications	Opportunities for reflective writing about new learning	Informal discussions and brainstorming with colleagues
	Job shadowing	Teaming

The education, training, and support sequence is cyclical rather than linear. Staff should have time to develop a preliminary understanding of how the new or enhanced competencies will look in practice before participating in formal skill development. Moreover, support should be provided as new skills are being used in day-to-day work.

Much of our work to date has focused on educating and training staff and students on the use of the NCCs. For this, we have focused on "Deep Dive" workshops, webinars, and cross-pollination of exemplary programs across our schools:

"Deep Dive" Workshop: Noncognitive Competencies as a Framework for Student Success

Description: In this "Deep Dive," get ready to reflect on your own experiences, share deeply with others, and design a change project for your school related to NCCs. At BPL schools, we are using NCCs as a frame to increase academic performance and design curriculum. NCCs are also used in professional development, interventions, student learning plan meetings, exhibitions, family meetings, and for post high school planning. Research has shown that these competencies are strongly correlated to college degree attainment and success in post high school endeavors.

"Deep Dive" Framing Questions

- What mindsets, habits, behaviors, conditions, and skills do you want to help your students cultivate?
- What mindsets, habits, behaviors, conditions, and skills do you possess?
- How can you build Noncognitive Competencies with students?
- How can you measure the NCCs?
- What do individual, structural, and cultural changes look like within your class, school, and district related to this work?
- How can you share this across stakeholders? (families, mentors, students)

Sample Agenda for NCC Workshop

10:00: Welcome & Introductions – Share who you are
10:10: Warm Up Activity – "Take a Step Forward IF"
Participate in a "warm up" activity to get us grounded in the work
10:30: Overview & Research – PowerPoint presentation, "Noncognitive Competencies as a Framework for Student Success"
10:50: Group Discussion and Group Projects – Dive into one of the NCCs, discuss, and create
11:30: Mini-Presentations – Present your work in teams and develop plan for data collection
12:00: LUNCH – Eat and devote time to data collection
12:30: Share Data Digs – Data Digs Group Presentation
12:45: Implementation Overview – Brainstorming and Discussion on how do we build on what we are already doing at our schools (cultural, structural, and individual strategies)? How might we share these across stakeholder groups?
1:30: Student Videos – Hear from some students. What do students say about the NCCs? What do you hear? What structures, culture, and individual supports are in place for student success? What structures, culture, or supports are needed?
1:45: Chalk Talk – Get grounded in the work at your school/organization; share across the room to see common connections
2:00: Action Plans – Work together or individually to design strategies for implementation and measurement of NCCs
2:45: Debrief, Next Steps, Appreciations, and Survey – What happens next? Share next steps, appreciate someone in the group, and complete a super quick survey to give us feedback
3:00: Depart

Webinar Description:

This year, BPL introduced a series of educational and training webinars as a way of reaching new schools and providing ongoing support to existing schools. This required developing content for the webinars and training staff on using the webinar tools and conducting effective webinar training. We introduced a precursor webinar that takes place one week prior to the on-site training and serves as a brief introduction to the content. This allows us to make better use of our on-site professional development time with staff in schools. We are currently in the process of developing webinar training that will serve as ongoing support to staff, in schools where on-site training has taken place, to assist them with implementing the work in their schools. The introductory webinar helps provide a common knowledge base for participation in the Deep Dive on-site workshop.

Webinar Framing Questions

- What do our students need to be successful in college and career?
- What are the Noncognitive Competencies (NCCs)?
- How are NCCs related to 21^{st} century skills?
- How can we be more intentional about helping students build "personal qualities"?
- Who else is using the NCCs?

Cross-Pollination:

By cross-pollination, we are simply referring to the process of benchmarking across our different schools to learn about best practices. This approach allows us to better understand how the NCCs can be implemented and cultivated in different learning communities, some with varying levels of resources. Throughout the second and third years of this project, we hosted a series of workshops with all of our schools at different school sites. In the third year, we expanded to include district staff and schools outside of the BPL Schools Network as a way of reaching larger and more diverse audiences. At each workshop training, we used the Deep Dive model described above to educate and train staff and students.

7

Student Case Studies

Student Case Studies

Overview

Our last chapter is intended to provide living examples of how the NCCs are helping to strengthen the understanding that students have of themselves and their success in school and in life. The following case studies illustrate our students' development around the Noncognitive Competencies. We believe that these case studies can be an inspiring view into individual students' experience and outcomes as a result of improvement in their Noncognitive Competencies over time.

We want to give you an opportunity to read about students whose work embodies the Noncognitive Competencies and give you an opportunity to "hear" from students in their own words. We have chosen to feature seven Big Picture graduates. Each student's case includes a description of their background, followed by a portion of their story and their post-high school plans.

A snapshot of featured students:

> 6 student stories of Highline Big Picture High School graduates
>
> Demographics: 5 female, 1 male; 3 African American students, 2 Caucasian students, 1 East Asian student
>
> All 1st generation college students: None of these students had parents who graduated from college
>
> All qualified for free/reduced lunch program
>
> 1 student emigrated from India and did not begin to learn English until 6th grade; 1 student emigrated from Haiti in the 1st grade
>
> 2 students were Special Education designated students

Why Case Studies?

We strongly believe in the power of telling someone's story, in personal narrative form, as a way of understanding an individual student's experience. Generalizations can be extrapolated from these student experiences to build a collective understanding of what our school does to build noncognitive skills, conditions, and mindsets.

We value case studies as an inspiring look into what can be accomplished by students when they are actively pursuing meaningful real world experiences, receiving the support of caring adults, engaging in leadership activities, providing service in their communities, and gaining deeper understanding of their own goals, strengths, and growth areas (among other NCCs). We hope these stories are as inspiring to you as they have been to us. We know each one of these students very well, and we are continually inspired by their accomplishments, their drive, and their ability to overcome mighty challenges with grace.

We believe these case studies are strong teaching tools. The examples featured here can be utilized by principals, teachers, and counselors in their work with their students. The following table illustrates some ideas about how to use these case studies in an instructional context.

Instructional value of case studies:
("How could we use these case studies at our school?")

Audience	Instructional Value/Ideas for Utilization of Case Studies
School Leadership (District leadership, school leaders including principals, deans, curriculum and instruction leaders)	In Professional Development with staff, assign individuals to read a particular case study. Questions for discussion include: • What individual supports were present that allowed this student to move forward? • What cultural (school) supports or structures were present that created student growth? • What structural supports, programs, and/or curriculum and instruction/best practices were present that created student growth? • What specific interventions helped this student move forward? • As a result of reading this, what does it make you wonder about your own work as an educator? • What short-term next steps could you envision that could help move students forward in the development of the NCCs? • What longer-term goals could you envision that could help move students forward in the development of NCCs? In Professional Development with staff, assign individuals to read all case studies. Questions above apply to this, but additional discussion question could be: • What overall trends do you see in the development of students' NCCs? In Professional Development with staff, assign individuals to read one of the 6 case studies. Ask each person (or team of people) to present the assigned case study to other staff. Have the person (or team) address the following questions: • What significant challenges did the student overcome? • What individual, structural, and/or cultural supports led to student growth in NCCs? • What stood out to you in terms of this student's experience? • Relate this student's experience to one at your school or organization. • With regards to this case study, what did this student's experience make you wonder?
Teachers and Counselors	Teachers could use these case studies with students in advisory and/or Socratic Seminar discussions. Please refer to above list for some questions. Additional questions for discussion include: In reading this, what do you wonder or want to know more about? • What helped this student grow as a person? Cite examples from the text to support your answer. • What supports were in place that moved this student forward? • What stood out to you? • What would you want to say to this student if you were to meet him or her? • What advice might this student give to you or another classmate about school? Work? College and career? Teachers could also use Insight Resumes and College Essays as examples in working with students on college-readiness, college applications, and scholarship essays. Counselors could use these case studies in one-on-one or small group discussions as stories and examples of persistence in the face of adversity.

All students presented here have given their permission to use their names and stories for the purpose of providing case studies around the NCCs.

Daniel

Background

Daniel was born in Haiti and moved to the U.S. as a young child. His parents had to work multiple jobs to keep food on the table. Daniel had an Individualized Education Plan in math and reading and came to Big Picture with academic insecurities around his ability to succeed.

Daniel chose to come to Big Picture because he wanted the opportunity to learn about business in real world settings. Daniel's internship experience at Big Picture illustrates clearly his passion and drive to succeed. He applied to the Starbucks Corporate Headquarters Internship as a freshman with the full understanding that freshmen rarely got that internship. He did not get it his freshman year, but he came back with a vengeance the following year. He sought feedback and he went to the interview prepared - he knocked it out of the park. Daniel became a valuable member of the Starbucks Corporate intern team. Not only did he do real work for them - tracking and logging invoices from the U.S and U.K., working with the IT team and investigating real estate in the business world, but he grew into a confident young man with his dreams clearly in sight.

In his sophomore year Daniel decided he wanted to enter the Running Start Program the following year, a program that allowed him to earn college credit while in high school. He attacked this with the same vigor he displayed at Starbucks. He took on a full fifteen credits in the fall quarter of his junior year. He set his sights high and he achieved them. Daniel currently has a 3.33 G.P.A. in his college classes. Daniel has been an excellent Running Start student. He has taken initiative, sought out resources on his own and kept a strong connection to his high school community.

Not only is Daniel succeeding academically, he has also succeeded at becoming an important part of the community at South Seattle Community College. In his first year there, he joined the Black Student Union and helped put on a big campus event for them. During his senior year, he was elected as president of the B.S.U. Daniel is a charismatic leader and a determined learner.

Post High School Plan

Daniel is a sophomore at Western Washington University, where he is studying business and entrepreneurship. He now works at Starbucks corporate headquarters as a paid intern in the accounting department.

In His Own Words…

The following is a letter Daniel wrote to the Big Picture community at the time of his graduation.

To Big Picture Community:

Throughout my four years enrolled at Highline Big Picture I have triumphed over the hardships, and overcame the obstacles and challenges that would both stop me from reaching my maximum potential both academically, personally, and spiritually.

I have come a long ways from being the insecure, cocky dreamer that I once was. I always had an interest for business and over time that interest grew and developed through attending Running Start. I had the pleasure in doing Running Start at South Seattle Community College for two consecutive years. The first year being full-time and this year mostly part-time, but the time spent over there has helped me grow as a leader student advocator, and as a businessman. I had the chance to take a public speaking, sociology, Anthropology, English 101 class etc. that would help me acquire the necessary knowledge that would develop me to be this great student that you all see in front of you now.

This year I have the honor in being elected as the president of the Black Student Union at SSCC campus. I learned more about myself and my leadership capabilities than I would sitting in a classroom learning general subjects. A couple things I learned was that the only way I was going to become a great educator was first becoming an excellent student and being able to learn new things each and every day so that could become a great leader and story teller. Another thing was delegating and facilitating meetings. Believe me when I say it wasn't easy leading a team of 15 students who are all older than you. It took the respect, trust, and a certain amount of passion to be where I'm standing now.

Starbucks Headquarters has also played a big part in my success. I remember the first time I applied and interview for the accounting internship I was denied, but I didn't let that stop me. My persistence lead to me applying for the internship again my sophomore year and this time around I received it, following a second term my junior year. Being there has increased my knowledge on finance and has given me the skills and qualities that would make me an effective leader and business owner. I now have a clear vision in what I would like to pursue after high school.

Overall the past four years has been great and I wouldn't take back anything because it has some way shaped who I am and where I will be going after high school. This upcoming fall I hope to be going to Western Washington University in hopes of transferring the following year to Seattle U to finish up my undergraduate.

My success at South Seattle Community college has given me the confidence to advance my knowledge and further my education rather it be the pursuit of my Master's degree or PhD. Regardless I know I will be well prepared to take on the challenges and obstacles college has for me because of what I learned personally and academically during my time enrolled at Big Picture.

Mahkayla

Background

Mahkayla joined the school at the beginning of her junior year. During her first two years of high school, she felt alienated from her large impersonal school, and this is reflected in her grades. At Big Picture, however, she immediately engaged in the community and brought startling leadership skills, which elevated the culture of our school for many students. In addition, her academic performance deepened, reflecting her true potential.

Mahkayla became a leader through her student-led projects and organizations she was a part of at the school. All of the students knew her, liked her, and respected her. Her motherly leadership was reflected in her nickname, "Mama Big Picture." She mentored younger students through her work here. She was instrumental in starting the Student Leadership Forum, which is the governing student body at our school. She was the co-president of the organization during her senior year. Her work has made a great impact on our school, including her revision of our school's admission policy through the creation of a new questionnaire for our student interviews. Additionally, she created a matrix to help our administrator's evaluate student interview responses. Mahkayla also coordinated all the middle school visits to help recruit our incoming 9th graders.

Perhaps the biggest compliment that could be paid to Mahkayla is that she was one of two students chosen to represent the entire Big Picture network (a network of over 80 schools) at a national conference in Tulsa, Oklahoma. Mahkayla spoke in front of teachers, administrators, and students about how the Big Picture model profoundly affected her own view of her learning and challenged her thinking about what she is capable of.

During her senior year, Mahkayla interned at United Way, where she used her leadership skills to help community members in need. She organized a clothing drive and spoke in high schools in our community to collect clothes and also to raise awareness about the problems of homelessness.

Mahkayla's own self-esteem suffered particularly around academics. She had been labeled with a learning disorder in middle school and this affected her own view of how "smart" she was. Her two years at Big Picture were spent un-learning her diagnosis and pushing through the academic challenges. She learned that it was ok to ask for help, and that learning required effort.

Mahkayla possessed a sense of self-awareness, as demonstrated through the writing of her 75-page autobiography. Mahkayla brought a unique perspective on diversity, as her experience as a bi-racial teenager. During her junior year, she led a thought provoking Socratic Seminar on the death penalty, in which she was able to challenge other people's points of view. Mahkayla, asserting that the death penalty is unjust, appropriately questioned students about racial equality, and was able to play devil's advocate to challenge those who already were in agreement with her own beliefs. She was also able to maintain a calm demeanor in the face of challenges to her own point of view.

Although Mahkayla came into the school in her junior year, she was able to express her under-utilized talents of leadership and community building. At the same time, she was also able to work on skills that were much tougher for her. For example, she had to process the death of her stepbrother, who died during the summer between her junior and senior year. She grieved much of the entire senior year, but was able to persevere through school with assistance from adults and actively working on Noncognitive Competencies, particularly her own ability to set long term goals and achieve them.

Post High School Plan

Mahkayla is currently working at a retail store near Seattle. She plans to re-enroll at Bellevue College to earn her AA, and then transfer to a four-year university to study social work. Mahkayla was enrolled at Bellevue Community College, where she was succeeding, but had to take a break due to family and health considerations. She looks forward to being back in school soon.

In Her Own Words…

The following is Mahkaya's Insight Resume for her college application to Washington State University.

Leadership/group contributions: Describe examples of your leadership experience and share how you have significantly influenced others, helped resolve disputes, or contributed to group efforts over time. Consider responsibilities you have taken for initiatives in or out of school.

As a student at Big Picture High School, I am deeply involved in the Student Leadership Forum (SLF), and was an intern for the assistant principal. While in SLF last year I had many leadership responsibilities, including planning our school's first Senior Brunch and leading the school's recruiting committee, which successfully recruited a class of incoming 9^{th} graders. While leading this committee, I was in charge of creating a slide show, contacting principals so we could present at each middle school in our district, and planning the presentation. During my internship, I was fortunate to meet with the superintendents of the school district about the creation of a new Big Picture middle school.

Knowledge or creativity in a field: Describe any of your special interests and how you have developed knowledge in these areas. Give examples of your creativity: the ability to see alternatives, take diverse perspectives, think of original ideas, or willingness to try new things.

As of right now I am currently interning at United Way in Seattle 12 hours a week. I am planning and organizing a clothing drive for the Community Research Exchange event in April. In addition to the clothing drive, I am also going to educate youth about homelessness. During this project, I have had to research homelessness, have meetings with my advisor and mentor and I had to make a time line on every step I needed to take to complete this project. I have used the time line as a guide; I have followed the steps and also made changes to reflect new next steps.

Dealing with adversity: Describe the most significant challenge you have faced and the steps you have taken to address this challenge. Include whether you turned to anyone in facing that challenge, the role that person played, and what you learned about yourself.

The biggest challenge I have faced is that this past year my stepbrother, Mario, passed away. He was the closest person to me. Lately I have gone to counseling but it's been a very hard issue to deal with. Through this difficult time, it has made me realize that we all only have one life to live. Time really is precious. His death was an accident and he expected to have a long life, but we never know what may happen in our lives.

His death was a reality check for me to make sure that I live my life to the fullest. This has translated into me pushing myself harder to accomplish what I want in life.

Community service: Explain what you have done to make your community a better place to live. Give examples of specific projects in which you have been involved over time.

I transferred to Big Picture High School right after my sophomore year. Since my transition to Big Picture, I have taken many opportunities to better my own community. I have had two internships that helped people in my community. The best project I was a part of was the Day of Caring event that United Way of King County puts together to help people who are on the verge of being homeless and people who are homeless. The event helps them get connected with resources. During that project I was able to connect with a lot of people and help them gain access to the resources that they need.

Handling systemic challenges: Describe your experiences facing or witnessing discrimination. Tell us how you responded and what you learned from those experiences and how they prepared you to contribute to the WSU community.

During high school, I had a very good friend, an African American male, who was incarcerated during my 11th grade year. Since then, I have known four more African American males, including my father, who have been incarcerated. From this, I've come to realize that for many African Americans, the criminal justice system can be very unjust and can lead to unfair circumstances. At WSU, I plan to be involved in organizations that further justice, especially for African Americans. I would also like to join the Black Student Union to help advocate for racial equality, especially in our criminal justice system.

Goals/task commitment: Articulate the goals you have established for yourself and your efforts to accomplish them. Give at least one specific example that demonstrates your work ethic/diligence

During my junior year, I set my sights on having a summer job. I learned that Youth Source, a program based in Renton, Washington, was hiring youth. I applied for and found an amazing summer job working with United Way of King County, which led to my current work around issues of homelessness. This work was not only important to my present success but has greatly helped me decide that I would like to go into social work. I have realized that I am the happiest when helping others. Social workers generally have a very strong desire to help improve people's lives, and that is exactly what I want to do after I graduate from high school.

Marrisa

Background

Marrisa was diagnosed with childhood leukemia at age five. She never lived in a home with a mother or father. Her father is in jail in Nevada, and her mother left her with her father's sister. Marrisa has no contact with her parents now. During her senior year, she was left homeless when she had to leave her aunt's house (where she lived for years) because of serious safety concerns. Marrisa was homeless for two months during the beginning of her senior year.

Through assistance from her advisor, the school principal, and a wrap-around team from Catholic Charities, Marrisa was able to find two caring adults that were able to take her in. This stability helped Marrisa continue to grow both academically and personally.

During her senior year, Marrisa took on significant academic challenges, including enrolling in college classes at the local community college. She earned an A in a college writing class. Marrisa has a desire to use her writing as an opportunity to heal from past trauma. Marrisa has demonstrated ability to overcome challenges, and she has the kind of grit and tenacity that will not only allow her to be successful in college, but will lead to positive life outcomes.

Marrisa is innately curious. She absolutely loves to laugh. If she is around others who are joyful, it's as if she is literally trying to "latch on" to the joy of others because it was something she was missing for so long. I have been around students who do the opposite. Because they are sad, they want others to be sad also. The exact opposite is true with Marrisa and this is what makes her so extraordinary. Despite the sad world she lived in for so long, she actively seeks to surround herself with love and laughter. She's goofy; she's funny. She warms up easily to adults. She wants to be around adults who like to laugh and like to be around her. She missed that growing up. Rather than be bitter about that, she's discovered herself and the kind of person she is, and the kind of people she wants to be around.

Marissa actively participated in school clubs and electives. During her senior year, she ran a girls' group at the school with another senior. Approximately 10 students regularly attended this group that met after schools on Monday. The group discussed wellness and stress reduction techniques for students who have faced trauma.

Post High School Plan

Marrisa is enrolled at Eastern Washington University, where she is studying to become an elementary school teacher.

In Her Own Words…

The following is Marrisa's college essay about her own private and personal struggles.

When I was seven, I traded my neighbor two cans of coke for the first book I ever owned. It was my prized possession. The book was called *The Secret Garden,* and I devoured every word. Every time I finished reading it, I would simply start again. I remember instantly resonating with the protagonist, Mary. We both wanted so desperately to be loved by our parents, but instead we were simply ignored. We loathed everything, especially ourselves.

Before I found *The Secret Garden,* there was "Him." He was the darkness that plagued my life, like creeping weeds destroying any laughter or enchantment in their path. He would lead me to his bedroom, a foul wicked place that existed far away from hope, or joy, or innocence. When finally I was allowed to leave, I would be left with a kind of filth I could never wash off. To escape from the wretched darkness, like Mary and her garden, I created an entire world all in my head. From the moment I woke up, throughout my school day, to the last time I blinked before finally giving into an often restless sleep, I would invest myself fully into this world. It was my sanctuary.

It wasn't until I was 17 and just beginning my senior year that I decided to leave the environment I was living in and move away from the man who raped me. I was finally taking control of my own garden, fighting the infesting weeds. It was a long fight, and I spent a lot of my time surfing couches and jumping shelters. Things began to look bleak and hopeless after a while. But I pushed through it, feeding the soil and watering the seeds all in the hopes that my garden would one day bloom; finally it did! I found a wonderful home, and I'm once again thriving in school. I have an entire army of people supporting me, and I'm working with my therapist to face the darkness and to keep those weeds from infesting my life again. My work isn't done. In fact, I work every day to keep my garden lively and radiant. Soon I will be a college student, and on my way to becoming a successful, confident adult.

I still have my copy of *The Secret Garden,* the one that brought me so much joy as a child. I often think of the scene in the book where Mary and her cousin, Collin, are in the garden: He says to her, "I shall live forever and ever! I shall find out thousands and thousands of things...and I shall never stop making magic! I'm well, I'm well!"

Olivia

Background

Olivia joined the school in the 9th grade. Until age 6, she lived with her biological mother in a negative home environment. She was then adopted by her mother's sister, where she still lives. Olivia continued to struggle throughout high school, largely because, by her own reflection, she lacked love and attention when she was so young. She chose to endure years of counseling to examine her past and the impact it has had on her. That she has been willing to do this work shows her maturity, and should serve her well as she transitions to adulthood. Of course, many students have negative home environments and instead choose to ignore their feelings, leading to anger and a pervasive sense of shame.

Post High School Plan

Olivia is enrolled in the military and is currently stationed in South Carolina.

In Her Own Words

The following is a letter Olivia wrote at the time of her graduation from our school.

Dear Panelists:

I have experienced so very much personal growth here at Big Picture over the last year. I have really refined my communication skills through the work I have been doing in my internship alongside Nancy Pappas. In terms of personal qualities, I believe I have developed my sense of self-awareness, I am learning how to appropriate express my opinion on things. I have gained many newfound leadership skills through my time with Nancy and the research I have conducted.

Through the end of course math testing I have become the type of student who can and will be successful in college. I have learned how to push myself to go above and beyond, what I had thought I was capable of beforehand. I have a different view on the things in life I do not understand; I now have a drive to learn even more about those things. I feel so much more confident in not only my mathematical abilities but also in my long-term study habits. I feel as though I will be able to accomplish so much more in university this fall than I would have ever been able to accomplish before.

I am so excited to be beginning a brand new chapter in my life. College is going to open up so many wonderful possibilities for me. I plan on joining the student government at Washington State University in the fall. I want to specifically help plan the school-wide events as well as assist with the internship program at WSU. I think it would be amazing if I could implement some of the Big Picture internship model into the WSU setting.

I plan to continue my work alongside [my advisor] into my post high school years through weekly updates and communication. I want to continue to help make the Big Picture internship model reach its full potential.

There are so many people I would like to thank for their help throughout my high school years. I would like to thank Dan for all that he has done for me. Dan has helped me become a more motivated and dedicated student. He has helped me through my struggles in math as well as allows me to explore my interests in the science department. This only scratches at the surface of everything this amazing teacher has done for me. One of the things I appreciate the most about Dan is the ample amount of times that Dan has dropped whatever he was working to simply answer one of my questions or help me out with a task.

I would also like to thank Stan, my advisor for the last 3 years. You have taught me so very much, throughout these last few years. I want to thank you so much for being so dedicated to helping me even throughout the toughest of times. Stan has helped me to become a less reactive person. One of the phrases that he taught me has become a daily mantra of mine, "Fast to listen, slow to speak."

I'd like to thank Lee, although I haven't known you for that long, these last several months we have been working on the end of course math test. It has substantially changed my life and I honestly feel that I owe a large part of that to you. You helped me to understand mathematics in a whole new way, a more exciting way. I don't think I would have passed math let alone placed into college level math for next year. So thank you Lee for all that you have done for me.

I'd like to thank Bonnie. Bonnie you have done so very much for me. You pushed me when I felt so lost and alone, you showed me that I could be doing better than I was and you were beyond right. Thank you so much, Bonnie, for getting me out of the whole I was digging for myself. Without your words of encouragement and your ample amount of time you invested in me I do not think I would be attending Washington State University in the fall, let alone attending any university.

I would like to thank my Starbucks mentors John, Jacquelyn and Kimberly. You guys have taught me many key skills for being a professional in the business field. John, thank you for pushing me to work as hard as I possibly could on the accounting work. You told me to always try your very hardest on the things in life that seem the most complex and the outcome will be even more desirable than it might have been had I given 50 percent of myself to the work. Jacquelyn, you taught me the importance of my questions.

Before you I would have thousands of questions forming in my head day by day that I would never ask all because I was too afraid that the question would make me appear unintelligent. You taught me that there is no such thing as a stupid question, all questions are smart and valid no matter whom they are coming from. Kimberly, you helped me to learn the importance of conducting yourself professionally. You taught me how to carry myself in the company of business professionals, how to dress the part of a business professional, and ultimately how to be that business professional even as a high school student. Thank you so much for the lessons you taught me during my time at Starbucks, I will always cherish the time we spent together.

I could go on and on about all the wonderful people who have impacted my life here at Big Picture High School and also in my everyday life. The truth is it takes a village to raise a child. My journey towards adulthood is still far from complete, but thanks to all of these amazingly wonderful individuals the transition should be simple.

Pawan

Background

Pawan was born in India and moved to the United States when she was ten years old. She speaks three languages (Hindi, Punjabi, and English). Although Pawan was in an ELL (English Language Learning class for a few years upon arrival in the United States), by the time she was a senior in high school, she was taking college classes while in high school. She earned an A in a University of Washington in the High School Pawan Biology class. Pawan was co-president of our school's governing body, Student Leadership Forum. Her leadership skills are one of her strongest assets.

Post High School Plan

Pawan is enrolled at Highline Community College and is working towards an AAS degree, and plans to transfer to a 4-year university where she will major in pre-med.

In Her Own Words

Pawan wrote the following letter to all panelists at her exhibition near the time of her graduation from our school.

Dear Panelists,

This year has been the most challenging year out of all the years I've been at Big Picture. I always thought that I could keep my life problems away from my schoolwork but this year things at home got really bad. Being a senior is a very hard job but when personal problems are added to that, it gets harder.

My dad and I have never been close, but we at least talked. This year in October my dad stopped speaking to me because I asked him why he left me with my grandma for so many years. This wasn't actually a problem because I started focusing more on my schoolwork. As the months went by we treated each other like strangers. A couple of months ago someone told my mom that my dad is probably cheating on her. My mom shared this with me but I didn't know how to react to it. We didn't confront him until February. My dad was drinking and started to bring up the old problems. My mom asked him if he was seeing someone in California; he started to smile, but didn't deny it. The argument got to the point where he almost slapped my mom. We had to call the cops on him. I always feel like they argue because of me, because my dad never wants to do something for me, but my mom does. This time the argument started because my mom wanted to get me a car and my dad didn't. As long as I can remember my parents have always had the thought in their head about getting separated but this time my parents actually brought it up.

I am a very private person; I don't like sharing my personal problems with anyone. It's hard for me to go to someone and say, "I need someone to talk to." Stan usually just reads my autobiography and asks me what's going on. After all this happened I needed to go talk to someone because it all started affecting my schoolwork. I just couldn't concentrate on my work anymore. I went and talked to Sherry and Stan. That is a very big step for me. It seems like very simple, but talking and sharing my problems with someone is very hard for me, but at the same time it helped me a lot. As of now I just got to hang in there and go with the flow at home.

I have learned a lot throughout the four years I have been here. I learned to how to be independent, and I also grew my writing skills. My projects used to be what other people showed me, but now I build my own projects and learn from my mistakes. I am not afraid to make mistakes and have other people correct me because I know I am a lifelong learner. I learned that my autobiography is very therapeutic to me. The only reason I finished my autobiography was because I wrote down all the problems I was having at home.

I have grown a lot in my quantitative reasoning. I learned so much algebra this year than any other years. We all have to pass the E.O.C exam in order for us to get our diplomas. I took the test three times in the past three years but I didn't pass it, but I am not going to let that hold me back for me to graduate. We had the opportunity to submit the Collection of Evidence (C.O.E) and I worked really hard to do that. I came to every class as well as the 6-8 hour class that was offered to me. I am glad I did these math classes because I learned a lot of math during the process. I learned how to do functions, word problems, linear equations, and exponents but, most importantly, I learned how to push myself above and beyond. I learned that I am able to problem solve without asking for help. Math as always been a struggle for me, but when I want to get something done no matter how difficult it is for me I will get it done.

Doing all the projects I have done especially learning about Diabetes, has taught me a lot. I know more about diabetes than any other person my age. I can teach people the basic about diabetes. I can help people make healthy life style choices but most importantly I have learned to eat healthy.

I worked really hard on my post high school plan. I applied to Western, Evergreen, and Central Washington University. I got accepted to Evergreen and conditionally accepted to Central. I am on the waitlist for Western Washington University. By applying to all these colleges, I learned how to write college essays and scholarships. I also learned the value of deadlines, but most importantly I learned a lot of personal stuff about me. I learned that I am a survivor and not a victim.

I always knew what I wanted to do after high school, but I know that it is all right to change my decision. I know I won't be lost after high school if I changed my decision of what I want to do. Most importantly I have learned how to apply to a four-year university and how to write my essays efficiently.

The skills I learned at Big Picture throughout the years are going to help me at college. The exhibitions we were required to do three times a year helped me with public speaking, and presentation. This also helped me work with younger students and teach them how to make their presentations better. I have learned how to make my resume look more efficient. I now help my mom and dad build their resume.

Throughout the four years I have been at Big Picture I have been involved in leadership. I went from following, to leading, to letting other people lead. I have done a lot of work with the student leadership forum: I am a part of recruiting incoming students, preparing the eighth graders for high school and giving them so much insight on Big Picture Middle School. All these skills are going to help in being professional in any setting.

I used to be the student who followed other people's footsteps but I never wanted to do that. I grew out of that and started leading my own projects. I don't want students to follow other student's footsteps; I want them to build their own. Students at Big Picture need peer-mentors to help them push. Next year my sister is going to be a freshman at Big Picture. I know I will mentor her with anything she needs. I am also going to help the seniors next year with all the college essays, application, etc.

There are a lot of people in my life that I want to thank. If it weren't for all these people I wouldn't have made it through the toughest times in my life. First I want to thank my grandma for teaching me how to respect our elders. She also thought me to reach for the sky and continue my education even after high school. She also gave me the love of a mother that I didn't receive from my own mom because she wasn't there, even though she wanted to be.

I would also like to thank my mom because she taught me how to be independent. She taught me how to cook, clean, and how to financially take care of myself. Even though I hated doing all the bills it is going to benefit me in the future.

Sherry has been one of those people who have always been there for me. I remember the day she used to tell me that no matter what I do; I will succeed. She told me that every day I went to go get lunch. Sherry is the person I go to whenever I have problems. She just sat there and listened to me complain on and on about life. She is a best friend to me. I started sharing everything with her. Sherry taught me how to have fun in life and how I shouldn't care what other people think of me. She taught me that I can stand up for myself in front of my dad and that I can make my own choices. Now I go to Sherry with the good things that are happening and all the problems I am going through.

Second I will like to thank Loren Demeroutis. First of all thanks for coming to my middle school and presenting about Big Picture. If you didn't come to school that day I wouldn't now be where I am today with so many opportunities waiting for me. I always look up to Loren with everything. He gave me an opportunity in SLF to make our school better. Because of Loren I found a leader in myself that I wouldn't be able to find at a traditional school. He taught me how to push myself above and beyond. I remember when I wanted to go to Stanford University. Loren didn't say that I couldn't go, but he told me to start practicing for the SAT's and I did even though I didn't end up applying. So thanks Loren for all that you did for me.

I also want to thank Stan for always being there for me. He always knew when something was going on just by looking at me. He also helped me push myself and how to become an independent person. I don't think I have ever said thanks to my father for this: Father, you never had something nice to say about me but today I have grown as a great person. I learned how to fight for myself and how to get through tough things. You treated me like I was some kid you picked up off the street and you never wanted to take care of me. I know for sure I will never treat my children like you treated me. You always crushed my dreams and told me that I will work in a fast place restaurant, but dad I passed my CNA test. I am a Certified Nursing Assistant. Every time you crushed my dreams, it made me dream bigger.

Sandy

Background

In her own words, you will read a bit more about Sandy from her application essay to Seattle Pacific University. Throughout her time in high school, she and her family lived in a motel without any stable housing. Throughout her time at Big Picture, Sandy exemplified growth in Noncognitive Competencies. She developed a strong ability to assess her own strengths and growth areas, and she has multiple meaningful internships with strong mentors. Sandy also demonstrated an ability to manage multiple increasingly rigorous projects and was in college classes while in high school.

Post High School Plan

Sandy is currently a sophomore at Seattle Pacific University, where she is studying business and graphic design. She is currently a paid intern at Starbucks corporate headquarters.

In Her Own Words

The following is Sandy's college application essay for Seattle Pacific University.

There is a pattern in my family: the moment you abandon school you are on Welfare and Food Stamps. Every relative I can think of has had children too young, gotten addicted to a substance, or never finished high school. I refuse to follow this pattern. My cousin and I were born in the same month and year; she has dropped out of high school, is addicted to marijuana, and was a miscarriage away from being a teen mom. I am the stitch holding my family's fabric together. Being in the first generation to attend and graduate from college will fortify this mending.

Some children accept the history of their past generations as the status quo. From the moment I was old enough to understand alcoholism, narcotics, and addiction, I wanted none of it. I entered high school with a firm commitment to myself and made it clear to anyone who offered that "I don't do that stuff." I have always kept my mind clear to learn and take everything in the best way I can.

Five years ago I knew living in a motel room with my mother and stepfather was not a normal home life. Now, we have been there so long it feels like there was never anything else. We grew too comfortable too quickly and soon an apartment was far out of reach. I have become somewhat comfortable in our small room, but the lack of personal space and privacy still gets to me sometimes. I know my parents try the best they can, but I promise myself every day I will know the meaning of a *home*.

As soon as I turned sixteen I sought out a job, but found something much better with a paid internship through the Port of Seattle at Sea-Tac International Airport. My first job involved advanced work that is not typically available to high school students. I learned about the inner workings of the airport and gained project management skills. I developed confidence in my ability to take on projects that required new learning when I was asked to create an Emergency Evacuation Plan draft for the airport's Security and Driving Training Department. My initial reaction was panic. I knew nothing about evacuation strategies or safety procedures, but I took a moment to strategize my approach and calm down before I began. With a lot of research and creativity I crafted a plan worthy of the Port of Seattle's use.

Because of this new experience, I was accepted for an internship at Starbucks' Corporate Headquarters. I worked closely with my mentors to learn accounting software and systems. At seventeen, I was conducting complete vendor reconciliations for the biggest coffee company in the world to insure their major vendors were getting paid on time. Starbucks showed me what it is like to make a positive difference on a global level.

Now, I am ready to set the pace for a new generation of motivated and educated youth. I am determined to continue to grow- as a daughter, sister, student, and role model. I know pursuing a degree will allow me to continue applying my learning to the real world. I am doing everything to let nothing stand in the way of my education.

8

Conclusion

Conclusion

We strongly believe that the most effective way to teach young people is through a deeply personalized, holistic, and relevant approach that allows students to master content knowledge while acquiring skills that will propel them to succeed in life. The 8 Noncognitive Competencies support this approach to education in four significant ways:

1. **Students are more than just a GPA or standardized test score** - By focusing on self-concept, self-appraisal, navigating systems, goal-setting, adult support, leadership, community involvement, and acquired knowledge, we are providing students with a framework that allows them to better understand the implications and applications that learning has in the real world. It teaches them that learning is more than just an "A" on a test.
2. **Social, emotional, and life competencies can be taught** – Through our implementation of the 8 NCCs in schools, we have evidence and real case studies that these skills can be taught and that they do promote positive behaviors and success in and out of school. For example, there is strong evidence to support that teaching students about fixed vs. growth mindset (Carol Dweck's work) leads to increased persistence in academic coursework.
3. **Leveling the playing field** – For students from disadvantaged backgrounds or from families without a history of higher education, the 8 NCCs are important for expanding access and promoting success in college. This work, for William Sedlacek and Big Picture Learning, is about equity. We have to provide school designs that work to eliminate the achievement gap and level the playing field for all students. This is no small task.
4. **Implications for the future of our country** – The success and future of our country relies on an educated workforce. A wide array of research around the NCCs and other models that promote the development of similar skills points to the fact that students who have acquired these skills graduate college at significantly higher rates. Subsequently, research also confirms that college graduates are employed at higher rates and earn significantly more throughout their lifetime than their counterparts without a college degree.

We strongly encourage you to be in touch with Big Picture Learning as we work together to provide research-based innovations to school design work nationally. Please contact us and share your successes and your struggles. Ask questions, wrestle with the NCCs, and reflect on them in your own practice. Go forth and spread the work across stakeholder groups.

Thank you for the work that you do to support and mentor young people

9

Appendix A

The 10 Distinguishers of Big Picture Learning

1. Learning in the Real World

The main component of every Big Picture student's education is the LTI (Learning through Internship/ Interest). Alongside an expert mentor in the field of the student's interest, the student completes an authentic project that benefits the student as well as the internship site. The projects both connect to the student's interests and meet the needs of the mentors, and are the main root to deepening student learning and academic growth.

2. One Student at a Time – Personalization

The philosophy of educating one student at a time expands beyond "academic" work and involves looking at and working with each student holistically. All the components that make up the student's learning experience – the curriculum, the learning environment, the use of time during the school day; the choice of workshops or college classes, the focus and depth of investigation through the Big Picture Learning Goals – is developed based on the student's individual interests, talents, and needs.

3. Authentic Assessment

Big Picture Learning views learning as a process of growth and change that is accentuated by the creation of quality products. There are high expectations for each student in a Big Picture Learning school. Assessment criteria is individualized and fit to each student based on the real world standards of the student's project and abilities. Assessments include public exhibitions, check-in meetings with advisors, journals, presentation portfolios, and transcripts.

4. School Organization

Big Picture schools use time, people, facilities, resources, and space in unique ways. We believe that all students should have the opportunity to learn in a place where people know each other well and treat each other with respect. School communities must be small and personalized to allow for every student to have genuine relationships with adults and peers. Each school is a small community of learning, is part of a system of small schools in their geographic area and is also a part of the international Big Picture school network.

5. Advisory Structure

The advisory structure is the core organizational and relational structure of a Big Picture school. It is the heart and soul of the school and is often described as the "home" and "second family" by students. Our goal is for all Big Picture Learning students to be a part of a small advisory of approximately fifteen students with one advisor who works with the students throughout their entire high school career.

6. School Culture

School culture is not a means to an end, but an end in itself. Big Picture Learning schools are small, personalized communities of learning, where students are encouraged to be leaders and where school leaders are encouraged to be visionaries. Our schools strive to create a respectful, diverse, creative, exciting, and reflective culture.

7. Leadership

In Big Picture Learning schools, leadership is shared and spread between a strong, visionary principal and a dedicated, responsible team of advisors. The leadership of the school community functions as a democracy. Principals are trained around Big Picture principal leadership criteria through mentor/mentee relationships with other Big Picture principals and coaches. Advisors and other staff members work in tandem with their school principal to share school leadership and management responsibilities.

8. Parent/Family Engagement: Adult Support

Big Picture Learning believes that parent/guardian engagement in a child's learning is essential to student success. Big Picture does not only enroll students, we enroll families – and involve them in all aspects of student learning. By bringing students out into the community and bringing the community into the school, Big Picture schools become community assets and positive, learning-rich contributors to their surrounding neighborhoods, towns, and cities. Most importantly, we are intentional about engaging families in their children's education by asking them to regularly participate in learning plan meetings and attend exhibitions.

9. School/College Partnership: College Preparation and Support

Big Picture Learning schools show deep faith in all students' abilities to make good decisions in assembling their post-high school plans. Big Picture Schools expose students to the variety of professional, academic, and social paths available to be pursued after high school; and plan students' academic course in order to maximize students' post-high school opportunities. No matter what their chosen course, Big Picture Schools require all students to develop post-high school plans that contribute to the future success of the student – be it through college, a professional internship, travel, trade school, the military, or the workforce.

10.Professional Development

At each Big Picture school, ongoing professional development takes place at staff meetings, at regular staff retreats, and conferences designed to delve deeply into various topics. Advisors and staff members participate in Big Picture Learning professional development activities, including but not limited to: our annual Big Bang conference, conferences around specific Big Picture Learning initiatives, visits to other schools, and through conference calls

10

Appendix B

Appendix B [part 1]: 11th grade action plan and 3-yr action plan

Sample Implementation Schedule for NCCs with students

When	What	Description/Outcomes
November, Feb, and May Exhibitions	Use of NCC rubric to score student exhibitions.	Gather baseline data; determine areas of strength and growth areas as a school.
January	Interview 2 301students re: NCCs.	Gather data re: NCCs, learn what adult behaviors and/or school structures (school culture) can be behind success(es).
February	Presentation of NCCs to students.	Students learn common language and understanding re: NCCs. Students develop posters of each NCC for display in class as part of class-based/advisory activities.
February	All 301s self-assess with rubric and answer survey questions re: self and advisory.	Student scores are analyzed along with staff exhibition scores and advisor scores. Analysis should focus on where collective strengths lie and what growth areas are. This is used to facilitate individual conversations and incorporate in student learning plan meetings.
February and ongoing	Student intern completes data entry, data collection and analysis with BP staff.	Student involvement in higher level, competency driven, real world work with staff member as mentor.
February and ongoing	Student and staff form "NCC Learning Team." 5 students and 3 staff in team.	Team develops and leads NCC work with students through end of year. Retreat held in April identifies next steps for senior year.

March and ongoing	Advisors assess students with NCC rubric.	Advisors use this data to compare to students' self-assessments. This data is used to drive individual conversations around college readiness and skill development in learning plan meetings. Students incorporate NCCs in vision, goal and project lists in learning plan.
March and ongoing	Advisors begin using NCCs as a framework in learning plan meetings and discuss with students their self-assessments and advisor assessments in individual student: advisor meetings.	Students are able to identify their own individual strengths and growth areas (realistic self-appraisal) and can see the connection between those identifiers and academic and personal growth. Students are able to speak articulately not only about what they are learning but why and how they learn (metacognition). Students understand the relationship between NCCs and positive outcomes later in life (including college degree attainment, labor market success, etc).
March	301 students present with college counselor and principal on NCCs at __________conference.* (this is an example of involving students in adult work and acquiring knowledge in a field setting).	Increased student leadership and involvement in growing a culture of student understanding of NCCs. Conference attendees benefit from student voice at conference.

March	NCC Retreat I held at Wascowitz Outdoor Training School.	Aforementioned team of students and staff identify main goals related to NCC development.
April	NCC Retreat II held at Burien Community Center.	At the retreat, the team of 5 students and 3 staff present the data collected throughout the year (Wordle, advisory and cohort averages, strengths and growth areas as identified by staff and students, implications of data, best practices in instruction, and identify student and adult behaviors that led to successes, etc). Students interview one another using the "Chain of 8" interview questions. Students lead the conversations/ protocols and identify individual, advisory and school strengths as well as growth areas for their senior year. See Appendix in this guide for NCC Retreat Agenda.
May	Middle school and high school students and two BP staff members present on NCCs at two conferences.* (this is an example of involving students in adult work and acquiring knowledge in a field setting).	Students speak in front of 100+ audience members about their own experiences with NCCs, and can speak to both strengths and growth areas.

May/June	Student end of year exhibitions feature Noncognitive competency reflection. Final data collection of student exhibitions occurs.	The NCC team of staff and students reviews data from the year, and continues to develop/implement plan for senior year continued development of NCC in this cohort. End of year professional development focuses on larger school-wide implementation.

Appendix B [part 2]: School Implementation Sample 3 Year Change Model

<u>Highline Big Picture School Wide Implementation Summary as adapted from Influencer</u>

- Overall Highline Big Picture School Implementation involves determining current and emerging actions as well as future actions through the lens of structural, cultural, and individual frameworks.

THE THEORY OF ACTION IS THAT NCC DEVELOPMENT WILL BENEFIT ALL INDICATORS OF STUDENT PERFORMANCE. IT DOESN'T necessarily replace what we do but it enhances everything we do by showing research backed support for things most of us value, by putting us in a larger national context.

	Year 1	Year 2	Year 3
Personal	Identify early adopters (students, staff, and family) Start counting/ establish baseline Informal conversation, share work loosely (open space) Email articles Garner excitement	Professional development emerging from data Staff and student data analysis Develop a committee or thought group Intentional check-ins with staff Create opportunities for feedback and focus on making change safe	Continued data collection Publish data at school and share across stakeholder groups Committee/thought group meets regularly and leads professional development with whole staff

Cultural	All of the above Pilot "Web of 8" interviews Admin provide coverage for staff in order to pilot some ideas Pilot Chain of 8 retreat Connect with outside agencies already doing this work (colleges, scholarship committees, foster youth organization, district leadership) – start growing a network Connect to leadership letters or staff communication Connect with US! Connect with student leaders and families, show the research	9th grade retreat focus on NCCs Start of school year with a focus on NCCs, unless somebody is new, this shouldn't be new to anybody Incorporate NCCs into School Improvement Plan, staff observations/ feedback, make safe Share student interviews gathered Share network with staff and students Professional Development focused on culture building and shared language Pair interviews with NCC rubric (student and teacher) Administrator models vulnerability and is interviewed by staff and students Share school district buy-in and invite outside guests from burgeoning network	All school retreat focuses on NCCs Professional development focuses on growth of NCCs and sharing of best practices Share data collection practices and increase these practices throughout school Continued professional development on culture of NCCs including whole school meetings, orientations, parent meetings, and summer camps Host all school events and invite outside guests to join in the NCC conversations Connect with outside organizations who are pushing this work forward

Structural	Cover for teacher to pilot some of the activities or lead activities with teacher in the room. Share data with teachers! Support NCC retreat pilot Create posters highlighting and explaining the NCCs Create activities and/or copies for early adopters – make it easy for people to try	Make observation/ feedback conversations relate to NCCs Create systems for measuring at exhibitions and use the teacher rubric Professional Development ideas: • Teacher rubric pair/share (plus capturing of activities) • Create focused PD time where this is the only thing on the table • review videos • Mine research as a staff • Discuss: Where are we getting stuck? Where are we excelling	Share measurements at exhibitions with students Students self-assess on NCCs weekly and report out on NCCs at exhibitions Rubric is used throughout all classes/ advisories Interview teachers, parents, and students and share widely results across interested stakeholder groups

11

Appendix C

NONCOGNITIVE COMPETENCIES (NCC) STUDENT PERSONAL RUBRIC

NCC **Noncognitive Variable**	**Needs Support** What supports are needed? What obstacles were encountered? How could this move forward? Who could support growth?	**Developing** How has this changed? What helped the development? What would strong evidence look like?	**Strong Evidence of Skills** What contributed to the evidence? How can this growth be shared with other students? What would push this into exemplary?	**Exemplary Evidence** How is this going to be shared with other students? How can this be maintained? What are further growth possibilities?
Positive Self-Concept and Growth Mindset	• Student makes self-sabotaging choices • Student makes self-derogatory or “self-bullying” comments • Student appears to have a fixed mindset about personal and academic skills	• Student inconsistently makes healthy choices to support growth • Student reflects upon mistakes and sees ways to improve • Student understands but inconsistently demonstrates a growth mindset	• Student regularly makes healthy choices to support growth • Student reflects upon and actively builds from mistakes • Student understands and regularly demonstrates a growth mindset	• Student consistently demonstrates healthy and growth-oriented choices • Student demonstrates strong reflective practice • Student demonstrates confidence, strength of character, and determination
Realistic Self-Appraisal of Strengths and Growth Areas	• Student seems to be in denial about or unaware of strengths • Student seems to be in denial about or unaware of growth areas • Student seems uninterested in self- or skill-development	• Student seems embarrassed or only somewhat aware of strengths • Student seems embarrassed or only somewhat aware of growth areas • Student seems inconsistently interested in self- or skill-development	• Student seems to embrace and identify strengths • Student seems to embrace and identify growth areas • Student seems consistently interested in self- or skill-development	• Student has a strong understanding of project or goal-specific strengths • Student has a strong understanding of project or goal-specific growth areas • Student consistently works toward self- or skill-development

Navigating Systems and Self-Advocacy	• Student seems to avoid asking for help or participating in class/school activities • When faced with challenges, student makes disrespectful, "bridge-burning", or reactionary choices • Student seems to have little understanding of institutionalized oppression, power, and privilege and/or takes little responsibility for their own choices	• Student inconsistently asks for help and occasionally participates in class/school activities • When faced with challenges, student occasionally responds with thoughtful, respectful, or productive self-advocacy • Student has an emerging understanding of institutionalized oppression, power, and privilege but focuses more on blaming these systems than their own choices	• Student regularly asks for help when needed and actively participates in class/school activities • When faced with challenges, student regularly responds with thoughtful, respectful, or productive self-advocacy • Student seems to have a strong understanding of institutionalized oppression, power, and privilege and makes choices to self-advocate within these systems	• Student consistently asks for help when needed and seeks ways to contribute to class/school activities • When faced with challenges, student consistently self-advocates to further personal goals • Students demonstrates strong understanding of institutionalized oppression, power, and privilege and actively seeks to influence and self-advocate within these systems
Preference for and Skill at Achieving Long-Term Goals	• Student makes choices favoring instant gratification over long-term goals • Student does not have a strong vision and long-term goals connected to vision • Student demonstrates ineffective or minimal project/work management skills	• Student sometimes chooses instant gratification at the expense of long-term goals • Student has post-high school vision with emerging goals connected to vision • Student demonstrates emerging skill at project/work management	• Student regularly makes choices implying a preference for long-term goals over instant gratification • Student has post-high school vision with clear long-term goals connected to vision • Student regularly utilizes effective project/work management skills	• Student consistently makes choices to work toward long-term goals at the sacrifice of instant gratification • Student has strong post-high school vision supported by long-term goals • Student consistently demonstrates effective project/work management skills

Availability of and Support from Adult Mentors	• Student does not have strong adult connections inside or outside of school • Student seems to avoid adult interactions related to work or interests • Student does not have a strong understanding of how adult mentors could support their interests	• Student has an emerging relationship with adult(s) inside or outside of school • Student occasionally engages with an adult or adults around interests, work, or post high school vision • Student has an emerging understanding of how adult mentors could support their interests and post high school plans	• Student has a strong relationship with adult(s)inside or outside of school • Student regularly engages with an adult or adults around their interests, work, or post high school vision • Student demonstrates a strong understanding of the benefits adult mentors bring to their interests and post high school plans	• Student has a strong relationship with adult expert(s) and/or mentors • Student actively works with adult(s) on their interests, work, and post high school vision • Student actively seeks and can articulate how high-quality adult mentorships benefit their interests and post high school plans
High Quality Leadership Experience	• Student actively disrupts and/or avoids taking responsibility for community, class, or school issues • Student demonstrates a lack of understanding as to how their choices affect different communities • Student has little understanding of different leadership styles and the role of leadership in society	• Student attempts to positively influence community, class, or school issues • Student demonstrates an emerging understanding of how their choices affect different communities • Student demonstrates an emerging understanding of leadership styles and the role of leadership in society	• Student regularly attempts to positively influence community, class, or school issues • Student demonstrates a strong understanding of how their choices affect different communities • Student demonstrates a strong understanding of leadership styles and the role of leadership in society	• Student actively seeks leadership roles and positively influences communities in or outside of school • Student helps others to understand how their choices affect different communities • Student can articulate a personal leadership vision and analyze the effects of leadership in society

Community Involvement	• Student seems to avoid or appears unconnected to a community, group, or activity inside or outside of school • Student does not understand how identities connect to community, demographic, or interest-based group • Student engages more in solitary rather than group activities inside or outside of school	• Student has fringe relationships with a community, group, or activity inside or outside of school • Student has emerging understanding of how community, demographic, or interest-based groups influence identity • Student sometimes engages in group activities inside or outside of school	• Student has a strong relationship within a community, group, or social activity inside or outside of school • Student has strong understanding of how community, demographic, or interest-based groups influence identity • Student appropriately and often engages in group activities inside or outside of school	• Student has a specific and long-term relationship within a community, group or social activity • Student has well develop self-identity and understands its relationship with community, demographic, or interest-based groups • Student helps others to engage in group activities inside or outside of school
Knowledge Acquired in a Field Outside of School	• Student knows little about career pathways or skills that can be acquired outside of school • Student cannot demonstrate skills, evidence of learning, or interest in learning outside of school • Student has not taken initiative to learn independently outside of school	• Student demonstrates some understanding of career pathways and/or field-based skills • Student can demonstrate evidence of learning or pursuit of interests outside of school • Student has taken some initiative to learn independently outside of school	• Student has pursued opportunities to develop field or career-based skills outside of school • Student can demonstrate significant evidence of learning or active pursuit of interests outside of school • Student can demonstrate evidence of independent project-based learning outside of school	• Student actively engages in a rigorous mentorship/internship outside of school connected to post high school interests • Student can demonstrate rigorous evidence of learning or pursuit of interests outside of school • Student consistently engages with rigorous project-based learning outside of school

12

Appendix D

NONCOGNITIVE COMPETENCIES (NCC) Teacher/Educator Rubric

NCC **Noncognitive Competency**	**Needs Support** What supports are needed? What obstacles were encountered? How could this move forward? Who could support growth?	**Developing** How has this changed? What helped the development? What would strong evidence look like?	**Strong Evidence of Skills** What contributed to the evidence? How can this growth be shared with other staff? What would push this to become "Exemplary Evidence"?	**Exemplary Evidence** How is this going to be shared with staff and community? How can this be maintained? What are further growth opportunities?
Positive Self-Concept and Growth Mindset	• Teacher gives oral or written feedback implying innate ability or "natural skill" rather than effort-based feedback • Teacher seems unaware of connection between brain research and academic growth • Teacher participates in or seems to allow students to belittle, insult, or humiliate students	• Teacher gives oral and written feedback alternating between fixed and growth mindset with occasional focus on effort • Teacher occasionally integrates brain research into lesson plans or classroom structures • Teacher does not allow students to belittle, insult, or humiliate themselves or others	• Teacher uses a variety of feedback methods to consistently give praise for effort and growth mindset language • Teacher integrates brain research into classroom structures, lesson plans, and classroom norms • Teacher facilitates structures to promote a culture of self-respect, healthy relationships, and ethic of excellence	• Teacher leads and/or helps plan professional development around growth mindset and effective feedback • Teacher integrates brain research into classroom culture and shares research with families and staff • Teacher facilitates a culture of respect and excellence and regularly shares student growth with families
Realistic Self-Appraisal of Strengths and Growth Areas	• Teacher demonstrates little evidence of reflection in relation to strengths and growth areas and rarely takes responsibility for successes and mistakes • Teacher often engages in power struggles with students • Teacher rarely solicits feedback from students, staff or families about the effectiveness of instruction	• Teacher occasionally reflects on his/her own strengths and weaknesses and takes responsibility for successes and mistakes • Teacher avoids power struggles with students and focuses on choices, natural consequences, and opportunities • Teacher occasionally models realistic self-appraisal by soliciting feedback from students, families and staff	• Teacher regularly reflects upon strengths and weaknesses and takes responsibility for successes and mistakes • Teacher effectively utilizes restorative practices to help students reflect upon and make healthy choices • Teacher regularly solicits and utilizes feedback from students, families, and staff	• Teacher demonstrates strong reflective practice, takes responsibility for and shares successes and mistakes • Teacher effectively utilizes restorative practices and shares best practices with families and staff • Teacher assists colleagues in developing effective systems to utilize feedback from students, families, and staff

Navigating Systems and Self-Advocacy	• Teacher does not develop student understanding of and minimizes the influence of oppression, power, and privilege • Teacher feels "sorry" for students based on privilege and attempts to "save" students through inappropriate boundaries • Teacher does not discuss matters of privilege and race in the classroom or during professional development • Teacher does not help students develop self-advocacy skills	• Teacher understands and sometimes helps students to understand self in relation to oppression, power, and privilege • Teacher maintains healthy boundaries with students and families, avoids martyrdom, and utilizes culturally responsive practices • Teacher does not avoid difficult conversations about oppression and privilege but does not take an active role to promote related conversations • Teacher helps students develop self-advocacy skills in school	• Teacher understands and often helps students to understand self in relation to oppression, power, and privilege • Teacher is committed to improving systems of oppression, power, and privilege while maintaining healthy boundaries and work-life balance • Teacher actively participates in or leads inclusive discussions in classroom and school about power, privilege, and oppression • Teacher actively helps students practice self-advocacy in and outside of school	• Teacher actively listens to and engages students and families around developing understanding of self in relation to oppression, power, and privilege • Teacher maintains healthy boundaries and work-life balance and helps coach others to improve communities through culturally responsive practices • Teacher effectively helps staff understand issues of oppression, power, and privilege in school and community • Teacher helps staff assist students to develop self-advocacy skills and navigate systems inside and outside of school
Preference for and Skill at Achieving Long-Term Goals	• Teacher does not have a strong vision or goals and does not connect student work to post high school opportunities • Teacher does not share examples of or help students to understand the relation between personal perseverance and achieving long-term goals • Teacher tends to attempt to manipulate student behavior through external consequences and rewards	• Teacher demonstrates strong and shared personal and classroom vision and/or goals and regularly connects student work with post high school opportunities • Teacher shares examples of and helps students to understand the relationship between perseverance, delayed gratification, and long-term goals • Teacher utilizes a mix of intrinsic and external motivators to promote student growth	• Teacher demonstrates strong and shared personal and classroom vision and/or goals and consistently connects student work with post high school opportunities • Teacher scaffolds differentiated activities to help students develop an understanding of the relationship between perseverance, delayed gratification, and long-term goals • Teacher primarily focuses on intrinsic motivators with students and help students develop long-term goals	• Teacher helps staff and school to develop shared vision and/or goals and plans instruction in relation to student post high school interests • Teacher actively participates in or leads professional development to help students develop effective long-term goals and avoid instant gratification • Teacher develops and shares well-organized systems utilizing intrinsic motivators to help student develop long-term goals

Availability of and Support from Adult Mentors	• Teacher does not utilize networks or resources to help students develop support systems • Teacher rarely communicates with student families or mentors • Teacher does not facilitate activities to promote student connections to adult supports or mentors	• Teacher occasionally connects students with adult support systems or mentors outside of school • Teacher occasionally communicates with families or mentors primarily around issues of concern • Teacher occasionally facilitates activities to promotes student connection to adult supports or mentors	• Teacher regularly connects students with adult support systems or mentors outside of school • Teacher regularly communicates with families and mentors to support student growth • Teacher regularly facilitates activities to promote student connection to adult supports or mentors	• Teacher consistently connects students with adult support systems or mentors outside of school • Teacher consistently communicates with families and mentors to support student growth inside and outside of school • Teacher helps staff to practices to promote student connection with adult supports and mentors
High Quality Leadership Experience	• Teacher regularly complains about community, advisor, or school issues without taking action or proposing ideas • Teacher does not acknowledge or value the leadership experiences that students experience in and outside of school • Teacher does not demonstrate an understanding of leadership styles or social reasoning	• Teacher rarely takes leadership positions within the school and community and inconsistently takes action to affect positive change • Teacher validates student leadership experiences in and outside of school • Teacher demonstrates some understanding of effective leadership and social reasoning skills	• Teacher consistently assumes leadership within the school and community and takes responsibility for their role in community issues • Teacher facilitates activities to help students develop leadership experiences in and outside of school • Teacher designs classroom experience to develop student understanding of leadership styles and social reasoning	• Teacher leads within the school and the larger community and encourages others to develop their own leadership practice • Teacher helps develop school practices to foster student leadership development in and outside of school • Teacher develops staff practice around leadership instruction and development of social reasoning

Community Involvement	• Teacher focuses primarily on content decontextualized from student and staff communities • Teacher does not recognize or value the ways in which students may be actively engaged in communities outside of school • Teacher does little to promote classroom community, student voice, and student ownership	• Teacher connects instruction and content to different communities and perspectives • Teacher validates the ways in which student may be actively engaged in communities outside of school • Teacher occasionally facilitates team-building activities in classroom and there is little evidence of student ownership in classroom culture	• Teacher differentiates instruction and content to validate a multitude of perspectives and community experiences • Teacher incorporates and promotes student membership in different communities through lesson plans • Teacher regularly facilitates community-building activities and there is significant evidence of student voice ownership in the classroom culture	• Teacher helps staff develop differentiated instruction valuing diverse perspectives and community experiences • Teacher incorporates and promotes meaningful student participation in communities in and outside of school • Teacher helps staff develop effective community-building activities and shares ways to promote student voice and ownership
Knowledge Acquired in a Field Outside of School	• Teacher does not value or understand the skills students may develop outside of school • Teacher does not share personal, school, and classroom examples of knowledge acquired in the field • Teacher does not encourage students to participate in mentorships or internships	• Teacher values the skills and learning students may develop outside of school • Teacher consistently provides relevant examples of knowledge acquired in the field • Teacher helps students to find internships that are both rigorous and related to student interests	• Teacher helps students understand the value of learning outside of school • Teacher facilitates activities to engage student in learning outside of school • Teacher helps student develop meaningful projects and learning opportunities at internships	• Teacher helps staff, students, and families understand the value of learning outside of school • Teacher facilitates classroom and professional develop activities to engage students in learning outside of school • Teacher works with students, families, and mentors to develop meaningful and rigorous internship learning opportunities

13

Appendix E

Appendix D: NCC retreat agenda

11th grade NCC Retreat
April 15, 2013

Purpose:
A team of 5 11th grade students and 3 staff identified main goals related to noncognitive skill development. The team identified specific next steps including the design of an NCC retreat for all juniors.
At the retreat, the team of 5 students and 3 staff present the data collected throughout the year via the NCC rubric. In March, students self-assessed their NCCs and teachers assessed students. A student intern evaluated and interpreted data and co-presented the data with her teacher. Students also interviewed one another using the "Chain of 8" interview questions. Students led the conversations and identified individual, class and school strengths as well as "moving towards"/growth areas for their senior year.

Objectives:

1. Students will evaluate and reflect on their own NCC strengths and areas of growth.
2. As an 11th grade cohort, we evaluate and reflect on our collective NCC strengths and areas of growth
3. Students will conduct "Chain of 8 interviews" will leave with new and interesting information about their interview partner as well as with a stronger relationship.
4. Students can define for themselves, positive life outcomes.
5. Students will have a better understanding of the correlation between NCCs and positive life outcomes.

Agenda
11:30 -11:35
Introduce video (positive self-concept) and objectives

11:35 -11:50
Ice Breaker Activity

11:50 -12:00
Student speaker, Senior Thesis Project overview: NCCs and Latino youth in the Highline School District: An Anthropological Study

12:00 -12:10
Student videos (leadership and community involvement)

12:10 -12:15
Prep for Lunch Activity

12:15 - 1:15
"Chain of 8" Interviews

1:15 - 1:30
Share out and reflection on interviews

1:30 - 1:45
Show 2 more video examples (Adult support person and Knowledge in field)

1:45 - 2:15
Student and Staff Q & A re: NCCs

2:30 - 3:00
Artwork: Draw your interpretation of the NCCs

3:00 - 3:15
Share out and reflections

3:15 - 3:30
Final Video (Long-term goals)

Note: You can find all videos listed in the Additional Resources section of this guidebook.

Student Evaluations:
How well did we meet our objectives? At the end of the retreat, we had students assess how well we met our objectives. 1= not well at all 5= extremely well.

Objective	Score
Students will evaluate and reflect on their own NCC strengths and areas of growth	4.5
As an 11th grade cohort we will evaluate and reflect on our collective NCC strengths and areas of growth	4
Students will have a better understanding of the correlation between NCCs and positive life outcomes	4.5
Students can define (for themselves) positive life outcomes	4.5
Students will leave with new and interesting information about their interview partners	4

14

Appendix F

Noncognitive Competencies (NCC) Student Interview

Your name: ____________________ Your partner's name: ____________________

Date: __________________

Directions: For each section, take turns interview each other, taking notes, and then circle all the statements that you think accurately describe your partner. Feel free to ask probing questions and/or discuss your thoughts behind why you circled each statement.

Positive Self-Concept: This Noncognitive Competency examines an individual's level of confidence, strength of character, determination, and independence.

No.	Guiding Questions
1	How confident do you feel about where your life is heading?
2	How do you feel about yourself?
3	What set of skills are you most proud of?
4	How would you rate your performance in school?
5	How do you approach and handle new challenges and situations in life?
6	Are your interests tied to your goals?
7	Describe an experience, project, or a situation that left you feeling accomplished.
8	Do you feel confident that you will graduate high school successfully and are you confident about your plans after high school?

Based on what you heard in the interview, circle the statements below that you think accurately describe your partner:

• The student bullies her/himself • The student makes self-sabotaging choices	• The student reflects regularly on decision making • The student is seeking wellness help	• The student speaks confidently about strengths and struggles • The student makes healthy, future oriented choices and demonstrates confidence, strength of character, determination, and independence

Realistic Self-Appraisal: This Noncognitive Competency examines an individual's ability to recognize and accept any strengths and deficiencies, especially academic, and determination to work hard at self-development. In addition, it looks at how well an individual recognizes the need to broaden his/her individuality.

No.	Guiding Questions
1	Name a strength and explain why this is a strength.
2	Name a weakness and explain why this is a weakness.
3	Are you realistic about your abilities?
4	What positive feedback have you received most recently and how did you internalize this feedback?
5	What constructive feedback have you received most recently and how did you apply this feedback to improve your situation?
6	How have you grown and changed over time from personal experiences at school, internship, home, or other situations?
7	What parts of yourself, your learning, or your habits have you worked at overcoming in your life?
8	What have been your most important learning experiences?

Based on what you heard in the interview, circle the statements below that you think accurately describe your partner:

• The student seems to be in denial about strengths and/or struggles • The student appears to have a "fixed state" mindset about skills	• The student understands the connection between practice and improvement • The student seems aware of growth areas	• The student actively works to improve skills and seems to have a mature understanding of strengths/struggles needed to achieve their long-term vision • The student works hard at self-development and recognizes need to broaden individuality

UNDERSTANDS AND DEALS WITH [DISCRIMINATION]: This Noncognitive Competency examines how well the individual understands the "system" based upon personal experience and how committed he/she is to improving the existing system. The individual takes an assertive and active approach to dealing with existing wrongs, but is not hostile to society, nor is a "cop-out."

No.	Guiding Questions
1	What experiences, either perpetrated on your own person or others, have you had dealing with discrimination (e.g. racial, gender, religious, sexual orientation, class structure, or other)? How did you approach the situation?
2	What biases and injustices do you see in the system?
3	What is your understanding of how the system benefits conventional individuals and undermines unconventional individuals?
4	What role do you play in improving the existing system and standing up for the rights of all individuals?

Based on what you heard in the interview, circle the statements below that you think accurately describe your partner:

• The student seems to avoid asking for help or participating in advisory activities • The student often makes choices which appear disrespectful • The student regularly does not complete tasks or assignments	• The student responds positively to support • The student asks for help improving • The student seems to be growing as a self-advocate	• The student seems highly professional and respectful • The students reliably completes assignments and tasks • The student exhibits a realistic view of the system on the basis of personal experience of racism; committed to improving the system; takes an assertive approach to dealing with existing wrongs but is not hostile to society and is not a "cop-out"; able to handle racist system

PREFERS LONG-RANGE GOALS TO SHORT-TERM OR IMMEDIATE NEEDS: This Noncognitive Competency examines how well an individual is able to respond to deferred gratification, while planning ahead and setting goals.

No.	Guiding Questions
1	What are your academic, personal, and career goals? Why are these important to you?
2	What steps are you currently taking to achieve these goals?
3	Describe a situation in which you had to forgo an immediate pleasure in order to achieve a goal?
4	How are your goals tied to your internship, interests, academics, and personal life?
5	How often do you reevaluate and reassess your goals?
6	Have you wavered in any of your goals? Why?

Based on what you heard in the interview, circle the statements below that you think accurately describe your partner:

• The student seems focused on instant gratification • The student does not have a strong vision or strong goals	• The student has strong vision and/or goals • The student seems to understand the need to plan and prioritize	• The students vision, goals, projects, and next actions seem aligned • The student seems well-organized • The student is able to respond to deferred gratification

AVAILABILITY OF STRONG SUPPORT PERSON: This Noncognitive Competency examines how well an individual seeks and takes advantage of a strong support network or has someone to turn to in a crisis or for encouragement.

No.	Guiding Questions
1	Who are the adults that you turn to for guidance and support in life?
2	Describe your relationship and the type of guidance and support that these adults provide you with?
3	Describe your support network of peers?
4	What value do you see in having a strong support person or network?
5	What characteristics and personal qualities do you look for in a support person?

Based on what you heard in the interview, circle the statements below that you think accurately describe your partner:

• The students does not have strong adult connections inside or outside of the school • The student seems to avoid adult interactions	• The student is starting to connect with adults inside or outside of the school • The student seems to have a mentor relationship with an adult	• The student has at least one strong adult mentor relationship and the mentor helps the student work toward long-term goals • The student seeks and takes advantage of a strong support network

SUCCESSFUL LEADERSHIP EXPERIENCE: This Noncognitive Competency examines how well an individual demonstrates strong leadership in any area of his/her background (e.g. church, sport, non-educational groups, family, community, etc.).

No.	Guiding Questions
1	What leadership roles in a traditional (e.g. school, work, church, sports, etc.) and non traditional (e.g. family, neighborhood, etc.) environment have you had?
2	How did these experiences help you grow as a person? What set of skills did you take away from these experiences?
3	What personal qualities do you value in a leader?
4	Describe what it means to you to be a leader?

Based on what you heard in the interview, circle the statements below that you think accurately describe your partner:

• The student avoids taking responsibility for community, classroom, or school projects	• The student has attempted to take a leadership position within the advisory, school, internships, or community	• The student has exhibited strong leadership skills within the advisory, school, internships, or community

DEMONSTRATED COMMUNITY SERVICE: This Noncognitive Competency examines an individual's participation and commitment to his/her community.

No.	Guiding Questions
1	How are you involved in your community?
2	How have you most recently made a difference in your community?
3	What needs have you identified in your community? Why are these important to you?
4	How do you define community?
5	Why is it important for you to be engaged in your community?

Based on what you heard in the interview, circle the statements below that you think accurately describe your partner:

• The student seems to not belong to groups, clubs, or activities inside or outside of the school	• The student has recently joined a group, club, or community activity	• The student is actively involved in one or more groups, clubs, or community activities

KNOWLEDGE ACQUIRED IN OR ABOUT A FIELD: This Noncognitive Competency examines an individual's ability to learn from experiences outside of the classroom, using less traditional methods that are outside of the education system.

No.	Guiding Questions
1	Describe an experience(s) outside of the classroom where you acquired knowledge about a specific topic or field of study.
2	How did the experience come about?
3	Did the experience inspire you to go more in-depth in a specific topic or field of study? Explain
4	How have you used the knowledge you acquired to teach others?

Based on what you heard in the interview, circle the statements below that you think accurately describe your partner:

• The student does not have an internship or job	• The student has recently acquired an internship or the student has an internship but does not have an authentic internship project	• The student has an authentic internship project with a strong mentor • The student acquires knowledge in a sustained or culturally related way

Appendix G

Additional Resources related to Noncognitive Competencies (NCC)

<u>Examples</u>

The following is a list of institutions and organizations that are utilizing Noncognitive Competencies in their work. This list is not exhaustive, but is meant to provide some points of entry for further research about this work.

Organization	Description	Website
Big Picture Learning	Big Picture Learning schools are utilizing Noncognitive Competencies as an embedded part of the curriculum at middle and high schools across the United States.	www.bigpicturelearning.org
College Success Foundation	College Success Foundation has been an early adopter of utilzing NCCs as one way to score scholarship essays. They have also conducted training with staff on NCCs (then referred to as MCVs).	www.collegesuccessfoundation.org
DePaul University	DePaul University (Chicago) allows for students to apply without SAT/ACT scores and with essays related to NCCs and similar to the Insight Resume.	http://www.depaul.edu/admission-and-aid/Pages/test-optional-faqs.aspx
Eastern Washington University Insight Resume	Eastern Washington University uses the Insight Resume as part of their application process to the university.	http://www.ewu.edu/undergrad/freshman/insight-resume.xml
Gates Millennium Scholars Program	The Gates Millenium Scholars Program was an early partner with William Sedlacek.	http://www.gmsp.org/
Oregon State University	Oregon State University uses the Insight Resume, featuring some NCCs, as part of their application process to the university. OSU has found that the Insight Resume is a good predictor for success for students with lower than a 3.25 GPA when applying for admissions.	http://handouts.aacrao.org/am09/finished/T0815a_M_Sandlin.pdf
Washington State University Insight Resume	Washington State University uses the Insight Resume as part of their application process to the university.	http://www.cheneysd.org/cms/lib04/WA01000473/Centricity/Domain/143/_files/Admissions_Essay_Handout.pdf

http://www.cheneysd.org/cms/lib04/WA01000473/Centricity/Domain/143/_files/Admissions_Essay_Handout.pdf

Framework for High Quality Project Based Learning

Spring 2017 Draft

A Framework for High Quality Project Based Learning

The Need to Define High Quality Project Based Learning

Project Based Learning (PBL) is increasingly recognized as a powerful instructional approach, both in the United States and around the world. More and more educators are trying to use project-based methods to engage their students toward meaningful, deeper learning. Although Project Based Learning's popularity is heartening, its rapid growth is also cause for caution. Currently, there is no collectively-developed, widely-accepted Project Based Learning Framework to guide aspiring educators. This is a serious obstacle to quality PBL practice, placing instructors in the situation of workers building a house without specifications or a blueprint.

To remedy this situation, the Buck Institute for Education, a nonprofit organization dedicated to building the capacity of teachers, school leaders, and school systems to implement great projects with all students, is leading an iterative, input-rich process to articulate a common vision of High Quality Project Based Learning. Guided by a 27 member steering committee of education leaders from the U.S. and other nations, and informed by the perspectives and input of a 90 member advisory team, it will also employ a dedicated website to gather public comment and suggestions from educators worldwide. This input will lead to several cycles of critique and revision, and be informed by a review of relevant research. This document describes the content of the framework; after consensus has been reached on what should be included, a user-friendly version will be written and designed for teachers, school leaders, and other educators and organizations.

By combining a crowd-sourced development process with a research review, the project seeks to create a framework for High Quality Project Based Learning that will have wide adoption and influence on formal and informal education throughout the world. This framework will guide practitioners and can serve as the basis for PBL certification, professional development, and materials development by state departments of education and other organizations.

This effort could not be undertaken without the generous financial support of the Project

Management Institute Educational Foundation and the William and Flora Hewlett Foundation. Strategic advice is also being provided by Getting Smart, an educational advisory and advocacy service.

What is High Quality Project Based Learning?

Project Based Learning falls within the general boundaries of student-centered instruction – those ways of teaching and learning that emphasize what students are interested in, understand, and initiate, as opposed to teacher-centered approaches emphasizing the transmission of prescribed knowledge from instructor to learner. In so doing, PBL shares assumptions and techniques with other student-centered learning approaches such as personalized learning, internships, and service learning. At the same time, Project Based Learning has its own, unique aspects including an emphasis on sustained inquiry, project management, and the creation of a publicly-shared product. Students work to complete an extended project that engages them in solving a real-world problem or answering a complex question, and perhaps even making an impact on their community. PBL can be used with any age learner and in any subject area, and often introduces students to the perspectives, tools and concepts disciplines use to make sense of the world. Project Based Learning also allows students to learn about themselves, their strengths and challenges, and their own relationship to the world.

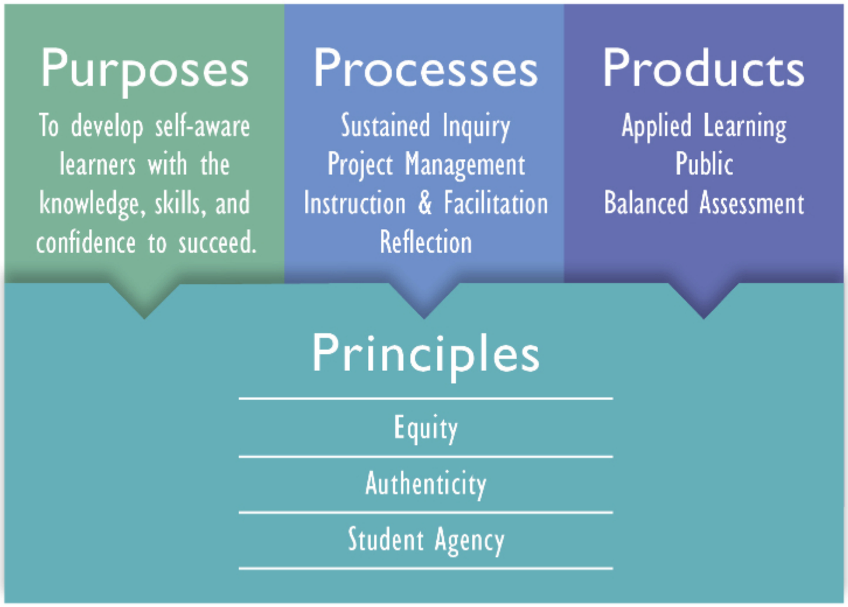
This general outline of Project Based Learning will seem familiar to many, but it does not address the question of what distinguishes *high quality* Project Based Learning from less successful implementations. This distinction will be refined over the course of this project, but thanks to the thought and creativity of the High Quality Project Based Learning steering committee, there is a starting point for review and critique. The framework below describes High Quality Project Based Learning according to four categories: the *principles* on which it rests, the *purposes* it seeks to achieve, the *processes* that contribute to student learning and growth, and the *products* that emerge. Within each of these categories, there are key components that will be described in more detail below. Other instructional approaches could be described using a similar four-category framework, but High Quality Project Based Learning is unique in the way it combines the components displayed below, and in the interplay between educational principles, processes, products, and purposes. This is the distinctive instructional signature of High Quality Project Based Learning.

The High Quality Project Based Learning Framework

The High Quality Project Based Learning Framework is not directly focused on practical project design—the concrete activities and tasks teachers and students do while creating and completing a project (conceiving a product, setting benchmarks, gathering resources, etc.). Similarly, it is not intended as a rubric to distinguish "good" and "bad" projects. There exist numerous publications, websites, and professional development organizations providing practical advice and useful examples for how to do Project Based Learning. Instead, this framework focuses on the concepts and aspirations that undergird High Quality Project Based Learning as an approach to instruction, and which must be addressed if PBL is to be considered high quality. The HQPBL Framework is the first step in developing a set of guiding questions that educators can use to assess and improve their own PBL implementation, or to develop new curriculum resources and professional development opportunities.

Framework Categories and Components

The categories and components of the HQPBL Framework are largely self-explanatory, but it may be useful to provide an overview of the framework as a whole, and then focus on individual components.



Purposes

Most teaching methods seek to **build the knowledge, skills, and confidence** needed for learners to succeed in a complex and changing world, and this is also the overarching purpose of High Quality Project Based Learning. In addition to increasing the retention of knowledge[1] and acquisition of deeper understanding, projects provide multiple opportunities for students to build skills valuable in the modern workplace: critical thinking, problem solving, communication, collaboration, and creativity/innovation. Of equal importance, however, is the explicit attention given to fostering learners' personal and social development**,** to help them become **self-aware**, and acquire the confidence needed to undertake and prevail in new challenges.

Processes

High Quality Project Based Learning prioritizes **sustained inquiry**, encouraging learners to ask questions and delve deeply into the concepts and practical strategies necessary to bring a project to fruition. In this effort, **project management** is a key tool, optimally shared between learners and teachers for achieving project goals. Like other teaching methods, research-validated **instruction** is part of High Quality Project Based Learning. This is paired with **facilitation**, where teachers take pains to support students and move them toward their goals through coaching and scaffolding. Throughout this learning process, time is given to both student and teacher **reflection** which provides opportunities for students to think deeply about the content they are learning, the skills they are developing, and the potential application of these skills and knowledge.

Products

Project Based Learning provides an opportunity for students to **apply their learning** by creating a display, performance, or construction that achieves project goals, and demonstrates learners' knowledge, skills, and understanding. This product is made **public** so that others may provide feedback, and contribute to product improvement. **Balanced assessment**, the combination of formative and summative assessment, given by students, the instructor, and the greater community, focused on understanding, project activities, and personal development – provides feedback both during the project and at its conclusion.

Principles

The principles of HQPBL are the core values of the framework; they guide the conceptualization and drive the implementation of projects. High Quality Project Based Learning is committed to **equity**, defined as the opportunity and support necessary for all students to be successful in the project. It also emphasizes **authenticity** by creating learning situations reflecting real-world issues and contexts. HQPBL strives to develop **student agency**, the internal sense that individuals can achieve their goals.

More details on the individual components of HQPBL are discussed below.

Processes

Sustained Inquiry. High Quality Project Based Learning defines inquiry as a disciplined process of asking questions and gathering data necessary to achieve project goals. Through inquiry, the act of seeking information becomes the foundation of meaningful learning.[2] Students confront problems and difficult tasks through an iterative approach of making meaning out of the information they have collected and determining if they have answered their questions or need to ask new ones. In contrast to "hands-on activities," it is the project itself, carefully planned by the instructor (and at times, by the learners themselves) that structures student inquiry and guides learning activities toward project culmination.

The presence of inquiry, however, is not a sufficient marker of High Quality Project Based Learning. Inquiry must be *sustained*. By extending the project timeline, learners have the opportunity to grapple with significant conceptual and practical issues, and persevere in a productive struggle to achieve project goals.[3] Project teams go through developmental phases as well as emotional ups and downs. Learning the collaborative skills necessary to contribute to an ongoing team may take time. Finally, if students are to develop the self-management and project-management skills that will be useful in college, career, and life, then they must be able to manage themselves and others over the course of weeks, rather than days. High Quality Project Based Learning provides opportunities for sustained inquiry over multiple working sessions.

Project Management. HQPBL projects are not simply launched and allowed to unfold, with students working on their own, without a process for completing tasks. That would be a recipe for unfocused drift, wasted time, and frustration for students and teachers. In HQPBL, projects are managed. Not just teachers but also students take on the role of project managers, to the extent appropriate for their age and experience.

Teachers and students in PBL use project management[4] practices when designing a project; setting learning goals; organizing and accomplishing tasks; setting checkpoints and deadlines, monitoring progress and testing ideas; reflecting on what is being learned; and wrapping up the project by sharing products publicly and assessing the results.

Instruction and Facilitation. Although Project Based Learning rightly emphasizes the key role of the learner, the importance of the teacher is often neglected. HQPBL explicitly addresses the central role of the teacher, and the prominence of traditional instructional practices as productive project activities. In addition to reading, writing, math, science, and other relevant academic subject content, many – if not most – projects require learners to develop specific skills. Some are practical (e.g., designing a survey, conducting an interview, using a measuring instrument, drawing a plan to scale), others are more conceptual (evaluating the reliability of a website, summarizing raw data using statistics, making suggestions for improving written work). Projects also often require students to develop new background knowledge (understanding the difference between federalism and states' rights, supply and demand, persona and author) to be completed successfully. There are different strategies students can use to develop these skills and knowledge, and it is part of effective teaching to determine when it is most appropriate for learners to master these on their own or to receive targeted instruction or scaffolding through lectures, practice exercises, selected readings or videos, and the like.

In High Quality Project Based Learning, the teacher also acts as a facilitator and coach, enabling students to work productively and providing emotional support and encouragement. As the project unfolds, teachers learn about students as individuals and show their respect for students' individuality and preferences. Teachers share students' accomplishments and listen to their frustrations as informed "guides on the side" who engage with students to advance thinking, working, and learning.

Reflection. In High Quality Project Based Learning, both learners and teachers need to reflect throughout the project on the effectiveness of their inquiry and project activities, the quality of work completed, and the obstacles to be confronted and overcome. HQPBL aims to prepare learners who, when confronted with a new problem, size it up and reflect on whether they've seen this type of problem before, and whether they've already developed knowledge and strategies they can use to address it.

When reflection is applied to one's own thinking processes (e.g., thinking about one's thinking), psychologists refer to it as metacognition. Cast outward, it enables students to progress thoughtfully through project tasks and modify their behavior as needed. This is often known as "self-regulation".[5] Cast inward, it provides awareness of the learning and problem-solving strategies they are using, and enables students to better understand and modify these strategies.

Products

Applied Learning. High Quality Project Based Learning is different from traditional instruction in that it emphasizes the active application of learning rather than the static acquisition of content. Project products provide opportunities for learners to demonstrate what they have learned, as well as what they can accomplish with these knowledge and skills. By testing new knowledge and skills through application, nuance is revealed, and knowledge and skills are deepened. These become more memorable and consequently, more accessible in the future.[6] The application process also enables learners to understand very concretely the worth of what they are learning, and how such knowledge and skills are used in the world outside of school.

Public. PBL provides the opportunity for students to create a product and share it with an audience beyond the classroom, when students display and describe their products in an exhibition, at a community meeting or other real-world setting, or online. This has several positive consequences. First, the products that result from a project are perceived as more real (i.e., authentic) and consequential than schoolwork that is only graded by the teacher and returned to students' notebooks. Since students tend to care more about work that will be made public and taken seriously by others, students are encouraged to do their best. Making project work public ups the stakes for both students and teachers.

By creating a product, students make what they have learned tangible and thus, when shared publicly, discussible. Instead of only being a private exchange between an individual student and teacher, the social dimension of learning becomes more important. This has an impact on classroom and school culture, helping create a "learning community," where students and teachers discuss what is being learned, how it is learned, what are acceptable standards of performance, and how student performance can be made better.

Balanced Assessment. Assessment in HQPBL includes many of the practices found in traditional instruction, but it requires instructors to go beyond the assignments, quizzes, tests, and other tools with which they might be most familiar. Balanced assessment[7] emphasizes the need for both *formative assessment*—used to inform the learner and teacher about progress toward a learning goal—and *summative assessment*—used to make a judgment about what has been learned. Both are important in HQPBL.

Summative assessment in HQPBL, like formative, is a combination of traditional and, for many teachers, new practices. In a traditional curriculum unit, for example, a teacher might give a test or ask students to write an essay to determine whether they have learned what the teacher intended. In a project, those tools might still have a place—especially to assess content knowledge and conceptual understanding—but so does a final evaluation of a team-created product and of students' ability to employ critical thinking/problem solving, collaboration, and project management skills.

In addition to formative and summative assessment, other kinds of "balance" apply in HQPBL. A project should include self-assessment, in which students use evidence and reflection to evaluate their own progress and achievements. Peer assessment plays a role in evaluating the quality of a piece of work or one's participation as a member of a team. In addition to assessing individual work, teachers in a project-based classroom might need to assess the work done as a group. Because a project requires students not only to gain knowledge but to apply it, traditional measures of knowledge gained must be balanced with performance assessment.

Principles

Equity. Educational equity means that each child receives what he or she needs to develop to his or her full academic and social potential.[8] High Quality Project Based

Learning is essential for a complete and effective education; therefore, in order to promote equity, each child (or learner) should have access to it. HQPBL should not be reserved only for students who are high-achieving (or low-achieving), or who gain access to it only in special programs or special schools, or by chance enrollment in a particular teacher's class. All students benefit from acquiring the deeper learning and success skills that can be taught so effectively by HQPBL.

HQPBL promotes equity by holding all students to the same high expectations for project products, an ethic that is reinforced by shared norms and accountability. Moreover, it fosters an equitable environment when students' interests, cultures, and identities are valued to inform the issues and problems projects focus on—and when students' unique gifts and talents are recognized and leveraged to improve project work.

A great project has a powerful effect on students that can help them reach their potential, and can even be transformative for young people. This is especially important for students farthest from educational opportunity. A project that makes a real-world impact can give students a sense of agency and purpose; they see that they can make a difference in their community and the world beyond it. An authentic project provides opportunities, for students who might not otherwise be exposed to them, to visit real-world settings, interact with professionals in the workplace, and develop a passion or career interest.

Authenticity. PBL educators know that authenticity enhances students' engagement in projects. Authenticity not only increases motivation, but it can also increase achievement.[9] Authenticity is a complex concept, but it's generally synonymous with making a learning experience as "real" as possible. Teachers and students can make projects authentic in multiple ways, and in varying degrees.

First, projects can have an actual *impact* on the world, as when students make a presentation to the school board proposing the redesign of a school playground, write books and create a tutoring program for younger readers, design and sell note cards picturing native animals to raise money for a local wildlife sanctuary, or conduct research projects and submit data that will be used by scientists to better understand climate change. Second, the *context* of a project can be a simulation or reflection of what happens in the world outside of school, even if students are not actually working in the real world—for example when elementary students design and create their own restaurant menus in a project, or when high school students act as advisors to the president on economic or social policies. Third, the *tasks, tools, processes, and performance standards* that students use make a project authentic when those things reflect what people do in the world outside school or the workplace. For example, students in some PBL projects today follow the process of "design thinking" used by professionals who design products and services. Finally, projects can have a *personal* authenticity because they speak to students' personal concerns, interests, or issues in their lives, or because they engage the needs, values, language, and cultural practices of students' communities.

Student Agency. Student agency is synonymous with experiencing control, autonomy, and power. It is exercised when students make decisions that affect their learning, including the way in which they learn, what they learn, and the pace at which they learn. Higher levels of student agency are associated with greater engagement and commitment to the learning process.[10] Students vary in their readiness to take on certain responsibilities and challenges, and teachers must determine how much autonomy is appropriate for each student. As a principle of High Quality Project Based Learning, however, the general goal is to help students reach the highest level of student agency they are capable of achieving. With a sense of agency, students are more likely to welcome and address new challenges, including issues in their own lives and communities.

An aspect of agency is holding a growth mindset, in which students' skills, knowledge, and interests can be developed through hard work, support and guidance, and effort. Students with a growth mindset build confidence, rebound from setbacks, and are willing to put in the time and effort it takes to make projects successful.

Acknowledgements

The authors would like to thank the many teachers, principals, network leaders, and school staff, who shared their experiences with us in a spirit of exploration, generosity, honesty, and integrity throughout the 18 months of this project. Your collective vision and tenacity in an emerging and sometimes confusing field, combined with your willingness to roll up your sleeves and do the hard work, continue to inspire us. We'd also like to thank Eve Goldberg and Beth M. Miller, who served as our Program Officers at the Nellie Mae Education Foundation. They designed this project as a pathway to learning more about a critical, emerging approach in education and we were fortunate to be able to carry out a truly "R&D" project. Finally, we are especially grateful to the many students who shared their work, their insights, and their learning with us—you are the true pioneers.

However, the views expressed in this report are those of the authors alone. Any errors in fact or omission are solely the responsibility of the authors and the Nellie Mae Education Foundation.

Note

About The Nellie Mae Education Foundation

The Nellie Mae Education Foundation is the largest charitable organization in New England that focuses exclusively on education. The Foundation supports the promotion and integration of student-centered approaches to learning at the middle and high school levels across New England. To elevate student-centered approaches, the Foundation utilizes a strategy that focuses on: developing and enhancing models of practice; reshaping education policies; increasing the body of evidenced-based knowledge about student-centered approaches and increasing public understanding and demand for high-quality educational experiences. The Foundation's initiative and strategy areas are: District Level Systems Change; State Level Systems Change; Research and Development; and Public Understanding. Since 1998, the Foundation has distributed over $110 million in grants.

Executive Summary

The traditional system of moving students ahead to the next grade level after nine months of school seems less relevant each year. This is a reason for the growing appeal of competency-based learning, or competency education.

Schools face unprecedented pressure to close achievement gaps and prepare all students for college or careers. The needs of the global economy, the demands of No Child Left Behind, and the requirements of the Common Core State Standards—combined with persistent educational disparities by race and class—cry out for a fundamentally new approach to K–12 education. Teachers are grappling with the need to reach each student with instruction that is more individualized than at any other time in our history. The traditional system of moving students ahead to the next grade level after nine months of school seems less relevant each year. This is a reason for the growing appeal of competency-based learning, or competency education. Today's graduates must be able to apply skills and knowledge in order to succeed in college or land a job, climb a career ladder, and earn a family-supporting income. While just going through the motions of school, getting by with "C" and "D" grades, was never optimum, it is now more than ever a dead-end for students and society as a whole. These are some of the reasons for the growing appeal of competency-based learning, or competency education, in which students progress at their own pace, based on what they can show that they know.

The idea of moving to a system built on demonstration of mastery, rather than a required amount of time in a classroom, is drawing renewed interest from educators and policy makers alike. Competency education is rooted in the notion that education is about mastering a set of skills and knowledge, not just moving through a curriculum. In competency education, students keep working on specific skills or knowledge until they can demonstrate their understanding and ability to apply them; they then move to the next material while continuing to use what they have already learned. Students cannot advance simply by showing up to class on a sufficient number of days and earning a grade just above failing. Instead they must meet standards (also known as competencies, performance objectives, or learning targets) at a pre-determined level of proficiency.

SNAPSHOT: The Project and The Schools

With support from the Bill & Melinda Gates Foundation and the Nellie Mae Education Foundation, the Proficiency-Based Pathways Project awarded grants in March 2011 to seven projects representing a range of competency education models. Two organizations were intermediaries working with more than one school, allowing a total of 11 schools to be studied.

All are small public high schools, with fewer than 600 students. They are located in rural, suburban, and urban areas, including inner-city neighborhoods of Boston and Providence. The schools are listed, with the particular focus of each, in the table below:

Schools	Focus
Big Picture Rochester in Rochester, Vt. and **Big Picture Depot Campus** in Storrs-Mansfield, Conn.	A high school model based on a highly personalized approach to learning. Known for its full-time advisory structure and careful blending of school, workplace, and community-based learning activities.
Boston Day and Evening Academy in Boston, Mass.	An alternative public charter high school serving overage Boston students; fully based on competency education. Well known in region for work on developing a competency education assessment system.
Casco Bay High School in Portland, Maine. (Supported by the Expeditionary Learning Network.)	A high school of choice for 275 Portland students, now in its seventh year, in which Learning Expeditions (in-depth projects) drive instruction.
Champion High School in Brockton, Mass.; **Charlestown High School** in Charlestown, Mass., and **E-Cubed Academy** in Providence, R.I. (Supported by Diploma Plus.)	A national alternative high school/program network designed specifically for struggling students from urban settings, typically overage and under-credited. Longtime leader in competency education-friendly technology systems.
Gray-New Gloucester High School in Gray-New Gloucester (MSAD15), Maine.	The district has been implementing competency education for over four years at the elementary and middle school levels. It is now being piloted at the high school level.
Medical Professions and Teacher Preparation Academy in Hartford, Conn. (Supported by the National Center on Education and the Economy and Capitol Region Education Council)	A dual-themed magnet school serving a diverse group of formerly struggling grade 6–10 students drawn from Hartford and surrounding areas.
Vergennes Union High School in Vergennes, Vt.	A rural grade 7–12 regional school serving 600 students. The middle school uses expeditions and exhibitions to frame student learning. The high school is creating a competency education program, building on the middle school's foundation.

In contrast to the traditional model of advancing at the end of a unit or course, students move ahead as soon as they are ready, at any point during the year. Supporters say this far more effectively promotes learning and increases achievement. It does so by allowing students to proceed at their own pace in every subject and enabling teachers to respond to individual needs, interests, and challenges in every class.

While competency-based principles have a history in vocational education, a growing number of typical high schools now are adopting competency-based programs. As is typical of any emerging field, a wide array of approaches is currently underway. This report focuses on the experiences of students, teachers, and administrators in a select, but varied, group of schools that are ahead of the curve in implementing competency education (sometimes called proficiency-based pathways).

A team of researchers spent a year and a half examining 11 high schools in New England that already had started this work and wanted to expand their efforts. (See SNAPSHOT: The Project and The Schools.) The authors provide a window into state-of-the-art strategies in New England and across the country. The report documents each school's experiences, highlighting the key components, benefits, and challenges of the work already done and the work left to do.

Key conclusions from this project include:

- Competency-based approaches have two distinguishing characteristics: 1) a clear, measurable definition of mastery, along with procedures and tools for tracking that mastery and 2) the flexible use of time.
- Many students find competency education more motivating and engaging than traditional approaches. The chance to progress at one's own pace is particularly important to struggling students.
- Time-based policies and systems from schedules to contracts to credit systems—at both the district and state level often pose challenges for those implementing competency-based designs. But educators are finding ways to create flexibility, often starting within familiar structures but looking for strategies to support more individualized pacing.
- There is no single blueprint or well-established menu of instructional products geared for competency education initiatives, so teachers often face the benefits and the drawbacks of designing their curriculum and instruction from scratch.
- The biggest logistical challenge to creating competency-based initiatives is the lack of high-quality data and technological tools to assess and monitor student progress that are tailored to each initiative's specific approach.
- The expansion of competency education is likely to benefit from a number of new favorable conditions.

What is Competency Education?

Competency-based programs can and do differ from each other in many respects, from the student populations they serve to the pedagogy they practice. However, two features distinguish competency education from other approaches: 1) A clear definition of mastery, along with systems for tracking student advancement; and 2) A commitment to flexible uses of time and individualized pacing.

In these fundamental ways, competency education challenges the traditional structure of the American school system. For more than a century, U.S. schools have relied on the concept of the "Carnegie Unit," or "credit," to determine student progress. Course credit is awarded for meeting "seat-time" requirements and earning a passing grade of "D" or higher. Students graduate upon completion of a mandated number of hours in a required set of courses aligned with state

SNAPSHOT: Key Characteristics of Competency Education

1 Students progress at own pace

- Transparent system for tracking and reporting progress
- Flexible, learner-centric use of time, often beyond standard school day and year
- Explicit methods for providing additional support or opportunities for learning

2 Graduation upon demonstration of mastery of a comprehensive list of competencies

- Courses designed around set of competencies aligned with Common Core State Standards
- "Credit" awarded upon mastery of competencies associated with course or smaller module, based on summative assessments
- Transparent system for tracking and reporting progress

3 Teachers skilled at facilitating differentiated learning environments

- Frequent formative assessments provide real-time feedback to students and teachers on progress toward competencies and help guide instruction
- Development of robust approaches to supporting students as they move through competencies, especially those who progress slowly

standards and, soon, the Common Core State Standards. Annual school calendars and daily schedules revolve around this basic idea.

In competency-based schools, by contrast, students graduate after they are able to demonstrate mastery of a comprehensive list of competencies that are aligned with state standards and/or the Common Core State Standards. Some schools offer multiple opportunities to enroll or graduate each year. Course "credit" is granted for mastering the competencies, or smaller learning targets, associated with a course. Summative assessments are aligned with competencies and may be taken whenever a student is ready to demonstrate mastery. (See SNAPSHOT: Key Characteristics of Competency Education.)

It is important to note that, in practice, competency education models can be understood as existing on a continuum. While the philosophical ideal may be for every student to advance based solely on mastery, not all schools adopting competency-based learning principles do this. Some value group learning and a sense of classroom community as much as purely individualized progression. Schools with different populations, policies, and student needs lead to distinct versions of competency education. However, all of the schools in this project are looking at mastery approaches and considering the benefits for their particular initiatives.

Motivating a Wide Range of Students

One goal of a competency-driven program is to provide an educational model that can spark interest in learning and inspire a wide range of students to reach their potential. In conversations with students at competency-based high schools, the young people were passionate, articulate advocates for their schools.

Students explained that they are engaged and motivated by competency education for a few, clear reasons: They know exactly what is expected of them, and yet exercise a great deal of control over their own learning. The freedom to set one's own pace and focus on learning gaps is particularly important for students who struggled in previous settings. At schools with highly flexible schedules, the ability to decide when and where to learn can contribute to students' commitment to do their best.

For example, **Boston Day and Evening Academy,** an alternative school for under-credited and over-age students, is designed to provide students with maximum flexibility as they set their course to graduation. Each student has a variety of options for working on learning targets—traditional coursework, online classes, independent studies—and most experiment with different paths and schedules until they find the combination that meets their needs.

The self-pacing allows students to start where they are. This has helped 19-year-old "Luis" to thrive. Taking day and evening courses, he has moved quickly through benchmarks, "testing out" of several classes. "Monique," who has learning disabilities, has been moving much more slowly, particularly in math. However, while retaking several math modules, she can continue meeting learning targets in other subjects.

SNAPSHOT: Learning How to Self-pace

Enabling each student to learn at a comfortable, yet challenging pace is essential to competency education. But it is not easy for everyone to figure out this balance. Some students find the freedom inherent in competency-based programs to be overwhelming at first. The need to self-regulate can pose a challenge to young people who never learned these skills. Several schools have established clear "Habits of Work"—to help guide students in using their time effectively and understanding what accountability looks like in the professional world.

Schools with more traditional populations stirred similar enthusiasm. At **Vergennes Union High School,** 10th graders described a great sense of pride and accomplishment that they always have time to produce work at the highest level possible. Rather than feeling stressed and then forced to stop by arbitrary deadlines, they persist at tasks until they feel they have done their best work.

Casco Bay High School students, who use an Expeditionary Learning framework, which focuses on community-based learning and "authentic" real-world experiences, are particularly excited about their "intensives." Twice a year, students complete a week-long intensive study of a single subject and then present their work to classmates in a public "exhibition." The topics are as varied as student passions and are shaped by student learning needs. Last year, one performing arts group wrote songs and performed them in their band. Another group learned about textiles, undertaking sewing, knitting, and other hand-work projects. The presentations were humorous, compelling, and connected to the real world, and emphasized the school's commitment to sharing learning experiences. The students were confident and fully engaged.

At Casco Bay, as in the other schools discussed here, students have authentic opportunities to lead, make decisions, manage their own learning, and facilitate the learning of others. The words and actions of these students reveal that competency education is not just a theory promulgated by adults, but a powerful factor in student experience, one in which they are deeply invested and engaged.

Finding Flexibility in Traditional Schedules

All of the schools have wrestled with the relationship between time and learning. Some reorganize the school year and school day. Despite their many differences from traditional schools, most competency-based programs actually work within the familiar constructs of daily bell schedules and two or three terms per year. The rigidity of district, state

Table 1: What Distinguishes Competency Education?

Competency Education	Traditional Education
Students graduate after they are able to demonstrate mastery of a comprehensive list of competencies (also broken down into learning targets or benchmarks).	Students graduate upon completion of a mandated number of hours in a required set of courses.
Courses are designed around a set of competencies or learning targets that are aligned with state standards and the National Common Core Standards.	Courses are designed to align with state standards and the National Common Core Standards.
Course "credit" is received by mastering the competencies associated with the course or a smaller module.	Course credit is received by meeting seat-time requirements.
Each competency is assessed on a rating scale (such as letter grades, or terms such as "Highly Competent," "Competent" and "Not Yet", or "Exceed", "Meets" or "Doesn't Yet Meet" the standard). Where effort or work habits are reported, they are typically maintained as a separate grade.	Course completion is assessed with a culminating grade composed of weighted averages of completed assignments (such as tests, homework, quizzes, labs), "effort" (organization, preparedness, and "attitude" are typically included in this component) and timeliness (students are typically penalized for turning in work late, arriving to class late, or missing school).
Students progress at their own pace.	Students complete coursework together.
Students are placed in courses based on the data mined from diagnostic assessments.	Students are placed in courses based on their age, grade-level and/or prior performance.
Assessments are aligned with competencies, and may be taken whenever a student is ready to demonstrate mastery.	Assessments are aligned with course calendars, and are taken when units of study are complete.

*Adapted from Boston Day and Evening Academy REAL Institute handout, 2011. *

and federal regulations on the subject, combined with the conventional wisdom that "this is how it's always been done," make it difficult to make major structural changes. However, educators at each site have figured out creative ways to use time flexibly within broader constraints.

Big Picture Learning, which provides a fully personalized program under the mission "the education of a nation, one student at a time," has developed the most flexible schedules of the schools studied. The model evolved from the belief that students learn best when they are learning about phenomena that intrigue them, and that what intrigues them should be explored where—and when—it occurs. Each student's daily schedule is unique, designed with support from a faculty Advisor, and includes out-of-school internships, independent studies, support from out-of-school mentors, and projects. The yearly school calendar also is unique, with time reserved for quarterly student exhibitions in front of a public audience in order to demonstrate mastery of learning targets.

Each grade at Casco Bay has extended block periods daily to make it possible for students to do fieldwork for expeditions (long-term, in-depth studies of a single topic that explore vital guiding

SNAPSHOT: Instant Performance Tracking

Diploma Plus has made a large investment in developing a customized learning management system. It is designed to provide both students and teachers with up-to-the-moment data about student progress on competencies: each time a teacher posts an activity or project for students, she also identifies the DP competencies that are embedded in the task. Then, as students complete work, teachers assess student mastery of each competency. Students can log on at any time to see which tasks are complete, which targets have been met, and even, what the data trends are in their mastery of each target.

questions) and other outside-the-classroom learning. The calendar is unique, organized around two or more annual expeditions that each last four to eight weeks, in addition to the twice-yearly "intensives." There is also a Mud Season School in March and a Summer School in July for students who have not successfully completed coursework to work on specific learning targets.

Staff at **Medical Professions and Teacher Preparation Academy,** which has a relatively traditional schedule, are struggling to find flexibility. They have set up structures like a daily "X" block and Saturday school for students who need extra instruction to master difficult material. They also are planning a summer component. However, the principal talks openly about the difficulty of breaking away from time-based student progression.

Designing Curriculum and Instruction From Scratch

In competency education schools and programs, administrators and teachers find themselves continually retooling both their curriculum and their practice, as they not only face the issues all teachers face, but also attempt to accommodate the specific learning needs of their students and the demands of competency education. There is no single blueprint for competency education initiatives, so it is virtually impossible to find a published curriculum that fits any individual program's often customized design needs. Rather than buying textbooks or "off-the-shelf" online courses, some teachers are designing their curriculum from scratch while others are building on existing materials. The benefit of a homemade approach is that curriculum can be customized to meet the needs of each classroom, teacher, and student. The drawback is that it requires a tremendous amount of work, especially for those committed to continuously reflecting on and improving the curricular designs.

At Boston Day and Evening Academy and Diploma Plus, teachers must develop the curriculum themselves, because it grows out of the need for self pacing and meeting the wide range of academic levels from third-grade to grade 11 or 12.

At **Expeditionary Learning** and Big Picture Learning, there is a long mission-driven tradition of teacher-created curriculum, evolving out of the specific interests of the students and the resources available in the community. But even these intermediaries with years of experience recognize their inherent limitations. Most notably, not all great teachers are great curriculum designers; the jobs require different skill sets.

Despite many variations, two things characterize successful competency-based classrooms. First, teachers explicitly teach students what the learning targets mean and provide examples of mastery. Second, teachers develop extensive formative assessment practices that they use frequently—sometimes multiple times a day—to measure each student's progress.

Assessing Mastery and Monitoring Progress

There are many logistical challenges to implementing competency-based programs. The biggest appears to be the lack of tools to assess and monitor student progress, especially anything tailored to a particular initiative's needs.

Medical Professions and Teacher Preparation Academy adopted an existing mastery framework, the Cambridge International Examinations system, as part of 21 pilot schools participating in Excellence for All. Students must meet or exceed qualification scores on a series of end-of-course exams in ELA, math, science, history, and the arts.

However, at most schools in this project, staff have invested many hours defining and refining their mastery system and building assessment and data systems from scratch, just as with their curriculum. They have created learning targets, performance-based assessment rubrics, and database applications to track progress and report to students.

Meanwhile, Big Picture Learning is just starting its efforts to introduce common proficiency-based assessments at all of its sites that will validate the quality and rigor of the work BPL students do, not just in class, but in internships, community projects, and other domains.

While competency education can be managed effectively in low-tech ways, school leaders and staff are eager for database systems to support their work. When each student is mastering competencies at their own pace, and often pursuing different pathways toward that goal, data can easily become overwhelming as teachers try to track where every student stands on each learning target. Furthermore, most schools have a commitment to ensuring that the information is transparent—available to students as well as school administrators and parents.

Some of the schools use "low-tech" methods such as wall charts, stickers, and students initialing their progress on standards, while others have developed customized database software. Competency education schools are hopeful that fast-paced improvements in technology to assess, track, communicate with other systems such as district software, and even suggest activities and curriculum modules, means that high quality solutions may not be very far away.

Coming to a School Near You?

Competency education is evolving across New England and the United States. While few models have reached maturity, educators and policy makers have much to learn from the work schools have begun. The expansion of competency-based programs is also likely to benefit from a number of new favorable conditions.

Experienced educators and intermediary organizations are providing a variety of essential training and support to newcomers to the field. The Quality Performance Assessment Initiative, for example, trains practitioners in designing Common Core-aligned, valid, performance assessments. Boston Day and Evening Academy has launched the Responsive Education Alternatives Lab, the only intermediary exclusively devoted to supporting the development of competency-based models.

The establishment of friendly policies at the federal, state, and district levels is making it possible to develop coherent competency-based programs. Thirty-six states have adopted policies that allow districts or schools to "provide credits based on students' proficiency in a subject," opting out of seat-time requirements. The adoption of the Common Core State Standards by almost every state will encourage consistency in developing competencies that are grounded in high quality college-readiness standards, and the assessment systems being developed by multi-state consortia will support the need to measure the kinds of complex knowledge and skills embedded in many competencies. It is easy to foresee that technological innovation, much of it already underway, eventually will lead to curriculum, data systems, and assessments designed around competencies, rather than class time.

Competency education has a long history, but its widespread adoption is far from certain. As personalization occurs in every aspect of modern life, it will no doubt permeate education more fully, and the idea that every student should learn at the same pace may seem as old-fashioned as typewriters do today. In the meantime, we can learn a great deal from the pioneers of competency education, including the 11 schools highlighted in this report.

Oakland and Me: A Human-Centered Storytelling and Design Project

Project Overview

"Oakland and Me" is an interdisciplinary project that all students will tackle in Phase I of their Latitude experience. Designed to develop strong skills in critical reading, nonfiction writing, and historical research, as well as facility with multimedia production, computer programming, and cutting edge fabrication technologies, this project will help students develop the foundational skills they need to pursue more independent projects in later phases of Latitude.

In their Humanities Studio, students will step into the shoes of professional journalists, historians, and anthropologists as they investigate local history and capture the untold stories of Oakland through writing and multimedia, including photography, audio, and video. Students will be organized into production teams, with each team investigating a different neighborhood of Oakland, conducting interviews with local historians, artists, entrepreneurs, activists, politicians, scientists, and residents. They will dig into the historical archives at the Oakland History Room and the Oakland Museum of California. They will learn from journalists and multimedia producers at KQED, as well as East Bay Yesterday, who will give critical feedback on early drafts of the students' work.

In their Design & Engineering Studio, students will develop the multimedia production skills needed to turn their research, their photography, their audio recordings, and their video footage into compelling multimedia stories. They will also learn to program drones to capture aerial footage of the neighborhoods they are studying. To curate the final stories, students will use a laser cutter and a CNC machine to design and engineer an interactive map of Oakland that they will program to display the digital media they create in Humanities. When an audience member clicks on a specific Geomarker featured on the map, they will be able to access the audio and video stories that the students produced. This "Oakland and Me" map installation, overlaid with multimedia stories, will be displayed at the Oakland Museum of California, where the final exhibition for the project will be held.

As part of their final exhibition, students will also lead a walking tour of the neighborhood they investigated, sharing the research they did into Oakland's unique history and the continued strengths and challenges of the community today.

While students work on producing their final products, they will also be digging into questions about why Oakland looks the way it does, in terms of the distribution of neighborhoods and demographics across the city. They will also explore the historical legacy of Oakland's local legends.

Essential Questions -

- How did historical redlining practices impact housing patterns in the city?
- What was the impact of the government's use of eminent domain to build the highways cutting apart neighborhoods inhabited primarily by Oaklanders of color?
- What impact did World War II have on the economy of Oakland, especially at the Port of Oakland?
- What is the legacy of the Black Panthers on the Oakland community today?

Project Deliverables and Assessment Points

Week	Humanities	Design and Engineering
1 & 2	• Nonfiction Piece-anatomy of a radio story (draft 1) • Nonfiction Piece-anatomy of a radio story (draft 2) • Field Journal with reflections of field research and homework responses to text-based prompts • Informal and formal discussion sessions • Socratic Seminar	• Photo essays showcasing a personal "Day in the Life" • Video interviews of students & Latitude staff, discussing their personal journeys • Field Journal with photos and reflections from field experiences
3 & 4	• Nonfiction Piece-anatomy of a radio story (draft 3) • Nonfiction Piece-anatomy of a radio story (final draft) • Field Journal with reflections of field research and homework responses to text-based prompts • Written response to excerpts from *Legendary Locals of Oakland* and *Black Against Empire: The History and Politics of the Black Panther Party*	• Graphic design & Photoshop: stylized self-portraits. • Web Design (HTML & CSS): Initial digital portfolios website templates • Field Journal with photos and reflections from field experiences
5 & 6	• Interview preparation and documentation • Ethnography cards • Photo narrative draft 1 • Annotated bibliography • Field Journal with reflections of field research and homework responses to text-based prompts • Written response to excerpts from *American Babylon: Race and the Struggle for Postwar Oakland*	• Group deliverable: short film / trailer introducing the Oakland & Me Project to the extended Latitude community • Aerial footage of Oakland captured via drones • Podcasts or Vimeo channel with collection of audio interviews • Field Journal with photos and reflections from field experiences
7 & 8	• Research proposal • Annotated bibliography • Photo narrative draft 2 • Field Journal with reflections of field research and homework responses to text-based prompts • Test on Oakland history 1945-2017	• Web design: Basic website with Oakland & Me project. • Digital fabrication: laser-cut and/or 3D printed representation of the Oakland & Memap. • Graphic design: digital representation of the same map on the new Oakland & Me website. • Field Journal with photos, videos, and reflections from field experiences
9 & 10	• Story pitch writing assignment • Story map and story board • Draft 1 of story transcript	• Field Journal documenting user needs and design process • Group deliverable: An interactive ("clickable") website,

Preparatio Field Work:

1. Introduction to Field Journals & Ethnography
2. Professional Interview Skills

Field Research Experiences:

1. Walking tour of East 14th Street Through the Eyes of a Local Historian, a Civil Engineer, an Economist, and a Landscape Architect

2. Studio Tour of KQED and In-Person Interview with "Bay Curious" reporters on surfacing strong research questions and methods of inquiry for journalists

Grounding Text: excerpts from Oakland: The Story of a City

Additional texts, differentiated by reading skills, on Urban Studies & Ethnography

Reading Focus: Skills, practices and routines that support close reading
Introduction to Socratic Seminars

Writing Focus: Nonfiction Writing - The Anatomy of a Radio Story. Students will deconstruct the structure of a journalistic narrative and analyze the narrative strategies used by the journalists who crafted the "Bay Curious" audio podcasts.

Latitude Competencies Targeted:
ELA: Conducting Research, Engaging in Text Based Discussions
History: Analyzing Historical Perspectives

Common Core Competencies (unbound ed curriculum)
RL. 9-10.1: Cite strong and thorough textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.
